

I1. Financial contributions

I1.1. Background

Section 108 of the Resource Management Act 1991 provides that when the Council grants a resource consent it may impose a condition of consent requiring that a financial contribution be made.

In certain precincts, financial contributions will be taken in accordance with the precinct rules in order to avoid, remedy or mitigate adverse effects of an activity on the environment. The precinct rules set out the purpose for which land may be required as a financial contribution, and the manner in which the level of contribution (i.e. the amount of land required) is determined.

A financial contribution taken by the Council is for a different purpose to any development contribution listed in the Council's current contributions policy and may be imposed in addition to a development contribution.

I1.2. Objective

- (1) Financial contributions of land are required in accordance with in the precinct rules in order to avoid, remedy or mitigate adverse effects of the proposed activity on the environment.

I1.3. Policies

- (1) Require financial contributions of land for the purpose specified in the precinct rules.
- (2) Determine the amount of financial contributions of land in accordance with the precinct rules and on a case by case basis.

For further precinct provisions (objectives, policies, activity table, standards, matters and assessment criteria) refer to the relevant precinct.

I100. Boat Building Precinct

I100.1. Precinct description

The Boat Building Precinct applies to the boat building yards at Alwick Street, Warkworth and the properties at 90, 92, 94 and 105 Rame Road, Greenhithe where long established boat building and boat repair activities continue to operate. These sites have an underlying zoning of Business – Light Industry Zone and are located directly adjacent to the coastal marine area.

The purpose of the precinct is to enable the continued operation of existing boat building, repair, maintenance, and associated activities in a manner that avoids, remedies or mitigates adverse effects on the environment, particularly the marine environment, and the amenity values of the surrounding area.

The objectives and policies of the underlying Business – Light Industry Zone are generally aligned with the purpose of the boat building precinct. However, other light industry activities are not appropriate in these locations and are therefore excluded from the Boat Building Precinct.

I100.2. Objectives [rcp/dp]

- (1) Boat building, repair, maintenance and associated activities continue to be undertaken within the precinct.
- (2) The activities undertaken in the precinct do not result in adverse effects on the water quality or ecological values of the coastal marine area.
- (3) The activities undertaken in the precinct maintain the amenity values of the surrounding area.

The zone and Auckland-wide objectives apply in this precinct, in addition to those specified above, with the exception of Business – Light Industrial Objectives H17.2(1) and H17.2(2).

I100.3. Policies [rcp/dp]

- (1) Enable boat building, repair, maintenance and associated activities, and avoid activities that do not have an operational need to be located in the precinct.
- (2) Manage use and development within the precinct to maintain amenity values and ensure that it is compatible with surrounding residential neighbourhoods and open space areas.
- (3) Require activities in the precinct to manage traffic volumes to avoid adverse effects on residential streets.

The Auckland-wide policies apply in this precinct in addition to those specified above. The Business – Light Industry Zone Policies do not apply, with the exception of H17.3(5) and H17.3(6).

I100.4. Activity table [rcp/dp]

The provisions in the zone and Auckland-wide provisions apply in this precinct unless otherwise specified below.

Table I100.4.1 Activity table specifies the activity status for land use, development and subdivision activities and structures in the coastal marine area and the occupation of the common marine and coastal area in the Boat Building Precinct pursuant to sections 9(3), 11, 12(1) and 12(2) of the Resource Management Act 1991.

Table I100.4.1 Activity Table

Activity		Activity status
Use		
Residential		
(A1)	Workers accommodation	P
(A2)	Workers accommodation that does not comply with Standards I100.6.1 to I100.6.6	D
Commerce		
(A3)	Marine retail	RD
Industry		
(A4)	Marine industry	P
(A5)	Repair and maintenance services accessory to marine industry	P
(A6)	Marine industry or repair and maintenance services accessory to marine industry that do not comply with Standards I100.6.1 to I100.6.6	D
Development		
(A7)	Boat launching facilities	P
(A8)	Demolition or removal of buildings	P
(A9)	Erection, addition to or alteration of buildings and accessory buildings for permitted activities	P
(A10)	Marine and port facilities	RD
(A11)	Development that does not comply with Standards I100.6.1 to I100.6.6	D
Subdivision		
(A12)	Subdivision creating vacant sites	D

I100.5. Notification

- (1) Any application for resource consent for an activity listed in Table H1.4.1 Activity table will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I100.6. Standards

The overlay, Auckland-wide and zone standards apply in this precinct.

All activities listed as permitted in Table I100.4.1 Activity table must comply with the following standards.

I100.6.1. Height

- (1) Buildings must not exceed 9m in height.

I100.6.2. Height in relation to boundary

- (1) No part of any building may exceed a height equal to 2.5m plus the shortest horizontal distance between that part of the building and any site boundary, where the boundary is adjacent to a residential or open space zone.

I100.6.3. Yards

- (1) Front, side and rear yards must be fully planted with trees, shrubs and ground cover plants within and along the full extent of the yard to provide a layered and densely planted visual buffer. Planting must include specimen trees that:
- (a) are a minimum of PB95 at the time of planting; and
 - (b) are spaced at a minimum of one every 5m along the full length of the yard.
- (2) Goods, materials, refuse or refuse containers must not be stored in a yard.
- (3) No activity other than boat building, boat maintenance or repair, boat recovery or loading or unloading of cargo must be undertaken in a yard adjoining a river.
- (4) The yard requirements in Table H1.6.3.1 Yards must be met.

Table H.1.6.3.1 Yards

Yard	Requirement
Front	5m Yards are not required for internal roads or service lanes
Rear	7.5m where a rear boundary adjoins a residential or open space zone or a reserve vested in council
Side	7.5m where the side boundary adjoins a residential or open space zone or a reserve vested in council
Riparian yard	20m from the edge of a river where a boundary adjoins a river
Coastal protection yard	20m from the edge of the coast where a boundary adjoins the coast

I100.6.4. Building coverage

- (1) The maximum building coverage must be no more than 20 per cent of the new site area.

I100.6.5. Storage and screening

- (1) Any outdoor storage or refuse disposal areas that directly face and are visible from a road, residential zone, open space zone or special purpose zone must be screened from those areas by a solid wall not less than 1.8m high.

I100.6.6. Subdivision

- (1) The subdivision standards for Business – Light Industry Zone in E38 Subdivision – Urban apply in the precinct.

I100.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I100.8. Assessment – restricted discretionary activities

I100.8.1. Matters of discretion

The Council will reserve its discretion to all the following matters when assessing a restricted discretionary resource consent application:

- (1) marine retail:
 - (a) traffic and parking effects; and
 - (b) effects on amenity and existing activities.
- (2) marine and port facilities:
 - (a) construction or works methods, timing and hours of operation;
 - (b) location, extent, design and materials;
 - (c) public access, navigation and safety;
 - (d) traffic and parking effects; and
 - (e) effects on amenity and existing activities.

I100.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities:

- (1) construction or works methods, timing and hours of operation:
 - (a) the extent to which the construction or works methods avoid, remedy or mitigate adverse effects, on water quality and sedimentation, marine mammals, bird roosting, nesting and feeding, and recreational users of the coastal marine area; and

- (b) whether the construction or works hours of operation are limited to minimise effects of noise and disruption on existing activities, and on nearby residential and open space areas.

(2) location, extent, design and materials:

- (a) whether the development is of a scale, design and materials and located that it remedies or mitigates adverse effects on the coastal environment and adjacent residential and open space zoned land, particularly on the following:
 - (i) the natural character of the coastal environment and coastal processes;
 - (ii) effects on the recreational, visual, amenity and ecological values in the locality;
 - (iii) effects on historic heritage values in the locality and any landscape elements and features;
 - (iv) effects on existing activities in the coastal marine areas and on adjacent land including ongoing operational noise and lighting effects; and
 - (v) the provision of shore-based facilities including car and trailer parking, boat storage and maintenance areas, administration buildings, public toilets, boat racks, public access and esplanade reserves and urban design treatment.

(3) public access, navigation and safety:

- (a) whether effects on existing public access arrangements should be avoided by minimising the extent and duration of work and by providing alternative access routes where practicable;
- (b) the extent to which the proposed activity or development adversely affects navigation and safety;
- (c) the extent to which the effects on vessel access and berthage are avoided, remedied or mitigated;
- (d) where possible, the layout of buildings and activities should enhance public access, including pedestrian access, to the coastline, including areas of open space; and
- (e) any loss of public access to, along and within the coastal marine area should be mitigated, including through provision of facilities such as public boat ramps, lookout platforms and alternative access.

(4) traffic and parking:

- (a) refer to the assessment criteria in E27 Transport.

- (b) whether the proposal, including any additional vehicle movements, adversely affect the safe and efficient operation of the internal or adjacent road network, including the operation of public transport and the movement of pedestrians, cyclists and general traffic; and
 - (c) whether sufficient parking are provided for workers, customers and service vehicles within the site and access to the public transport network have been considered.
- (5) effects on amenity and existing activities:
- (a) the activity should be complementary to, and not limit the primary use of the site for boat building purposes, including other marine-related activities;
 - (b) adequate provision should be made for activities with a functional requirement for a coastal location;
 - (c) the foreseeable future demand for space for activities with a functional requirement for a coastal location should be provided for without requiring reclamation;
 - (d) the activity should avoid, remedy or mitigate adverse effects on the amenity of the locality arising from use of the facility, including by controlling the design of buildings, signs, noise and hours of operation; and
 - (e) any generation of a need for parking or transport facilities should not be in conflict with the main boat building use.

I100.9. Special information requirements

There are no special information requirements in this precinct.

I100.10. Precinct plans

There are no precinct plans in this precinct

I101. Motorsport

I101.1. Precinct description

The Motorsport Precinct applies to three of Auckland's motorsport parks:

- Colin Dale Park;
- Rosebank Road; and
- Waikaraka Park.

The precinct does not include the larger motorsport facilities at Pukekohe Park and Western Springs Stadium which are included in the Special Purpose - Major Recreation Facility Zone. The purpose of the Motorsport Precinct is to enable the ongoing use and further development of these three locations, while recognising the effects associated with motorsport activities, such as noise and traffic generation.

The zoning of land within this precinct is the Open Space – Sports and Active Recreation Zone. The objectives and policies in the Motorsport Precinct, in addition to any relevant overlay, Auckland-wide and zone objectives and policies apply to each of the three sub-precincts within this precinct.

I101.2. Objective

- (1) The ongoing use and further development of Auckland's motorsport parks is provided for.

I101.3. Policies

- (1) Enable motorsport activities and associated development.
- (2) Limit traffic generated by the activity to avoid adverse effects on the safe and efficient function of transport infrastructure and the well-being of residents and businesses.
- (3) Avoid, remedy or mitigate the effects of noise on surrounding residents.

I101.4. Activity table

Table I101.4.1 Activity table specifies the activity status of land use activities in the Motorsport Precinct and its three sub-precincts pursuant to section 9(3) of the Resource Management Act 1991.

The provisions in any relevant overlays, zone and Auckland-wide apply in this precinct unless otherwise specified.

Table I101.4.1 Activity Table

	Activity	Activity status
(A1)	Motorsport activities	P
(A2)	Motorsport activities not meeting sub-precinct Standards I101.6.2.1, I101.6.2.3, I101.6.2.4, or I101.6.3.1	D
(A3)	Motorsport activities not meeting any other sub-precinct standard	RD

I101.5. Notification

- (1) Any application for resource consent for an activity listed in Table I101.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I101.6. Standards**I101.6.1. Sub-precinct Colin Dale Park**

The Auckland-wide and zone standards apply in this sub-precinct except:

- E27 Transport - Standard E27.6.1 Trip generation

All activities listed as permitted in Table I101.4.1 must comply with the following permitted activity standards unless otherwise specified.

I101.6.1.1. Hours of operation

- (1) Motorsport activities are restricted to the following hours:
- (a) between 9am and 10pm on normal working days (Monday to Friday), and public holidays on a Friday;
 - (b) between 9am and 10.30pm on Saturdays;
 - (c) between 9am and 6pm on Sundays, and public holidays on Monday-Thursday; and
 - (d) there will be no motorsport activities held on Good Friday, Anzac Day or Christmas Day.

I101.6.1.2. Traffic generation

- (1) Traffic generation must not exceed more than 750 vehicles per day or 300 vehicle turning movements per hour.

I101.6.1.3. Noise from motorsport activities

The Auckland-wide and zone noise standards apply in this sub-precinct except as specified below for motorsport activities:

- (1) Motorsport activities are subject to an L_{max} of 80dBA.
- (2) Back-firing vehicles are excluded from this standard provided that any vehicle which backfires more than twice in any one race must be withdrawn from the race immediately.
- (3) Motorsport activities that generate noise exceeding 55dB $L_{Aeq(15min)}$ between the hours of 9am and 6pm, or exceeding 50dB $L_{Aeq(15min)}$ between 6pm and 10pm, must comply with all of the following:
 - (a) these activities are run on no more than 50 days in any calendar year, excluding scheduled events which are cancelled;
 - (b) for 25 of the 50 days the noise level for those events must not exceed 60dB $L_{Aeq(15min)}$;
 - (c) for the other 25 of those days the noise level for those events must not exceed 65dB $L_{Aeq(15min)}$;
 - (d) the noise level must not exceed 60dB $L_{Aeq(15min)}$ for at least one weekend in each calendar month;
 - (e) notice must be provided to Council within 28 working days prior to any event identifying motorsport activities that will exceed 55dB $L_{Aeq(15min)}$ between 9am and 6pm or 50dB $L_{Aeq(15min)}$ between 6pm and 10pm;
 - (f) notice of any motorsport activities on a weekend subject to I101.6.1.3(3)(e) above must be provided to the Council no less than five working days prior to the event, or prior to the end of the preceding month, whichever is the earlier; and
 - (g) the monitoring of a minimum of two race meetings will occur where the design level is up to 65dB $L_{Aeq(15min)}$ and two race meetings where the design level is up to 60dB $L_{Aeq(15min)}$ within the first six meetings (or as soon as the weather permits) in each season. The monitoring results must be provided to the Council within 14 days from the date of each meeting.
- (4) All noise levels arising from Colin Dale Park must be measured at or within the notional boundary of any rural zoned site.
- (5) Where there are residential buildings existing on 19 December 2006 or replacement buildings at the same location the measurements must only be taken from notional boundaries.

- (6) Where access to properties is not available measurement must be taken from other such locations from which representative levels can be calculated.
- (7) There will be no penalty or correction for 'special audible characteristics' for any motorsport activities or public address system noise emitted from the site in accordance with New Zealand Standard on Acoustics – Environmental Noise (NZS 6802: 2008).
- (8) The sampling period for noise measurements must meet all of the following:
 - (a) be 15 minutes;
 - (b) ensure the $L_{Aeq(15min)}$ levels recorded are logarithmically averaged over the duration of the event;
 - (c) ensure the averaged level does not exceed the relevant limit, and any one 15 minute sample must not exceed the relevant L_{Aeq} limit by more than 5dBA;
 - (d) begin at the start of the first race or practice of the day and conclude at the end of the last race, practice or show of the day; and
 - (e) cease at any break of the racing or noisy activity longer than 90 minutes and measurement must resume at the recommencement of activities.
- (9) All noise measurement and assessment must be carried out in accordance with New Zealand Standard on Acoustics - Measurement of Environmental Sound (NZS 6801:2008) and New Zealand Standard on Acoustics – Environmental Noise (NZS 6802:2008). The noise must be measured with a sound level meter complying at least with the International Standard IEC 61672: Sound Level Meters, Parts 1–3.

Note: For the purposes of I101.6.1.3(3), a 'day' must include any events of any duration within the permitted hours in any one day.

I101.6.1.4. Noise from public address systems

The Auckland-wide and zone noise standards apply in this sub-precinct except as specified below for public address systems:

- (1) Any public address or other sound system must not exceed a measured level of 45dB $L_{Aeq(15min)}$ and must only be used during the hours specified in I101.6.1.3.
- (2) No more than two public address systems may operate simultaneously on the site, unless compliance with the noise limit above can be demonstrated on a cumulative basis.

I101.6.1.5. Lighting

The Auckland-wide and zone lighting standards apply in this sub precinct except as specified below:

- (1) The design and location of floodlighting must ensure that the direct illuminance does not exceed 100 lux at the sub-precinct boundary.
- (2) Hours of operation for floodlights must be no later than 10.30 pm daily except where agreed by Auckland Council for special national or international events for a maximum of six days per year.
- (3) All lighting must be installed and maintained to ensure that no light source is directed upwards or outside the site.
- (4) No lasers or fireworks are to be used on the site.

I101.6.2. Sub-precinct Rosebank Road

All permitted and restricted discretionary activities listed in Table I101.4.1 must comply with the following activity standards.

The Auckland-wide and zone noise and lighting standards apply in this sub-precinct except as specified below.

I101.6.2.1. All motorsport activities

- (1) Between 1 October in one year and 31 May in the following year no motorised activities will occur on one week in every three weeks.
- (2) Between 1 June and 30 September no motorised activities will occur on one week in every two weeks.
- (3) Weekday practices are only permitted on Wednesday and Friday. Practices can be Tuesdays and Thursdays where an agreement has been reached, prior to 30 September of any year, between the Auckland Kart Club, Speedway Riders Club and the Auckland Council.
- (4) Weekday practice may take place between:
 - (a) 3pm and 8.30pm from 1 October to 31 May; and
 - (b) 12 noon and 5pm from 1 June and 30 September.
- (5) No motorised activities may occur on the site between 23 December and 5 January inclusive.
- (6) Motorsport activities must not exceed 60 dB L_{Aeq} , and all other activities must not exceed 40dB L_{Aeq} , as measured at Covil Park over any 15 minute period and when the wind strength is less than 2 meters per second.

- (7) The Auckland Kart Club and the Speedway Riders Club must provide the Council with a programme of weekend practice and racing by 30 September for the following calendar year. No change to the programme is permitted without the Council's permission.

I101.6.2.2. Lighting

- (1) The design and location of floodlighting must ensure that the direct illuminance does not exceed 100 lux at the sub-precinct boundary.
- (2) Hours of operation for floodlights must be no later than 10.30 pm daily except where agreed by Council for special national or international events for a maximum of six days per year.
- (3) All lighting must be installed and maintained to ensure that no light source is directed upwards or outside the site.
- (4) No lasers or fireworks are to be used on the site.

I101.6.2.3. Auckland Kart Club motorsport activities

In addition to Standards I101.6.2.1 and I101.6.2.2, permitted and restricted discretionary activities must comply with all of the following:

- (1) Racing or practices must occur between one of the following times, except the first and last race meeting of the year which may occur between 10am and 5pm on Saturday:
 - (a) 12pm and 5pm on Saturdays; or
 - (b) 10am to 5pm on Sundays.
- (2) On one of every four years an extended meeting of up to four days can be held either over Easter or Labour Weekend between 9am and 5.30pm.
- (3) Extended events must be advertised no less than seven days or more than 14 days prior to the event in local papers in the Te Atatu area.
- (4) On one of every three years the club may hold an international meeting for overseas drivers that must meet all of the following:
 - (a) Friday practice from 9am to 5pm;
 - (b) Saturday practice and/or racing 9am to 5.30pm;
 - (c) Sunday practice and/or racing 9am to 5.30pm;
 - (d) must not occur on Easter or Labour Weekend; and
 - (e) must be adequately advertised no less than seven days nor more than 14 days prior to the event in local papers in the Te Atatu area.

- (5) All karts using the precinct must comply with the following noise requirements:
- (a) Sound levels: Measurement of sound levels is by one of two methods.
Method A (over the track, 1.8m), or Method B (beside the track, 15m).
 - (b) Method A (over track): The microphone must be suspended at a height of 1.8m +/- 0.1m over the driving line and must point towards the track.
 - (c) Method B (beside track): The microphone must be positioned 15m from the accepted driving line at a level 1.2m above the track surface. The point 15m +/- 0.2m from the meter must be marked on the track surface.
 - (d) Equipment: A digital meter complying with IEC 6511979, Type 2 or better (IEC - International Electrotechnical Commission) must be used.
 - (e) Meter Settings: The "A" frequency weighting must be used with the meter in the "fast" response setting.
 - (f) Disturbance Settings:
 - (i) Rain: In the case of a declared wet meeting no measurements may be carried out.
 - (ii) Wind: The influence of wind will not be taken into consideration.
 - (iii) Environment: Has been taken into account in the method and in the order of measurement.
 - (iv) Other: Ambient noises must not exceed 10dBA.
 - (v) Disturbances: less than the noise coming from the vehicle to be measured (e.g. from vehicles moving on the opposite track side).
 - (vi) Site: A site should be chosen where karts are at or near maximum speed.
 - (g) Sound Level Limits:
 - (i) Method A: The noise level must not be greater than 106.4dBA.
 - (ii) Method B: The noise level must not be greater than 88dBA.
 - (h) Sound Level Limit Exceptions:
 - (i) Sprint Tracks: Twin cylinder or twin engine karts – Method A no greater than 109.4dBA, Method B no greater than 91dBA.
 - (ii) MSNZ circuits: For twin cylinder or twin engine karts the maximum sound level must not be greater than the promoter's and/or MSNZ

regulations which are 95dBA measured at 30 metres from the centre of the track.

Karts that do not meet the noise requirements in Standard I101.6.2.3(5) must be excluded from racing.

- (6) The Auckland Kart Club must conduct regular noise measurements of karts at each meet and practice session and keep a register of all such testing, which must be made available to the Council on request.

I101.6.2.4. Auckland Speedway Riders Club motorsport activities

In addition to Standards I101.6.2.1 and I101.6.2.2, these activities must comply with all of the following:

- (1) Race meetings may only occur in a one week in three cycle between 1 October and 31 May.
- (2) Race meetings may occur between:
 - (a) noon and 6pm on Sundays; or
 - (b) 4pm and 9pm on Fridays.
- (3) Two two-day race meetings can occur a year between 12pm and 6pm on Saturday and Sunday.
- (4) Practice sessions can occur on three nominated Saturday afternoons prior to the first race meeting of the season. Sessions must not exceed three hours and must finish no later than 5pm.
- (5) All vehicles using the Speedway Riders Club track must comply with the following noise requirements:
 - (a) All vehicle noise must not exceed 95dBA. This must be measured on the infield, 25 meters from the pole line on the fastest part of the straight. The noise receiver must be held no less than 1 meter above the ground.

Vehicles that do not meet Standard I101.6.2.4(5)(a) must be excluded from racing.

- (6) Auckland Speedway Riders Club must conduct regular noise measurements of vehicles using the speedway track at each meet and practice session and keep a register of all such testing, which must be made available to the Council on request.
- (7) Auckland Speedway Riders Club may specify on the programme submitted to Council, a twilight meeting between 4pm and 9pm on a Wednesday, Thursday or Friday following a race to be used in the event

of a rainout of a Sunday meeting. A meeting will not be considered rained out if it has continued for more than one hour.

I101.6.3. Sub-precinct Waikaraka Park

All activities listed as permitted in Table I101.4.1 must comply with the following permitted activity standards.

I101.6.3.1. All motorsport activities

The Auckland-wide and zone noise standards apply in this sub-precinct except as specified below for motorsport activities:

- (1) The noise level must not exceed the following limits measured for any 15-minute period at any point at the footpath outside 14 Alfred Street, Onehunga:
 - (a) 75dB LAeq when the activity occurs inside the stadium; and
 - (b) 90dB LAeq when the activity occurs outside of the stadium.
- (2) Motorsport events, including practice sessions, must not exceed six hours and must occur between:
 - (a) 12pm and 10pm on Monday to Thursday;
 - (b) 12pm and 11pm Friday and Saturday; and
 - (c) 10am and 9.30pm on a Sunday.
- (3) No more than 35 events, including practice events, may occur within any 12-month period on the site.
- (4) Any event that finishes within two hours of starting because of adverse weather conditions does not count as one of the 35 events.

I101.6.3.2. Lighting

The Auckland-wide and zone lighting standards apply in this sub-precinct except as specified below:

- (1) The design and location of floodlighting must ensure that the direct illuminance does not exceed 100 lux at the sub-precinct boundary.
- (2) Hours of operation for floodlights must be no later than 10.30 pm daily except where agreed by Council for special national or international events for a maximum of six days per year.
- (3) All lighting must be installed and maintained to ensure that no light source is directed upwards or outside the site.
- (4) No lasers or fireworks are to be used on the site.

I101.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I101.8. Assessment – restricted discretionary activities

I101.8.1. Matters of discretion

The Council will reserve its discretion to the following matters when assessing a restricted discretionary resource consent application, in addition to the assessment criteria specified for the relevant activities in the overlay, Auckland-wide and zone provisions:

- (1) Any activity that does not comply with a lighting standard:
 - (a) the visual effects of indirect light spill and glare on areas surrounding the site.
- (2) Any activity that does not comply with an hours of operation standard:
 - (a) the noise effects on the surrounding area;
 - (b) the effects on the safety and efficiency of the road network;
 - (c) the effects of onsite event management on the surrounding area;
 - (d) the effects on the surrounding area of the timing and number of events;
and
 - (e) the visual effects of indirect light spill and glare on areas surrounding the site.
- (3) Any activity that does not comply with a traffic generation standard:
 - (a) the effects on the safety and efficiency of the road network; and
 - (b) the effects on the surrounding area of the timing and number of events.
- (4) Any activity that does not comply with a noise standard (including public address system noise):
 - (a) the noise effects on the surrounding area;
 - (b) the effects of onsite event management on the surrounding area; and
 - (c) the effects on the surrounding area of the timing and number of events.

I101.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay, Auckland-wide and zone provisions:

- (1) The visual effects of indirect light spill and glare on areas surrounding the site:

- (a) the extent to which indirect light spill and glare causes adverse effects on the safety, amenity, including night time amenity and sleep disturbance, of neighbouring residential properties or roads;
 - (b) whether the cause of the light spill or glare is related to site factors or to the site topography and could be mitigated through design specifications as specified by a professional illumination engineer or alterations to the site;
 - (c) whether the effects of light spill or glare can be reduced by the addition of glare guards or an alternative lighting arrangement; and
 - (d) whether the intensity of use will be compatible with the amenities of surrounding existing and foreseeable future development.
- (2) The noise effects on the surrounding area:
- (a) the extent to which noise arising from the motorsport activities and the congregation of people creates adverse effects (including cumulative effect) on the health and well-being of nearby residents and other public space users;
 - (b) whether a noise management plan is necessary to detail the control measures which would be put into practice including:
 - (i) timing and duration of the proposed activity;
 - (ii) the proposed measures used to mitigate the noise;
 - (iii) the extent, necessity and appropriateness of activities on public holidays; and
 - (iv) an acoustic design certificate from a professional acoustic engineer demonstrating that the standards proposed will not be exceeded.
- (3) The effects on the safety and efficiency of the road network:
- (a) the extent to which turning traffic can safely exit and enter the site without obstructing other traffic on the road network or creating a traffic hazard;
 - (b) whether on-road or on-site queuing space is sufficient to accommodate traffic waiting to enter the site without adversely impacting on pedestrians or traffic on the adjoining road network;
 - (c) the extent to which traffic generated by the activity can be accommodated by the capacity of the adjoining road network;
 - (d) whether the design of access is contrary to any criteria contained within Auckland-wide car parking and access assessment criteria or the Auckland Transport Code of Practice;
 - (e) the extent to which any required Traffic Management Plan for Colin Dale Park achieves the following:

- (i) address how the potential adverse effects of the proposed activity can be managed with appropriate temporary traffic management procedures, commensurate with the nature and scale of the proposed activity and its potential adverse effects;
 - (ii) provides for priority access to residential properties with their access from Prices Road;
 - (iii) addresses arrival and departure times and the provision of public transport to minimise any reliance on private vehicle trips;
 - (iv) recommends monitoring of compliance with traffic generation standards. Where monitoring is required the monitoring results should be provided to the Council within 14 days from the date of each race meeting; and
 - (v) provides the means by which notice and contact details will be given of the intended event at least two weeks prior to the event to owners of residential properties that have their access from Prices Road, and from the Auckland International Airport.
- (f) whether details of consultation undertaken with the New Zealand Transport Agency and Auckland Transport have been provided or are necessary;
- (g) the extent to which the demand for short term or long term car parking within the adjoining roads affects the operation or safety of the road network;
- (h) whether on-site facilities should be provided to cater for any short-term car parking demand; and
- (i) the extent to which the site layout and level of on-site car parking is appropriate for managing the effects of traffic within the site and on the adjacent road network.
- (4) The effects of onsite event management on the surrounding area:
- (a) the extent to which site management avoids food waste attracting birds, potentially impacting on airport operations; and
 - (b) whether site management provides for 24-hour access and signage for the fuel pipelines.
- (5) The effects on the surrounding area of the timing and number of events:
- (a) the extent to which the number and timings of events are appropriate for the site and will not generate a level of noise, activity, traffic and car parking that will adversely affect the amenity and function of surrounding sites. Consideration should be given to:
 - (i) the timing and number of past or proposed events;
 - (ii) restrictions on hours of operation; and

(iii) the number of attendees.

(b) the extent to which multiple activities occurring within Puhinui Reserve and Colin Dale Park could result in cumulative adverse effects. Measures should be put in place to avoid simultaneous events being staged where this would have significant adverse cumulative effects on adjoining properties.

I101.9. Special information requirements

I101.9.1. Traffic management plan

(1) A Traffic Management Plan (TMP) must be prepared and provided to Council with any resource consent application for an event at Colin Dale Park likely to generate more than 750 vehicle movements per day or more than 300 turning movements per hour.

I101.10. Precinct plans

There are no precinct plans in this precinct

I102.1. Rowing and Paddling Precinct

The Rowing and Paddling Precinct applies to three areas of the coastal marine area that are used for rowing, paddling, kayaking and waka ama training and competitive events. These precincts are supported by land-based access and facilities, including pontoons, ramps and club rooms located outside of the precinct.

The purpose of the Rowing and Paddling Precinct is to ensure the water course remains free of structures, moorings or activities that would compromise their use for paddling and rowing. The current and future use of the Rowing and Paddling Precinct will be managed to ensure the on-going safe navigation of vessels, including port and ferry activities, in conjunction with paddling and rowing activities. Any exclusion of public access for events, such as regattas, or restrictions of use at certain times that are necessary to enable safe navigation of vessels, including port and ferry terminal activities will be subject to control by the Harbourmaster.

The zoning within this precinct is Coastal – General Coastal Marine Zone.

I102.2. Objectives [rcp]

- (1) Rowing and paddling training and events can be undertaken within a Rowing and Paddling Precinct, unobstructed by structures, moorings or other activities.
- (2) Lane markers and other navigation aids enhance the use of the Rowing and Paddling Precinct.
- (3) Other water use and safe navigation occurs in conjunction with the use of a Rowing and Paddling Precinct, including port and ferry activities.

The zone, overlay and Auckland-wide objectives apply in this precinct, in addition to those specified above.

I102.3. Policies [rcp]

- (1) Avoid use and development that will obstruct or limit the use of a Rowing and Paddling Precinct for training or events.
- (2) Enable lane marking, buoys and other navigation aids, associated with the efficient and safe use of the Rowing and Paddling Precinct.
- (3) Enable the safe navigation and operation of all vessels in conjunction with the use of a Rowing and Paddling Precinct, including port and ferry activities.

The zone, overlay and Auckland-wide policies apply in this precinct, in addition to those specified above.

I102.4. Activity table

Table I102.4.1 Activity table specifies the activity status of use and activities (pursuant to section 12(1) and 12(3) of the Resource Management Act 1991) and associated occupation of the common marine and coastal area (pursuant to section 12(2) of the Resource Management Act 1991) and development (construction (pursuant to section

12(1) of the Resource Management Act 1991), associated occupation of the common marine and coastal area (pursuant to section 12(2) of the Resource Management Act 1991) and their use (pursuant to section 12(3) of the Resource Management Act 1991)) in the Rowing and Paddling Precinct.

The zoning within this precinct is Coastal – General Coastal Marine Zone. The provisions in the zone, Auckland-wide provisions and any relevant overlays apply in this precinct unless otherwise specified.

H1.4.1 Activity table [rcp]

Activity		Activity status
Use and activities and associated occupation of the common marine and coastal area		
(A1)	Anchoring of vessels necessary for navigation safety or emergency response	P
(A2)	Aquaculture activities (including any activities under section 12(1), 12(2), 12(3) and 15 of the Resource Management Act 1991)	Pr
(A3)	Clubrooms for marine-related clubs	NC
(A4)	Maintenance and servicing of vessels	NC
(A5)	Construction of vessels	NC
(A6)	Underwater explosives training exercises	Pr
Development (construction, associated occupation of the common marine and coastal area and their use)		
(A7)	Lane markers, buoys and navigation aids associated with rowing and paddling activities	P
(A8)	Maimai	Pr
(A9)	Existing legal moorings until 1 December 2018	P
(A10)	New moorings and existing legal moorings after 1 December 2018	NC

I102.5. Notification

- (1) Any application for resource consent for an activity listed in Table I102.4.1 Activity table will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I102.6. Standards

All activities listed as permitted in Table I102.1.4.1 must comply with the following standards. The zone, overlay and Auckland-wide controls apply in this precinct, unless otherwise specified.

I102.6.1. Lane markers, buoys and navigation aids

- (1) Written advice must be given prior to the work being undertaken to the council harbourmaster at least five working days prior to any lane markers, buoys or other navigation aids being installed.
- (2) Written advice must be given prior to the work being undertaken to the national Topo/Hydro authority at LINZ at least five working days prior to any permanent navigation aids being installed.

Note: The day-to-day management of lane markers, buoys and navigation aids within a Rowing and Paddling precinct is managed by the Harbourmaster's office with reference to the Navigation Safety bylaw.

I102.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I102.8. Assessment – restricted discretionary activities

There are no restricted discretionary activities in this precinct.

I102.9. Special information requirements

There are no special information requirements in this precinct.

I102.10. Precinct plans

There are no precinct plans in this precinct.

I103. Waitematā Navigation Channel Precinct

I103.1. Precinct description

The purpose of the Waitematā Navigation Channel Precinct is to ensure the navigational requirements of marine and port activities and other vessels are provided for in the main navigation channel into the Waitematā Harbour.

The precinct excludes the ship manoeuvring and berthing areas of the Port, Viaduct and Central Wharves, Wynyard, Westhaven precincts of the Business – City Centre Zone which have their own separate provisions.

The precinct incorporates the shipping channel, turning basins, and ship manoeuvring areas located within the Waitematā Harbour and inner Hauraki Gulf. The precinct will be managed to ensure that structures and activities do not compromise the safe and efficient navigation of vessels.

Dredging is provided for in the precinct to enable passage for shipping and all other vessels using that channel, to be maintained.

The zoning within this precinct is Coastal – General Coastal Marine Zone.

I103.2. Objective [rcp]

- (1) The Waitematā navigation channel provides for the safe and efficient navigation of vessels.

The Coastal – General Coastal Marine Zone, Auckland-wide and overlay objectives apply in this precinct in addition to those specified above.

I103.3. Policies [rcp]

- (1) Avoid permanent structures in the precinct, except those required for the safe and efficient navigation, manoeuvring and berthing of vessels.
- (2) Manage activities to avoid adverse effects on the safe and efficient navigation and manoeuvring of vessels in the precinct.
- (3) Enable dredging within the precinct that is necessary to provide for the safe and efficient navigation and manoeuvring of vessels.

The Coastal – General Coastal Marine Zone, Auckland-wide and overlay policies apply in this precinct in addition to those specified above, with the exception of D.5.1.3 Dredging Policy 4 of the Coastal - General Coastal Marine Zone.

I103.4. Activity table

Table I103.4.1 Activity table specifies the activity status for Dredging in the coastal marine area pursuant to section 12(1) and 15(1) of the Resource Management Act 1991 and structures in the coastal marine area pursuant to section 12(1), 12(2) and 12(3) of the Resource Management Act 1991.

The activities, standards and assessment in the Coastal - General Coastal Marine Zone apply in the coastal marine area in all the coastal zones and precincts unless otherwise

specified. The provisions in the Auckland-wide provisions and any relevant overlays apply in this precinct unless otherwise specified.

Table I103.4.1 Activity table

Activity	Activity Status
Navigational aids	P
Maintenance dredging	C
Capital-works dredging	RD
Temporary coastal marine area structures or buildings	D
All other coastal marine area structures or buildings not provided for	NC

I103.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I103.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I103.4.1 Activity table and which is not listed in I103.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I103.6. Standards

The Coastal – General Coastal Marine Zone, Auckland-wide and overlay standards apply in this precinct in addition to the following standards.

I103.6.1. Navigational aids

- (1) Written advice must be given to the Council harbourmaster and the National Topo/Hydro Authority at Land Information New Zealand at least five working days prior to the work being undertaken.

I103.6.2. Maintenance dredging

- (1) No dredged material may be deposited in the coastal marine area or on land where it could re-enter a water body unless it is listed in the Plan as a permitted activity or has a resource consent.

I103.7. Assessment – controlled activities

I103.7.1. Matters of control

The Council will reserve its control to all of the following matters when assessing a controlled activity resource consent application:

- (1) for maintenance dredging:
 - (a) the effects on water quality;
 - (b) the effects on harbour traffic, navigation and safety; and
 - (c) monitoring.

I103.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities.

- (1) for maintenance dredging:
 - (a) the effects on water quality:
 - (i) whether methods are implemented to avoid, remedy or mitigate the release of contaminated sediment.
 - (b) the effects on harbour traffic, navigation and safety:
 - (i) whether methods are implemented to avoid, remedy, or mitigate effects on harbour traffic, navigation and safety.
 - (c) monitoring:
 - (i) whether monitoring is required to demonstrate the extent and type of effects of the dredging on water quality and the degree to which the effects are remedied or mitigated during the activity.

I103.8. Assessment – restricted discretionary activities

I103.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) capital works dredging:
 - (a) the effects on coastal processes, ecological values, and water quality including the release of any contaminated sediment;
 - (b) the effects on harbour traffic, navigation and safety; and
 - (c) consent duration and monitoring.

I103.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

(1) for capital works dredging:

(a) the effects on coastal processes, ecological values, and water quality including the release of any contaminated sediment:

(i) whether measures have been taken to avoid, remedy, or mitigate adverse effects on coastal processes, ecological values, and water quality.

(b) the effects on harbour traffic, navigation and safety:

(i) whether methods are implemented to avoid, remedy, or mitigate effects on harbour traffic, navigation and safety.

(c) consent monitoring and duration:

(i) whether consent duration should be limited to the minimum duration necessary for the functional or operational needs of the activity; and

(ii) whether monitoring is required to demonstrate the extent and type of effects of the dredging on coastal processes, ecological values, and water quality and the degree to which the effects are remedied or mitigated during the activity.

I103.9. Special information requirements

There are no special information requirements in this precinct.

I103.10. Precinct plans

There are no precinct plans in this precinct.

I200. Arts, Civic and Entertainment Precinct

I200.1. Precinct description

The Arts, Civic and Entertainment Precinct is located at the head of the Queen Street Valley. Auckland's major arts and entertainment venues are situated in or near the precinct, including the Aotea Centre, Civic Theatre, Town Hall, Q Theatre, Art Gallery, St James Theatre, Central Public Library, and private galleries. The precinct also has a number of cafés, restaurants, cinemas, hotels and bars. Aotea Square is the focus for gatherings, processions and celebrations.

The purpose of the precinct is to provide for civic activities, ceremonies, functions, entertainment and performing arts, while ensuring development respects the special character and historic heritage places within the precinct.

The precinct contains a number of historic heritage places with a diversity of styles ranging from classical to modern and post-modern. The character of the older buildings exerts a strong presence in Queen and Wellesley streets and parts of Aotea Square.

The zoning of the land is Business – City Centre Zone and Open Space – Civic Spaces Zone.

I200.2. Objectives

- (1) The Arts, Civic and Entertainment Precinct is used as the primary location for civic activities, ceremonies and functions.
- (2) The precinct is maintained as the focus of performing arts, entertainment and events.
- (3) Built form respects and reinforces the distinctive form and scale of identified special character buildings and historic heritage places.
- (4) Pedestrian linkages through the precinct and to and from other parts of the city centre are maintained and enhanced.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I200.3. Policies

- (1) Encourage arts, entertainment, civic functions, and temporary events to occur in the Arts, Civic and Entertainment Precinct.
- (2) Promote Aotea Square as Auckland's main focal point for public occasions by providing for a range of events and activities.
- (3) Require building design to respect the form, scale and architecture of identified special character buildings and historic heritage places.
- (4) Enhance the public function, pedestrian network and public spaces within the precinct.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I200.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I200.4.1 specifies the activity status of development activities in the sub-precinct A – Aotea Square pursuant to section 9(3) of the Resource Management Act 1991.

- The duration of the temporary activities specified below includes the time required to establish and remove all structures and activities associated with the activity and reinstate the site to its original condition.
- All events on public land must obtain an event permit from the Council (and permission from Auckland Transport if required for activities on roads) in addition to any resource consent requirements.

Table I200.4.1. Activity table Sub-precinct A - Aotea Square

Activity		Activity status
(A1)	Temporary activities for up to 21 consecutive days	P
(A2)	Two temporary activities for up to 49 consecutive days per calendar year	P
(A3)	Temporary activities not otherwise provided for	RD
(A4)	Markets	P
(A5)	Noise events	P

I200.5. Notification

- (1) Any application for resource consent for an activity listed in Table I200.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I200.6. Standards

I200.6.1. Sub-precinct A

The overlay, zone and Auckland-wide standards apply in Sub-precinct A, except the following:

- Standards H8.6.2-H8.6.32 of the Business – City Centre Zone; and
- E27 Transport.

All permitted and restricted discretionary activities listed in Table I200.4.1 Activity table must comply with the following standards.

I200.6.2. Noise events

- (1) Up to 18 noise events are allowed in Aotea Square in a 12-month period.
- (2) The noise event including sound checks, shall start no earlier than 9.00am and shall finish not later than 11pm Sunday to Thursday inclusive, midnight Fridays and Saturdays and 1.00am New Year's Day.
- (3) Nine of the allowable noise events may be up to 80db LAeq and 85dBA L1.
- (4) Nine of the allowable noise events may not exceed 85db LAeq and 90dBA L1.

I200.6.3. Measurement of noise events

- (1) The noise levels of noise events must be met when measured from the boundary of 68 Greys Avenue.
- (2) Where the noise levels are found to have been complied with at the specified locations then the noise event will be deemed to have complied with the requirements of I200.6.2(3) and (4).
- (3) The L_{Aeq} noise levels to be met are incidence noise levels averaged over the duration of the event but are not to include sound testing or balancing. No corrections can be made to the measured incident noise level. Crowd noise must not be included in any noise measurement.

I200.6.4. Buildings and ancillary structures

- (1) No temporary signage or lighting shall be placed on or affixed to any trees or heritage buildings within Aotea Square.
- (2) No structures are to be placed within 10m of the scheduled Auckland City Town Hall.

I200.6.5. Trees

- (1) There shall be no pruning of, or structures within, the dripline of any tree located within the grassed areas of Aotea Square unless carried out by Council or its agents.

I200.7. Assessment – controlled activities

There are no controlled activities in this section.

I200.8. Assessment – restricted discretionary activities

I200.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) temporary activities not otherwise provided for:
 - (a) refer to the matters in E40 Temporary activities.

I200.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

(1) temporary activities not otherwise provided for:

(a) refer to the assessment criteria in E40 Temporary activities.

I200.9. Special information requirements

There are not special information requirements in this precinct.

I200.10. Precinct plans

I200.10.1 Arts, Civic and Entertainment: Precinct plan 1 - Sub-precinct A - Aotea Square

I201. Britomart Precinct

I201.1. Precinct background

The Britomart Precinct is bordered by Lower Queen Street, Quay Street, Britomart Place and Customs Street East and its zoning is Business - City Centre zone. The precinct re-establishes traditional grid street pattern through the extension of Gore and Commerce streets from Customs Street to Quay Street. The extent of the Britomart precinct is shown on Britomart Precinct: Precinct plan 1.

The purpose of the precinct is to act as a regional transport centre, provide for comprehensive development and provide a link between the core central business district and the harbour edge, while preserving identified special character and historic heritage values and enabling adaptive reuse of those buildings. Britomart's proximity to the harbour edge and the core central business district of the city centre provides an important context for existing and new development. The convenience and location of transport services is an important aspect of the precinct, along with providing a safe, attractive pedestrian environment with good sheltered connections to both the harbour edge and the city core.

The precinct is comprised largely of low and medium rise buildings including scheduled historic heritage places and identified special character buildings on its perimeter. The identified historic heritage building and special character buildings and general streetscape contribute to its character, enclosure, and sense of human scale. In combination with the precinct's function as a regional transport interchange, the identified historic heritage places and special character buildings form a framework for future redevelopment. It is noted however, that the north western perimeter of the precinct is comprised of high rise modern buildings. It is also proposed to develop new medium to high rise buildings within the central spine of the precinct.

The precinct is also in a critical location for providing a better link between the city centre and the harbour and also Viaduct Harbour to the west and the Quay Park precinct (the site of Auckland's former rail station and shunting yards) and the arena site to the east. Provision for an attractive and safe pedestrian network and public squares, with good quality connections to the harbour edge and the city core, is vital.

Station Plaza and Takutai Square are the two major public open spaces within the precinct and Te Ara Tahuhu (walking street) provides the main east-west pedestrian link connecting Commerce Street to Britomart Place.

The precinct provisions require future above-ground development to occur in a comprehensive and coordinated manner.

The land in the Britomart Precinct is zoned Business – City Centre Zone.

I201.2. Objectives

- (1) An attractive, safe and lively environment that reflects the importance of the precinct's role as a regional transport interchange, and provides a link between the core central business district and the harbour edge.

- (2) Britomart is comprehensively developed as a mixed use precinct that:
- (a) integrates with the facilities and functions of the Britomart regional transport centre;
 - (b) maintains a perimeter built form that is of an appropriate scale in relation to the form and scale of existing heritage buildings and waterfront edge location, and is in keeping with or complementary to established development within the precinct;
 - (c) acknowledges and reinforces the lower scale Customs Street heritage frontage, the Quay Street frontage and the medium to high rise new central spine of the precinct;
 - (d) provides a high level of physical and visual accessibility within the precinct, and to the city centre and the waterfront; and
 - (e) has high quality pedestrian connections and open spaces.
- (3) The historic heritage values of identified buildings within the precinct are retained, and where appropriate conserved.
- (4) The Port of Auckland is protected from potential reverse sensitivity effects generated by residential activities within the precinct.

The overlay, Auckland-wide and Business – City Centre Zone objectives apply in this precinct in addition to those specified above.

I201.3. Policies

- (1) Limit development to a scale that is sensitive to the values of heritage buildings within the precinct and the Waterfront setting.
- (2) Require development within Sub-precinct B to maintain an overall built form outcome that supports a lower scale heritage Customs Street frontage, a medium to high rise central spine and a mixed low, medium and high rise Quay Street frontage.
- (3) Reduce any potential adverse visual effects of buildings in relation to the harbour edge and as viewed from the southern side of Customs Street East, from Britomart Place through to the Chief Post Office building.
- (4) Require buildings and public open spaces to achieve a high standard of urban design while maintaining or enhancing the values of heritage buildings within the precinct.
- (5) Require development of building frontages to streets or other public spaces to maintain a height above street level that retains a sense of intimacy, character and human scale, particularly on the Customs Street frontage, and preserves sunlight access.

- (6) Reinforce pedestrian activity and adjoining public open spaces by requiring significant portions of ground floor frontages be made available for retail and commercial service activities.
- (7) Manage the scale, form and intensity of development to maintain the character of the Britomart Precinct.
- (8) Reinforce and acknowledge the Quay Street waterfront edge of the CBD, which runs from the Port Precinct through to Beaumont Street, through a mixture of lower buildings punctuated by taller buildings along the Britomart Precinct Quay Street frontage, while restricting tall new buildings along the Quay Street edge between Britomart Place and Gore Street to one location at 110 to 114 Quay Street.
- (9) Provide an opportunity on the Seafarers' site to create a contemporary medium to high rise building that acknowledges the surrounding heritage buildings but is also consistent with the scale of the existing medium to high rise contemporary buildings on the north-western frontage of the Precinct.

The above objectives and policies cannot be used to justify additional height above the maximum permitted height on sites along the Quay Street frontage of the Britomart Precinct, other than on the Seafarers' site.

Heritage

- (10) Enable the adaptive re-use of historic heritage buildings while ensuring that their valued features are maintained or enhanced.
- (11) Avoid insensitive development or objects adjacent to historic heritage places that detract from the heritage values for which the building is protected.

Open space and pedestrian connections

- (12) Maintain and enhance the environmental qualities and amenities of the precinct.
- (13) Establish an interconnected system of public open spaces, of varying size and pedestrian connections which can cater for a range of appropriate activities, events and support the regional transport interchange function of the precinct.
- (14) Preserve sunlight access to identified public open spaces by managing building height and form.
- (15) Provide strong visual and physical connections between the public open spaces within the Precinct, the waterfront and the city centre core.

Land uses

- (16) Encourage the distinction of different areas within the precinct, each with its own character.

(17) Require accommodation in the precinct to be located and designed to provide for amenity and well-being of residents while mitigating potential adverse effects of port operations and avoiding the likelihood of reverse sensitivity effects on the Port of Auckland.

(18) Limit parking to the eastern end of the precinct and to the Britomart carpark site located on the eastern side of Britomart Place to maintain main pedestrian thoroughfares and retain the visual amenity provided by heritage buildings.

The overlay, Auckland-wide and Business – City Centre Zone policies apply in this precinct in addition to those specified above.

I201.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I201.4.1 specifies the activity status of development activities in the Britomart Precinct pursuant to section 9(3) of the Resource Management Act 1991.

- The activities in the Business – City Centre Zone apply in the Britomart Precinct except in those areas identified as public open space on Precinct plan 4, and as specified in the following table.

Table I201.4.1. Activity table - Britomart Precinct

Activity		Activity status
Development		
(A1)	Minor cosmetic alterations to a building that does not change its external design and appearance	P
(A2)	New buildings, and alterations and additions to buildings not otherwise provided for	RD
(A3)	Dwellings and visitor accommodation that do not comply with Standard I201.6.1(1)	D
(A4)	Development that does not comply with Standard I201.6.7(1)-(2) or I201.6.8(1)	D
(A5)	Development that does not comply with Standard I201.6.5(1) or I201.6.6(1)-(5)	NC

Table I201.4.1 specifies the activity status of land use activities in the Britomart Precinct pursuant to section 9(3) of the Resource Management Act 1991.

- The following table specifies the activity status of activities within the identified public open spaces shown on Britomart Precinct: Precinct plan 4.

Table I201.4.2. Activity table - Britomart precinct (identified public open spaces shown on Britomart Precinct: Precinct plan 4)

Activity		Activity status
Community		
(A6)	Informal recreation	P
(A7)	Landscaping	P
(A8)	Artworks	P
(A9)	Playgrounds	RD
(A10)	Seating and picnic tables	P
(A11)	Awnings, canopies or similar weather protection structures accessory to tables and seating	RD
(A12)	Kiosks and market stalls	RD
Development		
(A13)	Glazed roof structures/atrium and/or glazed verandahs and physical connections	RD
(A14)	New buildings	D
(A15)	Dwellings and visitor accommodation that do not comply with Standard I201.6.1(1)	D
(A16)	Development that does not comply with Standard I201.6.7(1)-(2) or I201.6.8(1)	D
(A17)	Development that does not comply with Standard I201.6.5(1) or I201.6.6(1)-(5)	NC

I201.5. Notification

(1) Any application for resource consent for an activity listed in Table I201.4.1 Activity table - Britomart and Table I201.4.2. Activity table - Britomart precinct (identified public open spaces shown on Britomart Precinct: Precinct plan 4) above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

(2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I201.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All permitted and restricted discretionary activities listed in Table I201.4.1 Activity table - Britomart and Table I201.4.2. Activity table - Britomart precinct (identified public open spaces shown on Britomart Precinct: Precinct plan 4) must comply with the following standards.

I201.6.1. Dwellings and visitor accommodation

Purpose: to avoid the potential for reverse sensitivity effects on the Port of Auckland.

- (1) Dwellings and visitor accommodation must be subject to a restrictive non-complaint covenant* in favour of the Ports of Auckland.
- (2) For the purposes of this rule a 'restrictive non-complaint covenant' is defined as a restrictive covenant registered on the Title to the property or a binding agreement to covenant, in favour of Ports of Auckland Limited, by the landowner (and binding any successors in title) not to complain as to effects generated by the lawful operation of the port. The restrictive non-complaint covenant is limited to the effects that could be lawfully generated by the port activities at the time the agreement to covenant is entered into. This does not require the covenantor to forego any right to lodge submissions in respect of resource consent applications or plan changes in relation to port activities (although an individual restrictive non-complaint covenant may do so). Details of the existence of covenant documents may be obtained from Ports of Auckland Limited, its solicitors, or in the case of registered covenants by searching the Title to the relevant property.

I201.6.2. Building height

Purpose: manage the height of buildings to achieve Policies I201.3(1), (2), (3), (7), (8), (9) and (14) of the Britomart Precinct.

- (1) Buildings must not exceed the heights specified on Britomart Precinct: Precinct plan 1
- (2) The Britomart station ventilation stacks may exceed the maximum building height specified on Britomart Precinct: Precinct plan 1 provided that they do not exceed 10m above the roof to the storey immediately below.
- (3) A single lift machine room or over-run within the 50m height area shown on Britomart Precinct: Precinct plan 1 may exceed the maximum building height provided that:
 - (a) the height of the projection does not exceed 5.4m above the maximum permitted height; and
 - (b) the area of the projection does not exceed a floor area equal to 10 per cent of the area of the roof to the storey immediately below.

- (4) Seafarers' Height Controls as specified on Britomart Precinct: Precinct plan 1

A building on the Seafarers site is composed of two elements, each with the maximum permitted height as follows:

- (a) a larger element located at the eastern end of the site with an east-west footprint dimension two thirds of the east-west dimension of the site area (or up to a maximum of five metres either side of this dimension) and no taller than 55.24m above mean street level (AMSL); and

- (b) a smaller element located on the (remaining) western-most one third of the site (or up to a maximum of five metres either side of this dimension) and no taller than 35.40m AMSL

Explanation

The Seafarers site is a potential redevelopment site on the Quay Street frontage of the Precinct. The varied height limits provide an opportunity to develop a contemporary building that is complementary to both the taller existing buildings to the south and west and the lower heritage character buildings to the east. The larger element corresponds to the lower of the two Quay Street Harbour Edge Height Control Planes (HEHCP), while the smaller building element corresponds to the height of the parapet on the second step back on the western elevation of the East Building, facing Takutai Square.

I201.6.3. Minimum frontage height

Purpose: ensure streets are well defined by buildings and provide a sense of enclosure to enhance pedestrian amenity.

- (1) New buildings and additions to buildings must adjoin the site frontage for its entire length excluding vehicle and pedestrian access areas and have a minimum frontage height of 16m above mean street level.

I201.6.4. Paving of public open spaces

Purpose: Maintain and enhance the amenity of public open space.

- (1) Paving of areas of public open space, as shown on Britomart Precinct: Precinct plan 3, must be provided by adjacent site owners in conjunction with any new development of the site.
- (2) Applications for any new building or external alteration or addition to any existing building on sites adjacent to areas identified for paving in Britomart Precinct: Precinct plan 3 must provide details of ground surface designs particularly in relation to the paving materials to be laid and the pattern of their layout.
- (3) The pavers must be at least equal to the standard of paving and detailing in Station Plaza.

I201.6.5. View shaft

Purpose: manage development to maintain views from Britomart Place through to the Chief Post Office building and provide an important visual guide for pedestrians moving into and through the Precinct. The view shaft is intended to protect this view for the benefit of pedestrians.

- (1) Buildings must not locate within the areas of the view shaft shown on Britomart Precinct: Precinct plan 3, except for:
 - (a) temporary buildings which are permitted activities or for which resource consent has been granted;

- (b) parts of buildings or structures above first floor level; and
- (c) verandahs required by H8.6.26 of the Business – City Centre Zone rules or for which resource consent has been granted.

I201.6.6. Site intensity

Purpose: manage the scale, form and intensity of development to maintain the character of the Britomart Precinct.

- (1) The basic and the maximum floor area ratios permitted within the Britomart precinct are as shown on Britomart Precinct: Precinct plan 2.
- (2) In Sub-precinct A the bonus floor area provisions for bonus area 1a (refer H8.6.10 - H8.6.20 of the Business - City Centre Zone rules) apply except that the light and outlook bonus does not apply. The basic FAR plus the bonus FAR must not exceed the MTFAR shown in Britomart Precinct: Precinct plan 2.
- (3) In Sub-precinct B the basic FAR and the MTFAR is the gross floor area allowed as a permitted activity, except that for the sites notated on Britomart Precinct: Precinct plan 2 the floor area ratio must be limited to the gross floor area achievable within the existing special character building or scheduled historic heritage place.
- (4) In Sub-precinct B the 11:1 FAR shown in Britomart Precinct: Precinct plan 2 for sites to the east of Takutai Square is the basic/maximum total FAR for a building or combination of structures covering all sites, and is not the basic/maximum total FAR for individual sites.
- (5) On the Seafarers' site, the permitted site intensity shall be the floor area required to achieve the maximum permitted height as provided for within rule I201.6.2(4) Seafarers' Height Controls.

I201.6.7. Heritage buildings

Purpose: manage heritage buildings to achieve Policies I201.3(10) and (11) of the Britomart precinct.

- (1) All works relating to identified historic heritage buildings must be subject to conservation plans and obtain all necessary resource consents required by the Historic Heritage overlay rules and the Heritage New Zealand Pouhere Taonga Act 2014.
- (2) All works relating to the following non-scheduled buildings must be subject to approved conservation plans:
 - (a) Charter House, 54-58 Customs Street East (Part Lot 2 DP 382501);
 - (b) Newdick Building, 104 Quay Street (Part Lot 1 DP 369895);
 - (c) Quay Buildings, 106-108 Quay Street (Part Lot 1 DP 369895); and
 - (d) Maritime Building, 130 Quay Street (Lot 57 DP 317575).

I201.6.8. Noise

Purpose: Manage noise to maintain amenity.

- (1) Any activity must comply with E25 Noise and Vibration of the Auckland-wide rules for noise and vibration except that noise from events and temporary activities must be measured 1m from the façade of the nearest dwelling or visitor accommodation building located outside of the Britomart precinct.

I201.6.9. Parking

Purpose: Limit parking to the eastern end of the precinct to maintain main pedestrian thoroughfares and retain the visual amenity provided by heritage buildings.

- (1) For the purpose of calculating the maximum permitted parking, E27.6.2 of the Auckland-wide - Transport rules apply except that:
 - (a) Sub-precinct B and Lot 5 DP 325137 in the Quay Park precinct is defined as a site. Parking accumulated within this area is limited to the areas marked with an asterisk on Precinct Plan 2 and to Lot 5 DP 325 137 within the Quay Park precinct; and
 - (b) for the sites identified with an asterisk and bounded by Customs Street East, Gore Street, Galway Street and Rouakai Lane, parking must be confined to basement levels and vehicle access must be from Galway Street only.

I201.7. Assessment – controlled activities

There are no controlled activities in this precinct

I201.8. Assessment – Restricted discretionary activities

I201.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to existing buildings not otherwise provided for:
 - (a) the matters of discretion in H8.8.1(1) of the Business – City Centre Zone rules apply;
- (2) restricted discretionary activities within the public open spaces identified on Precinct plan 4:
 - (a) location, design and external appearance of temporary or permanent buildings, structures and signs;

- (3) infringing the building height standard:
 - (a) building scale, dominance and visual amenity effects; and
 - (b) effects on the current or planned future form and character of the precinct;
- (4) infringing the minimum frontage height standard:
 - (a) building scale, dominance and visual amenity effects; and
 - (b) pedestrian amenity;
- (5) infringing the paving of public open spaces standard:
 - (a) pedestrian amenity.

I201.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to existing buildings not otherwise provided for:
 - (a) building design and external appearance - contributing to sense of place:
 - (i) whether the consistency of the existing character in a cohesive streetscape is maintained, with new buildings acknowledging traditional design and detailing. However, new buildings and additions need not replicate this style.
 - (b) building design and external appearance - variation in building form/visual interest:
 - (i) the extent to which buildings contain a predominance of vertical or neutral emphases on their elevations (rather than horizontal), and thus contribute to the visual reduction in the scale of buildings, and an appropriate scale close to public places;
 - (c) building design and external appearance - creating a positive frontage:
 - (ii) the extent to which the ground floor level of buildings adjacent to public spaces make use of architectural elements of columns, windows, doors, verandahs, colonnades, and recessed entrance ways to achieve a strong visual and physical integration of public and private space;
 - (iii) the extent to which the treatment of exterior walls continuously define the edge of the street (or open space) but with individual variation in architectural character to avoid long, dull, monotonous lengths of undifferentiated wall;

- (iv) the extent to which buildings are designed to address and align to the street boundaries and adjoining public spaces to develop a strong visual axis along streets and at intersections;
 - (v) the extent to which buildings contain activities that have a strong interaction with the use of adjoining public space in order to provide increased security and surveillance and contribute to the vitality of the area;
 - (vi) whether buildings adjacent to public open space dominate it or 'privatise' it by giving the impression that the open space is a forecourt to any private development adjoining it; and
 - (vii) the extent to which verandahs, where required, are continuous along the length of the street but should be designed separately on a site by site basis. The architecture of each verandah should relate directly to the building on that site and should not be designed as a uniform or standardised building element.
- (d) building design and external appearance - materials and finishes:
- (i) the extent to which materials and colour used in new buildings complement existing buildings, but may use new and contemporary interpretations in form and detail;
 - (ii) the extent to which the design of ground surfaces ensure conformity of detail and material where private developments are integrated with streets or adjacent public open spaces; and
 - (iii) the extent to which new buildings or external alterations or additions to buildings on sites adjacent to areas identified for paving in precinct plan 4 ensure the adjoining ground surface design is appropriate and sensitive and has regard to the manner in which the development is integrated with adjacent public spaces.
- (e) signage and temporary buildings:
- (i) the extent to which signage is designed to a high standard and complements the architectural qualities, materials, details and colours of the buildings to which it relates;
 - (ii) the extent to which temporary buildings, including structures, show design sensitivity, be located in areas that will not compromise pedestrian access, and be simple in colour, form and materials and not conflict with the architectural style of permanent buildings.
- (f) design and scale of buildings adjoining historic heritage places:
- (i) the extent to which redevelopment of sites adjoining scheduled historic and character buildings on Quay Street incorporate a podium of similar height, complementing the building form of the existing adjoining buildings in terms of scale and proportion.

(g) design of access and parking:

- (i) service access points to buildings should not be located in pedestrian intensive areas and, where possible, should be combined with access to parking areas; and
- (ii) where vehicles and pedestrians share the same circulation network, the ground surface should be pedestrian orientated, that is, designed primarily for people on foot, but across which vehicles may have clearly defined and free access.

(h) design and layout of dwellings, visitor accommodation and boarding houses:

- (i) the extent to which buildings to be used for any form of dwelling or visitor accommodation are appropriately located and designed to reduce reverse sensitivity effects and any adverse noise effects from the surrounding environment (including noise from the port, traffic and other uses in the Britomart precinct such as entertainment). The extent to which the design of such buildings take into account the location of bedrooms, the type and thickness of glass, and the presence or otherwise of opening windows or doors to the exterior.

(2) new buildings on the Seafarer's site:

Heritage New Zealand Pouhere Taonga shall be considered to be a potentially adversely affected person for any application involving a new building on the Seafarer's site (as opposed to re-furbishment of the existing building). Accordingly, the New Zealand Historic Places Trust's written approval shall be required if the application is non-notified. Alternatively, the application shall be served on the New Zealand Historic Places Trust if the application is to be processed on a limited notified basis or is publicly notified.

(a) general design principles:

- (i) any new building and its primary elements (including the upper and lower building elements) shall have inherent design integrity, coherence and demonstrate high quality architectural design;
- (ii) any new building shall be constructed using high quality materials;
- (iii) the building design shall recognise the unique quality of its setting, within a block of important heritage buildings, while enhancing the qualities of the adjacent heritage buildings and the urban form of Auckland, particularly when viewed from the North Shore, the Waitemata Harbour, elsewhere in the CBD, the wider Britomart Precinct, Quay Street and Takutai Square;
- (iv) the site shall be fully developed to all boundaries approximately to the height of the adjoining heritage Quay Building in the city block bounded by Quay Street, Gore Street, Tyler Street and Britomart Place;

- (v) the cadastral boundaries of the site shall be respected and no parts of the building shall extend or be cantilevered beyond these boundaries;
 - (vi) the floor plan footprint and the corresponding vertical expression of the floor plan shall acknowledge and reflect the historic cadastral plan pattern of land subdivision between Britomart Place and Gore Street;
 - (vii) the design of the building shall comply with the relevant parts of the existing Britomart Precinct Urban Design Guidelines - Chapter 4 Buildings;
 - (viii) a sustainable approach to building design shall be utilised through the use of durable, low maintenance materials, maximisation of solar access and natural light and ventilation, and the incorporation of mechanical and electrical systems that optimise energy efficiency;
- (b) base Building (designed to relate to Quay Buildings and Union Fish building):
- (i) building frontage at street level must contribute to pedestrian vitality, interest and public safety. This will require a variety of architectural detail and maximising the number of doors and both the number and size of window openings;
 - (ii) a pedestrian through-site link shall be provided in close proximity to the western boundary of the Seafarers' site between Quay and Tyler Streets and shall be open to the public during normal working hours;
 - (iii) the rhythm and scale of architectural features, fenestrations, finishes and colour shall harmonise with and complement the streetscapes on both the northern and southern sides of the site;
 - (iv) the overall mass of the base building shall be broken down and articulated to reflect the scale and rhythm and masonry character of existing heritage buildings. The three dimensional form of the building should express the historic cadastral plan pattern of land subdivision. Facades should acknowledge primary structural elements, solid to void ratios of heritage buildings, compositional and elemental proportions and materials which induce detail, surface complexity, light and shade;
- (c) Upper Building
- (i) any new building shall consider high quality architectural design references to existing or adjacent/nearby buildings as follows:
 - first reference: The height of the main horizontal component of the parapet on the adjoining heritage Union Fish Building (8.61m AMSL);
 - second reference: The height of the parapet on the adjoining Quay Building (20.27m AMSL).

- third reference: The height of the parapet of the more recently constructed Union House on the corner of Quay and Commerce Streets (46.40m AMSL);
- fourth reference: The heights of the Nathan and Australis Buildings forming the southern edge of Takutai Square (22.84m AMSL and 23.89m AMSL respectively), and the height of the very western end of the East Building forming the eastern edge of Takutai Square (23.25m AMSL);

The architectural references should not replicate existing building features but, instead, provide an appropriate high quality contemporary interpretation that is complementary to the architecture of the existing heritage buildings. These references may include vertically stratified changes in the composition and character of the elevations, balconies recessed back from the Quay Street and Tyler Street boundaries, upper level set-backs, or a combination of two or more of these or some other architectural design referencing techniques. The three dimensional form of the upper building should reflect the historic cadastral plan pattern of land subdivision. The upper building is to be architecturally differentiated from the base building. A quite different character is required for the Upper Building with a preference for elevations of a transparent or translucent nature. All elevations are to be designed to achieve a lighter character for the upper building relative to the Base Building.

- (ii) above the tallest adjoining heritage building, the new building will be seen in the round and its plan form and corresponding elevations shall be architecturally articulated and modulated to acknowledge their exposure to public view. The articulation and modulation of the east and west elevations is as equally important as the north and south elevations and shall be designed to the highest quality and constructed using high quality materials;
- (iii) the building facades, above the tallest heritage buildings in the vicinity, should express differentially their two 'front' (Quay and Tyler) and two 'side' (east and west) boundaries. The design of these facades should establish a hierarchy whereby the 'front' facades are 'primary' and the 'side' facades are 'secondary', although the quality of design of each of the four facades should be of an equally high order;
- (iv) building facades must provide richness, interest and depth. Blank walls shall not be permitted (except where necessary for services);

(d) rooftops

- (i) roof profiles shall be designed as part of the overall building form and contribute to the architectural quality of the skyline when viewed from street level and the harbour. The roof design should also be attractive when viewed from higher surrounding buildings. This will require integration of plant, exhaust and intake units and other

mechanical and electrical equipment into the overall rooftop design so that they are not visible from outside the site;

(e) Takutai Square:

- (i) when viewed from Takutai Square, the building design shall be complementary to the scale, design composition and modulation of the other buildings surrounding the square, particularly but not restricted to the East Building, the Westpac Charter Building and the Australis and Nathan heritage buildings;
- (ii) Takutai Square shall not be subject to adverse wind effects that would infringe the Unitary Plan rules.
- (iii) in urban design terms, the space of Takutai Square is positively 'commanded'/'dominated' by the East Building, and by its 'direct' dialogue with the Central Building planned to define and contain the opposite (western) side of Square. The axial strength and primacy of this 'dialogue' between the East Building and the yet to be constructed Central Building should not be formally, spatially or visually challenged by a building on the Seafarers' site;
- (iv) the architectural expression and character of a building on the Seafarers' site shall clearly differentiate itself from that of the East and Central buildings whose similarities assist the east-west axial 'dialogue' across the urban space that is Takutai Square;
- (v) notwithstanding the requirement to differentiate its architectural character from that of the East and Central buildings, the architectural composition and expression of a building on the Seafarers' site should draw upon and reference the various heights and set-backs on the north-western corner and the western elevation of the East building and the Westpac Charter Building, in response to the height and scale of the Australis and Nathan Buildings;

Explanation

The purpose of the above criteria is to ensure that any new building on the Seafarers' site is of high quality design and complementary to the character and scale of the other buildings on the Quay Street frontage, the buildings which spatially define and contain Takutai Square and the wider Precinct. It is also particularly important that any new building on the Seafarers' site is complementary to the formal and visual primacy of the East Building when viewed from Takutai Square;

(3) restricted discretionary activities within the public open spaces identified on Britomart Precinct: Precinct plan 4:

- (a) location, design and external appearance of temporary or permanent buildings, structures and signs:

Buildings and structures within Britomart public open space should be consistent with the purpose and function of the open space as follows:

Station Plaza:

- (i) Station Plaza is intended to complement the ground level transport focus of the surrounding streets and the use of the plaza as a primary taxi drop-off/collection point for passengers. Given the potential mix of traffic and pedestrians in the area, emphasis is primarily on ensuring clarity for pathways, visibility of different transport modes, and safety and convenience for users;

Te Ara Tahuu (“walking street”):

- (ii) the walking street is intended to provide for an attractive, safe, convenient and unrestricted pedestrian through-traffic while stimulating lively and interactive private development on adjacent sites. Features of the walking street include a central row of light cones providing light to the tunnel below, a glazed atrium and other connections linking the upper floors of the adjacent buildings;

Takutai Square:

- (iii) all four sides of Takutai Square have sheltered active edges, with the focus of adjoining tenancies being retail and food and beverage related. Takutai Square is intended to be a dynamic and pedestrian-filled open space at the heart of the precinct, maximising lunch time sunshine and providing for regular informal use by shoppers and passers-by, while being of a sufficient size to allow for reasonable sized crowds for events;
- (iv) the extent to which activities within the public open space enhance the precinct as a ‘people place’ and promote pedestrian flows through the precinct while integrating with adjacent land uses;
- (v) the extent to which temporary buildings and structures show design sensitivity, are located in areas that will not compromise pedestrian access, and are simple in colour, form and materials and not conflict with the architectural style of adjacent permanent buildings, including heritage buildings;
- (vi) the extent to which buildings and structures are compatible in height and scale to adjoining buildings and should not compromise or dominate the use of the open space for public recreational use;
- (vii) the extent to which signage proposed as part of a resource consent application is designed to a high standard and should complement the architectural qualities, materials, details and colours of the buildings, facilities or open space to which it relates;

(4) infringing the building height standard:

- (a) building height may be exceeded where it would provide an attractive and integrated roof form that also meets the purpose of the standard; and
- (b) where building height is exceeded, Policies I201.3(1), (2), (3), (7), (8), (9) and (14) of the Britomart Precinct and Policy H8.3(30) of the Business – City Centre Zone should be considered.

(5) infringing the minimum frontage height standard:

- (a) the extent to which buildings frame the street to provide a sense of enclosure; and
- (b) whether pedestrian amenity is maintained or enhanced.

(6) infringing the paving of public open spaces standard:

- (a) whether public open space is maintained and is functional.

I201.9. Special information requirements

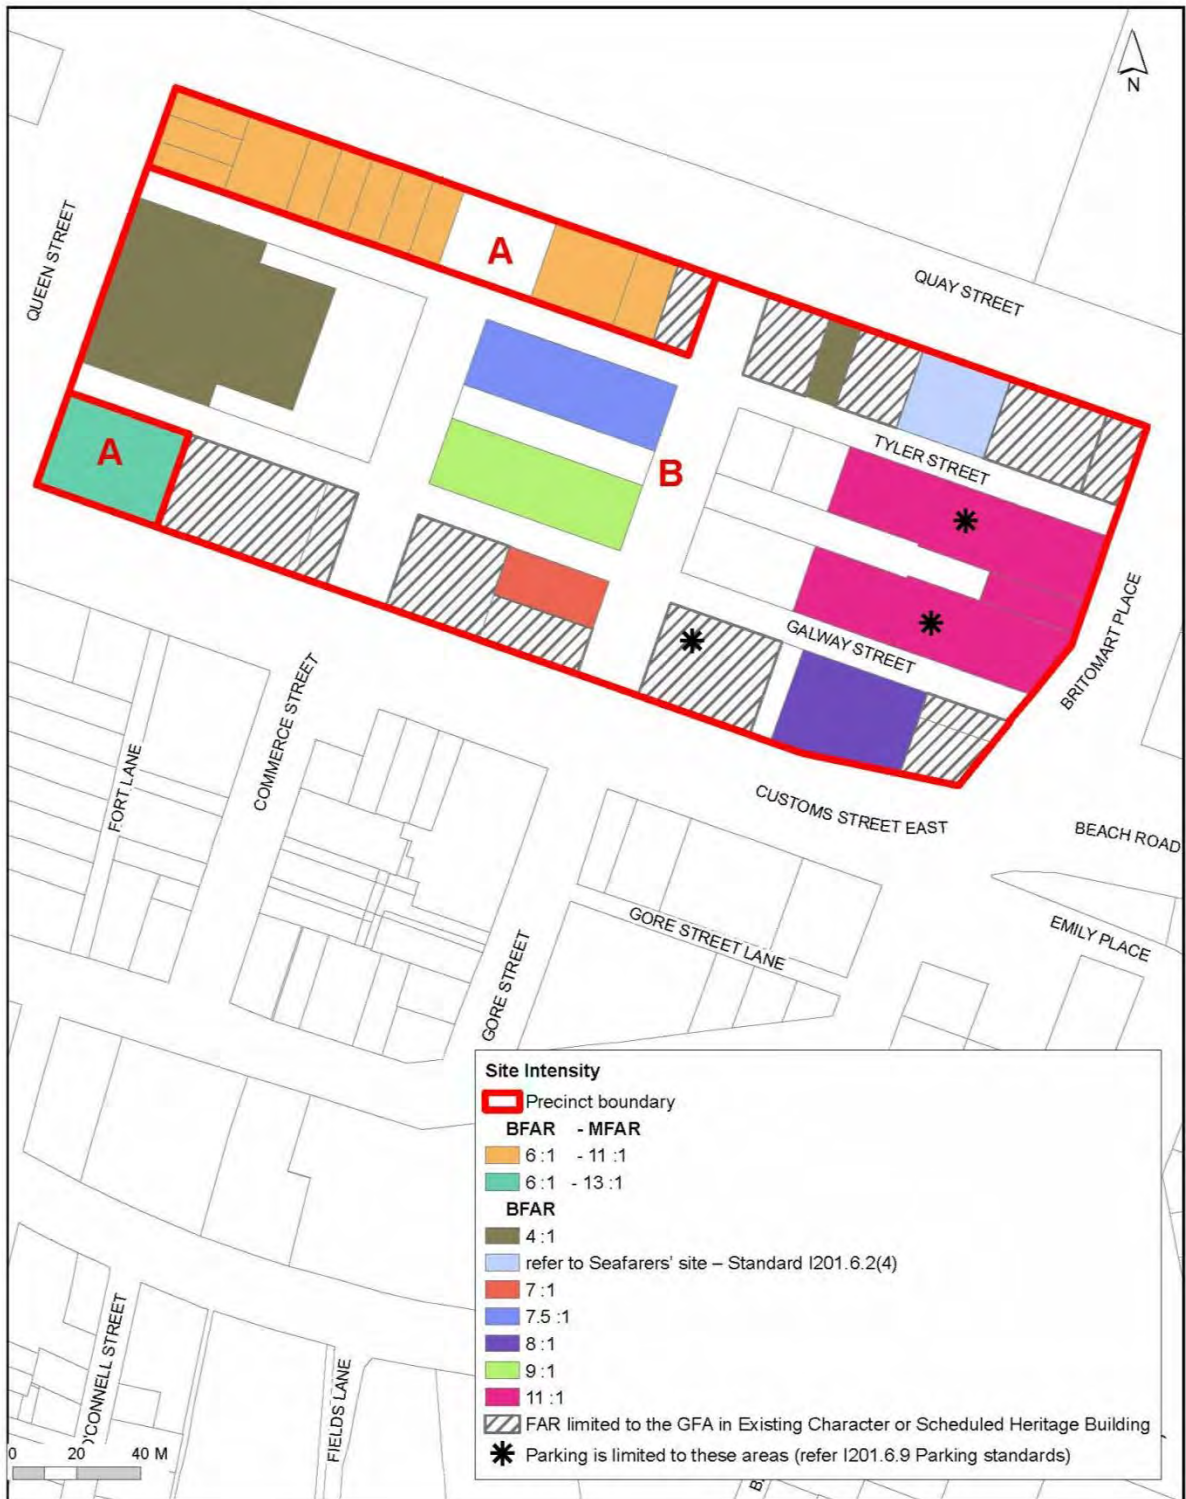

There are no special information requirements in this precinct.

I201.10. Precinct plans

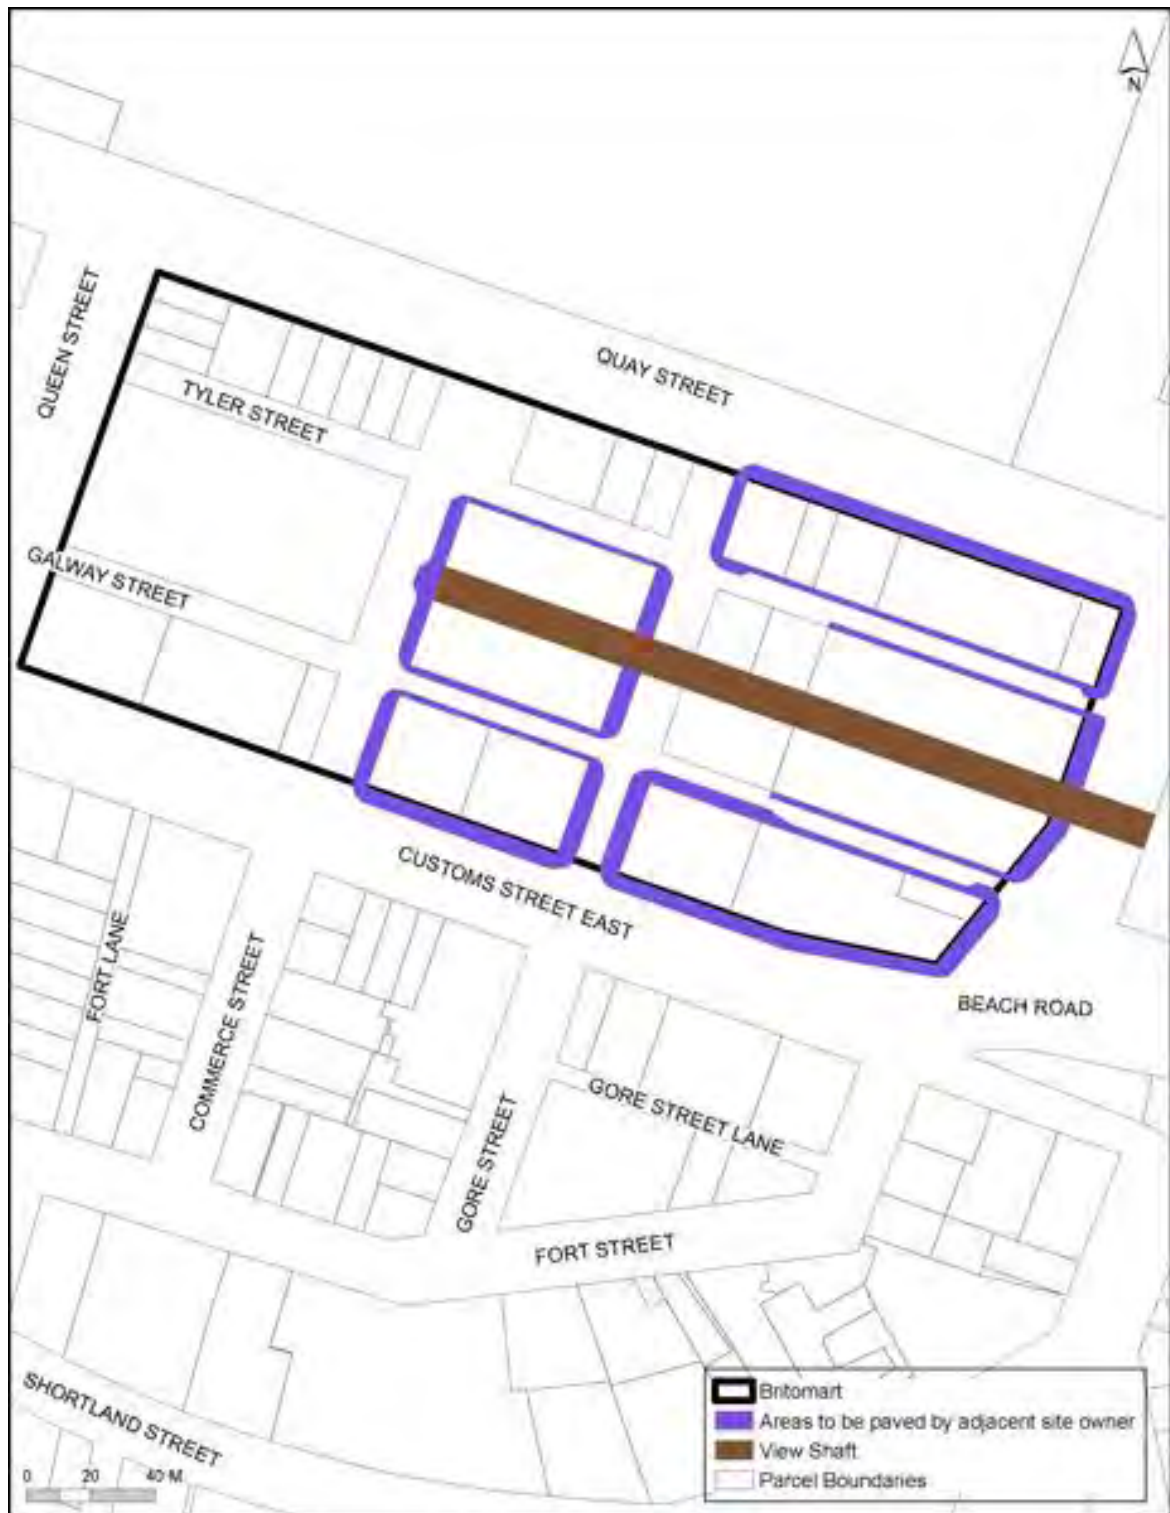

I201.10.1 Britomart Precinct: Precinct plan 1 - Building height

I201.10.2 Britomart Precinct: Precinct plan 2 - Site intensity

I201.10.3 Britomart Precinct: Precinct plan 3 - Paving and viewshafts

1201.10.4 Britomart Precinct: Precinct plan 4 - Public open space

I202. Central Wharves Precinct

I202.1. Precinct description

The zoning of the land within the Central Wharves Precinct is the Business – City Centre Zone and the underlying zoning of the part of the Central Wharves Precinct within the coastal marine area is the Coastal – General Coastal Marine Zone.

The Central Wharves Precinct incorporates the finger wharves between Viaduct Harbour precinct and the Port Precinct, including Princes Wharf, Queens Wharf and Captain Cook Wharf and the adjacent coastal marine area. The extent of the Central Wharves Precinct is shown on Precinct plan 1. Coordinates for the precinct boundary in the coastal marine area are shown on Precinct plan 3.

The precinct is characterised by its active water edge, maritime passenger operations (including cruise ships), marine and port activities, proximity to the city core, and areas of low-rise character buildings.

Captain Cook Wharf currently forms part of the working port infrastructure where public access is necessarily restricted. It may be appropriate to provide for public access and development if this wharf is no longer required for port operations.

The purpose of the precinct is to provide for ongoing use for maritime passenger operations and other marine and port activities, and in parts of the precinct to provide an environment and an appropriate scale of built form for public activities, marine facilities and events, while maintaining public access to the waterfront and providing for sustainable land and coastal management within the precinct.

I202.2. Objectives [rcp/dp]

- (1) A world-class visitor destination that is recognised for its quality buildings, public open spaces, recreational opportunities, marine and port activities and facilities and events.
- (2) Development which is of a medium to low scale on the waterfront which integrates and does not conflict with the scale of development in neighbouring precincts.
- (3) A safe, convenient and interesting environment, which optimises pedestrian and cycling use and connections to the waterfront and to the core central business district, in public areas of the precinct.
- (4) Public wharf space developed and used for predominantly public activities for the benefit of the people of Auckland and visitors while also enabling marine and port activities and maritime passenger operations.
- (5) Adverse effects arising from activities and development are avoided, remedied or mitigated, in an integrated manner across mean high water springs.

The overlay, Auckland-wide, Business – City Centre Zone and Coastal – General Coastal Marine Zone objectives apply in this precinct in addition to those specified above.

I202.3. Policies [rcp/dp]

The policies are as listed in the Coastal – General Coastal Marine Zone for the coastal marine area in the precinct in addition to those specified below, with the exception of Policy F2.5.3(4).

For Captain Cook Wharf, the Business – City Centre Zone Policies H8.3(19)-(23),(25),(30),(34) and (36) apply to land within the precinct in addition to those specified below while the wharf is still being operated by Ports of Auckland Ltd for marine and port activities.

For all other areas in the precinct, and for Captain Cook Wharf when it is available for public use, the Business – City Centre Zone policies apply in addition to those specified below:

- (1) Enable the efficient operation and development of the precinct by providing for activities which have a functional need to locate in or adjacent to the coastal marine area, including maritime passenger operations, marine and port activities and maritime passenger facilities including for the cruise ship industry.
- (2) Enable the use of Captain Cook Wharf for marine and port activities while also:
 - (a) enabling the potential future redevelopment of this wharf for other activities in accordance with the objectives and policies for the Central Wharves Precinct; and
 - (b) enabling public access, events, and associated activities in a manner that does not constrain or conflict with the use of the wharf for marine and port activities.
- (3) Enable a diverse range of activities while:
 - (a) avoiding, mitigating or remedying potential adverse effects in an integrated manner across mean high water springs, including reverse sensitivity effects on marine and port activities and maritime passenger operations; and
 - (b) maintaining and enhancing public access to the water's edge, except where public access must be excluded for safety, security, biosecurity, Customs, maintenance or operational purposes.
- (4) Provide for continued use of all berthage areas adjacent to public open spaces for maritime passenger operations and other marine and port activities.
- (5) Manage building height to:
 - (a) achieve an appropriate scale in relation to the street network and the precinct's prominent waterfront location;
 - (b) provide a sense of intimacy along streets and waterfront public space frontages;

- (c) complement the height enabled in the adjacent Britomart, and Viaduct Harbour precincts; and
 - (d) provide a transition in height between the core city centre and the harbour.
- (6) Encourage the development of a diverse range of high-quality visitor experiences including promenading, coastal recreation and temporary activities.
 - (7) Provide for a network of different-sized public open spaces in key locations along the water's edge to cater for a range of recreational opportunities and provide vantage points.
 - (8) Enable public access and events along Queens Wharf in a manner that does not constrain or conflict with the use of this wharf as a terminal and berthage for maritime passenger operations, cruise ship operations, other visiting non-cargo vessels and public transport facilities.
 - (9) Enable public access, events, and associated activities along Captain Cook wharf in a manner that does not constrain or conflict with the use of the Port Precinct for marine and port activities.
 - (10) Manage the land and coastal marine area to avoid significant adverse effects and avoid, remedy or mitigate other adverse effects on the ecology of the city centre coastal environment.
 - (11) Limit the loss of identified significant public views from the city to the harbour and adjacent landscape features.
 - (12) Enable dredging within the precinct that is necessary to provide for the safe and efficient navigation, manoeuvring, and berthing of vessels, while avoiding, remedying or mitigating any adverse effects.

I202.4. Activity table

Table I202.4.1 Activity table specifies the activity status for land use and development activities pursuant to section 9(3) of the Resource Management Act 1991 and the activity status for works, occupation and use (including dredging) in the coastal marine area pursuant to sections 12(1), 12(2), and 12(3) of the Resource Management Act 1991, or any combination of all of the above sections where relevant.

- (1) The activities in the Coastal – General Coastal Marine Zone apply to the coastal marine area in the Central Wharves Precinct unless otherwise specified in Table I202.4.1 Activity table.
- (2) The activities in the Business – City Centre Zone apply to land in the Central Wharves Precinct unless otherwise specified in Table I202.4.1 Activity table.
- (3) Those activities marked with * have the listed activity status only when that activity is located is on a coastal marine area structure (e.g. a new building on an existing wharf). If that activity is located directly in the coastal marine area (e.g. a new wharf) a different activity status will apply.

- (4) The temporary activities provisions applying to the use of public places within the Business – City Centre Zone as set out in E40 Temporary Activities apply to existing coastal marine area structures within the Central Wharves Precinct.

Table I202.4.1 Activity table

Activity		Activity status	
		CMA [rcp]	Land [dp]
Reclamation, declamation, drainage, deposition and dumping pursuant to section 12(1) of the Resource Management Act 1991			
(A1)	Maintenance or repair of a reclamation or drainage system	P	P

(A39)	Development that does not comply with I202.6.1.10(1)-(3)	NC	NC

I202.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I202.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I202.4.1 Activity table and which is not listed in I202.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I202.6. Standards

I202.6.1. Land and water use standards

The standards in the Coastal – General Coastal Marine Zone apply to the coastal marine area in the Central Wharves Precinct and the standards in the Business – City Centre Zone apply to land in the Central Wharves Precinct unless otherwise specified below, except that:

- (a) the Coastal – General Coastal Marine Zone Standard F2.21.9.4 Parking on coastal marine area structures for loading and unloading passengers and cargo to vessels does not apply to Captain Cook Wharf while it is still operated by Ports of Auckland Limited for marine and port activities; and
- (b) the Auckland-wide Noise rules E25.6.2-E25.6.13; E25.6.23-E25.6.26; E25.6.27-E25.6.29 and E25.6.31; E25.6.32; E25.6.33 do not apply to land and coastal marine area in the Central Wharves Precinct..

I202.6.1.1. Activities on Princes Wharf

- (1) Activities on Princes Wharf must comply with the following in Table I202.6.1.1.1:

Table I202.6.1.1.1 Activities on Princes Wharf

Activity	Maximum gross floor area allowed as a proportion of the overall gross floor area of buildings on Princes Wharf allowed in I202.6.1.8 Site intensity below
Visitor accommodation	30 per cent
Retail	5 per cent
Offices (except the Ports of Auckland building or offices that are accessory to marine and port activities)	10 per cent
Parking buildings and areas	35 per cent

I202.6.1.2. Parking

- (1) The number of parking spaces on Princes Wharf must not exceed 850, of which:
 - (a) at least 60 per cent of the spaces must be for short term parking (non-accessory); and
 - (b) at least five must be loading spaces.
- (2) On Princes Wharf, parking buildings or areas must not locate within 80m of the northern end of the wharf. This rule does not apply to parking associated with marine and port activities or loading associated with a permitted activity.

I202.6.1.3. Maintenance or repair of a lawful reclamation or drainage system

- (1) The work must not change the area occupied by the reclamation or drainage system.
- (2) Any visible disturbance to the substrate of the coastal marine area must be remedied or restored within 48 hours of the completion of the works in ONC, ONF and SEA-M1 overlay areas and within seven days in other areas of the coastal marine area.
- (3) There must be an emergency spill plan in place to address the unforeseen release of contaminants from equipment being used for the activity.
- (4) All equipment and materials must be removed from the foreshore and seabed on the completion of works or activities.
- (5) Written advice must be given to the council at least 10 working days prior to the work starting.

I202.6.1.4. Noise

- (1) These standards do not apply to temporary activities allowed under the E40 Temporary Activities rules.
- (2) These standards do not apply to the operational requirements of commercial vessels including cargo vessel, tugs, passenger liners, naval vessels and commercial fishing vessels operating within the coastal marine area.
- (3) The noise level arising from any activity within the Central Wharves Precinct must not exceed the following:
 - (a) when measured beyond the inner control boundary shown on Precinct Plan 3 in the Port Precinct:

Table I202.6.1.4.1 Noise limits

Time	Noise level
7am – 11pm	65 dB LAeq
11pm to 7am	60 dB LAeq 70 dB Leq at 63 Hz 65 dB Leq at 125 Hz 75 dB LAFmax

I202.6.1.5. Construction noise

- (1) Construction activity within the Central Wharves Precinct must not exceed the noise levels specified in E25.6.28 Construction noise levels in the Business – City Centre Zone and the Business – Metropolitan Centre Zone, when measured 1m from the façade of any building on the south side of Quay Street.

I202.6.1.6. Lighting

- (1) Artificial lighting illuminance associated with marine and port activities must not exceed 150 lux, measured at any point on the site containing the light source, in a horizontal or vertical plane at ground level.

Illumination associated with vehicles, mobile plant, and quay cranes are exempt from this standard.
- (2) Lighting sources associated with marine and port activities must be sited, directed and screened to avoid, as far as practicable, creating a navigation and transport safety hazard.
- (3) Lighting sources associated with marine and port activities must be sited, directed and screened to ensure, as far as practicable, that glare resulting

from the lighting does not cause an unreasonable and appreciable level of discomfort to any persons.

- (4) Lighting sources associated with marine and port activities shall not exceed an added illuminance of 50 lux measured horizontally or vertically at any point on or directly above the kerblines on the southern side of Quay Street.
- (5) Artificial lighting illuminance not associated with marine and port activities must comply with the E24 Lighting rules.

I202.6.1.7. Building height

Purpose: manage the height of buildings to achieve Policy I202.3(5) of the Central Wharves precinct.

- (1) Buildings must not exceed the heights specified on Precinct plan 1.

I202.6.1.8. Site intensity

Purpose: manage the scale, form and intensity of development to maintain the character of Princes Wharf.

- (1) The gross floor area of all buildings on Princes Wharf must not exceed 100,000m².

I202.6.1.9. Public spaces and accessways

Purpose: manage public spaces and accessways to achieve Policy I202.3(9) of the Central Wharves Precinct and Policy H8.3(37) of the Business – City Centre Zone.

- (1) Public accessways must be provided at ground level around the perimeter of Princes Wharf and Queens Wharf. The public accessways must have minimum dimensions as follows:
 - (a) Princes Wharf: 6m
 - (b) Queens Wharf: 10m
- (2) All public accessways within and around Princes Wharf and Queens Wharf must be available to the public at all times except where it is necessary to temporarily restrict access for security, safety or operational needs associated with marine and port activities or temporary events permitted under the Auckland-wide temporary activity rules or by resource consent.
- (3) Buildings or structures must not locate within the accessways. This standard does not apply to verandahs or lawful temporary buildings or structures.

(4) On Princes Wharf:

- (a) a minimum of 35 per cent of the overall wharf deck area must be maintained as external public space. A minimum of 30 per cent of this space must be located at the northern end of the wharf. For a length of 64m, external steps, ramps or landings must be provided to enable access from within the development down to the public areas at wharf deck level; and
- (b) a minimum of 15 per cent of the total gross floor area of the wharf deck level and the first upper level of all buildings must be in the form of internal public spaces and accessways and must include:
 - (i) internal pedestrian access to the northern end of the first upper level of any development, leading to the stairs or ramps required to provide access down to the wharf deck; and
 - (ii) an internal public space of at least 500m² on the first upper level of any development, commencing within 80m of the northern exterior wall, and designed to enable maximum views of the coastal marine area.

I202.6.1.10. Viewshafts

Purpose: manage development to maintain identified public views from the city to the harbour and adjacent landscape features.

- (1) Buildings or structures must not locate within those areas of land identified as viewshafts on Precinct plan 2. This standard does not apply to verandahs, existing buildings or structures, temporary activities, or marine and port accessory structures and services.
- (2) Coastal marine area structures must not locate within or over those parts of wharves and waterspace identified as viewshafts on Precinct plan 2. This standard does not apply to existing coastal marine area structures or their reconstruction, temporary activities, or marine and port accessory structures and services.
- (3) Marine and port facilities that do not comply with I202.6.1.10(1)-(2) above are a restricted discretionary activity.

I202.7. Assessment – controlled activities

I202.7.1. Matters of control

The Council will reserve its control to the following matters when assessing a controlled activity resource consent application:

- (1) maintenance dredging:
 - (a) effects on coastal processes, ecological values and water quality;

- (b) effects on other users of the coastal marine area, navigation and safety;
and
- (c) consent duration and monitoring.

I202.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

- (1) maintenance dredging:
 - (a) whether methods are implemented to avoid, remedy or mitigate the release of contaminated sediment;
 - (b) whether methods are implemented to avoid, remedy or mitigate effects on other users of the coastal marine area, navigation and safety;
 - (c) whether measures are taken to avoid, remedy or mitigate significant adverse effects on sediment quality;
 - (d) whether measures are taken to avoid, remedy or mitigate significant adverse ecological effects; and
 - (e) whether monitoring, including periodic monitoring of sediment quality, is required in order to demonstrate the extent and type of effects of the dredging on water and sediment quality and the degree to which the effects are remedied or mitigated during the activity.

I202.8. Assessment – restricted discretionary activities

I202.8.1. Matters of discretion

The Council will reserve its discretion to all the following matters when assessing a restricted discretionary resource consent application:

- (1) declamation:
 - (a) construction or works methods, timing and hours of construction works;
 - (b) location, extent, design and materials used;
 - (c) effects on coastal processes, ecological values, water quality;
 - (d) effects on public access, navigation and safety;
 - (e) effects on existing uses and activities; and
 - (f) consent duration
- (2) capital works dredging:
 - (a) effects on coastal processes, ecological values, and water quality;

- (b) effects on other users of the coastal marine area, navigation and safety;
and
 - (c) consent duration and monitoring.
- (3) visitor accommodation on Princes Wharf:
 - (d) the matters of discretion in H8.8.1(3) of the Business – City Centre Zone rules apply.
- (4) hard protection structures including wave attenuation devices:
 - (a) location and design of the hard protection structure;
 - (b) effects on navigation and safety;
 - (c) effects on coastal processes including wave hydraulics;
 - (d) construction or works methods, timing and hours of operation; and
 - (e) consent duration and monitoring.
- (5) minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation:
 - (a) form and design of the reclamation;
 - (b) contaminated material;
 - (c) the safe and efficient operation of marine and port activities;
 - (d) identified landscapes or sites of significance to Mana Whenua;
 - (e) construction or works methods, timing and hours of operation; and
 - (f) effects on natural hazards, coastal process, ecological values, water quality.
- (6) observation areas, viewing platforms, boardwalks and boat launching facilities:
 - (a) the matters of discretion in F2.23.1(1) of the Coastal – General Coastal Marine Zone rules apply.
- (7) new buildings, and alterations and additions to buildings not otherwise provided for:
 - (a) the matters of discretion in H8.8.1(1) of the Business - City Centre Zone rules apply; and
 - (b) effects on public access, navigation and safety.
- (8) pile moorings established after the date of notification of this Unitary Plan including occupation and use by the vessel to be moored:

- (a) the matters of discretion in F5.8.1(8) of the Coastal – Minor Port Zone apply.
- (9) permanent refuelling facilities for boats
 - (a) the matters of discretion in F2.23.1(1) of the Coastal – General Coastal Marine Zone apply.
- (10) occupation of the CMCA by an activity that would otherwise be permitted where the area to be occupied is already the subject of an existing occupation consent:
 - (a) the matters of discretion in F2.23.1(1) and F2.23.1(2)(c) of the Coastal – General Coastal Marine Zone apply; and
 - (b) effects on the safe and efficient use, operation and development of the CMCA subject to Ports of Auckland's existing occupation consents.
- (11) noise and construction noise:
 - (a) effects on land uses beyond the precinct;
 - (b) measures to avoid, remedy and mitigate the adverse effects of noise; and
 - (c) operational requirements of the Port of Auckland.
- (12) lighting:
 - (a) effects on adjacent land uses;
 - (b) measures to avoid, remedy and mitigate the adverse effects of lighting; and
 - (c) operational requirements of the Port of Auckland.
- (13) building height:
 - (a) building scale and dominance / visual amenity effects;
 - (b) effects on the current or planned future form and character of the precinct; and
 - (c) pedestrian access and amenity.
- (14) public spaces and accessways:
 - (a) pedestrian access and amenity; and
 - (b) operational requirements.
- (15) marine and port facilities within identified viewshafts:
 - (c) effects on the visual integrity of the identified viewshaft; and
 - (d) operational requirements of the Port of Auckland.

I202.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities:

(1) declamation:

- (a) whether the adverse effects of declamation are avoided, remedied or mitigated in respect of the effects of the final land/water configuration on:
 - (i) the marine environment (including coastal processes, water quality, sediment quality and ecology) of the coastal marine area;
 - (ii) hydrogeology (ground water) and hydrology; and
 - (iii) sediment accumulation and the need for ongoing maintenance dredging of the coastal marine area.
- (b) whether declamation works, including the construction of seawalls, avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated soils and groundwater, and other contaminants;
- (c) whether declamation is located and designed so that the adjacent land area can provide adequate public open space adjacent to, and public access around along the waters edge whether on land or on the adjacent water space.

(2) capital works dredging:

- (a) whether measures are taken to avoid, remedy or mitigate adverse effects on coastal processes, ecological values, and water quality;
- (b) whether effects on other users of the coastal marine area during the dredging are avoided, remedied or mitigated;
- (c) whether consent duration is limited to the minimum duration reasonably necessary for the functional or operational needs of the activity;
- (d) whether monitoring is required in order to demonstrate the extent and type of effects of the dredging, and the degree to which the effects are remedied or mitigated during and after the activity.

(3) hard protection structures including wave attenuation devices:

- (a) whether the location and design of the hard protection structure consider existing activities including marine related industries, other marine activities and/or adjoining residential/coastal activities;
- (b) whether the location and design of the hard protection device consider the effects of wave hydraulics on other users of the coastal marine area and on the adjacent coastline;

- (c) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants.
- (4) minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation:
 - (a) whether reclamation, as far as practicable, mitigates adverse effects through their form and design, taking into account:
 - (i) the compatibility of the design with the location;
 - (ii) the degree to which the materials used are visually compatible with the adjoining coast;
 - (iii) the ability to avoid consequential erosion and accretion, and other natural hazards;
 - (iv) the effects on coastal processes;
 - (v) the effects on hydrology.
 - (b) whether the use of contaminated material in a reclamation is avoided unless it is contained in a way that avoids, remedies or mitigates adverse effects on water quality, aquatic ecosystems and biodiversity;
 - (c) the Council will consider the extent to which the reclamation will affect identified landscapes or sites of significance to Mana Whenua;
 - (d) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants.
- (5) visitor accommodation on Princes Wharf:
 - (e) the assessment criteria in H8.8.2(3) of the Business – City Centre Zone rules apply.
- (6) observation areas, viewing platforms, and boardwalks:
 - (a) the assessment criteria in --clauses F2.23.2(1) and F2.23.2(17) of the Coastal –General Coastal Marine Zone rules apply in addition to the criteria below;
 - (b) the extent to which the design and finish complement and enhance the coastal environment, open spaces and pedestrian linkages.
- (7) new buildings, and alterations and additions to buildings not otherwise provided for:
 - (a) the assessment criteria in H8.8.2(1) of the Business – City Centre Zone rules apply in addition to the criteria below;

- (b) whether effects on public access, navigation and safety are avoided or mitigated.
- (8) new pile moorings established after 30 September 2013 including occupation and use by the vessel to be moored:
 - (a) the assessment criteria in F5.8.2(8) of the Coastal – Minor Port Zone apply.
- (9) permanent refuelling facilities for boats:
 - (a) the assessment criteria in F2.23.2(1) of the Coastal – General Coastal Marine zone apply.
- (10) occupation of the CMCA by an activity that would otherwise be permitted where the area to be occupied is already the subject of an existing occupation consent:
 - (a) the assessment criteria in F2.23.2(1) and F2.23.2(9) of the Coastal – General Coastal Marine Zone apply in addition to the criteria below;
 - (b) whether the actual or potential adverse effects on the safe and efficient use, operation and development of the coastal marine area occupied by Ports of Auckland are avoided.
- (11) noise and construction noise:
 - (a) the extent to which adverse effects on the health and amenity values of people who may be affected are avoided, remedied and mitigated, taking into account the existing noise environment, the frequency and duration of the proposed infringement and the practicality of managing the noise emissions; and
 - (b) the operational requirements of the Port of Auckland.
- (12) lighting:
 - (a) the extent to which adverse effects on the health and amenity values of people who may be affected are avoided, remedied and mitigated, taking into account existing light levels; and
 - (b) the operational requirements of the Port of Auckland.
- (13) building height:
 - (a) building height may be exceeded where it would provide an attractive and integrated roof form that also meets the purpose of the standard;
 - (b) where building height is exceeded, Policy I202.3(5) of the Central Wharves Precinct and Policy H8.3(30) of the Business – City Centre Zone should be considered.
- (14) public spaces and accessways:

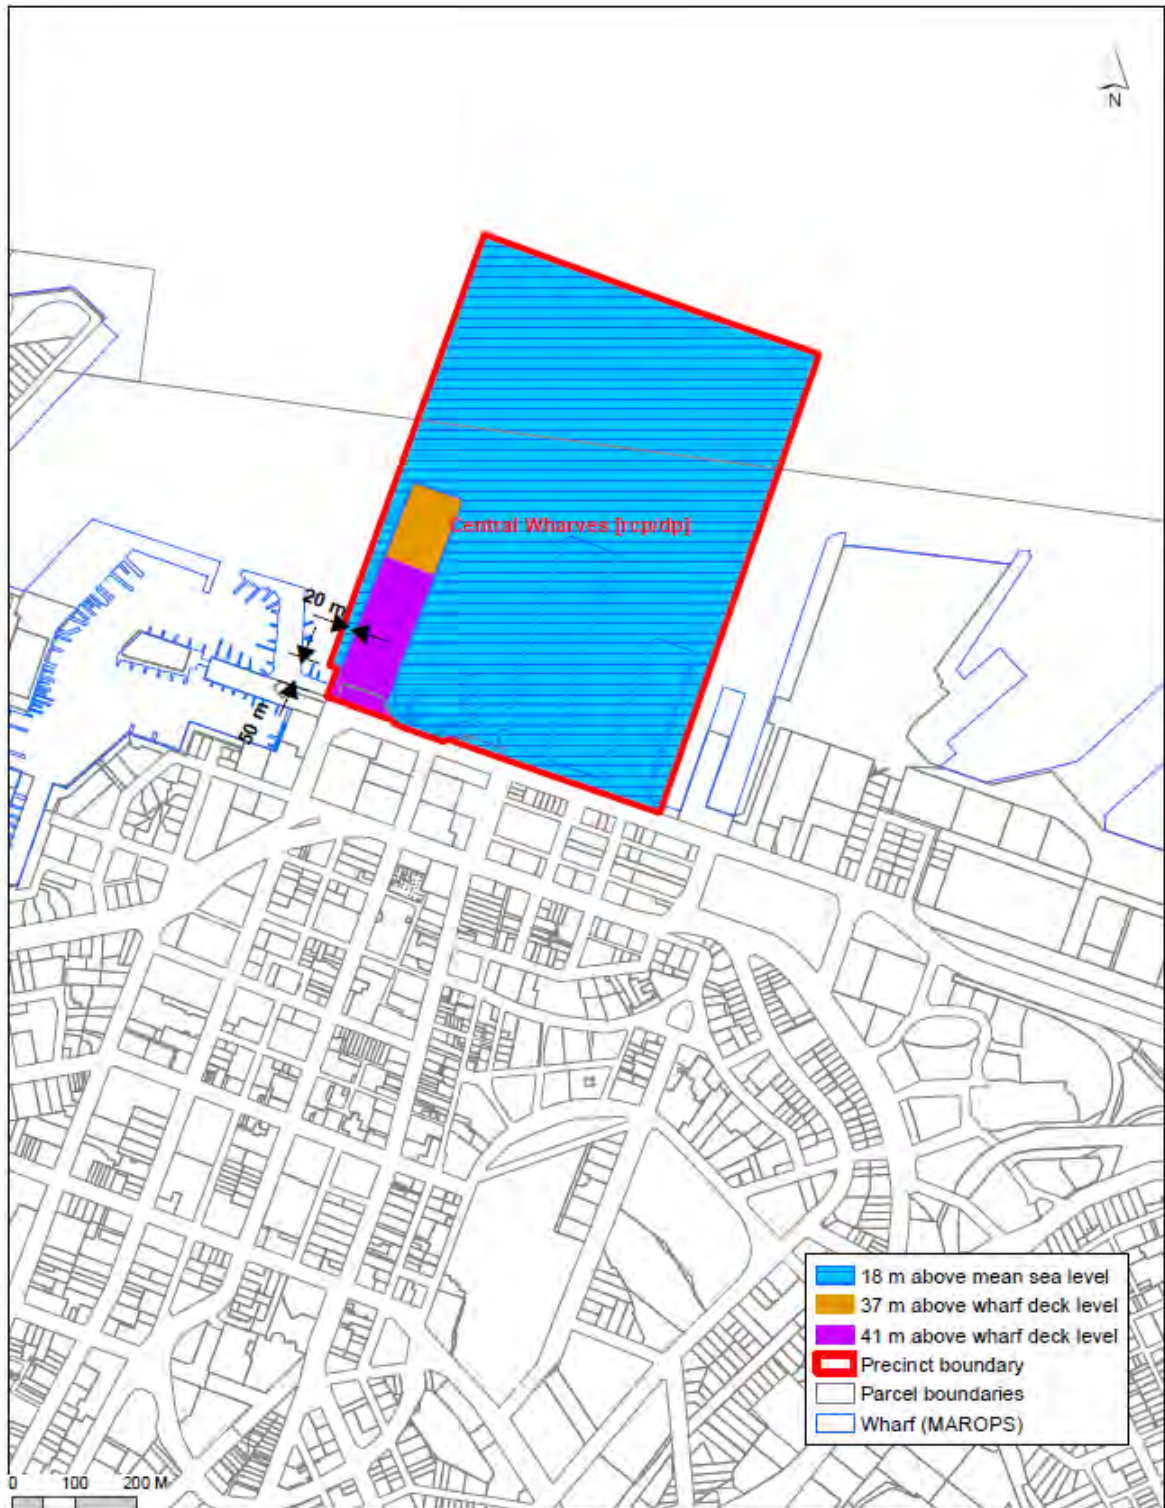

- (a) whether public access to the water's edge is provided;
 - (b) whether operation of marine and port activities are enabled.
- (15) marine and port facilities within identified viewshafts:
- (a) whether the location, number, design and operation of the marine and port facilities limit the loss of identified significant public views from the city to the harbour and adjacent landscape features;
 - (b) the operational requirements of the Port of Auckland.

I202.9. Special information requirements

There are no special information requirements in this section.

I202.10. Precinct plans

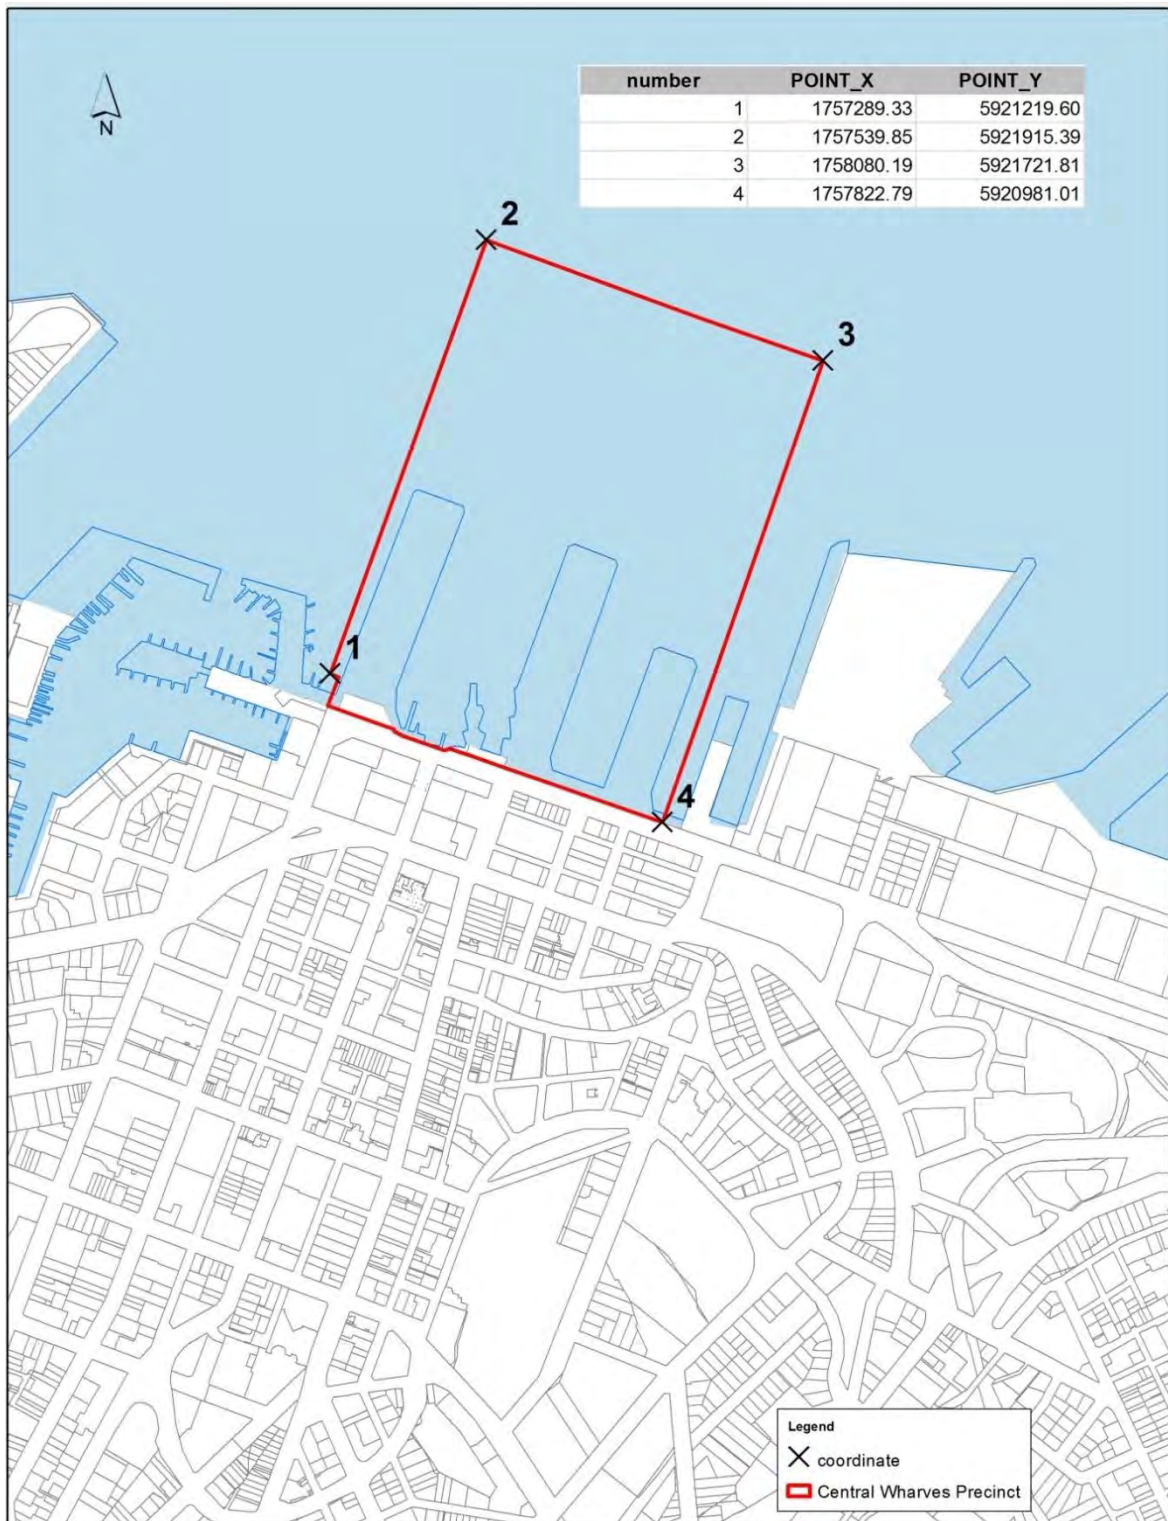

I202.10.1 Central Wharves: Precinct plan 1 - Building heights

I202.10.2 Central Wharves: Precinct plan 2 - Viewshafts

I202.10.3 Central Wharves: Precinct plan 3 - Precinct boundary coordinates in the coastal marine area

I203. City Centre Residential Precinct

I203.1. Precinct description

The City Centre Residential Precinct is applied to areas in the city centre that have a strong residential character and lower noise levels. There are four residential precincts located in the city centre:

- Emily Place/Eden Crescent;
- Whitaker Place;
- Myers Park/Greys Avenue/Day Street; and
- Scotia Place/Poynton Terrace; and

The purpose of the City Centre Residential Precinct is to provide for higher levels of amenity than in other parts of the Business – City Centre Zone. The precinct therefore includes standards relating to activities which have the potential to adversely affect residential amenity, including noise, lighting and hours of operation.

The land in the City Centre Residential Precinct is zoned Business – City Centre Zone and Open Space – Informal Recreation Zone.

I203.2. Objective

- (1) Residential neighbourhoods with a good standard of residential amenity are provided for in the city centre.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I203.3. Policies

- (1) Identify residential precincts in areas that have a significant concentration of residential activity and are generally quieter than other parts of the city centre.
- (2) Avoid the operation of activities that would detract from the residential amenity of the precinct, while recognising the vibrant, mixed-use character of the city centre.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I203.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I203.4.1 Activity table specifies the activity status of land use activities in the City Centre Residential Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I203.4.1. Activity table

Activity		Activity status
Use		
Commerce		
(A1)	Entertainment facilities	RD
(A2)	Food and beverage	RD
Community		
(A3)	Community facilities	RD
(A4)	Emergency services	RD

I203.5. Notification

- (1) Any application for resource consent for an activity listed in Table I203.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I203.6. Standards

There are no standards in this precinct.

I203.7. Assessment – controlled activities

There are no controlled activities in this precinct

I203.8. Assessment – restricted discretionary activities**I203.8.1. Matters of discretion**

The Council will reserve its discretion to all of the following matters when assessing a restricted discretionary resource consent application:

- (1) all activities listed as restricted discretionary in the City Centre Residential Precinct activity table:
 - (a) noise, lighting and hours of operation.

I203.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities:

- (1) noise, lighting and hours of operation:
 - (b) whether activities within the residential precincts generate noise levels that would adversely affect residential amenity and prevent residents from sleeping at night. In particular, whether activities that have excessive amplified music or a high volume of patrons entering and leaving the

premises at night that would disturb neighbouring residents are avoided. In this regard, the Council may impose conditions on the activity's hours of operation and/or permitted levels of low frequency noise; and

- (a) When assessing an application against the above criterion, the Council will consider whether the site is able to internalise any adverse noise or amenity effects, the cumulative effect of clustering activities that may generate adverse effects not in keeping with the residential area and whether adequate visual and/or aural privacy is provided through landscaping/buffer areas and sound insulation.

I203.9. Special information requirements

There are no special information requirements in this precinct.

I203.10. Precinct plans

There are no precinct plans for this precinct.

I204. Cook Street Depot Precinct

I204.1. Precinct description

The Cook Street Depot Precinct is located between Cook, Nelson, Wellesley and Sale streets and is one of the largest individual development sites remaining in the city centre.

The land in the Cook Street Depot Precinct is zoned Business – City Centre Zone.

I204.2. Objectives

- (1) The precinct is planned, designed and developed in an integrated and comprehensive manner, including high-quality buildings, public open spaces, streets, pedestrian and cycle connections, links to public transport networks and supporting infrastructure.
- (2) Existing buildings are used and refurbished prior to comprehensive redevelopment occurring.

The overlay, Auckland-wide and Business – City Centre Zone objectives apply in this precinct in addition to those specified above.

I204.3. Policies

- (1) Enable development in the precinct which includes:
 - (a) built form, public open spaces and infrastructure planned and designed on a comprehensive and integrated land area basis;
 - (b) the consideration of anticipated activities and car parking demand across the precinct; and
 - (c) the efficient and safe operation of public transport and cycling networks.
- (2) Enable refurbishment, alteration and minor additions to existing buildings for a mix of uses, and associated pedestrian access and landscaping that enhances the amenity of the precinct.

The overlay, Auckland-wide and Business – City Centre Zone policies apply in this precinct in addition to those specified above.

I204.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I204.4.1 specifies the activity status of development and subdivision activities in the Cook Street Depot Precinct pursuant to section 9(3) and (11) of the Resource Management Act 1991.

Table I204.4.1. Activity table

Activity		Activity status
Development		
(A1)	New buildings, and alterations and additions to buildings	RD
(A2)	Public open space	RD
(A3)	Roads	RD
(A4)	Pedestrian linkages	RD
Subdivision		
(A5)	Subdivision	RD

I204.5. Notification

- (1) Any application for resource consent for an activity listed in Table I204.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I204.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All restricted discretionary activities listed in Table I204.4.1 Activity table must comply with the following standards.

I204.6.1. Building Height

Purpose: to provide clarification in how maximum height is calculated within the precinct.

- (1) For the purpose of determining compliance with maximum building height in H8.6.2 General building height, the ground level is deemed to be the contours as shown on Cook Street Depot Precinct: Precinct plan 1 – Contours.

I204.7. Assessment – controlled activities**I204.7.1. Matters of control**

There are no controlled activities in this precinct.

I204.8. Assessment – Restricted discretionary activities**I204.8.1. Matters of discretion**

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the

matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (a) new buildings, and alterations and additions to buildings:
 - (i) the matters of discretion in H8.8.1(1) for new buildings and external alterations and additions to buildings not otherwise provided for; and
 - (ii) the location, bulk and scale of buildings relative to overall development, including the layout and design of roads, pedestrian linkages, open spaces, earthworks areas and land contours, and infrastructure location; and
 - (iii) design, bulk and location of buildings;
- (b) subdivision:
 - (i) The matters for discretion set out in E38 Subdivision - Urban under E38.12.1; and
 - (ii) the location, bulk and scale of buildings relative to overall development, including the layout and design of roads, lanes, open spaces, earthworks areas and land contours, and infrastructure location.
- (c) open space:
 - (i) the location, physical extent and design of open space.
- (d) roads:
 - (i) location, physical extent and design of the transport network;
 - (ii) the location and capacity of infrastructure to service the land for its intended use; and
 - (iii) integration of development with neighbouring areas, including integration of the transport network with the transport network of the wider area.
- (e) pedestrian linkages:
 - (iv) the location, physical extent and design of the transport network; and
 - (v) integration of development with neighbouring areas, including integration of the transport network with the transport network of the wider area.

I204.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings:

- (a) the assessment criteria in H8.8.2(1) of the Business – City Centre Zone rules for new buildings and/or alterations and additions to buildings apply; and
 - (b) the proposed building, alteration or addition relative to the location of infrastructure servicing the area and open space should result in an integrated network that is adequate to meet the needs of the overall development area.
- (2) subdivision:
- (a) the assessment criteria set out in E38 Subdivision - Urban under E38.12.2; and
 - (b) the location of infrastructure servicing the area, and open space, should result in an integrated network that is adequate to meet the needs of the overall development area.
- (3) open space:
- (a) layout and design of public open space should meet the demand of future occupants of the site and be of a high quality, providing for public use and accessibility, views, sunlight access and wind protection within the application area; and
 - (b) public open spaces are generally provided in the location(s) identified in the precinct plan to meet the needs of the local community. Where no location is identified, open space should be provided to and located to serve the future needs of the local community.
- (4) roads:
- (a) the transport network (roads, public transport connections, pedestrian connections and cycle connections) provides for an integrated and efficient street and pedestrian network, including connections to existing and future streets and networks.
- (5) pedestrian linkages:
- (a) safe, practical and efficient 24 hour through-site links are encouraged through the block, and will be assessed on whether the through-site link complies with the requirements for through-site links in the Business – City Centre Zone; and
 - (b) the transport network (roads, public transport connections, pedestrian connections and cycle connections) provides for an integrated and efficient street and pedestrian network, including connections to existing and future streets and networks.

I204.9. Special information requirements

There are no special information requirements in this precinct.

I204.10. Precinct plans

I204.10.1 Cook Street Depot Precinct: Precinct Plan 1 – Contours

I205. Downtown West Precinct

I205.1. Precinct description

The Downtown West Precinct is located within the heart of the city centre waterfront, between the established Viaduct Harbour Precinct and regenerating Britomart Precinct. The precinct has a mix of commercial and residential land uses including a major hotel and open spaces.

The block bounded by lower Queen Street, Customs Street West, lower Albert Street and Quay Street is generally held in single ownership and has significant redevelopment potential. Queen Elizabeth Square is legally recognized as a road with pedestrian mall status under the Local Government Act 1974. As such, no zone has been applied to the square. As part of any future development proposal, alternative locations for the square should be investigated and identified, potentially including a combination of both publicly provided open spaces, pedestrian and cycle connections and enhanced through site links within the block.

Council has confirmed approval to sell or lease part of Queen Elizabeth Square to ensure that redevelopment of the block is of the highest 'world class' design quality and the proceeds from the sale of Queen Elizabeth Square are reinvested in new or enhanced downtown public space/s and collectively, these alternative spaces should achieve a better street and open space network than is presently offered within or immediately adjoining the precinct. If the road stop process is approved, the square can be closed and the precinct provisions together with the Business – City Centre Zone objectives, policies and rules will apply.

The land in the Downtown West Precinct is zoned Business – City Centre Zone and Open Space – Informal Recreation Zone.

I205.2. Objectives

- (1) The precinct contains a mix of uses and the form and scale of development is integrated with the core central business district and the waterfront.
- (2) High quality public open space is provided and pedestrian connectivity from the core central business district to the waterfront and from Britomart to the west is enhanced.
- (3) Development recognises the precinct's location as part of Auckland's primary transport centre and supports the transport facilities within and around the precinct.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I205.3. Policies

- (1) Enable and encourage a diverse range of activities within the precinct including residential (including visitor accommodation), commercial, recreational, temporary activities and events.

- (2) Encourage an integrated network of attractive streets, lanes and pedestrian connections to improve pedestrian permeability and accessibility through the precinct and supports the transport interchange function of the area.
- (3) Provide for an interconnected network of high quality public open spaces and publicly accessible spaces which vary in form and function in highly accessible locations within the precinct that are activated by uses around their periphery.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I205.4. Activity table

Table I205.4.1 Activity table – Sub-precinct A and Table I205.4.2 Activity table – Sub-precinct B specifies the activity status of land use activities in the Downtown West Precinct pursuant to section 9(3) of the Resource Management Act 1991.

- (1) The activities listed in the Business – City Centre Zone apply in the Downtown West Precinct except to Area A identified on Precinct plan 1, or otherwise specified in the activity table below.
- (2) The activity status of activities within existing roads, including streets and lanes (including Area A), is the same as for roads.
- (3) If the legal road within Area A or Sub-precinct B on Precinct plan 1 is closed, the area will be classified as Business – City Centre Zone and Downtown West Precinct.

Table I205.4.1. Activity table - Sub-precinct A

Activity		Activity status
(A1)	Activities in Table H8.4.1 Activity table in the H8 Business – City Centre Zone	
(A2)	Development that does not comply with Standard I205.6.2 Pedestrian connections	RD

Table I205.4.2. Activity table - Sub-precinct B

Activity		Activity status
Development		
(A3)	Minor cosmetic alterations to a building that does not change its external design and appearance	P
(A4)	New buildings, and alterations and additions to buildings	RD
(A5)	Open space or through-site links	RD
(A6)	Vehicle, cycle and pedestrian access	RD

(A7)	Development that does not comply with Standard I205.6.2 Pedestrian connections	RD
------	--	----

I205.5. Notification

- (1) Any application for resource consent for an activity listed in Table I205.4.1. Activity table - Sub-precinct A and Table I205.4.2. Activity table - Sub-precinct B above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I205.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All permitted and restricted discretionary activities listed in Table I205.4.1. Activity table - Sub-precinct A and Table I205.4.2. Activity table - Sub-precinct B must comply with the following standards.

I205.6.1. Area A

- (1) When the legal road within Area A on Downtown West: Precinct plan 1 or the legal road within Sub-precinct B is closed, the standards applying to the adjoining land within the precinct will apply except that Standard H8.6.3 Admission of sunlight to public places does not apply to a building up to 19 metres above mean street level within Area A on Downtown West: Precinct plan 1. The minimum frontage height (19 metres) does apply between points A and B as shown on the Downtown West: Precinct plan 1.

I205.6.2. Pedestrian connections

- (1) Upon the erection of any new building on either of the blocks between Lower Queen Street and Lower Hobson Street, and unless already provided, an at-grade, east-west pedestrian connection across the block must be provided, and must achieve the following:
 - (a) provide straight pedestrian routes between streets, with a clear pedestrian movement width of at least 5 metres;
 - (b) protect pedestrians from the weather;
 - (c) incorporate natural daylight through glazed canopies of glazed roof structures;
 - (d) be publicly accessible 24 hours a day, 7 days a week; and
 - (e) incorporate active uses at ground floor level framing the pedestrian connection;

Purpose: To support the transport interchange function of the area by facilitating clear and unobstructed pedestrian movement through the precinct at-grade.

Note: The above requirement applies only to the development site, and accordingly it is acknowledged that the laneway may be developed incrementally, particularly across the block bounded by Lower Albert Street, Customs Street West, Lower Hobson Street and Quay Street.

- (2) Redevelopment of the block between Lower Queen Street and Lower Albert Street must include an at-grade, north-south pedestrian laneway connection between Customs Street West and Quay Street.

Purpose: To support pedestrian movement between the City Centre Core and the waterfront.

- (3) Redevelopment of the block between Lower Albert Street and Lower Hobson Street must include an at-grade, north-south pedestrian laneway connection between Customs Street West and Quay Street, being generally aligned with Federal Street.

Purpose: To support pedestrian movement between the City Centre Core and the waterfront.

I205.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I205.8. Assessment – restricted discretionary activities

I205.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings:
- (a) the matters of discretion in H8.8.1(1) for new buildings and external alterations and additions to buildings not otherwise provided for; and
 - (b) the location, bulk and scale of buildings relative to overall development, including the layout and design of roads, pedestrian linkages, open spaces, earthworks areas and land contours, and infrastructure location; and
 - (c) design, bulk and location of buildings;
- (2) open spaces or through-site links
- (a) the location, physical extent and design of the transport network;
 - (b) the location, physical extent and design of open space;
 - (c) integration of development with neighbouring areas, including integration of the transport network with the transport network of the wider area; and

- (d) layout and design of public open space should meet the demand of future occupants of the site and be of a high quality, providing for public use and accessibility, views, sunlight access and wind protection within the application area.
- (3) vehicle, cycle and pedestrian access and circulation:
 - (a) the location, physical extent and design of the transport network; and
 - (b) integration of development with neighbouring areas, including integration of the transport network with the transport network of the wider area;
- (4) infringing the pedestrian connections standard:
 - (a) functional, safe, and convenient pedestrian access between Lower Queen Street and Lower Hobson Street, and between Customs Street West and Quay Street.

I205.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings:
 - (b) the assessment criteria in H8.8.2(1) of the Business - City Centre zone rules for new buildings and/or alterations and additions to buildings apply.
 - (c) the proposed building, alteration or addition relative to the location of infrastructure servicing the area and open space should result in an integrated network that is adequate to meet the needs of the overall development area;
- (2) open spaces or through-site links:
 - (a) the transport network (roads, public transport connections, pedestrian connections and cycle connections) is generally provided in the location identified in the precinct plan to achieve a legible street network. Where no location is identified, an integrated and efficient street and pedestrian network should be provided, including connections to existing and future streets and networks;
 - (b) public open spaces are generally provided in the location(s) identified in the precinct plan to meet the needs of the local community. Where no location is identified, open space should be provided to and located to serve the future needs of the local community; and
 - (c) layout and design of public open space should meet the demand of future occupants of the site and be of a high quality, providing for public use and accessibility, views, sunlight access and wind protection within the application area.

(3) vehicle, cycle and pedestrian access and circulation:

- (a) the transport network (roads, public transport connections, pedestrian connections and cycle connections) is generally provided in the location identified in the precinct plan to achieve a legible street network. Where no location is identified, an integrated and efficient street and pedestrian network should be provided, including connections to existing and future streets and networks;

(4) infringing the pedestrian connections standard:

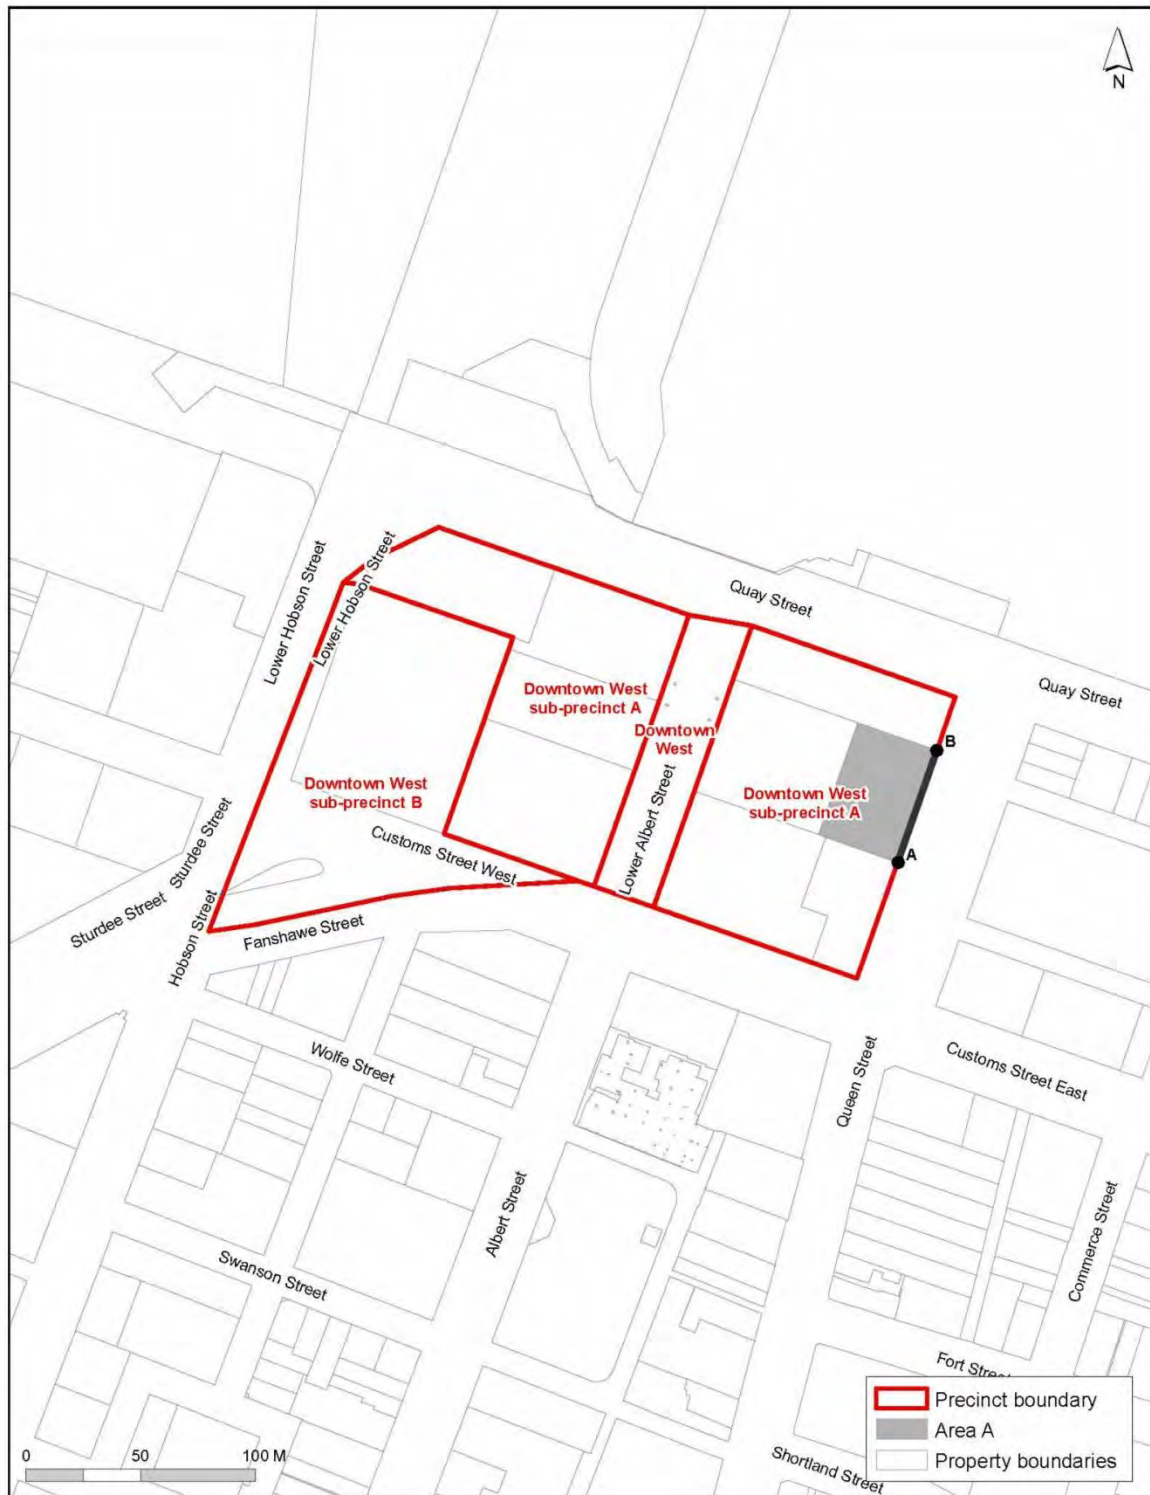

- (a) whether development that infringes the pedestrian connection standard demonstrates that:
 - (i) there is a safe, legible and direct link through the block;
 - (ii) the width of the lane or link is sufficient to provide a functional connection between the adjoining streets;
 - (iii) there is adequate provision for pedestrian movement in support of existing east-west options, and in support of the transport interchange function of the area; and
 - (iv) north-south pedestrian movement options are increased through blocks in support of pedestrian flows between the City Centre core and the waterfront, with a focus on the quality and interest provided through and along those routes.
- (b) consistency with the planned future form and character of the Downtown Precinct:
 - (i) where the pedestrian connection standard is infringed, whether the proposal demonstrates that Policies I205.3(2) and I205.3(3) above are met.

I205.9. Special information requirements

There are no special information requirements in this precinct.

I205.10. Precinct plans

I205.10.1 Downtown West Precinct: Precinct plan 1 – Extent of sub-precincts A and B, and Area A

I206. Karangahape Road Precinct

I206.1. Precinct description

The Karangahape Road Precinct seeks to maintain and enhance the area's distinctive built form and streetscape character. This distinctive character is derived from its:

- ridge top location, orientation and aspect;
- concentration of historic heritage and special character buildings and features; and
- diverse and multi-cultural mix of activities.

Built form and the street frontages of buildings are significant components of the precinct's character. While there is disparity in the age and detail of the frontages, there is an overall coherence. The design and appearance of building frontages is controlled to require new and altered buildings to be sympathetic to the existing qualities and character of the area.

Building form and scale in the precinct is controlled to maintain the spatial integrity of the street and the quality of street-level amenity where the east-west orientation of Karangahape Road enables good standards of sunlight penetration and contributes to the amenity of the area. These attributes are maintained by the frontage control applied to specific sites identified within the precinct and by the maximum height controls applied within and adjacent to the precinct through the general standards

The land in the Karangahape Road Precinct is zoned Business – City Centre Zone.

I206.2. Objectives

- (1) The distinctive built form and streetscape character of the Karangahape Road Precinct is maintained and enhanced.

The overlay, Auckland-wide and Business – City Centre Zone objectives apply in this precinct in addition to those specified above.

I206.3. Policies

- (1) Require building design to respect the form, scale and architecture of scheduled historic heritage places and special character buildings in the Karangahape Road Precinct.
- (2) Maintain the precinct's character and architectural style by requiring new buildings to be compatible in style, including scale, material, colour and detailing.
- (3) Require proposals for new buildings or additions to existing buildings adjoining or adjacent to scheduled historic heritage places or special character buildings to be sympathetic and provide contemporary and high-quality design which enhances the precinct's built form and streetscape character.
- (4) Require new buildings to be built to the street and manage height and building setbacks above street frontages in a manner that:

- (a) respects the general scale and form of existing buildings and avoids adverse dominance effects;
- (b) enhances the street environment for pedestrians by reducing down-drafts and wind tunnel effects, and maintains sunlight and daylight access to the street; and
- (c) contributes to the continuity of pedestrian interest and vitality.

The overlay, Auckland-wide and Business – City Centre Zone policies apply in this precinct in addition to those specified above.

I206.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I206.4.1 Activity table specifies the activity status of development activities in the Karangahape Road Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I206.4.1. Activity table

Activity		Activity status
Development		
(A1)	Minor cosmetic alterations to a building that does not change its external design and appearance	P
(A2)	New buildings, and alterations and additions to buildings not otherwise provided for	RD
(A3)	Development that does not comply with Standard I206.6.1 Frontage height and setback	NC

I206.5. Notification

- (1) Any application for resource consent for an activity listed in Table I206.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I206.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

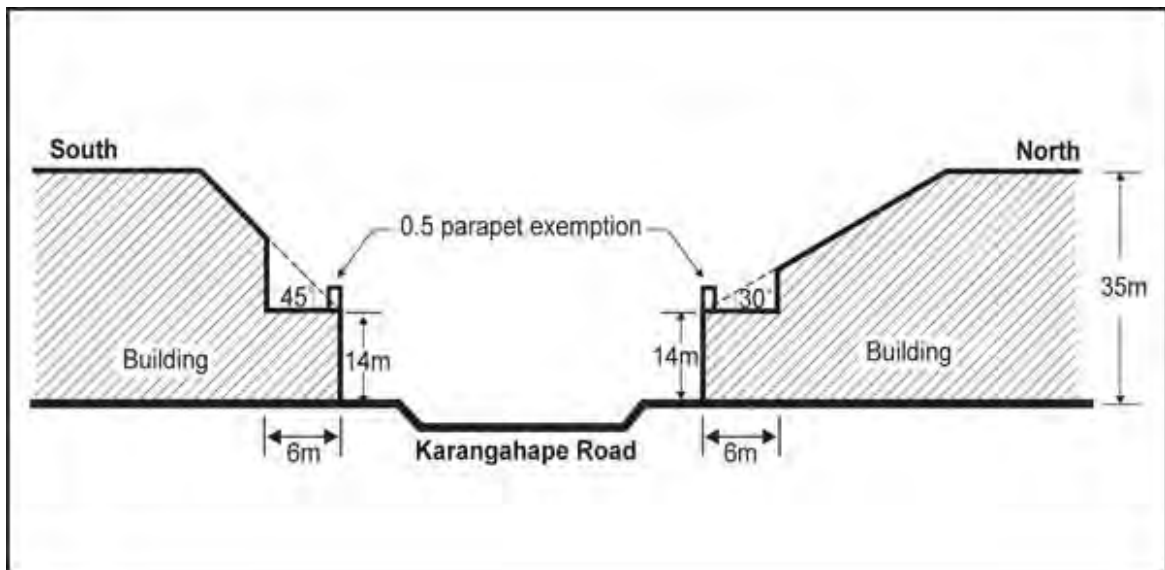

All permitted and restricted discretionary activities listed in Table I206.4.1 Activity table must comply with the following standards.

I206.6.1. Frontage height and setback

Purpose: manage the scale of development to maintain and enhance pedestrian amenity, and to avoid buildings dominating public open space.

- (1) For frontages shown in Precinct plan 1 - Frontage height and setback, buildings must:
 - (a) adjoin the site frontage for its entire length excluding vehicle and pedestrian access areas;
 - (b) not have a building frontage that exceeds 14m in height above mean street level; and:
 - (i) where the building is located on the southern side of Karangahape Road, not project beyond a 45 degree recession plane measured at all points along the site frontage from 14 metres above mean street level; or
 - (ii) where the building is located on the northern side of Karangahape Road, not project beyond a 30 degree recession plane measured at all points along the site frontage from 14 metres above mean street level.
- (2) I206.6.1(1) above does not apply to towers, turrets or similar structures located on a corner site at the intersection of Karangahape Road and the following roads: Queen Street, Upper Queen Street, Pitt Street, Mercury Lane, East Street, and West Terrace.
- (3) Towers, turrets or similar structures located on a corner site at the intersection of Karangahape Road and the following roads: Queen Street, Upper Queen Street, Pitt Street, Mercury Lane, East Street, and West Terrace must not:
 - (a) exceed the maximum height by more than 5 metres;
 - (b) exceed an area of 18m²;
 - (c) exceed a horizontal dimension of 4 metres measured along the site frontage; and
 - (d) contain signs at a height greater than 12.5 metres above mean street level.

Figure I206.6.1.1 Karangahape Road frontage height and setback

I206.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I206.8. Assessment – restricted discretionary activities

I206.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings not otherwise provided for:
 - (a) building design and external appearance.

I206.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings not otherwise provided for:
 - (a) building design and external appearance - creating a positive frontage:
 - (i) whether buildings are designed to address and align to the street boundary. Minor modulation and variance of the frontage such as recessed pedestrian entrances is encouraged to avoid architectural monotony;

(b) building design and external appearance - variation in building form/visual interest:

(i) whether building levels incorporate design elements which acknowledge the existing human scale and character of the precinct.

In particular:

- whether frontage height and design have regard to existing buildings in the vicinity and to maintain a consistent scale. This does not mean a rigid adherence to a single height but it does mean a respect for the general scale of the surrounding buildings to avoid dominance;
 - whether the design of building frontages include vertical and horizontal details that avoid dominance of frontage design elements larger than historically present. Where existing sites are amalgamated, whether the frontage design has regard to the existing grain of development and convey a residual sense of the original subdivision pattern;
 - whether the consistency of the existing character in a cohesive streetscape is maintained with the design of new buildings acknowledging the scale, sense of proportion and level of intricacy of detail on neighbouring buildings in the precinct;
 - whether the design of the ground level contribute to the continuity of pedestrian interest and vitality. However, frontages entirely of glass (curtain walling or continuous shopfront glazing) or of solid materials (including roller shutter doors of any size), should not be used at street level as they detract from the streetscape. Where feasible, restoration of original ground level detail should be included in plans for buildings adjoining historic heritage buildings or for alterations to historic heritage buildings;
 - at upper levels, whether large expanses of glass or blank walls are avoided. This will tend to favour solid walls penetrated by a pattern of windows above verandah level, articulation of floor levels and an appropriate treatment of the parapet level;
- (ii) whether the design of upper setback levels relate naturally to the lower frontage height levels in an acceptable architectural manner such as continuation of an elevational rhythm or recognisable visual theme or proportions;
- (iii) whether the design of buildings on corner sites and at the terminus of significant axial views use special features to accentuate focus and should have a landmark quality which can be easily identified from many directions, creating a sense of place;

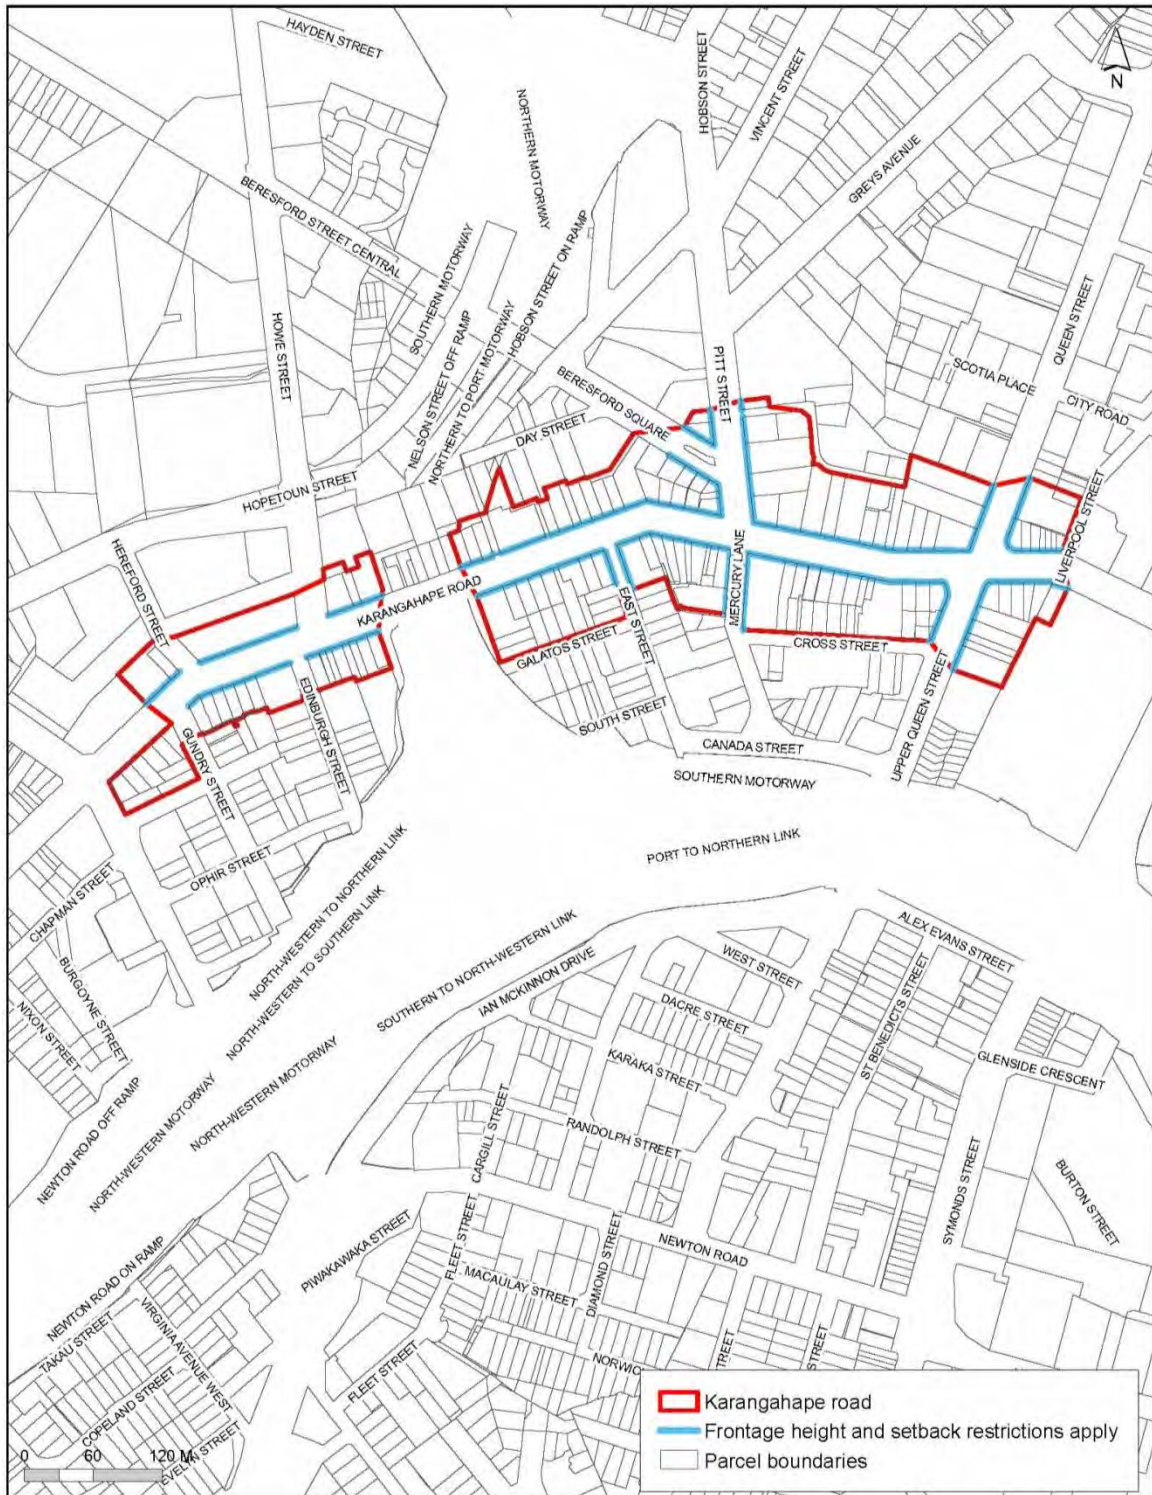

- (iv) whether signs and logos on frontages and fasciae are carefully integrated and visually clear so that they are unobtrusive and sympathetic with the architectural pattern of the buildings;
- (c) building design and external appearance - materials and finishes:
 - (i) whether materials, decoration and colour used for the exterior of new buildings or for alterations to the frontage of existing buildings have regard to existing buildings. New and contemporary interpretations in form and details may be used; and
 - (ii) whether frontage colour integrates with the existing vibrant streetscape, with colour considered as a whole, integrating under-verandah shop fronts with the frontage above. A frontage may be unified through the use of subdued colours or be given a sense of individuality by emphasising architectural features in contrasting colour.

I206.9. Special information requirements

There are no special information requirements in this precinct.

I206.10. Precinct plans

1206.10.1 Karangahape Road: Precinct plan 1 - Frontage height and setback

I207. Learning Precinct

I207.1. Precinct description

The Learning Precinct is centred on the Symonds Street ridge where the University of Auckland and Auckland University of Technology have the majority of their properties and have created a tertiary education hub. The location and extent of the Learning Precinct is shown on Precinct plan 1. The Learning Precinct contains Sub-precinct A which specifically addresses parking controls for the University of Auckland land and Sub-precinct B, as shown in Precinct plan 5, which contains the Old Government House site.

The land in the Learning Precinct is zoned Business – City Centre Zone and Open Space – Conservation Zone.

The purpose of the Learning Precinct is to ensure the stimulation of education, research, business and cultural experiences by identifying key actions to enhance economic and social benefits to the city, add value and vitality to the central business district and raise awareness of opportunities for learning in the precinct.

The Council intends the precinct to remain the focus of the tertiary education sector in the city centre, with development retaining and enhancing the particular qualities of the location. The council acknowledges that further expansion will be necessary within the precinct, but has also made provision for education activities outside the precinct, subject to relevant standards. The precinct includes other activities such as offices, residential, retail and food and beverage.

The precinct is one of the most significant destinations in the city, with a large number of students and workers travelling to the area daily. This will increase over time as the University of Auckland consolidates its campuses into the central city.

The physical characteristics of the precinct include historic heritage places, and parks and gardens around the campuses.

Sub-precinct B: Old Government House

The Old Government House sub-precinct is located at the corner of Princes Street and Waterloo Quadrant. The land forms part of the University of Auckland complex. The buildings located on the site include the MacClaurin Chapel, the old gate keeper's cottage, and Old Government House.

The Old Government House Grounds, whilst in private ownership, are available for public use and provide a key open space within the city centre and in particular the University. The amenity of the area contrasts with the intensity of the surrounding building form.

The purpose of this sub-precinct is to ensure that the grounds remain predominantly an open space for passive recreation. As a result the range of activities allowed in this precinct is limited to education and associated activities. A number of features included within the grounds have been scheduled for protection.

I207.2. Objectives

The overlay, Auckland-wide and Business – City Centre Zone objectives apply in this precinct in addition to those specified below:

- (1) Tertiary education and related activities are enabled to allow for growth and change within the precinct.
- (2) Campus buildings appropriate to education needs are developed to:
 - (a) respect and enhance the built character of the precinct;
 - (b) incorporate high-quality urban design; and
 - (c) avoid or mitigate adverse effects associated with development.
- (3) The predominance of existing tertiary education and accessory activities which characterise the precinct is continued while also providing for growth, change and diversification of activities over time.
- (4) Heritage values including historic heritage places, Māori sites of significance and notable trees, and the contribution they make to the precinct's character, are recognised, protected and enhanced.
- (5) Open spaces and pedestrian connections from the precinct to the wider city centre, including connections between activities and open spaces, are provided for and enhanced.
- (6) The transportation demands of the precinct are provided for and travel demand planning and operations are used to manage their effects on traffic and pedestrians on campuses.

Objective for Sub-precinct B: Old Government House

The overlay, Auckland-wide and Open Space – Conservation Zone objectives apply in this precinct in addition to the objective specified below:

- (7) Education and related activities are enabled.

I207.3. Policies

The overlay, Auckland-wide and Business – City Centre Zone policies apply in this precinct in addition to those specified below.

- (1) Enable a range of tertiary education activities and ancillary activities to occur within the precinct and recognise the functional requirements for those activities.
- (2) Support the efficient operation of the existing campuses while respecting, and where appropriate protecting, the particular built form, amenity and heritage values which contribute to the character of the precinct.

- (3) Provide for the growth and development of the existing campuses to meet existing needs and respond to future demand and changes in teaching, learning, research requirements and campus environments.
- (4) Require new buildings to be designed in a manner that respects existing buildings, provides for amenity, protects heritage values and, where appropriate, enhances the streetscape and gateway locations of the campuses.
- (5) Require new buildings to interface appropriately with the public realm by encouraging building frontages and activities to interact with the street and other public places.
- (6) Limit building height so that it is appropriate to its location, and:
 - (a) enhances and defines the landform;
 - (b) is generally consistent with the adjoining urban form and supports a distinctive urban form; and
 - (c) maintains views across the ridge from buildings in the core central business district.
- (7) Require proposals for new buildings or additions to existing buildings adjoining or adjacent to scheduled historic heritage places to be sympathetic and provide contemporary and high-quality design which enhances the precinct's built form.
- (8) Enable appropriate community use of the educational and research facilities, buildings and campus open spaces.
- (9) Require development to maintain and provide a varied network of key pedestrian connections, open space, and plazas within the campuses, consistent with education activities and campus operations.
- (10) Require pedestrian connections to be well-designed, safe, and improve connectivity for all users.
- (11) Require development to incorporate integrated transport planning that:
 - (a) promotes and enhances opportunities for bicycle and public transport
 - (b) avoids adverse traffic effects on pedestrian safety and amenity
 - (c) limits the amount of car parking in recognition of the limited carrying capacity of the road network and the desirability of maintaining the pedestrian-oriented character of the campuses
 - (d) recognises and provides for some roads within and adjoining the campuses.

Policy Sub-precinct B: Old Government House

The overlay, Auckland-wide and Open Space - Conservation Zone policies apply in this precinct in addition to the policy specified below.

- (12) Enable a range of education activities and accessory activities to occur within the Old Government House Grounds precinct

I207.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I207.4.1 Activity table specifies the activity status of land use and development activities in the Learning Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I207.4.1. Activity table - Learning Precinct including Sub-precinct A

Activity		Activity status
Residential		
(A1)	Boarding houses	P
(A2)	Dwellings	P

(A26)	New buildings, relocation of buildings, and alterations and additions to buildings not otherwise provided for	RD
(A27)	Minor cosmetic alterations to a building that does not change its external design and appearance	P
(A28)	Internal alterations to existing buildings	P
(A29)	Conversion of a building or part of a building to dwellings, visitor accommodation or boarding houses	C
(A30)	The transfer and utilisation of unrealised parking within Sub-precinct A complying with Standard I207.6.1	RD
(A31)	Development that does not comply with Standard I207.6.1	NC

Table I207.4.2 Activity table specifies the activity status of land use and development activities in the Learning Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Activities in the Open Space - Conservation Zone apply in Sub-precinct B Old Government House Grounds unless otherwise specified in the activity table below.

Table I207.4.2. Activity table - Sub-precinct B Old Government House

Activity		Activity status
Community		
(A32)	Tertiary education facilities	P
(A33)	Temporary activities	P
Development		
(A34)	Storage and maintenance building - not exceeding 50m ²	P

I207.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I207.4.1. Activity table - Learning precinct including Sub-precinct A above will be considered without public or limited notification or the need to obtain written

approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.

- (2) Any application for resource consent for an activity listed in Table I207.4.1. Activity table - Learning precinct including Sub-precinct A above and which is not listed in I207.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I207.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All permitted, controlled and restricted discretionary activities listed in Table I207.4.1 Activity table – Learning Precinct including Sub-precinct A and Table I207.4.2 Activity table - Sub-precinct B Old Government House must comply with the following standards.

I207.6.1. Parking

- (1) The total number of parking spaces within Sub-precinct A must not exceed 2000.
- (2) Where a site is located within Sub-precinct A and is accessed from either Grafton Road or Alten Road, an application for a restricted discretionary activity may be made to transfer to the recipient site the unrealised permitted parking from any other site or sites within Sub-precinct A held in the same ownership as the recipient site. Any transferred parking may be provided in addition to the amount of parking permitted on the recipient site in respect of any building or buildings erected on, or proposed for that site.
- (3) The unrealised permitted parking able to be transferred from the donor site, is the difference between the amount of parking permitted on the donor site and the amount actually provided, but only if the number of parking spaces provided on the donor site is less than that permitted.
- (4) For the purpose of monitoring the total number of parking spaces a register must be maintained by the council and the following must be recorded in it:
 - (a) the address and legal description of the donor and recipient sites;
 - (b) the number of parking spaces transferred to the recipient site and/or retained on the donor site; and
 - (c) the date of the consent permitting a transfer.

I207.6.2. Temporary activities in Sub-precinct B

The following standards apply to Sub-precinct B.

- (1) Temporary activities must be limited to functions and ceremonies.
- (2) Temporary activities can include temporary structures associated with functions and ceremonies including the erection of tents and marquees that meet the following:
 - (a) for up to 12 consecutive days and up to six times in a calendar year;
 - (b) not involving ground disturbance of more than 500mm; and
 - (c) includes storage and maintenance building not exceeding 50m².

I207.6.3. Building height

Purpose: manage the height of buildings to achieve Policy I207.3(6) of the Learning Precinct.

- (1) Buildings must not exceed the heights specified on Precinct plan 1.
- (2) Building height will be measured as the vertical distance between mean street level and a horizontal plane above that level for sites where no contour applies on Precinct plan 3. For all other sites on Precinct plan 3, building height will be measured in accordance with H8.6.8 Measuring building.
- (3) No additional height is permitted for buildings within the area shown on Precinct plan 1 as “existing buildings only”.

I207.6.4. Frontage Height and Setback

Purpose: manage the scale of development to maintain and enhance pedestrian amenity, and to avoid buildings dominating public open space.

- (1) On every frontage shown as “A” on Precinct plan 4:
 - (a) the building frontage must not exceed a height of 20m for a minimum depth of 10m from the site frontage;
 - (b) the building must not project beyond a 50 degree recession plane measured at all points along the site frontage from 20m above street level;
 - (c) the building setback must be an emphatic or a stepped profile of at least two stories and must not be a literal regression of the 50 degree angle; and
 - (d) where the building is on a corner site, the requirements of clauses I207.6.4(1)(a) and (b) above apply to both frontages.
- (2) On every frontage shown as “B” on Precinct plan 4:
 - (a) the building frontage must not exceed a height of 30m for a minimum depth of 10m from the site frontage.
- (3) On every frontage shown as “C” on Precinct plan 4:
 - (a) the building frontage must not exceed a height of 15m for a minimum depth of 15m from the site frontage;

- (b) the building must not project beyond a 45 degree recession plane measured at all points along the site frontage of the site from 15m above street level;
 - (c) the building setback must be an emphatic or a stepped profile of at least two stories and must not be a literal regression of the 45 degree angle;
 - (d) Where the building is on a corner site, the requirements of clauses I207.6.4(3)(a) and (b) above apply to both frontages.
- (4) On every frontage shown as “D” on Precinct plan 4:
- (a) the building frontage must not exceed a height of 35m for a minimum depth of 10m from the site frontage.
- (5) On every frontage shown as “E” on Precinct plan 4:
- (a) the building frontage must not exceed a height of 41.623m (Lands and Survey Datum (MSL) Auckland 1946) for a minimum depth of 15m from the site frontage

Figure I207.6.4.1 Frontage control A

Figure I207.6.4.2 Frontage control B

Figure I207.6.4.3 Frontage control C

Figure I207.6.4.4 Frontage control D

Figure I207.6.4.5 Frontage control E

I207.6.5. Wynyard Street Coverage and Pedestrian Link

Purpose: manage the scale, form and intensity of development to maintain and enhance pedestrian amenity within the precinct.

- (1) For areas shown on Precinct plan 1 as being subject to the “Wynyard Street coverage and pedestrian link control”:
 - (a) the maximum building coverage is 50 per cent;
 - (b) a continual pedestrian link must be provided from Grafton Road to Alten Road:
 - (i) that includes a continuous minimum width of 10m. This does not apply to the first 50m from the Alten Road boundary where the width may be reduced to a minimum of 6m;
 - (ii) that is open to the air and aligned so as to maintain a clear line of sight for pedestrians on Grafton Road through to Alten Road; and
 - (iii) of which sections may be covered by glazing for weather protection and narrow pedestrian over bridges for pedestrian connectivity to upper floors of adjacent buildings providing that Wynyard Street remains open to the air for the majority of its length and a clear line of sight for pedestrians on Grafton Road through to Alten Road is maintained. Pedestrian over bridges and glazing will be counted as coverage for the purpose of this control.

I207.6.6. Sub-precinct B: Old Government House

- (1) Buildings must not exceed 7.5m in height in Sub-precinct B.
- (2) A building or parts of a building in Sub-precinct B must be set back from the relevant boundary by the minimum depth listed in Table I207.6.6.1 Yards below.

Table I207.6.6.1 Yards

Yard	Sub-precinct B
Front	3m
Side	3m
Rear	3m

- (3) The maximum permitted site coverage or cumulative total area of buildings in Sub-precinct B must not exceed 5 percent of the sub-precinct area.

I207.7. Assessment – controlled activities

I207.7.1. Matters of control

The Council will reserve its control to all of the following matters when assessing a controlled activity resource consent application:

- (1) for demolition refer to the matters of control in H8.7.1(1) of the Business – City Centre Zone.
- (2) for the conversion of a building or part of a building to dwellings, visitor accommodation or boarding houses refer to matter of assessment in H8.8.1(3) of the Business – City Centre Zone.

I207.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

- (1) for demolition refer to the matters of control in clause H8.7.2(1) of the Business – City Centre Zone.
- (2) for the conversion of a building or part of a building to dwellings, visitor accommodation or boarding houses refer to matter of assessment in clause H8.8.2(3) of the Business – City Centre Zone.

I207.8. Assessment – Restricted discretionary activities

I207.8.1. Matters of discretion

The Council will reserve its discretion to all of the following matters when assessing a restricted discretionary resource consent application:

- (1) new buildings, relocated buildings, and alterations and additions to buildings not otherwise provided for:
 - (a) building design and external appearance;
 - (b) effects of buildings on historic heritage places;
 - (c) safety;
 - (d) the design of covered plazas, open spaces and pedestrian linkages;
 - (e) the design and location of parking; and
 - (f) travel plans and integrated transport assessments;
- (2) an entry canopy (and any associated steps, balustrades and retaining walls defined as “building”) in the position indicated by the symbol “#” in Precinct plan 1 within the “No buildings except as provided for by entry canopy and fire egress stair criteria” area shown on Precinct plan 1:
 - (a) design and scale;
- (3) alterations to or replacement of the existing fire egress stairs in the position indicated by the symbol “@” in Precinct plan 1 within the “No buildings except as provided for by entry canopy and fire egress stair criteria” area shown on Precinct plan 1
 - (a) design, materials and orientation;
- (4) the transfer and utilisation of unrealised parking within sub-precinct A:

- (a) traffic generation and safety;
 - (b) pedestrian safety; and
 - (c) design of parking areas.
- (5) infringing the building height standard (I207.6.3 Building height):
- (a) building scale and dominance/visual amenity effects; and
 - (b) effects on current or planned future form and character
- (6) infringing the frontage height and setback standard:
- (a) building scale and form, and dominance/visual amenity effects; and
 - (b) effects on streetscape character
- (7) infringing the Wynyard Street coverage and pedestrian link standard:
- (a) building scale and form, and dominance/visual amenity effects; and
 - (b) effects on public open space and pedestrian access
- (8) infringing the temporary activities standard in Sub-precinct B:
- (a) noise, lighting and hours of operation; and
 - (b) traffic;
- (9) infringing the height (I207.6.6(1)), yards and building coverage standards in Sub-precinct B:
- (a) intensity, scale and design.

I207.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities:

- (1) new buildings, relocated buildings, and alterations or additions to buildings not otherwise provided for:
 - (a) building design, and external appearance - creating a positive frontage:
 - (i) whether buildings and their uses maintain and where practicable enhance the quality and usability of streets, the public realm and campus pedestrian linkages through appropriate building scale, design and location. Generally, buildings should have interactive frontages where they face public streets to enable a public experience of activities within the campuses. 'Interactive frontages' are frontages which enable some form of public view or experience of activities within the campus, whether directly through openings and glazed areas into internal campus spaces or indirectly through landscaping, façade design, or artwork expressive of campus activities;

- (ii) in areas shown on Precinct plan 2 as being within an active use node, active commercial and retail or entertainment uses are encouraged that provide for the needs of students, as well as residents, workers and visitors. Where not feasible buildings are encouraged to be designed with a ground floor that could adapt to these activities in the future.
 - (iii) When adjacent to public streets, whether buildings are designed to encourage visual and physical interaction with the street to support its safety and amenity for pedestrians;
 - (iv) the main entries for all buildings adjacent to streets shall generally be from the street or directly visible from the street and when a building has more than one street frontage, multiple entries are encouraged. If the main entry is internal to the site a secondary street entry is encouraged;
 - (v) whether generous canopies are provided at all entries and encouraged in intermittent locations along street frontages to provide pedestrian shelter, when this can be incorporated into the design of the building. Verandahs are encouraged on streets and within campuses;
 - (vi) the extent to which artwork is encouraged to be incorporated into the street facades of buildings, open spaces and plazas;
- (b) building design and external appearance - variation in building form/visual interest:
- (i) the extent to which buildings are designed to address the street, through alignment, façade modulation, windows, pedestrian entrances/plazas and materials that are appropriate for a contemporary university and compatible with heritage buildings and objects;
 - (ii) the extent to which buildings fronting streets and open spaces incorporate design elements which acknowledge the adjacent built form, and enhance pedestrian comfort and amenity, and the character of the precinct. In particular:
 - the extent to which frontage height and design have regard to existing buildings in the vicinity and maintain a compatible scale. This does not mean a rigid adherence to a single height but it does mean a respect for the general appearance of the surrounding blocks;
 - the extent to which buildings ensure high levels of visual quality and visual interest, as viewed from near and afar, by the use of the number and composition of elements on the building's façade, and the contrasting relationships between them, having regard to the scale and proportions of

components on existing buildings within the vicinity. At every scale, from a range of viewing distances, building surfaces should appear rich in detail;

- the extent to which buildings employ the use of human scale proportions in the components of a façade, especially at the lower levels where pedestrians are experiencing the building from closer distances in order to maintain high levels of pedestrian visual interest;
- at all levels, whether large expanses of blank walls are avoided and whether they are visible from streets or public open spaces. If blank walls cannot be avoided, they should be minimal in relation to the overall size and length of the building frontage or located within campuses and mitigated with architectural detailing, artwork or landscaping;
- where the frontage height and setback standard applies, the extent to which the design of upper setback levels relate naturally to the lower frontage height levels in an acceptable architectural manner such as continuation of an elevational rhythm or recognisable visual theme or proportion;
- the extent to which the design of buildings on corner sites enhance the particular spatial qualities of street intersections that contribute to the prominence of sites. Building design on such sites should consider the relationship to other buildings and open spaces on opposite and adjacent corner sites;
- whether materials used in new buildings are durable and of high quality, particularly at ground level to enhance the pedestrian experience;
- the extent to which designs provide strong architectural cues to access-ways and pedestrian routes that reflect the hierarchy of routes and clearly express pedestrian entrances to enhance the visibility of pedestrian access to and through the campuses and their buildings;
- the extent to which frontages are designed to avoid service and access interruptions to frontage continuity, by locating and agglomerating such requirements internally within the campuses where practicable;
- where the proposed development is an extension or alteration to an existing building, the extent to which it is designed with consideration to the architecture of the original building;
- the extent to which building form and height consider the impact of shading and wind on the internal communal spaces of the campus and public streets;

- the extent to which building and landscape design include environmentally sustainable design features, such as passive solar design on-site stormwater conservation measures, rainwater harvesting devices, green roofs, site landscaping, rain gardens and wetland treatment systems and stormwater planter boxes.

(c) development on the corners of Symonds Street and Wellesley Street:

- (i) for buildings on the corner sites of Symonds and Wellesley Street, a high standard of architecture is expected due to its high profile, landmark location on the crest of the Wellesley Street axis, the location of scheduled historic heritage places in close proximity to the corner sites, its prominence as a significant gateway to the city centre from the Grafton Gully, and to the campuses from Wellesley and Symonds Street. Particular attention is required to the views of the building along Wellesley Street from the direction of both the city and motorway ends, and along Symonds Street;
- (ii) on the north-eastern corner of the intersection where a 50m height limit is applied without a frontage control, the architectural detailing on both frontages of the corner should support the articulation of the corner as distinctive from the rest of the building, and include a vertical emphasis in keeping with its location on the crest of the ridge. It should support the creation of a distinctive landmark that in the horizontal proportions of its façade complements the historic forms of the nearby heritage buildings; and
- (iii) the extent to which a development on the corner of Wellesley Street East and St Paul Street is sympathetic to the heritage building at 59-67 Wellesley Street East.

(d) Grafton Gully:

- (i) the extent to which all buildings that adjoin the motorway corridor or connecting streets, as shown on Precinct plan 2 as subject to the “Grafton Gully landscaped edge”, are designed to incorporate a varied building form that responds to the landscape context of this area, is organic in character, and does not present the appearance of a solid wall. Particular attention is required to the view of proposed buildings from Grafton Bridge, along Grafton Gully, from within the Domain, and from Auckland Hospital. The landscape context is the valley with the green open space of the Domain; the steep slopes, mature trees and vertical towers of the city centre, and the unfolding views of Rangitoto and the Harbour. Geological and ecological heritage values are present in this gully and should be recognised and protected from significant adverse effects. Building podiums and parking levels along this corridor must exhibit a high quality of architectural design befitting

their prominent location and be planted at their base using eco-sourced species naturally occurring in the area;

- (ii) an emphasis on enhancing the vertical characteristics of buildings and limiting the appearance of dominant horizontal elements along the Grafton Gully landscaped edge is encouraged. The extent to which buildings provide architectural interest along this edge, provide fronts rather than backs to this edge, and where practical maintain views in between buildings into and from the campus, to enhance Grafton Gully's role as a gateway to the city centre.

(e) effect of buildings on historic heritage places:

- (i) whether the scale, form and design of new buildings have regard to the significant heritage elements and built form of any scheduled heritage places adjacent to or in close proximity to the development site. This will require careful consideration to avoid the potential for dominance due to height and bulk. In doing so, the full development potential otherwise offered by the development controls may not be able to be achieved;
- (ii) whether new buildings and additions to existing buildings adjacent to or in close proximity with a scheduled heritage building have regard to and respect the latter's contribution to the streetscape, so that the historic heritage building is able to maintain its contribution to the streetscape and its historical relationship with its site surrounds and wider area, including any adjacent open space;
- (iii) the extent to which landscaping, where contextually appropriate, acknowledge both the natural and cultural heritage of the area, particularly when in proximity to or adjacent to any scheduled heritage building, its surrounds or conservation area;
- (iv) the extent to which design features that reflect the cultural heritage of the area, including Māori cultural values associated with the historic settlement and use of the area, are encouraged. For example, in the design of buildings, landscaping, artwork, signs and place names. This should be undertaken in consultation with the council and Mana Whenua;
- (v) whether new and upgraded buildings avoid inappropriate adverse effects on scheduled street trees and must respect their visual prominence on the streetscape;

(f) safety:

- (i) whether new and upgraded buildings and public open spaces are designed in accordance with CPTED principles. For the purpose of this assessment, internal open spaces, plazas, foyers, lanes and pedestrian linkages within the campuses will be considered as if they are public open spaces.

- (ii) for open spaces, plazas, foyers, lanes and pedestrian linkages, multiple entrances and exits are generally considered more appropriate in a campus environment rather than a single way in and out of such places and spaces.

(g) the design of covered plazas, open spaces and pedestrian linkages:

- (i) Precinct plan 2 shows the long term aspirations for covered plazas, open spaces and pedestrian linkages. With the exception of Wynyard Street, the location and orientation of these covered plazas, and pedestrian linkages are indicative only, however, building and open space design should seek to incorporate these elements, whether internally within buildings or externally, in a manner that provides for the same degree of permeability, legibility and accessibility within the campuses and beyond as envisaged by the indicative layout of open spaces and pedestrian linkages shown on Precinct plan 2;
- (ii) Wynyard Street is part of the historical street network and must maintain its historic alignment and become primarily a pedestrian route and linear open space. It must maintain a minimum width of 10m, except for the first 50m from the Alten Road boundary where the width may be reduced to a minimum of 6m, to reinforce its primacy as a major pedestrian route through the campus. Wynyard Street must be open to the air for the majority of its length. Pedestrian over bridges and sections of the street may be covered by glazing for weather protection. These must be designed and located to enhance the amenity of the street and to maintain views along its length;
- (iii) whether the network of covered plazas, open spaces and linkages ensure a cohesive, permeable and legible or 'self-explaining' network of pedestrian links and routes to create efficient, safe and attractive circulation around the campuses for people of all movement ability levels;
- (iv) the extent to which building heights and form allow a reasonable level of natural light into existing and planned communal open spaces within the campuses, appropriate to their intended use and limit the adverse effects of shading on student amenity. This may require building form to be modified to the north of such spaces;
- (v) the extent to which buildings are designed to support high quality open spaces and where appropriate provide views to the wider landscape and/or surrounding streets, to enhance the legibility, accessibility and character of the campuses;
- (vi) whether buildings provide legible entrances and exits to covered plazas, open spaces and pedestrian linkages.

- (vii) the extent to which the detailed design of pedestrian routes also support the legibility of the campuses from the public realm (namely adjoining streets and open spaces);
 - (viii) whether provision for cycle access and cycle parking is included along major entries where practicable.
- (h) Parking
- (i) parking, whether at-grade or within buildings is screened from public open spaces and streets.
 - (i) travel plans and integrated transport assessments:
 - (i) where no current travel plan exists for the precinct or that part of a campus within which a development is proposed, one must be submitted with a development with gross floor area greater than 2,500m²; and
 - (ii) where additional floor area greater than 2,500m² is provided for within a development, then it must be subject to an integrated transport assessment scoping process to determine whether it is required. If an integrated transport assessment is required by the council, then it should be prepared in accordance with current best practice guidelines adopted by Auckland Transport.
- (2) an entry canopy (and any associated steps, balustrades and retaining walls defined as “building”) in the position indicated by the symbol “#” in Precinct plan 1 within the “No building except as provided for by entry canopy and fire egress stair criteria” area shown on Precinct plan 1:
- (a) design and scale:
- (i) the extent to which the canopy enhances the visibility, legibility and overall quality of the entrance at this position; and
 - (ii) the extent to which the canopy is designed and has a scale that maintains the open space qualities of the no-building area and the character of the street and its context, including the scheduled building, identified surrounds and the street trees.
- (3) alterations to or replacement of the existing fire egress stairs in the position indicated by the symbol “@” in Precinct plan 1 within the “No buildings except as provided for by entry canopy and fire egress stair criteria” area shown on Precinct plan 1:
- (4) the transfer and utilisation of unrealised parking within Sub-precinct A:
- (a) traffic generation and safety:
- (i) whether vehicle access to and from the site provide adequate sight distances and avoid, remedy or mitigate congestion likely to have more than minor adverse effects;

- (ii) whether traffic generated from the parking area on the site adversely affect the surrounding roading network, having regard to the current and future traffic volumes in the area and any traffic problems in the area e.g. high accident rates;
- (b) pedestrian safety:
 - (i) whether vehicle access-ways are designed to ensure the safety of pedestrians;
- (c) design of parking areas:
 - (i) Parking areas should be designed to enable safe and efficient on-site vehicle circulation to avoid or mitigate adverse effects on the road network;
- (5) infringing the building height standard (I207.6.3 Building height):
 - (a) building height may be exceeded where it would provide an attractive and integrated roof form that also meets the purpose of the control; and
 - (b) where building height is exceeded, Policy I203.3(6) of the Learning Precinct and Policy H8.3(30) of the Business – City Centre Zone should be considered;
- (6) infringing the frontage height and setback standard:
 - (a) development should be of a scale and form appropriate to the setting;
 - (b) the extent to which the scale of the development is consistent with the current and future character of the Learning Precinct as established through the objectives and policies for the Learning Precinct; and
 - (c) the extent to which pedestrian amenity is maintained or enhanced;
- (7) infringing the Wynyard Street coverage and pedestrian link standard:
 - (a) whether the amenity of the pedestrian link is maintained;
 - (b) the extent to which buildings on Wynyard street are of a scale and form appropriate to the character of the Learning Precinct.
- (8) infringing the temporary activities standard in Sub-precinct B:
 - (a) whether noise and lighting from the activity have a significant adverse effect on the amenity of surrounding residential properties. In determining this, consideration will be given to:
 - (i) the location, duration and timing of the activity and the day of the week on which it will occur;
 - (ii) the measures to mitigate noise and light spill; and

- (iii) any proposed measures to manage levels of low frequency noise, particularly for night events.

(b) traffic:

- (i) the extent to which the location, scale and intensity of the activity and any associated parking, including provision for public transport will affect the efficiency of traffic movements and the safety of pedestrians; and
- (ii) the extent to which the activity will impact on other activities at the location, including the impact on public access;

(9) infringing the height (I207.6.6(1)), yards and building coverage in Sub-precinct B:

(a) intensity, scale and design:

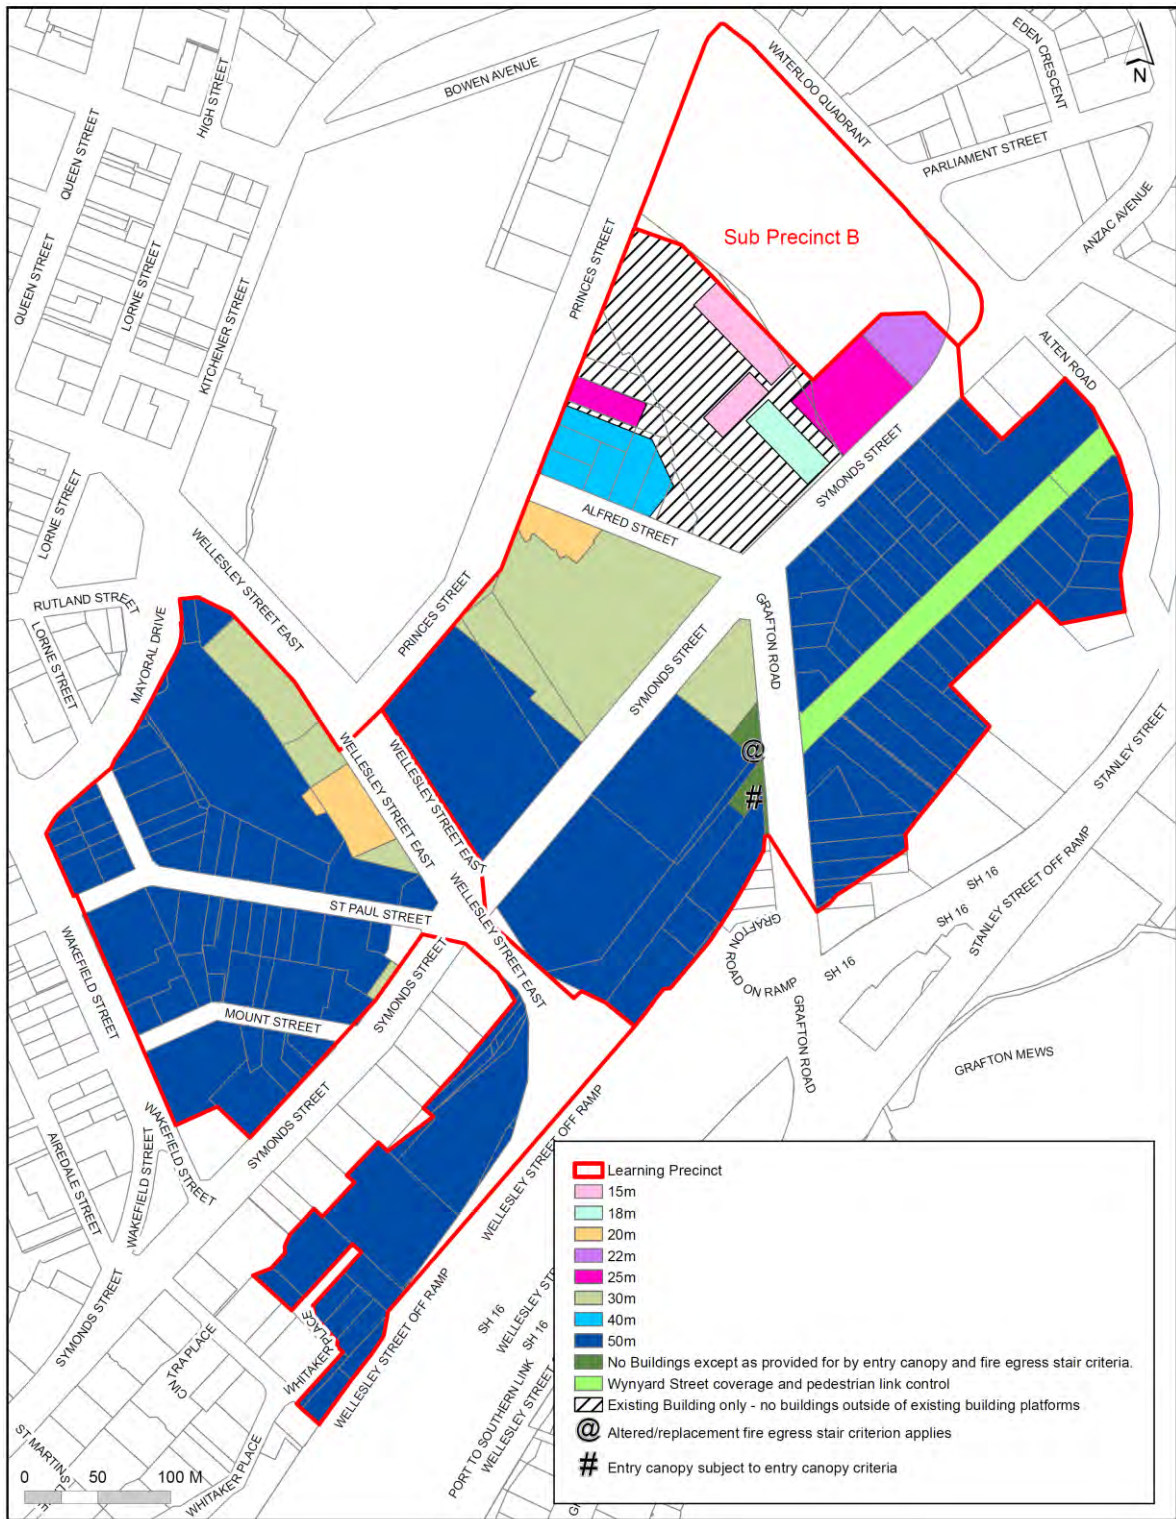

- (i) whether adequate public open space for visual amenity and recreations is maintained; and
- (ii) the extent to which the design of buildings and structures maintain the character of the open space and should be sympathetic to the existing development and open space in the Sub-precinct B.

I207.9. Special information requirements

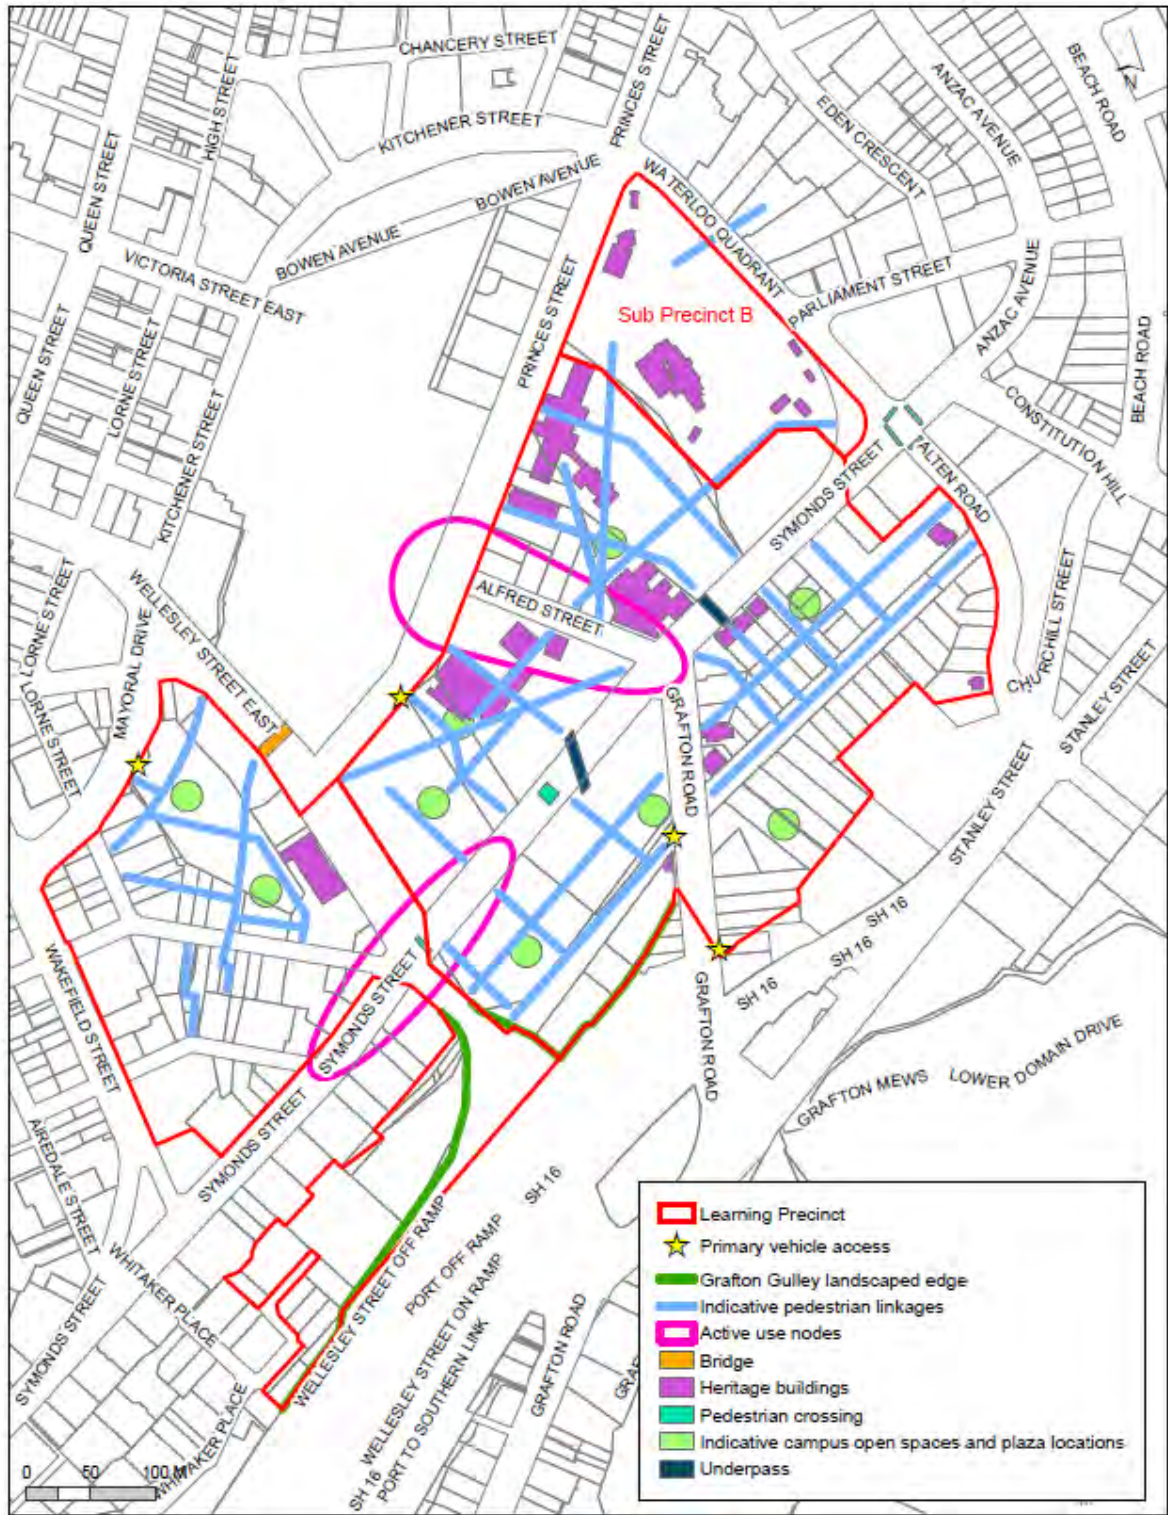

There are no special information requirements in this precinct.

I207.10. Precinct plans

1207.10.1 Learning: Precinct plan 1 - Building height controls

I207.10.2 Learning: Precinct plan 2 - Open spaces and pedestrian linkages

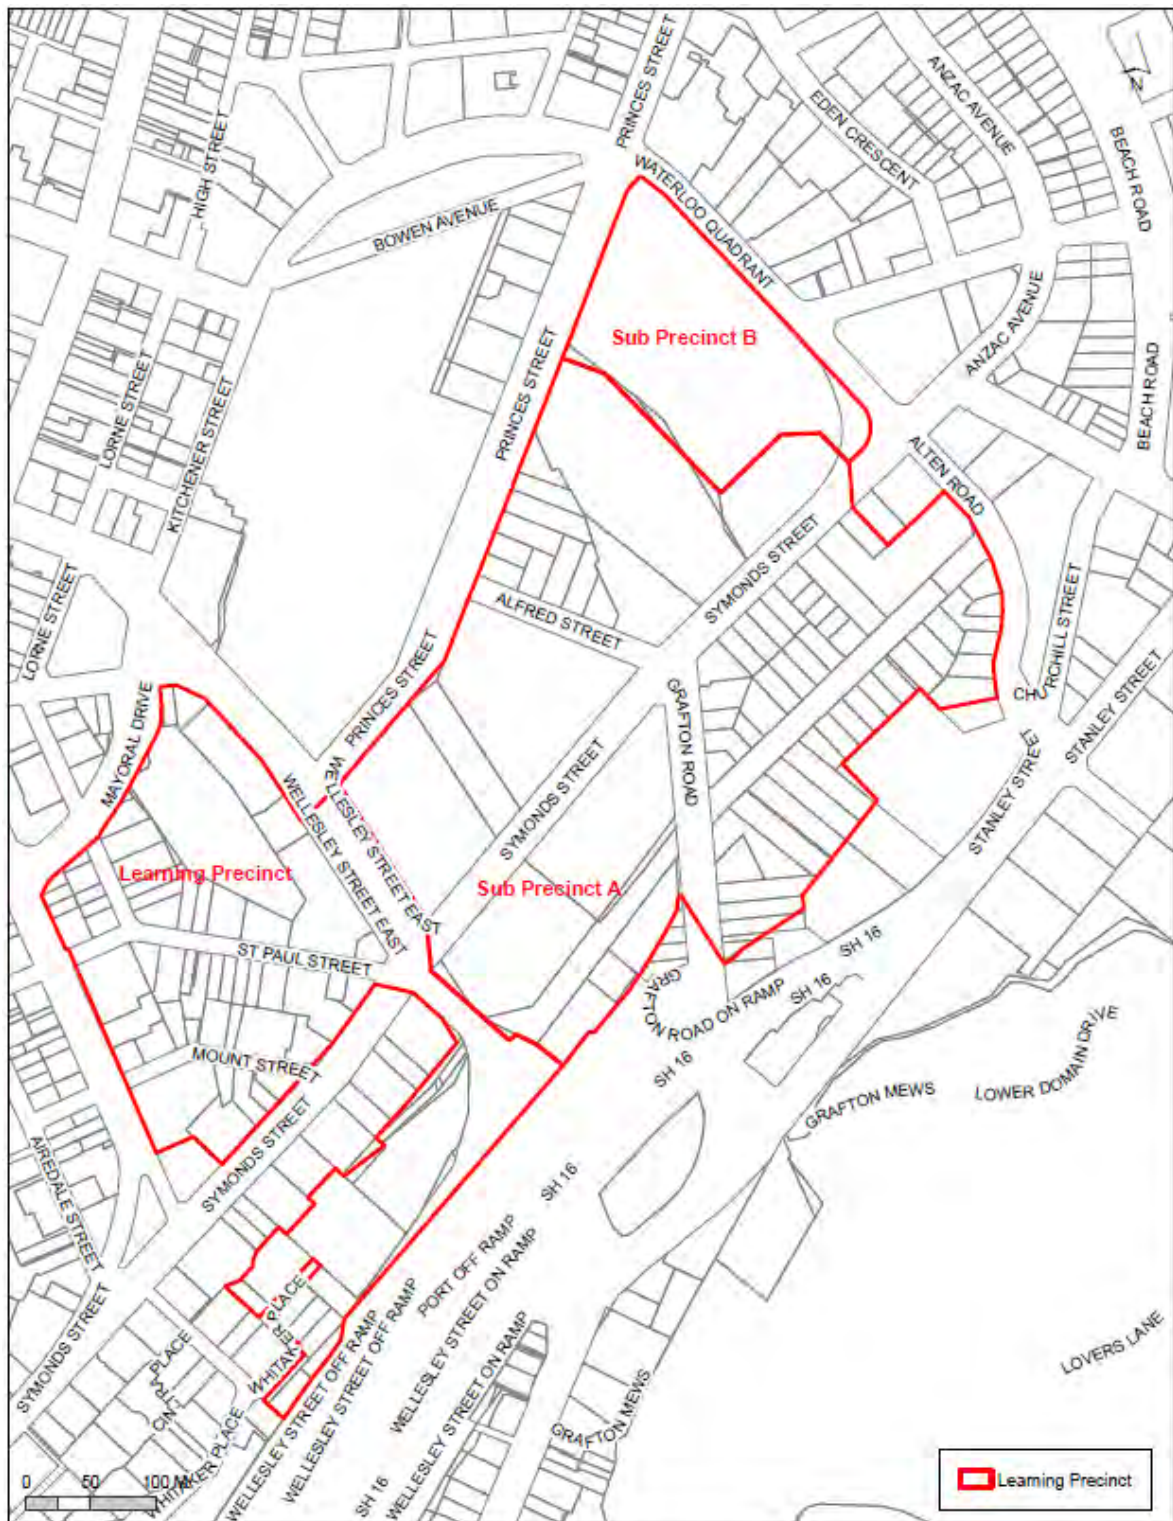

I207.10.3 Learning: Precinct plan 3 - Contours

1207.10.4 Learning: Precinct plan 4 - Frontage types

1207.10.5 Learning: Precinct plan 5 - Sub-precinct B Old Government House

I208. Port Precinct

I208.1. Precinct description

The purpose of the Port Precinct is to provide for a nationally and regionally significant component of Auckland and New Zealand's transport infrastructure and trade network. The precinct primarily consists of land and coastal areas owned or controlled by Ports of Auckland Limited.

The zoning of the land within the Port Precinct is the Business – City Centre Zone and the zoning of the part of the Port Precinct within the coastal marine area is the Coastal – General Coastal Marine Zone.

The Port Precinct includes the land and the coastal marine area north of Quay Street between the western side of Marsden Wharf and the eastern side of the Fergusson Reclamation. The reclaimed land and wharf structures named Bledisloe Terminal, Bledisloe Wharf, Jellicoe Wharf, Freyberg Wharf, and Fergusson Wharf and Fergusson Terminal are primary vessel loading and unloading areas. Cargo storage, cargo handling and ancillary port activities are undertaken on the balance of the area fronting Quay Street. Teal Park and a range of community and emergency facilities and food and beverage activities are located at the eastern end of the precinct.

The Port Precinct includes structures and activities located both on land and within the coastal marine area. For this reason, the activities and development within the precinct on land and within the coastal marine area (including wharves) are generally defined under the same activity category.

Within the precinct it is recognised that the coastal environment has already been modified by structures and port activities and that the land adjoining the coastal marine area provides for the infrastructure to service the marine and port activities. It is therefore appropriate to suitably recognise this, and make provision for the continued use and development of the precinct, while avoiding, remedying, or mitigating adverse effects.

Development within the precinct is guided by Precinct plans 1 – 3. Precinct plan 1 sets out the maximum height controls across the Port Precinct. Precinct plan 2 shows the area (named Area A) within the Port Precinct where buildings require design assessment due to their proximity and visibility from Quay Street and Queens Wharf. Precinct Plan 3 sets out the inner and outer noise control boundaries. Coordinates for the precinct boundary in the coastal marine area are shown on Precinct plan 4.

I208.2. Objectives [rcp/dp]

- (1) The efficient operation, growth and intensification of marine and port activities and marine and port facilities, including the development of the Port's capacity for shipping and its connections with other transport modes.
- (2) The use and development of non-port related activities and buildings do not compromise the existing or future operation of the precinct.
- (3) Adverse effects arising from activities and development are avoided, remedied or mitigated.

- (4) Adverse reverse sensitivity effects on the efficient and safe operation of marine and port activities are avoided, remedied or mitigated.
- (5) Buildings adjacent to Quay Street complement and enhance the gateway to the city centre, while recognising any functional and operational requirements of marine and port activities.
- (6) Public access to, and use and enjoyment of, the coastal marine area is maintained, and where practicable, enhanced, provided it does not adversely affect the efficient and safe operation of marine and port activities and development of the precinct.

The overlay, Auckland-wide, Business – City Centre Zone and Coastal – General Coastal Marine Zone objectives apply in this precinct in addition to those specified above.

I208.3. Policies [rcp/dp]

The policies are as listed in the Coastal – General Coastal Marine Zone for the coastal marine area in the precinct in addition to those specified below, with the exception of Policy F2.5.3(4).

The Business – City Centre Zone Policies H8.3(1), (11), (19), (21) – (23), (25), (30), (35) and (37) apply to land within the precinct in addition to those specified below.

- (1) Enable the consolidation, intensification, redevelopment and growth within the precinct for a wide range of marine and port activities and associated structures, to provide for the development of the Port's capacity for shipping, and its connections with other transport modes.
- (2) Provide a wide range of berthage facilities to accommodate vessels of different types and sizes.
- (3) Ensure that non-port related activities or non-port related development within the precinct does not compromise the primary function or development of the precinct for marine and port activities and marine and port facilities.
- (4) Require activities within the precinct to avoid, remedy or mitigate adverse effects on the land and coastal environment, particularly noise, lighting and amenity effects and effects on the surrounding road network.
- (5) Require the establishment of dwellings outside of the precinct to avoid, remedy or mitigate adverse effects on efficient and safe operation of marine and port activities.
- (6) Restrict public access to the coastal marine area only where it is necessary to protect human health and/or safety, to facilitate the efficient and safe operation of activities including the requirements of customs and quarantine, or to maintain security.

- (7) Provide for intensification, development and maintenance of marine and port facilities and associated works which contribute to the efficient use, operation, and management of marine and port activities while avoiding, remedying or mitigating potential adverse effects on the environment.
- (8) Limit maximum building height to an appropriate scale to provide a transition in height between the city centre core and the harbour, with the exception of specifically identified container and cargo-handling facilities, vessels, structures and equipment associated with marine and port activities.
- (9) Encourage buildings within Area A on Precinct plan 2, to be of a high quality design to complement and enhance this city centre gateway and to contribute positively to the visual quality, amenity, interest and public safety of streets and public open spaces, while recognising any functional and operational requirements of marine and port activities.
- (10) Avoid further reclamation, unless:
 - (a) there are no practicable alternative methods of providing the proposed activity, including on land outside the costal marine area;
 - (b) the activity which requires reclamation can only occur in or adjacent to the costal marine area;
 - (c) it will provide a significant regional or national benefit;
 - (d) it is the most appropriate form and design of development; and
 - (e) potential adverse effects will be avoided, remedied or mitigated.
- (11) Provide for minor reclamations and for reclamations carried out as part of rehabilitation or remedial works of an existing reclamation or costal marine area structure, while avoiding, remedying or mitigating any adverse effects on the environment.
- (12) Enable dredging within the precinct that is necessary to provide for the safe and efficient navigation, manoeuvring, and berthing of vessels, while avoiding, remedying or mitigating any adverse effects.
- (13) Require port operators to take all practicable steps to avoid contamination of coastal waters, substrate, ecosystems and habitats that is more than minor.
- (14) Require the provision of adequate and convenient facilities for:
 - (a) the collection of rubbish from vessels;
 - (b) sewage and waste from vessels; and
 - (c) the containment and disposal of residues from vessel servicing, repairs and maintenance.

I208.4. Activity table

The activities, standards and assessment criteria in the overlays and Auckland-wide rules apply in the Port Precinct, unless otherwise specified below.

The activities, standards and assessment criteria in the underlying General Coastal Marine zone apply to the coastal marine area in the Port Precinct, unless otherwise specified below.

The activities, standards and assessment criteria in the Business – City Centre Zone do not apply to land in the Port Precinct, unless otherwise specified below.

Table I208.4.1 Activity table specifies the activity status for land use and development activities pursuant to section 9(3) of the Resource Management Act 1991 and the activity status for works, occupation and use in the coastal marine area pursuant to sections 12(1), 12(2), and 12(3) of the Resource Management Act 1991, or any combination of all of the above sections where relevant.

- (1) The activities in the Coastal – General Coastal Marine Zone apply to the coastal marine area in the Port Precinct unless otherwise specified in the Port Precinct activity table below.
- (2) The following table also specifies the activity status of activities on land in the Port Precinct.
- (3) Those activities marked with * have the listed activity status only when that activity is located on a coastal marine area structure (e.g. a new building on an existing wharf). If that activity is located directly in the coastal marine area (e.g. a new wharf) a different activity status will apply.
- (4) In this table, the activity status for occupation of the common marine and coastal area (section 12(2) of the Resource Management Act 1991) has the same as the activity status for the use or activity (section 12(3) of the Resource Management Act 1991) or for the construction of a structure (section 12(1) of the Resource Management Act 1991) that the occupation relates to.

Table I208.4.1 Activity table

Activity		Activity status	
		CMA [rcp]	Land [dp]
Works in the coastal marine area pursuant to sections 9(3) and 12(1) of the Resource Management Act 1991			
(A1)	Maintenance or repair of a reclamation or drainage system	P	P
(A2)	Minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation	RD	NA
(A3)	Reclamation or drainage not otherwise provided for	D	NA

(A4)	Declamation	RD	RD
(A5)	Maintenance dredging, including dredging within a historic heritage overlay area	C	NA
(A6)	Capital works dredging, including dredging within a historic heritage overlay area	RD	NA
Use and activities pursuant to sections 9(3) and 12(3) of the Resource Management Act 1991 and associated occupation of the common marine and coastal area pursuant to section 12(2) of the Resource Management Act 1991			
Residential			
(A7)	Workers accommodation	P*	P
Commerce			
(A8)	Offices accessory to marine and port activities	P*	P
(A9)	Offices within a building existing at 22 January 2015 located within the 30m height area identified on Precinct Plan 1 not accessory to marine and port activities	NA	RD
(A10)	Maritime passenger operations	P	P
(A11)	Food and beverage east of Solent Street	NA	P
(A12)	Marine retail	NA	P
(A13)	Alterations, additions or the total or partial reconstruction of the existing service station located on the corner of Quay and Tinley Streets	NA	RD
(A14)	Service stations not otherwise provided for on those sites with frontage to Quay Street, between the western boundary of the Port Precinct and Plumer Street	NA	D
(A15)	Aquaculture activities (including any activities under RMA s.12(1), s. 12(2), s. 12(3) and s.15)	Pr	NA
Community			
(A16)	Artworks	P	P
(A17)	Community facilities, education facilities and healthcare facilities east of Solent Street	P*	P
(A18)	Information facilities	P*	P
(A19)	Emergency services	P	P
(A20)	Helicopter facilities (including the landing and taking off of helicopters and associated fuelling and service facilities), except as specified below	D	D
Industry			
(A21)	Marine and port activities, including the landing and taking off of helicopters associated with the loading and unloading of cargo	P	P
(A22)	Artificial lighting	P*	P

Development pursuant to sections 9 and 12(1) of the Resource Management Act 1991, occupation of the common marine and coastal area pursuant to section 12(2) of the Resource Management Act 1991, and their use pursuant to section 12(3) of the Resource Management Act 1991			
(A23)	Marine and port facilities other than wharves, landings and drydocks	P	P
(A24)	Wharves, landings and drydocks, including, including alterations and additions to these structures	RD	RD
(A25)	Maritime passenger facilities	P	P
(A26)	Marine and port accessory structures and services	P	P
(A27)	Repair and maintenance services ancillary to marine and port activities	NA	P
(A28)	New buildings and alterations and additions to buildings on land or on costal marine area structures outside of Area A shown on Precinct plan 2	P*	P
(A29)	Minor cosmetic alterations and additions to a building within Area A shown on Precinct plan 2 that does not change its external design or appearance	P*	P
(A30)	Maintenance, repair and reconstruction of existing costal marine area structures or buildings	P	P
(A31)	New buildings, and alterations and additions to buildings not otherwise provided for within Area A shown on Precinct Plan 2	RD*	RD
(A32)	Alterations and additions to existing costal marine area structures or buildings not otherwise provided for	P	P
(A33)	Demolition or removal of buildings or costal marine area structures except as otherwise specified below	P	P
(A34)	Public amenities	P*	P
(A35)	Hard protection structures including wave attenuation devices	RD	RD
(A36)	Observation areas, viewing platforms and boardwalks	P	P
(A37)	New and existing swing moorings and pile moorings including occupation and use by vessel to be moored	P	NA
(A38)	Occupation of the CMCA by an activity that would otherwise be permitted where the area to be occupied is already the subject of an existing occupation consent	RD	NA

(A39)	Buildings not listed as a permitted or restricted discretionary activity	D	D
-------	--	---	---

I208.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I208.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I208.4.1 which is not listed in I208.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I208.6. Standards

I208.6.1. Land and water standards

The land and water use standards in the Coastal – General Coastal Marine Zone apply to the coastal marine area in the Port Precinct, unless otherwise specified below, except that the following Coastal – General Coastal Marine Zone standards do not apply:

- F2.21.1.1 Noise and vibration;
- F2.21.1.2 Lighting;
- F2.21.2.1 Maintenance or repair of a lawful reclamation or drainage systems; and
- F2.21.9.4 Parking on coastal marine area structures for loading and unloading passengers and cargo to vessels.

The Business – City Centre Zone standards do not apply to land in the Port Precinct, unless otherwise specified below.

The Auckland-wide Lighting rules E24 and Noise rules E25.6.2 - E25.6.13; E25.6.23 - E25.6.26; E25.6.27 - E25.6.29 and E25.6.31; E25.6.32; E25.6.33 do not apply to land and the coastal marine area in the Port Precinct.

I208.6.1.1. Noise

- (1) These standards do not apply to temporary activities allowed under the E40 Temporary activities rules.
- (2) Within the coastal marine area, these standards do not apply to the operational requirements of commercial vessels including cargo vessels, tugs, passenger liners, naval vessels and commercial fishing vessels.

(3) The $L_{Aeq}(15 \text{ min})$ noise level and maximum noise levels (L_{AFmax}) arising from any activity (except construction or blasting activities) within the Port Precinct must not exceed the following:

(a) when measured 1m from the façade of any building (measured as the incident level with facade reflections excluded) located on the southern side of Quay Street, beyond the inner control boundary shown on Precinct plan 3:

Table I208.6.1.1 Noise levels 1

Time	Noise level
11pm to 7am	60dB L_{Aeq} 85dB L_{AFmax}

(b) when measured 1m from the façade of any residential building (measured as the incident level with facade reflections excluded) located beyond the outer control boundary shown on Precinct plan 3:

Table I208.6.1.2 Noise levels 2

Time	Noise level
7am to 11pm	55dB L_{Aeq}
11pm to 7am	50dB L_{Aeq} 75dB L_{AFmax}

(4) In determining compliance with the above the following applies:

(a) the long term average sound level, averaged over any 7 days (i.e. 7 days of short-term average levels) must not exceed the specified levels by more than 3dBA due to statistical variation over those days;

(b) there must be no exceedance of the specified short-term average levels by more than 5dBA. The short-term $L_{Aeq(15 \text{ min})}$ sound level will be the average of any four $L_{Aeq(15 \text{ min})}$ values obtained during a single night or day when the wind speed at the site where measurement is taken is less than 2m per second. If the wind speed in the vicinity of both the subject site and the receiver, or any intervening area is known to have exceeded 2m per second during any measurement interval or a temperature inversion is present, then that measurement must not be used to determine the short-term average sound level. Measurements must be accompanied by records of air temperature. There must be no other restrictions on weather conditions;

(c) care must be taken to ensure that the short-term average sound level represents noise from port activities and is not influenced by noise from other sources. The time period between 3:00am and 5:00am is the preferred time for noise measurements. If the short-term average level is wholly or partly determined from measurements at other times, then records must be adequate to demonstrate that the short-term average sound level was not influenced by noise from non-port sources;

(d) except as noted above, the noise levels must be measured and assessed in accordance with New Zealand Standard on Acoustics - Measurement of Environmental Sound (NZS 6801:2008) and New Zealand Standard on Acoustics – Environmental Noise (NZS 6802:2008).

I208.6.1.2. Construction noise

(1) Construction noise within the Port Precinct must not exceed the levels specified in E25.6.28 Construction noise levels in the Business – City Centre Zone and the Business – Metropolitan Centre Zone, when measured 1m from the façade of any building located outside of the Port Precinct.

I208.6.1.3. Lighting

(1) Artificial lighting illuminance must not exceed 150 lux, measured at any point on the site containing the light source, in a horizontal or vertical plane at ground level.

(2) Illumination associated with vehicles, mobile plant, and quay cranes are exempt from this control.

(3) Lighting sources must be sited, directed and screened to avoid, as far as practicable, creating a navigation safety hazard.

I208.6.1.4. Parking

(1) Standard E27.6.2 Number of parking and loading spaces does not apply to land and costal marine area west of Solent Street.

I208.6.1.5. Maintenance or repair of a lawful reclamation or drainage system

(1) The work must not change the area occupied by the reclamation or drainage system.

(2) Any visible disturbance to the substrate of the costal marine area must be remedied or restored within 48 hours of the completion of the works in ONC, ONF and SEA-M1 overlay areas and within seven days in other areas of the costal marine area.

- (3) There must be an emergency spill plan in place to address the unforeseen release of contaminants from equipment being used for the activity.
- (4) All equipment and materials must be removed from the foreshore and seabed on the completion of works or activities.
- (5) Written advice must be given to the council at least 10 working days prior to the work starting.

I208.6.1.6. Public access

- (1) Standard E38.7.3.2 Subdivision establishing an esplanade reserve does not apply to subdivision within the Port Precinct.

I208.6.1.7. Natural Hazards and flooding:

The activity status for activities listed in Table E36.4.1 of E36 Natural hazards and flooding do not apply and are replaced by standards I208.6.1.7.1 and I208.6.1.7.2 below:

- (1) Buildings or structures including fences and retaining walls located in 1 per cent annual exceedance probability (AEP) overland flow paths:
 - (a) any ponding of floodwater caused by any new building or structure must not extend beyond (upstream of) the inland boundary of the Port Precinct; or an alternative flow path of equivalent hydraulic capacity must be provided within the site; and
 - (b) the entry point of the flow path into the Precinct must not be altered.
- (2) Habitable rooms of new buildings shall be located above the coastal storm inundation 1 per cent annual exceedance probability (AEP) plus 1m sea level rise (CSI1).

I208.6.1.8. Building height

Purpose: manage the height of buildings to achieve Policy I208.3(8) of the Port Precinct.

- (1) Buildings, structures, marine and port facilities, maritime passenger facilities and marine and port accessory structures and services must not exceed the heights specified on Precinct Plan 1.
- (2) For the avoidance of doubt, building height excludes: reefer gantries, cargo and containers, telecommunications equipment, masts, lighting poles and associated equipment and aerials that are accessory to marine and port activities.
- (3) The height of buildings and structures on land must be measured in accordance with Standard H8.6.8 Measuring building height in the Business – City Centre Zone rules.

- (4) The height of buildings and structures within the coastal marine area must be measured above mean sea level.

I208.7. Assessment – controlled activities

I208.7.1. Matters of control

The Council will reserve its control to the following matters when assessing a controlled activity resource consent application:

- (1) maintenance dredging:
 - (a) effects on water quality;
 - (b) effects on harbour traffic, navigation and safety; and
 - (c) duration and monitoring.

I208.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

- (1) maintenance dredging:
 - (a) effects on water quality:
 - (i) whether methods are implemented to avoid, remedy or mitigate the release of contaminated sediment.
 - (b) effects on harbour traffic, navigation and safety:
 - (i) whether methods are implemented to avoid, remedy or mitigate effects on harbour traffic, navigation and safety.
 - (c) duration and monitoring:
 - (i) whether monitoring, including periodic monitoring of sediment quality, is required in order to demonstrate the extent and type of effects of the dredging on water and sediment quality and the degree to which the effects are remedied or mitigated during the activity.

I208.8. Assessment – restricted discretionary activities

I208.8.1. Matters of discretion

The Council will reserve its discretion to all the following matters when assessing a restricted discretionary resource consent application:

- (1) minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation and reclamation or drainage carried out as part of rehabilitation or remedial works:
 - (a) form and design of the reclamation;
 - (b) contaminated material;

- (c) the safe and efficient operation of marine and port activities;
- (d) construction or works methods, timing and hours of operation;
- (e) effects on natural hazards, coastal processes, ecological values and water quality; and
- (f) consent duration and monitoring

(2) declamation:

- (a) construction or works methods, timing and hours of construction works;
- (b) location, extent, design and materials used;
- (c) effects on coastal processes, ecological values and water quality;
- (d) effects on public access, navigation and safety;
- (e) effects on existing uses and activities;
- (f) effects on Mana Whenua values; and
- (g) consent duration and monitoring

(3) capital works dredging:

- (a) effects on coastal processes, ecological values and water quality;
- (b) effects on other users of the coastal marine area, navigation and safety; and
- (c) consent duration and monitoring.

(4) hard protection structures including wave attenuation devices:

- (a) location and design of the hard protection structure;
- (b) effects on navigation, safety and existing activities;
- (c) effects on coastal processes including wave hydraulics;
- (d) construction or works methods, timing and hours of operation; and
- (e) consent duration and monitoring.

(5) new buildings, and alterations and additions to buildings not otherwise provided for within Area A shown on Precinct Plan 2:

- (a) building design and external appearance;
- (b) effects on public access, navigation and safety; and

- (c) potential adverse effects of any ponding or diversion of floodwater upstream of the Port Precinct caused by changes to the overland flow path.
- (6) offices within a building existing at 22 January 2015 located within the 30m height area identified on Precinct Plan 1 not accessory to marine and port activities:
 - (a) efficient use of port precinct land and resources;
 - (b) public access; and
 - (c) duration of consent.
- (7) alterations, additions or the total or partial reconstruction of the existing service station located on the corner of Quay and Tinley Streets:
 - (a) the matters of discretion in H8.8.1(1) of the Business – City Centre Zone rules apply;
 - (b) location and design of vehicle and pedestrian access; and
 - (c) provision for the on-site manoeuvring of vehicles and pedestrians.
- (8) occupation of the CMCA by an activity that would otherwise be permitted where the area to be occupied is already the subject of an existing occupation consent:
 - (a) the matters of discretion in F2.23.1(1) and F2.23.1(2)(c) of the Coastal – General Coastal Marine Zone apply; and
 - (b) effects on the safe and efficient use, operation and development of the coastal marine area subject to Ports of Auckland's existing occupation consents.
- (9) wharves, landings and drydocks within the Port Precinct:
 - (a) location and design;
 - (b) construction or works methods, timing and hours of operation;
 - (c) effects on coastal processes;
 - (d) effects on navigation and safety;
 - (e) effects on the visual amenity values of the Waitemata Harbour;
 - (f) effects on Mana Whenua values; and
 - (g) consent duration and monitoring.
- (10) noise and construction noise
 - (a) effects on land uses beyond the precinct;

- (b) measures to avoid, remedy and mitigate the adverse effects of noise; and
- (c) operational requirements of the Port of Auckland.

(11) lighting:

- (a) effects on adjacent land uses;
- (b) measures to avoid, remedy and mitigate the adverse effects of lighting;
and
- (c) operational requirements of the Port of Auckland.

(12) building height:

- (a) building scale and dominance / visual amenity effects;
- (b) effects on the current or planned future form and character of the precinct;
and
- (c) reasons for the non-compliance.

I208.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities:

- (1) minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation and reclamation or drainage carried out as part of rehabilitation or remedial works:
 - (a) whether reclamation, as far as practicable, mitigates adverse effects through their form and design, taking into account:
 - (i) the compatibility of the design with the location;
 - (ii) the ability to avoid consequential erosion and accretion, and other natural hazards;
 - (iii) the effects on coastal processes; and
 - (iv) the effects on hydrology.
 - (b) whether the use of contaminated material in a reclamation is avoided unless it is contained in a way that avoids, remedies or mitigates adverse effects on water quality, aquatic ecosystems and biodiversity;
 - (c) whether the reclamation enables the efficient operation of port infrastructure; and
 - (d) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants.

(2) declamation:

- (a) whether the adverse effects of declamation are avoided, remedied or mitigated in respect of the effects of the final land/water configuration on:
 - (i) the marine environment including coastal processes, water quality, sediment quality and ecology of the costal marine area;
 - (ii) hydrogeology (ground water) and hydrology; and
 - (iii) sediment accumulation and the need for on-going maintenance dredging of the costal marine area.
 - (b) whether declamation works, including the construction of seawalls, avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated soils and groundwater, and other contaminants; and
 - (c) whether declamation east of Solent Street is located and designed so that the adjacent land area can provide adequate public open space adjacent to, and public access around along the water's edge whether on land or on the adjacent water space;
 - (d) the extent to which declamation will affect Mana Whenua values.
- (3) capital works dredging:
- (a) whether measures are taken to avoid, remedy or mitigate adverse effects on coastal processes, ecological values, and water quality;
 - (b) whether effects on other users of the costal marine area during the dredging are avoided, remedied or mitigated;
 - (c) whether consent duration is limited to the minimum duration reasonably necessary for the functional or operational needs of the activity; and
 - (d) whether monitoring is required in order to demonstrate the extent and type of effects of the dredging, and the degree to which the effects are remedied or mitigated during and after the activity.
- (4) hard protection structures including wave attenuation devices:
- (a) whether the location and design of the hard protection structure avoid, remedy or mitigate adverse effects on existing activities including marine related industries, other marine activities and/or adjoining coastal activities;
 - (b) whether the location and design of the hard protection structure avoid, remedy or mitigate adverse effects of wave hydraulics on other users of the costal marine area and on the adjacent coastline; and
 - (c) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants.

- (5) new buildings, and alterations and additions to buildings not otherwise provided for within Area A shown on Precinct plan 2:
- (a) the assessment H8.8.2(1)(a)(i), (ix), (xii), (xiii), (xv), (xvi), (xviii), (xix) and (c)(xi) of the Business – City Centre Zone rules apply in addition to the criteria below;
 - (b) the extent to which buildings within Area A shown on precinct plan 2 have clearly defined public fronts that address the street to positively contribute to the public realm and pedestrian safety. Where this is not possible, where practicable be designed to avoid long, unrelieved frontages and excessive bulk and scale when viewed from Quay Street;
 - (c) the extent to which building mass is visually broken up into distinct elements. Techniques include the use of recesses, variation in building height and roof form, horizontal and vertical rhythms and façade modulation and articulation;
 - (d) the extent to which any parking, loading and servicing activities including the storage and collection of wastes associated with a building is screened and occur behind the buildings and away from Quay Street;
 - (e) the extent to which the quality of building design reflects and recognises Quay Street's importance as a gateway to the city centre. In particular, it should have regard to the area's high visibility in views along Quay Street
 - (f) the extent to which the functional and operational requirements of marine and port activities to be accommodated within the building are recognised when considering the assessment criteria above; and
 - (g) the extent to which the adverse effects of any ponding or diversion of floodwater upstream of the Port Precinct caused by changes to the overland flow path will be avoided or mitigated.
- (6) offices within a building existing at 22 January 2015 located within the 30m height area identified on Precinct plan 1 not accessory to marine and port activities:
- (a) whether the office activity reduces or compromises the efficient use of port land or resources or the future growth or intensification of port activities and facilities;
 - (b) whether safe and unencumbered public access is provided between the building and the city centre; and
 - (c) whether the duration of consent is limited to ensure the building is available for marine and port activity when the demand arises.
- (7) alterations, additions or the total or partial reconstruction of the existing service station located on the corner of Quay and Tinley Streets:

- (a) the assessment criteria in H8.8.2(1) of the Business – City Centre Zone rules apply;
 - (b) whether separate pedestrian and vehicle access is provided to and through the site and there is adequate manoeuvring space for vehicles on the site; and
 - (c) the extent to which the design of any alterations or additions contribute to the visual quality, interest and safety of Quay Street and Tinley Street, where practicable.
- (8) occupation of the CMCA by an activity that would otherwise be permitted where the area to be occupied is already the subject of an existing occupation consent:
- (a) the assessment criteria in clause F2.23.2(1) and F2.23.2(9) of the Coastal – General Coastal Marine Zone apply in addition to the criteria below; and
 - (b) whether the actual or potential adverse effects on the safe and efficient use, operation and development of the coastal marine area occupied by Ports of Auckland are avoided.
- (9) wharves, landings and drydocks within the Port Precinct:
- (a) whether the location and design of the structure avoid, remedy or mitigate adverse effects on existing activities, marine related industries, other marine and port activities and navigation and safety;
 - (b) whether the location and design of the structure avoid, remedy or mitigate adverse effects on coastal processes and on other users of the coastal marine area;
 - (c) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants;
 - (d) whether duration for construction is limited to the minimum duration reasonably necessary;
 - (e) the extent to which monitoring of construction is required in order to demonstrate the extent and type of effects of the activity, and the degree to which the effects are remedied or mitigated during and after the activity; and
 - (f) whether the form, scale and design of the wharf, landing or drydock structures avoid, remedy or mitigate adverse visual amenity effects to and from the Waitemata Harbour;
- (10) noise and construction noise:

(a) the extent to which adverse effects on the health and amenity values of people who may be affected beyond the Port precinct are avoided, remedied and mitigated, taking into account the existing noise environment, the frequency and duration of the proposed infringement and the practicality of managing the noise emissions;

(b) the operational requirements of the Port of Auckland.

(11) lighting:

(a) the extent to which adverse effects on the health and amenity values of people who may be affected beyond the Port precinct are avoided, remedied and mitigated, taking into account existing light levels;

(b) the operational requirements of the Port of Auckland.

(12) building height:

(a) building height may be exceeded where it would provide an attractive and integrated roof form that also meets the purpose of the standard;

(b) where building height is exceeded, Policy I208.3(1) and (8) of the Port Precinct and Policy H8.3(30) of the Business – City Centre Zone should be considered.

I208.9. Special information requirements

(1) The special information requirements of the Coastal – General Coastal Marine Zone do not apply in the Port Precinct.

I208.10. Precinct plans

I208.10.1 Port: Precinct plan 1 - Building height

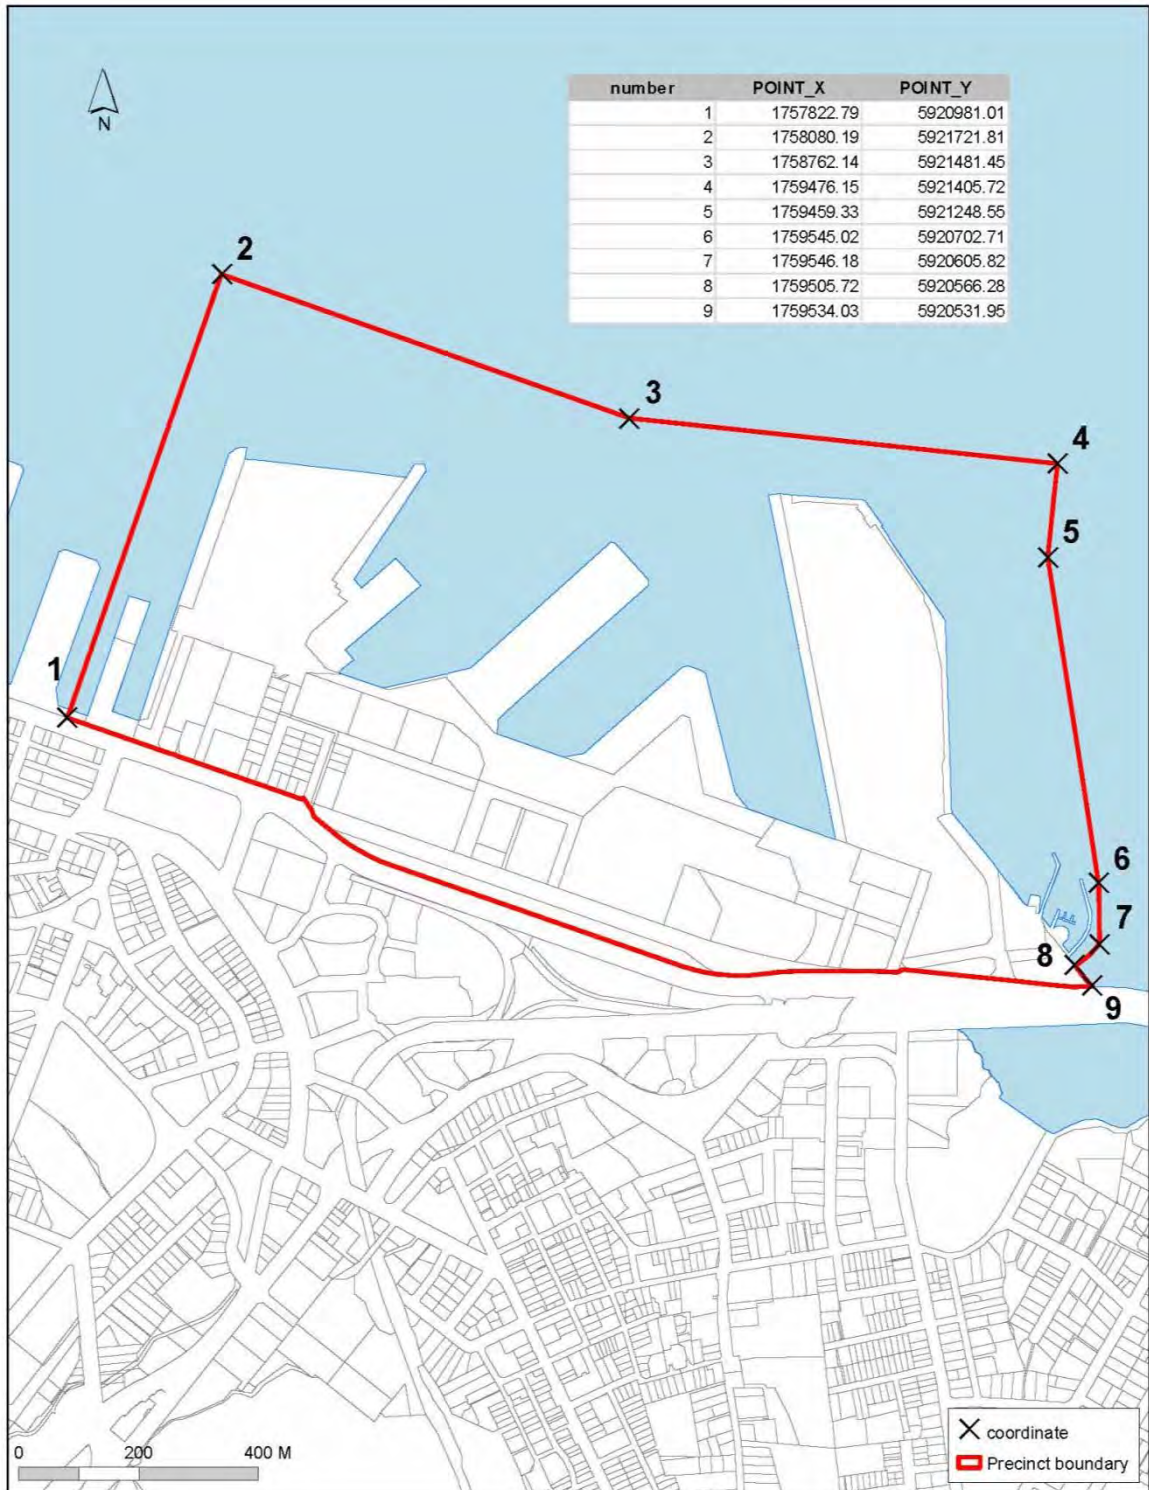

I208.10.2 Port: Precinct plan 2 - Extent of Area A

I208.10.3 Port: Precinct plan 3 - Noise boundaries

I208.10.4 Port: Precinct plan 4 - Precinct boundary coordinates in the coastal marine area

I209. Quay Park

I209.1. Precinct description

The Quay Park Precinct is located on reclaimed land at the eastern end of the city centre and along the City Centre waterfront. It is dissected to the east and south-east by a designated rail corridor and flanked to the north and south by two major roads, Quay Street and The Strand. The major infrastructure within and surrounding the precinct has made it difficult to achieve a well-connected and high-amenity precinct. Development within the precinct includes the arena, office, retail and accommodation activities

Redevelopment of the precinct should recognise the role this precinct plays as the eastern gateway to the city centre. Redevelopment must also respond innovatively to potential adverse noise and amenity effects generated by the port, and the strategic transport network.

The zoning of land is Business – City Centre Zone and Strategic Transport Corridor Zone.

I209.2. Objectives

- (1) A mix of activities compatible with its location on the eastern edge of the city centre and its proximity to the port and transport network.
- (2) The scale and form of development within the precinct:
 - (a) acknowledges the importance of the precinct as the eastern gateway to the city centre;
 - (b) provides a transition to surrounding neighbourhoods;
 - (c) is sensitive to public open spaces, and the former railway station building;
 - (d) enhances and defines street networks; and
 - (e) provides a variation in building height and form.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I209.3. Policies

Land use activities

- (1) Enable the establishment of a wide range of activities to support and complement the activities in the city centre.
- (2) Limit the size and type of retail activity to maintain the vibrancy and amenity of the city centre's core retail areas.
- (3) Require the design of any residential apartments to protect occupants from the potential adverse effects of noise from the port and transport network.

Built form

- (4) Require the location and design of development adjoining Te Taoū Crescent and the railway station to respect the scale and architecture of scheduled historic heritage places such as the railway station.
- (5) Provide for development that responds to the topography of the precinct and surrounds and achieves a transition in height between the core central business district and the less intensive fringe whilst allowing for some additional height in order to provide variation and interest in built form outcomes.
- (6) Limit building height in particular parts of the precinct to protect views to significant historic heritage places.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I209.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I209.4.1 Activity table specifies the activity status of use and development activities in the Quay Park Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I209.4.1. Activity table

Activity		Activity status
Use		
Commerce		
(A1)	Drive-through restaurants in Sub-precinct A	RD
Development		
(A2)	Minor cosmetic alterations and repairs to a building that does not change its external design and appearance	P
(A3)	New buildings, and alterations and additions to buildings	RD
(A4)	Transport network for roads, lanes, pedestrian connections	RD
(A5)	Public open space	RD
(A6)	Subdivision	RD
(A7)	Development that does not comply with Standard I209.6.3 Site intensity	NC

I209.5. Notification

- (1) Any application for resource consent for an activity listed in Table I209.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I209.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All permitted and restricted discretionary activities listed in Table I209.4.1 Activity table must comply with the following standards.

I209.6.1. Building height

Purpose: manage the height of buildings to achieve Policies I209.3(5) and I209.4(6) of the Quay Park Precinct.

- (1) Buildings must not exceed the heights shown on Quay Park Precinct: Precinct plans 2 and 3.

I209.6.2. Building frontage height

Purpose: manage the frontage height of buildings to maintain pedestrian amenity and maintain low building heights around public open space.

- (1) On every frontage identified on Quay Park Precinct: Precinct plan 1, buildings must not project beyond a 45 degree recession plane measured at all points along the frontage of the site from 18m above mean street level. The building setback must be an emphatic or a stepped profile of at least two stories and must not be a literal regression of the 45 degree angle.

I209.6.3. Site Intensity

Purpose: manage the scale, form and intensity of development to maintain the character of the Quay Park Precinct.

- (1) The basic and the maximum floor area ratio permitted within the precinct is 3:1.
- (2) Excluded from the calculation of the basic and maximum floor area ratio are parking areas incorporated within the building to an equivalent floor area ratio of 1:1.
- (3) For sites within the area bounded by Quay Street, Tangihua Street, Beach Road and Britomart Place the following applies:
 - (a) the basic floor area ratio is 4:1 and the maximum total floor area ratio is 8:1;

- (i) the maximum total floor area achievable is limited by the ratio of average floor area to site area as follows:

Where:		
(A8)	$\frac{AFA}{SA} < 6$	MTFAR equals 8:1
(A9)	$0.6 < \frac{AFA}{SA} < 0.75$	$12.8 - \frac{(8 \times AFA)}{SA} : 1$
(A10)	$\frac{AFA > 0.75}{SA}$	6.5:1

- (ii) the bonus floor area provisions under clauses H8.6.10(10) to H8.6.10(20) of the Business - City Centre Zone including the bonus features for bonus area 2 apply.

I209.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I209.8. Assessment – restricted discretionary activities

I209.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings:
 - (a) the matters of discretion in H8.8.1(1) for new buildings and external alterations and additions to buildings not otherwise provided for; and
 - (b) the proposed building, alteration or addition relative to the location of infrastructure servicing the area and open space should result in an integrated network that is adequate to meet the needs of the overall development area.
- (2) subdivision:
 - (a) the assessment criteria set out in E38 Subdivision - Urban under E38.12.2; and
 - (b) the location of infrastructure servicing the area, and open space, should result in an integrated network that is adequate to meet the needs of the overall development area.
- (3) transport network including roads, lanes, pedestrian connection:
 - (a) the location, physical extent and design of the transport network;

- (b) the location and capacity of infrastructure to service the land for its intended use;
 - (c) integration of development with neighbouring areas, including integration of the transport network with the transport network of the wider area; and
 - (d) the location of the roads, lanes and pedestrian connections relative to the overall development, including open spaces, earthworks areas and land contours and infrastructure location.
- (4) public open space network
- (a) the location, physical extent and design of open space; and
 - (b) the location of the public open space relative to the overall development, including roads, pedestrian linkages, existing open spaces, earthworks areas and land contours and infrastructure location.
- (5) drive-through restaurants in Sub-precinct A:
- (a) the matters in I209.8.1(1), where the matters for new buildings, or for additions and alterations, are inconsistent with the matters listed below, the matters listed below take precedence;
 - (b) building design and external appearance; and
 - (c) design of parking, access and servicing;
- (6) infringing the building height standard:
- (a) building scale, dominance and visual amenity effects; and
 - (b) effects on the current or planned future form and character of the precinct.
- (7) infringing the building frontage height standard:
- (a) building scale, dominance and visual amenity effects;
 - (b) effects on the planned future form and character of the precinct; and
 - (c) pedestrian amenity and function.

I209.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings:
 - (a) the matters of discretion in clause H8.8.2(1) of the Business – City Centre Zone rules for new buildings and/or alterations and additions to buildings apply; and

- (b) the proposed building, alteration or addition relative to the location of infrastructure servicing the area and open space should result in an integrated network that is adequate to meet the needs of the overall development area.

(2) subdivision:

- (a) the matters of discretion set out in E38 Subdivision - Urban under E38.12.1; and
- (b) the location of infrastructure servicing the area, and open space, should result in an integrated network that is adequate to meet the needs of the overall development area.

(3) transport network including roads, lanes, pedestrian connection:

- (a) the transport network (roads, public transport connections, pedestrian connections and cycle connections) is generally provided in the location identified in the precinct plan to achieve a legible street network. Where no location is identified, an integrated and efficient street and pedestrian network should be provided, including connections to existing and future streets and networks; and
- (a) the layout of the transport network relative to the location of infrastructure servicing the area and open space should result in an integrated network that is adequate to meet the needs of the overall development area.
- (b) safe, practical and efficient 24 hour through-site links are encouraged through the block. Where provided, the through-site link should comply with the requirements for through-site links in the City Centre zone.

(4) public open space network:

- (a) layout and design of public open space should meet the demand of future occupants of the site and be of a high quality, providing for public use and accessibility, views, sunlight access and wind protection within the application area; and
- (b) public open spaces are generally provided in the location(s) identified in the precinct plan to meet the needs of the local community. Where no location is identified, open space should be provided to and located to serve the future needs of the local community.

(5) drive-through restaurants in Sub-precinct A:

- (a) the assessment criteria in I209.8.2(1), where the assessment criteria for new buildings, or for additions and alterations, are inconsistent with the assessment criteria listed below, the assessment criteria listed below take precedence;
- (b) building design and external appearance:

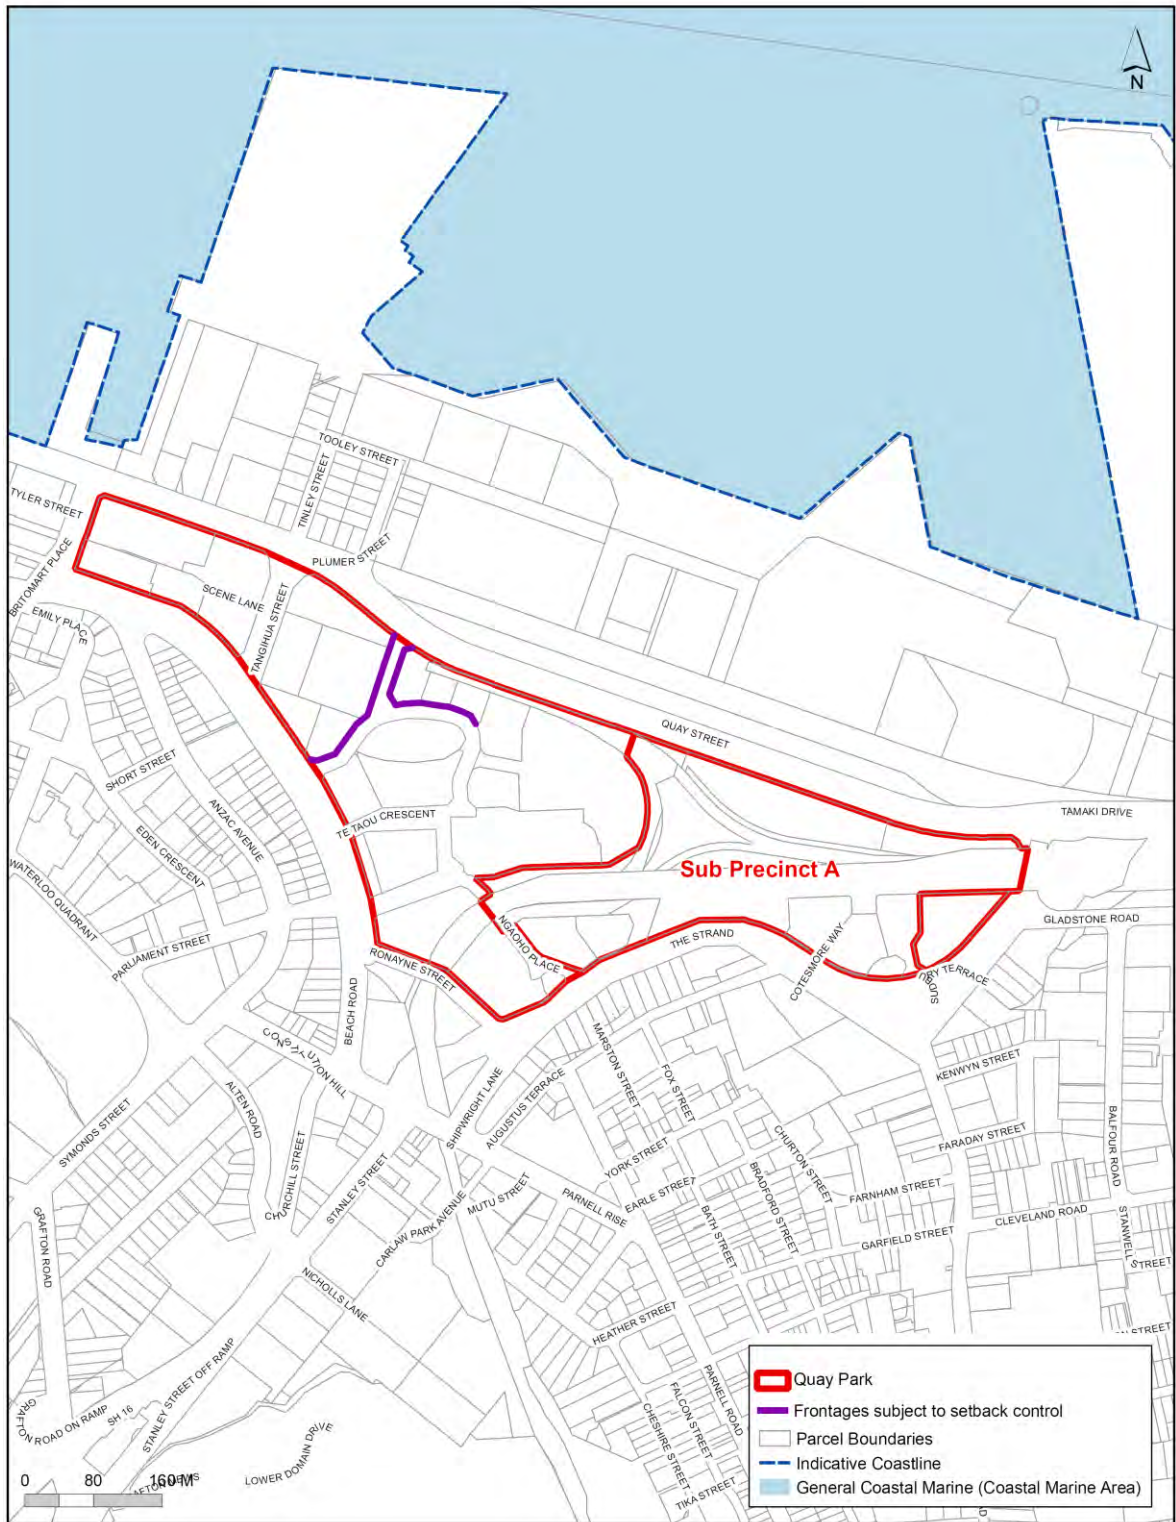

- (i) the extent to which buildings have clearly defined public frontages that positively contribute to public open spaces including streets (excluding service lanes);
 - (ii) the extent to which streetscape amenity and continuity of built form is maintained as far as is practicable and be supplemented by landscaping;
 - (iii) the extent to which buildings, landscaping and site layout are designed to ensure that the development maintains the amenity of surrounding residential or business zoned sites.
- (c) design of parking, access and servicing:
- (i) the extent to which drive-through ordering and collection points are designed and located to avoid or mitigate any adverse effects of noise, light, glare and fumes on adjacent residential zoned sites, including any effects of vehicles stopping and starting on-site;
 - (ii) whether the site is designed to accommodate any queuing of vehicles within the site;
 - (iii) the extent to which outdoor storage and rubbish containers are screened from the street, public open space and adjoining residential zoned sites by fencing or landscaping;
 - (iv) the extent to which the location of vehicle accesses have regard to effects on the continuity of activities and pedestrian movement at street level;
- (6) infringing the building height standard:
- (a) building height may be exceeded where it would provide an attractive and integrated roof form that also meets the purpose of the standard; and
 - (b) where building height is exceeded, Policies I209.3(5) and I209.4(6) of the Quay Park Precinct and Policy H8.3(30) of the Business – City Centre Zone should be considered.
- (7) infringing the building frontage height standard:
- (a) the extent to which the scale of the development is consistent with the planned future character of Quay Park as established through the objectives and policies for the Quay Park Precinct; and
 - (b) the extent to which pedestrian amenity is maintained or enhanced.

I209.9. Special information requirements

There are no special information requirements in this section.

I209.10. Precinct plans

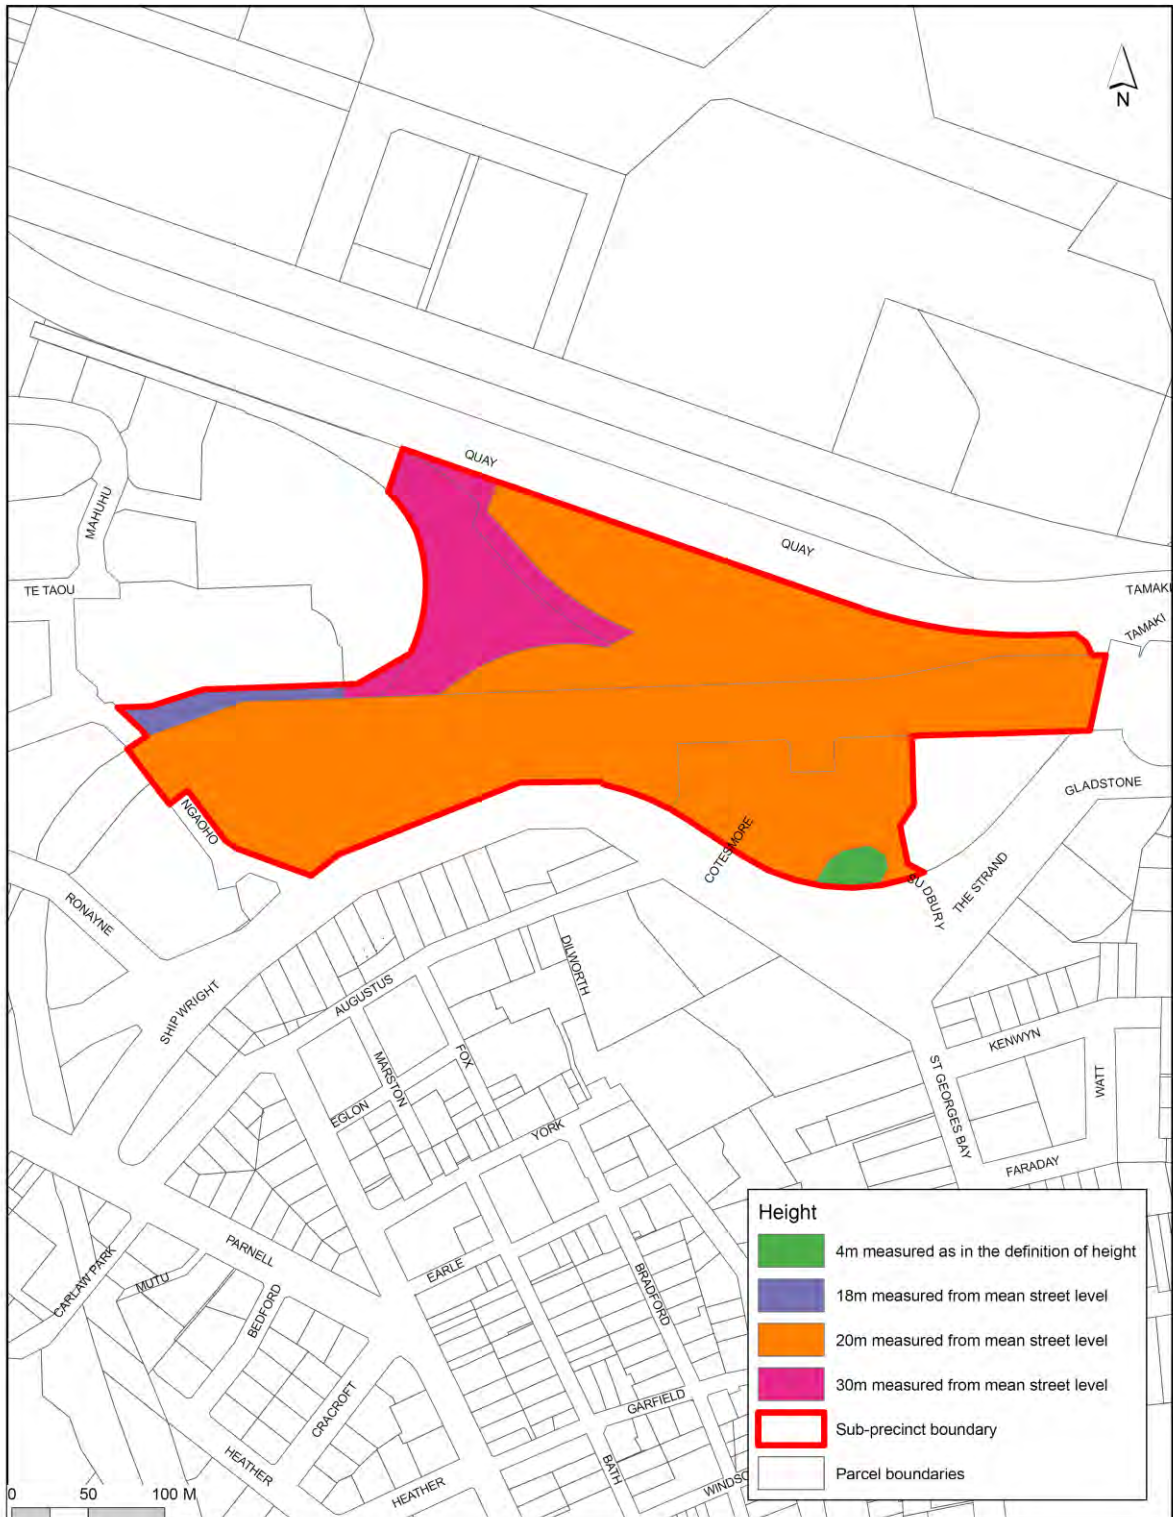

1209.10.1 Quay Park: Precinct plan 1 - Frontage height and setback

I209.10.2 Quay Park: Precinct plan 2 - Building height controls outside of sub-precinct A

I209.10.3 Quay Park: Precinct plan 3 - Building height controls within sub-precinct A

I210. Queen Street Valley Precinct

I210.1. Precinct description

The Queen Street Valley precinct is centred on Queen Street and includes the areas surrounding High, Lorne, O’Connell, and Fort streets.

Part of the special character of the Queen St Valley precinct is its varying topography, which includes a north-facing valley running between the Hobson Street and Princes Street ridges and the original shoreline which runs across Queen Street in the vicinity of Fort Street.

The precinct is located within the core central business district and therefore accommodates a wide range of retail and commercial activities that contribute to its vibrancy and amenity. The precinct has a strong pedestrian focus and provides important connections from the city centre to the harbour’s edge.

Buildings within the Queen Street Valley precinct are characterised by a highly diverse range of ages, styles, levels of detail, height and bulk. To the east of Queen Street, the streets are generally narrow, creating a sense of enclosure. Small site sizes and building footprints also mean that the architectural character is diverse. The older buildings in this area exert a strong presence in the streetscape, contributing to the precinct’s character and sense of human scale. This results in a sense of place with identifiable and unique qualities.

[ENV-2016-
AKL-000184:
Smith &
Caughey
Limited]

Pre-1940s buildings largely define the precinct. A key purpose of the precinct is to maintain the integrity and coherence of the built form and architecture as this is important to retaining the precinct’s streetscape character.

The land in the Queen Street Valley Precinct is zoned Business – City Centre Zone.

I210.2. Objective

- (1) The built and streetscape character and the amenity of the Queen Street Valley Precinct is maintained and enhanced.

The overlay, Auckland-wide and Business – City Centre Zone objectives apply in this precinct in addition to those specified above.

I210.3. Policies

- (1) Require building form and scale to maintain the character, sense of scale within the precinct and maintain sky views and sunlight access to streets.
- (2) Require building design to respect the form, scale and architecture of scheduled historic heritage places and pre-1940s buildings within the precinct.
- (3) Control demolition or removal of pre-1940s buildings, or parts of those buildings, to ensure it does not adversely affect the built form and streetscape character of the precinct.

[ENV-2016-
AKL-000184:
Smith &
Caughey
Limited]

- (4) Require proposals for new buildings or additions to existing buildings adjoining or adjacent to scheduled historic heritage places or pre-1940s buildings to be sympathetic and provide contemporary and high-quality design which enhances the precinct's built form and streetscape character.

The overlay, Auckland-wide and Business – City Centre Zone policies apply in this precinct in addition to those specified above.

I210.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I210.4.1 specifies the activity status of development activities in the Queen Street Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I210.4.1. Activity table

Activity		Activity status
Development		
(A1)	Minor cosmetic alterations to a building that does not change its external design and appearance	P
(A2)	New buildings, and alterations and additions to buildings not otherwise provided for	RD
(A3)	The total demolition or substantial demolition (more than 30% by volume), or any demolition of the front façade of a building constructed prior to 1 January 1940	RD

[ENV-2016-
AKL-000184:
Smith &
Caughey
Limited]

I210.5. Notification

- (1) Any application for resource consent for an activity listed in Table I210.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I210.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All restricted discretionary activities listed in Table I206.4.1 Activity table must comply with the following standards.

I210.6.1. Frontage height and setback

Purpose: manage the scale of development to maintain and enhance pedestrian amenity, and to avoid buildings dominating public open space.

(1) For frontages shown as Frontage Type A on Queen Street Valley Precinct:

Precinct plan 1 - Frontage types:

- (a) the height of the building frontage must be at least 19m above MSL (mean sea level) and must not exceed 28m above MSL (mean sea level); and
- (b) above the frontage height, the building must be setback from the site frontage at least 5m.

(2) For frontages shown as Frontage Type B on Queen Street Valley Precinct:

Precinct plan 1 - Frontage types:

- (a) the height of the building frontage must be at least 19m above MSL (mean sea level) and must not exceed 28m above MSL (mean sea level);
- (b) above the frontage height, the building must not project beyond a 65 degree recession plane measured at all points along the site frontage for a depth of at least 5m; and
- (c) the building setback must be an emphatic or a stepped profile of at least two stories and must not be a literal regression of the 65 degree angle.

(3) For frontages shown as Frontage Type C on Queen Street Valley Precinct:

Precinct plan 1 - Frontage types:

- (a) the height of the building frontage must be at least 13m above MSL (mean sea level) and must not exceed 19m above MSL (mean sea level);
- (b) above the frontage height, the building must not project beyond a 65 degree recession plane measured at all points along the site frontage for a depth of at least 5m; and
- (c) the building setback must be an emphatic or a stepped profile of at least two stories and must not be a literal regression of the 65 degree angle.

(4) Floor space within the area shown on Figures I210.6.1.1 - I210.6.1.3 below is exempt from the calculation of gross floor area for a depth not exceeding 20m from the frontage of the site, if the floor space is located on a storey that adjoins the site frontage or is within 4m of the maximum frontage height specified in I210.6.1(1)-(3) above. Additionally:

- (a) a maximum of six stories for Frontage Types A and B and four stories for Frontage Type C shown on Queen Street Valley Precinct: Precinct plan 1 - Frontage types are exempt from the calculation of gross floor area. The exempt stories must be within 4m of the minimum or maximum frontage height specified in I210.6.1(1)-(3) above;

- (b) floor space is not exempt if the building does not comply with the minimum frontage height specified in I210.6.1(1)-(3) above; and
 - (c) the building must not exceed the MTFAR applying to the site.
- (5) Buildings on sites with two frontages do not need to comply with I210.6.1(1)-(3) above for that part of the building:
- (a) located within 8m of the intersection of the two frontages; and
 - (b) three stories above the maximum frontage height specified in I210.6.1(1)-(3) above where the maximum floor to floor height is 4m.

Figure I210.6.1.1 Frontage height and setback - type A

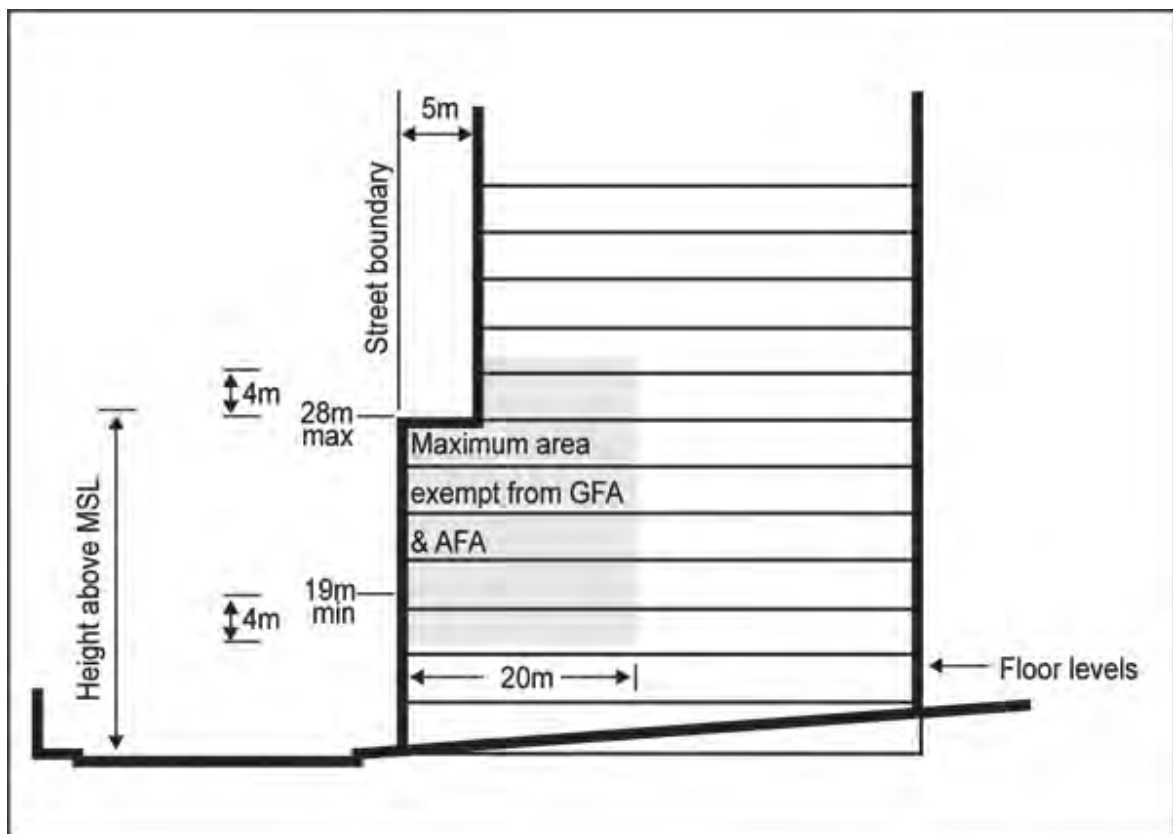

Figure I210.6.1.2 Frontage height and setback - type B

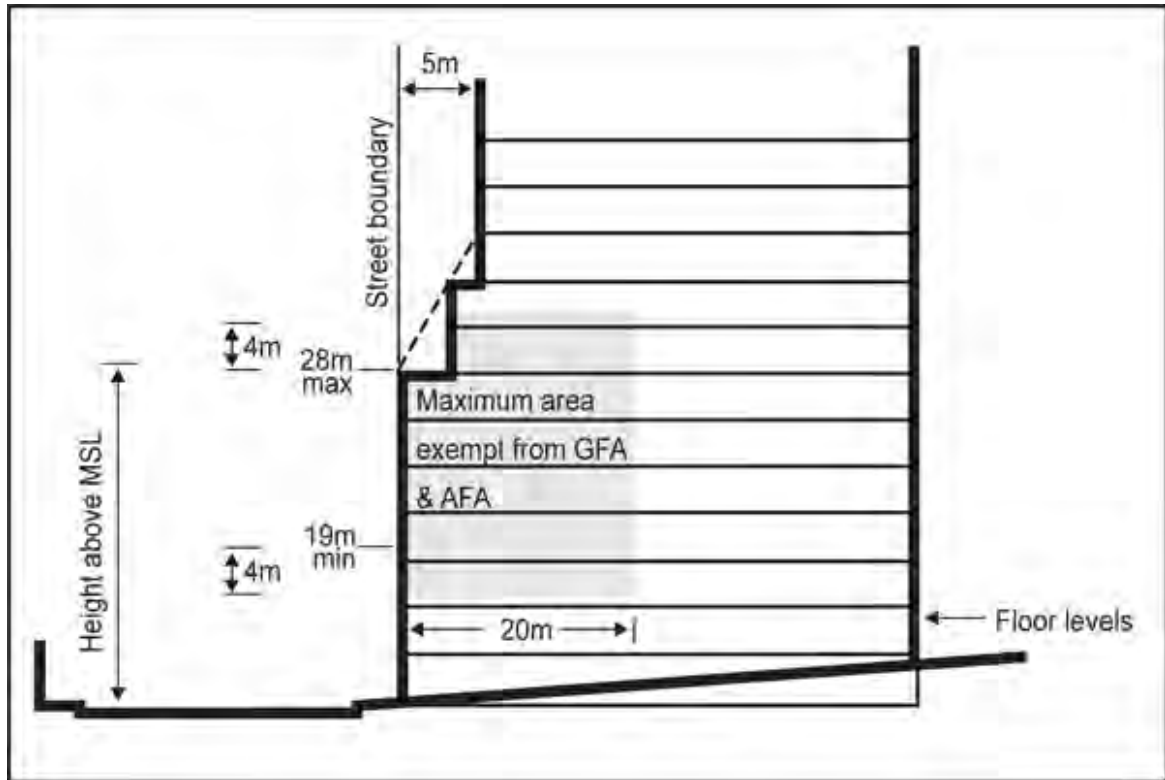

Figure I210.6.1.3 Frontage height and setback - type C

Figure I210.6.1.4 Setback exemption for corner sites

I210.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I210.8. Assessment – restricted discretionary activities

I210.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings and structures not otherwise provided for:
 - (a) building design and external appearance.
- (2) buildings that do not comply with the frontage height and setback standards:

(a) building scale, dominance and visual effects; and

(b) effects on public open space and pedestrian access.

[ENV-2016-
AKL-000184:
Smith &
Caughey
Limited]

(3) The total demolition or substantial demolition (more than 30 per cent by volume), or any demolition of the front façade of a building constructed prior to 1 January 1940.

(a) The effects of building demolition on built form and streetscape character.

I210.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

(1) new buildings and alterations and additions to buildings and structures not otherwise provided for:

(a) building design and external appearance - creating a positive frontage:

(i) whether the design of buildings at ground level contribute to the continuity of pedestrian interest and vitality. However, frontages entirely of glass (curtain walling or continuous shop-front glazing) should not be used at street level as they detract from the streetscape; and

(ii) where feasible, whether restoration of original ground level detail is included in plans for buildings adjoining heritage buildings or for alterations to heritage buildings.

(b) building design and external appearance - variation in building form and visual interest:

(i) whether building levels aligned to the street boundaries incorporate design elements which acknowledge the existing human scale and character of the precinct. In particular:

- whether frontage height and design have regard to existing buildings in the vicinity and maintain a consistent scale. This does not mean a rigid adherence to a single height but it does mean a respect for the general appearance of the surrounding blocks;
- whether the design of frontages include vertical and horizontal details which avoid dominance of frontage elements larger than historically present. Where existing sites are amalgamated, the frontage design should have regard to the existing “grain” of development and convey a residual sense of the original subdivision pattern; and
- whether the consistency of the existing character in a cohesive streetscape is maintained with new buildings acknowledging

the scale, sense of proportion and level of intricacy of adjacent heritage and special historic character buildings in the precinct. However, new buildings should be sympathetic to those buildings and should not replicate or imitate the architectural detailing or style.

(c) building design and external appearance - materials and finishes

(i) whether materials used in new buildings have regard to existing buildings, but new and contemporary interpretations in form and detail may be used.

(2) buildings that do not comply with the frontage height and setback standards:

(a) whether development is of a scale and form appropriate to the setting;

(b) whether the scale of the development is consistent with the current and future character of Queen Street valley as established through the objectives and policies for the Queen Street Valley Precinct; and

(c) whether pedestrian amenity is maintained or enhanced.

(3) the total demolition or substantial demolition (more than 30 per cent by volume), or any demolition of the front façade of a building constructed prior to 1 January 1940.

(a) Effects of building demolition on built form and streetscape character

(i) The demolition or removal of a pre-1940s building within the precinct should not significantly adversely affect the built form and streetscape character of the precinct. In particular, consideration will be given to:

- whether the existing building forms part of a cohesive group of buildings in terms of similarity of age, scale, proportion or design and the extent to which the building's demolition would detract from the shared contribution that group makes to streetscape, the unique character or the history and context of the precinct.
- whether the existing building is a remnant example of a building type that reflects the history of the area.
- the contribution the individual building makes to the context, character or cohesiveness of the streetscape or precinct.
- the contribution the building makes to adjoining or nearby scheduled historic heritage buildings, either through the context and the relationship of the building to the scheduled historic heritage building or through the building's mass, height or rhythm of facades, and whether its demolition would adversely impact on the historic heritage values of the building.

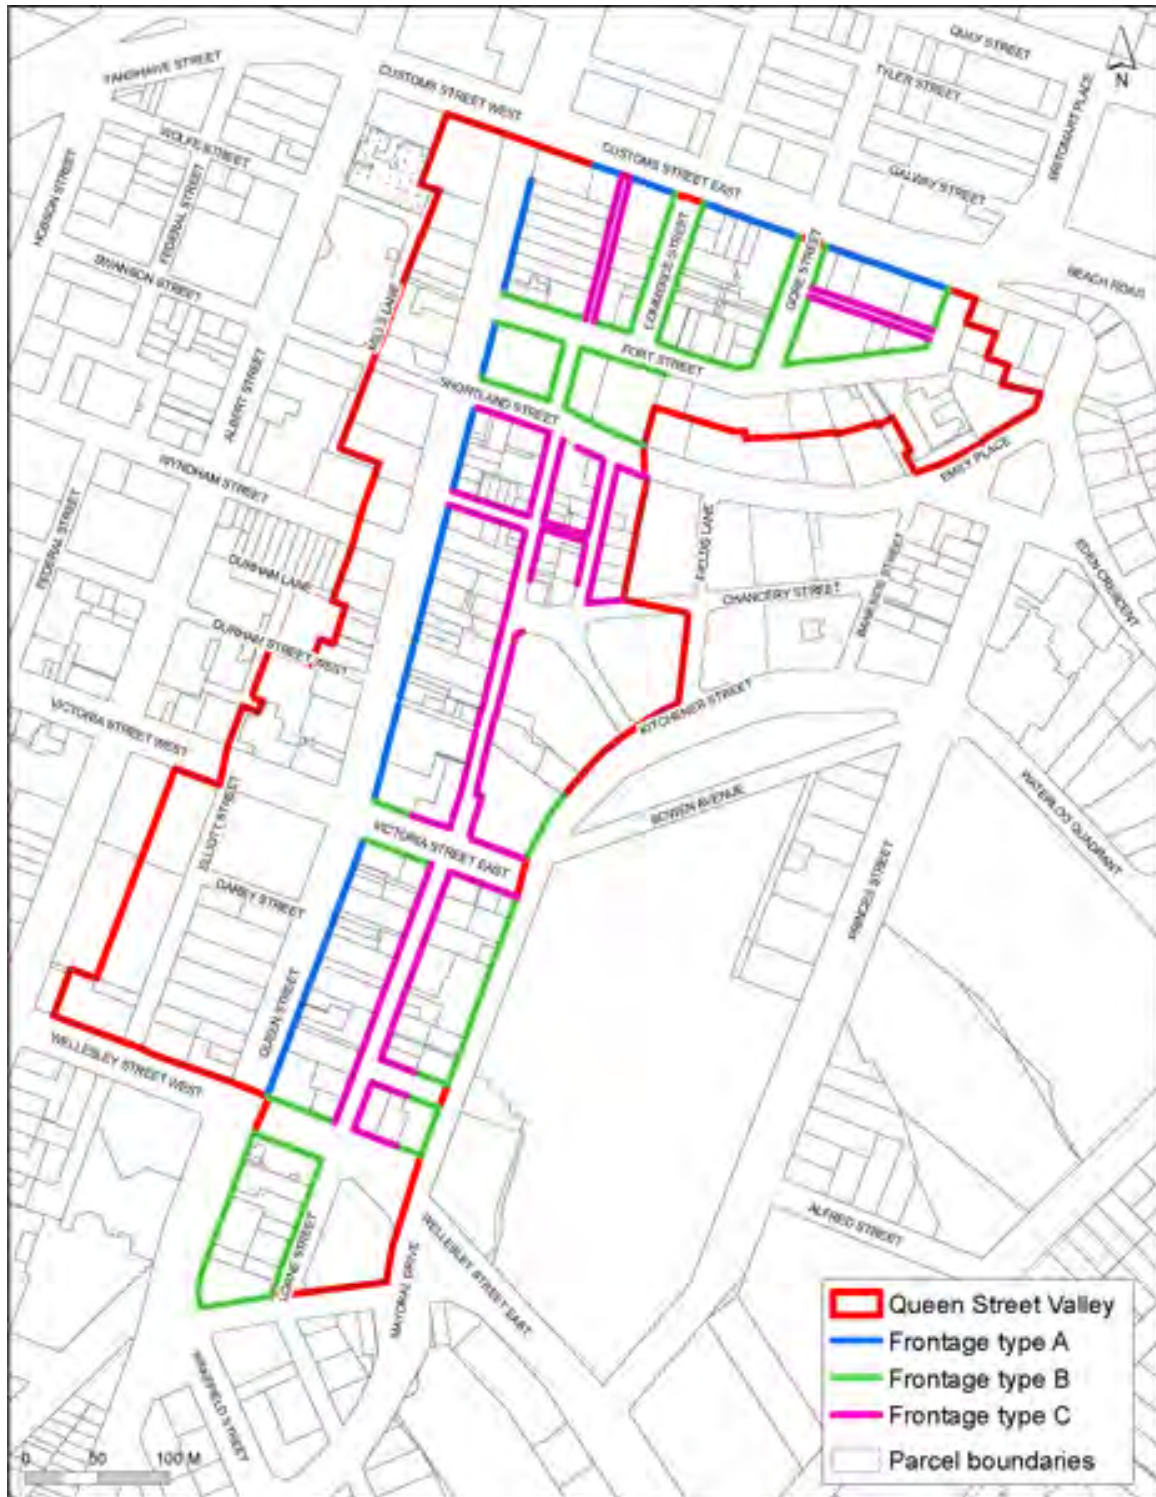

- whether reasonable use of the site can be achieved through adaptive re-use of the building rather than through its demolition and replacement.
- (ii) Notwithstanding the above, whether the building is beyond rehabilitation in terms of poor structural or physical condition, and the costs of the repair work or upgrading necessary to extend the useful life of the building are prohibitive (in comparison to the costs of a new building of similar size).

I210.9. Special information requirements

There are no special information requirements in this precinct.

I210.10. Precinct plans

I210.10.1 Queen Street Valley Precinct: Precinct plan 1 - Frontage types

I211. Viaduct Harbour Precinct

I211.1. Precinct description

The Viaduct Harbour precinct incorporates Viaduct Harbour and the land fronting the harbour (including Hobson Wharf), and the adjacent coastal marine area. The precinct is characterised by its enclosed water space, interesting water edge, proximity to the city core, and areas of low-rise character buildings. Refer to Viaduct Harbour Precinct plan 1 for the location and extent of the precinct. Coordinates for the precinct boundary in the coastal marine area are shown on Precinct plan 6.

The purpose of the Viaduct Harbour precinct is to provide for a scale of development and a range of uses which reflect and complement the Viaduct Harbour as a special place of character within the city centre. Building height, bulk and design controls are intended to provide a framework which, while providing flexibility in building design, encourages well-defined edges to public spaces, a sense of enclosure at the built edges of public space and a visual transition in the height of built form extending from the water's edge of Viaduct Harbour to the established central commercial area.

To build upon and reinforce the Viaduct Harbour's attributes, provision is made for a wide range of activities. In particular, the establishment of a mix of recreation, leisure, retail, entertainment and community/cultural activities is encouraged along the water's edge, open spaces and certain roads where pedestrian activity is likely to be highest.

The open space network, identified as sub-precinct B, incorporates a range of different sizes, widths and shapes to cater for varying recreational needs. The width of space around the Basin perimeter is also sufficient for the coexistence of maritime-related activities, pedestrian promenades, open air cafe seating and similar activities.

The residential area, identified as Sub-precinct C, recognises the established high quality residential environment and the benefits that a permanent residential population provides to the character, vitality, safety and amenity of the precinct.

The zoning in the Viaduct Harbour Precinct is Business – City Centre Zone and Coastal – General Coastal Marine Zone.

I211.2. Objectives [rcp/dp]

- (1) An attractive public waterfront and world-class visitor destination that is recognised for its distinctive character, quality buildings, public open spaces, recreational opportunities, community and cultural facilities and events.
- (2) Maintain and enhance the Viaduct Harbour land and adjacent water space as a special place of character in the City Centre and retain significant views of the water and areas within and adjacent to the precinct.
- (3) A safe, convenient and interesting environment, which optimises pedestrian and cycling use and improves connectivity within the precinct and to adjacent areas of the City.

[ENV-2016-

Viaduct
Harbour
Holdings
Ltd]
[CIV-2016-
404-002276:
Viaduct
Harbour
Holdings
Limited]

- (4) An attractive place for business and investment is provided for marine and port activity, maritime passenger operations and commercial business activity which benefit from a high amenity waterfront location.
- (5) Adverse effects arising from activities and development are avoided, remedied or mitigated, in an integrated manner across mean high water springs.
- (6) A mix of activities is encouraged including residential, business, tourism and events that create a vibrant environment.
- (7) Maintain the residential character and amenity in Sub-precinct C as an attractive place for permanent residents.

The overlay, Auckland-wide and Business – City Centre Zone objectives apply in this precinct in addition to those specified above.

I211.3. Policies [rcp/dp]

- (1) Enable the efficient operation and development of the precinct by providing for activities which have a functional need to locate in or adjacent to the coastal marine area.
- (2) Enable a diverse range of activities while:
 - (a) avoiding, mitigating or remedying potential adverse effects in an integrated manner across mean high water springs, including reverse sensitivity effects on marine and port activities; and
 - (b) maintaining and enhancing public access to the waters edge.
- (3) Provide for continued use of all berthage areas adjacent to public open spaces for commercial vessel activities and other marine and port activities and marina-activities.
- (4) Manage building height and bulk to:
 - (a) achieve an appropriate scale in relation to the street network and the precinct's prominent waterfront location;
 - (b) complement and maintain the distinctive low-medium rise character established by development in Viaduct Harbour, including a sense of intimacy along streets and other public space frontages;
 - (c) complement the height enabled in the adjacent Downtown West, Central Wharves and Wynyard precincts; and
 - (d) provide a transition in height between the core city centre and the harbour.
- (5) Encourage the development of a diverse range of high-quality visitor experiences including promenading, coastal recreation, community and cultural activities and temporary activities.

- (6) Encourage the construction of a bridge for pedestrians, cyclists and local public transport connecting the Eastern Viaduct with Jellicoe Street to improve public connectivity between Wynyard precinct and the city centre.
- (7) Encourage an integrated network of attractive streets and lanes to increase pedestrian and cycling permeability and accessibility through the precinct.
- (8) Enable and maintain a network of different-sized public open spaces in key locations along the water's edge to cater for a range of recreational opportunities and provide vantage points.
- (9) Manage the land and coastal marine area to avoid significant adverse effects and avoid, remedy or mitigate other adverse effects on the water quality and ecology of the city centre coastal environment.
- (10) Limit the loss of significant public views from the city to the harbour and adjacent landscape features.
- (11) Maintain the residential character and amenity values in Sub-precinct C by avoiding activities that adversely affect the residential character and its related amenity values.
- (12) Provide for permanent residents in Sub-precinct C to:
- (a) maintain and enhance the character and vitality of the precinct; and
 - (b) promote the safety and amenity for pedestrians through passive surveillance.

The overlay, Auckland-wide and Business – City Centre Zone policies apply in this precinct in addition to those specified above.

I211.4. Activity table

Table I211.4.1 Activity table specifies the activity status for land use and development activities pursuant to section 9(3) of the Resource Management Act 1991 and the activity status for works, occupation and use in the coastal marine area pursuant to sections 12(1), 12(2), and 12(3) of the Resource Management Act 1991, or any combination of all of the above sections where relevant.

- Within sub-precinct B, activities marked # in the activity table are limited to the area of the Eastern Viaduct shown on Precinct plan 1.
- Those activities marked with * have the listed activity status only when that activity is located on a coastal marine area structure (e.g. a new building on an existing wharf). If that activity is located directly in the coastal marine area (e.g. a new wharf) a different activity status will apply.
- The activities in the Coastal – General Coastal Marine Zone and Business – City Centre Zone apply in the Viaduct Harbour Precinct unless otherwise specified in the activity table below.

- For parking on land refer to E27 Transport, except where a more specific activity status applies in the table below.

Table I211.4.1. Activity table

Activity		CMA [rcp]	Land [dp]
Works in the coastal marine area pursuant to section 12(1) of the Resource Management Act 1991			
(A1)	Maintenance or repair of existing seawalls, reclamations or drainage systems	P	NA
(A2)	Minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation	RD	NA
(A3)	Reclamation or drainage not otherwise provided for	D	NA

I211.5. Notification

- (1) Any application for resource consent for an activity listed in Table I211.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I211.6. Standards

The standards in the Coastal – General Coastal Marine Zone apply to the coastal marine area in the Viaduct Harbour Precinct and the standards in the Business – City Centre Zone apply to land in the Viaduct Harbour Precinct unless otherwise specified below

I211.6.1. Temporary activities Events

- (1) Temporary activities within the Viaduct Harbour precinct must comply with the general noise limit in E25 Noise and Vibration. Temporary activities may exceed the general noise limit (deemed to be a noise event) no more than 15 times in total within the Viaduct Harbour Precinct (regardless of venue) in any calendar year (1 January to 31 December inclusive).
- (2) The general noise levels in E25 Noise and Vibration may be exceeded for a cumulative duration of not more than 6 hours within any 24 hour period for a noise event.
- (3) For the purpose of this rule and except where otherwise stated, the Eastern Viaduct, Te Wero, Waitemata Plaza and Market Square as defined on Precinct plan 1, are all separate venues.
- (4) For the 15 noise events, the maximum noise levels must not exceed:
 - (a) For no more than 3 of the 15 noise events and for a cumulative duration of not more than 3 of the total 6 hours permitted in I211.6.1(1) above (exclusive of one sound check of no more than one hour duration prior to each event):

82dB $L_{Aeq(15min)}$

90dB $L_{A1(15min)}$

76dB $L_{eq(15min)}$ at 63Hz 1/1 Octave Band

76dB $L_{eq(15min)}$ at 125Hz 1/1 Octave Band

(high noise event)

At all other times during the 15 noise events:

72dB $L_{Aeq(15min)}$

80dB $L_{A1(15min)}$

76dB $L_{eq(15min)}$ at 63Hz 1/1 Octave Band

76dB $L_{eq(15min)}$ at 125Hz 1/1 Octave Band

(medium noise event)

- (5) Except as provided elsewhere in this rule, noise levels must be measured in accordance with the requirements of NZS6801:2008 Acoustics – Measurement of environmental sound and must be assessed in accordance with NZS6802:2008 Acoustics – Environmental Noise except that clause 6.3 must not be used.
- (6) Within Waitemata Plaza and Market Square as shown on Precinct plan 2 the following additional restrictions apply:
 - (a) there must be no high noise events;
 - (b) there must be no more than two noise events in any four week period;
 - (c) of the total 15 noise events there must be no more than six in any one calendar year and the general noise level in in E25 Noise and Vibration of the Auckland-wide rules must not be exceeded for a cumulative duration of more than three hours for any one noise event.
- (7) For the purpose of the restrictions in I211.6.1(6) above, Waitemata Plaza and Market Square are counted as a single venue.
- (8) Noise levels exceeding the standard in E25 Noise and Vibration of the Auckland-wide rules including sound checks, must start no earlier than 9am and must finish no later than 10:30 pm Sunday to Thursday inclusive, 11pm Friday and Saturday and 1am New Year's Day.
- (9) The noise limits applying to noise events must be met when measured as the incident level 1m from any adjacent building outside the venue that is occupied during the event.
- (10) Not less than four weeks prior to the commencement of the noise event, the organiser must notify the council in writing of:
 - (a) the names and types of the acts and whether they are anticipated to be within the medium noise level or high noise level as defined in clause 4 above;
 - (b) the person(s) and procedures for monitoring of compliance with noise levels; and
 - (c) the nominated alternative date in the event of postponement due to the weather.
- (11) The council will keep a record of all noise events held and provide this information upon reasonable request.
- (12) Consultation must be undertaken with the majority freehold land owner within the Viaduct Harbour Precinct.

I211.6.2. Parking

- (1) There must be no parking on Hobson Wharf except for parking accessory to marine and port activities, including any short-term servicing requirements.

I211.6.3. Public access

- (1) Standard E38.7.3.2 Subdivision establishing an esplanade reserve does not apply to subdivision within the Viaduct Harbour Precinct.

I211.6.4. Building height

[CIV-2016-404-002276: Viaduct Harbour Holdings Limited] – Addition sought

Purpose: manage the height of buildings to achieve Policy I211.3(4) of the Viaduct Harbour precinct and respect the heritage values of specifically identified buildings.

- (1) Buildings must not exceed the heights specified on Precinct plan 2.
- (2) The height of buildings and structures on land will be measured in accordance with H8.6.8 of the Business – City Centre Zone rules.
- (3) The height limit in Sub-precinct A may be exceeded by no more than 2m for roofs, including any roof top projections, subject to the building complying with I211.6.5 below (site intensity).
- (4) Buildings must not exceed a height of 24m on the site legally described as LOT 1 DP 183125, except that buildings must be setback at least 3m from the northern and eastern facades of the former Auckland Harbour Board Workshops building, referenced as 01969 in Schedule 14.1 Schedule of Historic Heritage, above 16.5m, measured above mean street level.

I211.6.5. Site intensity

Purpose: manage the scale, form and intensity of development to maintain the character and amenity of the precinct.

- (1) Buildings must not exceed the floor area ratios shown on Precinct plan 3.

I211.6.6. Building coverage

Purpose: manage the scale of development within Waitemata Plaza and Market Square to maintain their open space character.

- (1) Buildings, temporary tents, marquees, air supported canopies, structures and tables and seating must not occupy more than 20 per cent in area of Waitemata Plaza or Market Square as shown on Precinct plan 2.

I211.6.7. Vehicle access restriction

Purpose: ensure safe and efficient access from and to Sturdee Street and Fanshawe Street.

- (1) Vehicular access from and to Sturdee Street and Fanshawe Street (except 7-9 Fanshawe Street, being the land in Certificate of Title 7B/1437), must be for left turn manoeuvres only, provided that nothing in this clause will limit the Council's powers in relation to roads under the Local Government Act 1974 and, in particular, its powers to construct median strips in roads where it considers that such works are necessary for traffic safety reasons.

I211.6.8. Special yard A

Purpose: ensure that buildings do not restrict public access along the water's edge.

- (1) Buildings must not locate within special yard A shown on Precinct plan 4.
- (2) The yard applies from average ground level of the land affected to a height of 3m.
- (3) The yard must have a minimum width of 7m.

I211.6.9. Special yard B

Purpose: maintain unobstructed pedestrian access between Customs Street West and the water's edge in Waitemata Plaza.

- (1) Buildings, tents, marquees, air supported canopies, tables, seating and structures must not located within 10m of special yard B shown on Precinct plan 4.

I211.6.10. Public spaces and accessways

Purpose: manage public spaces and accessways to achieve Policies I211.3(2), (3), (7) and (8) of the Viaduct Harbour Precinct.

- (1) The pedestrian accessway on the southern side of the eastern viaduct shown on Precinct plan 4 must be not less than 10m wide.
- (2) All public accessways within sub-precinct B must be available to the public at all times except when written approval has been obtained from the council to temporarily restrict access for security, safety or operational needs associated with port activities or events or where restricted for operational or safety reasons specified in the conservation covenants applying to the area.
- (3) Buildings or structures must not locate within the accessways. This standard does not apply to verandahs or lawful temporary buildings or structures.

I211.6.11. Viewshafts

Purpose: manage development to maintain significant views of the water and adjacent areas within, and to, the Viaduct Harbour precinct.

- (1) Buildings or structures must not locate within those areas of land identified as landward viewshafts on Precinct plan 4. This standards does not apply to the following:
 - (a) verandahs;
 - (b) lawful temporary buildings or structures;
 - (c) road lighting and support structures;
 - (d) traffic and direction signs and road name signs;
 - (e) traffic control devices, traffic signals and support structures, cabinets and other equipment accessory to traffic signals;
 - (f) parking meters, pay and display kiosks and traffic cameras; or

(g) cycle facilities.

- (2) Buildings and structures must not locate within or over those parts of coastal marine area structures and waterspace identified as viewshafts coastal marine area and viewshaft horizontal plane 5m above existing wharf deck level on Precinct plan 4. This control does not apply to lawful temporary buildings or structures.

I211.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I211.8. Assessment – restricted discretionary activities

I211.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) declamation:
- (a) construction or works methods, timing and hours of construction works;
 - (b) location, extent, design and materials used;
 - (c) effects on coastal processes, ecological values, water quality and natural character;
 - (d) effects on public access, navigation and safety;
 - (e) effects on existing uses and activities;
 - (f) consent duration and monitoring; and
 - (g) effects on Mana Whenua values.
- (2) maintenance dredging and capital works dredging:
- (a) effects on coastal processes, ecological values, and water quality;
 - (b) effects on other users of the coastal marine area, navigation and safety; and
 - (c) consent duration and monitoring;
- (3) wave attenuation devices:
- (a) location and design of the wave attenuation device;
 - (b) effects on navigation, safety, and existing activities;
 - (c) effects on wave hydraulics;
 - (d) construction or works methods, timing and hours of operation; and

- (e) consent duration and monitoring;
- (4) marine and port facilities within sub-precinct A or B:
 - (a) The matters of discretion in F2.23.1 of the Coastal - General Coastal Marine Zone apply.
- (5) minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation:
 - (a) form and design of the reclamation;
 - (b) contaminated material;
 - (c) the safe and efficient operation of marine and port activities;
 - (d) effects on Mana Whenua values;
 - (e) construction or works methods, timing and hours of operation; and
 - (f) effects on natural hazards, coastal processes, ecological values and water quality.
- (6) short-term parking (non-accessory) within Sub-precinct B:
 - (a) location, extent, design and materials used;
 - (b) effects on existing uses and activities; and
 - (c) amenity, effects on views and visual amenity;
- (7) observation areas, viewing platforms and boardwalks
 - (a) The matters of discretion in F2.23.1(1) of the Coastal – General Coastal Marine Zone rules apply.
- (8) a bridge across the Viaduct Harbour:
 - (a) construction or works methods, timing and hours of operation;
 - (b) location, extent, design and materials used;
 - (c) effects on coastal processes, ecological values, water quality and natural character;
 - (d) effects on public access, navigation and safety;
 - (e) effects on existing uses and activities;
 - (f) amenity, effects on views and visual amenity; and
 - (g) consent duration and monitoring;
- (9) new buildings, and alterations and additions to buildings not otherwise provided for

- (a) the matters of discretion in clause H8.8.1(1) of the Business – City Centre Zone rules apply; and
 - (b) effects on public access, navigation and safety.
- (10) new pile moorings established after 30 September 2013 including occupation and use by the vessel to be moored:
- (a) the matters of discretion in F2.23.1(1) of the Coastal - General Coastal Marine Zone rules apply.
- (11) permanent refuelling facilities for boats:
- (a) the matters of discretion in F2.23.1(1) of the Coastal - General Coastal Marine Zone apply;
- (12) infringing the building height standard:
- (a) building scale, dominance and visual effects;
 - (b) effects on current or planned future form and character; and
 - (c) pedestrian amenity and function;
- (13) infringing the site intensity standard:
- (a) building scale, dominance and visual effects;
 - (b) effects on current or planned future form and character; and
 - (c) effects on the transportation network including safety and efficiency;
- (14) infringing the building coverage standard:
- (a) building scale, dominance and visual effects; and
 - (b) public use amenity and function of the Waitemata Plaza;
- (15) infringing the vehicle access restriction standard:
- (a) effects on the transportation network (including safety and efficiency); and
 - (b) pedestrian amenity and function;
- (16) infringing the special yards A and B standard:
- (a) effects on public open space and pedestrian access.
- (17) activities on the ground floor within Area A of sub-precinct C:
- (a) effects on the residential character and amenity values; and
 - (b) noise, lighting and hours of operation.

I211.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

(1) declamation:

- (a) whether the adverse effects of declamation are avoided, remedied or mitigated in respect of the effects of the final land/water configuration on:
 - (i) the marine environment including coastal processes, water quality, sediment quality and ecology of the coastal marine area
 - (ii) hydrogeology (ground water) and hydrology; and
 - (iii) sediment accumulation and the need for on-going maintenance dredging of the coastal marine area;
- (b) whether declamation works, including the construction of seawalls, avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated soils and groundwater, and other contaminants;
- (c) whether declamation is located and designed so that the adjacent land area can provide adequate public open space adjacent to, and public access along the water's edge whether on land or on the adjacent water space; and
- (d) The extent to which declamation will affect Mana Whenua values;

(2) maintenance dredging and capital works dredging:

- (a) whether measures are taken to avoid, remedy or mitigate adverse effects on coastal processes, ecological values, and water quality;
- (b) whether effects on other users of the coastal marine area during the dredging are avoided, remedied or mitigated;
- (c) whether consent duration is limited to the minimum duration reasonably necessary for the functional or operational needs of the activity;
- (d) whether monitoring may be required in order to demonstrate the extent and type of effects of the dredging, and the degree to which the effects are remedied or mitigated during and after the activity;

(3) wave attenuation devices:

- (a) whether the location and design of the wave attenuation device consider existing activities including marine related industries, other marine activities and/or adjoining coastal activities;
- (b) whether the location and design of the wave attenuation device consider the effects of wave hydraulics on other users of the coastal marine area;

- (c) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants;
- (4) marine and port facilities within sub-precinct A or B:
 - (a) the assessment criteria in F2.23.2 of the Coastal – General Coastal Marine Zone rules apply;
- (5) minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation:
 - (a) whether reclamation, as far as practicable, mitigate adverse effects through their form and design, taking into account:
 - (i) the compatibility of the design with the location;
 - (ii) the degree to which the materials used are visually compatible with the adjoining coast;
 - (iii) the ability to avoid consequential erosion and accretion, and other natural hazards;
 - (iv) the effects on coastal processes; and
 - (v) the effects on hydrology;
 - (b) whether the use of contaminated material in a reclamation is avoided unless it is contained in a way that avoids, remedies or mitigates adverse effects on water quality, aquatic ecosystems and biodiversity;
 - (c) the extent to which the reclamation will affect Mana Whenua values; and
 - (d) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants;
- (6) short-term parking (non-accessory) within sub-precinct B:
 - (a) the extent to which the short-term parking is located and designed to:
 - (i) maintain safe public access to and along the edge of the coastal marine area and the perimeter of existing wharves;
 - (ii) avoid or mitigate and adverse amenity effects on public access areas and residents; and
 - (iii) avoid or mitigate effects on existing marine and port facilities;
- (7) observation areas, viewing platforms and boardwalks:
 - (a) the assessment criteria in F2.23.2(1) and F2.23.2(17) for coastal marine area structures and buildings in the Coastal - General Coastal Marine Zone rules apply in addition to the criteria below; and

(b) the extent to which the design and finish complement and enhance the coastal environment, open spaces and pedestrian linkages;

(8) a bridge across the Viaduct Harbour:

(a) whether the bridge contributes to a high quality maritime and urban environment and meet the following outcomes:

(i) the bridge design avoids significant visual intrusion into views from public areas across the harbour, or from the harbour out to the wider Waitemata Harbour;

(ii) the bridge contributes to the pedestrian character and amenity of the Viaduct Harbour and Wynyard precincts by:

- providing safe and pleasant pedestrian and cycle access east and west across the Viaduct Harbour;
- having a landscape design, character and quality which integrates with existing pedestrian priority areas and other accessways around the Viaduct Harbour;
- not causing significant adverse effects on the use and enjoyment of Te Wero Island as an area of pedestrian-oriented public space; and
- ensuring the operation or use of the bridge, or lighting will not cause significant adverse effects on the operation of nearby activities or on the amenity values of surrounding land or water uses;

(iii) the bridge is designed and operated to provide for:

- vessel access to and from the inner Viaduct Harbour without undue delay;
- navigation and berthage by the existing range of vessels in the inner Viaduct Harbour;
- any reduction in berthage area to be minimised as far as practicable;
- convenient and easily accessible systems for communicating with vessel users regarding scheduled and unscheduled bridge opening/closing;
- appropriate lighting, navigation aids, safety systems and fail-safe mechanisms; and
- a minimum clearance height of 3m above mean high water springs for a 10m wide navigable channel;

(iv) the ongoing viable use of the Viaduct Harbour (particularly the Wynyard Precinct mixed use sub-precinct) to accommodate marine

and port activities and marine events, such as boat shows and internationally recognised boating events such as the America's Cup event, is maintained;

(v) the bridge has a high quality design that:

- enhances the character of the Viaduct Harbour;
- is simple and elegant;
- is appropriate within the context of the Viaduct Harbour locality and Auckland's coastal setting;
- has an appropriate relationship with the Viaduct Lifting Bridge identified in the Historic Heritage Overlay; and
- utilises high quality and low maintenance materials and detailing;

(vi) the bridge is designed in a manner which may provide in the future for enhanced connectivity for the public between the Wynyard Precinct and the city centre; and

(vii) the bridge has no more than minor adverse effects on coastal processes including sedimentation within the Viaduct Harbour;

(9) new buildings, and alterations and additions to buildings not otherwise provided for:

(a) the assessment criteria in clause H8.8.2(1) of the Business – City Centre Zone rules apply in addition to the criteria below; and

(b) the building should avoid or mitigate effects on public access, navigation and safety;

(10) new pile moorings established after 30 September 2013 including occupation and use by the vessel to be moored:

(a) the assessment criteria in F2.23.2 of the Coastal – General Coastal Marine Zone apply in addition to the criteria below; and

(b) whether the new pile moorings avoid or mitigate effects on public access, navigation and safety;

(11) permanent refuelling facilities for boats:

(a) refer to the assessment criteria in F2.23.2(1) of the Coastal - General Coastal Marine Zone;

(12) infringing the building height standard:

(a) building height may be exceeded where it would provide an attractive and integrated roof form that also meets the purpose of the standard; and

- (b) where building height is exceeded, Policy I211.3(4) of the Viaduct Harbour Precinct and Policy H8.3(30) of the Business – City Centre Zone should be considered;

(13) infringing the site intensity standard:

- (a) the extent to which development is of a scale and form appropriate to the setting;
- (b) the extent to which the scale of the development is consistent with the current and future character of Viaduct Harbour as established through the objectives and policies for the Viaduct Harbour Precinct;
- (c) whether adverse effects on the transportation network are avoided, minimised or mitigated; and
- (d) whether development compromises marine and port activities;

(14) infringing the building coverage standard:

- (a) the extent to which the scale and form of development within Waitemata Plaza and Market Square maintains their open space character;

(15) infringing the vehicle access restriction standard:

- (a) whether access from and to Sturdee Street and Fanshawe Street is safe and efficient; and
- (b) unobstructed operation of the transportation network should be safe and efficient;

(16) infringing the Special Yards A and B standard:

- (a) whether unobstructed public access to and along the water's edge is maintained;

(17) activities on the ground floor within Area A of sub-precinct C:

- (a) the extent to which activities are compatible with and do not detract from the residential character and amenity values of sub-precinct C; and
- (b) whether activities generate noise levels that would adversely affect residential amenity. The Council may impose conditions on the activity's hours of operation and/or permitted levels of low frequency noise.

I211.9. Special information requirements

- (1) An application for marine and port facilities on land within the Viaduct Harbour area shown on Precinct plan 1 must be accompanied by a site management plan detailing operational procedures and physical measures to be put in place to avoid, remedy or mitigate public safety effects.

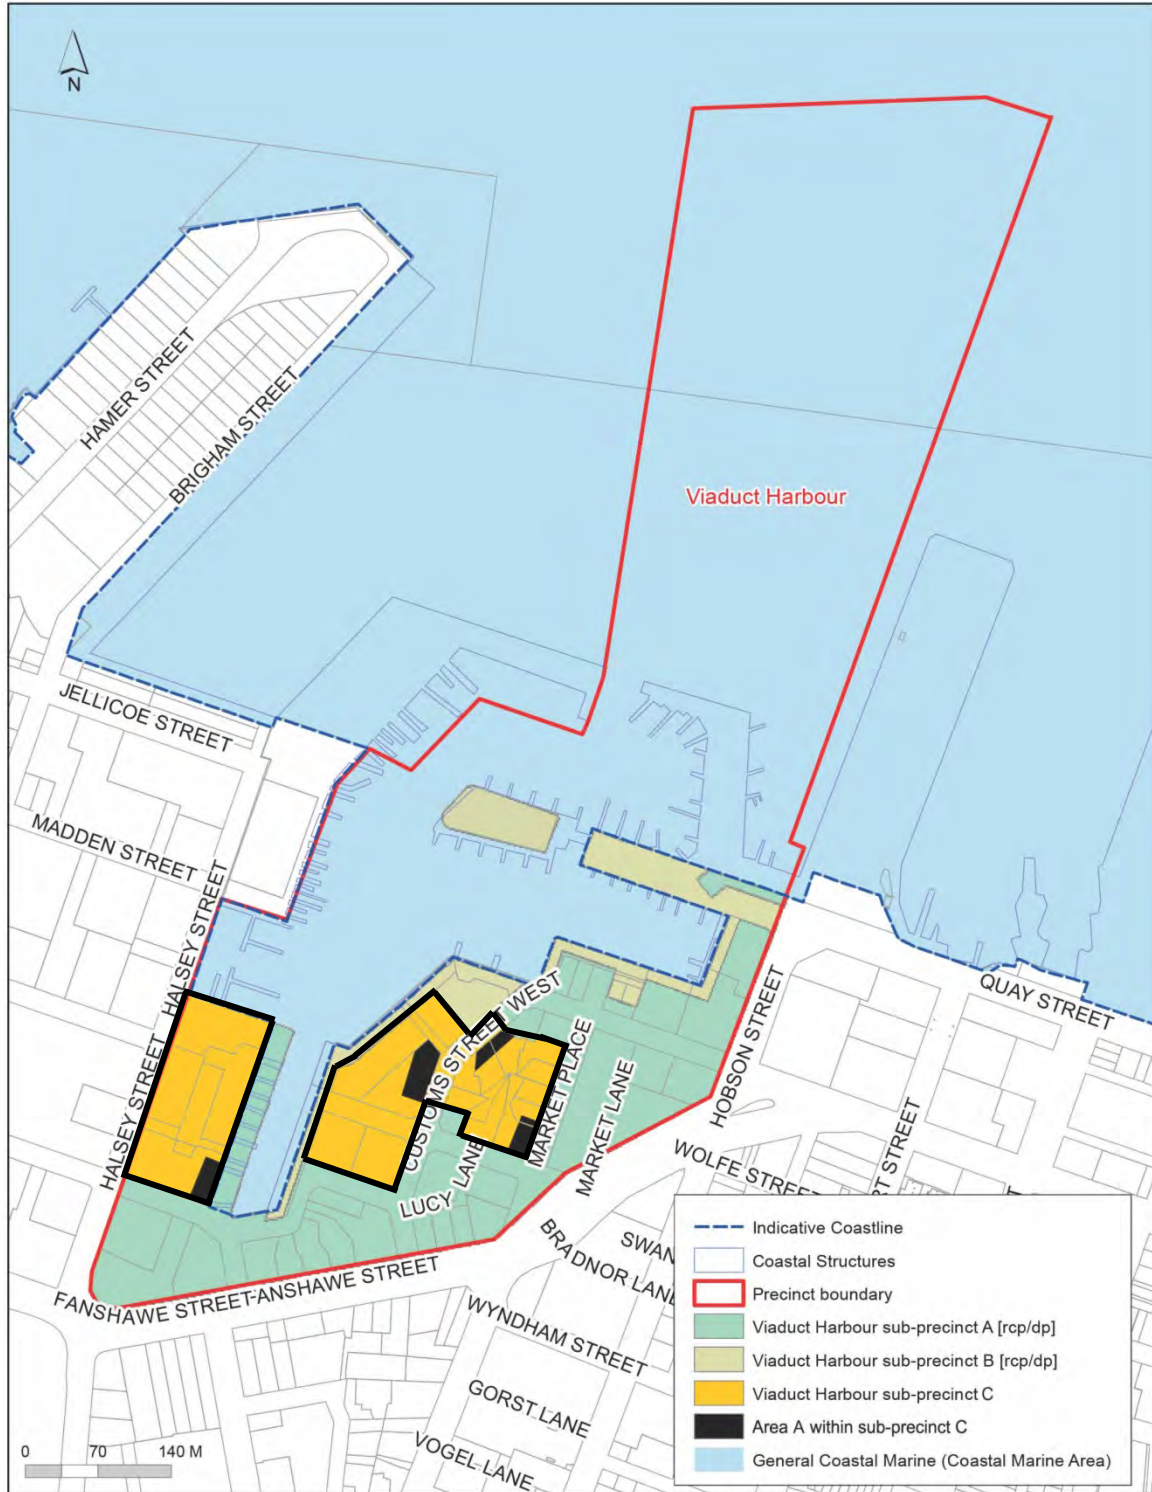

I211.10. Precinct plans

I211.10.6 Viaduct Harbour: Precinct plan 6 - Precinct boundary coordinates in the coastal marine area

I212. Victoria Park Market Precinct

I212.1. Precinct description

The precinct applies to the Victoria Park Market site which is located between Drake Street and Victoria Street West.

The purpose of the Victoria Park Market Precinct is to maintain the heritage values and the existing distinctive character of the market area.

The scale and form of the former city destructor/market brick buildings and high chimney are primary to the market's character, making it a unique city centre attraction. The area is complemented by the dominant retail and food and beverage activity. The high level of pedestrian activity in the courtyard and at street level should be maintained.

The precinct provides for a mix of other activities where they either occupy an area above the courtyard or do not occupy more than a specified percentage of the courtyard-level floor space. This enables flexibility for development without undermining the site's dominant retail activity. Specific activity provisions also apply to the Drake Street frontage which is an important interface of the precinct with its surrounds.

The precinct provides for existing buildings to be refurbished in a manner complementary to existing historic heritage buildings within the precinct. The precinct also encourages the removal of unsympathetic additions to buildings that detract from the historic heritage and historic special character of the precinct. Any major commercial redevelopment of the western portion of the site that adversely affects heritage qualities is inappropriate.

Specific view shafts are identified on the precinct plans to maintain views from the original cliff line along the Drake Street frontage down to Victoria Park. Additionally, views to the historic brick western wall of the destructor buildings from outside the site are considered important and should be retained.

The land in the Victoria Park Market Precinct is zoned Business – City Centre Zone.

I212.2. Objective

- (1) The special character and overall coherence of the Victoria Park Market Precinct, including its heritage values and pedestrian focus in the courtyard and at street level, and significant view shafts, are maintained and enhanced.

The overlay, Auckland-wide and Business – City Centre Zone objectives apply in this precinct in addition to those specified above.

I212.3. Policies

- (1) Protect and enhance the grouping of scheduled historic heritage places and historic elements and features within the precinct that collectively form a unique special character.
- (2) Enable development within the precinct that maintains and enhances the heritage qualities of its historic heritage places and features and historic character, in particular:

- (a) require development to conform with the form, massing, proportion and detailing of historic heritage places within the precinct; and
- (b) require development to respect the consistent scale of historic heritage places along the Victoria Street and Drake Street frontages.
- (3) Require activities at courtyard and street level to provide pedestrian interest and contribute to the liveliness of street and courtyard level frontages.
- (4) Identify and preserve significant view shafts to Victoria Park and to the historic brick western wall of the destructor buildings from outside the site.
- (5) Encourage built form and public amenity features that enhance public awareness of the former Freeman's Bay shoreline.

The overlay, Auckland-wide and Business – City Centre Zone policies apply in this precinct in addition to those specified above.

I212.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I212.4.1 specifies the activity status of development activities in the Queen Street Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I212.4.1. Activity table

Activity		Activity status
Development		
(A1)	Minor cosmetic alterations to a building that does not change its external design and appearance	P
(A2)	New buildings, and alterations and additions to buildings not otherwise provided for	RD
(A3)	Buildings or external alterations to buildings within the areas identified as scheduled buildings on Precinct plan 1.	NC
(A4)	Buildings that do not comply with Standards I212.6.1(1)-(6), I212.6.2(1)-(2), I212.6.3(1), I212.6.4(1) or I212.6.5(1)	NC

I212.5. Notification

- (1) Any application for resource consent for an activity listed in Table I212.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I212.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All permitted and restricted discretionary activities listed in Table I212.4.1 Activity table must comply with the following standards.

I212.6.1. Activities at courtyard level

Purpose: manage the location of activities to maintain and enhance amenity of courtyards and residential amenity.

- (1) Community facilities and offices must locate at least 3m above courtyard level.
- (2) Dwellings and visitor accommodation fronting Drake Street must locate at least 3m above mean street level using the Drake Street frontage.
- (3) Dwellings and visitor accommodation not fronting Drake Street must locate at least 3m above courtyard level
- (4) The combined gross floor area of community facilities, education facilities, entertainment facilities and commercial services (excluding all related nested activities) must not exceed 25 per cent of the total gross floor area at the courtyard level (excluding the Building Platforms A and B shown on Victoria Park Market Precinct: Precinct plan 1).
- (5) The gross floor area of any individual tenancy for community facilities, education facilities, entertainment facilities and commercial services at courtyard level (excluding all related nested activities) must not exceed 100m².
- (6) In I212.6.1(1)-(5) above, "courtyard level" is defined as mean street level using the Victoria Street frontage.

I212.6.2. Building height

Purpose: manage the height of buildings to achieve policy 2 of the Victoria Park Market precinct.

- (1) Buildings on platforms A to J shown on Victoria Park Market Precinct: Precinct plan 1 must not exceed the heights set out below:

Table I212.6.1.1 Building height

Building platform	Height
A	24m above mean street level
B	16m above mean street level
C	ridge and parapet height not to exceed existing ridge and parapet height of adjacent scheduled building 3
D	ridge and parapet height not to exceed existing ridge and parapet height of adjacent scheduled building 4
E	ridge and parapet height not to exceed existing ridge and

	parapet height of adjacent scheduled building 5
F	Max. RL. 11.675
G	Max. RL. 9.00
H	Max. RL. 9.65
I	Max. RL. 13.50
J	31m above mean street level

Note 1

Datum 0.00 = LINZ (Lands and Survey New Zealand Datum)

- (2) Canopies, verandah and walkway shelters within the courtyard shown on precinct plan 1 must not exceed a height of RL 15.50.

I212.6.3. Courtyard

Purpose: manage the location of buildings to maintain the amenity of the courtyard

- (1) Buildings must not locate within the courtyard shown on Victoria Park Market Precinct: Precinct plan 1. This control does not apply to canopies, verandahs and walkway shelters.

I212.6.4. Adelaide Street Viewshaft

Purpose: manage the location of buildings to achieve policy 5 of the Victoria Park Market Precinct.

- (1) Buildings must not locate with the Adelaide Street viewshaft shown on Victoria Park Market Precinct: Precinct plan 1 and in Figures 1 and 2 below.

Figure I212.6.4.1 Adelaide Street viewshaft

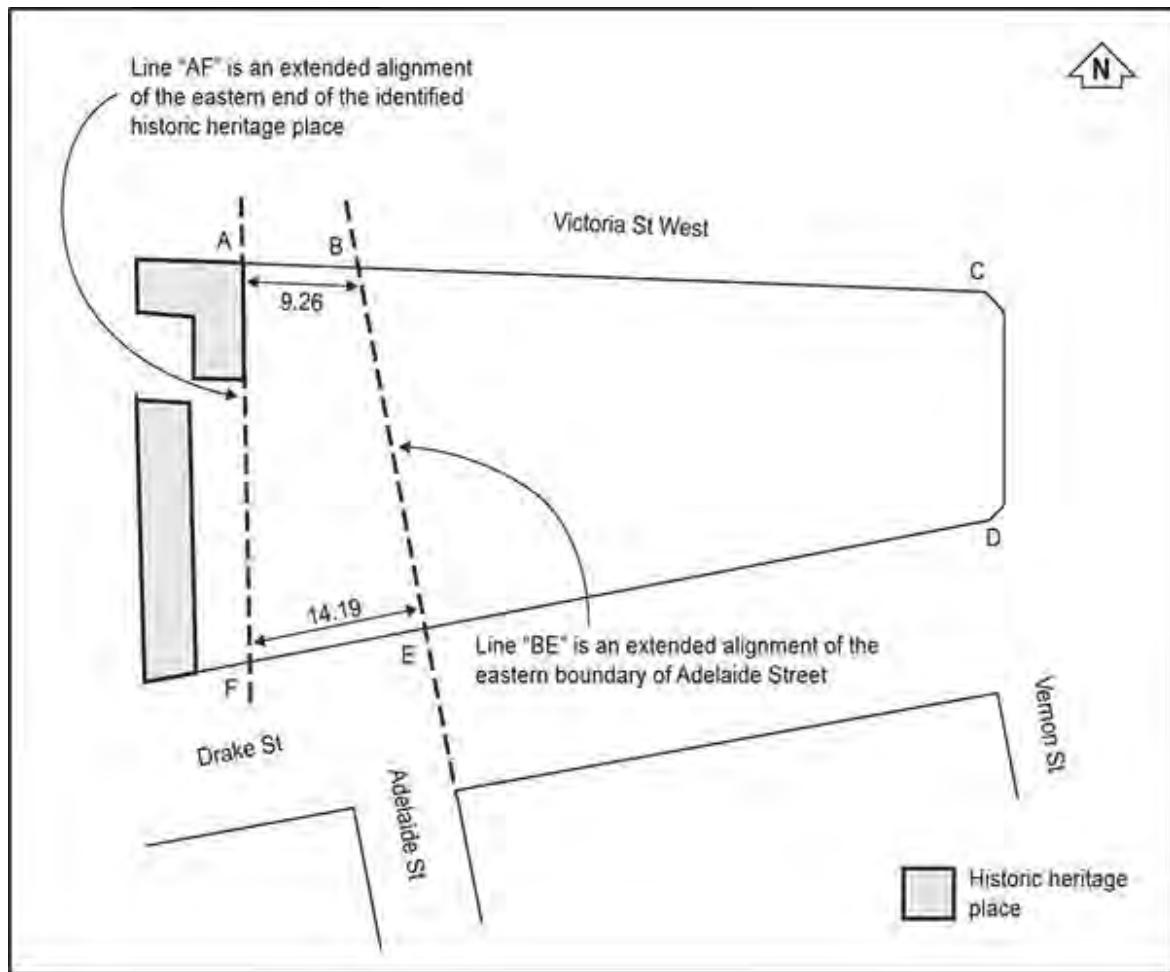

Figure I212.6.4.2 Adelaide Street viewshaft elevation

I212.6.5. Building setback - Building platform 4

Purpose: manage the location of buildings to maintain and enhance amenity.

- (1) Buildings must be setback 2.5m from building platform D shown on Victoria Park Market Precinct: Precinct plan 1.

I212.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I212.8. Assessment – restricted discretionary activities

I212.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings not otherwise provided for:
 - (a) the effects of development on historic heritage values.

I212.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and alterations and additions to buildings not otherwise provided for:
 - (a) the effects of development on historic heritage values:
 - (i) whether the form, mass, proportion and materials conform to the architectural character and heritage value of the scheduled heritage buildings;
 - (ii) whether any alterations retain the consistency of profile which characterises the Victoria Street and Drake Street frontages. In this respect, the vertical profile of the scheduled heritage buildings are considered particularly sensitive to change;
 - (iii) whether permanent canopies over any part of the courtyard detract from the architectural character and heritage value of the buildings. Whether through the use of height, design and materials, canopies maintain the appearance of openness and light in the courtyard area. In this respect, glazing and translucent materials and/or retention of openings to the sky are potentially important design elements to achieve this;

- (iv) new buildings should not detract from the heritage features of existing buildings within the site, particularly the western brick wall of the destructor building;
- (v) whether the open view to the courtyard from Drake Street as shown on Precinct plan 1 is retained;
- (vi) whether new buildings are designed to read as contemporary structures to maintain a distinction between them and the historic market buildings. They should however, be sympathetic in terms of their scale, form and materials used;
- (vii) the extent to which new buildings are generally separated from the historic buildings. Any connections between the two should be lightweight and only touch the historic buildings lightly;
- (viii) whether historic site elements and features such as basalt cobblestones are retained and protected as far as possible. Where cobblestones are affected by new building works, such as the western courtyard building, whether they can be uplifted and stored for future reinstatement. Any other cobblestones that are uncovered during the course of the work should also be retrieved. The final location of the cobblestones should be determined in the course of discussions between the heritage architect, Heritage New Zealand Pouhere Taonga and the Council;
- (ix) whether existing historic fabric assessed as having significance in the conservation plan is retained and protected wherever possible. This includes brickwork, joinery and internal fabric such as original wall linings, roof trusses and match-lined ceilings;
- (x) particular care should be taken to retain and protect any fabric that dates from the building's original uses as the Auckland City Destructor and works depot. This may include steel columns and beams, pulleys, furnace doors and the like;
- (xi) later fabric deemed not to be significant may be removed after consultation with the heritage architect, Heritage New Zealand Pouhere Taonga and the Council;
- (xii) whether historic fabric is repaired as required. This may include replacement of severely eroded bricks, repointing where mortar has weathered and repairs of cracks and other defects. Whether bricks are carefully selected to match the original bricks and mortar should be lime based to match the original. Whether roofs and gutters are repaired or replaced as necessary, either with like materials or to match the original. Some joinery may also need to be repaired or replaced;
- (xiii) whether repairs to the heritage buildings are carried out under the guidance of a heritage architect;

- (xiv) whether the historic buildings on the Victoria Park Market site are returned to an earlier form where possible. This may involve the reconstruction of missing elements such as windows and doors, the restoration or reinstatement of elements to their original locations and the removal of later accretions such as conservatories or canopies;
- (xv) whether the overhead walkway is cut back in various locations where it currently encroaches on the heritage buildings including the chimney, stables, destructor and generator/powerhouse/battery house complex. This will enable these buildings to be reconstructed or restored to their earlier form;
- (xvi) In general, the historic buildings should not be extended or added to other than the provision of two new levels above the battery building and another bay alongside. Some additional space is proposed to be constructed towards the western end of the western depot building in an area that has previously been extensively modified. The eastern depot is also proposed to be extended over part of its length;
- (xvii) some minor modifications may be required to adapt the heritage buildings for a new use. These include the destructor building, the depot buildings, the stables and generator/powerhouse building. In general, work to adapt these buildings may involve the provision of new openings and the installation of appropriate new doors and windows in the exterior fabric;
- (xviii) whether new joinery is detailed to have a consistency of design and appearance and shall be sympathetic to the character of the historic buildings. For example, the destructor building has steel windows and any new windows shall be fabricated to match. The remaining heritage buildings have timber windows;
- (xix) whether new joinery is designed to "read" as being new so as to maintain the distinction between old and new fabric. Some new joinery will also be required in areas such as the shop fronts in the depot buildings;
- (xx) whether all work to adapt the buildings for their new uses are designed in conjunction with the heritage architect, following consultation with Heritage New Zealand Pouhere Taonga and the Council;
- (xxi) In general, in terms of internal fit-outs tenants should be encouraged to leave original fabric exposed. This includes brick walls, trusses, raking ceilings with match lining and original trim.

- (xxii) it is accepted that some tenants may wish to provide new ceilings and wall linings to create a modern retail environment and that this may involve covering over or concealing significant heritage fabric such as brickwork. Any heritage fabric that is not wanted to be seen should be covered over, rather than be removed;
- (xxiii) whether new linings are sympathetic to the historic buildings and not to detract from their heritage values. For example, modern suspended ceilings with tiles set into exposed rails would not be considered appropriate;
- (xxiv) tenants should avoid damage to heritage fabric when installing new wall and ceiling linings. The later linings should also be able to be removed at some future date without damaging fabric and the spaces returned to their earlier form;
- (xxv) whether reticulation of new services is considered at an early stage to minimise their impact on heritage fabric. The location of all duct work and other services shall be discussed with the heritage architect, the council and Heritage New Zealand Pouhere Taonga and the Council;
- (xxvi) in particular, whether large scale ductwork such as kitchen extracts are run within the building envelope and large ducts should not be run on the outside of buildings. Consideration should be given to routing ductwork through new buildings. Service providers are encouraged to co-ordinate the installation of services to prevent a proliferation of ductwork and cabling;
- (xxvii) the location of air-conditioning services should similarly be carefully considered with the aim of avoiding a proliferation of exposed ductwork and air-conditioning plant on walls and roof areas. The location of such equipment must be discussed at an early stage with the heritage architect, Heritage New Zealand Pouhere Taonga and the Council and the council. Where appropriate, plant may be screened to reduce its impact;
- (xxviii) whether other services such as electrical and data cabling is concealed wherever possible. Television aerials and dishes must be concealed behind parapets and the like;
- (xxix) Any significant new development within the precinct should involve the substantial restoration of scheduled buildings identified on the Precinct plan 1; and
- (xxx) whether any lightweight shelters to the proposed new courtyard buildings are constructed of steel and glass and are designed to avoid visual conflict/obfuscation with existing heritage buildings on the site. All such structures should be designed in consultation with the council;

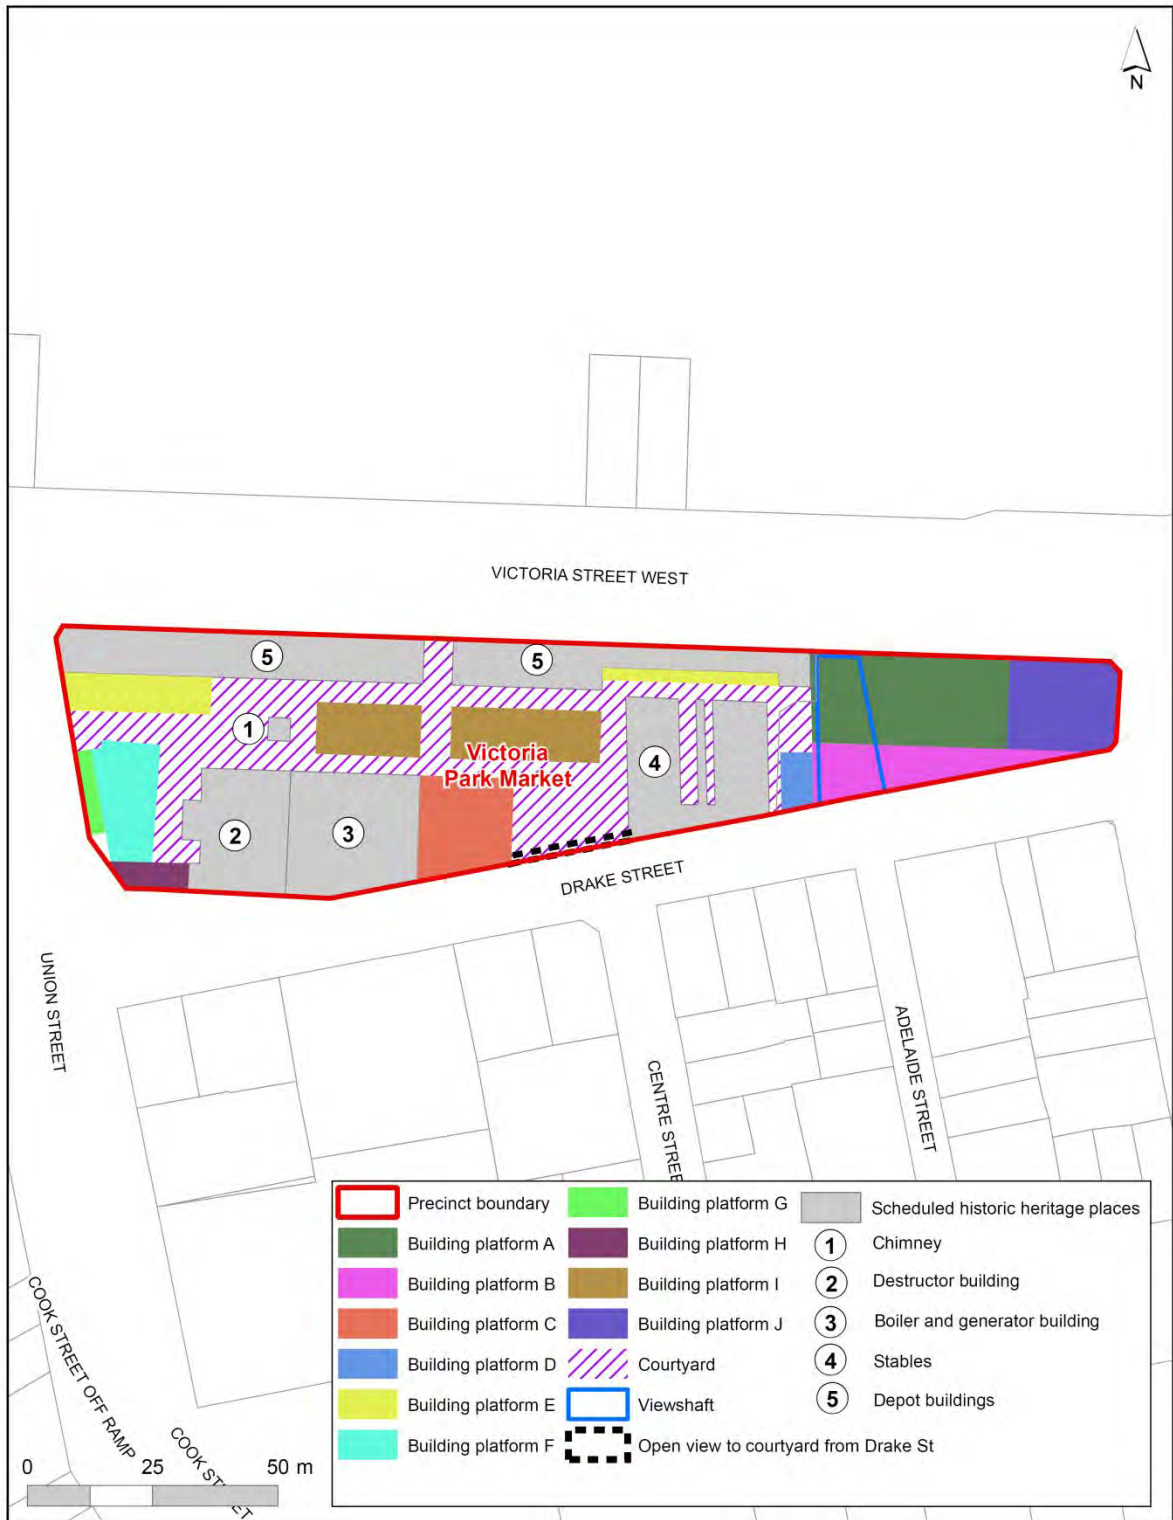

- (xxxi) where possible, whether development of sites along the original shoreline cliff near the northern edge of Drake Street avoids the destruction of, and should identify and enhance that natural and historic feature.

I212.9. Special information requirements

There are no special information requirements in this precinct.

I212.10. Precinct plans

I212.10.1 Victoria Park Markets Precinct: Precinct plan 1

I213. Westhaven – Tamaki Herenga Waka Precinct

I213.1. Precinct description

The Westhaven – Tamaki Herenga Waka Precinct is located at the western edge of the city centre and comprises the land and coastal marine area occupied by Westhaven marina. The extent of the Westhaven – Tamaki Herenga Waka Precinct is shown on Precinct plan 1. Coordinates for the precinct boundary in the coastal marine area are shown on Precinct plan 2.

The purpose of the Westhaven – Tamaki Herenga Waka Precinct is to provide for the use and development of one of the largest marinas in the southern hemisphere. For more than 100 years, Westhaven has been a significant focus for recreational and competitive boating activities in Auckland and this remains the principal function of the precinct. Along with the Wynyard Precinct, this precinct is a hub of recreational boating, charter services, boat clubs, coastal services and the marine industry. Reflecting its principal function, the precinct provides for the operation of the marina and a limited range of supporting commercial activities.

Westhaven forms an important part of Auckland's waterfront, providing pedestrian and cycling access between the city centre and St Marys Bay. It is located adjacent to the Harbour Bridge and its southern approaches, but functions independently from the motorway infrastructure. The precinct encourages pedestrian and cycling access within the precinct to be enhanced provided such activities do not compromise the current and future function and growth of the marina.

The marina provides an important visual edge to the city centre, with low-level buildings separated by public open spaces, allowing for landscape views of the marina. Development within the Westhaven – Tamaki Herenga Waka Precinct is guided by Precinct plan 1.

The land and coastal marine area in the Westhaven – Tamaki Herenga Waka Precinct is zoned Coastal – Marina Zone.

I213.2. Objectives [rcp/dp]

- (1) A world-class marina for recreational boating and water sport activities that is supported by other marine and port activities and a limited range of commercial business activities that rely on and benefit from a waterfront and marina location and contribute to the efficient operation of the marina and amenity of the waterfront.
- (2) A safe, convenient and interesting environment, which provides for and encourages pedestrian and cycling use and improves connectivity within the precinct and to adjacent areas of the city.
- (3) The efficient use and development of Westhaven marina, principally for recreational and competitive boating activities.
- (4) Adverse effects arising from activities and development are avoided, remedied or mitigated, in an integrated manner across mean high water springs.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified below.

I213.3. Policies [rcp/dp]

- (1) Enable the efficient operation and development of the marina by providing for activities that have a functional need to locate in or adjacent to the coastal marine area, while avoiding, mitigating or remedying any significant adverse effects across mean high water springs.
- (2) Enable the use of Westhaven Marina for a limited range of non-marina based activities provided the current and future function and growth of the marina for recreational boating and accessory activities is not compromised.
- (3) Limit maximum building height and the location of building platforms to an appropriate scale to the marina waterfront setting and maintain identified views to and from the city centre.
- (4) Encourage development and use of the marina to enhance pedestrian and cycling access to and along the city centre waterfront and adjoining residential areas to the extent that such activities do not compromise the current and future function and growth of the marina for recreational boating and accessory activities.
- (5) Public open space and ancillary buildings and structures are established to connect Westhaven Precinct to Point Erin in a manner that provides for increased opportunity for recreation and access to, along, or over the coastal marine area.
- (6) Manage the land and coastal marine area to maintain and enhance the ecology of the natural coastal environment and built environment within the precinct.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I213.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I213.4.1 Activity table specifies the activity status for land use and development activities pursuant to section 9(3) of the Resource Management Act 1991 and the activity status for works, occupation and use in the coastal marine area pursuant to sections 12(1), 12(2), and 12(3) of the Resource Management Act 1991, or any combination of all of the above sections where relevant.

- (1) The activities in the Coastal – Marina Zone apply in the Westhaven – Tamaki Herenga Waka Precinct unless otherwise specified in the activity table below.
- (2) Those activities marked with * have the listed activity status only when that activity is located on an existing coastal marine area structure (e.g. a new building on an existing wharf). If that activity is located directly in the coastal marine area (e.g. a new wharf) a different activity status will apply.

Table I213.4.1 Activity table

Activity		Activity status	
		CMA [rcp]	Land [dp]
Works in the coastal marine area pursuant to section 12(1) of the Resource Management Act 1991			
(A1)	Maintenance or repair of a reclamation or drainage system	P	NA
(A2)	Minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation	RD	NA
(A3)	Reclamation or drainage not otherwise provided for	D	NA
(A4)	Declamation	RD	RD
(A5)	Maintenance dredging	RD	NA
(A6)	Capital works dredging	RD	NA
Use and activities pursuant to sections 9(3) and 12(3) of the Resource Management Act 1991 and associated occupation of the common coastal marine area pursuant to section 12(2) of the Resource Management Act 1991			
Residential			
(A7)	Workers accommodation	NC	P
(A8)	Dwellings, visitor accommodation, home occupations, boarding houses, retirement villages and supported residential care	NC	NC
Commerce			
(A9)	Maritime passenger operations, excluding freight movement and storage	P*	P
(A10)	Marine retail	P*	P
(A11)	Food and beverage	P*	P
(A12)	Retail	P*	P
(A13)	Storage and sale of fuel and oil for vessels – maximum of 100m ² gross floor area	P*	P
(A14)	Service stations, excluding storage and sale of fuel and oil for vessels – maximum of 100m ² gross floor area	NC*	Pr
(A15)	Offices accessory to marine and port activities or maritime passenger operations	P*	P
(A16)	Offices that are not accessory to marine and port activities or maritime passenger operations	NC	NC
(A17)	Retail, commercial services and entertainment facilities not specified as a permitted activity	D*	NC
Community			
(A18)	Clubrooms for marine-related clubs	P*	P

(A19)	Educational facilities accessory to marine and port activities or maritime passenger operations	P*	P
(A20)	Community facilities and education facilities not specified as a permitted activity and healthcare facilities, care centres and emergency services	D*	D
(A21)	Hospitals and major recreation facilities	NC	NC
Industry			
(A22)	Marine and port activities	P	P
(A23)	Marine industry	RD*	RD
(A24)	Industrial activities not specified as a permitted or restricted discretionary activity	D*	D
(A25)	Parking accessory to permitted activities	P*	P
Development pursuant to sections 9(3) and 12(1) of the Resource Management Act 1991, occupation of the common marine and coastal area pursuant to section 12(2) of the Resource Management Act 1991 and their use pursuant to section 12(3) of the Resource Management Act 1991			
(A26)	Marine and port facilities	P*	P
(A27)	Marina berths	P	NA
(A28)	Marine and port accessory structures and services	P	P
(A29)	Demolition or removal of buildings or coastal marine area structures	P	P
(A30)	Wave attenuation devices	RD	RD
(A31)	Observation areas, viewing platforms and boardwalks	RD	RD
(A32)	New and existing swing moorings and pile moorings including occupation of the waterspace by vessel to be moored	P	NA
(A33)	Maimai	NC	NC
(A34)	Helicopter landing areas	D	D
(A35)	Public amenities	P*	P
(A36)	Minor cosmetic alterations to a building that does not change its external design or appearance	P*	P
(A37)	New buildings and alterations and additions to buildings not otherwise provided for as permitted activities	RD*	RD
(A38)	Coastal marine area structures or buildings not otherwise provided for	D	NA
(A39)	Development that does not comply with	NC	NC

	Standards I213.6.1.1(1)-(2), I213.6.1.2(1), I213.6.1.3(1)-(2) or Standard I213.6.1.4(1)		
(A40)	Development that does not comply with Standard I213.6.1.8(1)	NC	NC

I213.5. Notification

- (1) Any application for resource consent for an activity listed in Table I213.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I213.6. Standards

I213.6.1. Land and water use standards

The land and water use standards in the Coastal – Marina Zone apply in the Westhaven – Tamaki Herenga Waka Precinct unless otherwise specified below.

I213.6.1.1. Retail

- (1) The gross floor area of an individual retail tenancy must not exceed 200m².
- (2) The total cumulative gross floor area of retail activities within the precinct must not exceed 500m².

I213.6.1.2. Marine retail

- (1) The gross floor area of a marine retail tenancy must not exceed 200m².

I213.6.1.3. Food and beverage

- (1) The gross floor area of a food and beverage tenancy must not exceed 200m².
- (2) The total cumulative gross floor area of food and beverage activities in the precinct must not exceed 500m².
- (3) This standard does not apply to food and beverage accessory to clubrooms.

I213.6.1.4. Parking

- (1) Parking must be provided at a minimum rate of 0.5 for every marina berth.
- (2) Standard E27.6.2 Number of parking and loading spaces does not apply.

I213.6.1.5. Public access

- (1) Standard E38.7.3.2 Subdivision establishing an esplanade reserve does not apply to subdivision within the Westhaven – Tamaki Herenga Waka Precinct

I213.6.1.6. Building platforms

Purpose: manage building location to ensure development is of a scale and form appropriate to the marina waterfront setting.

- (1) Buildings must not locate outside of the building platforms shown on Precinct plan 1.
- (2) This standard does not apply to marine and port facilities, and marine and port accessory structures and services.

I213.6.1.7. Building height and coverage

Purpose: limit building height and coverage to achieve Policy I213.3(3) of the Westhaven – Tamaki Herenga Waka Precinct.

- (1) Buildings on the building platforms on Precinct Plan 1 must not exceed the heights and building coverage as set out in Table I213.6.1.7.1:

Table I213.6.1.7.1 Building height and coverage

Building platform	Maximum building height	Maximum building coverage
1	8m for 60% of the platform 10m for 45% of the platform	60%
2	12m	60%
3	10m	100%
4	4m for 100% of the platform 8m for the area specifically identified within the platform	100%
5	8m	100%
6	6m for 100% of the platform 8m for 50% of the platform	100%
7	12m	100%

- (2) Buildings on land must not exceed 8m in height when located outside of the building platforms shown on Precinct plan 1.

- (3) The height of buildings on land will be measured in accordance with Standard H8.6.8 of the Business – City Centre Zone.
- (4) Buildings and structures in the coastal marine area must not exceed a height of 5m above mean sea level
- (5) The maximum floor area of buildings, including marine and port facilities, and marine and port accessory structures and services on land located outside of the building platforms on Precinct Plan 1 must not exceed 50m² for any one structure and a maximum total cumulative floor area of 300m² within the precinct.

I213.6.1.8. Viewshafts

Purpose: manage development at the north of the marina to maintain views between the marina and the Waitemata Harbour.

- (1) At least two 15m wide view shafts crossing building platform 1 generally in a north-south direction must be provided and kept free of buildings and structures from the ground level upwards.

I213.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I213.8. Assessment – restricted discretionary activities

I213.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) declamation:
 - (a) construction or works methods, timing and hours of construction works;
 - (b) location, extent, design and materials used;
 - (c) effects on coastal processes, ecological values, water quality and natural character;
 - (d) effects on public access, navigation and safety;
 - (e) effects on existing uses and activities;
 - (f) consent duration; and
 - (g) effects on Mana Whenua values.
- (2) maintenance dredging and capital works dredging:
 - (a) effects on coastal processes, ecological values and water quality;

- (b) effects on other users of the coastal marine area, navigation and safety;
and
 - (c) consent duration and monitoring.
- (3) minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation:
 - (a) form and design of the reclamation;
 - (b) contaminated material;
 - (c) the safe and efficient operation of marine and port activities;
 - (d) effects on Mana Whenua values;
 - (e) construction or works methods, timing and hours of operation; and
 - (f) effects on natural hazards, coastal processes, ecological values and water quality.
- (4) marine industry:
 - (a) the matters of discretion in clauses F3.8.1(1) and F3.8.1(3) of the Coastal – Marina Zone for marine industry other than the maintenance and servicing of vessels apply.
- (5) wave attenuation devices:
 - (a) location and design of the wave attenuation device;
 - (b) effects on navigation, safety and existing activities;
 - (c) effects on wave hydraulics;
 - (d) construction or works methods, timing and hours of operation; and
 - (e) consent duration and monitoring.
- (6) new buildings and alterations and additions to buildings not otherwise provided for:
 - (a) the matters of discretion in F3.8.1(1) of the Coastal – Marina Zone apply;
 - (b) effects on public access, navigation and safety.
- (7) observation areas, viewing platforms and boardwalks:
 - (a) the matters of discretion in F2.23.1(1) of the Coastal – General Coastal Marine Zone rules apply.
- (8) building platforms:
 - (a) building scale and form, and dominance/visual amenity effects;

- (b) effects on public open space and pedestrian access; and
 - (c) effects on the operation and development of the marina.
- (9) building height and building coverage:
- (a) building scale and form, and dominance/visual amenity effects; and
 - (b) effects on current and planned future form and character. building platforms.

I213.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the Coastal – Marina Zone provisions:

- (1) declamation:
- (a) whether the adverse effects of declamation are avoided, remedied or mitigated in respect of the effects of the final land/water configuration on:
 - (i) the marine environment, including coastal processes, water quality, sediment quality and ecology, of the coastal marine area;
 - (ii) hydrogeology (ground water) and hydrology; and
 - (iii) sediment accumulation and the need for ongoing maintenance dredging of the coastal marine area.
 - (b) whether declamation works, including the construction of seawalls, avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated soils and groundwater, and other contaminants;
 - (c) whether declamation is located and designed so that the adjacent land area can provide adequate public open space adjacent to, and public access along the water's edge whether on land or on the adjacent water space;
 - (d) the extent to which declamation will affect Mana Whenua values.
- (2) maintenance dredging and capital works dredging:
- (a) whether measures are taken to avoid, remedy or mitigate adverse effects on coastal processes, ecological values, and water quality;
 - (b) whether effects on other users of the coastal marine area during the dredging are avoided, remedied or mitigated;
 - (c) whether consent duration is limited to the minimum duration reasonably necessary for the functional or operational needs of the activity;

- (d) whether monitoring is required in order to demonstrate the extent and type of effects of the dredging, and the degree to which the effects are remedied or mitigated during and after the activity.
- (3) minor reclamation for the purpose of maintaining, repairing or upgrading a reclamation:
 - (a) whether reclamation, as far as practicable, mitigate adverse effects through their form and design, taking into account:
 - (i) the compatibility of the design with the location;
 - (ii) the degree to which the materials used are visually compatible with the adjoining coast;
 - (iii) the ability to avoid consequential erosion and accretion, and other natural hazards;
 - (iv) the effects on coastal processes; and
 - (v) the effects on hydrology.
 - (b) whether the use of contaminated material in a reclamation is avoided unless it is contained in a way that avoids, remedies or mitigates adverse effects on water quality, aquatic ecosystems and biodiversity;
 - (c) the extent to which the reclamation will affect Mana Whenua values;
 - (d) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants.
- (4) marine industry:
 - (a) the assessment criteria in F3.8.2(4) of the Coastal – Marina Zone rules apply.
- (5) wave attenuation devices:
 - (a) whether the location and design of the wave attenuation device avoid, remedy or mitigate adverse effects on existing activities including marine related industries, other marine activities and/or adjoining coastal activities;
 - (b) whether the location and design of the wave attenuation device avoid, remedy or mitigate adverse effects of wave hydraulics on other users of the coastal marine area;
 - (c) whether construction works avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated sediments, and other contaminants.
- (6) new buildings and alterations and additions to buildings not otherwise provided for:

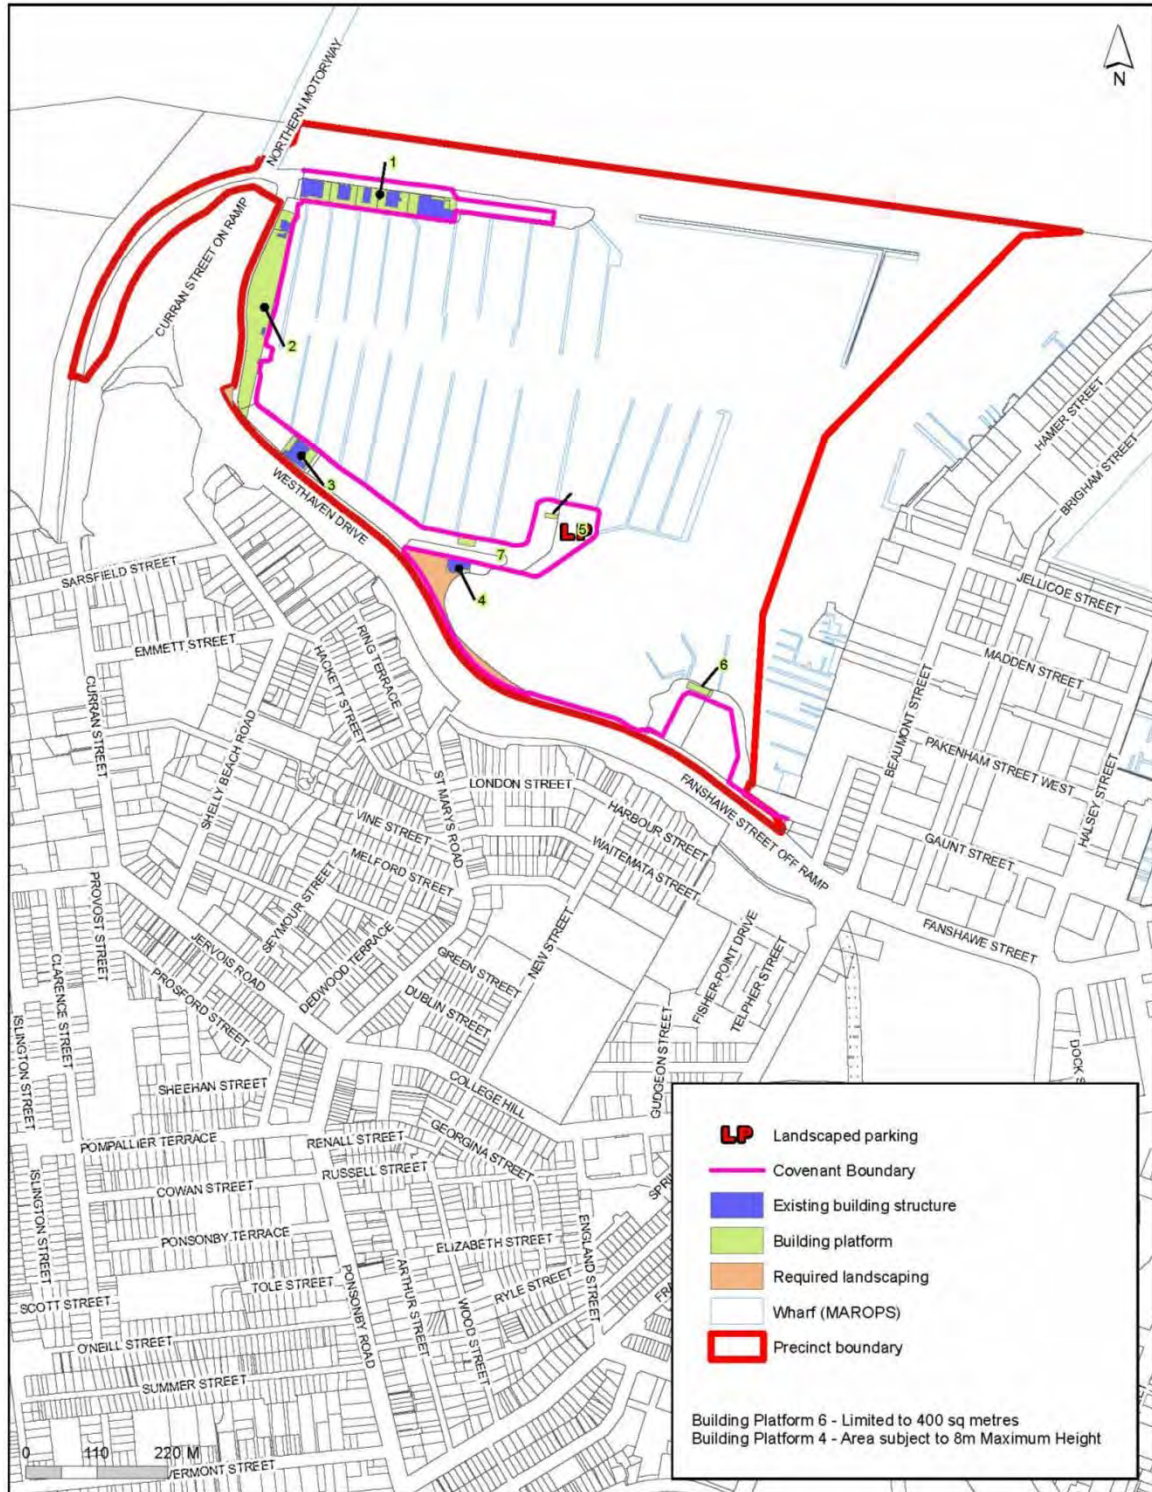

- (a) the relevant assessment criteria in F3.8.2 Coastal – Marina Zone apply;
 - (b) whether the building avoid or mitigate effects on public access, navigation and safety.
- (7) observation areas, viewing platforms and boardwalks:
- (a) the assessment criteria in F2.23.2(1) and F2.23.2(17) of the Coastal – General Coastal Marine Zone rules apply, in addition to the criteria below;
 - (b) whether the design and finish complement and enhance the coastal environment, open spaces and pedestrian linkages.
- (8) building platforms:
- (a) whether buildings are of a scale and form appropriate to the marina waterfront setting;
 - (b) whether the building location and scale maintains the open space character of the marina appropriate to the waterfront setting and maintain views to and from the city centre;
 - (c) whether the building location compromises the current and future function and growth of the marina.
- (9) building height and building coverage:
- (a) building height may be exceeded where it would provide an attractive and integrated roof form that also meets the purpose of the standard;
 - (b) where building height is exceeded, Policy I213.3(3) of the Westhaven – Tamaki Herenga Waka Precinct should be considered.

I213.9. Special information requirements

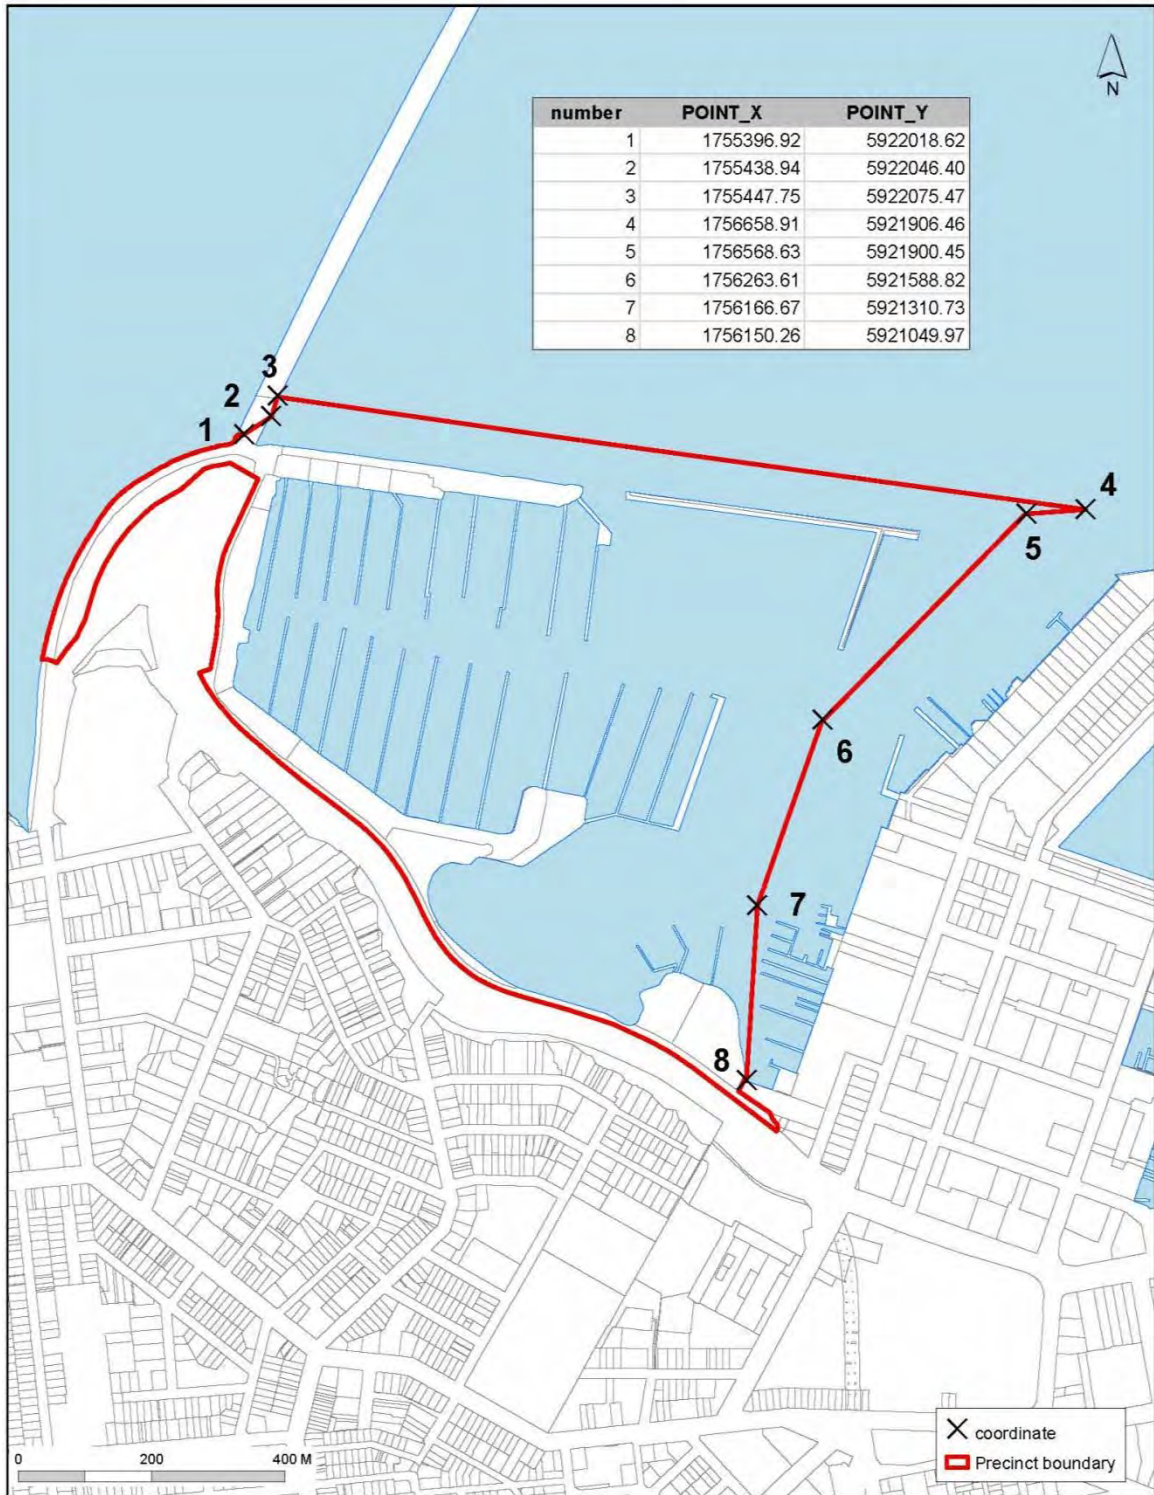

There are no special information requirements in this precinct.

I213.10. Precinct plans

I213.10.1 Westhaven – Tamaki Herenga Waka Precinct: Precinct plan 1 - Building platforms

I213.10.2 Westhaven – Tamaki Herenga Waka Precinct: Precinct plan 2 - Precinct boundary coordinates in the coastal marine area

I214. Wynyard Precinct

I214.1. Precinct description

The Wynyard Precinct represents the north-western end of the city centre. The land is bound on three sides by the sea and by Fanshawe Street on its southern boundary. It is the largest brownfield area within the city centre. The precinct also includes an area of the coastal marine area to the west and the north. Coordinates for the precinct boundary in the coastal marine area are shown on Precinct plan 11.

The purpose of the Wynyard Precinct is to provide for the comprehensive and integrated redevelopment of this large brownfields area while enabling the continued operation of marine industry and hazardous industry.

Wynyard Precinct is an evolving environment characterised by a mix of activities and development including:

- high-quality open space areas, restaurants, offices and cafés fronting Jellicoe Street and North Wharf;
- office activity fronting Fanshawe Street;
- a marine focus along the western edge; and
- a bulk liquids storage industrial activity focus within the northern finger of the precinct.

Marine-related activities, including marine services, ship repairs, fish processing, berthage and marine-related events, will continue to play an important economic and social role for the area.

Existing built form includes a collection of special character buildings, marine and industrial structures, and features that provide a background context to the area's stages of development. Collectively, these elements create an overall industrial aesthetic of structures and buildings, with robust materials and simple details.

To retain the existing character of the area, a design-based approach has been implemented, with all building development and redevelopment requiring assessment.

Although hazardous industry is likely to relocate progressively from the area, risk must still be managed in the transition period, particularly within the northern part of Wynyard Precinct.

Redevelopment of this area should have regard to the existing and planned infrastructure connections that are adjacent to or pass through the precinct, for example, the Additional Waitemata Harbour Crossing.

The zoning in the Wynyard Precinct is Business – City Centre Zone and Coastal – General Coastal Marine Zone.

I214.2. Objectives [rcp/dp]

Social and economic

- (1) Wynyard precinct is redeveloped while managing potential conflicts between different uses to achieve:

- (a) a high-quality visitor destination which showcases the City's diverse communities and the importance of the harbour;
- (b) maintenance and enhancement of the regionally significant economic function of the marine, fishing and other industries and maritime passenger operations to the Hauraki Gulf islands;
- (c) a vibrant community with a mix of activities and experiences for all people including a community focal point, high quality public open space and community facilities;
- (d) public open space on the waterfront, and an area for events and entertainment activity for the social and economic benefit of the wider Auckland Region;
- (e) access to and along the coast and enjoyment of the coastal environment with a network of open space while recognising the need to manage access with competing commercial activities; and
- (f) the maintenance and where practicable enhancement of navigation and berthage within the Wynyard Precinct coastal marine area for a wide range of recreational and commercial vessels, including maritime passenger transport and fishing industry operations, excluding in areas subject to potential risk and public safety effects.

Built form

- (2) An integrated urban environment is created which:
 - (a) exhibits high-quality and diverse built form and urban design which reflects the marine attributes of the precinct;
 - (b) has appropriate building heights that enhance its prominent waterfront location and which complements the central area and wider city landforms, skyline and views; and
 - (c) avoids, remedies or mitigates adverse effects on existing infrastructure.
- (3) Individual buildings or collections of buildings are designed to achieve an appropriate form and scale in relation to:
 - (a) existing and proposed public open spaces; and
 - (b) identified view shafts.

Special character

- (4) Identified special character buildings are protected and enhanced and the unique character within Wynyard precinct, which is reflective of its maritime and industrial history, is retained.

(5) *Public open space*

- (6) A significant area of waterfront public park space is provided for the benefit of the Auckland Region with a complementary hierarchy of interconnected, high quality, public open space for current and future residential and commercial occupants and visitors.

Risk and public safety

- (7) Adverse environmental effects and risks presented by hazardous or dangerous activities or facilities within the precinct are avoided or mitigated.

Remediation

- (8) The adverse effects of contamination are minimised through comprehensive management of contaminated sites and materials.

Reverse sensitivity and amenity

- (9) Conflicts between different uses are managed to ensure the efficient operation of marine industry and fishing industry, other industry and regionally significant transport infrastructure while enabling the marine events centre and public spaces to be used for a range of public events.

Pedestrian access, street quality and safety

- (10) A safe, convenient and interesting environment, which optimises pedestrian and cycling use and improves connectivity within the precinct and to adjacent areas of the City.

Transport

- (11) The safety and capacity of the transport network is maintained and, where appropriate, enhanced.

Integrated development

- (12) The development of buildings and activities and the provision of infrastructure in a comprehensive and integrated manner which achieves high quality urban design outcomes and which avoids, remedies or mitigates adverse effects on existing and planned infrastructure.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I214.3. Policies [rcp/dp]

Built form

- (1) Encourage the location, bulk, outlook, access to, and servicing of buildings to be planned and designed on a comprehensive and integrated basis rather than on an ad hoc individual building basis.
- (2) Encourage the integration of built form with the existing and proposed public open space network on a comprehensive land area basis, rather than a site by site

basis, to create a sound framework for a well-designed and high-quality environment.

(3) Ensure that maximum building height:

(a) is appropriate in scale to the street network and the prominent waterfront location;

(b) provides a transition between the core of the precinct and the coastal edge with site-specific opportunities for taller buildings located and designed to reinforce key public open space and waterfront connections while avoiding intrusion of public views into and through Wynyard Precinct;

(c) complements development in the Viaduct Harbour Precinct; and

(d) provides a transition in height between the core central business district and the harbour.

(4) Identify and protect public view shafts from open space across, within, and to Wynyard precinct to reinforce connections with the central area, harbour, and wider Auckland.

(5) Promote excellence and diversity in architecture and urban design that enhances the relationship of buildings with public open space, and reflects the coastal, topographical, and historical qualities of the precinct.

Special character

(6) Recognise the contribution that identified special character buildings make to the marine, fishing, and industrial heritage aesthetic within the precinct.

(7) Encourage the retention and re-use of identified special character buildings, features, structures and elements within the precinct.

(8) Encourage developments adjoining or adjacent to identified special character buildings to respond sympathetically to the historic context by reference to characteristics such as form, scale, materials and setbacks.

(9) Encourage development and design that is reflective of the precinct's maritime location.

(10) Promote and encourage the important role the marine and fishing industries play in defining the character and amenity of the precinct.

Social and economic

(11) Enabling a diverse range of activities, high quality visitor experiences, entertainment, events and development to occur, while recognising and maintaining the economic importance of the marine and fishing industry, the bulk liquid industry and Hauraki Gulf Islands maritime passenger operations to the Auckland Region.

- (12) Recognise the significant local and regional socio-economic benefits associated with providing high-quality waterfront public open space and events activity while also providing for the operational and access requirements of the marine and fishing industries, other industrial activities and maritime passenger operations.
- (13) Ensure that sufficient and suitably located land, wharf, waterspace and appropriate, convenient and adequate navigation and berthing facilities are provided to accommodate the current and future operation and growth of the marine and fishing industries and maritime passenger operations, including Sub-precinct C, North Wharf, the southern face of the Western Viaduct Wharf and the western face of the Halsey Street Extension Wharf together with the adjacent waterspace for use primarily by the fishing industry.
- (14) Encourage activities and built form which contribute to the maintenance of pedestrian interest and vitality at ground level at Jellicoe Harbour to foster a vibrant community focal point.
- (15) Establish and maintain a network of coastal edge, public open space and public access along waterfront areas, linking the precinct to the wider central area while also providing the operational and access requirements of the marine and fishing industries, other industrial activities and maritime passenger operations.

Public open space

- (16) Establish a framework which supports the development of key interconnected public open space across the precinct, including:
 - (a) a high-quality waterfront park of regional significance, including the potential for a high quality public building;
 - (b) a network of coastal edge promenades and pedestrian accessways enabling access to and along the coast comprising a minimum width of 20 metres, with the exception of Sub-precinct C;
 - (c) a high-quality linear park linking Victoria Park to the waterfront park;
 - (d) High quality areas of public open space for the public, residents, workers and local occupants designed to enliven the urban core of the precinct, including a significant park space within Sub-precinct B; and
 - (e) a network of small pocket parks, linking spaces and plazas.
- (17) Encourage the use of the precinct's internal street network to function as part of the public open space network, and provide for the creation of internal canals, ponds and plazas.

Pedestrian access, street quality and safety

- (18) Encourage the construction of a bridge for pedestrians, cyclists and local public transport connecting the Eastern Viaduct with Jellicoe Street to improve public connectivity between Wynyard precinct and the city centre.

- (19) Facilitate the reconnection of Daldy Street between Pakenham Street and Madden Street to provide a physical north-south connection through Wynyard precinct and enable the establishment of activities with greater people-or traffic-generation potential.
- (20) Provide mechanisms to manage and, in some cases temporarily restrict, public access to and along some parts of the water's edge to enable marine and fishing industry, maritime passenger operations and events to operate.
- (21) Encourage an integrated network of streets and lanes to increase pedestrian permeability and accessibility through the precinct.
- (22) Encourage a high level of pedestrian amenity along identified existing and future routes, including Te Wero Bridge, which reinforces the ease, comfort and safety of the pedestrian environment.
- (23) Enhance the connection between Wynyard precinct and adjoining areas through the provision of additional pedestrian linkages across Fanshawe Street.
- (24) Discouraging parking within buildings visible from existing and proposed public open space.
- (25) Require planning and development of transport and road changes within and on the fringe of the precinct, including Fanshawe Street, to consider any effects on or contribution to the amenity of the precinct and adjacent areas.

Risk and public safety

- (26) Require new activities, buildings and works to be designed, located, and managed to avoid unacceptable levels of risk.
- (27) Require new hazardous industry or changes to existing hazardous industry to be designed, located and managed to avoid levels of risk which are incompatible with existing sensitive activities.
- (28) Require new industry or changes to existing industry at existing or future public interfaces to implement management measures to avoid, remedy or mitigate existing or potential adverse public safety effects.

Reverse sensitivity and amenity

- (29) Provide for the continued efficient operation of existing and future marine, fishing and other industries, including maritime passenger operations.
- (30) Manage establishing permanent or temporary accommodation within or directly adjacent to areas identified for marine or fishing operations or events, or on sites subject to potentially unacceptable levels of risk associated with existing hazardous industry.

- (31) Require new development, or changes to existing marine, fishing and other industries, to protect and enhance amenity values of specified existing and future public interfaces.

Remediation

- (32) Encourage remediation, including clean-up and mitigation methods, to be addressed on a comprehensive basis.
- (33) Encourage remediation of contaminated land to include consideration of future activity and prospective site topography and likely pathways to the contaminant.

Transport

- (34) Constrain and manage private vehicle travel in and out of Wynyard Precinct, particularly during peak travel periods.
- (35) Encourage walking, cycling and the provision of passenger transport services and facilities compatible with the character and amenity of the area.
- (36) Enable the improvement of public connectivity between Wynyard Precinct and the city centre for pedestrians, cyclists and public transport.
- (37) Maintain and enhance maritime passenger transport operations by providing adequate vehicular, pedestrian and public transport access to ferry terminal facilities.
- (38) Protect the safe and efficient operation of Fanshawe Street as a key arterial route connecting the central city area with wider Auckland and an important element of Auckland's frequent and rapid transit network.

Integrated development

- (39) Use integrated assessment for future development that has regard to:
- (a) land ownership;
 - (b) character;
 - (c) activities;
 - (d) existing and proposed street pattern; and
 - (e) existing and planned infrastructure.
- (40) Encourage built form, activities, public open spaces and infrastructure to be planned and designed on a comprehensive land area basis, rather than on an individual site basis.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above

I214.4. Activity table

Table I214.4.1 and I214.4.2 specifies the activity status for land use and development activities pursuant to section 9(3) of the Resource Management Act 1991 and the activity status for works, occupation and use in the coastal marine area pursuant to sections 12(1), 12(2) and 12(3) of the Resource Management Act 1991, or any combination of all of the above sections where relevant.

- (1) The activities on land in the precinct are as specified in the table below and are also subject to compliance with Precinct plan 7.
- (2) The activities in the Coastal – General Coastal Marine Zone and Business – City Centre Zone apply in the Wynyard Precinct unless otherwise specified in the activity table below.
- (3) Activities marked # in the activity table are deemed to be risk-sensitive activities and are subject to additional assessment.
- (4) Within Sub-precinct F and Area 1 and Area 3 shown on Precinct plan 10, the activity status of activities marked * in the activity table applies until the date when all hazardous industry located within Sub-precinct F discontinue operation. After that time, those activities are permitted unless an alternative activity status not marked * is shown.
- (5) The requirements in E40 Temporary activities apply to:
 - (a) all temporary activities within Sub-precincts A, B, C (south of Area 3 as shown on Precinct plan 10), G, Halsey Street Extension Wharf and Western Viaduct Wharf;
 - (b) all sports events provided that the event only passes through, and is not based in, sub-precincts D, E, F or areas 1, 3, 4, 5, and 6 as shown on Precinct Plan 10: Risk areas, and the event does not involve motor racing; and
 - (c) all temporary activities occurring within Sub-precincts D, E, F and areas 1, 3, 4, 5, and 6 as shown on Precinct plan 10: Risk areas, except an event.
- (6) Events located within sub-precincts D, E and F and areas 1, 3, 4, 5, and 6 as identified on Precinct plan 10, will be subject to the requirements set out in Wynyard Precinct. From the date on which all hazardous industry located within Sub-precinct F and Area D discontinue operations, the requirements set out in E40 Temporary activities apply to events within Sub-precinct F and areas 1, 3, 4, 5, and 6 as identified on Precinct plan 10 - Risk areas.

I214.5. Notification

- (1) Any application for resource consent for a controlled and restricted discretionary risk-sensitive activity marked with a # in Table I214.4.1. Activity table – Land use will be considered without public notification, except that limited notification may be undertaken to the parties listed for the risk sensitive activities below:
- (a) for dwellings or visitor accommodation within Area 1 or Area 3 shown on Precinct plan 10, notice of an application will not be served on any person or party other than any hazardous industry owner or operator within Sub-precinct F who has not provided written approval;
 - (b) for dwellings or visitor accommodation within Area 2 shown on Precinct plan 10, notice of an application will not be served on any person or party other than any fish processing plant owner or operator located within Sub-precinct E who has not provided written approval;
 - (c) for events within sub-precincts D and E or Area 1, 2, 3, 4, 5 and 6 shown on Precinct plan 10, notice of an application will not be served on any person or party other than any hazardous industry owner or operator within Sub-precinct F or fish processing plant owner or operator within Sub-precinct E who has not provided written approval.
- (2) Notwithstanding the requirements of I214.5(1)(a) and (b) above, notice of an application need not be served on hazardous industry owners or operators if it can be clearly demonstrated that the land area subject to the application falls outside the hazardous industry toxic injury risk contour caused by the particular hazardous industry owner or operator within Sub-precinct F.

- (3) Any application for resource consent for a restricted discretionary activity to exceed the maximum office activity gross floor area requirement in Standard I214.6.2(1), and which complies with Standard I214.6.2(2) below, will be considered without public notification or served on any person or party other than the freehold land owner of the subject land and the relevant national and regional statutory roading agency or authority.
- (4) An application for resource consent for a controlled activity listed in Table I214.4.1. Activity table – Land use and Table I214.4.2. Activity table – development above and which is not listed in I214.5(1)-(3) will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (5) New buildings, and alterations and additions to buildings provided for as a restricted discretionary activity will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (6) Any application for resource consent for an activity listed in Table I214.4.1. Activity table – Land use and Table I214.4.2. Activity table – development and which is not listed in I214.5(1)-(4) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (7) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I214.6. Standards

All permitted, controlled and restricted discretionary activities listed in Table I214.4.1 and Table I214.4.2 must comply with the following standards.

The land and water use standards in the Coastal – General Coastal Marine Zone apply to the coastal marine area in the Wynyard Precinct.

The following standards in the Business – City Centre Zone apply to land in the Wynyard Precinct:

- H8.6.26 Verandahs;
- H8.6.28 Wind;
- H8.6.29 Glare;
- H8.6.32 Outlook space; and
- H8.6.25 Building frontage alignment and height except as specified in I214.6.8 below

All other standards that apply to land in the precinct are specified below.

I214.6.1. Parking

Purpose: To maintain or enhance both the safety and capacity of the internal and wider road network and to significantly reduce single occupancy vehicle commuter trips to and from the Wynyard precinct.

(1) Parking ratios:

(a) the number of parking spaces on a site on land within the precinct must not exceed the rates specified in Table I214.6.1.1:

Table I214.6.1.1 Parking ratios

Activity	Maximum parking ratio
Offices	1 space per 150m ² of gross floor area
Retail	1 space per 150m ² of gross floor area
Visitor accommodation	1 space per 200m ² of gross floor area
Dwellings - excluding gross floor area of servicing and common areas within buildings	1 space per 80m ² of gross floor area
All other listed activities	1 space per 105m ² of gross floor area

- (i) on Wynyard wharf, parking accessory to marine and port activities operating from buildings on the wharf must not exceed a ratio of one space per 105m² of gross floor area of the building;
- (ii) the combined number of parking spaces on Halsey Street Extension and Western Viaduct wharves must not exceed 50.

I214.6.2. Maximum office gross floor area

Purpose: To limit office activity, because of its potential to generate traffic during morning and evening peak travel times and particularly in the direction of peak traffic flow.

(1) The amount of office gross floor area allowed on a site must not exceed the rates specified in Table I214.6.2.1:

Table I214.6.2.1. Maximum office gross floor area 1

Sub-precinct	Maximum permitted office gross floor area per sub-precinct	Maximum permitted office activity ratio per site
A	98,000m ²	Lot 1 DP 179403 0:1 Lots 2-10 DP9097, Lot 1 DP197609, Lot 2 DP360738, Lot 3 DP8709 and Part Blk V Deeds Plan 226 - 3:1 All other sites - 3.62:1
B	69,300m ²	2.48:1

C	5000m ²	Only on Lot 28 DP133386 - 0.41:1
D	34,000m ²	0.94:1
E	35,000m ²	1.02:1
F	13,000m ²	0.86:1
G	0m ²	0

- (2) It is a restricted discretionary activity to exceed the maximum office gross floor area rates specified in I214.6.2(1), provided the amount of office gross floor area on a site does not exceed the rates specified in Table I214.6.2.2:

Table I214.6.2.2. Maximum office gross floor area 2

Sub-precinct	Maximum additional office gross floor area	Maximum restricted discretionary office activity ratio per site	Total office gross floor area - permitted + restricted discretionary
A	12,000m ²	Only on Lot 1 DP179403 - 3:1	110,000m ²
B	14,700m ²	3:1	84,000m ²
C	14,000m ²	1.32:1	48,000m ²
D	8500m ²	1.27:1	45,500m ²
E	5000m ²	1.18:1	18,000m ²

I214.6.3. Calculating maximum office gross floor area

Purpose: To provide a methodology for calculating office gross floor area which meets the purpose of I214.6.2 Maximum office gross floor area above.

- (1) When calculating or allocating office activity in accordance with I214.6.2 above:
- the maximum permitted office activity ratio and restricted discretionary office activity ratio is to be applied to the site area excluding any area of land shown on Precinct plan 6, as 'public open space inclusive of land subject to public access easement', but including any land shown as 'indicative lane'.
- (2) Office activity may be transferred between sub-precincts A, B, D, E, F and G subject to:
- the maximum amount of office activity able to be established on the donor land in accordance with I214.6.2(1) above not being increased as a consequence of the transfer;
 - office activity must not be transferred from Lot 1 DP360738 and Lot 1 DP309925 to any other site.

- (3) Offices accessory to marine and port activities and marine retail must not exceed:
- (a) 15 per cent of the total gross floor area on any site, unless otherwise specified in I214.6.3(3)(b) below;
 - (b) 3000m² or 15 per cent total gross floor area on the Sanford site (Lot 1 DP 70740 (NA27B/649), Lot 1 DP 57246 (NA29A/54), Lots 27 & 28 Block VI Deeds 226 (NA29A/56) and Lot 1 DP 89281 (NA46B/682)) in Sub-precinct E, whichever is the greater.

I214.6.4. Noise

Purpose: to minimise reverse sensitivity effects on existing industrial and maritime land uses by providing a minimum level of internal acoustic amenity for occupants of buildings from external noise sources generated by activities in the Wynyard Precinct and a maximum level of noise that activities other than accommodation may generate.

- (1) Sound insulation of accommodation buildings:
- (a) All dwellings must be designed and constructed to provide an indoor noise level of 35dBA L10 in every bedroom and 45dBA L10 in any other habitable spaces (as defined in the NZ Building Code), based on both:
 - (i) an external traffic noise level of 65dBA L10 at the boundary of any road between 11pm and 7am;
 - (ii) the noise levels standards in I214.6.4(2) below as applicable to the Noise Area within which the accommodation units are located as shown on Precinct plan 9;
 - (b) At the same time and under the same physical conditions as the above internal noise levels will be achieved, all bedrooms and other habitable spaces are to be adequately ventilated in accordance with clause G4 of the NZ Building Code.
- (2) External noise levels:
- (a) Noise from activities in Wynyard Precinct must comply with the following limits in Table I214.6.4.1, measured at 1m from the façade of any building containing habitable spaces (as defined in the NZ Building Code) located in the noise areas shown on Precinct plan 9.

Table I214.6.4.1. External noise levels

Noise source location	Noise limit		Noise receiver location
	Day - 7am-11pm	Night - 11pm-7am	
Noise Areas 1,2	L10 60dBA	55dB L _{Aeq} (15 min) 66dB L _{eq} (15 min) @ 63Hz 62dB L _{eq} (15 min) @ 125Hz	Noise Area 2

		90dB L _{AFmax}	
Noise Areas 1,2	L10 70dBA	70dB L _{Aeq} (15 min) 76dB L _{eq} (15 min) @ 63Hz 73dB L _{eq} (15 min) @ 125Hz 90dBA L _{AFmax}	Noise Area 1

(3) Internal noise levels for adjacent tenancies:

- (a) Where an activity shares a common building element such as floor or wall with a separate tenancy it must not exceed the following noise levels in Table I214.6.4.2 when measured in any habitable spaces (as defined in the NZ Building Code):

Table I214.6.4.2 Internal noise levels

Time	Noise limit
7:00am to 11:00pm	L10 45dBA
11:00pm to 7:00am	L10 40dBA L10 55dB @ 63Hz L10 50dB @ 125Hz

(4) Noise levels for events:

- (a) events in sub-precincts D, E, F and G and on coastal marine area structures must comply with I214.6.4(2) above, except that for no more than 15 noise events in any calendar year (1 January to 31 December inclusive) those levels may be exceeded subject to:
- (i) the noise level specified in I214.6.4(2) above not exceeding a cumulative duration of more than six hours within any 24 hour period for a noise event, and
 - (ii) the maximum noise levels not exceeding:
 - 75dBA L10 and 80dBA L01 (medium noise level) for at least 12 of the 15 noise events, and
 - 85dBA L10 and 90dBA L01 (high noise level) for a cumulative duration of not more than 3 of the total 6 hours permitted in I214.6.4(4)(a)(i) above exclusive of one sound check of no more than one hour duration prior to each event, and for no more than 3 of the 15 noise events.
 - (iii) the medium and high noise levels must be determined from the logarithmic average of the L10 values for any measurement periods not exceeding 15 minutes during the event. The L01 values must be determined from the logarithmic average of the L01 values for representative periods not exceeding 15 minutes within the timeframe

of the event. The noise levels must not be exceeded by more than 5 dBA for medium noise levels and 3dBA for high noise levels in any representative measurement period not exceeding 15 minutes during the noise event.

- (iv) Noise levels exceeding the standard in I214.6.4(4)(a)(iii), including sound checks, must start no earlier than 10.00am and must finish no later than 10.30 pm Sunday to Thursday inclusive, 11.00pm Friday and Saturday and 1.00am New Year's Day.
 - (b) at least 4 weeks prior to the commencement of the noise event, the organiser must notify the council in writing of:
 - (i) the names and types of the acts and whether they are anticipated to be within the medium noise level or high noise level as defined in I214.6.4(4)(a)(ii) above;
 - (ii) the person(s) and procedures for monitoring compliance with noise levels; and
 - (iii) the nominated alternative date in the event of postponement due to the weather;
 - (c) the council will keep a record of all noise events held and provide this information upon reasonable request.
- (5) Noise measurement and assessment:
- (a) measurement and assessment must be in accordance with the requirements of NZS 6801:1991 "Measurement of Sound" and NZS 6802:1991 "Assessment of Environmental Sounds". Noise must be measured with a sound level meter complying with at least the International Standard IEC 651 (1979): Sound Level Meter, Type 1.

I214.6.5. Financial contributions

Purpose: to provide for the acquisition and development of public open space in the Wynyard precinct, and/or for enhancing public pedestrian facilities, and/or for enabling public access to and enjoyment of the coastal environment.

- (1) Public open space:
 - (a) a financial contribution may be taken for development on any site for the specific purposes of providing for the acquisition and development of public open space in the precinct, and/or for enhancing public pedestrian facilities;
 - (b) financial contributions must not be levied for subdivisions or refurbishments.
- (2) Public access to the coastal environment:

- (a) with the exception of Sub-precinct C, a financial contribution may be taken in the form of either a conservation covenants, or land to be vested in the council for development on any site adjoining the coastal marine area or any site within 20m of the coastal marine area for the specific purpose of enabling public access to and enjoyment of the coastal environment. This rule does not apply to any site where an esplanade reserve or conservation covenant of 20m or greater in width (or such lesser width as provided by I214.6.4(2)(c) below) has been created prior to 13 July 2007.
 - (b) within sub-precincts E and F, where the site adjoins the coastal marine area, the land to be vested in the council or otherwise secured shall be of a minimum width of 20m and shall not exceed 30m in width measured perpendicular from the coastal mean high water springs mark, except where specified in I214.6.5(2)(c), below.
 - (c) the total width of land over which public access is secured within Sub-precinct G is limited to the area identified as public open space as shown on Precinct plan 6.
 - (d) Standard E38.7.3.2 Subdivision establishing an esplanade reserve does not apply to subdivision or development within the Wynyard Precinct.
- (3) Interpretation:
- (a) for the purpose of this rule "development" includes site works, building construction and alterations; and
 - (b) for the purpose of this rule "refurbishment" means the cosmetic alteration, restoration or redecoration to the interior or exterior of a building or site and includes replacement of services such as lifts or air-conditioning. "Refurbishment" excludes increases to the gross floor area of a building and changes in activity such as conversion of office premises to retail premises or conversion of offices to residential apartments.

I214.6.6. Building height

Purpose: To ensure the height of buildings complements and reinforces key public open spaces within Wynyard Precinct and development within the Viaduct Harbour precinct while providing an appropriate scale and transition in relation to the street network, the harbour and coastal environment and the core central business district. Refer Policy I214.3(3) of the Wynyard Precinct.

- (1) Buildings must not exceed the heights specified on Precinct plan 5.
- (2) For sites on precinct plan 5 with a maximum permitted height of 52m, the maximum cumulative floor plate area per floor must not exceed:
 - (a) sub-precinct B: 1200m² GFA and a maximum dimension of 45m by 45m for that part of the building exceeding a height of 31m;

- (b) sub-precinct E at the corner of Halsey and Jellicoe streets: 1200m² GFA and a maximum dimension of 40m by 30m for that part of the building exceeding a height of 27m; and
 - (c) sub-precincts C and E, except for the site at the corner of Halsey and Jellicoe streets: 900m² GFA and a maximum dimension of 30m by 30m for that that part of the building exceeding a height of 31m.
- (3) In land areas shown on sub-precinct E with a height limit of 25m, the height limit may be exceeded by no more than 2m for roofs, including any roof top projections, subject to a maximum of 6 building storeys and compliance with clause I214.6.7 below for maximum site intensity.

I214.6.7. Maximum site intensity

Purpose: manage the scale, form and intensity of development in the Wynyard precinct. Refer Policies I214.3(1)-(4) of the Wynyard Precinct.

- (1) Buildings on a site must not exceed the maximum site intensity specified for the site on Precinct plan 3, except as specified in I214.6.7(2) below
- (2) The maximum floor area ratio applying to the building footprint of an identified special character building (refer Map H8.11.1 of the Business – City Centre Zone) may be transferred to another site within the precinct subject to:
 - (a) resource consent being obtained as controlled activity;
 - (b) the total area of transferable floor space being calculated on the following basis:
 - (A x B) - (A x C) = total area of transferable floor space
 - A = Area of identified special character building floorplate*
 - B = Maximum floor area ratio shown on Precinct plan 3
 - C = Floor area ratio of 1:1
 - (i) the bonus floor space transferred not increasing the floor area ratio on the recipient site by more than 1:1 above the maximum floor area ratio shown on Precinct plan 3

*Except that the for the character building located on Lots 9 and 10 DP 9092, A = 1655m².

- (3) When calculating gross floor area, where the vertical distance between building storeys exceeds 6m, the gross floor area of the building or part of the building so affected must be calculated as gross floor area as opposed to the volume of that airspace.
- (4) 'Character building floor plate' means that part of the site covered by a special character building identified on Map H8.11.1 of the Business – City Centre Zone including a curtilage of a depth of 2m contained within the legal boundaries of the site and surrounding the character building to enhance the visual integrity of the character building.

- (5) Where a special character building is incorporated in a development or a new development is proposed on the residual site area and the special character building is subject to an approved character plan, the gross floor area of the special character building is excluded from the floor area ratio calculations.
- (6) For the purpose of calculating maximum site intensity the subject land area of any proposed development may be considered as one site, provided the maximum total cumulative gross floor area across all sites within the subject land area is not exceeded.

I214.6.8. Building frontage alignment and height

Purpose: ensure streets are well defined by buildings and provide a sense of enclosure to enhance pedestrian amenity, while avoiding buildings dominating public open space.

- (1) H8.6.25 Building frontage alignment and height applies except that:
 - (a) where the maximum building height is less than the minimum frontage height requirement in Map H8.11.5 of the Business – City Centre Zone, H8.6.25 of the Business – City Centre Zone rules does not apply; and
 - (b) in Sub-precinct G, the ground floor along the eastern boundary must be set back from the public open space identified on Precinct plan 6 by a minimum width of 2.5m measured perpendicular from the public open space for a minimum height of 4m.

I214.6.9. Special industrial frontage

Purpose: avoid unacceptable levels of human injury risk associated with accidental ammonia release from the fish processing plant

- (1) For any building proposed for dwellings or visitor accommodation, facades of buildings fronting the Industrial Frontage identified on Precinct plan 8 must not incorporate opening windows or balconies.

I214.6.10. Marine retail at ground level

Purpose: Provide for marine and fishing industry and marine and fishing retail activity at ground level on specific sites identified on Precinct plan 7. Some flexibility has also been built into the control to allow specific sites identified as Transitional Ground Level Activity to accommodate other activities in the future.

- (1) Except as specified in I214.6.10(2) below, activities at ground level must be restricted to the extent and in the manner identified on Precinct plan 7.
- (2) Activities at ground level on a site identified on Precinct plan 7 as transitional ground level activity must be limited to marine and port activities and/or marine retail until any of the following occurs on that site:
 - (a) the marine and port activity and/or marine retail at ground level occurring on the site as at 1 November 2009 has either relocated off-site or ceased operating from the site, or

(b) the lease (including all rights of renewal) for the site existing as at 1 November 2009 which, as at 1 November 2009, is used for marine and port activities and/or marine retail at ground level expires; or

(c) the road widening works along the frontage of the site authorised by a designation are constructed.

(3) At any time any one of the Standards I214.6.10(2)(a)-(c) above occur on the site, the limitation to marine and port activities and/or marine retail is lifted from that site and those activities listed in the precinct activity table may establish at ground level.

I214.6.11. Vehicle access

Purpose: To avoid potential adverse traffic safety and efficiency effects on the regional arterial and rapid transit functions of Fanshawe Street, as well as protecting traffic capacity and pedestrian and cyclist amenity along Beaumont Street, Halsey Street, Daldy Street and Jellicoe Street.

(1) Except from the land legally described as Pt Lot 2 DP179403 (contained in NA110C/761), vehicle entry or exit must not be established directly from Fanshawe Street.

(2) Vehicle entry or exit from the land legally described as Pt Lot 2 DP179403 (contained in NA110C/761) to Fanshawe Street is limited to one entry and one exit providing left turn manoeuvres only.

(3) Vehicle entry or exit must not be established directly from Beaumont Street (south of Jellicoe Street), Daldy Street, Jellicoe Street or the western side of Halsey Street where alternative access via another road or service lane is available.

(4) Notwithstanding I214.6.11(1)-(3), the total crossing width for any front or corner site must not exceed 50 per cent of the frontage to any road in which it adjoins.

I214.6.12. Lanes and view shafts

Purpose: To build upon the existing grid pattern of streets that characterise the precinct by requiring additional lane connections to serve a finer urban grain. The minimum required widths provide the opportunity for some lanes to be used as service lanes while also contributing to pedestrian permeability within the development blocks. The widths also provide the opportunity to include landscaping features, furniture and artworks.

The viewshafts identified along required lanes are designed to enhance the visual connections of the precinct with the harbour, other features of the surrounding landscape, the CBD and the wider city.

(1) Lanes must be provided at ground level, generally in the locations shown on Precinct plan 6 and must comprise:

- (a) a minimum width of 10m where provided for pedestrians, cyclists and service vehicles; or
- (b) a minimum width of:
 - (i) 6m where lanes are 50m or less in length, or
 - (ii) 7m where lanes are up to 100m in length, or
 - (iii) 8m where lanes are over 100m in length
 - (iv) where provided for pedestrians and cyclists only.

For the purpose of this standard, the length of the lane must be measured as the dimension between the lane intersections and/or the lane termination points as shown on Precinct plan 6.

- (2) Where the lanes shown on Precinct plan 6 are also shown as view shafts on land, the minimum width must be 10m.
- (3) Where a view shaft on land is indicated alone, it must have a minimum width of 10m.
- (4) The minimum widths specified in I214.6.12(1)-(3) above, must be clear and unobstructed by buildings or structures from ground level upwards, except that verandahs may be provided where they meet H8.6.26 Verandahs of the Business – City Centre Zone rules.
- (5) The lane must be available for public use at all times unless written approval has been obtained from the council. In all circumstances the lane must be available for public use between the hours of 7am and 11pm.
- (6) The registration of an access easement on the title to which the lane applies is required to ensure preservation of the lane and its ongoing maintenance by the owner(s) of the land concerned.
- (7) Structures and buildings, including marine and port facilities, must not be located within or over those parts of wharves and water space identified as coastal view shafts on Precinct plan 6.

I214.6.13. Public access ways - wharves

Purpose: Maintain and enhance public access to the Wynyard Precinct wharves.

- (1) Public access ways on wharves must be provided at ground level in the following locations and to the following dimensions in Table I214.6.13.1:

Table I214.6.13.1. Public access ways - wharves

Wharf	Location	Public accessway dimension
Halsey Street Extension	Western, northern and eastern edge	10m
Western Viaduct	Southern edge	10m

Wynyard	Eastern and northern edge	8m
---------	---------------------------	----

- (2) The access ways must be available to the public at all times unless written approval has been obtained from the council to be temporarily restrict access from time to time for security, safety or operational needs associated with marine and port activities, maritime passenger operations or temporary events.
- (3) Except as allowed by I214.6.13(2) above, the access ways must be clear and unobstructed by structures and buildings, including marine and port facilities from ground level upwards.
- (4) Structures and buildings, including marine and port facilities must not be erected or placed on North Wharf or the Western Viaduct Wharf other than temporary structures or buildings.

I214.6.14. Buildings and structures on the Halsey Street extension wharf

Purpose: Limit building and structures on the Halsey Street extension wharf

- (1) Structures and buildings, including marine and port facilities on the Halsey Street extension wharf must be located within the building platform area shown on Precinct plan 1 and must not cover more than 60 per cent of the building platform.

I214.6.15. Temporary structures or buildings

Purpose: to enable temporary structures while managing public access and risks associated with hazardous industry.

- (1) Temporary structures or buildings within sub-precinct D, and E, and Areas 1, 3, 4 and 6 as identified on Precinct plan 10 must comply with the following:
 - (a) no part of any venue that has been occupied by a building, tent, marquee or air supported canopy may be reoccupied by the same structure within a period of 5 days after the structure's removal.
- (2) Temporary structures or buildings within the Halsey Street extension wharf, and the Western Viaduct wharf as identified on Precinct plan 1:
 - (a) where the temporary structures or buildings wharf and are for the purpose of a major marine event related to an internationally recognised boat race or race series, the associated structures and buildings must not occupy any venue for more than 60 days within any 12 month period, inclusive of the time required for the establishment and removal of all structures and activities associated with the activity. Where the temporary structures or buildings are not for the purpose of a major marine event related to an internationally recognised boat race or race series, I214.6.15(1)(a) above applies;
 - (b) when it is necessary to place vehicles, tents, marquees, seating, canopies and other structures within the 10m wide public accessway around the

western, northern and eastern sides of the Halsey Street extension wharf, the southern side of the Western Viaduct wharf, or the 8m wide accessway along Wynyard wharf, alternative public accessways must be provided and be free of charge and clearly marked; and

- (c) public access around the Viaduct Events Centre shall be available at all time and free of charge except for special events when public access can be restricted provided the restriction is for no more than 60 days in any 12 month period and no more than 20 days consecutively.

I214.7. Assessment – controlled activities

I214.7.1. Matters of control

The Council will reserve its control to the following matters when assessing a controlled activity resource consent application:

- (1) offices accessory to marine and port activities and marine retail specified as a controlled activity in the activity table:
 - (a) transfer of office space.
- (2) events and associated buildings and structures specified as a controlled activity in the activity table:
 - (a) duration, demographic and number of people attending the event;
 - (b) transportation effects and management;
 - (c) visual amenity;
 - (d) emergency response and management processes; and
 - (e) risk to the activity from adjacent storage and use of hazardous substances.
- (3) marine and port activities and marine and port facilities specified as a controlled activity in the activity table:
 - (a) construction or works methods, timing and hours of operation;
 - (b) location, extent, design and materials used;
 - (c) effects on coastal processes, ecological values, water quality and natural character;
 - (d) effects on views and visual amenity;
 - (e) effects on public access, navigation and safety;
 - (f) effects on existing uses and activities;
 - (g) consent duration; and

- (h) traffic and parking.
- (4) the transfer of identified character building floor space:
 - (a) recording the use/transfer of floor space on the certificate of title.
- (5) building demolition:
 - (a) the matters of control in H8.8.1(5) of the Business – City Centre Zone apply.

I214.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

- (1) offices accessory to marine and port activities and marine retail specified as a controlled activity in the activity table:
 - (a) whether the amount of ancillary office gross floor area constructed on another site within Sub-precinct C or on land fronting Beaumont Street is recorded by covenant on the donor freehold and leasehold title(s) upon which the ancillary office gross floor area is transferred from to ensure the amount transferred does not exceed the limit specified in the definitions of marine and port activities and marine retail;
- (2) events and associated buildings and structures specified as a controlled activity in the activity table:
 - (a) the relevant assessment criteria in E40.8.2 Temporary activities in addition to the following criteria; and
 - (b) whether adverse risk or transport related effects are able to be adequately remedied or mitigated through the preparation and implementation of an emergency evacuation and management plan and event transport plan;
- (3) marine and port activities specified as a controlled activity in the activity table:
 - (a) the relevant assessment criteria in F2.23.2 Coastal – General Coastal Marine Zone rules apply in addition to the following criteria;
 - (b) the activity should protect and enhance amenity values and public safety at the sub-precinct interface with existing and proposed public open space (as shown on Precinct plan 6);
- (4) the transfer of special character building floor space:
 - (a) the assessment criteria in H8.9.2.2(5) of the Business – City Centre Zone rules for the transfer of special character building floor space apply;
- (5) building demolition:

- (a) the relevant assessment criteria in H8.8.2(5) of the Business – City Centre Zone rules for building demolition apply in addition to the following criteria; and
- (b) whether adverse effects on the marine environment (including water, sediment quality, and ecology) of the coastal marine area are avoided, remedied or mitigated;

I214.8. Assessment – Restricted discretionary activities

I214.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary resource consent application:

- (1) risk sensitive activities marked # in the activity table identified as a restricted discretionary activity (excluding events):
 - (a) location, extent, design and staging of buildings;
 - (b) design occupancy;
 - (c) risk to the activity from adjacent storage and use of hazardous substances;
 - (d) emergency response processes, including accessibility and the content of evacuation plans; and
 - (e) reverse sensitivity effects;
- (2) an event and associated buildings and structures identified as a restricted discretionary activity in the activity table:
 - (a) duration, demographic and number of people attending the event;
 - (b) transportation effects and management;
 - (c) emergency response and management processes;
 - (d) risk to the activity from adjacent storage and use of hazardous substances; and
 - (e) effects on the navigation and safety of commercial vessels operation in these areas;
- (3) marine and port activities and marine and port facilities:
 - (a) construction or works methods, timing and hours of operation;
 - (b) location, extent, design and materials used;
 - (c) effects on coastal processes, ecological values, water quality and natural character;

- (d) the location, bulk and scale of the activities and facilities relative to overall development, including the layout and design of roads, lanes, open spaces, earthworks areas and land contours, and infrastructure location;
 - (e) effects on public access, safety and navigation;
 - (f) effects on existing uses and activities including existing and planned significant infrastructure;
 - (g) consent duration; and
 - (h) traffic, parking and access;
- (4) private use of coastal access areas either vested in the council or areas over which council has a covenant for public access:
- (a) duration and frequency of the activity; and
 - (b) public access and safety.
- (5) offices that exceed the thresholds of I214.6.2(1) above but do not exceed the restricted discretionary thresholds in I214.6.2(2) above:
- (a) travel management;
 - (b) traffic generation; and
 - (c) operational capacity and safety of the adjacent road network;
- (6) offices, offices accessory to marine retail and marine and port activities, maritime passenger operations, marine retail, retail, food and beverage, entertainment facilities and education facilities greater than 100m² gross floor area per site:
- (a) travel management; and
 - (b) traffic generation;
- (7) declamation:
- (a) construction or works methods, timing and hours of operation;
 - (b) location, extent, design and materials used;
 - (c) effects on coastal processes, ecological values, water quality and natural character;
 - (d) effects on public access, navigation and safety;
 - (e) effects on existing uses and activities; and
 - (f) consent duration;
- (8) maintenance dredging and capital works dredging:

- (a) effects on coastal processes, ecological values, and water quality;
 - (b) effects on other users of the coastal marine area, navigation and safety;
and
 - (c) consent duration and monitoring;
- (9) a bridge across the Viaduct Harbour, linking the Eastern Viaduct to Jellicoe Street:
- (a) construction or works methods, timing and hours of operation;
 - (b) location, extent, design and materials used;
 - (c) effects on coastal processes, ecological values, water quality and natural character;
 - (d) effects on public access, navigation and safety;
 - (e) effects on existing uses and activities;
 - (f) amenity, effects on views and visual amenity; and
 - (g) consent duration and monitoring;
- (10) new buildings, and alterations and additions to buildings:
- (a) the matters of discretion in H8.8.1(1) of the Business – City Centre Zone rules for new buildings and/or alterations and additions to buildings apply;
 - (b) the location, bulk and scale of buildings relative to overall development, including the layout and design of roads, lanes, open spaces, earthworks areas and land contours, and infrastructure location; and
 - (c) where one or more buildings infringes the basic site intensity or basic building heights on Precinct plans 2 and 4, but complies with the maximum site intensity and maximum building heights on Precinct Plans 3 and 5:
 - (i) location, physical extent and design of streets, pedestrian connections and open space;
 - (ii) location, form and scale of buildings;
 - (iii) location and staging of activities;
 - (iv) provision of adequate infrastructure.
- (11) subdivision:
- (a) the matters of discretion set out in E38 Subdivision - Urban under E38.12.1; and

- (b) the location, bulk and scale of buildings relative to overall development, including the layout and design of roads, lanes, open spaces, earthworks areas and land contours, and infrastructure location;
- (12) conversion of a building or part of a building to dwellings or visitor accommodation:
 - (a) the matters of discretion in H8.8.1(3) in the Business – City Centre Zone apply;
- (13) substantial demolition or any demolition of the front façade of a special character building within the Wynyard precinct identified on Business – City Centre Zone – Map H8.11.1:
 - (a) the matters of discretion in of the Business – City Centre Zone apply;
- (14) retail specified as a restricted discretionary activity in the activity table:
 - (a) the matters of discretion in H8.8.1(4) of the Business – City Centre Zone apply;
- (15) roads or lanes:
 - (a) scale, form and dominance/ visual amenity effects;
 - (b) effects on the transportation network (including safety and efficiency);
 - (c) amenity and function of public open space and pedestrian access; and
 - (d) the location, physical extent and design of the transport network and any pedestrian linkages;
- (16) infringing the building height standard:
 - (a) building scale, form, dominance and visual amenity effects; and
 - (b) effects on current or planned future form and character;
- (17) building frontage alignment and height:
 - (a) building scale, form, dominance and visual amenity effects; and
 - (b) amenity and function of public open space and pedestrian access.
- (18) infringing the special industrial frontage standard:
 - (a) risk and safety;
- (19) infringing the access to sites with multiple frontages standard:
 - (a) effects on the transportation network (including safety and efficiency); and
 - (b) amenity and function of public open space and pedestrian access;
- (20) infringing the vehicle access over footpaths standard:

- (a) effects on the transportation network (including safety and efficiency); and
 - (b) amenity and function of public open space and pedestrian access;
- (21) infringing the lanes and viewshafts standards:
- (a) scale, form, dominance and visual amenity effects;
 - (b) effects on the transportation network (including safety and efficiency); and
 - (c) amenity and function of public open space and pedestrian access;
- (22) infringing the public accessways – wharves standard:
- (a) building scale, form, dominance and visual amenity effects; and
 - (b) amenity and function of public open space and pedestrian access;
- (23) infringing the buildings and structures on the Halsey Street extension wharf standard:
- (a) building scale, form, dominance and visual amenity effects;
 - (b) reverse sensitivity effects;
 - (c) amenity and function of public open space and pedestrian access; and
 - (d) risk and safety;
- (24) infringing the temporary structures or buildings standard:
- (a) building scale, form, dominance and visual amenity effects;
 - (b) reverse sensitivity effects; and
 - (c) amenity and function of public open space and pedestrian access.

I214.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities:

- (1) marine and port activities and marine and port facilities:
 - (a) the assessment criteria in F2.23.2 of the Coastal – General Coastal Marine Zone rules, including F2.23.2(17) for coastal marine area structures & buildings, apply in addition to the criteria below; and
 - (b) whether the activity protects and enhances amenity values and public safety at the interface with existing and proposed public open space (as shown on Precinct plan 6 and the amenity values of existing or approved residential activity, and, in particular, visual and aural privacy;
- (2) offices that exceed the thresholds in I214.6.2(1) above but do not exceed the restricted discretionary thresholds in I214.6.2(2) above:

(a) whether the activity together with existing, permitted and consented activities, will adversely affect the current and future operational capacity and safety of the adjacent road network and specifically the Beaumont Street/Fanshawe Street, Daldy Street /Fanshawe Street and Halsey Street/Fanshawe Street intersections. In determining the extent of any potential transportation effects, the following matters shall be taken into account:

(i) the extent to which it is demonstrated that the proposed office activity will result in vehicle trips consistent with a maximum formula of:

- 0.38 trips per parking space, plus
- 0.16 trips per 100m² proposed office gross floor area;

(ii) whether it is demonstrated that:

- the proposed office activity, together with all other existing, permitted and consented activities, will not exceed the following trip generation ceiling targets for all activities from Wynyard Precinct:
 - 3650 vehicles per hour two way; and
 - 2500 vehicles per hour one way inbound or outbound during the weekday morning peak (7.00am - 9.00 am)
 - 2500 vehicles per hour one way outbound or inbound during the weekday afternoon peak (4.00pm-6.00pm);
- the proposed office activity, together with all other existing, permitted and consented activities, will not exceed the total allowable gross floor area and the predicted total trips for the relevant sub-precinct set out in Table 2 of Part A of the Wynyard Precinct Transport Plan;
- the proposed office activity will not exceed the number of trips per hour inbound or outbound during the weekday morning and afternoon peaks for each sub-precinct set out in the table below:

Sub-precinct	Trips per hour one way in peak direction
A and B	968
C	21
D-F	451
G	0

- (iii) any available information demonstrating the success or otherwise of travel management measures implemented within the precinct;
 - (iv) any planned or constructed transport infrastructure improvements;
 - (v) the proximity of the site to a regular public transport service;
 - (vi) when assessing any application in sub-precincts D, E and F, any agreed reduction in allowable office gross floor area provided in these sub-precincts or sites below that specified in I214.6.2 above;
 - (vii) where the proposed activity does not comply with criteria I214.8.2(2)(a)(i) and (ii) above, the council shall have regard to whether the proposed activity could comply with these criteria if either:
 - less than the maximum permitted parking is proposed in the application for the proposed office activity gross floor area, or
 - no parking is proposed in the application for the proposed office activity gross floor area;
- (b) in granting any resource consent the council may impose resource consent conditions relating to any of the matters listed in these criteria, including a requirement for ongoing morning and afternoon peak vehicle trip generation monitoring results and supporting review condition(s);
- (3) retail specified as a restricted discretionary activity in the activity table:
- (a) The assessment criteria in H8.8.2(4) of the Business – City Centre Zone rules apply;
- (4) offices (including offices accessory to marine and port activities and marine retail), maritime passenger operations, marine and fishing retail, retail, food and beverage, entertainment facilities or education facilities greater than 100m² per site:
- (a) whether it can be demonstrated by the measures and commitments outlined in a detailed site travel management plan that the activity or activities will be managed to minimise private vehicle travel to and from precinct to achieve Policies I214.3(34)-(37) of the Wynyard Precinct using methods outlined in Part A of the Wynyard Precinct Transport Plan (19 August 2010) refer I214.11.1 Appendix 1;
- (5) private use of coastal access areas either vested in the Council or areas over which council has a covenant for public access:
- (a) whether:
 - (i) the requirement for the use of coastal access areas is based on the operational nature of the activity, including any available alternatives to avoid the use of coastal access areas;
 - (ii) the proposed duration and frequency of the use of the coastal access area is minimised, including the level of certainty provided (through

- conditions offered by the applicant, site management plans and monitoring) that usage will be appropriately managed and the conditions of use adhered to;
- (iii) the existing and future potential public use of the subject coastal access area could be compromised, including the timing of the proposed use in relation to peak pedestrian activity;
 - (iv) alternative access along the coastline is available during any periods of closure;
 - (v) the level of public safety risk posed will be avoided, remedied or mitigated, including the provision of a site management plan;
- (6) risk sensitive activities marked # in the activity table identified as a restricted discretionary activity (excluding events):
- (a) whether any unacceptable levels of risk can be avoided or mitigated based on the following:
 - (i) the location of the development, including service areas, parking and outdoor areas, with respect to industrial hazard sources;
 - (ii) the design occupancy of the development, including anticipated design occupation numbers, the predominant and most vulnerable age demographic, hours of operation, estimated mean and maximum occupancy times for individual site dwellers in hours/days and any other pertinent occupancy information;
 - (iii) a description of alternative layout plans considered in order to mitigate risk arising from offsite hazard sources;
 - (iv) methods for advising occupiers of the development of potential safety risks including methods of risk mitigation and control;
 - (v) building design methods for avoiding or mitigating occupant risk resulting from exposure to toxic vapour, thermal radiation and explosion debris from offsite hazard sources;
 - (vi) details of any proposed development staging and any voluntary site occupancy controls to be implemented during the transition period leading up to hazardous industry relocation;
 - (b) for open markets that attract more than 1000 people at any one time, the criteria in I214.8.2(7) below also apply;
- (7) an event and associated buildings and structures identified as a restricted discretionary activity in the activity table:
- (a) whether measures outlined in an emergency, evacuation and management plan and event transport plan avoid or mitigate any unacceptable level of risk or adverse transport related effects associated with the type and duration of event and expected demographic and number of people attending the event including for events within Areas 4

and 6, whether the activity will adversely affect marine and port activities and the navigation, safety or commercial vessels operating in these areas;

- (8) substantial demolition or any demolition of the front façade of a special character building within the Wynyard precinct identified on Business – City Centre Zone Map H8.11.1;
- (a) the assessment criteria in H8.8.2(5) of the Business – City Centre Zone rules for the demolition of special character buildings apply in addition to the criteria below; and
 - (b) the contribution the identified special character building (including its association with any nearby identified character buildings) makes to the character or streetscape quality of the precinct and whether its removal or partial demolition adversely impacts upon those qualities. In assessing proposals against this criterion particular regard should be had to retaining a link to the past marine industrial aesthetic of the precinct;
- (9) new buildings, and alterations and additions to buildings:
- (a) the relevant assessment criteria in H8.8.2(1) of the Business – City Centre Zone rules for buildings or alterations and additions to buildings apply in addition to the criteria below; and
 - (b) the proposed building, or alteration or addition to buildings, relative to the location of infrastructure servicing the area and open space should result in an integrated network that is adequate to meet the needs of the overall development area;
 - (c) whether internal space at all levels within the building are designed to maximise outlook onto existing public open space and proposed public open space, streets and lanes shown on Precinct plan 6;
 - (d) the extent to which activities which engage and activate existing public open space and proposed public open space, streets and lanes shown on Precinct plan 6 at ground level are encouraged;
 - (e) at grade private parking areas and parking areas located within buildings which are visible from existing public open space and proposed public open space, streets and lanes shown on Precinct plan 6 are strongly discouraged. It is expected that activated building space will be provided between parking areas within buildings and existing and proposed street and public open space frontages;
 - (f) whether vehicle access to sites are designed and located to complement the road function and hierarchy, while avoiding conflict with the function of existing public open space and proposed public open space, streets and lanes shown on Precinct plan 6 and public transport priority lanes, balancing the requirements of access and through-movement;

- (g) where alternative vehicle access is available, the creation of new vehicle crossings across frontages along Jellicoe, Beaumont, Halsey and Daldy Streets is discouraged;
- (h) Precinct plan 6 illustrates the locations of publicly accessible lanes which should be provided to create alternative, shorter, or more convenient pedestrian routes at ground level;
- (i) whether a safe and practical 24hr east-west public pedestrian walkway is provided through the block bound by Daldy, Jellicoe, Beaumont and Madden Streets to provide connectivity between Beaumont and Daldy Streets;
- (j) where a building accommodates greater than 100m² gross floor area of office, marine and fishing retail, retail, food and beverage, entertainment/gathering or education activity, the criteria listed in I214.8.2(4) above, also apply;
- (k) the design of building frontages and elevations facing streets and/or other public open spaces should have regard to the setback, form and character of any identified character building(s) adjoining or adjacent to the site. This requires consideration of important character elements and qualities through building design on frontages and elevations visible from streets and other public open spaces;
- (l) a new building abutting, or adjacent to, an identified character building which is set back from the street frontage, may not be required to be constructed predominantly to the street boundary, where a better urban design outcome could be achieved by respecting the spatial location of the character building;
- (m) building elevation, design and materials should respect (rather than replicate) the architectural design composition of the identified special character building(s), and new and contemporary interpretations in form, elevational composition, material and detail may be used;
- (n) where the building works are undertaken within the coastal marine area, the assessment criteria for buildings/structures in the Coastal - General Coastal Marine Zone apply in addition to the following:
 - (i) whether adverse effects associated with the methods of construction on water quality and coastal processes can be avoided, remedied or mitigated;
 - (ii) whether adverse effects on navigation and safety can be avoided, remedied or mitigated; and
 - (iii) whether the buildings or structures are of an appropriate scale, design, colour and location to complement its waterfront setting, maintain or enhance amenity values, and where practicable, maintain

views from the land to the coastal marine area, particularly the viewshafts shown on Precinct plan 6; and

- (iv) with the exception of Wynyard wharf and Halsey Street extension wharf, demonstrate that the purpose for which the structure is required cannot reasonably or practicably be accommodated on the land or by existing structures in the coastal marine area; and
 - (v) where practicable, enhance public access to the coastal marine area; and
 - (vi) whether the building or structure is required for significant infrastructure;
- (o) where one or more buildings infringes the basic site intensity or basic building heights on Precinct plans 2 and 4, but complies with the maximum site intensity and maximum building heights on Precinct plans 3 and 5:
- (i) Refer to Policies 1, 2, 3, 39 and 40;
 - (ii) Whether building footprints, profile and height (as opposed to detailed building design) establishes an integrated and legible built form and also:
 - 1. Integrates with other approved development (including approved Integrated Development Plans);
 - 2. Enhances the form and function of existing and proposed streets, lanes and public open space, including complementing and enhancing the function of Daldy Street as a major tree-lined boulevard linking Victoria Park to the public open space in sub-precinct F as shown on precinct plan 6;
 - 3. Avoids monotonous built form when viewed from public open space through variation in building footprints, height and form;
 - 4. Maintains the ability for marker buildings within sub-precincts B, C and E to be established to the maximum height provided for on Precinct plan 5;
 - 5. Within sub-precincts D, E, F and G, the extent to which the location or orientation of buildings, and the type and location of any known prospective activities marked # in the activity table, including the use of public open space areas:
 - a. Avoids or mitigates reverse sensitivity issues associated with existing industry, marine industry, fishing industry and maritime passenger operations;
 - b. Avoids unacceptable levels of risk associated with existing hazardous industry, including the adjacent ammonia refrigerant based fish processing plant;

6. Enables or maintains efficient vehicle access to existing industry, marine industry, fishing industry and maritime passenger operations;
 7. Supports the role of Jellicoe Street as the major community and visitor focal point of the precinct;
- (iii) The extent to which the building footprints, height, floor to floor heights and profile of buildings enable them to accommodate a wide range of activities and to be adapted to accommodate differing uses in the future;
 - (iv) Whether the location and staging of anticipated activity types and/or the location, orientation or layout of buildings avoids or mitigates potential conflicts between activities within the subject land area and adjacent land areas;
 - (v) Whether buildings may provide opportunities for the establishment of community facilities, such as health, educational and care facilities, for future people in the area;
 - (vi) Whether the layout and design of public open space within the subject land area will ensure well-connected, legible and safe vehicular and pedestrian routes with appropriate provision for footpaths, servicing, infrastructure services and landscape treatment;
 - (vii) Whether the layout and design of public open space and lanes within the subject land area will integrate with and complement the form and function of existing and proposed public open space and lanes network;
 - (viii) Whether stormwater, wastewater, water supply, electricity and telecommunication infrastructure will be provided to adequately service the nature and staging of anticipated development within the subject land area;
 - (ix) Whether consideration has been given to integration of parking, loading and servicing areas within the subject land area taking account of location and staging of anticipated activity types;
- (10) a bridge across the Viaduct Harbour:
- (a) the bridge should contribute to a high quality maritime and urban environment and meets the following outcomes:
 - (i) the bridge design avoids significant visual intrusion into views from public areas across the harbour, or from the harbour out to the wider Waitemata Harbour, particularly within the viewshafts identified on Precinct plan 6.
 - (ii) the bridge contributes to the pedestrian character and amenity of the Viaduct Harbour and Wynyard precinct by:

- providing safe and pleasant pedestrian and cycle access east and west across the Viaduct Harbour;
 - having a landscape design, character and quality which integrates with existing pedestrian priority areas and other accessways around the Viaduct Harbour;
 - not causing significant adverse effects on the use and enjoyment of Te Wero Island as an area of pedestrian-oriented public space; and
 - ensuring the operation or use of the bridge, or lighting will not cause significant adverse effects on the operation of nearby activities or on the amenity values of surrounding land or water uses;
- (iii) the bridge is designed and operated to provide for:
- vessel access to and from the inner Viaduct Harbour without undue delay;
 - navigation and berthage by the existing range of vessels in the inner Viaduct Harbour; and
 - any reduction in berthage area to be minimised as far as practicable;
- (iv) convenient and easily accessible systems for communicating with vessel users regarding scheduled and unscheduled bridge opening/closing;
- (v) appropriate lighting, navigation aids, safety systems and fail-safe mechanisms; and
- (vi) a minimum clearance height of 3m above mean high water springs for a 10m wide navigable channel;
- (b) the ongoing viable use of the Viaduct Harbour (particularly the Wynyard Precinct mixed use Sub-precinct G) to accommodate marine and port activities and marine events, such as boat shows and internationally recognised boating events such as the America's Cup event, is maintained;
- (c) the bridge has a high quality design that:
- (i) enhances the character of the Viaduct Harbour;
 - (ii) is simple and elegant;
 - (iii) is appropriate within the context of the Viaduct Harbour locality and Auckland's coastal setting;
 - (iv) has an appropriate relationship with the Viaduct Lifting Bridge identified in the Historic Heritage overlay; and

- (v) utilises high quality and low maintenance materials and detailing;
 - (d) the bridge is designed in a manner which may provide in the future for enhanced connectivity for the public between the precinct and the city centre; and
 - (e) the bridge has no more than minor adverse effects on coastal processes including sedimentation within the Viaduct Harbour;
- (11) declamation:
- (a) whether the adverse effects of declamation are avoided, remedied or mitigated in respect of the effects of the final land/water configuration on:
 - (i) the marine environment (including coastal processes, water quality, sediment quality and ecology) of the coastal marine area;
 - (ii) hydrogeology (ground water) and hydrology; and
 - (iii) sediment accumulation and the need for ongoing maintenance dredging of the coastal marine area;
 - (b) whether declamation works, including the construction of seawalls avoid, remedy or mitigate the adverse effects of construction, particularly through the management of silt, contaminated soils and groundwater, and other contaminants;
 - (c) whether declamation is located and designed so that the adjacent land area can provide adequate public open space adjacent to, and public access along the water's edge whether on land or on the adjacent water space;
- (12) maintenance dredging and capital works dredging:
- (a) the assessment criteria in F2.23.2(1) and F2.23.2(11) of the Coastal - General Coastal Marine Zone rules apply in addition to the criteria below;
 - (b) whether the dredging is necessary to achieve the outcomes sought by the objectives and policies for the Wynyard precinct.
- (13) conversion of a building or part of a building to dwellings or visitor accommodation:
- (a) the assessment criteria in H8.8.2(3) in the Business – City Centre Zone apply; and
- (14) subdivision:
- (a) the assessment criteria set out in E38 Subdivision - Urban under E38.12.2; and
 - (b) the location of infrastructure servicing the area and open space should result in an integrated network that is adequate to meet the needs of the overall development area;

(15) roads and lanes:

- (a) the extent to which pedestrian permeability is maintained and enhanced through the site layout;
- (b) whether pedestrian access to the water's edge is maintained;
- (c) the integration of the site with the wider Wynyard Precinct; and
- (d) whether intrusion of public views into and through Wynyard Precinct are avoided;

(16) infringing the building height standard:

- (a) where building height is exceeded, Policies I214.3(3) of the Wynyard Precinct and Policy H8.3(30) of the Business – City Centre Zone should be considered.

(17) infringing the building frontage alignment and height standards:

- (a) the extent to which buildings are of a scale and form appropriate to the setting; and
- (b) the extent to which pedestrian access and amenity is enhanced through the design of the building;

(18) infringing the special industrial frontage standard:

- (a) whether the design avoid, remedy or mitigate human injury risks associated with accidental ammonia release associated with the ammonia refrigerant based fish processing plant;

(19) infringing the access to sites with multiple frontages standard:

- (a) the extent to which access to sites are located to allow safe and efficient access to and from the site;
- (b) whether the access location and traffic generation from the site compromise the safe and efficient operation of the transportation network; and
- (c) whether pedestrian function, and safety of pedestrians on footpaths is compromised;

(20) infringing the vehicle access over footpaths standard:

- (a) whether the pedestrian function, and safety of pedestrians on footpaths is compromised; and
- (b) whether an alternative access location would better maintain pedestrian and cyclist safety and amenity.

(21) infringing the lanes and view shafts standard:

- (a) the extent to which pedestrian permeability is maintained and enhanced through the site layout;
 - (b) whether pedestrian access to the water's edge is maintained;
 - (c) the integration of the site with the wider Wynyard precinct; and
 - (d) avoid intrusion of public views into and through Wynyard Precinct.
- (22) infringing the public access ways – wharves:
- (a) the extent of public access to the water's edge; and
 - (b) whether the development control infringement is required to enable marine and fishing industry, maritime passenger operations and events to operate;
- (23) infringing the buildings and structures on the Halsey Street extension wharf standard:
- (a) Whether pedestrian access is maintained.
 - (b) the extent to which the building design is consistent with the character and amenity of Halsey Street extension wharf.
 - (c) whether buildings and structures adversely affect the current and future operation and growth of the marine and fishing industries and maritime passenger operations.
- (24) infringing the temporary structures or buildings standard:
- (a) the extent to which buildings are of a scale appropriate to the waterfront setting; and
 - (b) whether building location compromises the function of the Wynyard Precinct.

I214.9. Special information requirements

In addition to the general information that must be submitted with a resource consent application (refer C1.2(1) Information requirements for resource consent applications), applications for the activities listed below must be accompanied by the additional information specified.

- (1) Events specified as a controlled activity in the activity table:
 - (a) an emergency evacuation and management plan and event transport plan.
- (2) Marine and port activities:
 - (a) a site management plan that details operational procedures and physical measures to be put in place to avoid, remedy or mitigate public safety effects.
- (3) The transfer of special character building floor space:

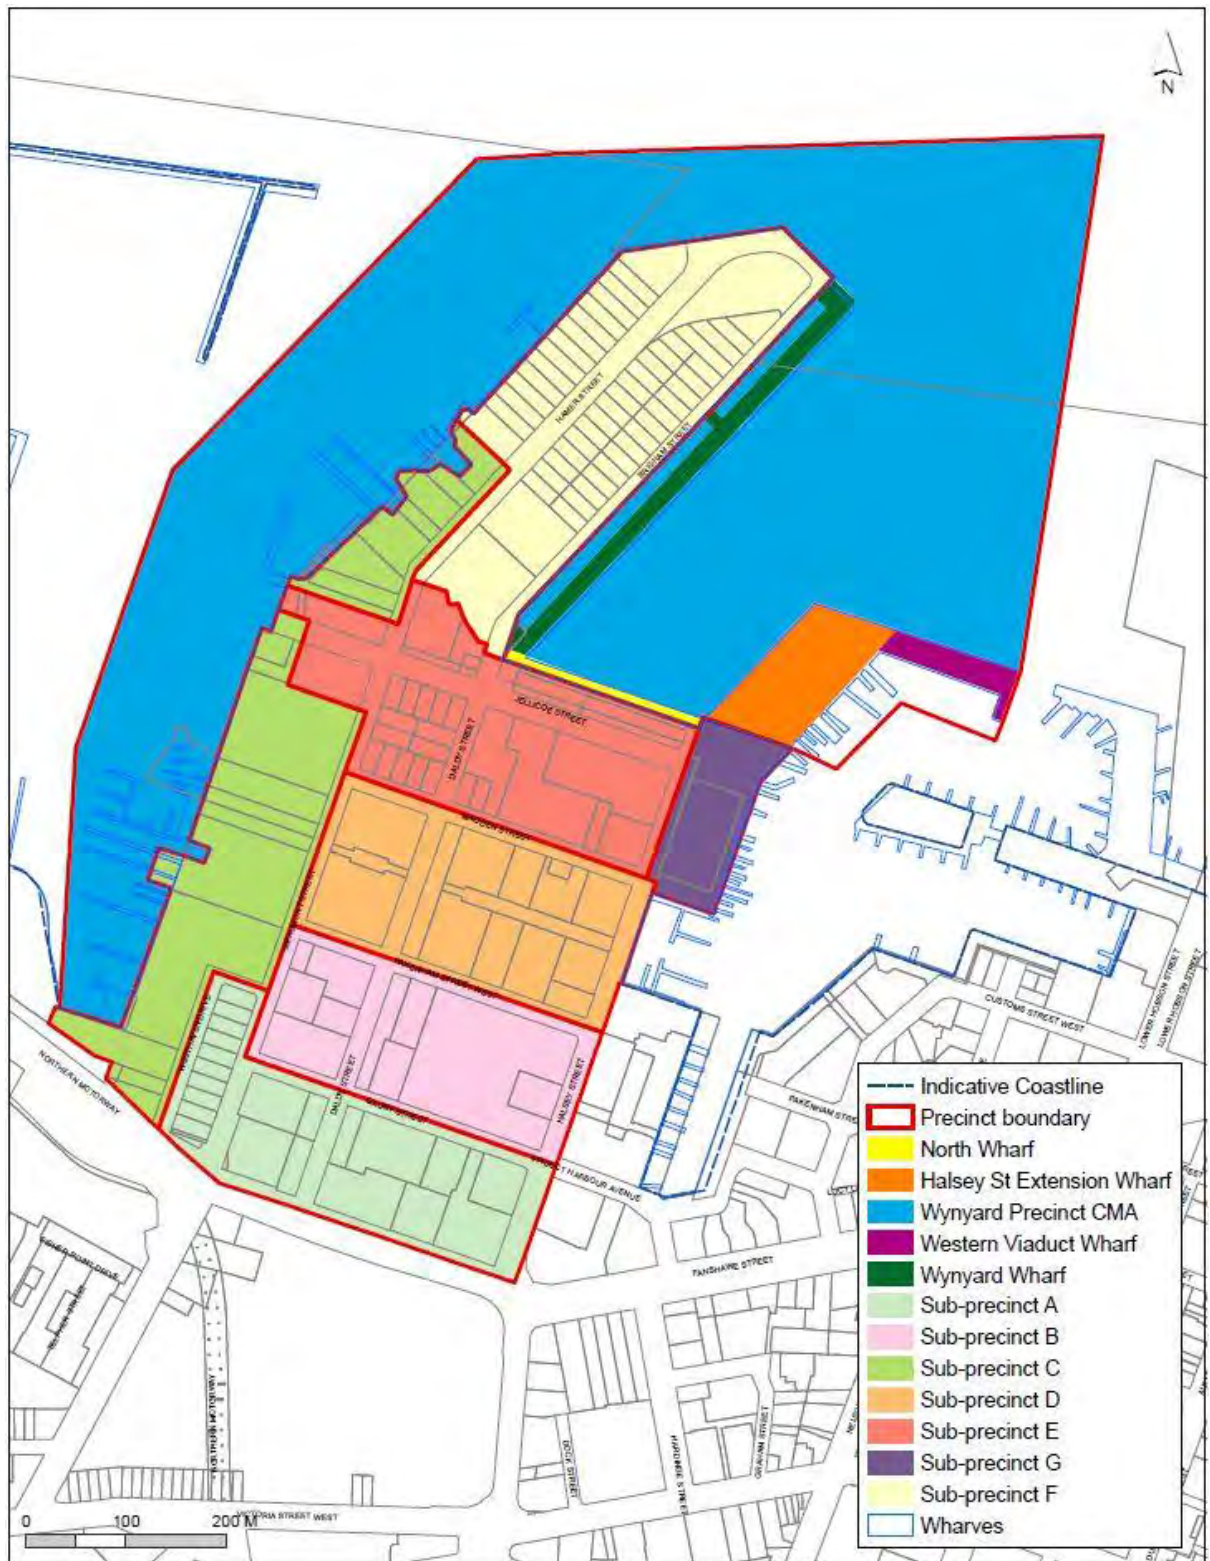

- (a) the special information required in H8.6.13 of the Business – City Centre zone rules for the transfer of special character building floor space apply.
- (4) Offices that exceed the permitted thresholds in I214.6.2(1) above but do not exceed the restricted discretionary thresholds in I214.6.2(2) above:
- (a) the Council will require independently verified actual morning and afternoon peak vehicle trip generation monitoring results from existing office activity within and, if appropriate, adjacent to the precinct with similar operational characteristics to the office activity proposed. The trip generation formula set out in the assessment criteria for the activity must be used to predict trips from the proposed, permitted and consented office activities.
- (5) Offices (including offices accessory to marine and port activities and marine retail), marine and fishing retail, retail, food and beverage, entertainment facilities or education facilities greater than 100m² per site:
- (a) a site travel management plan must be provided corresponding to the scale and significance of the activity and containing the following information as a minimum to demonstrate how the development will achieve the objectives of the Wynyard Precinct Transport Plan including:
 - (i) the physical infrastructure to be established or currently established on-site to support the use of alternative forms of transport, such as adequate covered facilities for cyclists, showering, locker and changing facilities; carpool parking areas, travel reduction information boards in foyer areas, such as timetables and route maps; internet service to enhance awareness of alternative transportation services;
 - (ii) the physical linkages to be provided on the site to link with surrounding pedestrian and cycle networks and existing public transport resources;
 - (iii) operational measures to be established or currently implemented on-site to encourage reduced vehicle trips to Wynyard precinct, including car sharing schemes, public transport use incentives, flexitime, staggered working hours;
 - (iv) operational measures to be established to restrict the use of any short term parking area(s) during peak periods;
 - (v) details of the management structure within the building or site in which the activity is to be located which has overall responsibility to oversee the implementation and monitoring of travel management measures;
 - (vi) the methods by which the effectiveness of the proposed measures outlined in the site travel management plan can be independently measured/monitored and reviewed, including a commitment to undertake travel surveys at the time of building occupation or as otherwise required to provide on-going information regarding travel behaviour; and

- (vii) the methods by which the travel management measures complement the Precinct wide travel management measures outlined in part B of the Wynyard Precinct Transport Plan (refer I214.11.1 Appendix 1) and use the travel demand management measures outlined in part C of that plan, or other appropriate initiatives.
- (6) private use of the coast access areas either vested in the council or areas over which council has a covenant for public access:
- (a) a site management plan corresponding to the scale and significance of the activity detailing the operational measures to be established to address the matters listed in assessment criteria for the activity.
- (7) risk sensitive activities marked # in the activity table located in sub-precinct D, E, F, G or areas 1-6 shown on Precinct plan 10 (excluding events):
- (a) an emergency and evacuation plan prepared by an independent authority or competent safety professional, which clearly indicates communication roles and responsibilities, location of egress points and assembly areas.
- (8) events within sub-precinct D and E and areas 1, 3, 4 and 6 shown on Precinct plan 10:
- (a) an emergency, evacuation and management plan, prepared by an independent authority or competent safety professional, which clearly indicates communication roles and responsibilities, location and management of access and egress points, assembly areas and people movement for the event;
 - (b) an event transport plan, developed in consultation with adjacent hazardous industry, marine industry and maritime passenger operators, which addresses the following matters:
 - (i) measures to ensure the maintenance of safe and efficient access (including at least two access points for emergency service vehicles) to existing hazardous industry, marine industry and maritime passenger operations for the full duration of the event;
 - (ii) measures to prevent event attendees entering into, or parking within Sub-precinct F or Wynyard wharf for the full duration of the event;
 - (iii) communication channels and methods to respond to and remedy traffic issues as they may arise with existing hazardous industry, marine industry and maritime passenger operations; and
 - (iv) where multiple events are planned, review procedures with hazardous industry, marine industry and maritime passenger operators to ensure that

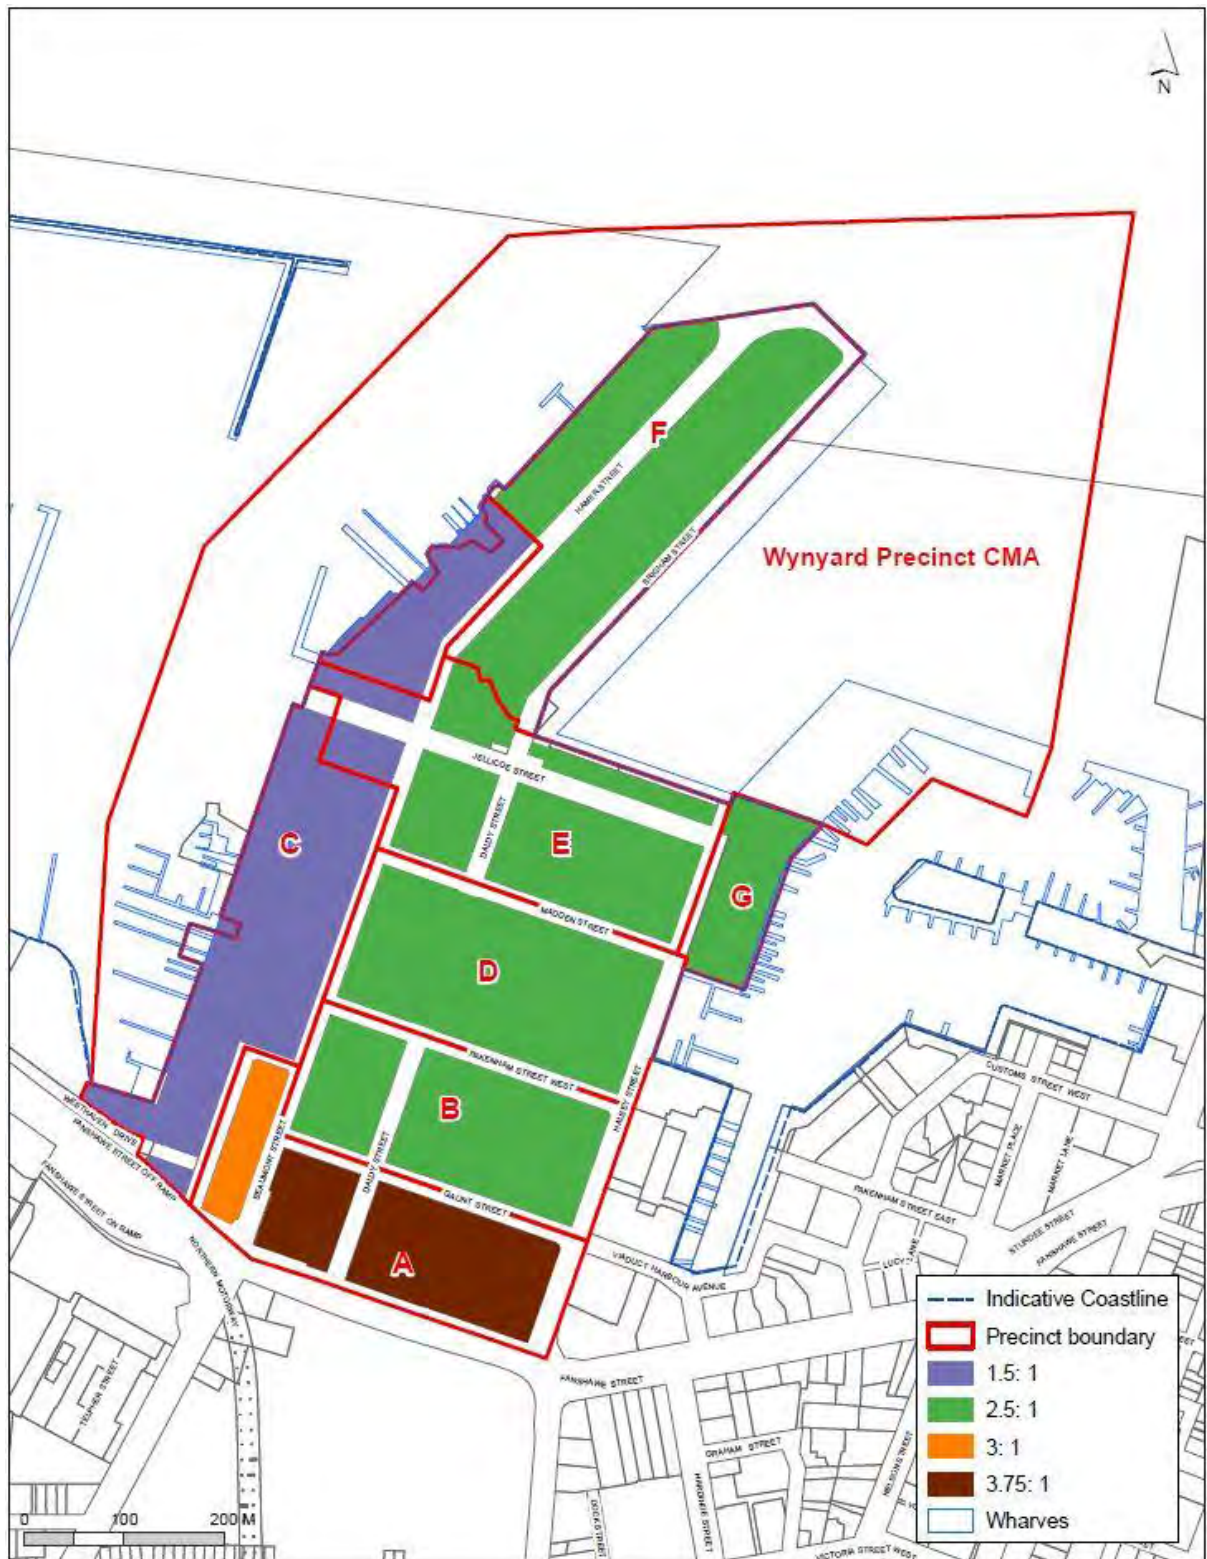

issues identified are avoided, remedied or mitigated for future planned events.

I214.10. Precinct plans

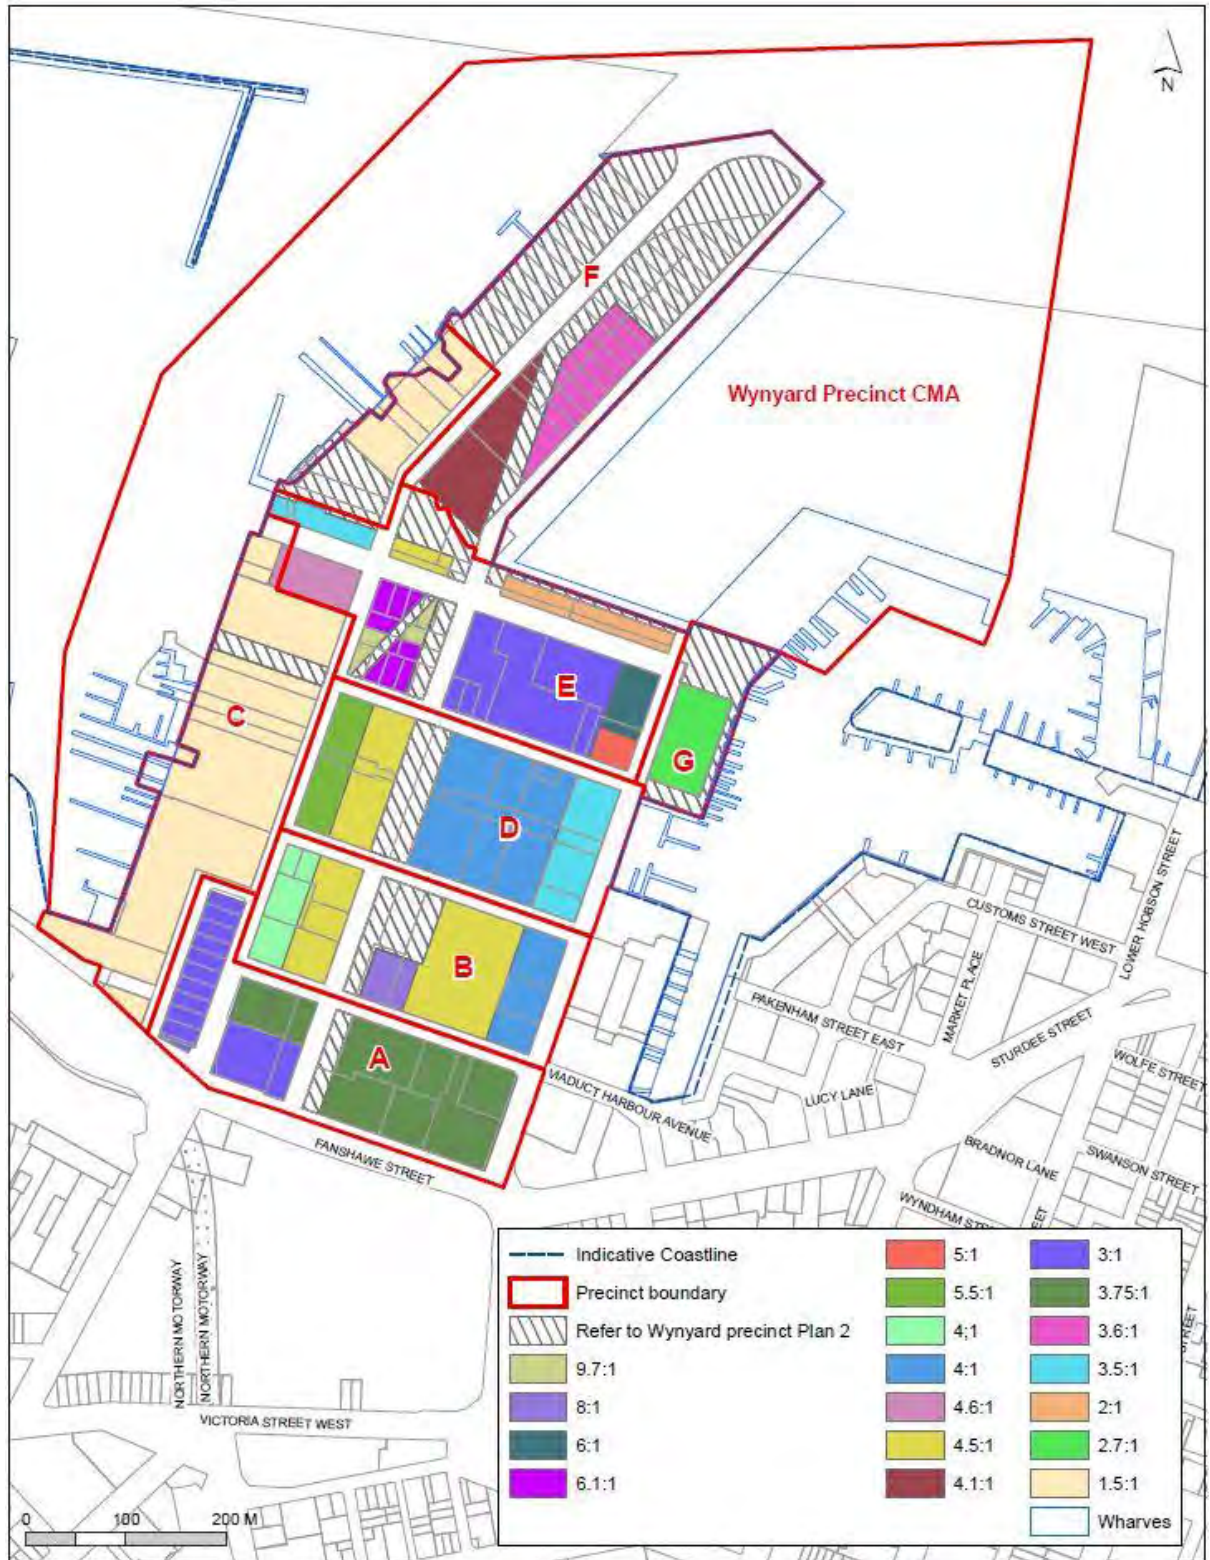

I214.10.1 Wynyard: Precinct plan 1 - Sub-precincts

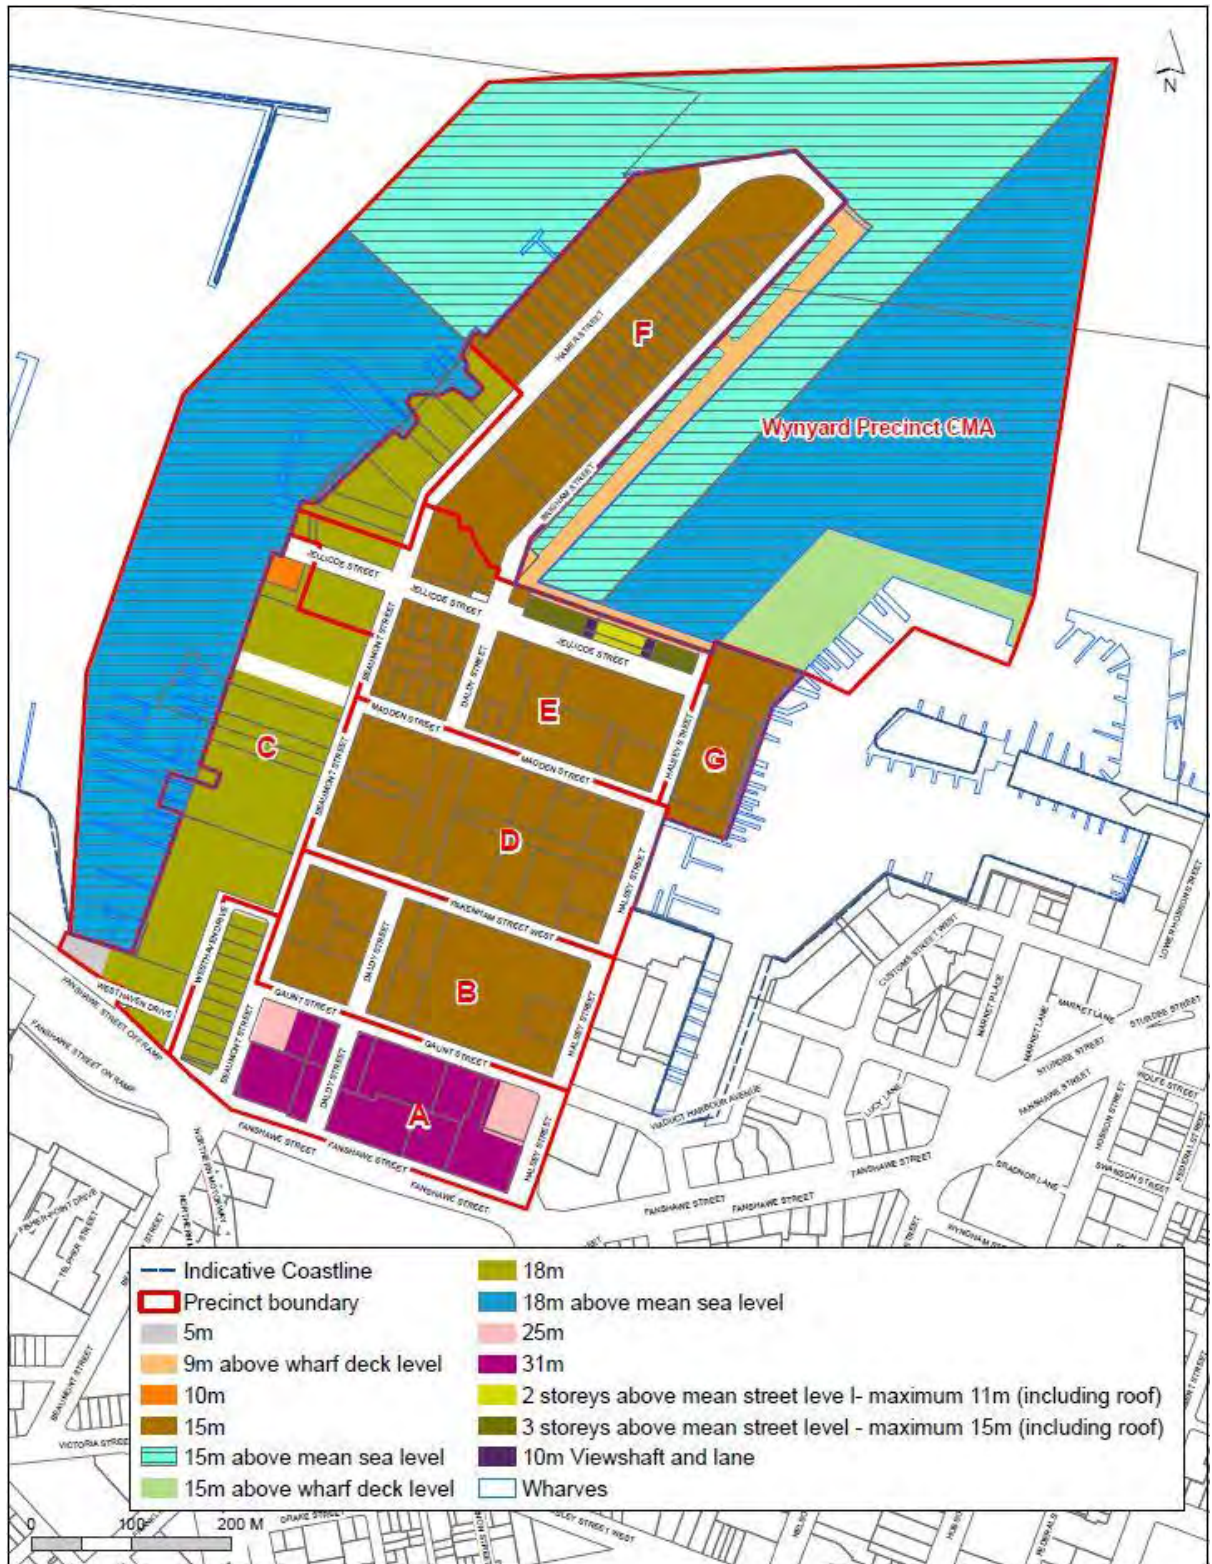

I214.10.2 Wynyard: Precinct plan 2 - Basic floor area ratio

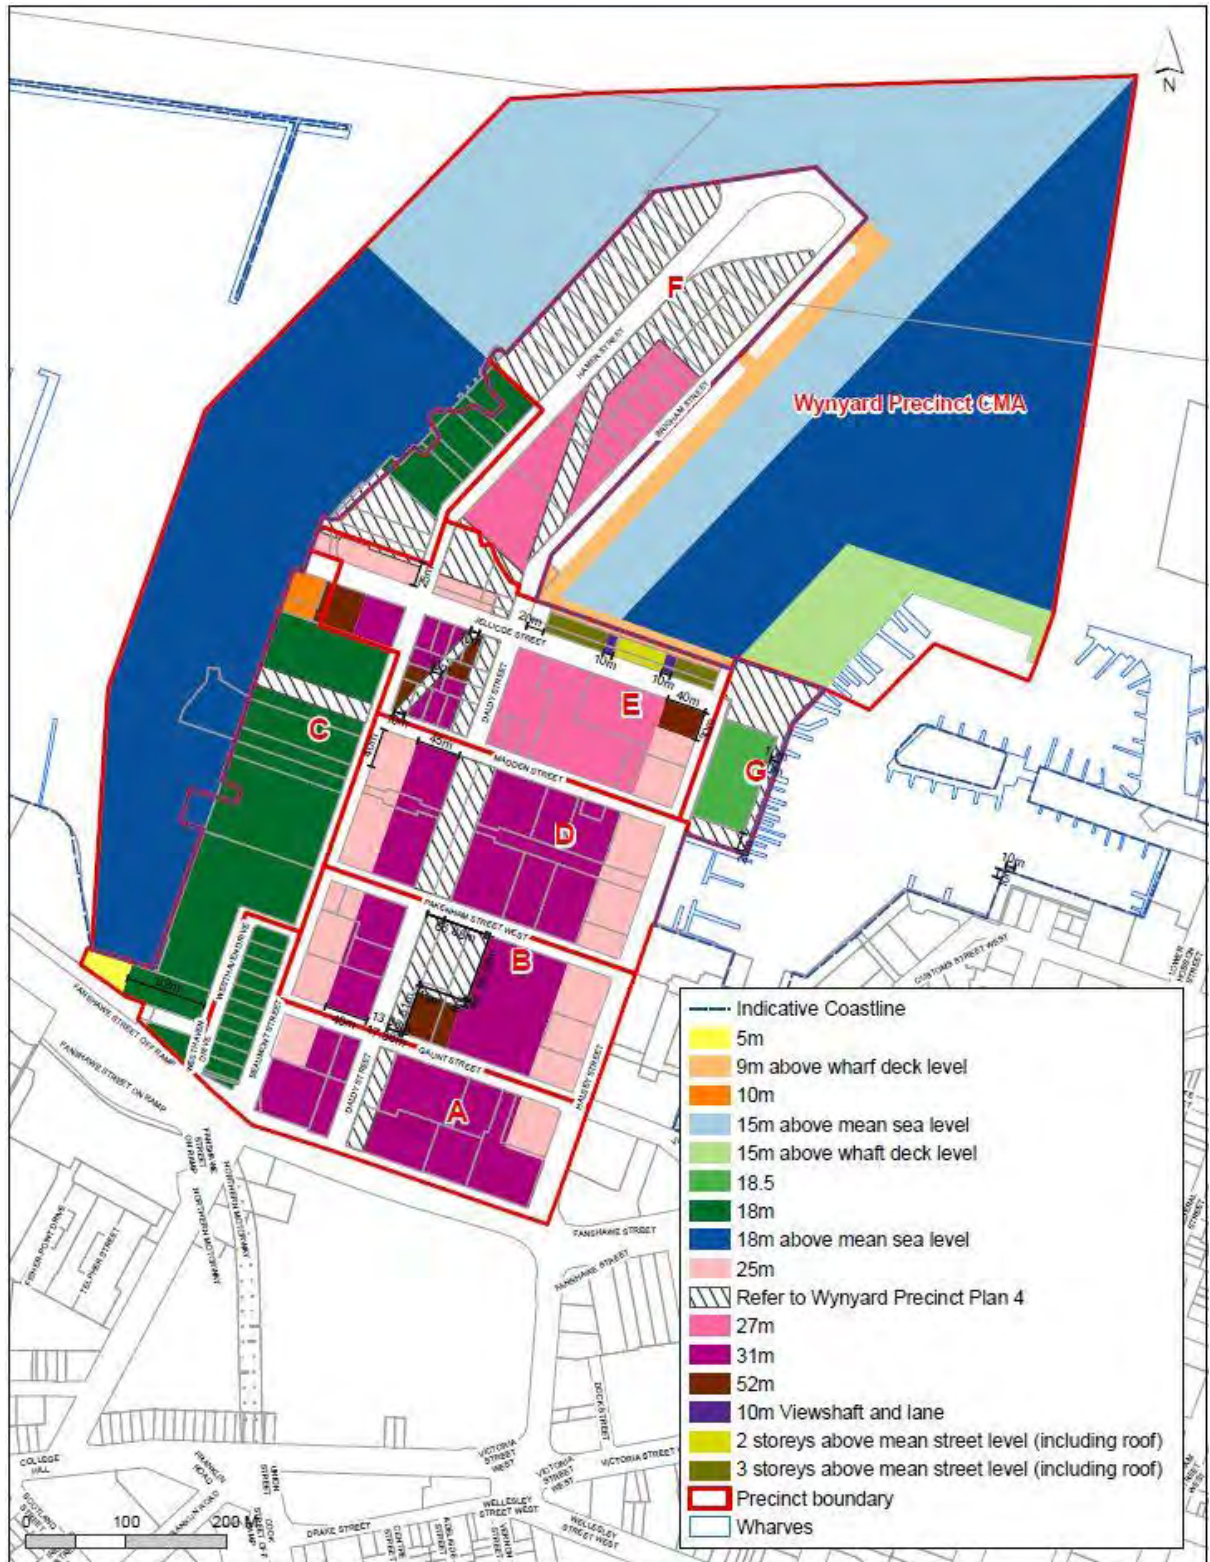

I214.10.3 Wynyard: Precinct plan 3 - Maximum floor area ratio

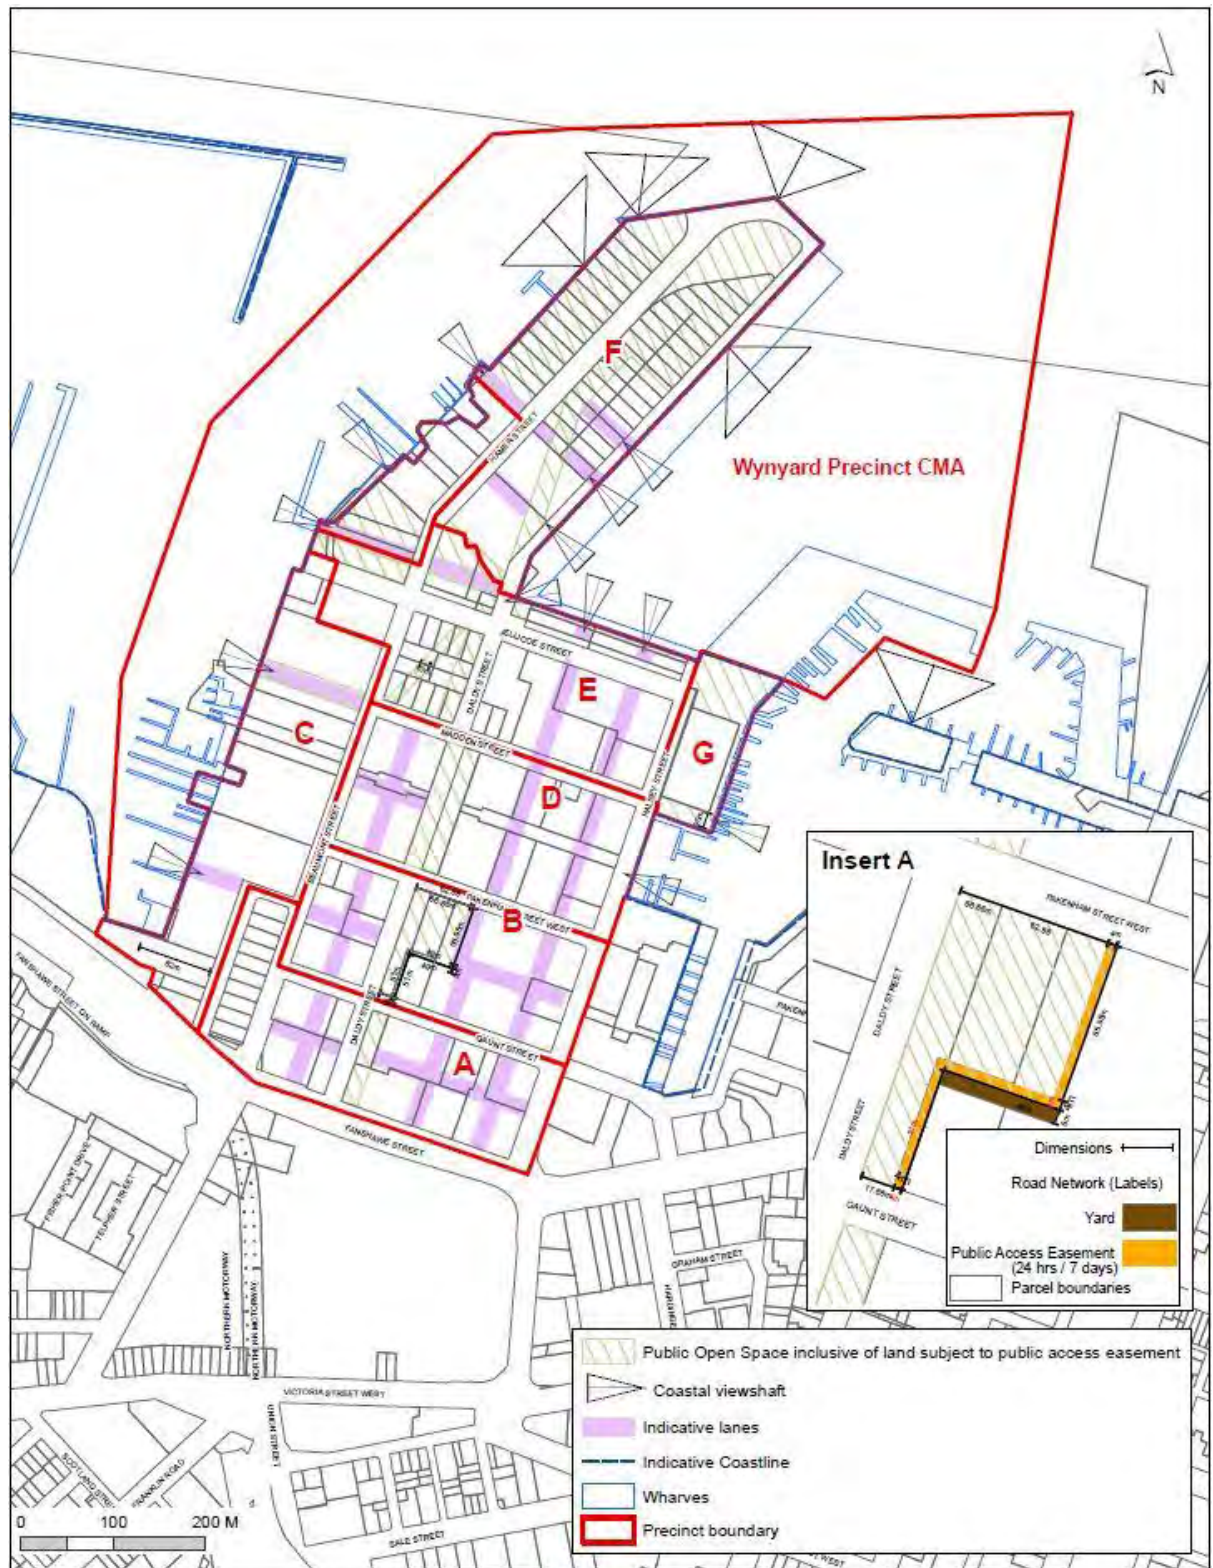

I214.10.4 Wynyard: Precinct plan 4 – Basic height

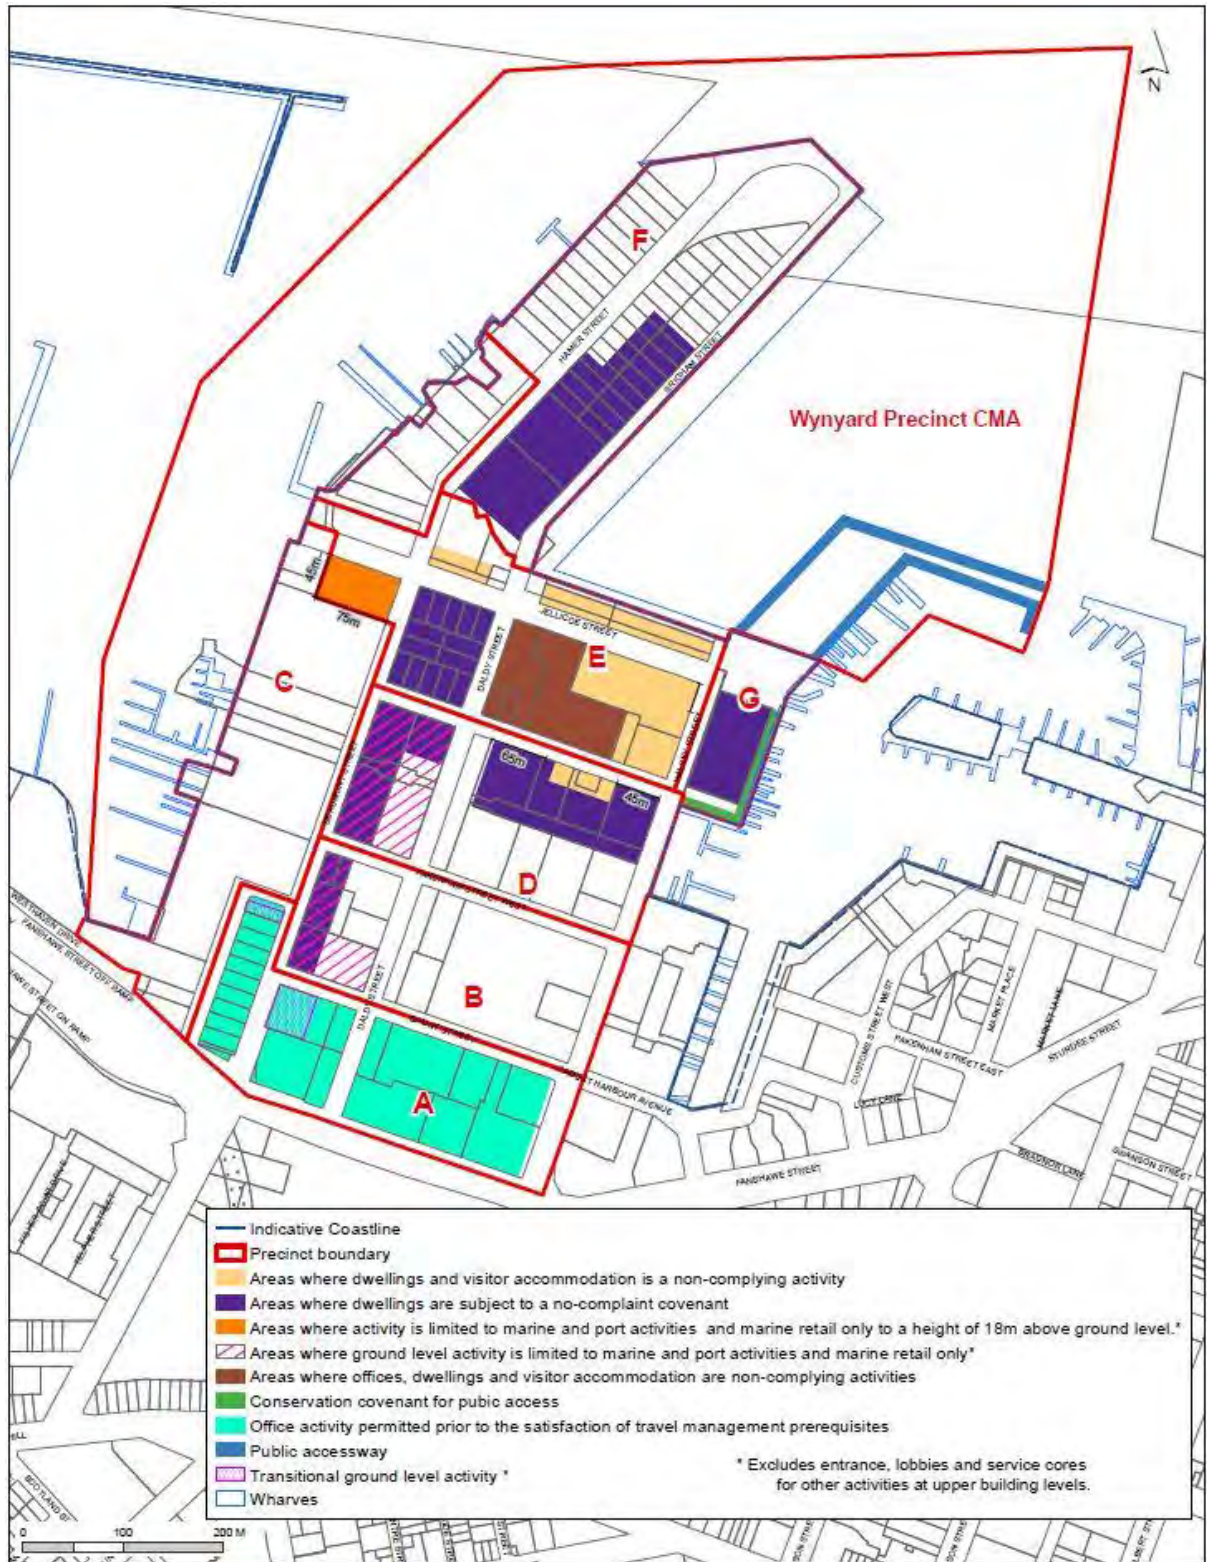

I214.10.5 Wynyard: Precinct plan 5 – Maximum height

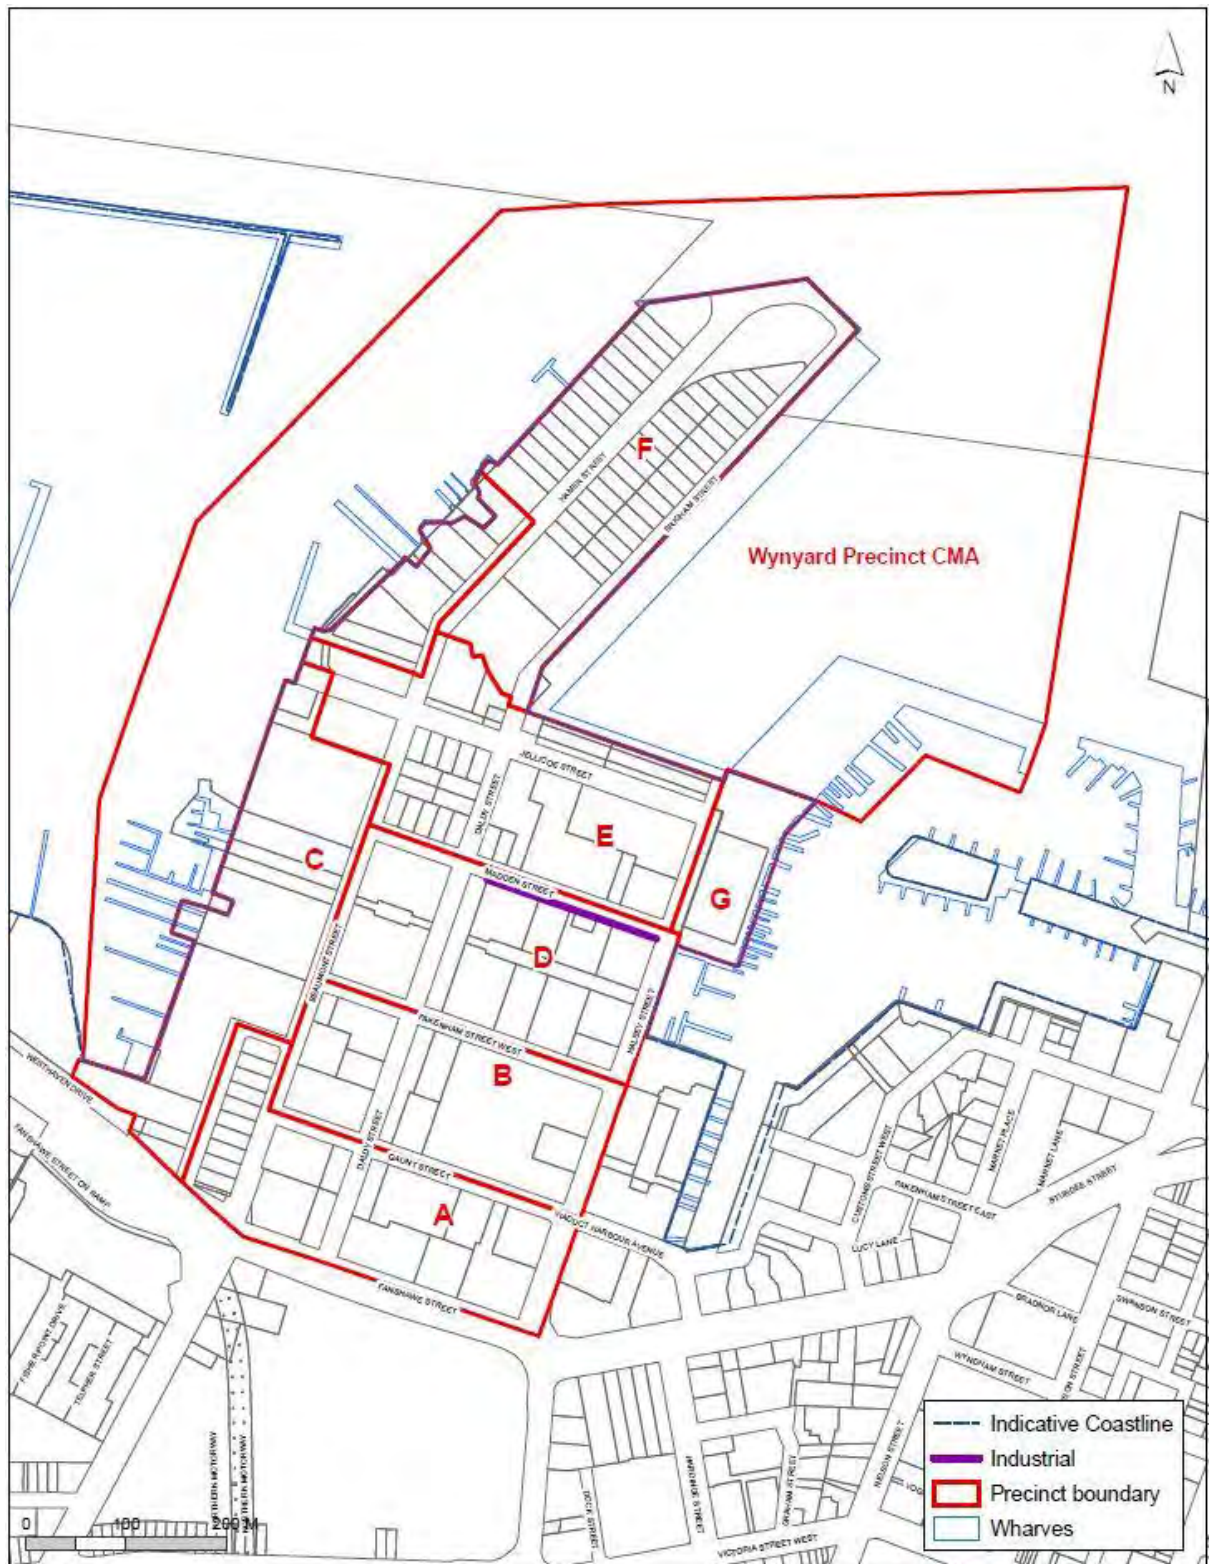

I214.10.6 Wynyard: Precinct plan 6 - Indicative lanes and viewshafts

I214.10.7 Wynyard: Precinct plan 7 – Additional activity restrictions

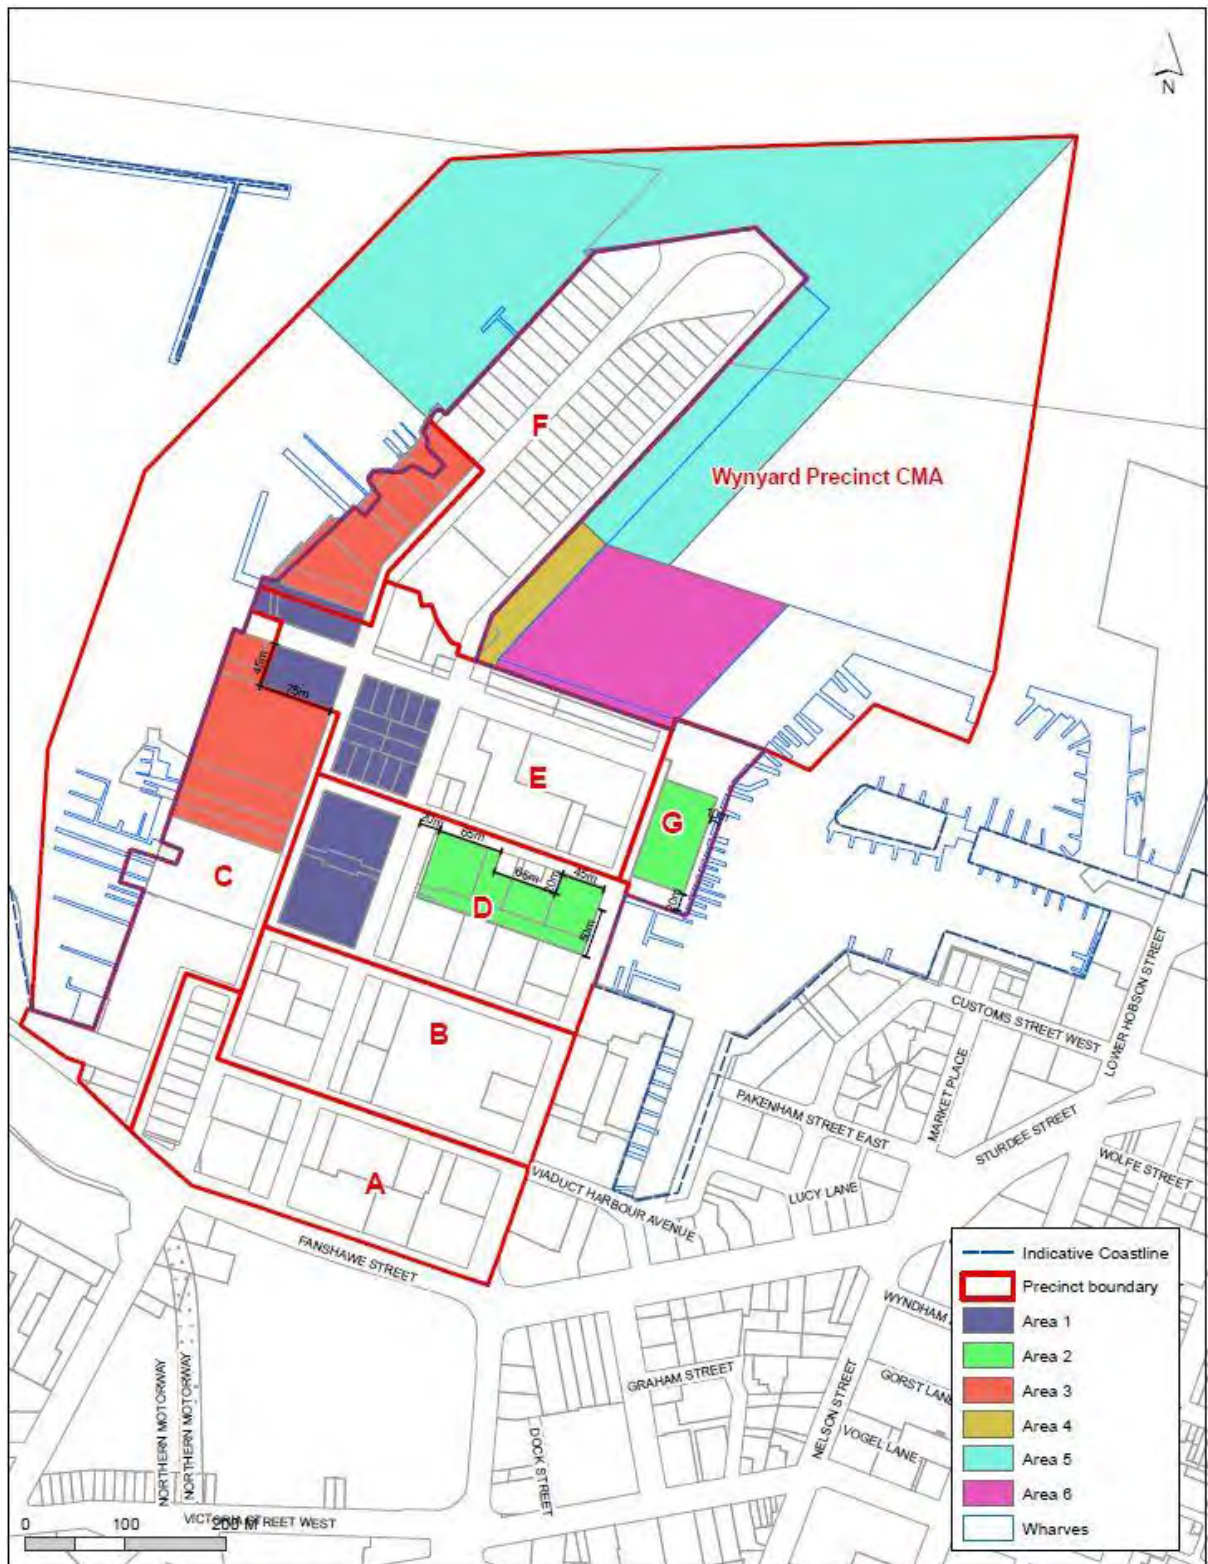

1214.10.8 Wynyard: Precinct plan 8 - Industrial frontages

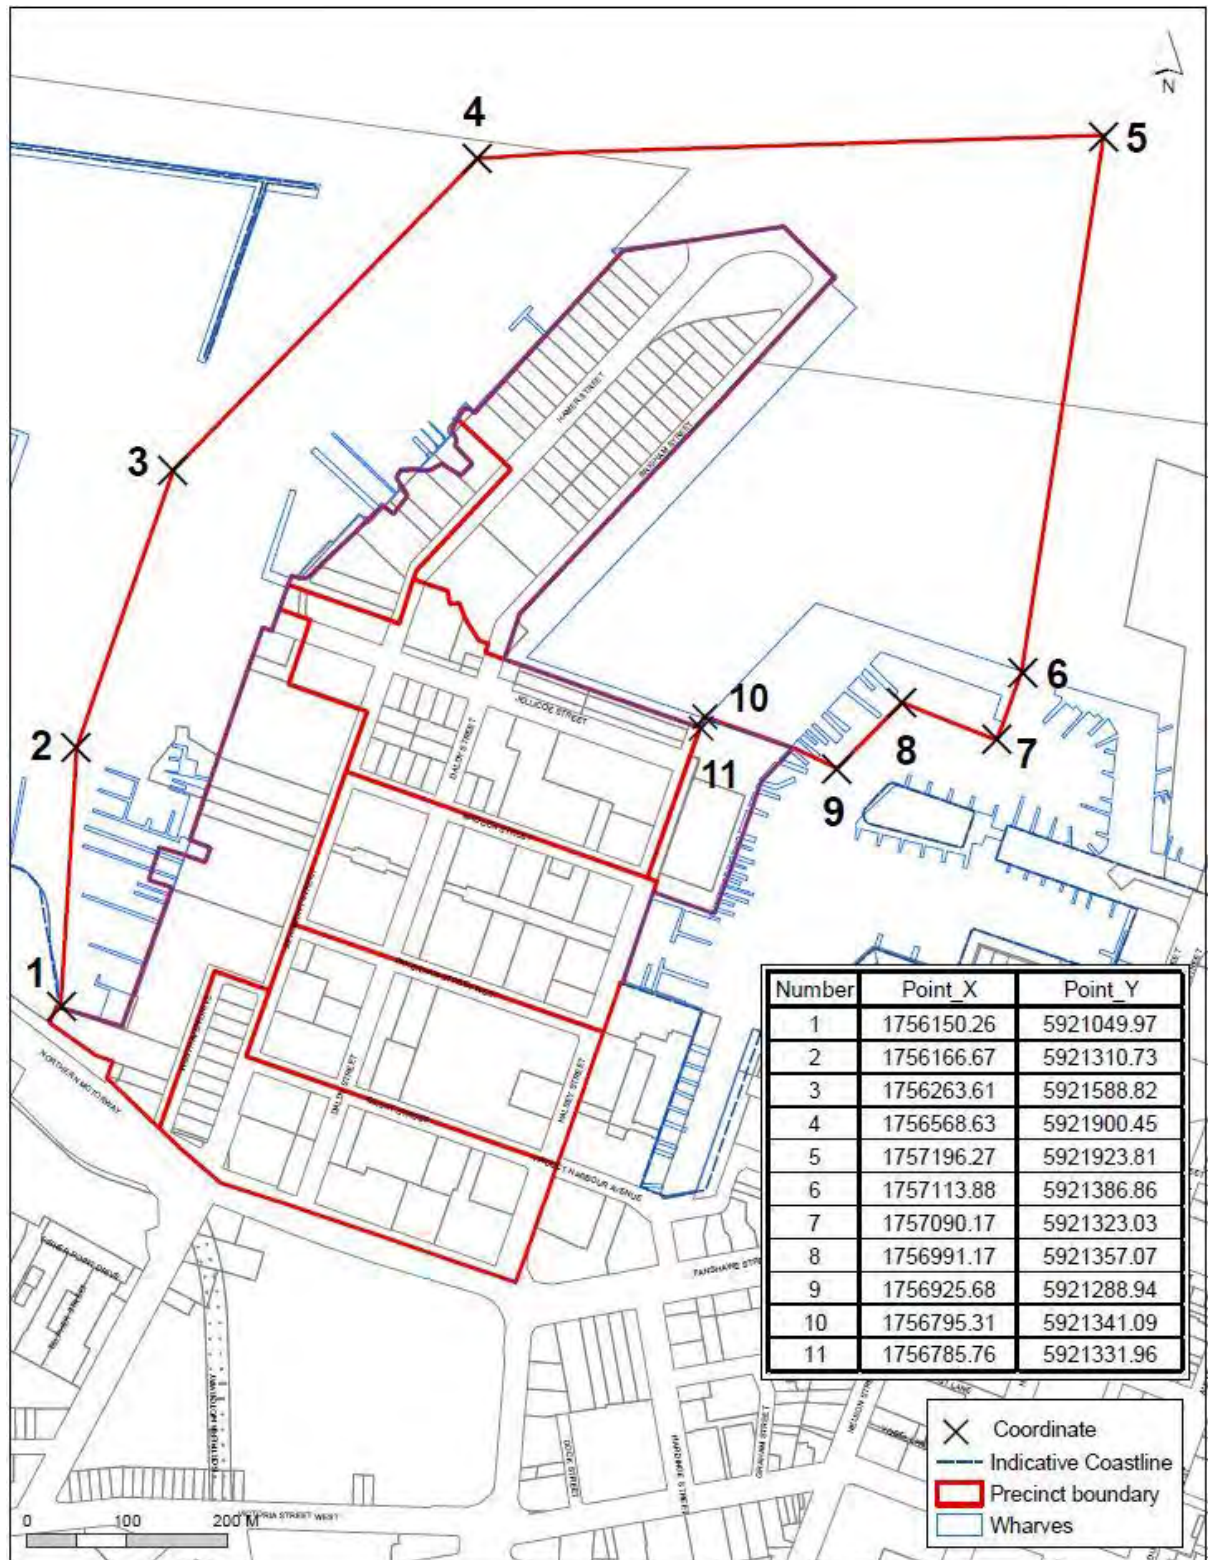

I214.10.9 Wynyard: Precinct plan 9 - Noise areas

I214.10.10 Wynyard: Precinct plan 10 – Risk areas

1214.10.11 Wynyard: Precinct plan 11 – Precinct boundary coordinates in the coastal marine area

I214.11. Appendices

I214.11.1 Appendix 1 - Methodology for undertaking traffic generation surveys in Wynyard Quarter (non-statutory)

I214.11.1. Wynyard Appendix 1 – Methodology for undertaking traffic generation surveys in Wynyard Quarter (non-statutory)

Objectives

- (a) To confirm the vehicle traffic generated by the office buildings in Wynyard Quarter during the morning and evening peak period as surveyed in 2009:
 - (i) On a 6 monthly basis for two years following the date that Plan Change 4 becomes operative; and
 - (ii) Thereafter, annually.
- (b) To confirm, on an annual basis, the mode split of persons leaving the office buildings in Wynyard Quarter during the evening peak period as surveyed in 2009;
- (c) To determine the vehicle traffic generated by new office development in Wynyard Quarter buildings;
- (d) To determine the mode split of persons leaving office buildings in Wynyard Quarter during the evening peak period; and
- (e) To determine the total number of vehicles entering and leaving Wynyard Quarter during the morning and evening peak periods.

General description of data required

Traffic generation

- (a) There are seven components to the generation of vehicle traffic that will eventually find its way to the Wynyard quarter intersections with Fanshawe Street. They are:
 - (i) Traffic generated by employees and visitors using car parks dedicated to office buildings in the area;
 - (ii) Traffic generated by visitors using short term on street parking;
 - (iii) Traffic generated by delivery vehicles;
 - (iv) Traffic generated by employees being dropped off or picked up;
 - (v) Traffic generated by land uses in the neighbouring Viaduct Harbour which will leave Wynyard Quarter through Fanshawe Street;
 - (vi) Traffic generated by 'through' vehicles; and
 - (vii) Traffic generated by non-office land uses.

The surveys are designed to enable all seven components to be identified.

Survey methodology

(1) Internal office car parks

The arrivals and departure from each of the car park will be recorded by time and direction of travel, and the following information will also be recorded:

- (a) All Cars.
- (b) The number of persons in each vehicle.
- (c) Delivery vehicles out of the car park.
- (d) Cyclists out of the car park.
- (e) Motorcycles.

There will be one surveyor recording the entrance to each car park.

(2) Mode split

All people leaving the building on foot during the evening peak period are to be counted, and a sample of the people leaving the building in the evening peak hour will be stopped and interviewed. There should be sufficient interviewers to achieve a 40% sample. The questions to be asked are:

- (a) Do you work in the building, or have you been visiting or are you delivering goods?
- (b) By what mode are you travelling?
 - Car driver?
If yes, then where have you parked your car?
 - Car passenger?
If yes, are you being picked up within Wynyard Quarter?
 - Bus?
 - Motorcycle?
 - Taxi?
 - Walk?
 - Cycle?
 - Train?
 - Ferry?

(3) Other data

- (a) Occupied spaces

Car park occupancy counts will be taken at the beginning and end of each survey period.

(b) Traffic volume counts

Tube counts on the entrances to Wynyard Quarter should be carried out at the same time as the building surveys.

(c) Intersection Counts

The intersection turning movement count data was last collected in 2005. This should be repeated at the same time as the building surveys for all five access points to Wynyard Quarter.

(d) Number plate surveys

Number plate surveys of cars in and out of the three Fanshawe Street intersections, Westhaven Drive, and Viaduct Harbour Avenue at the Custom Street end should be carried out at the same time as the intersection counts. A 20-25% sample should be aimed at (White and silver cars only). If surveyor numbers become a problem, then this survey could be carried out on a different day, as long as a count of all vehicles entering and leaving is done at the same time.

Survey date and times

The surveys should be taken between 6:30am and 9:15am and between 3:45pm and 6:30pm on a Wednesday or Thursday in March and October (when 6 monthly). They should not be taken during school or University holidays.

Buildings to be surveyed

The buildings to be surveyed are in two parts:

(a) Buildings surveyed in 2009:

Buildings Surveyed			Table 1
Building	GFA	Car Parks	Parking Ratio
Vodafone et al	34,250m ²	501	1: 68m ²
Maritime Square	21,766m ²	212	1:104m ²
Air New Zealand	15,667m ²	133	1:117m ²
NZI	9,114m ²	63	1:145m ²
BNZ	9,073m ²	135	1: 67m ²
Lumley Centre	30,321m ²	194	1:156m ²

(b) Each new office building in Wynyard Quarter, one year after occupation, and then annually thereafter.

I300. Alexandra Park Precinct

I300.1. Precinct description

The Alexandra Park Precinct provides specific planning controls for the use of the Alexandra Park Racecourse. The Alexandra Park Racecourse is a major harness racing venue and is located on the corner of Manukau Rd and Green Lane West. It adjoins Cornwall Park to the north and the ASB Showgrounds to the east.

The zoning of the land within the Alexandra Park Precinct is Special Purpose - Major Recreation Facility Zone. The overlay, Auckland-wide and zone objectives and policies apply in this precinct in addition to those listed below.

Refer to the planning maps for the location and extent of the precinct.

I300.2. Objectives

- (1) The Alexandra Park Racecourse is protected as a regionally and nationally important venue for all of the following primary activities:
 - (a) horse racing activities;
 - (b) organised sport and recreation;
 - (c) informal recreation;
 - (d) concerts, events and festivals;
 - (e) markets, fairs and trade fairs;
 - (f) functions, conferences, gatherings and meetings; and
 - (g) displays and exhibitions.
- (2) A range of activities compatible with, or accessory to, the primary activities are enabled.
- (3) The adverse effects of the operation of the Alexandra Park Racecourse are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I300.3. Policies

- (1) Enable the safe and efficient operation of the Alexandra Park Racecourse for its primary activities.
- (2) Protect the primary activity of the Alexandra Park Racecourse from the reverse sensitivity effects of adjacent development.

- (3) Enable a range of accessory and compatible activities to the primary activities where they achieve all of the following:
- (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of the Alexandra Park Racecourse, having regard to the amenity of surrounding properties.
- (5) Recognise that the Alexandra Park Racecourse's primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I300.4. Activity table

The provisions in any relevant overlays and Auckland-wide provisions apply in this precinct unless otherwise specified below. The following provisions do not apply:

- (1) E24 Lighting;
- (2) E25 Noise and vibration (noise provisions only); and
- (3) E40 Temporary activities.

Table I300.4.1 Activity table specifies the activity status of land use and development activities in the Alexandra Park Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I300.4.1 Activity Table

	Activity	Activity status
Use		
Primary activities		
(A1)	Horse racing activities	P
(A2)	Organised sports and recreation	P
(A3)	Informal recreation	P
(A4)	Concerts, events and festivals	P
(A5)	Markets, fairs and trade fairs	P
(A6)	Functions, conferences, gatherings and meetings	P
(A7)	Displays and exhibitions	P
(A8)	Any primary activity not meeting Standard I300.6.3 but meeting all other standards	C

Accessory activities		
(A9)	Accessory activities	P
(A10)	Any accessory activity not meeting Standard I300.6.3 but meeting all other standards	C
Compatible activities		
(A11)	Filming activities	P
(A12)	Sports, recreation and community activities	P
(A13)	Professional fireworks displays meeting Standard I300.6.8	P
(A14)	Professional fireworks displays not meeting Standard I300.6.8	RD
(A15)	Helicopter flights meeting Standard I300.6.9	P
(A16)	Helicopter flights not meeting Standard I300.6.9	RD
(A17)	Any compatible activity not meeting Standard I300.6.3 but meeting all other standards	C
Development		
(A18)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 20m in height	P
(A19)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m and up to 25m in height	RD
(A20)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 25m in height	D
(A21)	Light towers and associated fittings up to and greater than 25m in height	P
(A22)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I300.6.6	RD
(A23)	Demolition of buildings	P
(A24)	Temporary buildings	P

I300.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I300.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.

- (2) Any application for resource consent for an activity listed in Table I300.4.1 Activity table and which is not listed in I300.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I300.6. Standards

The overlay and Auckland-wide standards apply in this precinct, unless otherwise specified below. The following standards do not apply:

- (1) E27 Transport – Standard E27.6.1 Trip generation; and
- (2) E27 Transport – Standard E27.6.2 Number of parking and loading spaces.

All permitted, controlled or restricted discretionary activities listed in Table I300.4.1 Activity table must comply with the following activity standards unless otherwise stated.

I300.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing an activity sensitive to noise must not exceed the noise limits in Table I300.6.1.1 Noise standards.

Table I300.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
All days including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:30pm	55dB L _{Aeq}
At all other times	45dB L _{Aeq} and 75dB L _{Amax}

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (4) Professional fireworks displays and helicopter flights are excluded from this standard.

I300.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.

- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I300.6.2, the curfew and pre-curfew times are as stated in Table I300.6.2.1 Pre-curfew and curfew times.

Table I300.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7.00am – 11.00pm
Curfew	11.00pm – 7.00am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:
- (a) the limits in Table I300.6.2.2 Horizontal and vertical illuminance at a boundary when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I300.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) the vertical illuminance limits in Table I300.6.2.3 Vertical illuminance at a window when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I300.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15 per cent (based on an adaption luminance of 2cd/m^2) on any public road, calculated within each traffic lane in the direction of travel.
- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I300.6.2.4 Pre-curfew luminous intensity and 1,000 candelas for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I300.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd

- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I300.6.2.5 Building façade luminance. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.
- (9) Professional fireworks displays are excluded from this standard.

Table I300.6.2.5: Building façade luminance

	Luminance limit
Standard	10 cd/m^2

I300.6.3. Traffic management

All activities must meet at least one of the following traffic management standards:

- (1) the activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) the activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

I300.6.4. Parking

- (1) Any loss of existing formed and marked parking spaces from 30 September 2013, must be accommodated elsewhere within the precinct, unless the number of parking spaces provided exceeds the requirements set out in E27.6.2 Number of parking and loading spaces.

I300.6.5. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas.

I300.6.6. Interface control areas

- (1) New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity must be located outside the Interface Control Area (ICA) illustrated on Alexandra Park: Precinct plan 1. Temporary buildings are excluded from this standard.

I300.6.7. Height in relation to boundary

- (1) Where the Alexandra Park Precinct directly adjoins an open space zone, buildings must not project beyond a 45 degree recession plane measured from a point 2.5 metres vertically above ground level on the precinct boundary.
- (2) Temporary buildings, light towers and associated fittings are excluded from this standard.

I300.6.8. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 metres from any residential zone.
- (5) Displays must comply with 140dB L_{zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I300.6.9. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landings and departures must take place at least 150 metres from any neighbouring site.

I300.6.10. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days excluding set up and dismantling time.

I300.7. Assessment – controlled activities

I300.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) the effects of the proposed activity on the safety and efficiency of the transport network.

I300.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) the effects of the proposed activity on the safety and efficiency of the transport network.
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I300.8. Assessment – restricted discretionary activities

I300.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) any activity that does not comply with noise and/or lighting standards:
 - (a) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) any activity that does not comply with permitted helicopter flight standard:
 - (a) the effects of non-compliance with the permitted helicopter flight standard on the amenity of surrounding properties.
- (3) any activity that does not comply with permitted professional fireworks display standard:
 - (a) the effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m and up to 25m in height and/or which does not comply with height in relation to boundary standards:

- (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I300.6.6:
 - (a) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) any activity that does not comply with screening standards:
 - (a) the visual effects of rubbish and storage areas on residential and open space sites.

I300.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance;
 - (b) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time;
 - (c) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
 - (d) the extent to which any artificial lighting will create a traffic safety issue;
 - (e) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (f) the extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance; and
 - (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.

- (2) the effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
 - (a) the extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
 - (a) the extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas;
 - (b) the extent to which the height, location and design of the building allows reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites;
 - (c) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties;
 - (d) whether there is an operational need to exceed height and/or height in relation to boundary standard/s; and

- (e) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the operational needs of the facility.
- (4) the visual effects of rubbish and storage areas on residential and open space zoned sites:
 - (a) the extent to which screening is practicable; and
 - (b) the extent to which distance and topographical matters mitigate likely adverse visual effects.

I300.9. Special information requirements

There are no special information requirements for this precinct.

I300.10. Precinct plans

I300.10.1. Alexandra Park: Precinct plan 1

I301. ASB Showgrounds Precinct

I301.1. Precinct description

The ASB Showgrounds Precinct provides specific planning provisions for the use and development of the ASB Showgrounds as an events and exhibition venue.

The zoning of the land within the ASB Showgrounds Precinct is the Special Purpose - Major Recreation Facility Zone. The overlay, Auckland-wide and zone objectives and policies apply in this precinct in addition to those listed below.

Refer to the planning maps for the location and extent of the precinct.

I301.2. Objectives

- (1) The ASB Showgrounds are protected as a regionally and nationally important venue for all of the following primary activities:
 - (a) concerts, events and festivals;
 - (b) displays and exhibitions;
 - (c) functions, conferences, gatherings and meetings;
 - (d) markets, fairs and trade fairs; and
 - (e) stabling and care of racehorses and livestock.
- (2) A range of activities compatible with, or accessory to, the primary activities are enabled.
- (3) The adverse effects of the operation of the ASB Showgrounds are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

I301.3. Policies

- (1) Enable the safe and efficient operation of the ASB Showgrounds for its primary activities.
- (2) Protect the primary activities of the ASB Showgrounds from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of the ASB Showgrounds, having regard to the amenity of surrounding properties.

- (5) Recognise that the ASB Showgrounds' primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

I301.4. Activity table

The zone, overlay and Auckland-wide provisions apply in this precinct except for the following provisions which do not apply in this precinct.

- (1) E40 Temporary activities.
- (2) E25 Noise and vibration (noise provisions only).
- (3) E24 Lighting.
- (4) E27.6.1 Trip generation.
- (5) E27.6.2 Number of parking and loading spaces.

Table I301.4.1 specifies the activity status of land use and development activities in the ASB Showgrounds Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I301.4.1: Activity table

	Activity	Activity status
Use		
Primary activities		
(A1)	Concerts, events and festivals	P
(A2)	Displays and exhibitions	P
(A3)	Functions, conferences, gatherings and meetings	P
(A4)	Markets, fairs and trade fairs	P
(A5)	Stabling and care of racehorses and livestock	P
(A6)	Any primary activity not meeting Standard I301.6.5 but meeting all other standards	C
Accessory activities		
(A7)	Accessory activities	P
(A8)	Any accessory activity not meeting Standard I301.6.5 but meeting all other standards	C
Compatible activities		
(A9)	Sports, recreation and community activities	P
(A10)	Professional fireworks displays meeting Standard I301.6.10	P
(A11)	Professional fireworks displays not meeting Standard I301.6.10	RD

(A12)	Helicopter flights meeting Standard I301.6.11	P
(A13)	Helicopter flights not meeting Standard I301.6.11	RD
(A14)	Filming activities	P
(A15)	Any compatible activity not meeting Standard I301.6.5 but meeting all other standards	C
Development		
(A16)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 20m in height	P
(A17)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m but up to 25m in height	RD
(A18)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 25m in height	D
(A19)	Light towers and associated fittings up to and greater than 25m in height	P
(A20)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I301.6.8	RD
(A21)	Demolition of buildings	P
(A22)	Temporary buildings	P

I301.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I301.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I301.4.1 Activity table and which is not listed in I301.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I301.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I301.4.1 must comply with the following activity standards unless otherwise stated.

I301.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site zoned residential, incident on the facade of any building zoned Business - Mixed Use Zone, must not exceed noise limits stated in Table I301.6.1.1.

Table I301.6.1.1: Noise standards

Time, day, duration and frequency	Residential noise limit	Mixed Use noise limit
Up to 5 special noise events between 8:00am and 10:30pm in any 12 month period	75dB $L_{Aeq(5min)}$	85dB $L_{Aeq(5min)}$
Up to 15 special noise events between 8:00am and 10:30pm in any 12 month period	65dB $L_{Aeq(5min)}$	75dB $L_{Aeq(5min)}$
General noise standards for all days including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:30pm	55dB L_{Aeq}	65dB L_{Aeq}
General noise standards for all other times	45dB L_{Aeq} and 75dB L_{Amax}	55dB L_{Aeq} and 75dB L_{Amax}

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) For special noise events an adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.
- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.

- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) Where $L_{Aeq(5min)}$, is specified, no 5 minute measurement sample can exceed the stated limit.
- (7) Professional fireworks displays and helicopter flights are excluded from this standard.

I301.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I301.6.2, the curfew and pre-curfew times are as stated in Table I301.6.2.1.

Table I301.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 11pm
Curfew	11pm – 7am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:
 - (a) the limits in Table I301.6.2.2 when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I301.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) the vertical illuminance limits in Table I301.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I301.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15% (based on an adaption luminance of 2 cd/m²) on any public road, calculated within each traffic lane in the direction of travel.
- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I301.6.2.4 and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I301.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd
Special lighting events	25,000 cd

- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I301.6.2.5. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.
- (9) Professional fireworks displays are excluded from this standard.

Table I301.6.2.5: Building façade luminance

	Luminance limit
Standard	10 cd/m ²
Special lighting events	25 cd/m ²

I301.6.3. Special noise events

- (1) The total number of special noise events in any 12 month period must not exceed 20 events.
- (2) For the purpose of this standard, a special noise event exceeds the general noise standards but does not exceed the special noise limits, which are both listed in Table I301.6.1.1 Noise standards.
- (3) Special noise events may occur consecutively over a day or days, but may not exceed the total number of special noise events allowed in any 12 month period provided that there must be no more:
 - (a) than 2 special noise events on any one day;
 - (b) than 4 special noise events within any 2 week period.
- (4) A single event must be limited to a total duration of 6 hours. Any special noise event lasting longer than 6 hours must be counted as 2 special noise events. The duration of a special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.

I301.6.4. Special lighting events

- (1) The total number of special lighting events in any 12 month period must not exceed 25 events.
- (2) For the purpose of this standard, a special lighting event exceeds the standard lighting limits but does not exceed the special lighting limits listed in Tables I301.6.2.4 and I301.6.2.5.

I301.6.5. Traffic management

All activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

I301.6.6. Parking

- (1) Any permanent loss of existing formed and marked parking spaces from 1,200 spaces (as at 30 September 2013) must be accommodated elsewhere within the precinct.

I301.6.7. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas.

I301.6.8. Interface control areas

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on Precinct plan 1. Temporary buildings are excluded from this standard.

I301.6.9. Height in relation to boundary

- (1) Where the ASB Showgrounds Precinct directly adjoins an open space zone, buildings must not project beyond a 45 degree recession plane measured from a point 8.5 meters vertically above ground level on the precinct boundary.
- (2) Temporary buildings, light towers and associated fittings are excluded from this standard.

I301.6.10. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 meters from any residential zone.
- (5) Displays must comply with 140dB L_{zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I301.6.11. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 150m from any neighbouring residentially zoned site.

I301.6.12. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period no greater than 90 days, excluding set up and dismantling time.

I301.7. Assessment – controlled activities

I301.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) The effects of the proposed activity on the safety and efficiency of the transport network.

I301.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions.

- (1) Effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I301.8. Assessment – restricted discretionary activities

I301.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions.

- (1) Any activity that does not comply with noise and/or lighting standards.
 - (a) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) Any activity that does not comply with permitted helicopter flight standards.
 - (a) The effects of non-compliance with the permitted helicopter flight standard on the amenity of surrounding properties.
- (3) Any activity that does not comply with permitted professional fireworks display standard.
 - (a) The effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m and up to 25m in height and/or which does not comply with height in relation to boundary standards.
 - (a) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I301.6.8.

- (a) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) Any activity that does not comply with screening standards.
 - (a) The visual effects of rubbish and storage areas on residential and open space sites.

I301.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) Whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance.
 - (b) Whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time.
 - (c) The extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
 - (d) The extent to which any artificial lighting will create a traffic safety issue.
 - (e) Whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing.
 - (f) The extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance.
 - (g) Whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
 - (h) The extent to which additional special events adversely affect the amenity of surrounding properties having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;

- (ii) the cumulative effect of numerous infringements of special event standards;
 - (iii) the additional number of special events; and
 - (iv) whether there is an operational need for the exceedance.
- (2) The effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
 - (a) The extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
 - (a) The extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (b) The extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones).
 - (c) Whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s.
 - (d) The extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (4) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
 - (a) The extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;

- (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) The visual effects of rubbish and storage areas on residential and open space zoned sites:
- (a) The extent to which screening is practicable
 - (b) The extent to which distance and topographical matters mitigate likely adverse visual effects.

I301.9. Special information requirements

There are no special information requirements for this precinct.

I301.10. Precinct plans

I301.10.1. ASB Showgrounds: Precinct plan 1

I302. ASB Tennis Arena Precinct

I302.1. Precinct description

The ASB Tennis Arena Precinct provides for the operation, development, redevelopment and intensification of the ASB Tennis Arena.

The zoning of the land within the ASB Tennis Arena Precinct is the Special Purpose - Major Recreation Facility Zone. The overlay, Auckland-wide and zone objectives and policies apply in this precinct in addition to those listed below.

I302.2. Objectives

- (1) The ASB Tennis Arena is protected as a regionally and nationally important venue for all of the following primary activities:
 - (a) organised sports and recreation;
 - (b) informal recreation;
 - (c) concerts, events and festivals;
 - (d) markets, fairs and trade fairs;
 - (e) functions, conferences, gatherings and meetings; and
 - (f) displays and exhibitions.
- (2) A range of activities compatible with, or accessory to, the primary activity are enabled.
- (3) The adverse effects of the operation of the ASB Tennis Arena are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

I302.3. Policies

- (1) Enable the safe and efficient operation of the ASB Tennis Arena for its primary activities.
- (2) Protect the primary activity of the ASB Tennis Arena from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activities.

(4) Manage the adverse effects of the operation of the ASB Tennis Arena, having regard to the amenity of surrounding properties.

(5) Recognise that the ASB Tennis Arena's primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

I302.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E40 Temporary activities;
- (2) E25 Noise and vibration (noise provisions only);
- (3) E24 Lighting;

Table I302.4.1 specifies the activity status of land use and development activities in the ASB Tennis Arena Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I302.4.1: Activity table

	Activity	Activity status
Use		
Primary activities		
(A1)	Organised sports and recreation	P
(A2)	Informal recreation	P
(A3)	Concerts, events and festivals	P
(A4)	Displays and exhibitions	P
(A5)	Functions, gatherings, conferences and meetings	P
(A6)	Markets, fairs and trade fairs	P
(A7)	Any primary activity not meeting Standard I302.6.5 but meeting all other standards	C
Accessory activities		
(A8)	Accessory activities	P
(A9)	Any accessory activity not meeting Standard I302.6.5 but meeting all other standards	C
Compatible activities		
(A10)	Sports, recreation and community activities	P
(A11)	Professional fireworks displays meeting Standard I302.6.10	P
(A12)	Professional fireworks displays not meeting Standard I302.6.10	RD

(A13)	Helicopter flights meeting Standard I302.6.11	P
(A14)	Helicopter flights not meeting Standard I302.6.11	RD
(A15)	Filming activities	P
(A16)	Retail limited to a gross floor area of no more than 200m ² within the precinct	P
(A17)	Retail with a gross floor area greater than 200m ² but no more than 400m ² within the precinct	RD
(A18)	Retail greater than 400m ² within the precinct	D
(A19)	Any compatible activity not meeting Standard I302.6.5 but meeting all other standards	C
Development		
(A20)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 20m in height	P
(A21)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m in height	RD
(A22)	Light towers and associated fittings up to and greater than 20m in height	P
(A23)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I302.6.8	RD
(A24)	Demolition of buildings	P
(A25)	Temporary buildings	P

I302.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I302.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I302.4.1 Activity table and which is not listed in I302.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I302.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I302.4.1 must comply with the following activity standards unless otherwise stated. The following standards do not apply:

- (1) E27 Transport – Standard E27.6.1 Trip generation; and
- (2) E27 Transport – Standard E27.6.2. Number of parking and loading spaces.

I302.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site zoned residential, and incident on the facade of any building containing an activity sensitive to noise established as at September 30, 2013 within the Mixed Use Zone, must not exceed the noise limits in Table I302.6.1.1.

Table I302.6.1.1: Noise standards

Time, day, duration and frequency	Residential noise limit	Mixed Use noise limit
Up to 5 Special Noise Events between 8:00am and 10:30pm in any 12 month period	70dB L _{Aeq(5min)}	80dB L _{Aeq(5min)}
Up to 15 Special Noise Events between 8:00am and 10:30pm in any 12 month period	65dB L _{Aeq(5min)}	75dB L _{Aeq(5min)}
General noise standards for all days including Christmas Day, Good Friday & Anzac Day between: <ul style="list-style-type: none"> • 7:00am and 10:00pm within any residential zone; • 7:00am and 11:00pm within all other zones. 	55dB L _{Aeq}	65dB L _{Aeq}
General noise standards at all other times	45dB L _{Aeq} and 75dB L _{Amax}	55dB L _{Aeq} and 75dB L _{Amax}

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) For special noise events an adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.

- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) Where $L_{Aeq (5min)}$, is specified, no 5 minute measurement sample can exceed the stated limit.
- (7) Professional fireworks displays and helicopter flights are excluded from this standard.

I302.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standards I302.6.2, the curfew and pre-curfew times are as stated in Table I302.6.2.1.

Table I302.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 11pm
Curfew	11pm – 7am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:
 - (a) The limits in Table I302.6.2.2 when measured at the boundary of any adjacent site containing a lawful dwelling established prior to 30 September 2013. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I302.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

(b) The vertical illuminance limits in Table I302.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I302.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	25 lux
Curfew	4 lux

(6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15 per cent (based on an adaption luminance of 2 cd/m²) on any public road, calculated within each traffic lane in the direction of travel.

(7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I302.6.2.4 and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I302.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd
Special lighting events	25,000 cd

(8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I302.6.2.5. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.

(9) Professional fireworks displays are excluded from this standard.

Table I302.6.2.5: Building façade luminance

	Luminance limit
Standard	25 cd/m ²
Special lighting events	25 cd/m ²

I302.6.3. Special noise events

- (1) The total number of special noise events in any 12 month period must not exceed 20 events.
- (2) For the purpose of this standard, a special noise event exceeds the standard noise limits but does not exceed the special noise limits listed in Table I302.6.1.1.
- (3) Special noise events may occur consecutively over a day or days, but may not exceed the total number of special noise events allowed in any 12 month period provided that:
 - (a) There must be no more than 2 special noise events on any one day.
 - (b) There must be no more than 4 special noise events within any 2 week period.
- (4) A single special noise event must be limited to a total duration of 6 hours. Any special noise event lasting longer than 6 hours must be counted as 2 special noise events. The duration of a special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.

I302.6.4. Special lighting events

- (1) The total number of special lighting events in any 12 month period must not exceed 25 events.
- (2) For the purpose of this standard, a special lighting event exceeds the standard lighting limits but does not exceed the special lighting limits listed in Tables I302.6.2.4 and I302.6.2.5.

I302.6.5. Traffic management

Activities must meet at least one of the following traffic standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

I302.6.6. Parking

- (1) Parking for a minimum of 120 cars must be retained within the precinct unless an authorised Transport and Traffic Management Plan is in effect.

I302.6.7. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas.

I302.6.8. Interface control areas

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) illustrated on the precinct plan. Temporary buildings are excluded from this standard.

I302.6.9. Height in relation to boundary

- (1) Where the ASB Tennis Arena Precinct directly adjoins an open space zone, buildings must not project beyond a 45 degree recession plane measured from a point 8.5 metres vertically above ground level on the precinct boundary.
- (2) Temporary buildings, light towers and associated fittings are excluded from this standard.

I302.6.10. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 metres from any residential zone.
- (5) Displays must comply with 140dB L_{zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I302.6.11. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).

I302.6.12. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I302.7. Assessment – controlled activities

I302.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) The effects of the proposed activity on the safety and efficiency of the transport network.

I302.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) The effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I302.8. Assessment – restricted discretionary activities

I302.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Any activity that does not comply with noise and/or lighting standards:
 - (a) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) Any activity that does not comply with permitted helicopter flight standards:
 - (a) the effects of non-compliance with the permitted helicopter flight standard on the amenity of surrounding properties.
- (3) Any activity that does not comply with permitted professional fireworks display standards:
 - (a) the effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity that greater than 20m in height and/or which does not comply with height in relation to boundary standards:
 - (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.

- (5) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I302.6.8:
 - (a) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.

- (6) Any activity that does not comply with the screening standards:
 - (a) the visual effects of rubbish and storage areas on residential and open space zoned sites.

- (7) Any activity identified as a restricted discretionary activity:

In addition to the matters listed for non-compliance with any general and/or specific standard, discretion is restricted over all of the following matters:

- (a) the effects of the activity on the primary activities of the site;
- (b) the effects of traffic and parking on the surrounding environment; and
- (c) the effects of the activity on metropolitan, town or local centres.

I302.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance.
 - (b) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time.
 - (c) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
 - (d) the extent to which any artificial lighting will create a traffic safety issue.
 - (e) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing.

- (f) the extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance.
- (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
- (h) the extent to which additional special events adversely affect the amenity of surrounding properties having regard to all of the following:
 - (i) the sensitivity of the surrounding environment; and
 - (ii) the cumulative effect of numerous infringements of special event standards;
 - (iii) the additional number of special events; and
 - (iv) whether there is an operational need for the exceedance.
- (2) The effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
 - (i) the extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
 - (a) the extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (b) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones).
 - (c) whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s.
 - (d) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.

- (4) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
 - (a) the extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) The visual effects of rubbish and storage areas on residential and open space zoned sites:
 - (a) the extent to which screening is practicable.
 - (b) the extent to which distance and topographical matters mitigate likely adverse visual effects.
- (6) The effects of an activity on the primary activities of the site:
 - (a) whether the activity is of a character, scale and intensity to ensure that adverse effects on the operation of the primary activity, including its likely future use or intensification, are avoided, remedied or mitigated.
- (7) The effects of traffic and parking on the surrounding environment:
 - (a) whether there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements.
 - (b) whether a reduction in car parking will compromise the successful implementation of a Transport and Traffic Management Plan, where relevant or required.
 - (c) whether the precinct has sufficient parking capacity to provide for the day to day needs of existing and proposed activities.

(8) The effects of the activity on metropolitan, town or local centres:

- (a) whether the proposed activity will adversely affect the function, role, or amenity of any metropolitan, town or local centre beyond those effects ordinarily associated with trade effects on trade competitors.

I302.9. Special information requirements

There are no special information requirements for this precinct.

I302.10. Precinct plans

I302.10.1. ASB Tennis Area: Precinct plan 1

I303. Auckland War Memorial Museum Precinct – Tamaki Paenga Hira

I303.1. Precinct Description

The Auckland War Memorial Museum is prominently located in the Auckland Domain and houses one of the most significant collections of Māori, Pacific and New Zealand colonial artefacts in the Southern Hemisphere. The museum is a major New Zealand cultural institution and the museum building is an iconic feature of Auckland that has significant heritage significance. Views to and from museum are protected.

The museum is subject to the Auckland War Memorial Museum Act 1996 under which the Auckland Museum Trust Board manages the museum for charitable purposes.

The Auckland War Memorial Museum Precinct includes the Auckland War Memorial Museum, the surrounding road and parking areas. It does not include the adjoining Cenotaph and parade ground area in front of the museum which is managed by Auckland Council.

The purpose of the precinct is to provide for the on-going use and development of the Auckland War Memorial Museum as a contemporary museum facility while maintaining the significant cultural and built heritage values of the museum. The precinct enables the operation of the museum and associated activities, including conference, education, event, function, ceremonial activities, café, restaurant and retail activities.

The land within the precinct is zoned Open Space – Community Zone. The Auckland War Memorial Museum Viewshaft Overlay extends from the front of the museum building and across the Domain to protect views to and from the museum.

The museum building and the adjoining Cenotaph and parade ground area are scheduled in the Historic Heritage Overlay.

The Outstanding Natural Features Overlay and the Volcanic Viewshaft and Height Sensitive Areas Overlay also apply to the precinct.

I303.2. Objectives

- (1) The ongoing use and development of the Auckland War Memorial Museum as a contemporary museum facility is enabled.
- (2) New development maintains the heritage values of the Auckland War Memorial Museum building and is appropriate for its context and setting within the Auckland Domain.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I303.3. Policies

- (1) Enable activities associated with the operation of Auckland War Memorial Museum as a contemporary museum facility.

- (2) Require new buildings and structures to be designed and built using colours and materials that are sympathetic to the existing Auckland War Memorial Museum building.
- (3) Require landscaping associated with any development to:
 - (a) preserve the significant views to and from the museum provided for in the Auckland War Memorial Museum Viewshaft Overlay;
 - (b) reduce the visual impact of parking areas; and
 - (c) integrate with the Cenotaph and parade area at the front of the Auckland War Memorial Museum building.
- (4) Locate vehicle and bus parking, and wheelchair accessible drop-off and parking, away from the front of the museum building.
- (5) Limit the impact of car parking areas on the amenity values of the museum and do not require additional parking to be provided for existing and new activities.

The overlays, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I303.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I303.4.1 specifies the activity status of land use and development activities in the Auckland War Memorial Museum Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I303.4.1 Activity Table

Activity		Activity status
Use		
Commerce		
(A1)	Offices and administration accessory to the operation of the Auckland War Memorial Museum	P
(A2)	Displays and exhibitions	P
Community		
(A3)	Activities associated with the use and operation of Auckland War Memorial Museum as a contemporary museum facility	P
(A4)	Conference facilities	P
(A5)	Education facilities	P
Development		
(A6)	New buildings	D

I303.5. Notification

- (1) Any application for resource consent for an activity listed in Table I303.4.1 Activity Table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I303.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct, except for the following:

- Standard E27.6.2 Number of parking and loading spaces
- Standard H7.11.6 Maximum site coverage in the Open Space – Community Zone

All activities listed as permitted in Table I303.4.1 must comply with the following permitted activity standards.

I303.6.1. Number of parking and loading spaces

- (1) The number of parking and loading spaces must be maintained at 270 spaces, including 8 bus parking spaces.

I303.6.2. Maximum site coverage

- (1) The maximum site coverage must not exceed 85 per cent of the area of the precinct.

I303.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I303.8. Assessment – restricted discretionary activities

There are no restricted discretionary activities in this precinct.

I303.9. Special information requirements

There are no special information requirements in this precinct.

I303.10. Precinct plans

There are no precinct plans in this precinct.

I304. Auckland Zoo Precinct

I304.1. Precinct description

The Auckland Zoo is a zoological garden situated next to Western Springs Park. The Auckland Zoo Precinct provides specific planning provisions for the use of Auckland Zoo.

The zoning of the land within the Auckland Zoo Precinct is the Special Purpose - Major Recreation Facility Zone.

Refer to the planning maps for the location and extent of the precinct.

I304.2. Objectives

- (1) The Auckland Zoo is protected as a regionally and nationally important venue for the display and management of the living collection of flora and fauna for viewing by the public (including associated visitor programmes, interpretation, conservation, research and education).
- (2) A range of activities compatible with, or accessory to, the primary activity are enabled.
- (3) The character of the Auckland Zoo is maintained and enhanced.
- (4) The adverse effects of the operation of the Auckland Zoo are avoided, remedied or mitigated as far as is practicable recognising that the primary activity will by virtue of its nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those listed above.

I304.3. Policies

- (1) Enable the safe and efficient operation of the Auckland Zoo for its primary activity.
- (2) Protect the primary activity of the Auckland Zoo from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activity.
- (4) Manage the adverse effects of the operation of the Auckland Zoo, having regard to the amenity of surrounding properties.
- (5) Recognise that the Auckland Zoo's primary activity may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

The overlays, Auckland-wide and zone policies apply in this precinct in addition to those listed above.

I304.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E40 Temporary activities;
- (2) E25 Noise and vibration (noise provisions only);
- (3) E24 Lighting;
- (4) E27 Transport – Standard E27.6.1 Trip generation; and
- (5) E27 Transport – Standard E27.6.2 Number of parking and loading spaces.

Table I304.4.1 Activity table specifies the activity status of land use and development activities in the Auckland Zoo Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I304.4.1: Activity table

	Activity	Activity status
Use		
Primary activity		
(A1)	The display and management of the living collection of flora and fauna for viewing by the public (including associated visitor programmes, interpretation, conservation, research and education)	P
Accessory activities		
(A2)	Accessory activities	P
(A3)	Any accessory activity not meeting Standard I304.6.3 but meeting all other standards	C
Compatible activities		
(A4)	Sports, recreation and community activities	P
(A5)	Concerts, events and festivals	P
(A6)	Markets, fairs and trade fairs	P
(A7)	Functions, conferences, gatherings and meetings	P
(A8)	Filming activities	P
(A9)	Displays and exhibitions	P
(A10)	No more than one care centre with a gross floor area no greater than 500m ²	P
(A11)	Care centres not otherwise provided for	RD

(A12)	Any compatible activity not meeting Standard I304.6.3 but meeting all other standards	C
Development		
(A13)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 15m in height	P
(A14)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity more than 15m in height	RD
(A15)	Elevated walkways, viewing platforms, animal enclosures, light towers and associated fittings required for the display and management of the living collection of flora and fauna up to and greater than 15m in height	P
(A16)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I304.6.6	RD
(A17)	Demolition of buildings	P
(A18)	Temporary buildings	P
(A19)	Workers' accommodation	P

I304.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I304.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I304.4.1 Activity table and which is not listed in I304.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I304.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I304.4.1 Activity table must comply with the following standards unless otherwise stated.

I304.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing an activity sensitive to noise must not exceed the noise limits in Table I304.6.1.1.

Table I304.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Any day including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:00pm	55dB L _{Aeq}
At all other times	40dB L _{Aeq} and 70dB L _{Amax}

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (4) These noise limits do not apply to the sounds generated by animals kept within the Auckland Zoo.

I304.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I304.6.2, the curfew and pre-curfew times are as stated in Table I304.6.2.1.

Table I304.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 11pm
Curfew	11pm – 7am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:

- (a) the limits in Table I304.6.2.2 when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I304.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) the vertical illuminance limits in Table I304.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I304.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15 per cent (based on an adaption luminance of 2 cd/m²) on any public road, calculated within each traffic lane in the direction of travel.
- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed 10,000 cd for pre-curfew times and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling within a residential zone and at the boundary of any residentially zoned site where a dwelling does not yet exist.
- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed 10 cd/m². The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.

I304.6.3. Traffic management

Activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or

- (2) The activity generates a crowd of less than 6,000 people and does not require the closure of a public road.

Traffic generated by the primary activity of the Auckland Zoo is excluded from Standard I304.6.3.

I304.6.4. Parking

- (1) Parking for a minimum of 270 cars must be retained within the precinct unless an authorised Transport and Traffic Management Plan is in effect.

I304.6.5. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas.

I304.6.6. Interface control area

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on the precinct plan. Temporary buildings are excluded from this standard.

I304.6.7. Height in relation to boundary

- (1) Where the Auckland Zoo Precinct directly adjoins a road or open space zone, buildings (other than animal enclosures) must not project beyond a 45 degree recession plane measured from a point 8.5m vertically above ground level on the precinct boundary.
- (2) Where the Auckland Zoo Precinct directly adjoins a residential zone, the height in relation to boundary standard that applies in the adjoining residential zone also applies at the Auckland Zoo Precinct boundary.
- (3) Any elevated walkways or viewing platforms or animal enclosure (or structures within an animal enclosure) required for the display and management of the living collection of flora and fauna are excluded from this standard.
- (4) Temporary buildings, light towers and associated fittings are excluded from this standard.

I304.6.8. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I304.7. Assessment – controlled activities

I304.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) The effects of the proposed activity on the safety and efficiency of the transport network.

I304.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) The effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I304.8. Assessment – restricted discretionary activities

I304.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Any activity that does not comply with noise and/or lighting standards:
 - (a) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15m in height and/or does not comply with height in relation to boundary standards:
 - (a) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (3) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I304.6.6:
 - (a) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (4) Care centres not otherwise provided for:
 - (a) The effects of the proposed activity on the efficient operation of the primary activity of the site; and
 - (b) The effects of traffic and parking on the safety and efficiency of the transport network.

- (5) Any activity that does not comply with screening standards:
 - (a) The visual effects of rubbish and storage areas on residential and open space zoned sites.

I304.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) Whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance.
 - (b) Whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time.
 - (c) The extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
 - (d) The extent to which any artificial lighting will create a traffic safety issue.
 - (e) Whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing.
 - (f) The extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance.
 - (g) Whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
- (2) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces:
 - (a) The extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and

- (ii) adjoining sites, particularly those in residential zones.
 - (b) The extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones).
 - (c) Whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s.
 - (d) The extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (3) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (a) The extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (4) The effects of the proposed activity on the efficient operation of the primary activity of the site
- (a) Whether the activity is of a character, scale and intensity to ensure that adverse effects on the operation of the primary activity, including its likely future use or intensification, are avoided, remedied or mitigated.
- (5) The effects of traffic and parking on the safety and efficiency of the transport network.

- (a) Whether there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements.
 - (b) Whether a reduction in carparking will compromise the successful implementation of a Transport and Traffic Management Plan, where relevant or required.
 - (c) Whether the precinct has sufficient parking capacity to provide for the day to day needs of existing and proposed activities.
- (6) The visual effects of rubbish and storage areas on residential and open space zoned sites:
- (a) The extent to which screening is practicable.
 - (b) The extent to which distance and topographical matters mitigate likely adverse visual effects.

I304.9. Special information requirements

There are no special information requirements for this precinct.

I304.10. Precinct plans

I304.10.1. Auckland Zoo: Precinct plan 1

I305. Avondale 1 Precinct

I305.1. Precinct Description

The Avondale 1 Precinct applies to the northern boundary edge of the Avondale Racecourse land that adjoins Ash Street, Avondale, and the north-eastern corner edge of the Avondale Racecourse land extending from Ash Street to Racecourse Parade.

The precinct is divided into Sub-precinct A and Sub-precinct B. The purpose of the precinct is to:

- enable the Avondale Jockey Club to continue to use the Avondale Racecourse for horse racing (including associated activities) and market days over the short to medium term, while enabling the staged transition to an integrated mixed use development over the medium to long term;
- provide commercial, residential and office development potential, with limited opportunity for larger retail activities and residential activities at the ground floor in Sub-precinct A; and
- provide intensive residential development potential, with limited opportunity for larger retail and commercial activities in Sub-precinct B.

Sub-precinct A provides for development that will address the Ash Street frontage and the interface with the Avondale Racecourse. The Sub-precincts will integrate and connect with each other and encourage connections to existing streets to provide access to Avondale Town Centre. The sub-precinct seeks to ensure that the prominence and visibility of the racecourse activities is not lost as a consequence of new development along part of the racecourse boundary.

The development of Sub-precinct A is likely to result in the relocation of the existing historic buildings of the Avondale Racecourse along the edge of Ash Street. Built around the turn of the century, these structures are the last remaining historic buildings on the 100-year old racing property. Although they are not scheduled, they are considered to have significance to the local area and their retention is encouraged.

The transport infrastructure for Avondale 1 Precinct should complement and support the Avondale 2 Precinct, particularly pedestrian and cycle connectivity into and through both precincts. Provision for new roads, intersections and vehicle access points should be made.

The zoning of land within this precinct is Business – Mixed Use Zone and Residential – Terrace Housing and Apartment Buildings Zone.

I305.2. Objectives

- (1) Subdivision and development is designed and implemented in a comprehensive, efficient and integrated way which achieves a high quality urban environment, recognises the wider landscape features of the area, and enables the ongoing use of the precinct for horse racing, market days and related activities.
- (2) Redevelopment of the precinct has regard to the former sanitary block and casualty room buildings along the Ash Street Boundary of Avondale Racecourse

and measures are taken where possible to retain and reuse them due to their local significance.

- (3) Development and/or subdivision within the precinct facilitates a transport network that:
 - (a) integrates with, and avoids, remedies or mitigates adverse effects on the safety and efficiency of the transport network in the surrounding area, including providing any upgrades to the surrounding network; and
 - (b) facilitates transport choices by providing for pedestrians, cyclists, public transport facilities, and vehicles
- (4) Commercial development supports the Avondale Town Centre, and does not detract from its vitality and viability.
- (5) Residential activities are limited in Sub-precinct A to support Sub-precinct B and maximise the business amenity of the Ash Street frontage.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I305.3. Policies

- (1) Provide for the Avondale Racecourse to continue to be used for horse racing, market days and related activities until redevelopment occurs.
- (2) Encourage development to recognise and provide for the wider landscape views and special features of the area, including the Waitakere Ranges and Avondale Racecourse infield, and the historic former sanitary block and casualty room buildings located in Sub-precinct A.
- (3) Encourage subdivision and development of vehicle, pedestrian and cycle routes, including new roads and intersections, through the precinct that provide access through to Avondale Precinct 2 to Elm Street and Racecourse Parade while ensuring adverse effects on the existing transport network are avoided, remedied or mitigated.

Sub-precinct A

- (4) Provide for a range of commercial and office activities that will not diminish the role of the Avondale Town Centre and its function.
- (5) Restrict retail activities that undermine the role, function, amenity, and community social and economic wellbeing of the Avondale Town Centre environment, or which add significant traffic to Ash Street.
- (6) Limit residential activities to those that are above businesses and which mitigate the effects of Ash Street's traffic function on resident health and amenity.

Sub-precinct B

(7) Enable intensive residential activities within a close walk of the Avondale Town Centre and public transport, and which integrates well with the adjoining Avondale Racecourse precinct land and existing residential development immediately east of the sub-precinct.

(8) Limit office and retail activities unless they will support the Avondale Town Centre main street or activities within Sub-precinct B.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I305.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I305.4.1 Activity table specifies the activity status of land use, development and subdivision activities in the Avondale 1 Precinct pursuant to sections 9(3) and 11 of the Resource Management Act 1991 or any combination of all of these sections where relevant.

A blank in Table I305.4.1 Activity table below means that the provisions of the overlays, zone or Auckland-wide apply.

Table I305.4.1 Activity table

Activity		Activity status	
		Sub-precinct A	Sub-precinct B
Use			
(A1)	Activities identified as permitted in I307 Avondale Racecourse Precinct	P	P

I305.5. Notification

- (1) Any application for resource consent for an activity listed in Table I305.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I305.6. Standards

All activities listed as permitted or restricted discretionary in Table I305.4.1 Activity table must comply with the standards of the overlay, zone and Auckland-wide standards as relevant.

I305.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I305.8. Assessment – restricted discretionary activities

I305.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and external alterations and additions to buildings:

- (a) the effect on the identified buildings on the Avondale: Precinct Plan 1, if relocated; and
 - (b) the effect on views to the Waitakere Ranges and the Avondale Racecourse infield.
- (2) relocation, total or substantial demolition of the former sanitary block or casualty room-identified on Avondale 1 Precinct: Precinct plan 1:
- (a) the effect on the character and historical significance of the buildings.

I305.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) new buildings, and external alterations and additions to buildings:
 - (a) the effect on the identified buildings on the Avondale 1 Precinct: Precinct Plan 1, if these buildings have been relocated:
 - (i) the extent to which the works compliment the scale and form of the identified buildings.
 - (b) the effect on views to the Waitakere Ranges and the Avondale Racecourse infield:
 - (i) the extent to which the works are designed to, where appropriate, maintain public views to the wider landscape features including the Avondale Racecourse infield and the Waitakere Ranges.
- (2) relocation, total or substantial demolition of the former sanitary block or casualty room buildings identified on Avondale 1 Precinct: Precinct plan:
 - (a) the effect on the character and historical significance of the buildings:
 - (i) whether the proposed works will result in adverse effects (including cumulative adverse effects) on the heritage values of the buildings;
 - (ii) whether the proposed works will maintain or enhance the values of the buildings, including by:
 - avoiding or minimizing the loss of fabric that contributes to the significance of the buildings;
 - removing features that compromise the values of the place;
 - complementing the form and fabric which contributes to, or is associated with, the values of the buildings; and
 - recovering or revealing the values of the buildings;
 - (iii) whether the proposed works will be undertaken in accordance with good practice conservation principles and methods;

- (iv) whether the proposed works will be undertaken in a manner that is based on a clear understanding of the values of the buildings;
- (v) whether the proposal contributes to, or encourages, the long term viability and/or ongoing functional use of the buildings; and
- (vi) refer to Policy I305.3.(2)

I305.9. Special information requirements

- (1) As part of the first subdivision resource consent application; or land use resource consent application for a proposal greater than 1,000m² gross floor area, the applicant must prepare an integrated transport assessment that includes both Avondale 1 Precinct and Avondale 2 Precinct.

I305.10. Precinct plans

I305.10.1 1 Avondale 1 Precinct: Precinct plan 1

I306. Avondale 2 Precinct

I306.1. Precinct Description

The Avondale 2 Precinct applies to an area that is bounded by Racecourse Parade to the north, Great North Road to the east and a small area of Avondale Town Centre to the south-east.

The purpose of the precinct is to provide town centre type activities, with limited opportunity for larger retail activities. The precinct is divided into sub-precincts A, B and C.

Sub-precincts A and B are intended to provide town centre activities that integrate with the Great North Road main street.

Sub-precinct C is intended to facilitate the development of an off main street town centre environment that supports the Great North Road main street environment, provides opportunities for larger scale (non-retail) commercial and institutional activities, and community facilities.

The transport infrastructure for the Avondale 2 Precinct should complement and support the Avondale 1 Precinct, particularly vehicle, pedestrian and cycle connectivity into and through both precincts.

The zoning of land within this precinct is Business – Town Centre Zone.

I306.2. Objectives

- (1) The intensification of commercial, residential, community and civic activities is provided for, with limited opportunities for large scale retail activities.
- (2) The scale and intensity of development is increased while ensuring development is in keeping with Avondale Town Centre's planned future form and quality.
- (3) Subdivision and development is designed and implemented in a comprehensive, efficient and integrated way which achieves a high quality urban environment and recognises the Avondale Town Centre and the wider landscape features of the area.
- (4) The transport network within the Avondale 2 Precinct is integrated with the surrounding transport network including connections for vehicles, pedestrians and cyclists between Ash Street, through Avondale 1 Precinct, to Avondale Town Centre and to public transport.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I306.3. Policies

- (1) Enable significant redevelopment where the outcome can be shown to contribute to the function, amenity, and role of the Avondale Town Centre.
- (2) Provide for town centre activity which:

- (a) services the surrounding community's needs for a range of moderate intensity uses, such as commercial, leisure, tourist, cultural, community and civic amenities;
 - (b) supports public transport, pedestrian and cycle networks and the ability to change transport modes; and
 - (c) contributes positively to local character and identity, including public spaces developed to complement buildings and streets.
- (3) Enable the intensification of commercial, residential and community activities, by:
- (a) encouraging increased scale and intensity of buildings; and
 - (b) the comprehensive redevelopment of sites.
- (4) Limit the level of retail activity in the precinct.
- (5) Encourage subdivision and development to provide vehicle, pedestrian and cycle routes, including new roads and intersections, through the precinct that provide connections to Avondale Precinct 1 through to Ash Street and access to Great North Road while ensuring adverse effects on the existing transport network are avoided, remedied or mitigated.
- (6) Discourage dwellings at ground floor in sub-precincts A and B and enable dwellings above ground floor.
- (7) Encourage development to recognise and provide for the wider landscape features of the area, including the Waitakere Ranges and Avondale Racecourse.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I306.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I306.4.1 specifies the activity status of land use, development and subdivision activities in the Avondale 2 Precinct pursuant to sections 9(3) and 11 of the Resource Management Act 1991 or any combination of these sections where relevant.

A blank in Table I306.4.1 Activity table below means that the provisions of the overlays, zone or Auckland-wide apply.

Table I306.4.1 Activity table

Activity		Activity status	
		Sub-precinct A and B	Sub-precinct C
Use			
Accommodation			
(A1)	Dwellings on the ground floor where the building is subject to the Key Retail Frontage Control	D	NA
(A2)	Dwellings on the ground floor of a building not subject to the Key Retail Frontage Control	RD	RD
Commerce

(A4)	Retail greater than 450m ² gross floor area per tenancy	NC	NC
Development			
(A5)	New buildings and external alterations and additions to buildings	RD	RD
Subdivision			
(A6)	Subdivision		

I306.5. Notification

- (1) Any application for resource consent for an activity listed in Table I306.4.1 Activity table will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I306.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct except H10 Business – Town Centre Zone Standard H10.6.5. Residential at ground floor does not apply.

I306.7. Assessment – controlled activities**I306.7.1. Matters of control**

There are no controlled activities in this precinct.

I306.7.2. Assessment criteria

There are no controlled activities in this precinct.

I306.8. Assessment – restricted discretionary activities

I306.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) dwellings on the ground floor of a building;
 - (a) the effect of, and on, the adjacent street network; and
 - (b) the effect on commercial activities;
- (2) new buildings and external alterations and additions to buildings:
 - (a) the effect on Avondale Town Centre; and
 - (b) the effect on views to the Waitakere Ranges and the Avondale Racecourse infield;
- (3) retail up to 450m² gross floor area per tenancy:
 - (a) the effect on the commercial viability of Avondale Town Centre.

I306.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) dwellings on the ground floor of a building:
 - (a) the effect of, and on, the adjacent street network:
 - (i) the extent to which the design and layout of the dwelling avoids or mitigates adverse effects from vehicle emissions and vehicle noise on the adjacent road network;
 - (ii) the extent to which the layout of the dwelling does not detract from the vitality and amenity of the street; and
 - (iii) the extent to which opportunities for passive surveillance of the street from the ground floor of the dwelling are provided;
 - (b) the effect on commercial activities:
 - (i) the extent to which the dwelling does not detract from the viability of commercial activity in the precinct; and
 - (ii) refer to Policy I306.3.(6);
- (2) new buildings and external alterations and additions to buildings:
 - (a) the effect on Avondale Town Centre:

- (i) refer to Policy I306.3.(1);
- (ii) refer to Policy I306.3.(4)
- (b) the effect on views to the Waitakere Ranges and the Avondale Racecourse infield:
 - (i) the extent to which public views to the wider landscape features including the Avondale Racecourse infield and the Waitakere Ranges are maintained;
- (3) retail up to 450m² gross floor area per tenancy:
 - (a) the effect on the commercial viability of Avondale Town Centre:
 - (i) refer to Policy I306.3.(1); and
 - (ii) refer to Policy I306.3.(4).

I306.9. Special information requirements

- (1) As part of the first subdivision resource consent application; or land use resource consent application for a proposal greater than 1,000m² gross floor area, the applicant must prepare an integrated transport assessment that includes both Avondale 1 Precinct and Avondale 2 Precinct.

I306.10. Precinct plans

There is no precinct plan for this precinct.

I307. Avondale Racecourse Precinct

I307.1. Precinct description

The Avondale Racecourse Precinct provides specific planning provisions for the use of the Avondale Racecourse as a horse racing facility.

The zoning of the land within the Avondale Racecourse Precinct is the Special Purpose - Major Recreation Facility Zone.

I307.2. Objectives

- (1) The Avondale Racecourse is protected as a regionally and nationally important venue for horseracing activities.
- (2) A range of activities compatible with, or accessory to, the primary activity are enabled.
- (3) The adverse effects of the operation of the Avondale Racecourse are avoided, remedied or mitigated as far as is practicable recognising that the primary activity will by virtue of its nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I307.3. Policies

- (1) Enable the safe and efficient operation of the Avondale Racecourse for its primary activity.
- (2) Protect the primary activity of the Avondale Racecourse from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activity.
- (4) Manage the adverse effects of the operation of the Avondale Racecourse, having regard to the amenity of surrounding properties.
- (5) Recognise that the Avondale Racecourse's primary activity may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I307.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E40 Temporary activities;
- (2) E25 Noise and vibration (noise provisions only);
- (3) E24 Lighting;
- (4) E27 Transport – district rule E27.6.1; and
- (5) E27 Transport – district rule E27.6.2.

Table I307.4.1 specifies the activity status of land use and development activities in the Avondale Racecourse Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I307.4.1: Activity table

Activity		Activity status
Use		
Primary activity		
(A1)	Horse racing activities	P
(A2)	Any primary activity not meeting Standard I307.6.5 but meeting all other standards	C
Accessory activities		
(A3)	Accessory activities	P
(A4)	Any accessory activity not meeting Standard I307.6.5 Traffic management but meeting all other standards	C
Compatible activities		
(A5)	Organised sport and recreation	P
(A6)	Informal recreation	P
(A7)	Concerts, events and festivals	P
(A8)	Markets, fairs and trade fairs	P
(A9)	Functions, conferences, gatherings and meetings	P
(A10)	Filming activities	P
(A11)	Displays and exhibitions	P
(A12)	Sports, recreation and community activities	P
(A13)	Professional fireworks displays meeting Standard I307.6.10	P
(A14)	Professional fireworks pyrotechnics displays not	RD

	meeting Standard I307.6.10	
(A15)	Helicopter flights meeting Standard I307.6.11	P
(A16)	Helicopter flights not meeting Standard I307.6.11	RD
(A17)	Any compatible activity not meeting Standard I307.6.5 Traffic management but meeting all other standards	C
Development		
(A18)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 20m in height	P
(A19)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m, but up to 25m in height	RD
(A20)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 25m in height	D
(A21)	Light towers and associated fittings up to and greater than 20m in height	P
(A22)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I307.6.8 Interface control areas	RD
(A23)	Demolition of buildings	P
(A24)	Temporary buildings	P
(A25)	Workers' accommodation	P

I307.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I307.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I307.4.1 Activity table and which is not listed in I307.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I307.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I307.4.1 must comply with the following activity standards unless otherwise stated.

I307.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing activity sensitive to noise must not exceed the noise limits in Table I307.6.1.1.

Table I307.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Up to 5 special noise events between 8:00am and 10:30pm in any 12 month period	75dB $L_{Aeq(5min)}$
Up to 15 special noise events between 8:00am and 10:30pm in any 12 month period	65dB $L_{Aeq(5min)}$
General noise standards for all other days including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:30pm	55dB L_{Aeq}
General noise standards for all other times	40dB L_{Aeq} and 70dB L_{Amax}

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) For special noise events an adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.
- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) Where $L_{Aeq(5min)}$ is specified, no 5 minute measurement sample can exceed the stated limit.

- (7) Professional fireworks displays and helicopter flights are excluded from this standard.

I307.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I307.6.2, the curfew and pre-curfew times are as stated in Table I307.6.2.1.

Table I307.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 11pm
Curfew	11pm – 7am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following;
- (a) The limits in Table I307.6.2.2 when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I307.6.2.2: Horizontal and Vertical Illuminance at a Boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) The vertical illuminance limits in Table I307.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I307.6.2.3: Vertical Illuminance at a Window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15% (based on an adaption luminance of 2 cd/m²) on any public road, calculated within each traffic lane in the direction of travel.
- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I307.6.2.4 and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I307.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd
Special Lighting Events	25,000 cd

- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I307.6.2.5. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.
- (9) Professional fireworks displays are excluded from this standard.

Table I307.6.2.5: Building façade luminance

	Luminance limit
Standard	10 cd/m ²
Special lighting events	25 cd/m ²

I307.6.3. Special noise events

- (1) The total number of special noise events in any 12 month period must not exceed 20 events.

- (2) For the purpose of this standard, a special noise event exceeds the standard noise limits but does not exceed the special noise limits listed in Table I307.6.1.1.
- (3) Special noise events may occur consecutively over a day or days, but may not exceed the total number of special noise events allowed in any 12 month period provided that:
 - (a) There must be no more than 2 special noise events on any one day.
 - (b) There must be no more than 4 special noise events within any 2 week period.
- (4) A single special noise event must be limited to a total duration of 6 hours. Any special noise event lasting longer than 6 hours must be counted as 2 special noise events. The duration of a special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.

I307.6.4. Special lighting events

- (1) The total number of special lighting events in any 12 month period must not exceed 25 events.
- (2) For the purpose of this standard, a special lighting event exceeds the standard lighting limits but does not exceed the special lighting limits listed in Tables I307.6.2.4 and I307.6.2.5.

I307.6.5. Traffic management

Activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

I307.6.6. Parking

- (1) Any loss of existing formed and marked parking spaces from 30 September 2013, must be accommodated elsewhere within the precinct unless the number of parking spaces provided exceeds the requirements set out in E27 Transport – district rule E27.6.2.

I307.6.7. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas

I307.6.8. Interface control areas

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on the precinct plan. Temporary buildings are excluded from this standard.

I307.6.9. Height in relation to boundary

- (1) Along the boundaries where the Avondale Racecourse Precinct directly adjoins a zone, the height in relation to boundary standard that applies in the adjoining zone will also apply to the precinct boundary.
- (2) Where the Avondale Racecourse Precinct directly adjoins a road or a zone with no height in relation to boundary standard, buildings must not project beyond a 45 degree recession plane measured from a point 8.5m vertically above ground level along the precinct boundary.
- (3) Temporary buildings, light towers and associated fittings are excluded from this standard

I307.6.10. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 metres from any residential zone.
- (5) Displays must comply with 140dB L_{Zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I307.6.11. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 150m from any neighbouring site.

I307.6.12. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I307.7. Assessment – controlled activities

I307.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) the effects of the proposed activity on the safety and efficiency of the transport network.

I307.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I307.8. Assessment – restricted discretionary activities

I307.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) any activity that does not comply with noise and/or lighting standards:
 - (a) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) any activity that does not comply with permitted helicopter flight standards:
 - (a) the effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties.
- (3) any activity that does not comply with permitted professional fireworks display standard:
 - (a) the effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m, but up to 25m in height and/or which does not comply with height in relation to boundary standards:
 - (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.

- (5) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I307.6.8:
 - (a) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) any activity that does not comply with screening standards:
 - (a) the visual effects of rubbish and storage areas on residential and open space sites.

I307.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and,
 - (iii) the degree of non-compliance.
 - (b) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time;
 - (c) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement;
 - (d) the extent to which any artificial lighting will create a traffic safety issue;
 - (e) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (f) the extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance;
 - (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment; and
 - (h) the extent to which the additional special events adversely affect the amenity of the surrounding environment having regard to:

- (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of special event standards;
 - (iii) the additional number of special events; and
 - (iv) whether there is an operational need for the exceedance.
- (2) the effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
- (a) The extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (a) the extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (b) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones);
 - (c) whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s; and
 - (d) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (4) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (a) the extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;

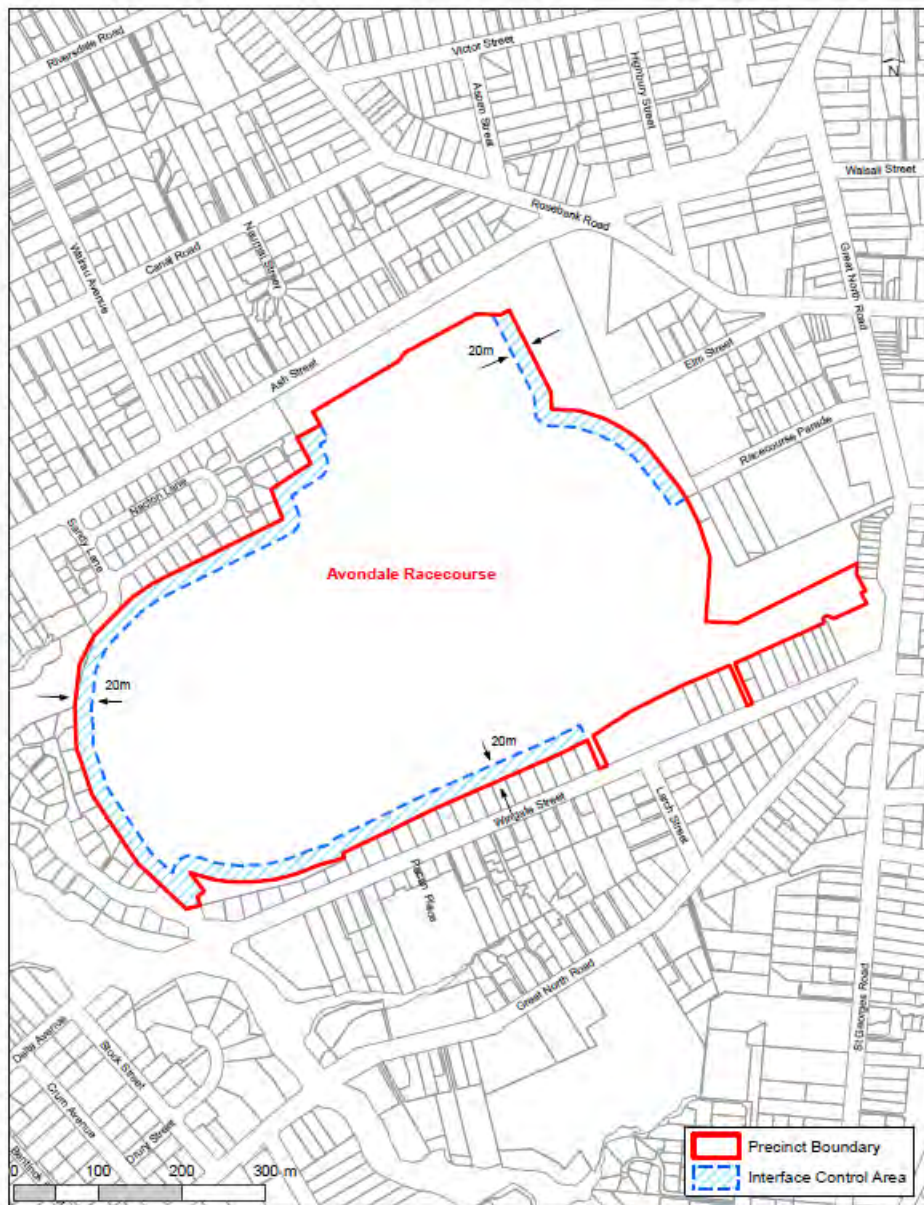

- (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) the visual effects of rubbish and storage areas on residential and open space zoned sites:
- (a) the extent to which screening is practicable; and
 - (b) the extent to which distance and topographical matters mitigate likely adverse visual effects.

I307.9. Special information requirements

There are no special information requirements in this precinct.

I307.10. Precinct plans

1307.10.1. Avondale Racecourse: Precinct plan 1

I308. Central Park Precinct

I308.1. Precinct description

The Central Park Precinct is located at 666 Great South Road, Ellerslie. The purpose of the Central Park Precinct is to provide for employment and office activities within an office park environment.

Constraints on the amount and location of parking contribute to the pedestrian amenity of the precinct. The amount of supporting services and minor convenience/service retail that can be established in the site is capped so that the Central Park precinct and Ellerslie town centre complement, and do not compete with each other.

The precinct is separated into four development areas. The four areas have different building heights, reflecting the existing built environment, the nature of the site, its location near Ellerslie town centre and surrounding protected views.

The zoning of the land within the Central Park Precinct is the Business – Business Park Zone.

I308.2. Objective

- (1) The Central Park Precinct is developed as a business park with a range of supporting activities that are complementary to the Ellerslie town centre, and is well designed and integrated with the surrounding area and infrastructure.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I308.3. Policies

- (1) Limit land use activities such as retail, food and beverage and recreation facilities, to those that serve the needs of office workers within the precinct.
- (2) Require buildings to align with and activate private streets within the site.
- (3) Require development to avoid, remedy and mitigate any adverse traffic effect on the Ellerslie Panmure Highway interchange.
- (4) Require development within the precinct to apply the following principles:
 - (a) good pedestrian links through the site;
 - (b) landscape amenity space;
 - (c) gateway and landmark features;
 - (d) safe vehicle movements within and to and from the site;
 - (e) massing and building height; and
 - (f) landscaped areas and pedestrian plazas that enhance the amenity of the site and provide a focal point of the development.

- (5) Promote the use of public transport and pedestrian orientated activity by limiting the amount of parking provided on the site once Central Park is fully developed.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I308.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I308.4.1 Activity table specifies the activity status of land use and development activities in the Central Park Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I308.4.1 Activity table

Activity		Activity status
Use		
Commerce		
(A1)	Food and beverage not exceeding 250m ² of gross floor area per building	P
(A2)	Food and beverage exceeding 250m ² of gross floor area per building	D
(A3)	Retail not exceeding 250m ² gross floor area per building, provided any single tenancy does not exceed 150m ² of gross floor area	P
(A4)	Retail exceeding 250m ² gross floor area per building, provided any single tenancy does not exceed 150m ² of gross floor area	D
(A5)	Retail where any single tenancy exceeds 150m ² of gross floor area	NC
(A6)	Entertainment facilities	D
Community		
(A7)	Recreation facilities not exceeding 250m ² of gross floor area per building	P
(A8)	Recreation facilities exceeding 250m ² of gross floor area per building	D
Development		
(A9)	New buildings	C
(A10)	External additions and alterations to buildings that: <ul style="list-style-type: none"> (a) are not structural; (b) increase the building development area by less than 25%; and (c) do not increase the height of the building. 	P
(A11)	External additions and alterations to buildings not provided	C

	for as permitted	
--	------------------	--

I308.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I308.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I308.4.1 Activity table and which is not listed in I308.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I308.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All activities listed as permitted and controlled in Table I308.4.1 Activity table must comply with the following permitted activity standards.

I308.6.1. Building height

- (1) Buildings must not exceed the heights specified in the table below:

Table I308.6.2.1 Building height

Building development areas	Height above mean sea level	Height above ground level (average)
A	44.2m	19.8m
B	53.3m	30.4m
C	73.0m	48.0m
D	90.0m	67.9m

- (2) The location of the building development areas within the precinct are shown on Precinct plan 1 - Central Park Building heights.
- (3) Building height coordinates are shown on Precinct plan 3 - Central park building height coordinates.
- (4) The height above mean sea level method is the prevailing maximum height measure.

I308.6.2. Roof tops

- (1) In development areas A, B and C:

- (a) rooftop projections must not exceed the maximum building height by more than 10 per cent; and
- (b) the total area of rooftop projections must not exceed 10 per cent of the total roof area.

I308.6.3. Site intensity

- (1) The maximum floor area ratio for building development areas A, B, C and D is 1.8:1 and the gross floor area of buildings within the precinct must not exceed 114,000m².
- (2) Within the maximum floor area ratio, the gross floor area of the following activities must not exceed 3,500m² for:
 - (a) recreation facilities;
 - (b) food and beverage; and
 - (c) retail provided that the total gross floor area for retail must not exceed 2000m²

I308.6.4. Upper and lower storey setbacks

- (1) A minimum distance between buildings must be provided as follows:
 - (a) for the portion of the building façade located between ground level and 13m above ground level: 18m; and
 - (b) for the portion of the building façade located more than 13m above ground level: 24m.
- (2) An existing or consented building will set the building line on one side of the street, and any future building setback must comply with I308.6.4(1) above.
- (3) Parking structures (except the parking structure along the eastern frontage of building development area A) will not set the first building line.

I308.6.5. Pedestrian plaza and landscaped amenity spaces

- (1) The indicative pedestrian plaza and indicative landscaped amenity spaces must be provided in the general locations shown on Precinct plan 2: Central Park urban design framework.
- (2) The pedestrian plaza must have a minimum area of 600m² (excluding footpaths on road frontages) and must be provided concurrently at the time the next building in the precinct is constructed after the date the Unitary Plan becomes operative.
- (3) A minimum of 10 per cent of the total developable area of the precinct (excluding internal road corridors) must be provided as landscaped amenity spaces. The landscaped amenity spaces may comprise:
 - (a) pedestrian plaza areas;

- (b) pocket parks i.e. small parks and breakout areas; or
- (c) stormwater retention ponds where they are designed for dual purpose as amenity features.

I308.6.6. Footpaths in the pedestrian oriented area

- (1) Footpaths within the pedestrian oriented area must be a minimum of 1.8m wide on both sides of the street.
- (2) This standard does not apply to existing or consented footpaths as at June 2010 that do not comply with this standard.

I308.6.7. Pedestrian connections

- (1) Pedestrian connections must be provided and maintained throughout the site, generally in the locations shown on Precinct plan 2: Central Park urban design framework. The following pedestrian connections must be provided:
 - (a) an at grade pedestrian link as shown on Precinct plan 2: Central Park urban design framework;
 - (b) internal pedestrian links as shown on Precinct plan 2: Central Park urban design framework; and
 - (c) signage at the Great South Road and Sultan Road entrances to the pedestrian connection advising the public of the availability of the link, subject at all times to any temporary restrictions that may reasonably be required to be imposed for security purposes.
- (2) Any development on the site must not prevent or impede the creation of an upper level pedestrian link over the motorway to connect to Ramsgate Street.
- (3) Pedestrian connections must be provided as part of the development or redevelopment of the building development areas.

I308.6.8. Car parking

- (1) Car parking in the precinct must comply with the following controls and Figure I308.6.6.1 Car parking ratios below:
 - (a) minimum car parking requirements:
 - (i) for any development where the total gross floor area of the precinct development is less than 72,600m², a minimum of 1815 car parks shall be provided; and
 - (ii) for development that results in a total gross floor area of between 72,600m² and 114,000m², the minimum number of car park spaces that shall be provided is 1815 plus one car park per 224m² of gross floor area above 72,600m²;
 - (b) maximum car parking requirements:

- (i) for any development that results in a total gross floor area of between 32,887m² and 72,600m², the maximum number of car parks that may be provided is 1815 car parks, plus one car park per 40m² of gross floor area above 32,887m²; and
- (ii) For any development that results in a total gross floor area of more than 72,600m², the maximum number of car parks within the precinct must not exceed 2850.

Figure I308.6.6.1 Car parking ratios

I308.7. Assessment – controlled activities

I308.7.1. Matters of control

The Council will reserve its control to all of the following matters when assessing a controlled activity resource consent application:

- (1) new buildings and external additions and alterations that are not provided for as a permitted activity:
 - (a) building design and external appearance;
 - (b) pedestrian connections and vehicle access;
 - (c) pedestrian amenity; and
 - (d) traffic impacts.

I308.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

(1) new buildings and external additions and alterations that are not provided for as a permitted activity:

(a) building design and external appearance:

building form:

- (i) the extent to which the exterior design and appearance of the building contributes to the avoidance of adverse building bulk and dominance effects;
- (ii) the extent to which the building creates a human scale environment at street level;
- (iii) whether rooftop projections including towers, turrets, chimneys, lift towers, machinery rooms which exceed the parapet or roof height are compatible with the overall architectural form and detailing of the building;
- (iv) extent to which there is similarity in facade design and materials and continuity in form and appearance of canopies with the facades of other buildings;
- (v) whether signage on the building has been incorporated as part of the building design;
- (vi) whether there is landscaping of pedestrian connections throughout the precinct; and

gateway and landmark features:

- (vii) the extent to which buildings on highly visible locations are designed to feature architectural accents such as special architectural features, articulation, extra glazing or lighting;

sustainability:

- (viii) the extent to which the proposal addresses the following principles:
 - buildings are designed to be sustainable through the use of durable low maintenance materials, maximising solar access and natural ventilation and the incorporation of mechanical and electrical systems that optimise energy efficiency;
 - on-site landscaping consists of indigenous vegetation where appropriate;
 - on-site stormwater conservation measures are incorporated where appropriate including rainwater harvesting devices, green roofs, site landscaping, rain gardens and wetland treatment systems and

stormwater planter boxes (subject to soil contamination considerations);

- adequate storage space and containers are provided for rubbish and recyclable materials in a location which is clearly visible on the site and easily accessible for occupants and collection vehicles;
- building and demolition is undertaken in a way that maximises the use of waste materials for reuse and recycling; and

crime prevention

(ix) the extent to which the proposal addresses crime prevention through environmental design principles.

(b) pedestrian connections and vehicle access:

(i) The extent to which the proposal addresses the following principles:

- pedestrian links through buildings should be provided where these will provide short and convenient pedestrian routes;
- pedestrian links through the ground floor of buildings should:
 - be overlooked by adjacent uses;
 - be lined by internal walls which contribute to visual interest and pedestrian safety;
 - include a variety of architectural detail and maximise building entrances and glazing;
 - minimise blank walls;
 - adopt CPTED principles (i.e. avoid potential entrapment areas and deep recesses);
 - avoid chicanes which limit natural surveillance; and
 - provide adequate internal lighting.

(c) pedestrian amenity:

(i) the extent to which the proposal addresses the following principles:

- the pedestrian plaza and landscaped amenity spaces should:
 - be visible from the pedestrian routes on the site and overlooked by buildings to maximise personal safety;
 - be lined with active edges on the ground floor in the case of the pedestrian plaza;
 - be landscaped with soft and hard landscape elements;
 - include adequate seating, lighting, signage and street furniture; and
 - feature high quality materials and robust detailing.

- in addition, street trees and other landscape elements should also be provided to achieve the following:
 - visual enhancement of internal private roads and pedestrian routes; and
 - screening of parking areas where these are visible from the pedestrian routes; and
- outdoor storage and refuse disposal areas should be avoided in the pedestrian oriented area.

(d) traffic impacts:

(i) unless it can be proven they are not required, whether the measures listed below are implemented to manage the traffic effects generated by the redevelopment of the site:

- a second signalised right turn into the site from Great South Road;
- queue detection and/or electronic signage to manage right turn queues into the site from Great South Road;
- at the existing signalised site access (north) – a double right turn into and out of the site;
- internal road upgrades required to meet internal traffic flow demands, including (but not limited to):
 - two lanes being provided in both directions between the Great South Road northern site access to the onsite roundabout;
 - installation of a solid median extending from the signals at the northern site access to beyond the first park entrance, approximately 90m (with a gap to allow access to the site north of the Central Park Precinct); or
 - speed tables on approaches

conditions of consent requiring any of the traffic management measures in above may be imposed when individual applications for resource consent for individual buildings (or groups of buildings) are granted. Traffic monitoring may also be required as a condition of consent.

I308.8. Assessment – restricted discretionary activities

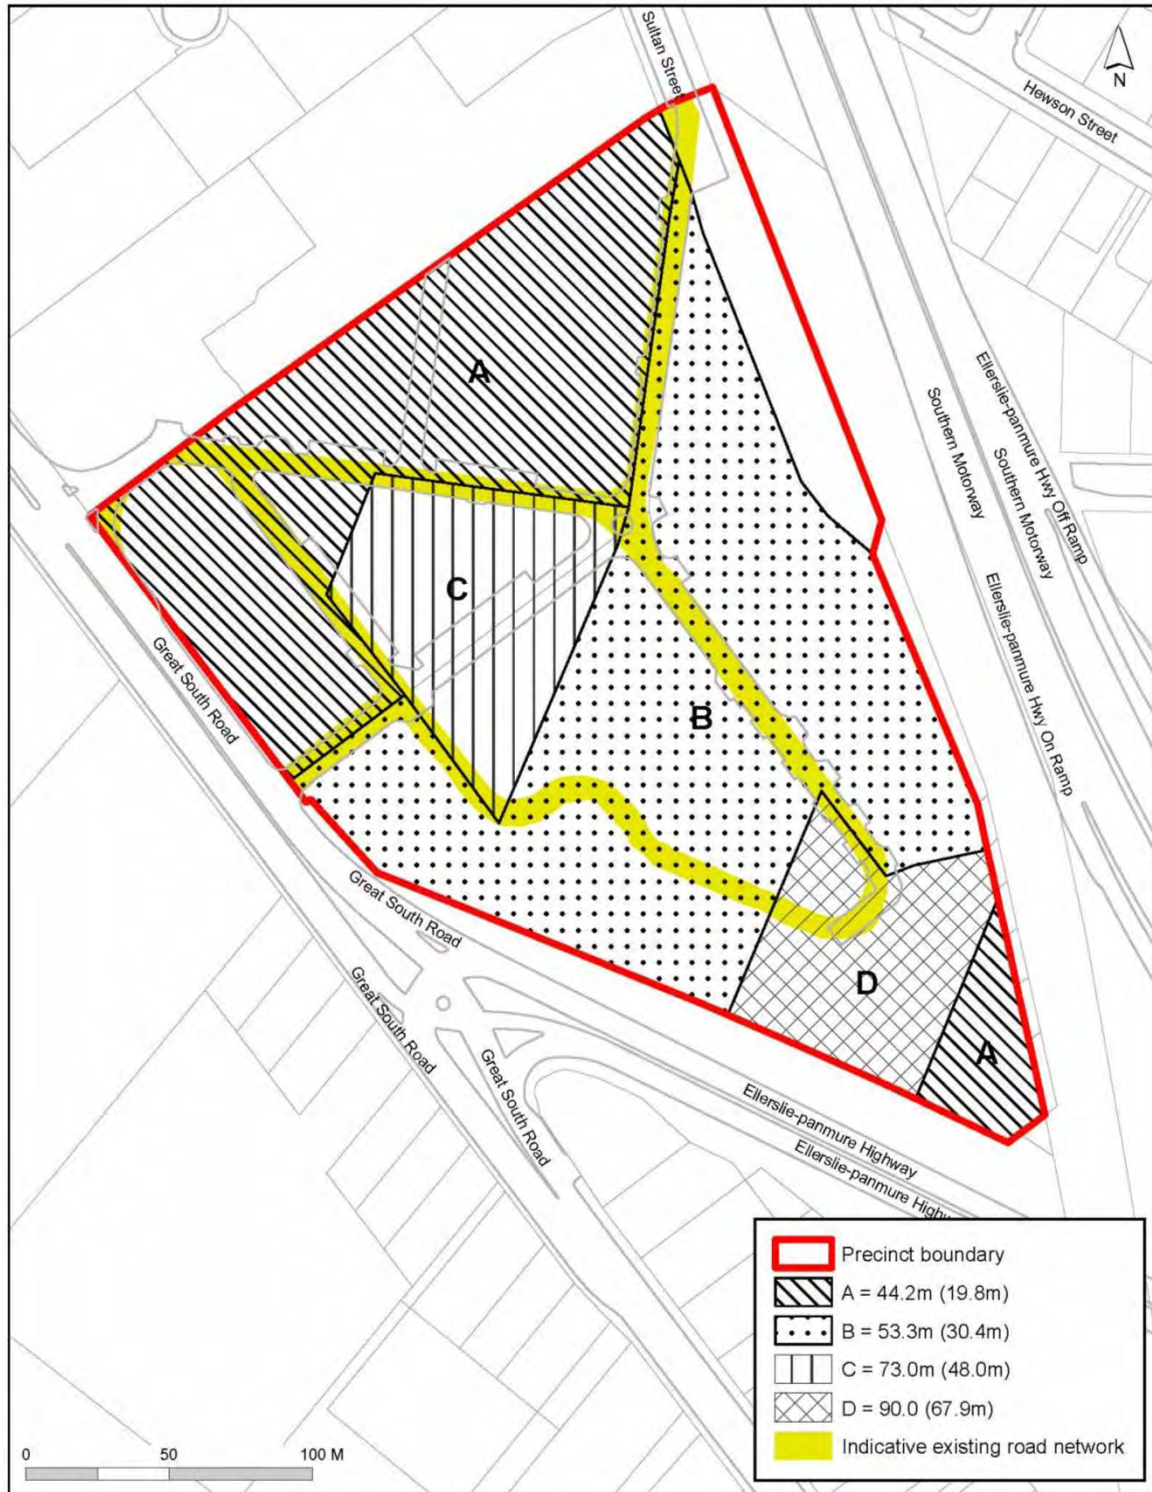

There are no restricted discretionary activities in this precinct.

I308.9. Special information requirements

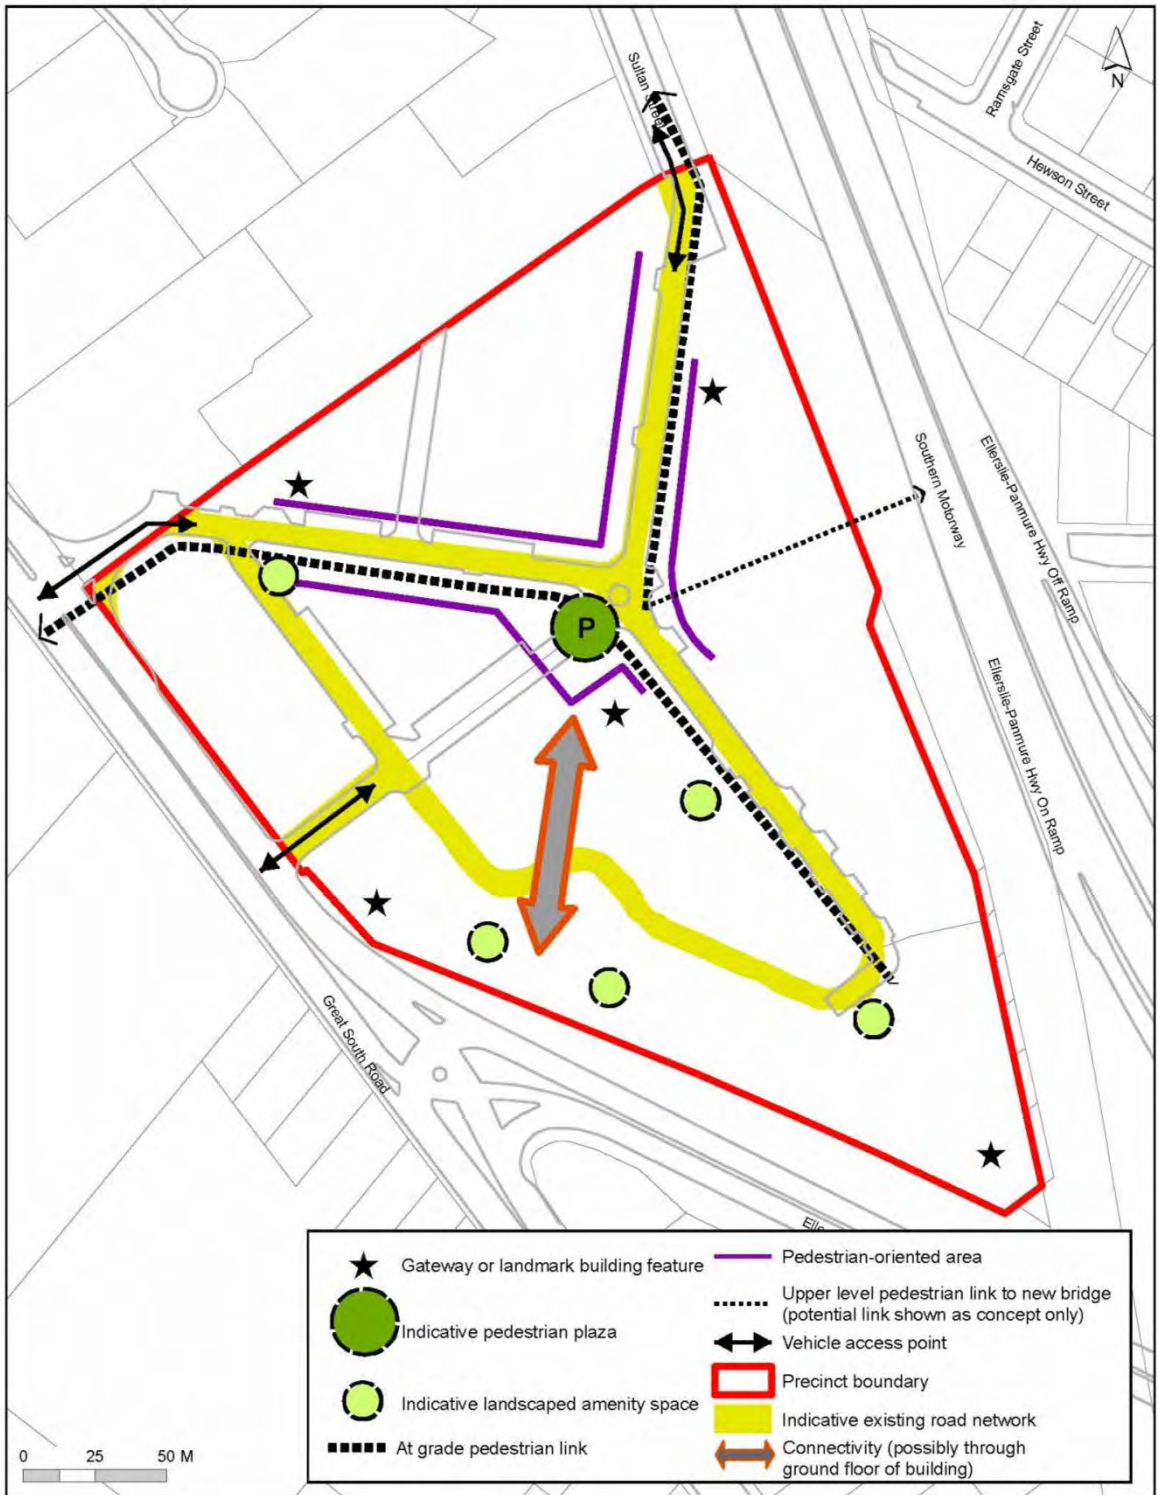

There are no special information requirements in this precinct.

I308.10. Precinct plans

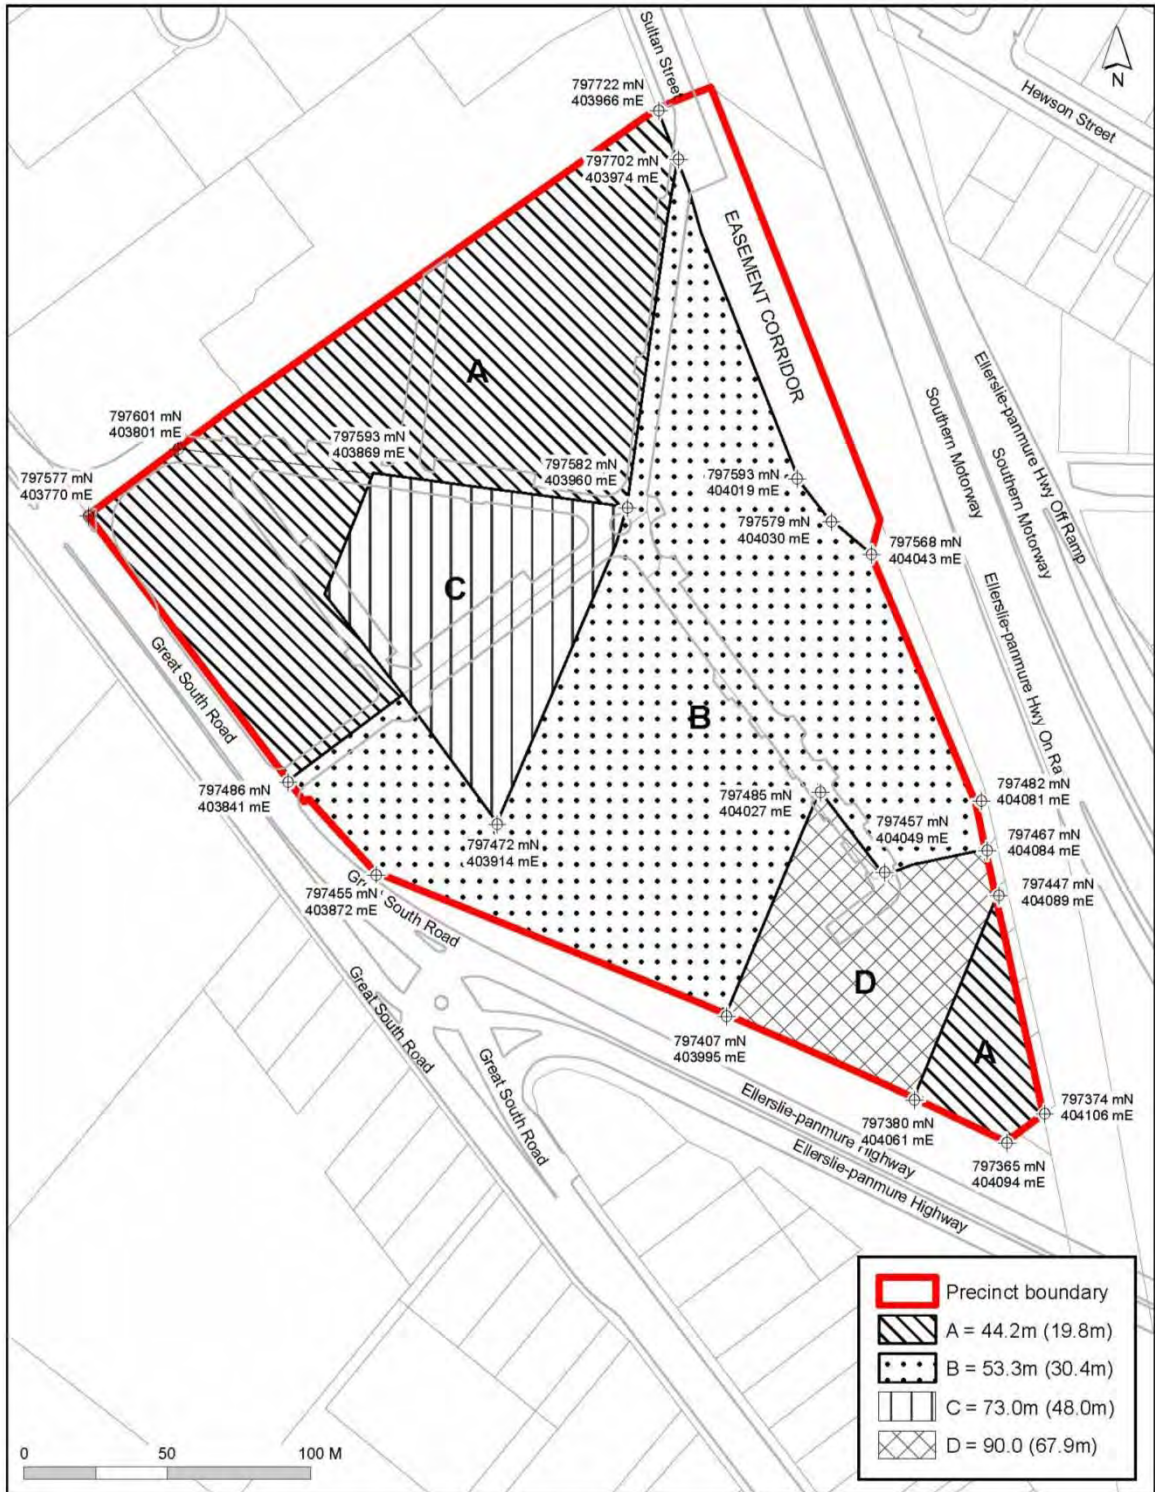

I308.10.1 Central Park: Precinct plan 1 – Central Park building heights

1308.10.2 Central Park: Precinct plan 2 – Central Park urban design framework

1308.10.3 Central Park: Precinct plan 3 - Central park building height coordinates

I309. Cornwall Park Precinct

I309.1. Precinct Description

Cornwall Park is a privately owned and managed landscaped park designed for public recreation and enjoyment and is a highly used and valued open space.

The park is governed by the Cornwall Park Trust Board through a Trust Deed that requires the land to be maintained as parkland for the benefit of the public.

The park is comprised of 172 hectares of land that lies both north and south of Green Lane West Road. The area south of Green Lane West Road has a picturesque semi-rural pastoral setting, with sheep and cattle grazing, natural features, stone walls, and expanses of green open space that provide a 'country' experience in the city. The park is renowned for its landscape design and wide variety of mature trees.

The park enables a diverse range of recreation activities and provides sports fields, barbeque areas, seats, information and education facilities, a restaurant and café. The park contains two buildings (Acacia cottage and Huia Lodge) that are scheduled for their significant historic heritage values.

The park flanks a volcanic cone, Maungakiekie/One Tree Hill, which includes the scoria cone that largely lies in the adjacent One Tree Hill Domain, and the surrounding volcanic landforms. A pre-European Māori fortification (pa) was built on the cone, many features of which can still be seen.

The significant natural and historic values of the park have been scheduled and are managed through overlays including the Historic Heritage Overlay, the Notable Trees Overlay, as an outstanding natural feature in the Outstanding Natural Features Overlay and the Outstanding Natural Landscapes Overlay, and the Volcanic Viewshafts.

The area of the park south of Green Lane West Road is zoned Open Space - Informal Recreation Zone. The area of the park north of Green Lane West Road is zoned Open Space - Sport and Active Recreation zone, apart from the area within Campbell Crescent which is zoned Open Space – Informal Recreation Zone.

The purpose of the Cornwall Park Precinct is to provide for the on-going operation and development of the park for public use and enjoyment while protecting the scheduled features within the park. To assist in achieving these outcomes the precinct provides for activities in appropriate locations within the park through sub-precincts (Refer to the Plan maps), namely:

Sub-precinct A: Parkland conservation

This sub-precinct includes the lower slopes of Maungakiekie/One Tree Hill and the grove of scheduled olive trees. The topography combined with the scheduled historic heritage, notable trees and outstanding natural feature values in this sub-precinct support its use for informal recreation and limit its suitability for development.

Sub-precinct A is zoned Open Space – Informal Recreation Zone.

Sub-precinct B: Parkland informal recreation

This sub-precinct includes the majority of the open parkland used for informal recreation, events and farm activities; predominantly grazing. It also applies to the area within Campbell Crescent adjoining Manukau Road where the statue of Sir John Logan Campbell and fountain is located.

Sub-precinct B is zoned Open Space – Informal Recreation Zone.

Sub-precinct C: Parkland development

This sub-precinct includes open parkland used for informal recreation, events, farm, restaurant and café activities. Cornwall Hospital was located in this sub-precinct from 1942-1975 which resulted in the land being modified more than most of the other open parkland areas. As a result the area is less sensitive to future development.

Sub-precinct C is zoned Open Space – Informal Recreation Zone.

Sub-precinct D: Parkland sport and active recreation

This sub-precinct includes the parts of the park used for sport and active recreation including associated fields and facilities for tennis, bowling, rugby, rugby league and cricket. In the area north of Green Lane West Road it also includes the adjoining Puriri Drive.

The Sub-precinct D areas north of Green Lane West Road are zoned Open Space – Sport and Active Recreation Zone and Open Space – Informal Recreation Zone.

The Sub-precinct D area south of Green Lane West Road is zone Open Space – Informal Recreation Zone.

Sub-precinct E: Parkland visitor/information

This sub-precinct includes the park's visitor and information centre and restaurant/kiosk, the scheduled historic Acacia Cottage and Huia Lodge buildings and the car parking areas.

Sub-precinct E is zoned Open Space – Informal Recreation Zone.

Sub-precinct F: Parkland farm activities

This sub-precinct includes facilities associated with farming including farm implement and shearing sheds. It is also appropriate for park administration, horticulture and education activities related to farming.

Sub-precinct F is zoned Open Space – Informal Recreation Zone.

Sub-precinct G: Parkland administration and operations

This sub-precinct includes the park administration and operations buildings, including park depot and storage facilities, and the park's plant nursery.

The Sub-precinct G area is zoned Open Space – Sport and Active Recreation Zone.

I309.2. Objectives

- (1) Cornwall Park retains its significant value as a farm park and expansive open space that provides for a range of recreational use and enjoyment by the public.

- (2) The significant historic, natural and amenity values of Cornwall Park are protected while enabling on-going use, development, operation and maintenance activities to be undertaken.

The relevant overlay, Auckland-wide and zone objectives apply in this precinct, in addition to those specified above.

I309.3. Policies

- (3) Provide for use and development that is consistent with the use and values identified for each sub-precinct.
- (4) Enable on-going daily park operations, including farming operations.
- (5) Provide for future use and development in appropriate locations, including farming, recreation, restaurant, cafe and visitor centre activities.
- (6) Limit formed and sealed parking areas adversely affecting the conservation and amenity values of Cornwall Park by not requiring any additional parking to be provided for new activities.

The relevant overlay, Auckland-wide and zone policies apply in this precinct, in addition to those specified above.

I309.4. Activity table

The provisions in the relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I309.4.1 Activity table specifies the activity status of land use and development activities in the Cornwall Park Precinct pursuant to section 9(3) of the Resource Management Act 1991.

A blank in the activity status for an activity in Table I309.4.1 Activity table below means that the provisions of the overlay/s, zone or Auckland-wide apply.

Sub-precincts

Sub-precinct A: Parkland conservation

Sub-precinct B: Parkland informal recreation

Sub-precinct C: Parkland development

Sub-precinct D: Parkland sport and active recreation

Sub-precinct E: Parkland visitor/information

Sub-precinct F: Parkland farm activities

Sub-precinct G: Parkland administration and operations

Table I309.4.1. Activity Table

I309.5. Notification

- (1) Any application for resource consent for an activity listed in Table I309.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I309.6. Standards

The overlay, Auckland-wide and zone standards apply in this precinct, unless otherwise specified below. All permitted activities listed in Table H1.4.1. Activity table must comply with the following standards.

I309.6.1. Farming

- (1) Farming activities in Sub-precinct A must be limited to grazing of sheep.

I309.6.2. Maximum height

- (1) In Sub-precinct A the maximum height of any building must not exceed 5m and the height of exterior lighting, fittings and supports must not exceed 8m.
- (2) In Sub-precinct D the maximum height of any building must not exceed 15m.
- (3) In Sub-precinct G the maximum height of any building must not exceed 8m and the height of exterior lighting, fittings and supports must not exceed 10m.

I309.6.3. Gross floor area threshold

- (1) The gross floor area of individual buildings in Sub-precinct B must not be more than 250m².
- (2) The gross floor area of individual buildings in Sub-precincts C, E and F must not be more than 300m².
- (3) The gross floor area of individual buildings in Sub-precinct D must:
 - (a) not be more than 150m² where the building is within 20m of a residential zone; or
 - (b) not be more than 500m² where the building is further than 20m from a residential zone.

I309.6.4. Parking

- (1) A minimum of 800 car parking spaces must be retained in the Cornwall Park precinct.
- (2) No additional car parking is required for new activities.

I309.6.5. Conservation planting (including in scheduled areas)

- (1) Conservation planting in Sub-precinct A must be limited to the restoration of vegetative cover on the cone's slopes.
- (2) Conservation planting in all other sub-precincts must not result in earthworks that extend more than 300mm below the surface.

I309.6.6. Tree trimming and alteration (including scheduled notable trees)

- (1) The maximum branch diameter must not exceed 150mm.
- (2) No more than 20 per cent of live growth of the tree can be removed in any one calendar year.
- (3) The works must meet best arboricultural practice.
- (4) All trimming or alteration must retain the natural shape, form and branch habit of the tree.

I309.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I309.8. Assessment – restricted discretionary activities

I309.8.1. Matters of discretion

For development that is a restricted discretionary activity in the Cornwall Park Precinct, the Council will restrict its discretion to the following matters, in addition to the matters specified for the relevant restricted discretionary activities in the Open

Space – Informal Recreation Zone or the Open Space – Sport and Active Recreation Zone.

(1) Rock walls:

- (a) design, external appearance and landscaping; and
- (b) effects on heritage and the natural environment.

(2) Sport and recreation structures:

- (a) intensity and scale;
- (b) development design, external appearance and landscaping; and
- (c) effects on heritage and the natural environment.

I309.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

I309.8.2.1. Rock walls

(1) The extent to which the design, external appearance and any landscaping:

- (a) is compatible with the character of the area and height and form of any existing rock walls;
- (b) minimises any adverse effects, including visual amenity through use of materials and colour; and
- (c) integrates with the existing landscape character of the area.

(2) Whether the construction of the wall will have adverse effects on any areas with scheduled values, and the extent to which these can be remedied or mitigated.

(3) The extent to which any disturbance to the existing landform and vegetation is minimised and any adverse effects can be remedied or mitigated.

I309.8.2.2. Sport and recreation structures

(1) The extent to which the intensity and scale of the structures will detract from the amenity value of any adjoining residential areas, and the measures to remedy or mitigate any adverse effects.

(2) Whether the structures are located to minimise adverse effects on public access to, and use of, the open space.

(3) The extent to which any disturbance to existing landform and vegetation is minimised.

- (4) The extent to which any adverse effects on natural values or amenity values are avoided, remedied or mitigated through location, design, external appearance and landscaping.

I309.9. Special information requirements

There are no special information requirements in this precinct.

I309.10. Precinct plans

There are no precinct plans in this precinct.

I310. Eden Park Precinct

I310.1. Precinct description

The Eden Park Precinct provides specific planning controls for the use, development and redevelopment of Eden Park. Eden Park was established as the home of Auckland Cricket in 1910, with Auckland Rugby joining in 1925. Eden Park is a multi-purpose stadium and is one of New Zealand's premier sports facilities.

The zoning of the land within the Eden Park Precinct is Special Purpose - Major Recreation Facility Zone. Refer to the planning maps for the location and extent of the precinct.

I310.2. Objectives

- (1) Eden Park is protected as a regionally, nationally and internationally important venue for all of the following primary activities:
 - (a) organised sports and recreation;
 - (b) informal recreation; and
 - (c) day time non-sporting events.
- (2) A range of activities compatible with, or accessory to, the primary activities are enabled.
- (3) The adverse effects of the operation of Eden Park are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I310.3. Policies

- (1) Enable the safe and efficient operation of Eden Park for its primary activities.
- (2) Protect the primary activities of Eden Park from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of Eden Park, having regard to the amenity of surrounding properties.

- (5) Recognise that Eden Park's primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I310.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E24 Lighting;
- (2) E25 Noise and vibration (noise provisions only); and
- (3) E40 Temporary activities.

Table I310.4.1 Activity table specifies the activity status of land use and development activities in the Eden Park Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Note 1:

For the purposes of this precinct the following applies:

- day time activities are those undertaken between 30 minutes before sunrise and 30 minutes before sunset on the same day. For clarity, any activity that continues longer than 30 minutes before sunset is defined as a night time activity.
- night time activities are those undertaken between 30 minutes before sunset on one day and 30 minutes before sunrise on the following day. For clarity, any activity that continues longer than 30 minutes before sunrise remains defined as a night time activity.

Table I310.4.1: Activity table

	Activity	Activity status
Use		
Primary activities		
(A1)	Organised sports and recreation undertaken during the day time	P
(A2)	Informal sports and recreation undertaken during the day time	P
(A3)	Non-sporting events undertaken during the day time	P
(A4)	Organised sports and recreation undertaken during the night time	C
(A5)	Any primary activity not meeting Standard I310.6.4 but meeting all other standards unless otherwise specified.	C

Accessory activities		
(A6)	Accessory activities	P
(A7)	Any accessory activity not meeting Standard I310.6.4 but meeting all other standards	C
Compatible activities		
(A8)	Functions, gatherings, conferences and meetings	P
(A9)	Sports, recreation and community activities	P
(A10)	Filming activities	P
(A11)	Professional fireworks displays meeting Standard I310.6.13	P
(A12)	Professional fireworks displays not meeting Standard I310.6.13	RD
(A13)	Helicopter flights meeting Standard I310.6.14	P
(A14)	Helicopter flights not meeting Standard I310.6.14	RD
(A15)	Up to 6 concerts in any 12 month period	D
(A16)	More than 6 concerts in any 12 month period	NC
(A17)	Any compatible activity not meeting Standard I310.6.4 but meeting all other standards	C
Development		
(A18)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 15m in height (excluding grandstands and spectator viewing structures)	P
(A19)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15m in height (excluding grandstands and spectator viewing structures)	RD
(A20)	Grandstands and spectator viewing structures up to 35m in height	P
(A21)	Grandstands and spectator viewing structures exceeding 35m in height	RD
(A22)	Light towers and associated fittings up to and greater than 15m in height	P
(A23)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I310.6.7	RD
(A24)	Demolition of buildings	P
(A25)	Temporary buildings and structures	P
(A26)	Workers' accommodation	P

I310.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I310.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I310.4.1 Activity table and which is not listed in I310.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I310.6. Standards

The overlay and Auckland-wide standards apply in this precinct, unless otherwise specified below. The following standards do not apply:

- (1) E27 Transport – Standard E27.6.1 Trip generation; and
- (2) E27 Transport – Standard E27.6.2 Number of parking and loading spaces.

All permitted, controlled or restricted discretionary activities listed in Table I310.4.1 Activity table must comply with the following activity standards unless otherwise stated.

I310.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site in a residential zoned property (not owned by the Eden Park Trust) must not be greater than the noise limits in Table I310.6.1.1 Noise standards.

Table I310.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
All days between 8:00am and 10:30pm	55dB L _{A10} (13hr) 60dB L _{A10} (10min) 85dB L _{Amax}
At all other times	40dB L _{A10} and 75dB L _{Amax}

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) For noise events an adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.

- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) Where $L_{Aeq (10min)}$ is specified, no 10 minute measurement sample can exceed the stated limit.
- (7) A computer based measurement system (including electronic limiter) attached to the sound system output must be used as the preferred method of measurement for sound system noise except for any 75 dB noise events.
- (8) Professional fireworks displays and helicopter flights are excluded from this standard.

I310.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I310.6.2, the curfew and pre-curfew times are as stated in Table I310.6.2.1 Pre-curfew and curfew times.

Table I310.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7.00am – 11.00pm
Curfew	11.00pm – 7.00am

- (5) The following standards apply to the playing field floodlights, in addition to the standards listed above:
 - (a) The playing field floodlights may be used for up to four hours in the 48 hour period prior to their use for a night time sporting event, provided the playing field floodlights are fully turned off by 10.00pm.
 - (b) The playing field floodlights may be switched on for maintenance purposes up to a maximum of six nights every two years. This must be

for a maximum of two hours after sunset and they must be switched off by 10.00pm.

- (c) The playing field floodlights may be used for training purposes up to two nights per week provided they are turned off by 10.00pm.
 - (d) The playing field floodlights must be switched to an average level no higher than 300 lux on the field, no later than 15 minutes after the finish of play, and must be turned off no later than 30 minutes after the finish of play.
 - (e) Where an incident occurs that emergency services agencies consider could potentially jeopardise public safety and the emergency services request that the lights remain energised, the lights may remain energised until the emergency services agencies consider it safe to de-energise.
- (6) The added illuminance at sites other than those owned by the Eden Park Trust from artificial lighting within the precinct must not be greater than either of the following:
- (a) the limits in Table I310.6.2.2 Horizontal and vertical illuminance at a boundary when measured or calculated at the boundary of any residentially zoned site. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I310.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) a pre-curfew vertical illuminance limit of 25 lux, and curfew limit of 10 lux, when measured or calculated at the windows of habitable rooms of a lawfully established dwelling within a residential zone.
- (7) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 20 per cent (based on an adaption luminance of 10cd/m²) on any public road, calculated within each traffic lane in the direction of travel.
- (8) If the playing field floodlighting is added to or modified in any way, the Glare Rating (GR) must be calculated at the windows facing the stadium of all residential dwellings located adjacent to the site and not owned by the Eden Park Trust, and must not exceed 35.
- (9) Any artificial lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the

applicable limits for pre-curfew times in Table I310.6.2.3 Pre-curfew luminous intensity and 1,000 candelas for curfew times. This must be measured or calculated at the windows of habitable rooms of a lawfully established dwelling within a residential zone or at the boundary of any residentially zoned site where a dwelling does not yet exist.

Table I310.6.2.3: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	7,500 cd
Special lighting events	70,000 cd

- (10) Feature lighting may be used to illuminate the exterior of the stadium provided that this occurs on no more than 25 occasions during a 12 month period and is de-energised by 10.30pm. Feature lighting may be dynamic in nature (e.g. moving, colour changing, etc.), but not strobe lights or similar effects which are directly visible from outside the site.
- (11) The average surface luminance for an intentionally artificially lit building façade must not exceed 25cd/m² or a maximum of 50cd/m². The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination
- (12) Professional fireworks displays are excluded from this standard.

I310.6.3. Special lighting events

- (1) The total number of special lighting events in any 12 month period must not exceed 25 events.
- (2) For the purpose of this standard, a special lighting event exceeds the standard lighting limits but does not exceed the special lighting event limits listed in Table I310.6.2.3 Pre-curfew luminous intensity.

I310.6.4. Traffic management

Activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport.
- (2) Organised sports and recreation activities which generates a crowd of less than 5,000 people and does not require the closure of a public road; or
- (3) Any other activity undertaken at night time which generates a crowd of less than 2,000 people and does not require the closure of a public road.

I310.6.5. Parking

- (1) Parking for a minimum of 310 cars must be retained within the precinct unless an authorised Transport and Traffic Management Plan is in effect.

I310.6.6. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas

I310.6.7. Interface control areas

- (1) New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity must be located outside the Interface Control Area (ICA) illustrated on the precinct plan. Temporary buildings are excluded from this standard.

I310.6.8. Height in relation to boundary

- (1) Where the Eden Park Precinct directly adjoins another zone, the height in relation to boundary standard that applies within the adjoining zone also applies to the adjoining Eden Park Precinct boundary.
- (2) Where the Eden Park Precinct directly adjoins a road or a zone with no height in relation to boundary standard, buildings must not project beyond a 45 degree recession plane measured from a point 8.5 metres vertically above ground level on the road or zone boundary.
- (3) Temporary buildings, light towers and associated fittings are excluded from this standard.

I310.6.9. Yards

- (1) All buildings must be setback from the front boundary by the minimum distances set out in Table I310.6.9.1 Front yard requirements.

Table I310.6.9.1 Front yard requirements

Street frontage	Front yard
Sandringham Road	3m
Walters Road	10m
Cricket Avenue	2m
Reimers Avenue	10m

I310.6.10. Primary activities undertaken during the day time

- (1) Day time primary activities must not be undertaken on the Number 1 field (main ground) within the same 24 hour period as night time primary activities. This standard does not apply to organised sport and recreation activities

which are accessory to another organised sport and recreation event such as 'curtain raisers'.

- (2) The number of non-sporting activities held on the Number 1 field within any 12 month period must not exceed the number listed in Table I310.6.10.1 Number of non-sporting activities.

Table I310.6.10.1 Number of non-sporting activities

Number of occurrences	Crowd capacity
Unlimited	Up to 2,000
No more than 30	2,001 to 10,000
No more than 20	10,001 to 25,000
No more than 6	25,001 to 50,000

I310.6.11. Organised sports and recreation activities undertaken at night time on the Number 1 field

These activities must meet all of the following standards:

- (1) There must be no more than 25 activities within any 12 month period;
- (2) There must be no more than one day/night cricket test match within any 12 month period;
- (3) If scheduled between Monday and Friday (inclusive), these activities (excluding day/night cricket test matches) must commence after 7:30pm and be scheduled to finish no later than 9:30pm. Activities on public holidays are excluded from these time limits;
- (4) Day/night cricket test matches must be scheduled to finish no later than 10.00pm;
- (5) These activities must not be undertaken on a Sunday;
- (6) These activities must not exceed four occurrences within any 35 day period; and
- (7) The crowd attending any of these activities must not exceed 50,000 persons.
- (8) For the purpose of these standards, a day/night cricket test match of up to five days in duration is to be counted as one activity.

I310.6.12. Functions, gatherings, conferences and meetings

- (1) The crowd numbers within the precinct's function facilities must not exceed 2,000 people.
- (2) This activity must not be undertaken at the same time as any primary activity or sports, recreation and community activity that has a cumulative capacity greater than 10,000 people.

I310.6.13. Professional fireworks displays

- (1) Displays are limited to three in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 metres from any residential zone.
- (5) Displays must comply with 140dB L_{zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I310.6.14. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 100 metres from any neighbouring site.

I310.6.15. Temporary buildings and structures

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I310.7. Assessment – controlled activities

I310.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) organised sports and recreation undertaken during the night time:
 - (a) the effects of the proposed activity on the safety and efficiency of the transport network.
 - (b) the effectiveness of any community liaison.
 - (c) effects associated with any event management plan.
- (2) any primary, accessory or complimentary activity not meeting Standard I310.6.4 Traffic management but meeting all other standards:
 - (a) the effects of the proposed activity on the safety and efficiency of the transport network.

I310.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) effects on the safety and efficiency of the transport network:

- (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to suitably accommodate traffic and pedestrian movements;
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person);
 - (d) the extent to which consultation has been undertaken with representatives of any relevant transport agencies; and
 - (e) the extent to which bus parking is to be provided to reduce traffic flows within the surrounding residential area.
- (2) the effectiveness of any community liaison:
- (a) the extent to which ongoing community liaison has adequately addressed the immediate concerns of the community surrounding Eden Park.
 - (b) the extent to which provision is made for adequate notice of night time events to be provided to the community; and
 - (c) the extent to which review and monitoring protocols are developed and will be implemented to ensure that any community consultation and communication plan can be updated to address matters arising through public feedback and monitoring.
- (3) effects associated with event management:
- (a) the extent to which pre-event procedures and procedures on the day of an event, including the management requirements in respect of the event and communications planning, are developed and will be implemented.
 - (b) the extent to which methods of ensuring the co-ordination and briefing of relevant agencies involved in managing events within the Eden Park Precinct are developed and will be implemented.
 - (c) the extent to which security measures are to be provided both within and outside the precinct to ensure the safe and efficient operation of the event and the minimisation of adverse effects on the surrounding environment.
 - (d) the extent to which provision is made to ensure littering and antisocial behaviour in public places following organised sports and recreation activities is avoided, remedied or mitigated.

I310.8. Assessment – restricted discretionary activities

I310.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay or Auckland-wide provisions:

- (1) any activity that does not comply with noise and/or lighting standards:
 - (a) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) any activity that does not comply with the permitted helicopter flight standard:
 - (a) the effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties.
- (3) any activity that does not comply with the permitted professional fireworks display standard:
 - (a) the effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15 metres in height and/or which does not comply with height in relation to boundary standards:
 - (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) grandstands and spectator viewing structures exceeding 35 metres in height:
 - (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (6) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I310.6.7 Interface control areas, and/or yard standards:
 - (a) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (7) any activity that does not comply with screening standards:
 - (a) the visual effects of rubbish and storage areas on residential and open space zoned sites.

I310.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of the noise standards; and
 - (iii) the degree of non-compliance.
 - (b) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time;
 - (c) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement;
 - (d) the extent to which any artificial lighting will create a traffic safety issue;
 - (e) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (f) the extent to which the amount of light falling into habitable rooms during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance;
 - (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment; and
 - (h) the extent to which additional special events adversely affect the amenity of surrounding properties having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of the special event standards;
 - (iii) the additional number of special events; and
 - (iv) whether there is an operational need for the exceedance.
- (2) the effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
 - (a) the extent to which the additional activities adversely affect the amenity of the surrounding properties, having regard to all of the following:

- (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces:
- (a) the extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (b) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones);
 - (c) whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s; and
 - (d) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (4) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces:
- (a) the extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,

(vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.

(5) the visual effects of rubbish and storage areas on residential and open space zoned sites:

(a) the extent to which screening is practicable; and

(b) the extent to which distance and topographical matters mitigate likely adverse visual effects.

I310.9. Special information requirements

A Community Consultation and Communication Management Plan (CCCMP) and Events Management Plan (EMP) must be prepared and provided to the Council with any resource consent application for organised sport and recreation activities undertaken at during the night time.

I310.9.1. Community consultation and communication plan

(1) The Community Consultation and Communication Management Plan must include the following information in addition to any other matters relevant to the matters of control:

(a) details of the community communication and consultation liaison officer. The community liaison officer must be identified as being the main and accessible point of contact. The community liaison officer's contact details must be listed on the Eden Park and Auckland Council websites;

(b) details of the membership of the Community Liaison Group (CLG);

(c) details of how all of the following have been invited to participate within the Community Liaison Group:

(i) representatives of recognised local community organisations active in the Eden Park community;

(ii) the Eden Park Neighbours Association Incorporated;

(iii) the Eden Park Residents Association Incorporated;

(iv) mainstreet business associations from Kingsland and Valley Road;

(v) Council and relevant Council Controlled Organisations; and

(vi) the New Zealand Police.

(d) details of the responses to the request to participate within the Community Liaison Group;

(e) details of how the applicant will provide all of the following to the Community Liaison Group:

(i) regular updates on scheduling of primary activities;

- (ii) opportunities for feedback and input with regards to the effectiveness of methods to avoid, remedy or mitigate adverse effects associated with the activity;
- (iii) details of how the applicant will respond to queries and complaints including all of the following matters:
 - who is responsible for responding;
 - how responses will be provided; and
 - the timeframes that the responses will be provided within; and
- (iv) details of consultation undertaken and responses and feedback received. Where responses and feedback are provided, the applicant must set out how feedback and responses have been addressed, and if not incorporated into the Community Consultation and Communication Management Plan, the reasons why;
- (f) details of methods for informing each household within the vicinity of Eden Park, the Community Liaison Group, other stakeholders and affected parties of forthcoming activities and related arrangements (including the use of fireworks) not less than four times per 12 month period;
- (g) details of the Eden Park “hotline”. The Eden Park hotline must be maintained and advertised for the purposes of enabling the local community, stakeholders and the Community Liaison Group to contact the appropriate authorities or gain assistance. The hotline must be operated for two hours prior to any event or function being held within Eden Park and must continue to operate until midday (12:00pm) the following day after any event; and
- (h) details of the complaints protocol. The complaints protocol must include methods for responding to and managing complaints arising from the actions of spectators, including methods for liaising with and assisting the New Zealand Police in devising and implementing an appropriate protocol to ensure as far as practicable, that spectators do not engage in anti-social behaviour in the vicinity of Eden Park.

I310.9.2. Events management plan

- (1) The Events Management Plan must include the following information in addition to any other matters relevant to the matters of control:
 - (a) details of methods for ensuring the removal of litter from streets within the vicinity of Eden Park.
 - (b) details of methods and procedures for preventing the consumption of alcohol in public places and areas outside of the Eden Park precinct.
 - (c) details of pre-event procedures including:

- (i) methods for ensuring the appropriate coordination of all agencies involved in managing events including:
 - New Zealand Police;
 - security companies (in the precinct and street security patrol);
 - Auckland Transport;
 - bus services;
 - St Johns;
 - fire Service;
 - taxi operators;
 - tow truck operators; and
 - media.
- (d) methods for ensuring that security arrangements for both inside and outside of the precinct are undertaken in a safe and efficient manner; and
- (e) details of the post event procedures including methods for ensuring that patrons depart the precinct in a safe, efficient and orderly manner.

I310.10. Precinct plans

I310.10.1. Eden Park: Precinct plan 1

I311. Ellerslie 1 Precinct

I311.1. Precinct Description

The Ellerslie 1 precinct applies to 6.0974 ha of land within the Auckland Racing Club's Ellerslie Racecourse. The land, most of which is not used for racing purposes, is south of the race track and fronts onto Morrin Street.

The purpose of the precinct is to allow urban residential living that is comprehensively planned, capitalises on the park-like setting of Ellerslie Racecourse, and is complementary to the surrounding residential environment. The area is suited to residential intensification due to the high visual and recreational amenity offered by the Racecourse and the proximity of the land to Ellerslie town centre and Greenlane and Ellerslie train stations. The precinct also provides for intermittent activities associated with the Ellerslie Racecourse, and enables a limited range of commercial and community activities.

The land comprises five sub-precincts. The sub-precincts are in an east-west spread. The controls on height and use are progressively more restrictive the further east the sub-precinct is to achieve a transition from the racecourse grandstand through to the adjacent established residential area.

Sub-precinct A is closest to the racecourse grandstand and allows a greater height and range of activities than sub-precincts B and C. Included in sub-precinct B is a triangular area of land adjoining Mitchelson Street, the majority of which is to vest in Council as a road on implementation of the precinct. Sub-precinct D is a 23m wide strip of land which has special yard requirements and indicative building platforms. Sub-precinct E is zoned Residential - Mixed Housing Suburban Zone and is included in the precinct as access to the land is by the private roads within the precinct.

There are also particular attributes of the Ellerslie 1 Precinct, which contribute to the amenity of the precinct and the surrounding area and are to be retained and enhanced through the development of the precinct. These include:

- Open space with densely planted trees located in southern part of the site and adjoining Morrin Street;
- Linkages and routes into and through the precinct to the Ellerslie Racecourse; and
- Sightlines from the public grandstand and visual connections into the Ellerslie Racecourse from the local road network.

The location of the sub-precincts, the indicative private road layout and specific development controls of the land is set out in the I311.10.1 Ellerslie 1 Precinct Plan 1 – Special Yards. This shows existing trees and stone walls to be retained, the indicative location of private roads and land to be vested in Council as road, required building frontages, visual connection from Morrin Street and pedestrian links.

The underlying zoning for sub-precincts A, B and C is Residential – Terrace Housing and Apartment Buildings Zone. The underlying zoning for sub-precincts D and E is Residential - Mixed Housing Suburban Zone.

I311.2. Objectives

Sub-precincts A, B and C

- (1) Residential development of moderate high intensity engages with the Ellerslie Racecourse, positively responds to the park-like setting of the site, its context and complements the surrounding residential character in buildings of between four to eight storeys in an east to west spread.
- (2) Non-residential activities that do not diminish the function and role of the Ellerslie town centre and are compatible with residential activities.
- (3) Trees identified in the precinct plan add to the area's amenity and sense of place are retained.
- (4) The surrounding road network is not compromised by the adverse effects of traffic from development and through traffic.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above - with the exception of Objective H6.2(2) of the H6 Residential - Terrace Housing and Apartment Buildings Zone which is replaced by I311.2(1) Objective.

Sub-precinct D and E

- (5) In sub-precinct D, an outlook to the racecourse from existing residential properties to the south-east of this sub-precinct is maintained.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I311.3. Policies

Sub-precincts A, B and C

- (1) Require development to be undertaken in a comprehensive and integrated manner that:
 - (a) opens up views into the racecourse, through the use of height restrictions, a visual connection from Morrin Street, the road layout and pedestrian connections;
 - (b) retains open space and identified significant trees that are part of the park-like setting of the precinct;
 - (c) addresses and fronts onto the racecourse;
 - (d) provides passive surveillance onto private roads and the racecourse;
 - (e) integrates with and respects the surrounding residential and racecourse built and natural environment; and
 - (f) provides pedestrian links through the precinct to facilitate access to Ellerslie town centre, Ellerslie train station and Greenlane train station designed and

constructed in accordance with any relevant codes of practice or engineering standards.

- (2) Require commercial activities to be of a scale and character that avoids significant adverse effects on residents within the precinct and surrounding area.
- (3) Provide for community activities in identified areas in a manner that:
 - (a) avoids significant adverse effects on residents within the precinct and surrounding area; or
 - (b) is limited to intermittent temporary carparking and horse racing activities associated with the Ellerslie Racecourse.
- (4) Manage vehicle and pedestrian traffic so that it does not compromise the functioning of the surrounding road network by:
 - (a) providing private roads through the precinct designed and constructed in accordance with any relevant codes of practice or engineering standards; and
 - (b) requiring land identified on I311.10.2 Ellerslie 1 Precinct Plan 2 to vest as road in the council.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above

Sub-precinct D and E

- (1) In sub-precinct D, require special yards between buildings to retain an outlook to the racecourse from existing residential properties to the south-east of the precinct. Refer to I311.10.1 Ellerslie 1 Precinct Plan 1 – Special Yards.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above

I311.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I311.4.1 Activity table specifies the activity status of land use, development and subdivision activities in the Ellerslie 1 Precinct pursuant to section 9(3) and 11 of the Resource Management Act 1991 or any combination of all of these sections where relevant.

A blank in Table I311.4.1 Activity table below means that the provisions of the overlays, zone or Auckland-wide apply. The provisions of Sub-precincts D and E rely on the Residential - Mixed Housing Suburban Zone activity table, Table H4.4.1 Activity table.

Table I311.4.1 Activity table

Activity		Activity status				
Use		Sub-precinct				
		A	B	C	D	E
Residential						
(A1)	Activities not provided for	NC	NC	NC	NC	NC
(A2)	25 or more dwellings	RD	RD	RD		
(A3)	Fewer than 25 dwellings	NC	NC	NC		
(A4)	Retirement villages	RD	RD	RD		
(A5)	Supported residential care	D	D	D		
(A6)	Visitor accomodation	D	D	D		
Commerce						
(A7)	Conference facilities	D	NC	NC		
(A8)	Entertainment facilities	D	NC	NC		
(A9)	Organised sport and recreation	D	NC	NC		
(A10)	Car parking (non-accessory)	D	NC	NC		
(A11)	Restaurants and cafes greater than 100m ² within the sub-precinct	D	NC	NC		
(A12)	Restaurants and cafes up to 100m ² GFA within the sub-precinct	RD	RD	NC		
Community						
(A13)	Care centres	D	D	D		
(A14)	Healthcare facilities	D	D	D		
(A15)	Horse racing activities, including accessory television towers within the area identified for this purpose on I311.10.2 Ellerslie 1 Precinct Plan 2 in sub-precinct B	NC	P	NC		
(A16)	Horse racing activities, including accessory television towers within the area identified for this purpose on I311.10.2 Ellerslie 1 Precinct Plan 2		RD			
(A17)	Overflow car parking associated with events on the Ellerslie Racecourse	P	P	P		

	land					
(A18)	Community facilities	D	D	D		
(A19)	Temporary activities associated with horse racing activities	P	P	P

(A20)	Tree alteration or tree removal of trees listed in Schedule I311.6.16 Identified trees and shown on the I311.10.2 Ellerslie 1 Precinct Plan 2		RD			
(A21)	Tree trimming of trees listed in Schedule I311.6.16 and shown on the I311.10.2 Ellerslie 1 Precinct Plan 2		P			
(A22)	Modifications to the existing stone walls on the Morrin Street and Mitchelson Street frontages to the extent identified on the I311.10.2 Ellerslie 1 Precinct Plan 2		C			
Subdivision						
(A23)	Subdivision of land	D	D	D		

I311.5. Notification

- (1) Any application for resource consent for an activity listed in Table I311.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I311.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

All activities listed in Table I311.4.1 Activity table must comply with the following standards.

I311.6.1. Maximum density in sub-precincts A, B and C

- (1) The number of dwellings on a site must not exceed the limits specified below:
 - (a) Sub-precincts A, B and C one dwelling per 110m² of net site area, excluding land required for the private roads within the precinct.

- (2) Net site area is the area of the site excluding the area of an adjoining private road. For the avoidance of doubt, the net site area in sub-precincts A, B and C are those areas marked A, B and C on I311.10.2 Ellerslie 1 Precinct Plan 2
- (3) Development for dwellings that does not comply with I311.6.1(1) and (2) above is a discretionary activity.

I311.6.2. Development area staging in sub-precincts A, B and C

- (1) Resource consent applications for 25 or more dwellings must comprise either:
 - (b) the whole of sub-precinct A or C; or
 - (c) cover an area (including access roads) of at least 1ha within or comprising the residue area of sub-precinct B.
- (2) A resource consent application that does not comply with I311.6.2(1) above is a non-complying activity.

I311.6.3. Temporary activities associated with horse racing in sub-precincts A, B and C

- (1) Temporary activities associated with horse racing including accompanying buildings and structures, such as marquees and toilets, must be located within 30 metres of the adjoining Special Purpose – Major Recreation Facility Zone boundary.

I311.6.4. Noise and vibration in sub-precincts A, B, C, D and E

- (1) The Auckland-wide noise and vibration rules in E25 Noise and vibration apply, except where specified below.
- (2) The noise (rating) level from horse racing activities within this precinct where undertaken in conjunction with horse activities on the Ellerslie Racecourse Precinct must not exceed:
 - (a) The I313 Ellerslie Racecourse Precinct Standards I313.6.1 Noise, I313.6.3 Special noise events and I313.6.4 Special lighting events, measured within the boundary of any site containing an activity sensitive to noise both within precinct and outside the precinct.

I311.6.5. Building height

- (1) Buildings must not exceed the maximum heights excluding basement parking as set out in Table I311.6.5.1 Maximum height below:

Table I311.6.5.1 Maximum height

Sub-precinct	Maximum height
A	26m and eight storeys
B	20m and six storey
C	14m and four storey

- (2) For the purpose of calculating compliance with the maximum building height control, account shall be taken of parapets but not of radio and television aerials, chimneys, lift towers, machinery rooms, water towers or finials where:
- (a) the maximum heights prescribed for areas A, B and C above are not exceeded by more than 3m, and
 - (b) the cumulative area of such projections does not exceed 10% of the area of the roof to the storey immediately below such structures.
- (3) Buildings must be constructed to achieve the minimum heights excluding basement parking as set out in Table I311.6.5.2 Minimum height below:

Table I311.6.5.2 Minimum height

Sub-precinct	Minimum height
A	14m and four storeys
B	14m and four storey
C	12m and three storey

I311.6.6. Yards

- (1) Buildings must be set back a minimum depth of 1.5m from the front boundary.
- (2) Where sites adjoin the Residential - Mixed Housing Suburban Zone, buildings must be set back at least 3m from side and rear boundaries for storeys one and two and 5m for storeys three and four.
- (3) Where development is separated from land zoned Special Purpose – Major Recreation Facility Zone by a private road or private way, or immediately adjoins land zoned Special Purpose – Major Recreation Facility Zone, Standard I311.6.6(2) Yards above does not apply.

I311.6.7. Height in relation boundary

- (1) Where separated from residential zoned land outside sub-precincts A, B and C by a public or private road:
 - (a) The maximum allowable building height shall not extend through a recession plane of 6m plus 45 degrees measured from the nearest public or private road boundary which provides frontage or access to residential zoned land outside sub precincts A, B and C on its opposite side, provided that the measuring point at the eastern end of sub-precinct B shall be the private road boundary or the building line shown on the I311.10.2 Ellerslie 1 Precinct Plan 2, whichever is the more restrictive.
- (2) Where abutting land within sub-precinct A, B and C is not part of same development area staging:
 - (a) A building setback of 7.5m shall be required from the boundary of the development area.

- (3) Where separated from land zoned Special Purpose – Major Recreation Facility Zone by a private road or private way, or immediately adjoins land zoned Special Purpose – Major Recreation Facility Zone:

(a) No recession plane is required.

I311.6.8. Maximum impervious area, building coverage and landscaping

- (1) Sites must be developed to comply with the standards in Table I311.6.8.1 Impervious area, building coverage and minimum landscaped area.

Table I311.6.8.1 Impervious area, building coverage and minimum landscaped area

Sub-precinct	Maximum impervious area (of net site area)	Maximum building coverage (of net site area)	Minimum landscaped area (of net site area)
A	60%	55%	40%
B	60%	35%	40%
C	60%	55%	40%

I311.6.9. Fences on required building frontage

- (1) Any fence, wall or other structure erected within the required frontage areas as shown in the I311.10.2 Ellerslie 1 Precinct Plan 2 must be no higher than 1.2m.

I311.6.10. Sightline from the existing grandstand to 2400m start-line

- (1) No part of any building can extend north-east of the sightline (from the public grandstand to the 2400m line) as shown in I311.10.2 Ellerslie 1 Precinct Plan 2.

I311.6.11. Building line

- (1) Buildings must not be constructed south-west of the building line which runs near parallel with Morrin Street.
- (2) Buildings must not constructed in the triangular area east of the building line which runs in a northerly direction towards the 2400m start chute.

I311.6.12. Required building frontage

- (1) In those areas identified as the required building frontage in the precinct plan, the adjoining building facades must be set back:
- (a) no less than 3m and no more than 5m from the nearest private road boundary.
- (b) no less than 3m and no more than 5m from the sight line located close to the 2400m race start chute.

I311.6.13. Maximum building length and minimum building separation

(1) Within Sub-precinct B, buildings that adjoin a required building frontage must:

- (a) not exceed 70m in length; and
- (b) have a minimum separation distance between buildings of 15m.

I311.6.14. Distance to existing buildings within the adjoining the Special Purpose – Major Recreation Facility Zone

(1) A minimum separation of 15m is required between any new buildings within sub-precinct A and any existing buildings within the adjoining Special Purpose – Major Recreation Facility Zone.

I311.6.15. Internal private roads and private ways

- (1) Internal private roads must be constructed to provide access within the precinct and must be laid out in general accordance as shown in the precinct plan.
- (2) The private road must be designed and constructed in accordance with the any relevant code of practice or engineering standards.
- (3) Where private ways other than those shown in the precinct plan are proposed these must also be designed and constructed in accordance with the any relevant code of practice or engineering standards.
- (4) The private roads shown in the precinct plan must be treated in the same way as public roads when applying the development controls of the zone and the precinct, and the Auckland-wide subdivision controls.

I311.6.16. Identified trees

(1) Trees listed in Schedule I311.6.16.1 Identified trees and identified on I311.10.2 Ellerslie 1 Precinct Plan 2, must not have any activity on or within the protected root zone or be removed.

Schedule I311.6.16.1 Identified trees

Tree number on I311.10.2 Ellerslie 1 Precinct Plan 2,	Botanical name	Common name	Location of tree	Legal description
1	Quercus robur	English Oak	100A Ascot Avenue	Lot 1 DP 466956
2	English Oak palustris	Pin Oak	100A Ascot Avenue	Lot 1 DP 466956
3	Plantanus x acerifolia	London Plane	100A Ascot Avenue	Lot 1 DP 466956
4	Quercus palustris	Pin Oak	100A Ascot Avenue	Lot 1 DP 466956
5	Ulmus sp.	Elm	100A Ascot Avenue	Lot 1 DP 466956
6	Ulmus sp.	Elm	100A Ascot Avenue	Lot 1 DP 466956

7	Removed			
8	Platanus x acerifolia (x 11)	London Plane	100A Ascot Avenue	Lot 1 DP 466956
9	Ulmus sp.	Elm	100A Ascot Avenue	Lot 1 DP 466956
10	Corynaocarpus laevigatus (x 5)	Karaka	100A Ascot Avenue	Lot 1 DP 466956
11	Ulmus sp. (x7)	Elm	100A Ascot Avenue	Lot 1 DP 466956
12	Plantanus x acerifolia	London Plane	100A Ascot Avenue	Lot 1 DP 466956
13	Quercus robur	English Oak	100A Ascot Avenue	Lot 1 DP 466956
14	Corynaocarpus laevigatus (x 5)	Karaka	100A Ascot Avenue	Lot 1 DP 466956
15	Plantanus x acerifolia (x2)	London Plane	100A Ascot Avenue	Lot 1 DP 466956
16	Corynaocarpus laevigatus	Karaka	100A Ascot Avenue	Lot 1 DP 466956
17	Populus yunnanesis	Yunnan Poplar	100A Ascot Avenue	Lot 1 DP 466956
18	Corynaocarpus laevigatus	Karaka	100A Ascot Avenue	Lot 1 DP 466956

(2) The following are exceptions to tree trimming of any protected tree identified in Schedule I311.6.16.1 Identified trees above and shown on the precinct plan:

- (a) the maximum branch diameter must not exceed 50mm
- (b) no more than 20 per cent of live growth of the tree is removed in any one calendar year
- (c) must meet accepted modern arboricultural practice

I311.6.17. Sub-precinct D yards

(1) Special yards must be provided within sub-precinct D, in accordance with I311.10.1 Ellerslie 1 Precinct Plan 1 – Special Yards and subject to the yards listed in Table I311.6.17.1 Sub-precinct D – yards following:

Table I311.6.17.1 Sub-precinct D - yards

Yard	Minimum depth
Front	2.5m to Morrin Street and the private road
Side	5m between indicative building platforms
Rear	8m to the adjoining Mixed Housing suburban zone

- (a) Except on sites other than rear sites not less than 60 per cent of that part of the site between the road boundary and a parallel line 6m there from must comprise landscaped permeable surface.
- (b) The landscaping requirement applies on each frontage of a corner site.
- (2) Buildings maybe erected within the 5m side yard as shown in the precinct plan, provided that such buildings do not exceed a height of 3m.
- (3) Buildings maybe erected in the 8m rear yard as shown in the precinct plan, provided that such buildings do not exceed a height of 3m and a building coverage of 10 per cent of the rear yard.

I311.6.18. Subdivision controls

- (1) Any application for subdivision of land within the precinct must be lodged no later than the application for building consent on the subject land.
- (2) There are no minimum frontage and site width requirements for the subdivision of sites within this precinct.

I311.7. Assessment – controlled activities

I311.7.1. Matters of control

The Council will reserve its control to all of the following matters when assessing a controlled activity resource consent application:

- (3) The length of stone wall to be removed; and
- (4) The extent and manner in which the removed stone is proposed to be reused.

I311.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

- (1) The extent to which the length of stone wall to be removed is in accordance with the I311.10.2 Ellerslie 1 Precinct Plan 2, or otherwise appropriate to achieve the purpose for which it is being demolished;
- (2) Whether any removed stones are to be reused to form wall returns or gateways in the vicinity of where the stone originated;
- (3) Whether the style of any proposed new stone walls are the same or similar to the existing stone walls; or
- (4) Whether for walls removed from the vicinity of the Mitchelson and Morrin Streets intersection, the residual stone walls provide adequate sightlines for traffic based on the new road alignment.

I311.8. Assessment – restricted discretionary activities

I311.8.1. Matters of discretion

The Council will restrict its discretion to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions except for:

- (5) all development that is a restricted discretionary activity in sub-precincts A, B, and C in the Ellerslie 1 precinct, the council will restrict its discretion to the following matters, in addition to the matters specified for the relevant restricted discretionary activities in the Residential - Terrace and Apartments Buildings Zone, H6.8.1 Matters of discretion,
 - (a) design and layout;
 - (b) design of carparking, access and servicing;
 - (c) traffic and roading;
 - (d) tree trimming not otherwise a permitted activity, removal and alteration;
and
 - (e) lava cavities

I311.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

I311.8.2.1. Design and layout

- (1) the extent to which the development is in general accordance with the I311.10.2 Ellerslie 1 Precinct Plan 2. Variation to the road layout maybe acceptable as part of a comprehensive masterplan that demonstrates positive urban design outcomes.
- (2) the extent to which the development provides views between buildings into the racecourse from both the surrounding and internal roads.
- (3) the extent to which the proposed development reinforces the curved geometry of the racetrack, including development in a semi-continuous series of medium-rise facade buildings which address the racetrack and align with the internal private road which runs generally parallel to the racetrack's outer rail as shown on I311.10.2 Ellerslie 1 Precinct Plan 2.
- (4) whether minor variance in the required building frontages is acceptable to avoid architectural monotony.
- (5) whether building heights are varied within and between sub-precincts with gaps between lengths of longer building facades.

- (6) whether buildings are generally simple in form, relying on elegant proportioning, façade composition and detail, including recesses, pilasters, balconies, changes in surface texture and colour, for their aesthetic appeal rather than complex forms.
- (7) whether development maintains continuity of architectural form within each individual building and also between separate buildings.
- (8) the extent to which elevations facing streets and other publicly accessible spaces are restrained and relatively formal, befitting the somewhat grand character of the racecourse grounds and gardens.
- (9) the extent to which building form acknowledges site corners where these form a main entry into the racecourse grounds or are visually prominent.
- (10) whether the area between the Major Recreation Facility zone boundary, which coincides with the outer rail of the racetrack, and the adjoining parallel private road should remain visually unimpeded so as to preserve views from the carriageway and footpath within the private road into the racecourse.
- (11) development layout should substantially avoid adverse shadowing effects on existing residential properties within adjoining or nearby sites with Mixed Housing Suburban zone between 9am-3pm in mid-winter.
- (12) development should maximise outlook over publicly accessible areas, the racecourse and infield and minimise outlook over adjoining residential property.
- (13) landscaping associated with development should be responsive to the restrained, elegant and formal character of the racecourse grounds.
- (14) the street boundary of sites should be defined by visually permeable steel, wrought iron or aluminium fencing or stone or concrete walls up to 1.2m, which may incorporate hedging. The use of stone, basalt or volcanic stone similar in appearance and detail to the existing stone walls is encouraged.
- (15) whether streets are constructed in general accordance with I311.8.2.1.1 Indicative Section – Streets adjacent to Racetrack (16.5m minimum width – where it is closest to the racetrack), I311.8.2.1.2 Indicative Street Section – Walpole Street extension between sub-precincts A and B (16.5m wide), and Figure I311.8.2.1.3 Indicative Street Section for all other streets (13.5m wide).

Figure I311.8.2.1.1 Indicative Section – Streets adjacent to Racetrack (16.5m minimum width – where it is closest to the racetrack)

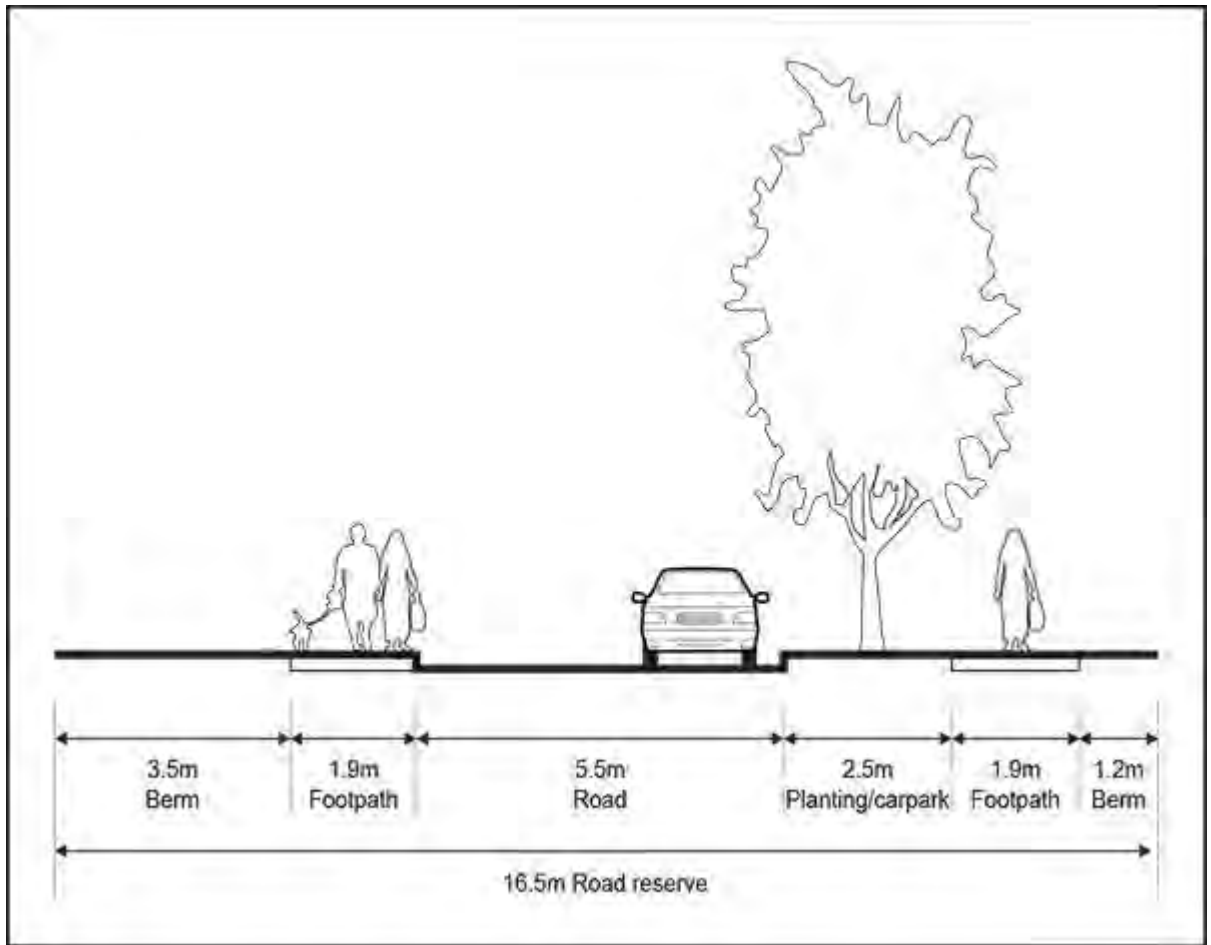

Figure I311.8.2.1.2 Indicative Street Section – Walpole Street extension between sub-precincts A and B (16.5m wide)

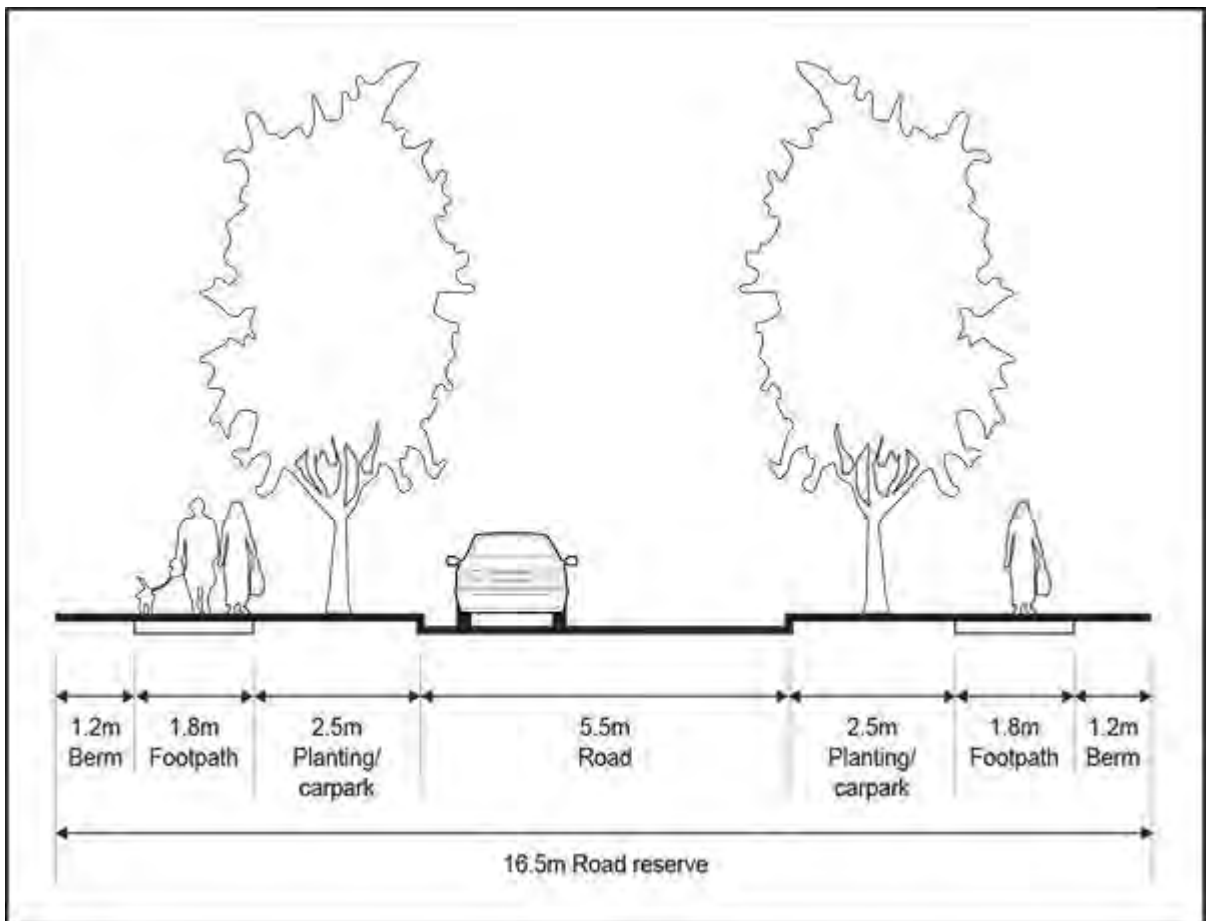

Figure I311.8.2.1.3 Indicative Street Section for all other streets (13.5m wide)

I311.8.2.2. Design of car parking, access and servicing

- (1) adequate signposted public pedestrian access should be provided within the area, including a well-formed route on the racecourse side of the private road paralleling the racecourse, and also pedestrian connections to public transport including between Derby Downs Place and the Greenlane railway station, via Mitchelson Street and The Avenue of Palms, and Ellerslie Town Centre and railway station via Morrin Street.
- (2) at least one publicly accessible footpath should be constructed between the private road and the racecourse's outer rail should an at-grade pedestrian crossing to the infield eventuate.
- (3) access to any basement or outdoor car parking facility should be from the sides or rear of buildings rather than their trackside faces.
- (4) buildings containing car parking facilities at or above ground level should provide a sleeve of residential or active uses between the car parking areas and the street or publicly accessible space frontages. Where sleeving is not practicable, all vehicles at or above ground level should be

screened from view from public areas and be located outside the required building frontage.

I311.8.2.3. Traffic and roading

- (1) The extent to which the detailed design of and any changes to the roading network identified below achieves good urban design outcomes and ensure that any adverse effects on the roading networking are avoided or mitigated:
 - (a) the T-intersection on the northern side of Morrin Street in the vicinity of Somerfield Street;
 - (b) the realignment of Mitchelson Street; or
 - (c) the roundabout at the intersection of Mitchelson and Morrin streets, or alternative design that achieves good urban design and traffic management outcomes
- (2) whether and to what extent works maybe required to upgrade or modify intersections based on whether traffic modelling shows this is needed to accommodate traffic flows arising from the proposed development. These intersections may include:
 - (a) Great South Road and Woodbine Avenue;
 - (b) Great South Road and Kalmia Street;
 - (c) Mitchelson and Walpole Streets;
 - (d) Main Highway and Walpole Street;
 - (e) Ellerslie Racecourse Drive and Greenlane East intersection; and
 - (f) Greenlane and Ellerslie Panmure Interchanges.

Note: If any of these intersections are included in Auckland Transport's programme of works, development contributions will be sought to assist in the funding of those works instead of conditions being imposed requiring works and services or imposing financial contributions.

I311.8.2.4. Tree modification or removal tree trimming not otherwise a permitted activity, removal and alteration:

- (1) the degree to which the tree contributes to the existing amenities of the precinct and protects the surrounding environment from the adverse effects of development;
- (2) the necessity for carrying out the works;
- (3) whether any alternative methods and locations are available to the applicant for carrying out the work or activities;

- (4) the degree to which the tree or a part of the tree is, in the opinion of a Council arborist structurally unsound;
- (5) the degree to which removal of the tree would be beneficial to the health and growth of existing trees on the site, taking into account the size, appearance, health and condition of the existing trees;
- (6) the extent to which the removal of the tree will impact on ground stability;
- (7) whether the proposed activities within the dripline of the tree, in the opinion of Council, will not damage the tree or endanger its health;
- (8) whether conditions may be imposed as part of any consent to an application to mitigate effects and may include the following requirements:
 - (a) payment of a bond to ensure a tree is not damaged or destroyed during pruning and maintenance or works or activities in the dripline area; and
 - (b) providing a replacement tree where a tree is removed or destroyed where appropriate, having regard to the amenity of the area.

I311.8.2.5. Lava cavities

- (1) whether a protocol is provided to Council's satisfaction setting out a suitable response should lava cavities be discovered during construction.

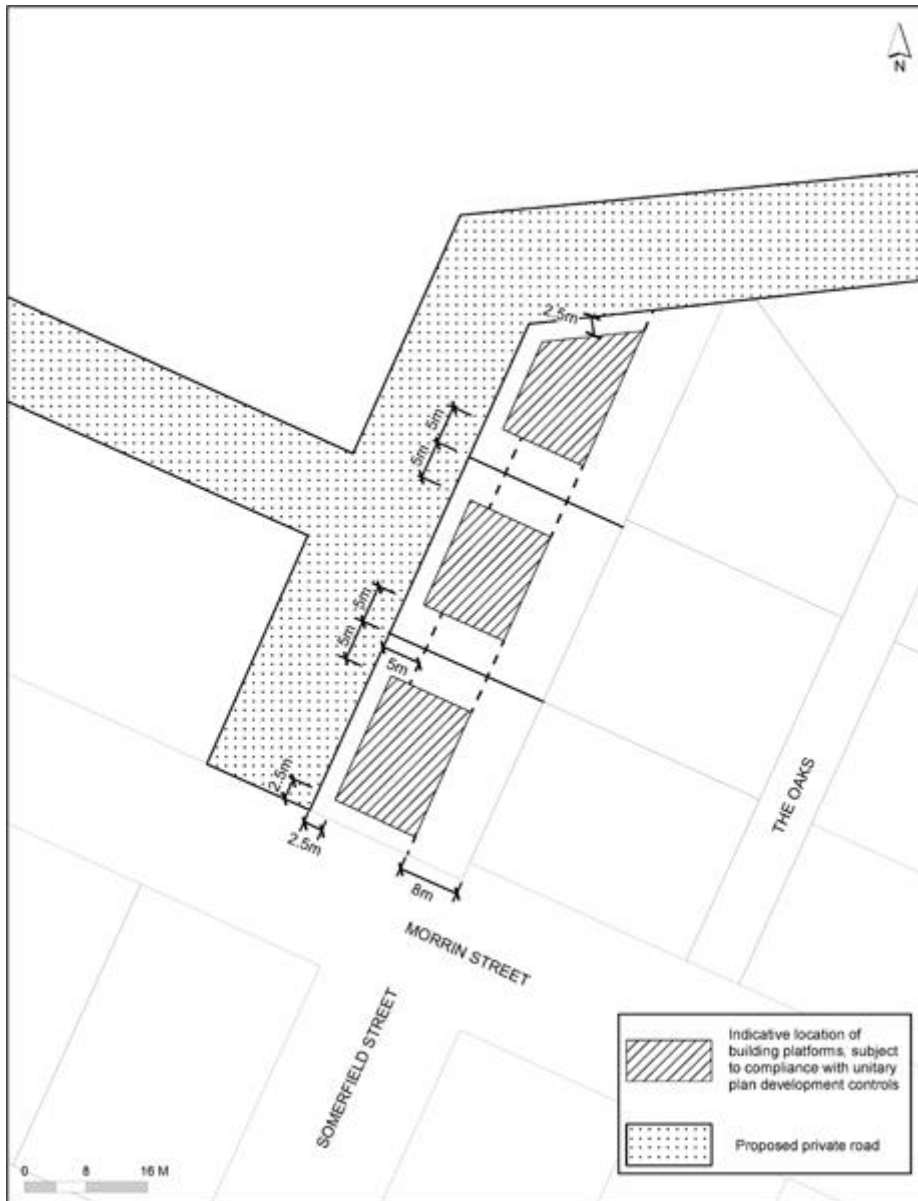

I311.9. Special information requirements

An application for any activity must be accompanied by:

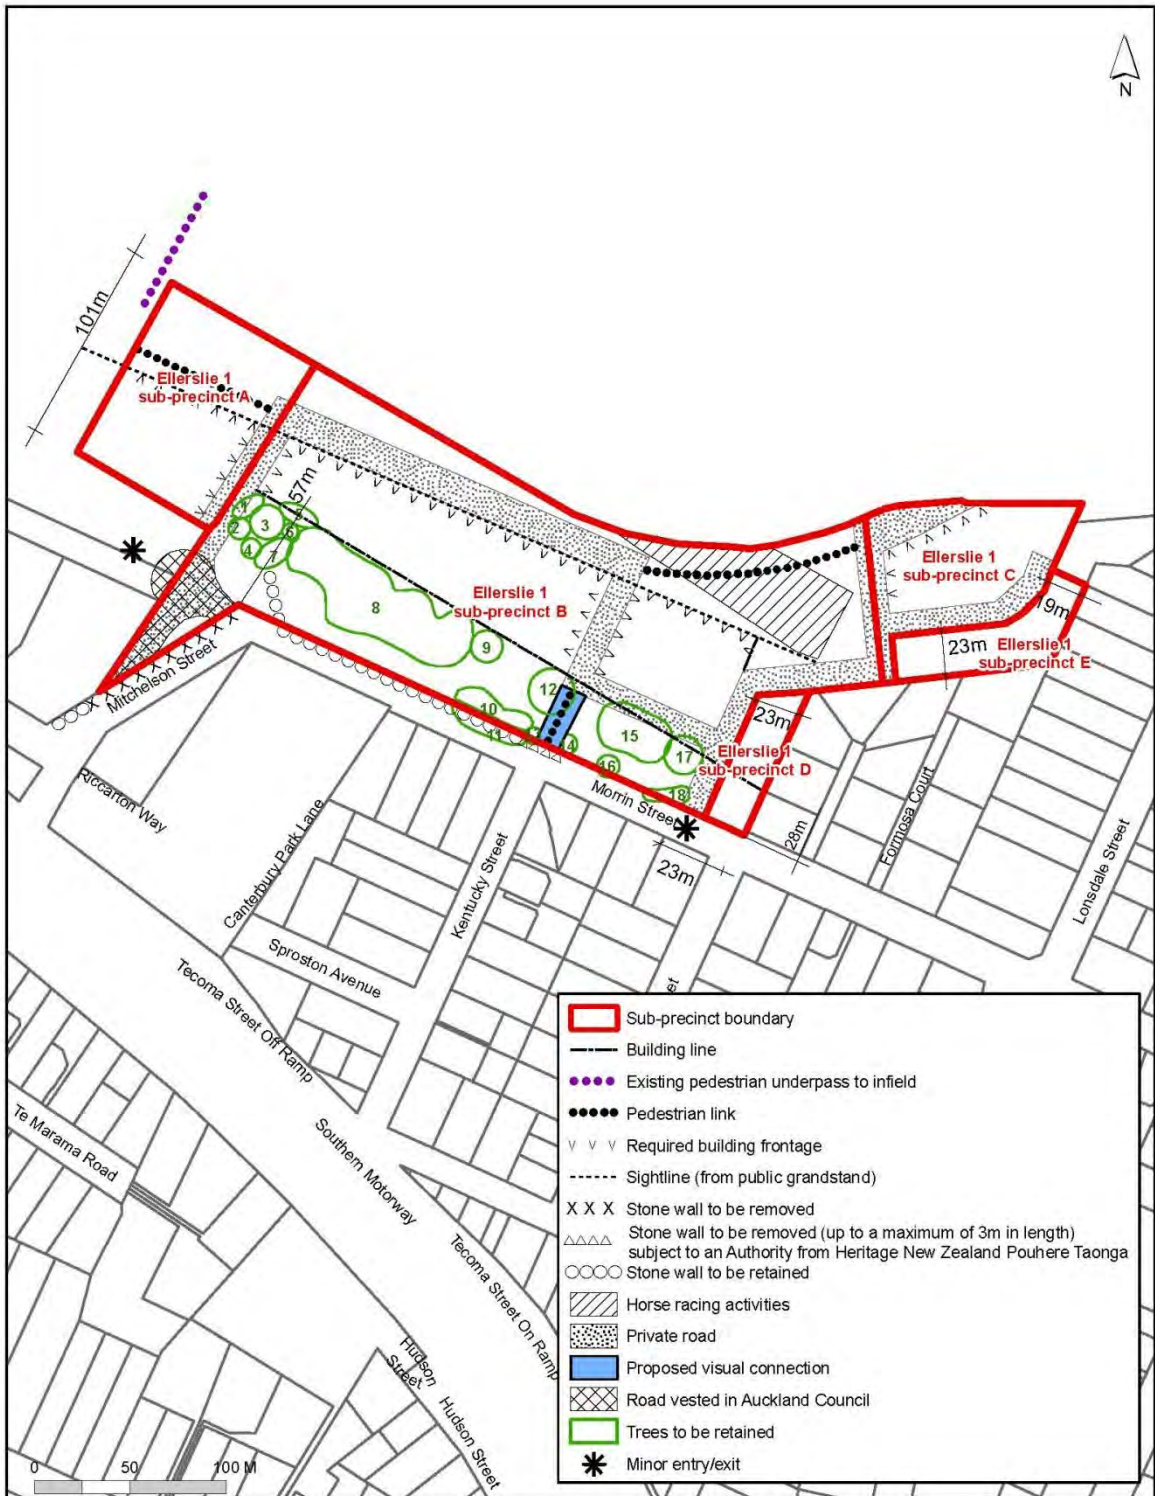

- (1) The special information requirements in D12 apply.
- (2) In addition, an application for resource consent for subdivision or a restricted discretionary activity for accommodation shall include:
 - (a) the detailed design of, or any necessary design change to, the following parts of the adjacent roading network:
 - (i) the T-intersection on the northern side of Morrin Street in the vicinity of Somerfield Street
 - (ii) the realignment of Mitchelson Street
 - (iii) the roundabout at the intersection of Mitchelson and Morrin streets, or alternative design that achieves good urban design and traffic management outcomes
 - (b) A travel plan should be provided, prepared in consultation with the NZTA and Auckland Transport, which includes measures to reduce private car travel and promote walking, cycling and public transport use.

I311.10. Precinct plans

I311.10.1. Ellerslie 1: Precinct plan 1 – Special Yards

1311.10.2. Ellerslie 1: Precinct plan 2

I312. Ellerslie 2 Precinct

I312.1. Precinct Description

The Ellerslie 2 precinct is located in the south western corner of the Ellerslie Racecourse, bordered by the southern motorway and an avenue of phoenix palms, which is used to provide the main entrance to the racecourse. The land contains a mixture of pervious and impervious surfaces and was once frequently used for parking in conjunction with race meetings.

The purpose of the Ellerslie 2 precinct is to provide for a limited range of mixed uses that complement existing land uses to the north west of the precinct and do not compromise the economic vitality of Ellerslie town centre.

There are three sub-precincts:

- Sub-precincts A and B introduce variations in land use and design development controls from the underlying Business - Mixed Use Zone that manage the built form, limit the range of activities and protect landscape values.
- Sub-precinct C manages the formation and public use of a private road for through access.

The zoning of land within this precinct is Business - Mixed Use Zone. Refer to the planning maps for the location and extent of the precinct.

I312.2. Objectives

- (1) Development is of an intensity that complements surrounding businesses north west of the precinct and does not compromise the economic vitality of Ellerslie town centre.
- (2) Development in sub-precincts A and B is of a scale, bulk and height that integrates positively with the landscape values within the precinct and surrounding built form.
- (3) Development within the precinct and any resulting through traffic does not result in significant adverse effects on the surrounding road network.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above

I312.3. Policies

- (1) Provide for a limited range of mixed uses while managing the effects of activities on the surrounding environment, particularly nearby centres.
- (2) Enable a limited amount of total floor area for retail and food and beverage land uses.
- (3) Require new buildings and development to be designed and located in a manner that contributes positively to the visual landscape of the Ellerslie Racecourse when viewed from the southern motorway, within the racecourse grounds and surrounding sites by:

- (a) Retaining existing significant trees;
 - (b) Requiring sufficient space to allow for additional landscaping;
 - (c) Requiring an active building frontage at the south eastern corner of Sub-precinct B that contributes to pedestrian amenity and passive surveillance of the adjoining road; and
 - (d) Using building design to manage the building scale, height and bulk
- (4) Manage adverse effects of traffic from the precinct and through vehicle and pedestrian safety by:
- (a) Providing a private road through the precinct linking Ascot Avenue and Mitchelson Street designed and constructed to ensure the safety and efficiency of the use of this private road by the public, and formed to provide continuous and integrated access with the existing and vested road connections;
 - (b) Requiring land to vest as road in the Council as specified on the 0 Ellerslie 2 Precinct plan 1 to be designed and constructed in accordance with any relevant codes of practice or any relevant engineering standards;
 - (c) Requiring pedestrian footpaths/routes linking with existing footpaths to be designed and constructed in accordance with any relevant codes of practice or any relevant engineering standards to provide continuous and integrated access with the existing and vested road connections; and
 - (d) Controlling the location and number of vehicular access to sites.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I312.4. Activity table

The provisions in any relevant overlays and the Auckland-wide apply in this precinct unless otherwise specified below.

The provisions of the zone are replaced by Table I312.4.1 Activity table

Table I312.4.1 Activity table specifies the activity status of land use, development, and subdivision activities in the Ellerslie 2 Precinct pursuant to section 9(3) and 11 of the Resource Management Act 1991 or any combination of all of these sections where relevant.

Table I312.4.1 Activity table

Activity		Activity status		
Use		Sub-precincts		
Residential		A	B	C

I312.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I312.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides

that special circumstances exist under section 95A(4) of the Resource Management Act 1991.

- (2) Any application for resource consent for an activity listed in Table I312.4.1 Activity table and which is not listed in Standard I312.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I312.6. Standards

The overlay and Auckland-wide standards apply in this precinct.

The standards below replace the standards of the Business – Mixed use Zone

I312.6.1. Activities in the active building frontage

- (1) The ground floor of a building subject to the active building frontage identified on the 0 Ellerslie 2 Precinct plan 1 must be occupied by the following activities for a minimum depth of 6m:
 - (a) retail up to 300m² gross floor area with sub-precinct A and B combined, and/or
 - (b) food and beverage.

I312.6.2. Building height

- (1) Buildings must not exceed the heights as listed in Table I312.6.2.1 Building height below:

Table I312.6.2.1 Building height

Sub - precinct	Occupiable building height	Height for roof form	Total building height
A	18m	NA	18m
B	25m	2m	27m

I312.6.3. Yards and building setbacks

- (1) Buildings up to 7m in height must be located at least 7.5m from the nearest site area boundary, except where the Active Building Frontage identified on 0 Ellerslie 2 Precinct plan 1 applies.
- (2) Buildings above 7m in height must be located at least 15m from any part of another building.
- (3) Buildings above 7m in height must be setback at least 10m from the motorway boundary.

I312.6.4. Building coverage

- (1) The maximum building coverage for each site area identified on 0 Ellerslie 2 Precinct plan 1 is:
 - (a) 80 per cent for that part of the building up to 7m in height.
 - (b) 35 per cent for that part of the building between 7m and the maximum height specified in I312.6.2 Building height above.

I312.6.5. Active building frontage

- (1) Buildings subject to the active building frontage must:
 - (a) be set back no greater than 6m from the private road frontage;
 - (b) adjoin the site frontage adjoining sub-precinct C (private road) for at least 80 per cent of its length;
 - (c) have a minimum height of 6m for a minimum depth of 6m from the site frontage adjoining sub-precinct C (private road);
 - (d) provide clear glazing for at least 60 per cent the surface area of the building façade at the ground floor; and
 - (e) provide clear glazing for at least 40 per cent the surface area of the building façade at the upper floors.
- (2) Where a building is setback from the private road frontage, the space between the building and private road frontage must incorporate landscaped areas, pedestrian amenity areas or outdoor eating areas.
- (3) The ground floor of a new building subject to the active building frontage must be no more than 1m above or below the level of the site frontage adjoining sub-precinct C (private road).
- (4) Vehicle access to parking and service areas must not occupy more than 10 per cent of the site frontage adjoining sub-precinct C (private road).

I312.6.6. Site areas

- (1) Site areas may be modified in area by up to plus or minus 10 per cent.
- (2) Side boundaries of site areas may be moved up to 15m in either direction.

I312.6.7. Building platform

- (1) Buildings must be constructed within the building platform identified on the 0 Ellerslie 2 Precinct plan 1.

I312.6.8. Landscaping

- (1) Minimum landscaping for each site area identified on the 0 Ellerslie 2 Precinct plan 1 is 15 per cent.

I312.6.9. Identified Trees

(1) The following trees listed in Schedule I312.6.9.1 Identified trees below and identified on 0 Ellerslie 2 Precinct plan 1 are subject to this rule.

Schedule I312.6.9.1 Identified trees

Tree number on 0 Ellerslie 2: Precinct plan 1	Botanical name	Common name	Location of tree	Legal description
1	Removed			
2	Metrosideros excelsa	Pohutukawa	80-100 Ascot Avenue	Lot 2 DP 476619
3	Metrosideros excelsa	Pohutukawa	130 Ascot Avenue	Lot 1 DP 406738
4	Elaeocarpus dentatus	Hinau	80-100 Ascot Avenue	Lot 2 DP 476619
5	Elaeocarpus dentatus	Hinau	80-100 Ascot Avenue	Lot 2 DP 476619
6	Telopea oreads.	Warratah	80-100 Ascot Avenue	Lot 2 DP 476619
7	Podocarpus sp.	Cow tail Pine	130 Ascot Avenue	Lot 1 DP 406738
8	Lagunaria patersonii	Norfolk Island Hibiscus	80-100 Ascot Avenue	Lot 2 DP 476619
9	Corynaocarpus laevigatus	Karaka	130 Ascot Avenue	Lot 1 DP 406738
10	Stenocarpus sinuatus	Firewheel tree	80-100 Ascot Avenue	Lot 2 DP 476619
11	Lagunaria patersonii	Norfolk Island Hibiscus	80-100 Ascot Avenue	Lot 2 DP 476619
12	Lagunaria patersonii	Norfolk Island Hibiscus	130 Ascot Avenue	Lot 1 DP 406738
13	Corynaocarpus laevigatus	Karaka	80-100 Ascot Avenue	Lot 2 DP 476619
14	Vitex lucens	Puriri	130 Ascot Avenue	Lot 1 DP 406738
15	Lagunaria patersonii	Norfolk Island Hibiscus	130 Ascot Avenue	Lot 1 DP 406738
16	Cinnamomum camphora	Camphor Laurel	80-100 Ascot Avenue	Lot 2 DP 476619

(2) The following works to the trees in Schedule I312.6.9.1 Identified trees are permitted under this rule.

(a) the removal of any tree or part of a tree that is dead or that is suffering from an untreatable disease which has caused a significant decline in its health, evidence must be produced if required. Note: Where any element

of uncertainty exists as to the likely fate of the tree, the benefit of doubt will be given to the tree's survival by not removing it until such time as its irreversible decline is obvious. Before removing any affected tree, consultation with the council's arborist is strongly advised.

- (b) where emergency tree works are required the person undertaking the work must notify the Council in writing within seven days of the work commencing as to the reason for the work.
- (c) where any statutory authority carries out of work authorised by statute the authority must notify the Council in writing no later than seven days prior to the work commencing as to the reason for the work.
- (d) maintenance of the private road where the works in the dripline of protected trees is supervised by a qualified arborist and in accordance with accepted arboricultural practices.
- (e) trimming of the canopy of the trees, excluding the roots. Such works will be limited to no more than 20 per cent of live growth removal in any one year and must be carried out in accordance with currently accepted arboricultural practice, ensuring that the natural form and branch habit of the tree species is maintained.
- (f) if the trimming is completed by a qualified arborist or arboriculturalist, the work must be limited to no more than 30 per cent of live growth removal in any one year and must be in accordance with currently accepted arboricultural practice, ensuring that the natural form and branch habit of the tree species is maintained.
- (g) where activities do not comply with clauses e. and f above, any regular minor trimming or maintenance must be done by hand operated secateurs or pruning shears, in accordance with the currently accepted arboricultural practice.

I312.7. Assessment – controlled activities

I312.7.1. Matters of control

The Council will reserve its control to all of the following matters when assessing:

- (1) For the use and modification of the private road (Avenue of Palms) for public access that is a controlled activity in the Ellerslie 2 precinct, the Council will reserve its control over the following matters:
 - (a) road closure;
 - (b) monitoring;
 - (c) traffic management measures; and
 - (d) consultation.

I312.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

- (1) Road closure
 - (a) the appropriateness of private road closure to public through traffic on a temporary basis for large scale events associated with the Ellerslie Racecourse.
- (2) Monitoring:
 - (a) whether monitoring is required to be carried out to assess the effects of public through traffic (using the Avenue of Palms) on Morrin Street, Somerfield Street, and Kentucky Streets which connect with the Tecoma Street motorway ramps, Mitchelson Street and Walpole Street, Wairakei Street and Woodbine Avenue.
- (3) Traffic management measures
 - (a) the extent to which traffic management measures are necessary to mitigate adverse effects identified by the monitoring to be implemented, including the temporary or permanent closure of the Avenue of Palms to through traffic and associated road design changes.
- (4) Consultation
 - (a) the extent to which the applicant should provide details on the process to be followed for consultation with NZTA, Auckland Transport, Auckland Council and the residents of the surrounding streets, on the results of the monitoring and the identification and implementation of any necessary traffic management measures.

I312.8. Assessment – restricted discretionary activities

I312.8.1. Matters of discretion

The Council will reserve its discretion to all of the following matters when assessing a restricted discretionary resource consent application:

- (1) Traffic effects
- (2) Intensity and scale of activity
- (3) Centre vitality
- (4) Landscaping and trees to enhance the visual amenity of buildings and reduce their scale
- (5) Building design and interface with the public realm
- (6) Water sensitive design
- (7) Tree trimming not otherwise a permitted activity, removal and alteration refer to E16 Trees in open space zones and E17 Trees in roads.

- (8) Additional subdivision criteria for the private road, pedestrian connections and road to vest in Council.

I312.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities:

(1) Traffic:

- (a) the extent to which The Avenue of Palms (including extension to it) is designed and constructed in accordance with any relevant codes of practice or engineering standards by the landowner prior to the occupation of any proposed building; and
- (b) the extent to which the proposal results in significant traffic effects on Green Lane East, Green Lane interchange, Great South Road and surrounding street network.

(2) Intensity and scale of activity:

- (a) whether the activity is of a character, scale and intensity which ensures that any adverse effects on the planned outcomes identified in the Plan for the surrounding area (including likely future use or intensification) are avoided, remedied or mitigated.

(3) Centre vitality:

(a) whether Retail and Food and Beverage activities:

- (i) have a substantial adverse effect upon the function, role and amenity values, vitality and functions of the city centre, metropolitan centres or town centres (and in the case of activities in the Business - Mixed Use Zone such effects on local centres), beyond those effects ordinarily associated with trade effects on trade competitors, having regard to:
- the activity's proposed size, composition and characteristics; and
 - the centre's on-going ability to provide for the future needs of communities

(b) whether Community activities:

- (i) support the efficient and effective operation of public services; and
- (ii) enable the convenient access of communities to community services.

(c) whether Residential activities:

- (i) result in the intensification of the site; and
- (ii) support local high density housing.

(4) Landscaping and trees:

- (a) the extent to which the landscaping enhances the visual amenity of the building(s) when viewed from the southern motorway, from within the grounds of the Ellerslie Racecourse and surrounding residential areas. Landscaping alongside the motorway boundary should include a significant number of substantial trees capable of growing to a height of at least 8m above the nearest adjoining motorway carriageway;
 - (b) whether landscaping protects or utilise the existing rock wall located between the subject site and the Avenue of Palms (apart from those sections which need to be demolished for vehicle or pedestrian access purposes);
 - (c) the extent to which the landscaping is in-keeping with the character of the site and Ellerslie Racecourse in general; and
 - (d) whether on site carparking is screened from view from the motorway and the Avenue of Palms by existing and proposed planting.
- (5) Building design and interface with the public realm:
- (a) whether the building incorporates architectural relief in terms of its articulation and building mass, and the inclusion of recesses, pilasters, entrances, windows, balconies, and changes in surface texture, colour and other architectural detailing;
 - (b) whether any rooftop projections including towers, turrets, chimneys, lift towers, machinery rooms and water towers which exceed the parapet or roof height, are compatible with the overall architectural form and detailing of the building. As a general rule rooftop projections should be enclosed in a single structure and avoid a plain box like appearance;
 - (c) whether good quality, durable exterior cladding materials are used and highly reflective cladding or glazing avoided;
 - (d) the extent to which the continuity of architectural form in the various facades of a building, especially those visible from adjacent public and private roads. (This criterion is intended to ensure that all of a building's facades are designed to a similar standard);
 - (e) whether on site parking areas, whether at grade or on elevated decks, are softened by planting, paving patterns or other architectural / landscaping elements, so as to provide visual relief when viewed from adjacent buildings;
 - (f) whether windows of buildings are designed to overlook adjacent public and private roads, pedestrian routes and entrances;
 - (g) the extent to which the landscape and streetscape enhances individual sites, adjacent private roads, and any public roads being vested in the Council;

- (h) the extent to which the design treatment of the building edge (with a particular emphasis on the ground level) and any landscape work adjacent to it within the proposed 7.5m setback along that part of the Avenue of Palms that is not classified as 'active building frontage', contributes to the quality and safety of the proposed pedestrian route by:
 - (i) entry foyers, offices or other ground level activities (where possible) facing the road;
 - (ii) employing design techniques to mitigate any 'blank wall' effect;
 - (iii) providing quality landscape design and appropriate lighting that are consistent with 'personal safety' (CPTED) principles; and
 - (iv) ensuring that the space within the setback (between the building edge and road boundary) is not used for surface carparking (apart from delivery bays).
- (i) in sub-precinct B:
 - (i) the extent to which proportions (height in relation to footprint, including modulation) and design avoid buildings with bulky appearance; and
 - (ii) the extent to which the building in sub-precinct B contributes as a positive landmark when viewed from the motorway.
- (6) Water sensitive design:
 - (a) whether On site stormwater management can be integrated into the site design, including landscaped areas, applying to apply a water sensitive design approach as appropriate.
- (7) Tree trimming not otherwise a permitted activity, removal and alteration:
 - (a) the degree to which the tree contributes to the existing amenities of the precinct and protects the surrounding environment from the adverse effects of development;
 - (b) the need to obtain a practicable building site, access, a car parking area, or to install engineering services to the land;
 - (c) any alternative methods which may be available to the applicant in the achievement of their objectives including consideration of variation to specified development controls or alternative design options where this would encourage retention and enhancement of existing large trees on the site;
 - (d) whether the tree can be relocated;
 - (e) whether previous applications made in respect of the land involved consideration of treescape conservation;

- (f) the extent to which the tree or trees contribute to the amenity of the neighbourhood both visual and physical, including contributions as habitats for birds and other animals;
- (g) whether there are any function the tree may have in conserving water and soil;
- (h) whether there are any actions of the applicant in regard to the tree;
- (i) the extent to which the tree or part of a tree is, in the opinion of a council arborist, structurally unsound;
- (j) whether removal of the tree would be beneficial to the health and growth of existing, more appropriate trees on the site, taking into account the size, appearance, health and condition of those existing trees; and
- (k) the impact of the tree on ground stability.

(8) Additional subdivision criteria

The following assessment criteria apply to subdivision within the precinct and these are in addition to any relevant assessment criteria in the Auckland-wide Subdivision rules:

- (a) the extent to which the layout of the private road should be in accordance with the precinct plan;
- (b) the extent to which the Avenue of Palms (including its proposed extension) is designed and constructed in accordance with any relevant codes of practice or engineering standards and include the following works:
 - (i) a traffic roundabout part way along the Avenue of Palms and another at its intersection with Mitchelson Street; and
 - (ii) the provision of footpaths along each side of the proposed private road together with connections to the existing and proposed footpaths in Ascot Avenue and Mitchelson Street.
- (c) whether the proposed footpaths link into the footpaths/pedestrian accessways on the adjoining site(s) so as to facilitate access to Greenlane Road and the Greenlane train station; and
- (d) The appropriateness of the proposed road to be vested in the Council as shown on the precinct plan.

I312.9. Special information requirements

The special information requirements in the underlying zone and Auckland-wide provisions apply in this precinct.

In addition, an application for a controlled activity for the use and modification of the private road (Avenue of Palms) must be accompanied by:

(1) Traffic monitoring programme

(a) the traffic monitoring programme must set out how the traffic monitoring is to be undertaken:

(i) prior to the opening of the Avenue of Palms to through traffic; and/or

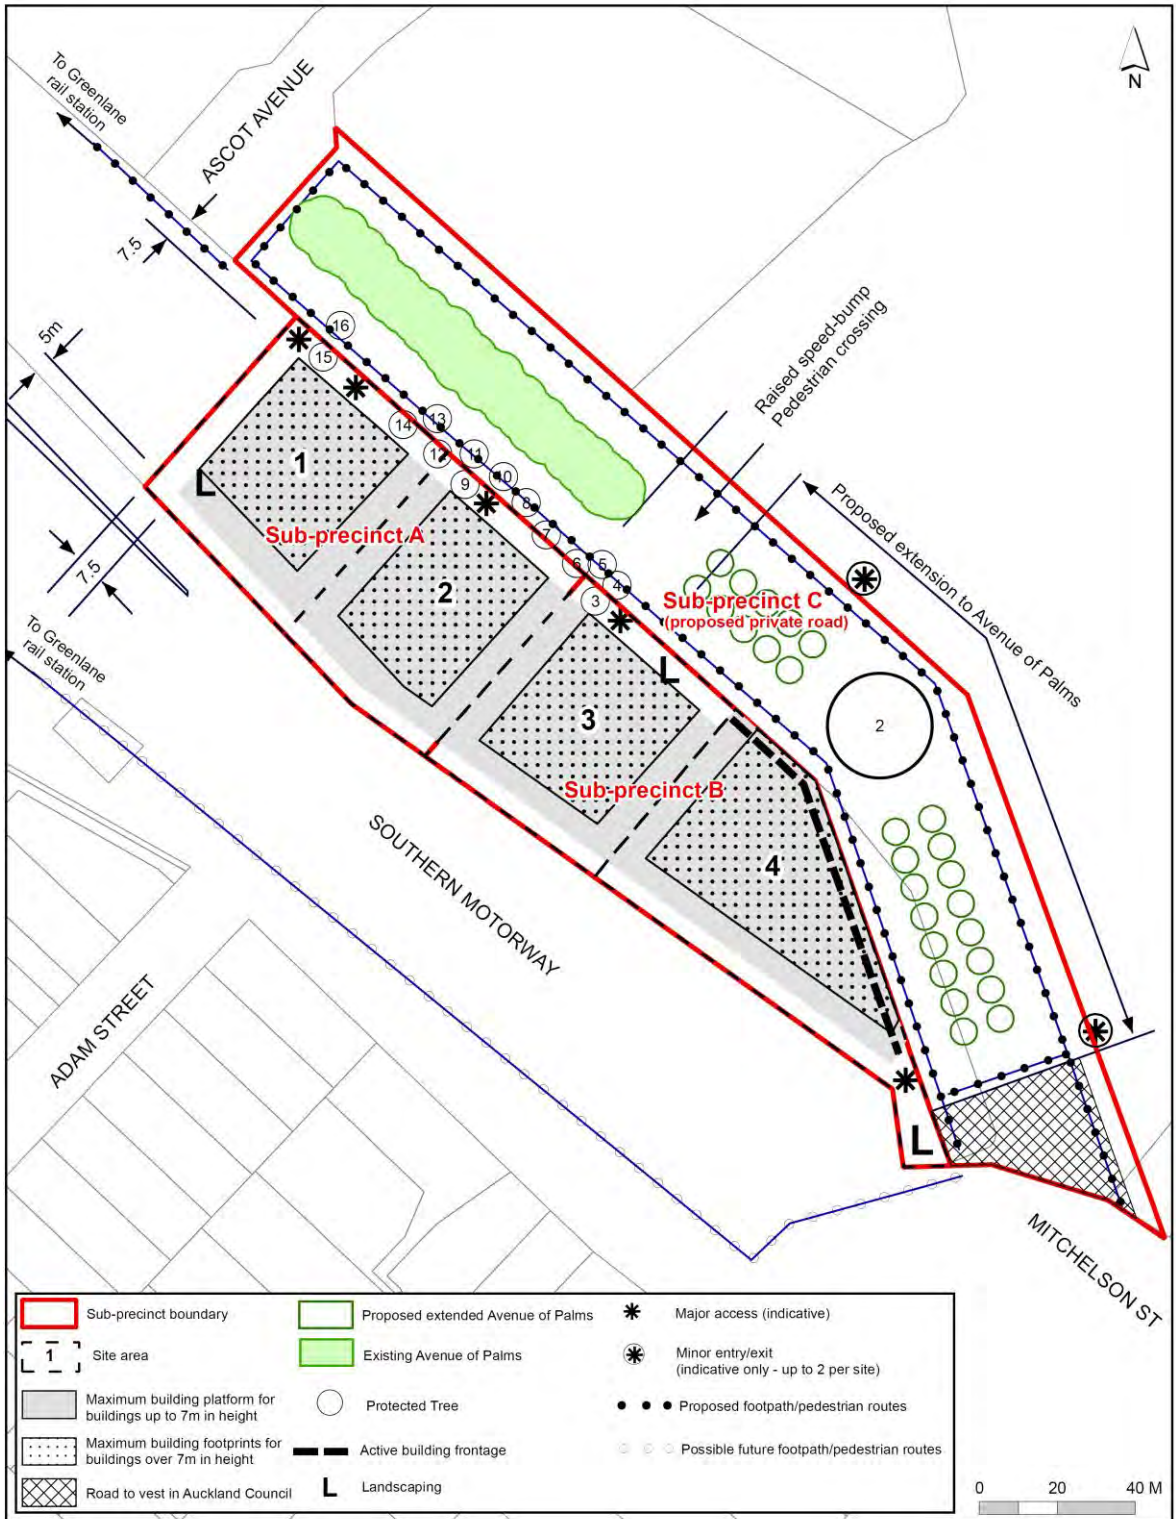

(ii) within 1 month of the following times or events:

- 12 months after the opening of the Avenue of Palms to through traffic (or a shorter period if deemed appropriate by the Council following the opening of the Avenue of Palms to through traffic); and
- 12 months, 24 months, and 36 months after substantial completion and occupation of the development provided for within the precinct.

(b) the traffic monitoring must be undertaken by an independent traffic engineer engaged by the Auckland Racing Club and the results of the monitoring must be submitted in a report to Auckland Transport and Auckland Council within 2 months of completion of each of the monitoring surveys.

I312.10. Precinct plans

1312.10.1. Ellerslie 2 Precinct plan 1

I313. Ellerslie Racecourse Precinct

I313.1. Precinct description

The Ellerslie Racecourse Precinct provides specific planning controls for the use of the Ellerslie Racecourse. The Ellerslie Racecourse is a major horse racing venue that covers approximately 55 hectares of privately-owned land.

The zoning of the land within the Ellerslie Racecourse Precinct is the Special Purpose - Major Recreation Facility Zone. The overlay, Auckland-wide and zone objectives and policies apply in this precinct in addition to those listed below.

Refer to the planning maps for the location and extent of the precinct.

I313.2. Objectives

- (1) The Ellerslie Racecourse is protected as a regionally and nationally important venue for all of the following primary activities:
 - (a) horse racing activities;
 - (b) organised sport and recreation;
 - (c) informal recreation;
 - (d) concerts, events and festivals;
 - (e) markets, fairs and trade fairs;
 - (f) functions, conferences, gatherings and meetings; and
 - (g) displays and exhibitions.
- (2) A range of activities compatible with, or accessory to, the primary activity are enabled.
- (3) The adverse effects of the operation of the Ellerslie Racecourse are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

I313.3. Policies

- (1) Enable the safe and efficient operation of the Ellerslie Racecourse for its primary activities.
- (2) Protect the primary activity of the Ellerslie Racecourse from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and

- (b) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of the Ellerslie Racecourse, having regard to the amenity of surrounding properties.
- (5) Recognise that the Ellerslie Racecourse's primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

I313.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E40 Temporary activities;
- (2) E25 Noise and vibration (noise provisions only);
- (3) E24 Lighting;
- (4) E27 Transport – district rule E27.6.1; and
- (5) E27 Transport – district rule E27.6.2.

Table I313.4.1 specifies the activity status of land use and development activities in the Ellerslie Racecourse Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I313.4.1: Activity Table

	Activity	Activity status
Use		
Primary activity		
(A1)	Horse racing activities	P
(A2)	Organised sports and recreation	P
(A3)	Informal recreation	P
(A4)	Concerts, events and festivals	P
(A5)	Markets, fairs and trade fairs	P
(A6)	Functions, conferences, gatherings and meetings	P

(A29)	Non accessory retail up to 500m ² gross floor area	P
(A30)	Non accessory retail greater than 500m ² gross floor area	RD
(A31)	Professional fireworks displays meeting Standard I313.6.10	P
(A32)	Professional fireworks displays not meeting Standard I313.6.10	RD
(A33)	Helicopter flights meeting Standard I313.6.11	P

(A34)	Helicopter flights not meeting Standard I313.6.11	RD
(A35)	Any compatible activity not meeting Standard I313.6.5 but meeting all other standards	C
Development		
(A36)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 25m in height	P
(A37)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 25m and up to 35m in height	RD
(A38)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 35m in height	D
(A39)	Light towers and associated fittings up to and greater than 35m in height	P
(A40)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I313.6.8	RD
(A41)	Demolition of buildings	P
(A42)	Temporary buildings	P
(A43)	Workers' accommodation	P

I313.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I313.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I313.4.1 Activity table and which is not listed in I313.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I313.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I313.4.1 must comply with the following activity standards unless otherwise stated.

I313.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing activity sensitive to noise must not exceed the noise limits in Table I313.6.1.1.

Table I313.6.1.1: Noise Standards

Time, day, duration and frequency	Noise limit
Up to 5 special noise events between 8:00am and 10:30pm in any 12 month period	75dB $L_{Aeq(5min)}$
Up to 15 special noise events between 8:00am and 10:30pm in any 12 month period	65dB $L_{Aeq(5min)}$
General noise standards for all other days including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:30pm	55dB L_{Aeq}
General noise standards for all other times	45dB L_{Aeq} and 75dB L_{Amax}

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) For special noise events an adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.
- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) Where $L_{Aeq(5min)}$, is specified, no 5 minute measurement sample can exceed the stated limit.
- (7) Professional fireworks displays and helicopter flights are excluded from this standard.

I313.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the

event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.

- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I313.6.2, the curfew and pre-curfew times are as stated in Table I313.6.2.1.

Table I313.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 11pm
Curfew	11pm – 7am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:
 - (a) The limits in Table I313.6.2.2 when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I313.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) The vertical illuminance limits in Table I313.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I313.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15% (based on an adaption luminance of 2 cd/m²) on any public road, calculated within each traffic lane in the direction of travel.
- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I313.6.2.4 and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling.

Table I313.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd
Special lighting events	25,000 cd

- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I313.6.2.5. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.
- (9) Professional fireworks displays are excluded from this standard.

Table I313.6.2.5: Building façade luminance

	Luminance limit
Standard	10 cd/m ²
Special lighting events	25 cd/m ²

I313.6.3. Special noise events

- (1) The total number of special noise events in any 12 month period must not exceed 20 events.
- (2) For the purpose of this standard, a special noise event exceeds the standard noise limits but does not exceed the special noise limits listed in Table I313.6.1.1.
- (3) Special noise events may occur consecutively over a day or days, but may not exceed the total number of special noise events allowed in any 12 month period provided that:
- (a) There must be no more than 2 special noise events on any one day.

(b) There must be no more than 4 special noise events within any 2 week period.

- (4) A single special noise event must be limited to a total duration of 6 hours. Any special noise event lasting longer than 6 hours shall be counted as 2 special noise events. The duration of a special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.

I313.6.4. Special lighting events

- (1) The total number of special lighting events in any 12 month period must not exceed 25 events.
- (2) For the purpose of this standard, a special lighting event exceeds the standard lighting limits but does not exceed the special lighting limits listed in Tables I313.6.2.4 and I313.6.2.5.

I313.6.5. Traffic management

All activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 20,000 people and does not require the closure of a public road.

I313.6.6. Parking

- (1) A minimum number of parking spaces must be provided within the precinct at the rate of 1 parking space for every 4 persons that the outside seated capacity of the grandstands is designed to accommodate.

I313.6.7. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas.

I313.6.8. Interface control area

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on the precinct plan.
- (2) Temporary buildings are excluded from this standard. Entry ports and ticket boxes with an individual gross floor area of less than 50m² are also excluded from this standard.

I313.6.9. Height in relation to boundary

- (1) Along the boundaries where the Ellerslie Racecourse Precinct directly adjoins a residential zone, the height in relation to boundary standard that applies in the adjoining zone will also apply to the precinct boundary.

- (2) Temporary buildings, light towers and associated fittings are excluded from this standard.

I313.6.10. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 metres from any residential zone.
- (5) Displays must comply with 140dB L_{Zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I313.6.11. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 150m from any neighbouring site.

I313.6.12. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I313.7. Assessment – controlled activities

I313.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) The effects of the proposed activity on the safety and efficiency of the transport network.

I313.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation

and implementation of a Transport and Traffic Management Plan
(prepared by a suitably qualified and experienced person).

I313.8. Assessment – restricted discretionary activities

I313.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Any activity that does not comply with noise and/or lighting standards:
 - (a) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) Any activity that does not comply with permitted helicopter flight standard:
 - (a) The effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties.
- (3) Any activity that does not comply with permitted professional fireworks display standard:
 - (a) The effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 25m and up to 35m in height and/or which does not comply with height in relation to boundary standards:
 - (a) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I313.6.8.
 - (a) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) Any activity that does not comply with screening standards:
 - (a) The visual effects of rubbish and storage areas on residential and open space zoned sites.
- (7) Any activity identified as a restricted discretionary activity:

In addition to the matters listed for non-compliance with any general and/or specific standard, discretion is restricted over all of the following matters:

- (a) the effects of the proposed activity on the efficient operation of the primary activity of the site;

- (b) the effects of traffic and parking on the safety and efficiency of the transport network; and
- (c) The effects of the activity on metropolitan, town or local centres.

I313.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) Whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and,
 - (iii) the degree of non-compliance.
 - (b) Whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time.
 - (c) The extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
 - (d) The extent to which any artificial lighting will create a traffic safety issue.
 - (e) Whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing.
 - (f) The extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance.
 - (g) Whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
 - (h) The extent to which additional special events adversely affect the amenity of surrounding properties having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of special event standards;

- (iii) the additional number of special events;
 - (iv) whether there is an operational need for the exceedance
- (2) The effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
 - (a) The extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
 - (a) The extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (b) The extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones).
 - (c) Whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s.
 - (d) The extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (4) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
 - (a) The extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;

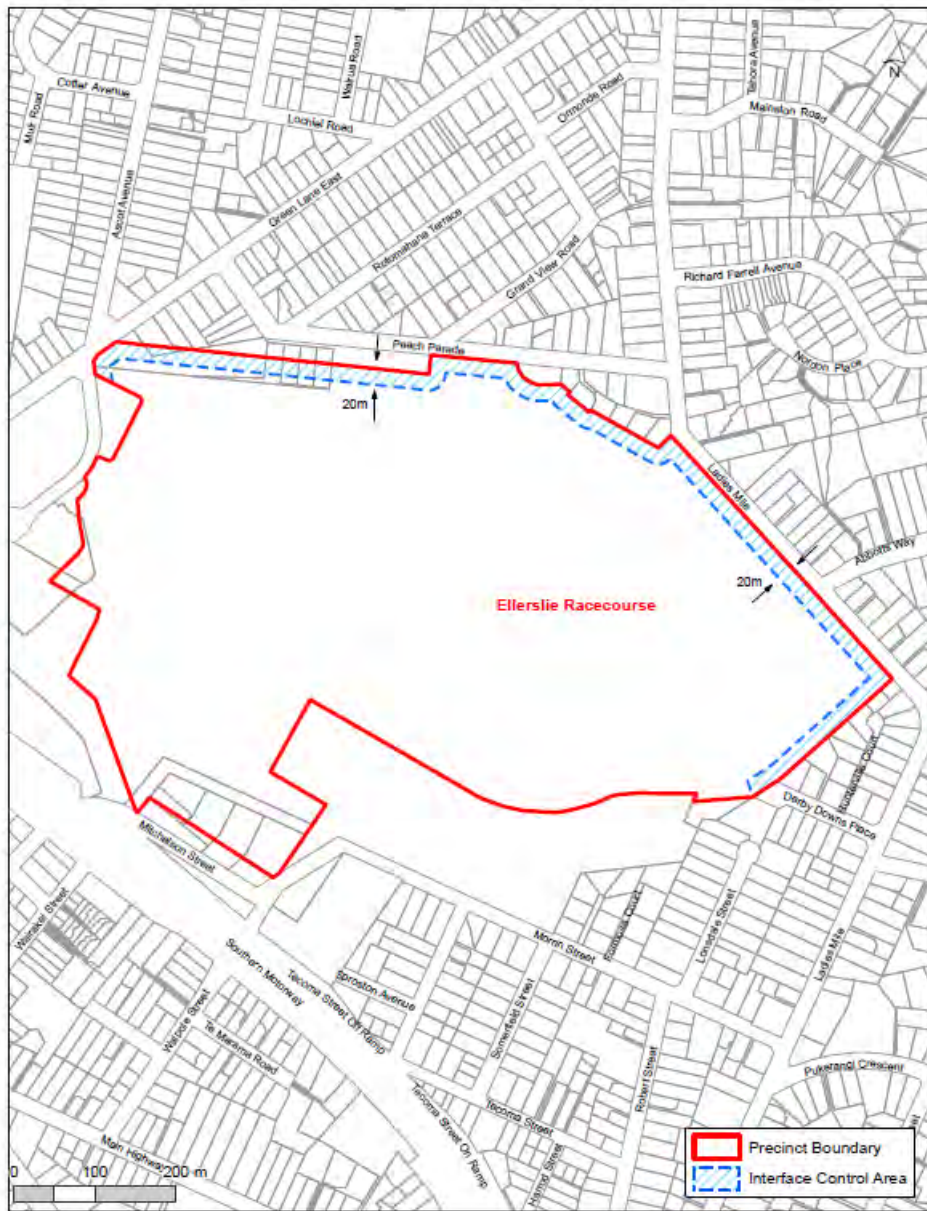

- (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) The effects of the proposed activity on the efficient operation of the primary activity of the site:
- (a) Whether the activity is of a character, scale and intensity to ensure that adverse effects on the operation of the primary activity, including its likely future use or intensification, are avoided, remedied or mitigated.
- (6) The effects of traffic and parking on the safety and efficiency of the transport network:
- (a) Whether there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements.
 - (b) Whether a reduction in carparking will compromise the successful implementation of a Traffic and Transport Management Plan, where relevant or required.
 - (c) Whether the precinct has sufficient parking capacity to provide for the day to day needs of existing and proposed activities.
- (7) The effects of the activity on metropolitan, town or local centres:
- (a) Whether the proposed activity will adversely affect the function, role, or amenity of any metropolitan, town or local centre beyond those effects ordinarily associated with trade effects on trade competitors.
- (8) The visual effects of rubbish and storage areas on residential and open space zoned sites:
- (a) The extent to which screening is practicable.
 - (b) The extent to which distance and topographical matters mitigate likely adverse visual effects.

I313.9. Special information requirements

There are no special information requirements for this precinct.

1313.10. Precinct plans

1313.10.1. Ellerslie Racecourse: Precinct plan 1

I314 Epsom Precinct

I314.1. Precinct Description

The Epsom Precinct applies to an 8.48 hectare site at 74 Epsom Avenue, Epsom. The purpose of the Epsom precinct is to enable the development and operation of a range of education-focused activities. Campus facilities on the site include a range of small to large buildings primarily used for teaching, learning and research, childcare facilities, a marae as well as substantial parking areas and recreational facilities in a spacious well-treed environment. The Campus is one of the largest teacher education providers in the country. The campus adjoins two long-established schools providing primary and intermediate education, and there is some sharing of facilities and services.

Community, commercial and social services and other accessory use of the facilities are also enabled in the precinct. In addition, accessory accommodation, administrative, cultural, health, retail and communal facilities are enabled within the definition of Tertiary Education facilities.

The zoning of the land within the Epsom precinct is Residential - Terrace Housing and Apartment Buildings and Residential - Mixed Housing Suburban zones.

I314.2. Objectives

- (1) Tertiary education facilities at Epsom Campus meet the education needs of their students, facilitate research and economic development, and provide for the support and well-being of employees, students and visitors.
- (2) Tertiary education facilities integrate positively with the wider community and environment and mitigate potential adverse effects.
- (3) Tertiary education and accessory business activities benefit from co-location in tertiary education precincts.
- (4) New buildings and structures respond to and positively contribute to the amenity values of public streets, public open spaces and surrounding context, thereby reinforcing sense of place while having regard to the functional and operational requirements of the tertiary education facility.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I314.3. Policies

- (1) Enable a wide range of activities and building development in the Epsom Precinct, including tertiary education, research, health, recreation, student accommodation and appropriate accessory activities.
- (2) Provide for those accessory activities which clearly contribute to and benefit from co-location with a tertiary education facility, including research, innovation, learning, clinics, and related work experience and training.

- (3) Having regard to the functional and operational requirements of the tertiary education facility, require new buildings and significant additions and alterations to be designed in a manner that:
- (a) makes efficient use of the site;
 - (b) contributes to the amenity of the public realm where development is located adjacent to a public street or public open space;
 - (c) responds positively to the existing and planned future form and quality of the Epsom Precinct, underlying zone and surrounding area; and
 - (d) responds and contributes positively to the sense of place.
- (4) Require screening or landscaping of waste management facilities, service areas/buildings and parking to enhance their appearance when viewed from adjacent residential zones or the public realm.
- (5) Enable accessory activities to meet the needs of employees, students and visitors without undermining the function of nearby town centres as the primary location for business activities, and while avoiding, remedying or mitigating adverse effects on the transport network.
- (6) Require new buildings to be designed in a manner that respects any adjacent existing heritage places on the site and provides a high standard of amenity.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I314.4. Activity table – Epsom Precinct

The provisions in any relevant overlays, zone and Auckland-wide apply in this precinct unless otherwise specified below.

Table I314.4.1 Activity table specifies the activity status of land use and development activities in the Epsom Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I314.4.1

Activity		Activity status
Use		
Accommodation		
(A1)	Student accommodation	P
Commerce		
(A2)	Commercial services	P
(A3)	Licensed premises accessory to Tertiary education facilities	P
(A4)	Laboratories	P
(A5)	Entertainment facilities accessory to Tertiary education facilities	P

(A6)	Light manufacturing and servicing accessory to Tertiary education facilities	P
(A7)	Office accessory to Tertiary education facilities	P
(A8)	Use of Tertiary education facilities for conference purposes	P
(A9)	Conference facilities	D
Community		
(A10)	Care centres	P
(A11)	Community facilities	P

(A22)	Buildings, alterations, additions and demolition unless otherwise specified below	P
(A23)	Sport and recreation structures	P
(A24)	Buildings greater than 500m ² gross floor area	RD
(A25)	Buildings, external alterations, additions and demolition within the site and where the work is visible from and located within 10m of a road or land zoned Open Space (excluding private roads)	RD
(A26)	Parking buildings	RD
(A27)	Parks maintenance	P
Infrastructure		
(A28)	Waste management facilities accessory to tertiary education facilities	P

I314.5. Notification

- (1) Any application for resource consent for an activity listed in Table I314.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I314.6. Standards

The overlay and Auckland-wide standards apply in this precinct, unless otherwise specified below.

The following standards apply to activities specified within Table I314.4.1 Activity table.

The zone standards apply to activities not specified within the Activity Table, other than I314.6.1 Building height which also applies to the zone.

I314.6.1. Building height

- (1) Buildings must not exceed the heights as set out in Epsom: Precinct plan 1 - building heights.

I314.6.2. Yards

- (1) The following table sets out the permitted minimum yard requirements for the Epsom Precinct:

Table I314.6.2.1

Yard	Dimension
Front, side and rear yards adjoining a site in the residential zones or a public open space	3m

I314.6.3. Building coverage

- (1) The maximum building coverage area must not exceed 50 per cent of the net site area.

I314.6.4. Height in relation to boundary

- (1) Where a site in the Epsom Precinct directly adjoins a site in another zone outside the precinct, the height in relation to boundary control that applies in the adjoining zone applies to the common boundary.
- (2) Where the adjoining zone does not specify a height in relation to boundary control, the yard and/or setback controls in the adjoining zone apply to the common boundary.

I314.6.5. Screening

- (1) Any outdoor storage or rubbish collection areas that directly face and are visible from a residential zone or public open space adjoining a boundary with, or on the opposite side of the road from, the Epsom Precinct, must be screened from those areas by a solid wall or fence at least 1.8m high.

I314.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I314.8. Assessment – restricted discretionary activities

I314.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) for parking buildings and structures, buildings greater than 500m² gross floor area:
 - (a) refer to matters H30.8.1 in Special Purpose – Tertiary Education Zone.
- (2) for buildings, external alterations, additions and demolition within the site and where the work is visible from and located within 10m of a road or land zoned Open Space (excluding private roads):
 - (a) refer to matters 30.8.1 in Special Purpose – Tertiary Education Zone.
- (3) for infringements of building height, height in relation to boundary and maximum building coverage standards:
 - (a) refer to matters H30.8.1 in Special Purpose – Tertiary Education Zone.
- (4) for infringement of yards and screening standards:
 - (a) refer to matters H30.8.1 in Special Purpose – Tertiary Education Zone.

I314.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) for parking buildings and structures, buildings greater than 500m² gross floor area:
 - (a) refer to criteria H30.8.2 in Special Purpose – Tertiary Education Zone.
- (2) for buildings, external alterations, additions and demolition within the site and where the work is visible from and located within 10m of a road or land zoned Open Space (excluding private roads):
 - (a) refer to criteria H30.8.2 in Special Purpose – Tertiary Education Zone.
- (3) for building height, height in relation to boundary, maximum building coverage:

(a) refer to criteria H30.8.2 in Special Purpose – Tertiary Education Zone.

(4) for yards and screening

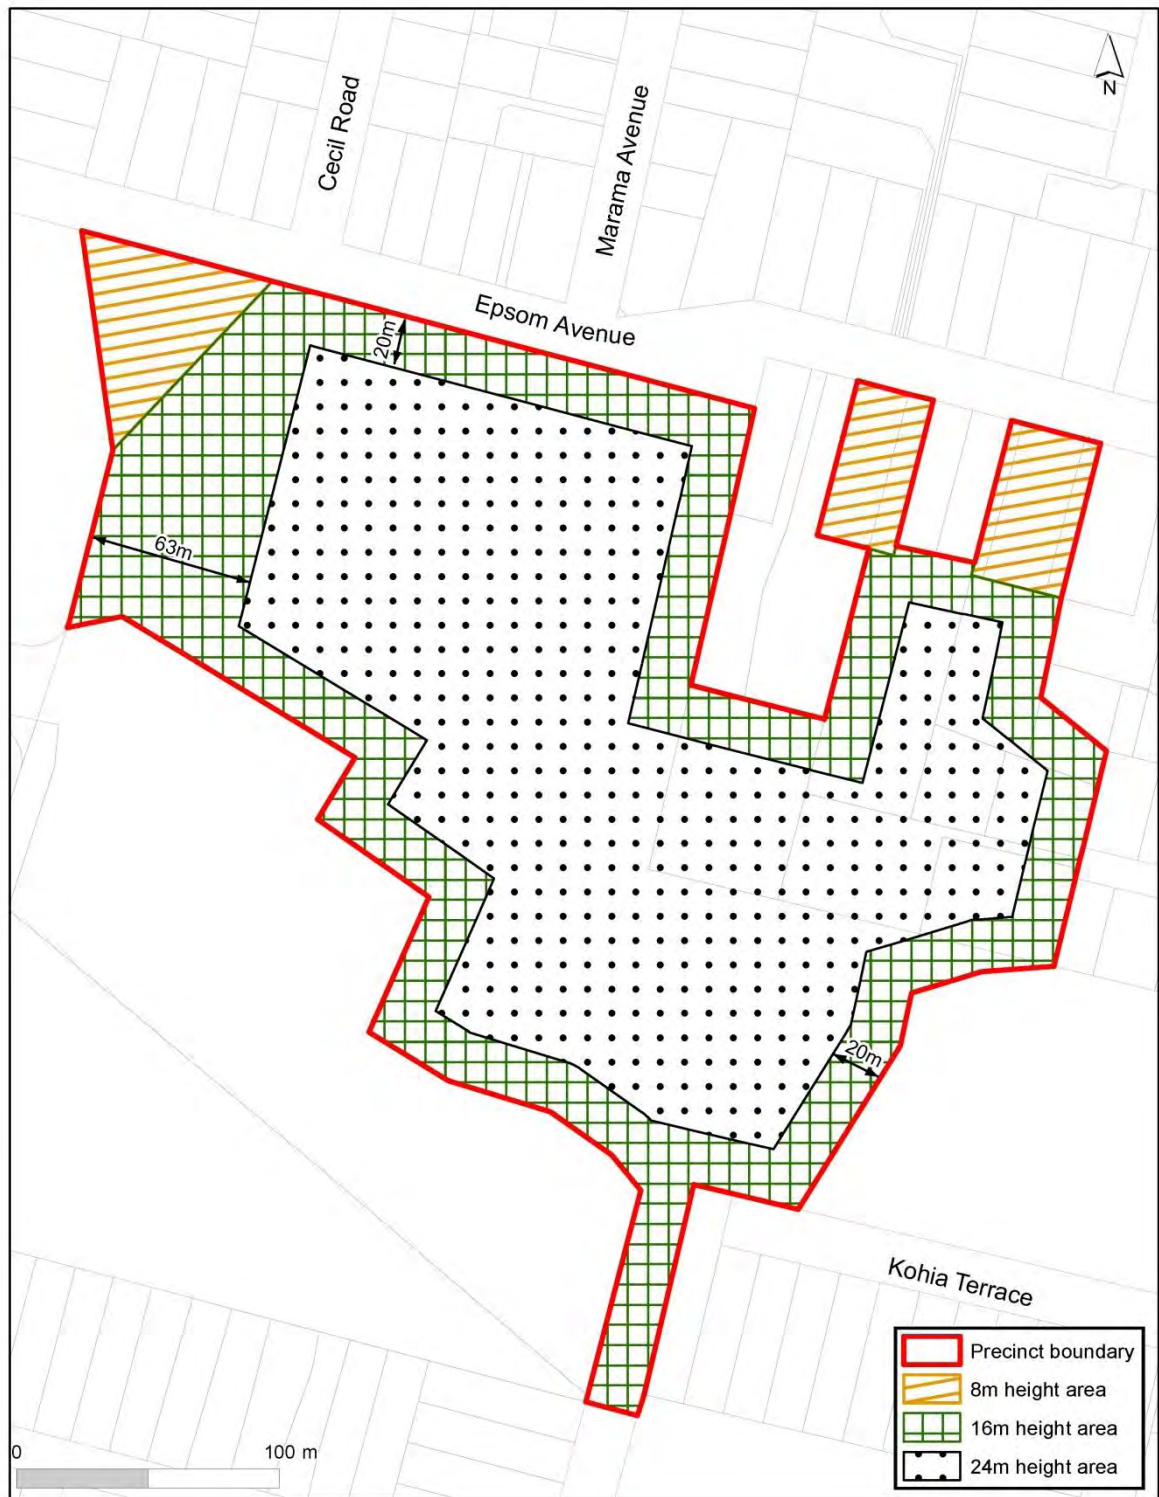

(a) refer to criteria H30.8.2 in Special Purpose – Tertiary Education Zone.

I314.9. Special information requirements

There are no special information requirements in this precinct.

I314.10. Precinct plans

1314.10.1. Epsom: Precinct plan 1 - building heights

I315. Gabador Place Precinct

I315.1. Precinct description

The underlying zoning of land within this precinct is Business – Light Industry Zone. The underlying zoning of the coastal marine area within this precinct is Coastal – Minor Port Zone.

The land and coastal marine area at Gabador Place, Mt Wellington, on the Tāmaki River, is used for a variety of marine and port activities, including boat dry stack, boat building and travel lifts, and the handling and transferring of bulk liquids (including hazardous substances) and sand and shingle. Commercial and private vessels regularly use the Tāmaki River to access the boat dry stack and boat building yards and to transport chemicals, sand and gravel by barge to the wharves located at the Gabador Place facility.

The precinct provides for the integrated and efficient operation and development of the Gabador Place Precinct by providing for the operation, development, and expansion of marine and port activities, and marine and port facilities. This provides integrated management across the land and coastal marine area as these activities are anticipated in the Coastal – Minor Port Zone for the coastal marine area. The precinct also recognises other compatible industrial activities to allow greater flexibility in maintaining efficient use of the land. The precinct restricts some activities that would otherwise be provided for in the Business – Light Industry Zone, in order to retain land for marine and port activities and to minimise reverse sensitivity effects.

I315.2. Objectives [rcp/dp]

- (1) The efficient and safe operation of marine and port activities, and industrial activities, at Gabador Place is protected and enabled in a manner which:
 - (a) avoids, remedies or mitigates significant adverse effects from these activities on the surrounding environment; and
 - (b) avoids the establishment of incompatible land uses.
- (2) Marine and port activities and facilities are managed in an integrated manner across land and the coastal marine area.

The underlying zone and Auckland-wide objectives apply in this precinct, in addition to those specified above.

I315.3. Policies [rcp/dp]

- (1) Restrict use or development which adversely affects the safe and efficient operation of water transport facilities for freight and business located within the precinct or their connections with other transport modes.
- (2) Enable the intensification, development and maintenance of buildings, structures and works for marine and port activities and supporting industrial activities.

- (3) Restrict land-use activities that are not related to marine and port activities or industrial activities to minimise reverse sensitivity effects.

The underlying zone and Auckland-wide policies apply in this precinct, in addition to those specified above.

I315.4. Activity table

The provisions in the underlying zone, Auckland-wide provisions and any relevant overlays apply in this precinct unless otherwise specified below.

Table I315.4.1 specifies the activity status of activities on land in the Gabador Place Precinct pursuant to sections 9(3) and 12(1) of the Resource Management Act 1991.

Table I315.4.1 Activity Table [rcp/dp]

I315.5. Notification

- (1) Any application for resource consent for an activity listed in Table I315.4.1 Activity table will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I315.6. Standards

All activities listed as permitted in Table I315.4.1 must comply with the following standards. The underlying zone and Auckland-wide standards apply in this precinct, unless otherwise specified.

I315.6.1. 1 Building height

- (1) Buildings must not exceed 20 m in height.
- (2) For the avoidance of doubt, building height excludes: reefer gantries, cargo and containers, telecommunications equipment, masts, lighting poles and associated equipment and aerials that are accessory to marine and port activities.

I315.6.2. 3.2 Maximum impervious area

- (1) Maximum impervious area is 100 per cent of the site area.

I315.6.3. Coastal hazards

- (1) The activity status for activities listed in Table E36.4.1 of E36 Natural hazards and flooding apply except in relation to the following activities which are permitted on land which may be subject to coastal hazards and in areas subject to coastal storm inundation one per cent annual exceedance probability plus 1 metre sea level rise:
 - (a) marine and port accessory structures and services; and
 - (b) marine and port facilities.

I315.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I315.8. Assessment – restricted discretionary activities

I315.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or Coastal – Minor Port Zone provisions:

- (1) development that is a restricted discretionary activity in this precinct:
 - (a) refer to Coastal – Minor Port Zone F5.8.1(6) Wharves, landings and drydocks; and
 - (b) refer to Coastal – Minor Port Zone F5.8.1(7) wave attenuation devices.

I315.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or Coastal – Minor Port Zone provisions:

- (1) refer to Coastal – Minor Port Zone F5.8.2(6) Wharves, landings and drydocks; and
- (2) refer to Coastal – Minor Port Zone F5.8.2(7) for wave attenuation devices.

I315.9. Special information requirements

There are no special information requirements for this precinct.

I315.10. Precinct plans

There are no precinct plans for this precinct.

I316 Grafton Precinct

I316.1. Precinct Description

The Grafton Precinct applies to multiple sites currently occupied by the University of Auckland, a tertiary education facility that provides medical teaching and research facilities alongside student accommodation, healthcare services, care centre and other accessory activities. The primary campus site is zoned Business - Mixed Use and contains buildings of a significant scale located in a campus style arrangement. The remaining sites contain smaller buildings used for accessory activities.

The purpose of the Grafton Precinct is to enable the development and operation of a range of tertiary education and accessory activities, including teaching and research, and catering for the diverse requirements of the student population, employees and visitors. Community use of the facilities is also provided for, including the Auckland District Health Board (Auckland City Hospital) use of the MRI unit and mortuary.

The zoning of the land within the Grafton Precinct is for Sub-precinct A the Business - Mixed Use Zone, for Sub-precinct B the Business - Local Centre Zone and Residential - Terrace Housing and Apartment Buildings Zone and for Sub-precinct C the Residential - Terrace Housing and Apartment Buildings Zone.

I316.2. Objectives

- (1) Tertiary education facilities at Grafton Campus meet the education needs of their students, facilitate research and economic development, and provide for the well-being of employees, students and visitors.
- (2) Tertiary education facilities integrate positively with the wider community and environment and mitigate potential adverse effects.
- (3) Tertiary education and complementary business activities including services and facilities related to Auckland City Hospital benefit from co-location in tertiary education precincts.
- (4) New buildings and structures respond to and positively contribute to the amenity values of public streets, open spaces and surrounding context, thereby reinforcing sense of place.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I316.3. Policies

- (1) Enable a wide range of activities and building development in the Grafton Precinct, including tertiary education, research, health, recreation, student accommodation and appropriate complementary and accessory activities.
- (2) Provide for those complementary activities which clearly contribute to and benefit from co-location with a tertiary education facility, including research, innovation, learning, clinics, and related work experience and training.

- (3) Require new buildings and significant additions and alterations to be designed in a manner that:
- (a) makes efficient use of the site;
 - (b) contributes to the amenity of the public realm where development is located adjacent to a public street or public open space;
 - (c) responds positively to the existing and planned future context of the Grafton Precinct, zones and surrounding area; and
 - (d) responds and contributes positively to the sense of place.
- (4) Require screening or landscaping of waste management facilities, service areas/buildings and parking to enhance their appearance when viewed from adjacent residential zones or the public realm.
- (5) Provide for accessory activities to meet the needs of employees, students and visitors without undermining the function of nearby town centres as the primary location for business activities, and while avoiding, remedying or mitigating adverse effects on the transport network.
- (6) Require new buildings to be designed in a manner that respects any adjacent existing heritage places and provides a high standard of amenity.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I316.4. Activity table

The provisions in any relevant overlays, zone and Auckland-wide provisions apply in this precinct unless otherwise specified below.

Table I316.4.1 Activity table specifies the activity status of land use and development activities in the Grafton Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I316.4.1 Grafton Precinct

(A26)	Parks maintenance	P

I316.5. Notification

- (1) Any application for resource consent for an activity listed in I316.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I316.6. Standards

The overlay, Auckland-wide and zone standards apply in this precinct unless otherwise specified below.

All activities listed as permitted or restricted discretionary in Table I316.4.1 Activity table must comply with the following permitted activity standards.

I316.6.1. Building height

- (1) Buildings must not exceed the heights as set out below:

Building location	Maximum height (m)		
	A	B	C
Sub-precinct	Standard H13.6.1 does not apply	Standard H6.6.5 does not apply.	
Less than 20m from the boundary of a site having a residential zoning	16m	12m	16m
Greater than 20m from the boundary of a site having a residential zoning	30m	18m	16m

I316.6.2. Height in relation to boundary

- (1) Where a site in the Grafton Precinct directly adjoins a site in another zone outside the precinct, the height in relation to boundary control that applies in the adjoining zone applies to the common boundary.
- (2) Where the adjoining zone does not specify a height in relation to boundary control, the yard and/or setback controls in the adjoining zone apply to the common boundary.

I316.6.3. Yards

- (1) The following standard applies to any boundary in the precinct that adjoins a site having a residential zoning:

Yard	Dimension (m)		
	A	B	C
Sub-precinct			
Front yard	3m	0m	3m
Side and rear yard	3m	3m	3m

I316.6.4. Building coverage

(1) Building coverage must not exceed the coverage standards as set out below:

- (a) Sites zoned Business – Mixed Use Zone 60 per cent.

I316.6.5. Screening

(1) Any outdoor storage or rubbish collection areas that directly face and are visible from a residential zone or open space adjoining a boundary with, or on the opposite side of the road from, the Grafton Precinct, must be screened from those areas by a solid wall or fence at least 1.8m high.

I316.6.6. Outlook space

(1) Visitor accommodation and student accommodation in any zone must comply with the Residential - Terrace Housing and Apartment Buildings Zone outlook space Standard H6.6.13.

I316.6.7. Assessment – controlled activities

There are no controlled activities in this section.

I316.6.8. Assessment – restricted discretionary activities

I316.6.8.1. Matters of discretion

The Council will reserve its discretion to all the following matters when assessing a restricted discretionary resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the zones, Auckland-wide, or overlay provisions:

- (1) New parking buildings visible from and located within 10m of a public road or a residential zone or open space zone:
 - (a) refer to Matters H30.8.1 Special Purpose – Tertiary Education Zone.
- (2) New buildings and alterations and additions to buildings, visible from and within 10m of the street:
 - (a) refer to Matters H30.8.1 Special Purpose – Tertiary Education Zone.
- (3) For development that does not comply with Standards I316.6.1 Building height, I316.6.2 Height in relation to boundary, I316.6.3 Yards, I316.6.4 Building coverage, I316.6.5 Screening, I316.6.6 Outlook space the Council will reserve its discretion to all of the following matters when assessing a restricted discretionary resource consent application:
 - (a) any special or unusual characteristic of the site which is relevant to the standard:
 - (b) where more than one standard will be infringed, the effects of all infringements considered together; or

- (c) any matter contained within Matters H30.8.1 Special Purpose – Tertiary Education Zone.

I316.6.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the matters specified for the relevant restricted discretionary activities in the zones, Auckland-wide, or overlay provisions

- (1) New parking buildings visible from and located within 10m of a public road or a residential zone or open space zone:
 - (a) refer to Criteria H30.8.2 Special Purpose – Tertiary Education Zone.
- (2) New buildings and alterations and additions to buildings, visible from and within 10m of the street:
 - (a) the extent to which development minimises visual dominance effects to open spaces and the street; and
 - (b) refer to Criteria H30.8.2 Special Purpose – Tertiary Education Zone.
- (3) For development that does not comply with Standards I316.6.1 Building height, I316.6.2 Height in relation to boundary, I316.6.3 Yards, I316.6.4 Building coverage, I316.6.5 Screening, I316.6.6 Outlook space the Council will consider the following assessment criteria when assessing a restricted discretionary resource consent application:
 - (a) refer to Criteria H30.8.2 Special Purpose – Tertiary Education Zone.

I316.6.9. Special information requirements

There are no special information requirements in this precinct.

I316.6.10. Precinct plans

There are no precinct plans in this precinct.

I317. Hillsborough Precinct

I317.1. Precinct Description

Hillsborough Precinct is located between the Three Kings and Royal Oak Town Centres. It is bound by Korma Road in the north, Queenstown Road in the east, Herd Road in the south, and adjoins Monte Cecilia Park along the western boundary. The precinct area has a southern aspect overlooking the Manukau Harbour, and enjoys north easterly views to One Tree Hill.

The purpose of the precinct is to provide for retirement village development. The precinct provisions acknowledge the significance of the amenity and outlook from the adjacent Monte Cecilia Park, through suitable building setbacks, controls on building heights and provision of viewshafts across the site, tree protection, access and heritage.

Sub-precinct A provides for greater building heights to enable more intensive retirement village development on the site. It enables taller building heights to be located within the inner core of the site. Sub-precinct A also identifies the location of the future building platforms.

The historic access to the Pah Homestead (located on Monte Cecilia Park) has been identified as bisecting the north eastern portion of the precinct. The former carriageway alignment and the associated vegetation is considered to be significant with or without the physical remains being in existence. Sub-precinct B provides for the protection of the physical/archaeologic remains of this access, the former alignment and the gate posts at the Pah Road frontage, while providing for development within the existing building platforms up to the permitted building height for the underlying zone.

The zoning of land within this precinct is Residential – Mixed Housing Urban Zone.

I317.2. Objectives

- (1) Retirement village development is enabled within the precinct.
- (2) The landscape and heritage values of Monte Cecilia Park are recognised together with the spatial relationship between Monte Cecilia Park and the development within the precinct.
- (3) The contribution that trees make to the precinct's character and the character and landscape of the adjoining Monte Cecilia Park are recognised and protected.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I317.3. Policies

- (1) Enable the development of retirement villages to provide accommodation and care for older people.

- (2) Enable consolidation of greater building heights within Sub-precinct A, while ensuring that the adverse effects on the character and amenity of the neighbourhood and neighbouring sites are managed.
- (3) Limit maximum building height and the location of building platforms to an appropriate scale to maintain identified views from Monte Cecilia Park shown in Hillsborough Precinct: Precinct plan 1.
- (4) Provide for the protection of the physical/archaeological remains of the historic access to the Pah Homestead, the former carriageway alignment and the gate posts at the Pah Road frontage.
- (5) Protect trees within the precinct that contribute to the amenity, landscape and ecological values of the area.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I317.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I317.4.1 Activity table specifies the activity status of land use and development activities in the Hillsborough Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I317.4.1 Activity table

Activity		Activity status
(A1)	Tree trimming	P
(A2)	Tree alteration or removal of trees listed in Table I317.6.4.1 and identified on Hillsborough: Precinct plan 2 – location of trees	RD
Use		
Residential		
(A3)	Retirement villages	P
Development		
(A4)	New buildings and additions to buildings accommodating retirement village activities	RD
(A5)	Maintenance of existing paved surfaces within Sub-precinct B	P
(A6)	Development within Sub-precinct B	RD
(A7)	Development in accordance with Hillsborough: Precinct plan 1	P
(A8)	Any development that is not in accordance with Hillsborough: Precinct plan 1	D

I317.5. Notification

- (1) Any application for resource consent for an activity listed in Table I317.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I317.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct.

All activities listed as permitted and restricted discretionary in Table I317.4.1 Activity table must comply with the following permitted activity standards.

I317.6.1. Building height

- (1) The building height Standard H5.6.4 for the Residential - Mixed Housing Urban Zone applies to the precinct, except where otherwise specified in Hillsborough Precinct: Precinct plan 1.

The maximum height in Sub-Precinct A as shown in Hillsborough: Precinct Plan 1 is to be measured to the underside of the eaves of buildings. An additional three metres of height is allowed for to accommodate roofs, machinery rooms/plant, lift and stair over-runs (all being non-habitable floor space) for these buildings.

I317.6.2. Yards

- (1) All buildings must be located greater than 3 metres from the boundary with Monte Cecilia Park.

I317.6.3. Building platform

- (1) All buildings in Sub-precinct A must be located in the building platforms identified in Hillsborough Precinct: Precinct plan 1.

I317.6.4. Tree Trimming

- (1) The following trees listed in Table I317.6.4.1 Trees for protection and identified in Hillsborough Precinct: Precinct plan 2 must not be altered, removed or have works undertaken within the dripline.

(a) Exceptions to this control are the following:

- (i) trimming of the canopy, excluding the roots, of any tree which does not damage its health. Such works must be limited to no more than 20 per cent of live growth removal in any one year and must be in accordance with currently accepted arboriculture practice, ensuring that the natural form and branch habit of the tree species is maintained;
- (ii) if the trimming is done by a qualified arborist or arboriculturalist, the work must be limited to no more than 30 per cent of live growth

removal in any one year and must be in accordance with currently accepted arboriculture practice, ensuring that the natural form and branch habit of the tree species is maintained;

- (iii) if the trimming rule above does not apply, any regular minor trimming or maintenance must be done by hand operated secateurs or pruning shears, in accordance with the accepted arboriculture practice.
- (iv) the removal of any tree or part of a tree that is dead or that is suffering from an untreatable disease which has caused a significant decline in its health, evidence must be produced if required.

Note: Where any element of uncertainty exists as to the likely fate of the tree, the benefit of doubt will be given to the tree's survival by not removing it until such time as its irreversible decline is obvious. Before removing any affected tree, consultation with the Council's arborist should be undertaken.

Emergency tree works: In such circumstances the person undertaking the work must notify the council in writing within seven days of the work commencing as to the reason for the work.

The actions of any statutory authority in carrying out of work authorised by statute: In such circumstances the authority concerned shall notify the council in writing no later than seven days prior to the work commencing as to the reason for the work.

I317.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I317.8. Assessment – restricted discretionary activities

I317.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) new buildings and additions to buildings accommodating retirement village activities:
 - (a) the matters of discretion in H5 Residential – Mixed Housing Urban Zone H5.8.1.(3) integrated residential development;
 - (b) the effect on the historic Pah Homestead carriageway, if relevant; and
 - (c) the effect on the surrounding residential and open space environment.
- (2) the effect of tree alteration or tree removal:
 - (a) the matters of discretion set out in E16 Trees in open space zones E16.8.1.
- (3) infringements of the standards:
 - (a) the effect on the surrounding residential and open space environment.

I317.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) new buildings and additions to buildings accommodating retirement village activities:
 - (a) the matters of discretion in H5 Residential – Mixed Housing Urban Zone H5.8.1.(3) integrated residential development:
 - (i) the assessment criteria H5 Residential – Mixed Housing Urban Zone H5.8.2.(3) integrated residential development;
 - (b) the effect on the historic Pah Homestead carriageway, if relevant:
 - (i) the extent to which the alignment of the historic Pah Homestead carriageway is affected; and

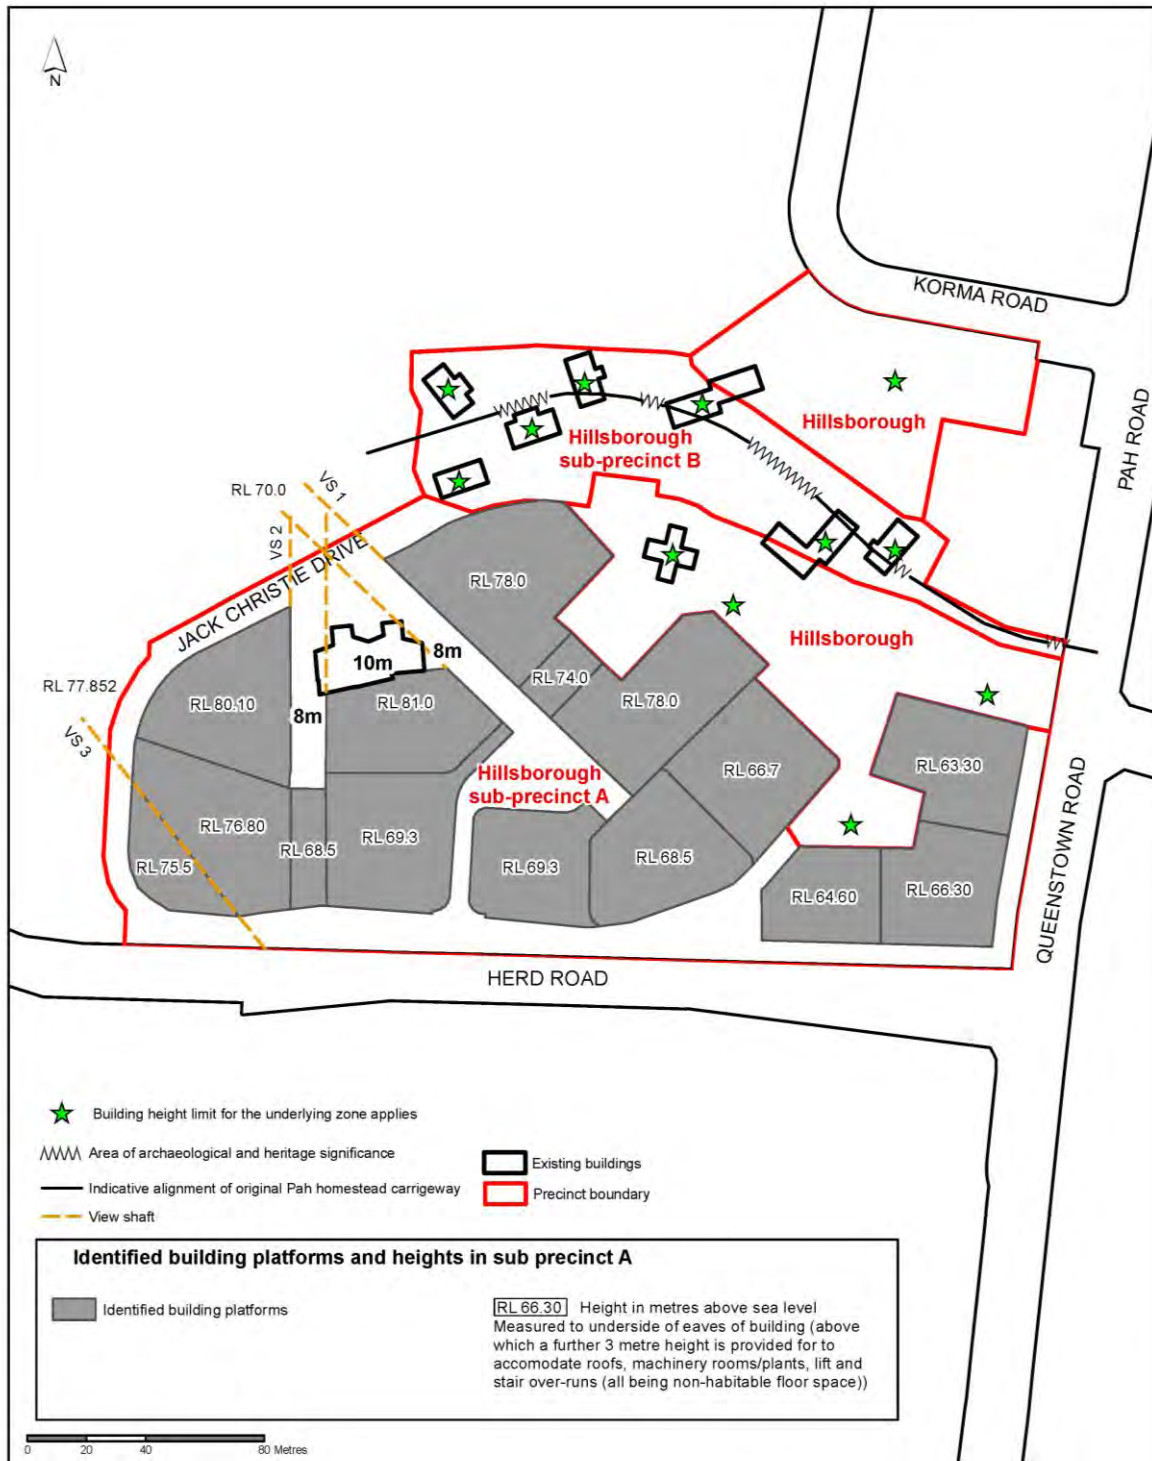

- (ii) the extent to which elements of heritage/archaeological significance located along the alignment of the access route can be maintained.
- (c) the effect on the surrounding residential and open space environment:
 - (i) refer to Policy I317.3.(1);
 - (ii) refer to Policy I317.3.(2);
 - (iii) refer to Policy I317.3.(3);
 - (iv) refer to Policy I317.3.(4); and
 - (v) refer to Policy I317.3.(5);
- (2) the effect of tree alteration or tree removal:
 - (a) the matters of discretion set out in E16 Trees in open space zones E16.8.1:
 - (i) the assessment criteria in E16 Trees in open space zones E16.8.2 applies;
 - (ii) the extent to which the tree contributes towards significant historic and landmark values of the site and neighbourhood due to its species, location and form;
 - (iii) the extent to which the tree forms part of the historic planting of the former carriageway;
 - (iv) the extent to which the tree contributes to the visual amenity of the site and immediate neighbourhood characteristics; and
 - (v) the extent to which the tree contributes to the amenity value of the site relative to screening or beautification functions.
- (3) infringements of the standards:
 - (a) the effect on the surrounding residential and open space environment:
 - (i) refer to Policy I317.3.(2); and
 - (ii) refer to Policy I317.3.(3).

I317.9. Special information requirements

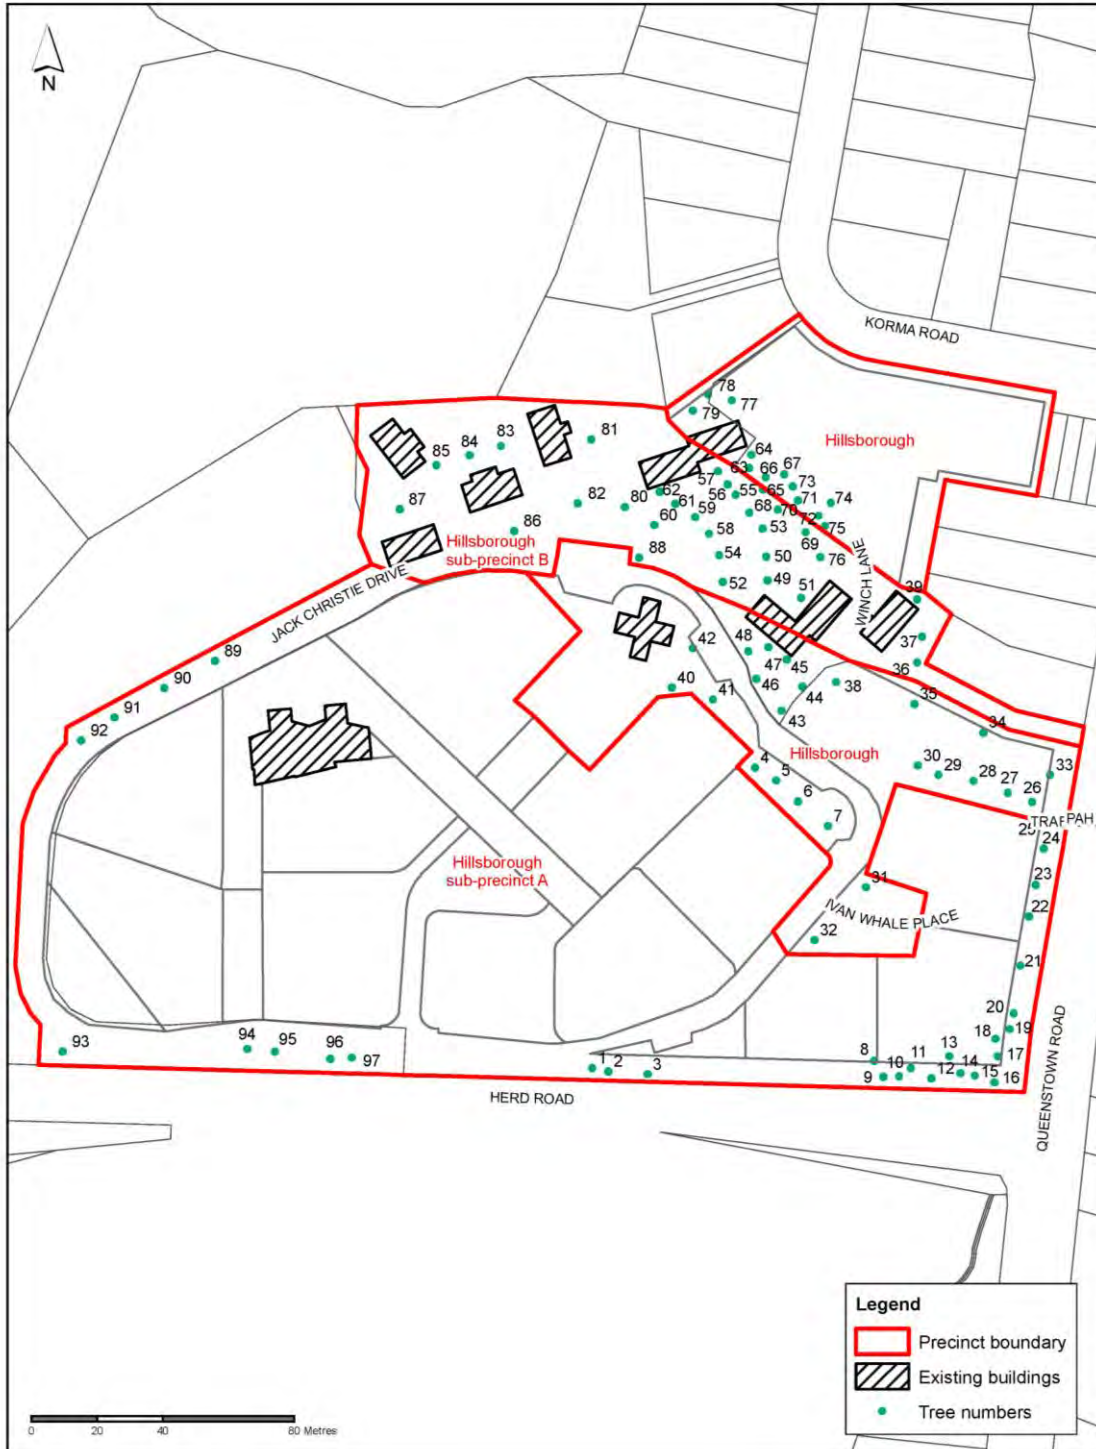

There are no special information requirements in this precinct.

I317.10. Precinct plans

I317.10.1. Hillsborough: Precinct plan 1

1317.10.2 Hillsborough: Precinct plan 2 – location of trees

I318. Monte Cecilia Precinct

I318.1. Precinct Description

The Monte Cecilia precinct is located within Monte Cecilia Park, half way between Three Kings and Royal Oak. The park is situated in the middle of a large block between Mt Albert and Herd Roads to the north and south and between Hillsborough and Queenstown Roads to the west and east.

Monte Cecilia Park is an area of exceptional heritage value to the immediate area, and within the wider Auckland region. The precinct covers Pah Homestead and its surrounds including the Whare building, car parking areas and the carriage drive. The Pah Homestead building is a 19th century Italianate mansion that sits within park like surrounds. The clear historical, visual and spatial relationships between the house and grounds (including the stables, carriage drive and gates, sheds paths, steps, fencing etc) are integral to the sites sense of place. The precinct site and surrounding land is also of significance to tangata whenua as it is known to have been occupied by Māori and was formerly known as Whataroa Pa.

The purpose of the precinct is to enable the use of the homestead and its immediate surrounds for arts and cultural activities as well as conferences, meetings and functions. The rules of the precinct are intended to provide for such activities so long as the park's heritage values are maintained as a priority.

The zoning of land within this precinct is Open Space - Conservation Zone. The Historic Heritage Overlay and Notable Trees Overlay also apply to this precinct.

I318.2. Objectives

- (1) The historic and natural heritage values and characteristics of the Pah Homestead are protected and enhanced.
- (2) The Pah Homestead is used for activities which are compatible with the natural and historic heritage values and characteristics of the precinct.

The relevant overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above

I318.3. Policies

- (1) Ensure activities are compatible with the Monte Cecilia Character Statement and Pah Farm Conservation Plan.
- (2) Promote the arts and cultural purpose of the precinct while ensuring there are no adverse effects on the archaeological, heritage, geological, arboricultural or Māori cultural values of the precinct.
- (3) Ensure that the landscape values, heritage landscape values and the spatial relationship between the park and the homestead are conserved and protected.

The relevant overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I318.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the zone apply in this precinct unless otherwise specified below.

Table I318.4.1 Activity table specifies the activity status of land use and development activities in the Monte Cecilia Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I318.1 Activity table

Activity		Activity status
Community		
(A1)	Arts and cultural activities and/or natural displays within the Pah Homestead building	P
(A2)	Conferences, meetings and functions	P
(A3)	Food and beverage	P
(A4)	Musical performances	P
(A5)	Offices up to 200m ² GFA	P
(A6)	Retail activities up to 25m ² GFA	P
(A7)	Temporary marquees, stages and similar structures	P
(A8)	Visitor accommodation up to 105m ² GFA	P
Development		
(A9)	Any activity, building or structure in the precinct not provided for as a permitted activity	RD

I318.5. Notification

- (1) Any application for resource consent for an activity listed in Table I318.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.11(4).

I318.6. Standards

The relevant overlay, Auckland-wide and zone standards apply in this precinct. In addition to the following standards.

All activities listed as permitted in Table I318.4.1 Activity table must comply with the following permitted activity standards.

I318.6.1. Conferences, meetings and functions

- (1) Conferences, meetings and functions must not involve any buildings or the structures beyond Pah Homestead building, except for temporary structures provided for in this precinct.

I318.6.2. Food and beverage

- (1) Food and beverage activities within the Pah Homestead building may also include associated tables, seating and umbrellas on the veranda and in the scheduled site surrounds.
- (2) Food and beverage activities must not involve any buildings or structures beyond the Pah Homestead building, except for temporary structures provided for in the precinct.

I318.6.3. Office activities

- (1) Office activities must be ancillary to arts and cultural activities and/or natural displays within the Pah Homestead building.
- (2) Office activities must also be located within the Pah Homestead building.

I318.6.4. Retail activities

- (1) Retail activities must be ancillary to arts and cultural activities and/or natural displays within the Pah Homestead building.
- (2) Retail activities must be located within the Pah Homestead building.

I318.6.5. Temporary marquees, stages and similar structures

- (1) The height of all temporary marquees, stages or similar structures must not exceed 5m.
- (2) All temporary marquees, stages or similar structures must not result in disturbance of the ground.
- (3) All temporary marquees, stages or similar structures must be in place for no longer than 5 days, inclusive of the time required for establishing and removing all structures.
- (4) These controls will not apply where the temporary marquee, stage or similar structure complies with all the relevant provisions of a Site Surrounds Management Plan approved by the council.

I318.6.6. Visitor accommodation

- (1) Visitor accommodation activities must be ancillary to arts and cultural activities and/or natural displays within the Pah Homestead building.
- (2) Visitor accommodation activities must be located within the Pah Homestead building.

I318.7. Assessment – controlled activities

There are no controlled activities in this Precinct.

I318.8. Assessment – restricted discretionary activities

I318.8.1. Matters of discretion

The Council will restrict its discretion to the following matters for the activities listed as restricted discretionary activities in the Monte Cecilia precinct:

- (1) compatibility with the Statement of significance for the Monte Cecilia Historic Heritage Area in Schedule 14.2 Historic Heritage Areas – Maps and statement of significance;
- (2) compatibility with other events and activities in the precinct and the activities provided for in the zone;
- (3) heritage landscape values;
- (4) Maori cultural and archaeological values;
- (5) geological, arboricultural and ecological values; and
- (6) traffic and vehicle safety

I318.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for the restricted discretionary activity listed above:

- (1) the extent to which the proposal is compatible with the Statement of significance for the Monte Cecilia Historic Heritage Area in Schedule 14.2 Historic Heritage Areas – Maps and statement of significance;
- (2) the extent to which the proposed development promotes the dominant arts, and cultural activity and/or natural display activities and significant ancillary conferences, meetings and functions activities provided for in the precinct;
- (3) the extent to which the proposed development promotes:
 - (a) appropriate temporary events within Monte Cecilia Park;
 - (b) the dominant arts, cultural activity, natural display activities and significant ancillary conferences, meetings or functions activities provided for in the precinct; and
 - (c) the passive recreation activities provided for in the Open Space - Conservation Zone;
- (4) the extent to which the adverse effects from the proposed development are avoided, remedied, or mitigated with regards to:
 - (a) the heritage landscape values of Monte Cecilia Park; and
 - (b) the visual/spatial relationship between Monte Cecilia Park and the Pah Homestead building;

- (c) amenity and functioning of surrounding land uses. Discretion may be exercised, and conditions may be imposed over the following, but is not limited to:
- (i) hours of operation;
 - (ii) noise levels;
 - (iii) lighting levels;
 - (iv) the number and frequency of events;
 - (v) the number of people;
 - (vi) the number, nature and frequency of vehicle movements having regard to any concurrent activities and the capacity and operation of the intersection of Delargey Avenue with Hillsborough Road; and
 - (vii) the number of parking spaces available having regard to any concurrent activities and mechanisms included in any parking/travel management plan;
- (d) the Maori cultural values of the land are recognised and provided for (this may include cultural monitoring);
- (e) the archaeological values of Monte Cecilia Park;
- (f) trees; and
- (g) vehicular, pedestrian and cycle safety and function.

I318.9. Special information requirements

There are no special information requirements in the Precinct.

I318.10. Precinct plans

There are no precinct plans for the Precinct.

I319. MOTAT Precinct

I319.1. Precinct description

The MOTAT Precinct provides specific planning controls for the use, operation, development, redevelopment and intensification of The Museum of Transport and Technology (MOTAT). MOTAT is a transport, technology, science and social history museum spread between two sites at Great North Road (MOTAT 1) and Meola Road (MOTAT 2).

The zoning of the land within the MOTAT Precinct is the Special Purpose - Major Recreation Facility Zone.

I319.2. Objectives

- (1) MOTAT is protected as a regionally and nationally important venue for all of the following primary activities:
 - (a) concerts, events and festivals;
 - (b) markets, fairs and trade fairs;
 - (c) functions, conferences, gatherings and meetings; and
 - (d) demonstrations, displays and exhibitions.
- (2) A range of activities compatible with, or accessory to, the primary activities are enabled.
- (3) The adverse effects of the operation of MOTAT are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I319.3. Policies

- (1) Enable the safe and efficient operation of MOTAT for its primary activities.
- (2) Protect the primary activities of MOTAT from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of MOTAT, having regard to the amenity of surrounding properties.

- (5) Recognise that MOTAT's primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I319.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E40 Temporary activities;
- (2) E25 Noise and vibration (noise provisions only);
- (3) E24 Lighting;
- (4) E27 Transport – district rule E27.6.1; and
- (5) E27 Transport – district rule E27.6.2.

Table I319.4.1 specifies the activity status of land use and development activities in the MOTAT Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I319.4.1 Activity table

Activity		Activity status
Primary activity		
(A1)	Concerts, events and festivals	P
(A2)	Markets, fairs and trade fairs	P
(A3)	Functions, conferences, gatherings and meetings	P
(A4)	Demonstrations, displays and exhibitions	P
(A5)	Any primary activity not meeting Standard I319.6.3 Traffic management but meeting all other standards	C
Accessory activities		
(A6)	Accessory activities	P
(A7)	Any accessory activity not meeting Standard I319.6.3 Traffic management but meeting all other standards	C
Compatible activities		
(A8)	Sports, recreation and community activities	P
(A9)	Filming activities	P
(A10)	Professional fireworks displays meeting Standard I319.6.8	P

(A11)	Professional fireworks displays not meeting Standard I319.6.8	RD
(A12)	Helicopter flights meeting Standard I319.6.9	P
(A13)	Helicopter flights not meeting Standard I319.6.9	RD
(A14)	Any compatible activity not meeting Standard I319.6.3 Traffic management but meeting all other standards	C
Development		
(A15)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 20m in height	P
(A16)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity more than 20m, but up to 25m in height	RD
(A17)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 25m in height	D
(A18)	Light towers and associated fittings up to and greater than 25m in height	P
(A19)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I319.6.6 Interface control areas	RD
(A20)	Demolition of buildings	P
(A21)	Temporary buildings	P

I319.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I319.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I319.4.1 Activity table and which is not listed in I319.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I319.6. Standards

All permitted, controlled or restricted discretionary activities in Table I319.4.1 must comply with the following activity standards unless otherwise stated.

I319.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing activity sensitive to noise must not exceed the noise limits in Table I319.6.1.1.

Table I319.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Any day including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:30pm	55dB L _{Aeq}
31 October (Halloween) between 10:30pm and 12am	55dB L _{Aeq}
At all other times	45dB L _{Aeq} and 75dB L _{Amax}

- (2) Noise levels must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (4) The noise from tram and train whistles and horns is excluded from any assessment of compliance with the noise limits.
- (5) For up to 8 times in any 12 month period, but no more frequently than 1 in any 2 week period, the noise (rating) level may be up to 75dB L_{Aeq(10min)} for up to 6 hours per day. No 10 minute sample can exceed the stated noise limit. This noise level does not apply at any of the following times:
- (a) Between 10:30pm and 8am at MOTAT 1 and MOTAT 2; and
 - (b) Between 8am and 4pm Monday to Friday during the normal school term at MOTAT 2.
- (6) For activities and activities undertaken in accordance with Standard I319.6.1(5) a noise management plan must be prepared by a suitably qualified and experienced person and include the following:
- (a) Procedures for advising the occupiers of residentially zoned properties located within 150m of either MOTAT 1 or 2 where the activity is proposed that will exceed the noise limits Table I319.6.1.1. The advance notice

must be given no earlier than 14 days and no later than 7 days prior to the activity taking place and must include:

- (i) The times and days when the noise is likely to be generated and the finishing time of the activity;
 - (ii) A contact name and number for the receipt of complaints;
 - (iii) A procedure for recording and responding to noise complaints; and
 - (iv) Identification of the best practicable options that will be undertaken to minimise the noise.
- (7) An adjustment for Special Audible Characteristics must not be applied to:
- (a) the noise from any steam powered vehicle, military vehicle, train, tram, transport vehicle or transport equipment;
 - (b) the noise generated between 10.30pm and 11.00pm for the 14 days prior to Christmas Day; and
 - (c) the noise generated in accordance with Standard I319.6.1(5).
- (8) A Duration Adjustment (as prescribed by NZS6802:2008) must only be applied to noise generated between the hours of 8am and 10.30pm.
- (9) Professional fireworks displays and helicopter flights are excluded from this standard.

I319.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I319.6.2, the curfew and pre-curfew times are as stated in Table I319.6.2.1.

Table I319.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 11pm
Curfew	11pm – 7am

(5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following;

- (a) The limits in Table I319.6.2.2 when measured at the boundary of any residentially zoned site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I319.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) The vertical illuminance limits in Table I319.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I319.6.2.3: Vertical Illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15% (based on an adaption luminance of 2 cd/m²) on any public road, calculated within each traffic lane in the direction of travel.
- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed 10,000 cd for pre-curfew times and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling within a residential zone and at the boundary of any residentially zoned site where a dwelling does not yet exist.
- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed 10 cd/m². The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.

I319.6.3. Traffic management

All activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Traffic and Transport Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

I319.6.4. Parking

- (1) Parking for a minimum of 100 cars must be retained within the precinct unless an authorised Traffic and Transport Management Plan is in effect.

I319.6.5. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone, must be screened from those areas

I319.6.6. Interface control areas

Permitted activities must meet all of the following standards. Temporary buildings are excluded from Standard I319.6.6.

- (1) Within the Great North Road 10m Interface Control Area (ICA) as illustrated on Precinct plan 1:
 - (a) Buildings (including external alterations and additions) must have a footprint no greater than 150m²; and
 - (b) The cumulative total of buildings (including external alterations and additions) within the ICA must not exceed 80% of the total frontage.
- (2) Within the Meola Road 20m ICA as illustrated on Precinct plan 2:
 - (a) Buildings (including external alterations and additions) must have a footprint no greater than 500m²; and
 - (b) The cumulative total of buildings (including external alterations and additions) within the ICA must not exceed 60% of the total frontage.
- (3) Within the Upper Meola Creek 20m ICA as illustrated on the Precinct plan 2:
 - (a) Buildings (including external alterations and additions) must have a footprint no greater than 250m²; and
 - (b) The cumulative total of buildings (including external alterations and additions) within the ICA must not exceed 15% of the total frontage.

I319.6.7. Height in relation to boundary

- (1) Where the MOTAT Precinct adjoins a road or another zone, buildings must not project beyond a 45 degree recession plane measured from a point 8.5m vertically above ground level along the road or zone boundary, except at the following MOTAT 2 boundaries illustrated on the Precinct plan 2:
 - (a) Boundary D: 10m + 45 degrees

(b) Boundaries E and F: 4.5m + 45 degrees

(2) Temporary buildings, light towers and associated fittings are excluded from this standard.

I319.6.8. Professional fireworks displays

(1) Displays are limited to 3 in any 12 month period.

(2) Displays must not exceed 15 minutes in duration.

(3) Displays must be finished by 10:30pm.

(4) Fireworks must be discharged at least 120 meters from any residential zone.

(5) Displays must comply with 140dB L_{Zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I319.6.9. Helicopter flights

(1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).

(2) Landing and departures must take place at least 150m from any neighbouring site.

I319.6.10. Temporary buildings

(1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I319.7. Assessment – controlled activities

I319.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

(1) the effects of the proposed activity on the safety and efficiency of the transport network.

I319.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

(1) the effects on the safety and efficiency of the transport network:

(a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;

(b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and

- (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I319.8. Assessment – restricted discretionary activities

I319.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) any activity that does not comply with noise and/or lighting standards:
 - (a) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) any activity that does not comply with permitted helicopter flight standards:
 - (a) the effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties.
- (3) any activity that does not comply with permitted professional fireworks display standards:
 - (a) the effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m and up to 25m in height and/or which does not comply with height in relation to boundary standards:
 - (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I319.6.6:
 - (a) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) any activity that does not comply with screening standards:
 - (a) the visual effects of rubbish and storage areas on residential and open space sites.

I319.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance.
 - (b) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time;
 - (c) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement;
 - (d) the extent to which any artificial lighting will create a traffic safety issue;
 - (e) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (f) the extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance; and
 - (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
- (2) the effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
 - (a) the extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.

- (3) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces:
 - (a) the extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (b) The extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones);
 - (c) whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s; and
 - (d) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (4) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces:
 - (a) the extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) the visual effects of rubbish and storage areas on residential and open space zoned sites:
 - (a) the extent to which screening is practicable.

- (b) the extent to which distance and topographical matters mitigate likely adverse visual effects.

1319.9. Special information requirements

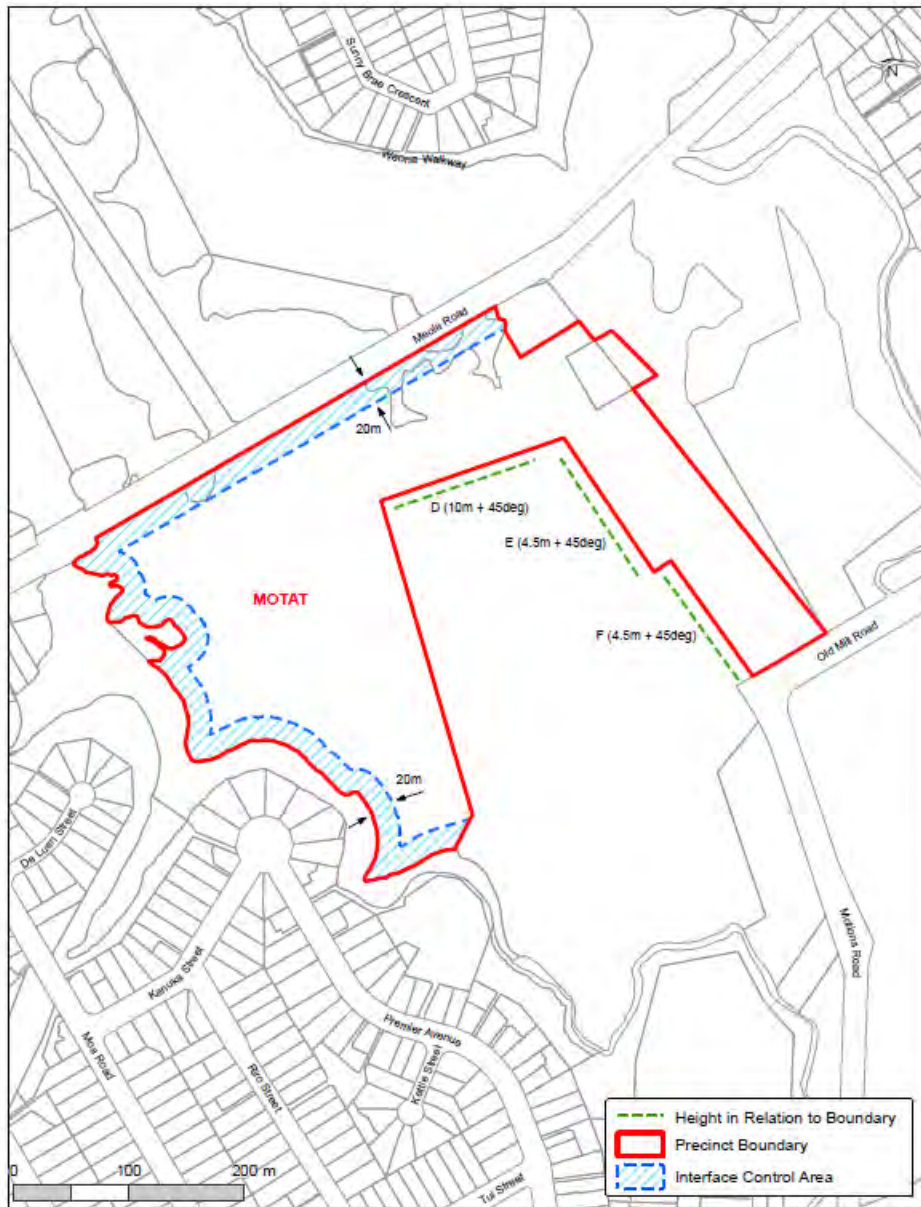

There are no special information requirements for this precinct.

1319.10. Precinct plans

1319.10.1. MOTAT 1 : Precinct plan 1

I319.10.2. MOTAT 2 : Precinct plan 2

I320. Mount Albert 2 Precinct

I320.1. Precinct Description

The Mount Albert 2 precinct covers the site currently occupied by the Auckland Institute of Studies St Helens (AIS), a tertiary education facility. The St Helens campus is located on Linwood Avenue in Mount Albert adjacent to the Chamberlain Park Golf Course and established residential areas. The purpose of the precinct is to provide for tertiary education and accessory activities of a scale and intensity compatible with the surrounding Residential and Open Space zones.

The precinct is separated into two sub-precincts. Sub-precinct A applies to the established built out area of the site, and therefore does not anticipate additional development outside of existing building platforms. Sub-precinct B provides for future development whilst controlling its location and scale, in order to protect the amenity values of Chamberlain Park Golf Course and the surrounding residential area.

The underlying zoning of land within this precinct is Residential - Mixed Housing Suburban Zone.

I320.2. Objectives

- (1) Tertiary education facilities meet the education needs of their students, and provide for the well-being of employees, students and visitors.
- (2) Tertiary education facilities integrate positively with the wider community and environment and mitigate potential adverse effects. In particular the amenity of neighbouring residential areas on the south east and south west boundaries of the campus is protected.
- (3) New buildings and structures respond to and positively contribute to the amenity values of streets, open spaces and the surrounding context, thereby reinforcing a sense of place.
- (4) Traffic effects arising from the tertiary education facilities are managed on the site.

The relevant overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I320.3. Policies

- (1) Enable tertiary education, student accommodation and appropriate accessory activities in the precinct.
- (2) Manage effects on the amenity of surrounding residential and open space areas by:
 - (a) limiting new development to specified locations within the precinct;
 - (a) controlling the scale and intensity of new development; and
 - (b) requiring identified areas within the precinct to be landscaped.

- (3) Require new buildings and significant additions and alterations to be designed in a manner that:
 - (a) makes efficient use of the site;
 - (b) contributes to the amenity of the public realm where development is located adjacent to a street or open space;
 - (c) responds positively to the existing and planned future form and quality of the surrounding area; and
 - (d) responds and contributes positively to the sense of place.
- (4) Require screening or landscaping of waste management facilities, service areas/buildings and parking to enhance their appearance when viewed from adjacent residential zones and open space.
- (5) Manage external transport effects arising from the operation of the tertiary education facility by:
 - (a) limiting the campus population; and
 - (b) requiring that sufficient on-site car parking be provided.
- (6) Provide for community liaison with parties potentially affected by the operation of the tertiary education facility.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I320.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the zone apply in this precinct unless otherwise specified below:

In E23 Signs - E23.4.1 Activity Table – Billboards in zones, the Residential - Mixed Housing Suburban rule (A4) is replaced with the Special Purpose - Tertiary Education Zone rule (A38).

Table I320.4.1 specifies the activity status of land use and development activities in the Mount Albert 2 Precinct pursuant to sections 9(3) of the Resource Management Act 1991.

For the purpose of this precinct, the “campus population” is defined as the number of students and staff present on the site at any one time. When calculating “campus population”, students living on the campus will be assumed to be on the site at all times.

Table I320.4.1 Activity table

Activity		Activity status	
		Sub-precinct A	Sub-precinct B
(A1)	Development that does not comply with a Standard	RD	RD
Use			
Residential			
(A2)	Student accommodation accommodating up to 120 students	P	D
(A3)	Student accommodation accommodating up to 400 students	D	D
(A4)	Student accommodation accommodating more than 400 students	NC	NC
Infrastructure			
(A5)	Parking existing at 16 December 2004	P	P
(A6)	Parking not existing at 16 December 2004	D	D
Community			
(A7)	Artworks	P	P
(A8)	Community use of education and tertiary facilities	P	P
(A9)	Displays and exhibitions	P	P
(A10)	Informal recreation	P	RD
(A11)	Information facilities	P	RD
(A12)	Organised sport and recreation associated with the tertiary education facility	C	C
(A13)	Public amenities associated with the implementation of this precinct	P	RD
(A14)	Teritary education facilities existing at 16 December 2004	P	N/A
(A15)	Teritary education facilities not existing at 16 December 2004	D	D
(A16)	Teritary education facilities for a maximum campus population of 1,100 from Monday to Friday and 570 from Saturday to Sunday	P	D
(A17)	Teritary education facilities for a maximum campus population of 1,500	D	D
(A18)	Teritary education facilities over a campus population of 1,500	NC	NC

Development			
(A19)	Accessory buildings for the maintenance of the campus grounds and buildings, including storage and workshops	P	RD
(A20)	Buildings, external alterations, additions and demolition unless otherwise specified below	P	RD
(A21)	Buildings greater than 500m ² in gross floor area	RD	RD
(A22)	Buildings, external alterations, additions and demolition where the work is visible from and located within 10 metres of a road or open space zone (excluding private roads)	RD	RD
(A23)	Parking buildings	D	D

I320.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I320.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I320.4.1 Activity table and which is not listed in I320.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I320.6. Standards

The standards applicable to the underlying zone and Auckland-wide apply in this precinct, except the following:

- H4 Residential – Mixed Housing Suburban Zone Standard H4.6.10 Landscaped area;
- E27 Transport - Table E27.6.2.4 Parking rates - area 2; and
- In E24 Lighting - Table E24.6.1.1 Lighting category classifications, the Mixed Housing Suburban standard is replaced by the Special Purpose - Tertiary Education Zone standard. For the avoidance of doubt, the lighting category for this precinct is Lighting Category 4 (high brightness).

All activities listed in Table I320.4.1 must comply with the following permitted activity standards.

I320.6.1. Height

- (1) Buildings must not exceed the maximum height in Table I320.6.1.1 Building heights below:

Table I320.6.1.1 Building heights

Building	Maximum height in metres
Parking building	6
All other building platforms	10

- (1) For the purposes of determining maximum height on the building platform in the north western corner of the site marked on Mount Albert 2: Precinct plan 1, all of the following apply:
- (a) the average ground level method or the rolling height method must be used;
 - (b) the maximum ground level must be taken as RL22.5 and no regard must be had to ground levels above RL22.5; and
 - (c) regard must be had to ground levels below RL22.5.

I320.6.2. Building platform

- (1) Building development must only occur on the building platforms identified on Mount Albert 2: Precinct plan 2 – activity locations.

I320.6.3. Parking

- (1) Parking must be provided at a minimum ratio of 1 space for every 3 students and staff permitted to be on the site at any one time.
- (2) All parking must be located within the identified parking areas shown on Mount Albert 2: Precinct plan 2 - activity locations.
- (3) A designated on-site bus stop and bus parking area must be provided on the site.

I320.6.4. Access

- (1) All vehicle and pedestrian access must be from Linwood Avenue.
- (2) There must be no pedestrian or vehicle access to the site from Burnside Avenue or Martin Avenue.
- (3) The boundary of the tertiary education facility campus with Burnside and Martin Avenues must be fenced so that no pedestrian or vehicle access can be achieved.
- (4) The northern Linwood Avenue access must be closed to traffic during the following hours:
 - (i) Mondays to Saturdays between 10pm and 7am the following day; and

- (ii) Sundays between 6pm and 7am the following day
- (d) The access must be closed by a physical barrier such as a locked gate.
- (e) A sign must be maintained at the access clearly advising of the times the access is open.

I320.6.5. Impervious area, building coverage and landscaping

- (1) The maximum impervious area must not exceed 35 per cent of the total site area.
- (2) The maximum building coverage must not exceed 35 per cent of the total site area.
- (3) Screening trees and shrubs, in accordance with Mount Albert 2: Precinct plan 3 - landscaping must be planted in Sub-precinct B along the site's boundary with the adjoining open space zoned land 12 months prior to any construction work being undertaken on the building platforms. The planting must be accompanied by a planting plan in accordance with I320.9.6.

I320.7. Assessment – controlled activities

I320.7.1. Matters of control

The Council will reserve its control to the following matters when assessing a controlled activity resource consent application, in addition to the matters specified for the relevant controlled activities in the zone or Auckland-wide provisions:

- (1) for organised sport and recreation:
 - (a) the effects of planting and landscaping on the surrounding residential properties and golf course;
 - (b) the effects of the activity on the neighbourhood character and residential amenity of the surrounding residential properties and golf course; and
 - (c) the effects on the wider transport infrastructure and network.

I320.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the zone or Auckland-wide provisions:

- (1) for organised sport and recreation:
 - (a) the effects of planting and landscaping on the surrounding residential properties and golf course:
 - (i) the extent to which the planting and other landscaping is provided in relation to the following matters:
 - (i) is consistent with Mount Albert 2: Precinct plan 3 – landscaping;

- (ii) mitigates adverse visual effects with particular regard to views from adjacent residential and open space zoned land. This includes whether boundary planting is of a suitable species, spacing and size to provide screening of the new buildings when viewed from the adjoining open space zoned land;
 - (iii) includes provision for specimen trees in appropriate locations with particular regard to the need to mitigate the effects of the loss of any existing trees which need to be removed during development; and
 - (iv) provides adequate topsoil depth to allow for optimum growing conditions for boundary screen planting. This would be required to be achieved through mounding where existing ground conditions are not adequate to provide minimum topsoil depths of 1m for trees and 0.4m for shrubs.
- (b) the effects of the activity on the neighbourhood character and residential amenity of the surrounding residential properties and golf course:
 - (i) the extent to which screening or other design features mitigate adverse effects relating to noise and lighting on the adjoining properties; and
 - (ii) whether hours of operation and operational measures should be controlled to mitigate adverse effects on adjoining properties.
- (c) effects on wider transport infrastructure and network:
 - (i) the extent to which the proposal provides for safe pedestrian access into and within the site (other than from Martin Avenue). This will include consideration of the pedestrian connections from the site to the adjoining street network and the Asquith Avenue campus; and
 - (ii) the extent to which any potential adverse effects on the wider transport and infrastructure and network are mitigated. Council may require the following transport actions to be actioned or funded by the tertiary education facility as a condition of any resource consent:
 - (i) widening Linwood Avenue by approximately 2.2 metres in the vicinity of the site access points to allow for the provision of a central painted flush median and the provision of left turn slip lanes for vehicles turning left into the site from Linwood Avenue. These works are intended to reduce delays for other traffic using Linwood Avenue. Any loss of on-street parking due to the road widening is to be mitigated by the provision of replacement parking in recessed parking bays at suitable locations on Linwood Avenue;
 - (ii) the upgrading of vehicle access points to the campus from Linwood Avenue to a sealed width of 10 metres. This work will allow the provision of separate left and right turn lanes for vehicles

exiting the site and will assist in minimising delays for vehicles exiting the site;

- (iii) modification of the vertical alignment of Linwood Avenue to ensure that adequate visibility is maintained at the northern Linwood Avenue access for traffic safety;
- (iv) provision of low noise generating surfaces, such as friction course sealing, on Linwood Avenue adjacent to the southern Linwood Avenue access into the campus;
- (v) the enhancement of existing pedestrian access from Linwood Avenue in order to minimise pedestrian and vehicle conflict;
- (vi) the design and implementation of intersection upgrades (to the extent that these are required to deal with traffic effects generated by the development on site) for the following intersections:
 - St Lukes Road and Linwood Avenue
 - Linwood Avenue and Rossgrove Terrace; and
 - Rossgrove Terrace and Asquith Avenue.
- (vii) the implementation of a transport demand management strategy to reduce reliance on private motor vehicles by tertiary education institute staff and students as a means of transport to the site and to minimise the increase in peak period traffic generation; and

I320.8. Assessment – restricted discretionary activities

I320.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the Auckland-wide or zone provisions:

- (1) informal recreation:
 - (a) the matters listed in I320.7.1(1) above;
- (2) information facilities, public amenities and, accessory buildings, buildings, alterations and additions identified as restricted discretionary activities:
 - (b) the matters listed in I320.7.1(1) above;
 - (c) the effect of the built form on the amenity of the golf course; and
 - (d) the effect of the building design, location and external appearance.

I320.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the Auckland-wide or zone provisions:

- (1) informal recreation
 - (a) the matters listed in I320.7.1.(1) above;
 - (i) the criteria listed at I320.7.2 above;
- (2) information facilities, public amenities, and accessory buildings, alterations and additions identified as restricted discretionary activities:
 - (a) the matters listed in I320.7.1.(1) above;
 - (i) the criteria listed at I320.7.2 above;
 - (b) the effect of the built form on the amenity of the golf course:
 - (i) the extent to which new buildings include suitable screening and/or use toughened glass to minimise damage to people and campus property caused by golf balls from the adjoining golf course; and
 - (ii) where the boundary planting along the north eastern boundary of the site required by I320.6.5(3) above is not yet of sufficient height and form to provide adequate visual screening of the parking building when viewed from the golf course, the car parking building should be designed such that its building form and north western façade treatment reduces the visual impact of the bulk of the building and provides interest through façade modulation, setbacks, contrasting materials, parapet and or roof forms and building openings; and
 - (c) the effect of the building design, location and external appearance:
 - (i) the extent to which the scale, bulk, location and design of buildings or structures:
 - (i) minimise adverse overshadowing or privacy effects on adjoining residential zoned and open space zoned sites by landscaping, screening, and/or separation distances;
 - (ii) maintain the personal safety of tertiary education facility users; and
 - (iii) provides appropriate landscaping or fencing so that the tertiary education facility building is compatible with its surroundings and to preserve privacy of adjoining and facing residential properties and the golf course.
 - (ii) whether the design of buildings contributes to the local streetscape and sense of place by responding to the planned future context of the surrounding area;

- (iii) whether buildings that front the streets and open spaces positively contribute to the public realm and pedestrian safety; and
- (iv) whether buildings include activities that engage and activate streets and public spaces at ground and first floor levels; and

I320.9. Special information requirements

An application for any resource consent in this precinct must be accompanied by the following information, or confirmation that the provisions are being met, whichever is applicable:

I320.9.1. Parking and traffic

- (1) The tertiary education institute must provide an annual statement to the Council by 31 March of every calendar year identifying campus numbers and formally marked car parking spaces. The statement must identify:
 - (a) total people, being equivalent full-time students and full-time staff; and
 - (b) campus population, being numbers of students and staff on the site at any one time; and
 - (c) the number of marked parking spaces provided on the site.

I320.9.2. Traffic survey

- (1) The tertiary education facility must undertake an annual traffic survey during a peak operational period as agreed with Council to determine:
 - (a) the extent of traffic generation in the surrounding streets resulting from the tertiary education facility.
 - (b) the on-site parking demand and the incidence of on-street parking resulting from the tertiary education facility.
- (2) The traffic survey must:
 - (a) be undertaken by a registered traffic engineer during the course of a typical day;
 - (b) include Linwood, Burnside and Verona Avenues, Martin Avenue as far as Rossgrove Terrace, Rossgrove Terrace between Norrie and Martin Avenues and Challinor Crescent; and
 - (c) include information setting out the actual campus population during the time that the survey was undertaken.
- (3) The manner and timing of the survey must be agreed beforehand with Council.
- (4) The results of the survey must be provided to Council within one month of the survey being undertaken.

I320.9.3. 24-hour contact and complaints register

- (1) The tertiary education facility must provide the owners and occupiers of all properties adjoining the site and the Mount Albert Residents Association with a 24-hour contact phone number(s) to report concerns or complaints associated with the tertiary education institute directly to its management or security staff.
- (2) The tertiary education facility must keep and maintain a register of any complaints about its operation including those received via the 24-hour contact phone number(s), email, written correspondence or face to face meetings.
 - (a) The register must record the time of the complaint, who it is from, the nature of the issue and the action taken by the tertiary education facility.
 - (b) The tertiary education facility must make the register available to the council within 48 hours of a written request from the council.

I320.9.4. Community liaison group

- (1) The tertiary education facility must form a community liaison group to consult and liaise with the local community in respect of its operations, including implementation of and compliance with this precinct.
- (2) The tertiary education facility must invite the following parties to participate in the community liaison group:
 - (a) Mount Albert Residents Association;
 - (b) Auckland City Golf Course Ltd, or any successive manager of the Chamberlain Park Golf Course;
 - (c) local residents living in the following streets:
 - (i) Linwood Avenue;
 - (ii) Burnside Avenue;
 - (iii) Verona Avenue;
 - (iv) Martin Avenue (those properties located on either side of Martin Avenue between Rossgrove Terrace intersection and the former Martin Avenue entrance onto the campus);
 - (v) Rossgrove Terrave; and
 - (vi) Chaillinor Crescent; and
 - (d) Gladstone Primary School Board of Trustees.
- (3) The tertiary education facility must convene a meeting of the community liaison group on a yearly basis no later than one month after undertaking the annual traffic survey (refer to I320.9.2 above) for the purpose of providing and

discussing the traffic survey and any other matters of concern to the community arising from activities at the tertiary education institute.

- (4) The tertiary education facility must provide a written invitation to the parties outlined in I320.9.4(2) above at least ten working days before the commencement of the meeting.
- (5) The meeting must be held at a convenient location mutually agreed upon by the tertiary education institute facility-and Mount Albert Residents Association. The costs, if any, of renting the venue must be borne by the tertiary education institute.
- (6) The meeting must be chaired by an independent party with mediation skills as agreed between the tertiary education facility-and Mount Albert Residents Association. The cost of employing such a person must be borne by the tertiary education facility.
- (7) Minutes of the meeting must be provided to all attendees promptly following the meeting. A copy of the minutes must also be provided to Council.

I320.9.5. Intensity

- (1) Within 48 hours of receiving a written request from the Council, the tertiary education facility must provide written information about the number of staff and students present on the campus throughout the course of a particular campus day. This is for monitoring purposes.

I320.9.6. Planting and maintenance plan

- (1) A planting and maintenance programme must be submitted to and approved by the Council prior to the planting required under Standard I320.6.5(3) being implemented.

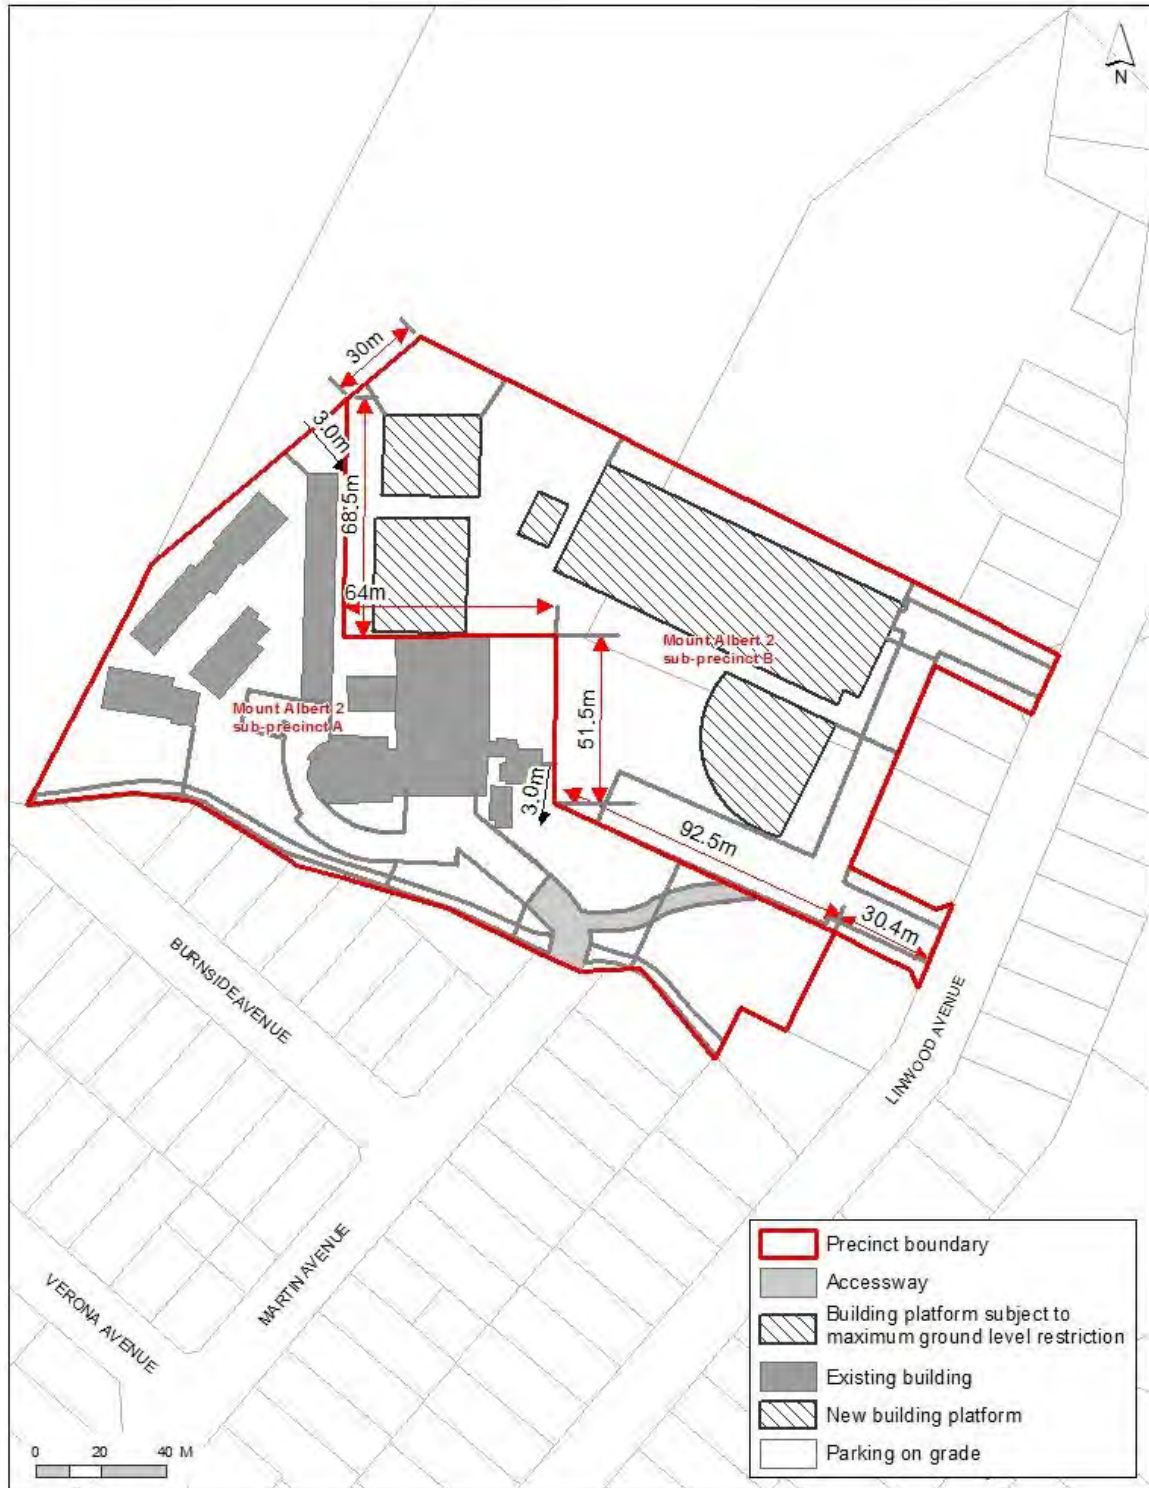

The planting plan and maintenance programme must:

- (a) be prepared by a registered landscape architect;
- (b) include details of plant sizes at the time of planting and intended species, including mature specimen trees to provide screening;
- (c) set out the methods for irrigation and fertilising to ensure continued growth of the plants;
- (d) set out the methods to protect planting during construction;
- (e) provide details on the timing of planting; and
- (f) detail topsoil depths, sufficient to ensure the optimum growth of the plants. In particular, boundary planting must be required to achieve the following minimum topsoil depths at the time of planting:
 - (i) for trees 1 metre of topsoil depth, and
 - (ii) for shrubs 0.4 metres of topsoil depth.

Note: The minimum topsoil depths may either be achieved using existing ground conditions where appropriate or through mounding.

1320.10. Precinct plans

1320.10.1 Mount Albert 2: Precinct plan 1

I320.10.2 Mount Albert 2: Precinct plan 2 - activity locations

I320.10.3 Mount Albert 2: Precinct plan 3 - landscaping

I321. Mount Smart Stadium Precinct

I321.1. Precinct description

The Mount Smart Stadium Precinct provides specific planning controls for the use and development of Mount Smart Stadium. Mount Smart Stadium Precinct is a 22 hectare sports and recreation stadium. It was originally a volcanic hill that stood 86 metres high and local Maori called it Rarotonga which means 'below south'.

The zoning of the land within the Mount Smart Stadium Precinct is Special Purpose - Major Recreation Facility Zone. The overlay, Auckland-wide and zone objectives and policies apply in this precinct in addition to those listed below.

Refer to the planning maps for the location and extent of the precinct.

I321.2. Objectives

- (1) The Mount Smart Stadium is protected as a regionally and nationally important venue for all of the following primary activities:
 - (a) organised sports and recreation;
 - (b) informal recreation;
 - (c) concerts, events and festivals;
 - (d) markets, fairs and trade fairs;
 - (e) functions, conferences, gatherings and meetings;
 - (f) motorsport activities; and
 - (g) displays and exhibitions.
- (2) A range of activities compatible with, or accessory to, the primary activities are enabled.
- (3) The adverse effects of the operation of the Mount Smart Stadium are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

I321.3. Policies

- (1) Enable the safe and efficient operation of the Mount Smart Stadium for its primary activities.
- (2) Protect the primary activities of the Mount Smart Stadium from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and

- (b) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of the Mount Smart Stadium, having regard to the amenity of surrounding properties.
- (5) Recognise that the Mount Smart Stadium's primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

I321.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E40 Temporary activities;
- (2) E25 Noise and vibration (noise provisions only);
- (3) E24 Lighting;
- (4) E27 Transport – district rule E27.6.1; and
- (5) E27 Transport – district rule E27.6.2.

Table I321.4.1 specifies the activity status of land use and development activities in the Mount Smart Stadium Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I321.4.1: Activity table

	Activity	Activity status
Use		
Primary activities		
(A1)	Concerts, events and festivals	P
(A2)	Markets, fairs and trade fairs	P
(A3)	Functions, conferences, gatherings and meetings	P

(A17)	Any compatible activity not meeting Standard I321.6.4 but meeting all other standards	C
Development		
(A18)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 20m in height	P
(A19)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m in height	RD
(A20)	Grandstands and spectator viewing structures up to 35m in height	P
(A21)	Grandstands and spectator viewing structures greater than 35m in height	RD
(A22)	Light towers and associated fittings up to and greater than 35m in height	P
(A23)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I321.6.6	RD
(A24)	Demolition of buildings	P
(A25)	Temporary buildings	P
(A26)	Workers' accommodation	P

I321.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I321.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I321.4.1 Activity table and which is not listed in I321.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I321.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I321.4.1 must comply with the following activity standards unless otherwise stated.

I321.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any residential site in a residential zone must not exceed the noise limits in Table I321.6.1.1. Noise limits do not apply within the Mount Smart noise control area as illustrated in Figure I321.6.1.1.

Table I321.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Up to 6 special noise events between 8:00am and 10:30pm in any 12 month period	75dB $L_{Aeq(5min)}$
Up to 30 special noise events between 8:00am and 10:30pm in any 12 month period	65dB $L_{Aeq(5min)}$
Up to 50 special noise events between 8:00am and 10:30pm in any 12 month period	55dB L_{Aeq}
General noise standards for all days including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:30pm	55dB L_{Aeq}
General noise standards for all other times	45dB L_{Aeq} and 75dB L_{Amax}

Figure I321.6.1.1: Mount Smart noise control area

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) For special noise events an adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.
- (4) Testing and balancing of all sound systems including vocal checks by performers must cumulatively not exceed 3 hours and must not commence

before 10am on any day and must be completed by 7pm on the day of the event.

- (5) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (6) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (7) Where $L_{Aeq (5min)}$, is specified, no 5 minute measurement sample can exceed the stated limit.
- (8) Professional fireworks displays and helicopter flights are excluded from this standard.

I321.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I321.6.2, the curfew and pre-curfew times are as stated in Table I321.6.2.1.

Table I321.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 12am
Curfew	12am – 7am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:
 - (a) The limits in Table I321.6.2.2 when measured at the boundary of any residentially zone. The illuminance limit will apply horizontally and vertically at any point on the residential zone boundary and at any height;
 - or

Table I321.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) The vertical illuminance limits in Table I321.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling within a residential zone.

Table I321.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	25 lux
Curfew	4 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15 per cent (based on an adaption luminance of 10 cd/m²) on any public road, calculated within each traffic lane in the direction of travel.
- (7) The glare resulting from any artificial lighting must not exceed 50,000 cd for pre-curfew times and 2,500 cd for curfew times measured at any residential zone boundary.
- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed 50cd/m². The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.
- (9) Professional fireworks displays are excluded from this standard.

I321.6.3. Special noise events

- (1) The total number of special noise events in any 12 month period must not exceed 86 events.
- (2) For the purpose of this standard, a special noise event exceeds the standard noise limits but does not exceed the special noise limits listed in Table I321.6.1.1.
- (3) Special noise events may occur consecutively over a day or days, but may not exceed the total number of special noise events allowed in any 12 month period provided that:
- (a) There must be no more than 2 special noise events on any one day.

- (b) There must be no more than 4 special noise events within any 2 week period.
- (4) A single special noise event must be limited to a total duration of 6 hours. Any special noise event lasting longer than 6 hours must be counted as 2 special noise events. The duration of a special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.

I321.6.4. Traffic management

All activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 10,000 people and does not require the closure of a public road.

I321.6.5. Parking

- (1) Parking for a minimum of 325 cars must be retained within the precinct unless an authorised Transport and Traffic Management Plan is in effect.

I321.6.6. Interface control areas

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on the precinct plan. Temporary buildings are excluded from this standard.

I321.6.7. Height in relation to boundary

- (1) Where the Mount Smart Stadium Precinct directly adjoins a road, buildings must not project beyond a 45 degree recession plane measured from a point 8.5m vertically above ground level on the precinct boundary.
- (2) Temporary buildings, light towers and associated fittings are excluded from this standard.

I321.6.8. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 metres from any residential zone.
- (5) Displays must comply with 140dB L_{zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I321.6.9. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 150m from any neighbouring site.

I321.6.10. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I321.7. Assessment – controlled activities

I321.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions.

- (1) The effects of the proposed activity on the safety and efficiency of the transport network.

I321.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay and Auckland-wide provisions.

- (1) Effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I321.8. Assessment – restricted discretionary activities

I321.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions.

- (1) Any activity that does not comply with noise and/or lighting standards:

- (a) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks;
- (2) Any activity that does not comply with permitted helicopter flight standards:
 - (a) The effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties;
- (3) Any activity that does not comply with permitted professional fireworks display standards:
 - (a) The effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties;
- (4) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m in height and/or which does not comply with height in relation to boundary standards:
 - (a) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces;
- (5) Grandstands and spectator viewing structures greater than 35m in height:
 - (a) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces; and
- (6) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I321.6.6:
 - (a) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.

I321.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions.

- (1) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) Whether the effects of the activity will give rise to noise effects are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance;
 - (b) Whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time;

- (c) The extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement;
 - (d) The extent to which any artificial lighting will create a traffic safety issue;
 - (e) Whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (f) The extent to which the amount of light falling into habitable rooms during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance;
 - (g) Whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment; and
 - (h) The extent to which additional special events adversely affect the amenity of surrounding properties having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of special event standards;
 - (iii) the additional number of special events; and
 - (iv) whether there is an operational need for the exceedance.
- (2) The effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
- (a) The extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces:
- (a) The extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones;
 - (b) The extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones);

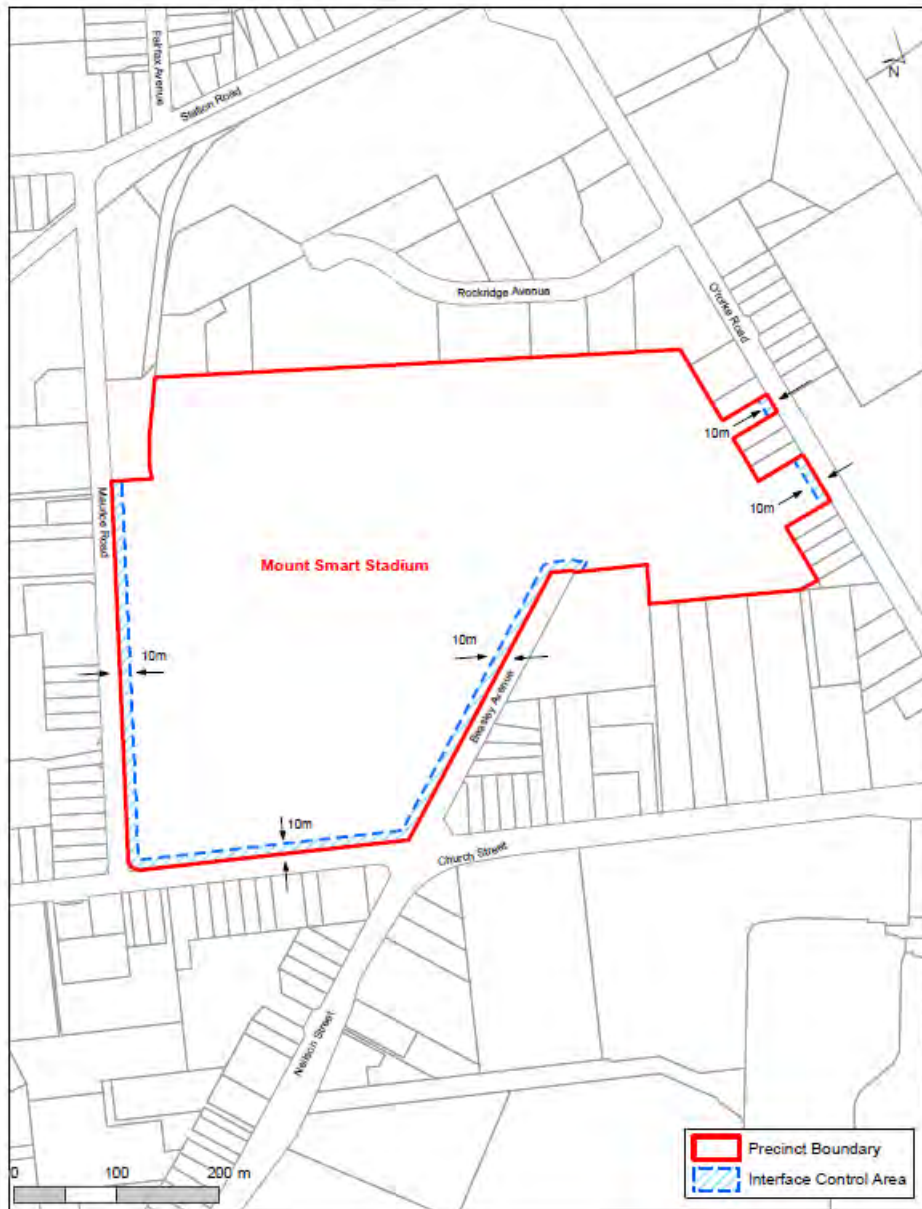

- (c) Whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s; and
 - (d) The extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (4) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces:
- (a) The extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.

I321.9. Special information requirements

There are no special information requirements for this precinct.

I321.10. Precinct plans

I321.10.1. Mount Smart Stadium: Precinct plan 1

I322. Mount Wellington 5 Precinct

I322.1. Precinct description

The Mount Wellington 5 Precinct incorporates a large purpose built sports centre occupying 7.5ha of land in Mount Wellington. The centre provides predominantly for netball activities, while other sports and community activities also use the facilities in order to support the viability of the centre. The centre has regional, as well as local, significance providing for organised sport and recreation at all levels, from school children to premier sport. It is envisaged that up to 46 outdoor and eight indoor netball courts will be established on the site when it is fully developed.

The zoning of the land within the Mount Wellington 5 Precinct is Open Space - Sport and Active Recreation Zone.

I322.2. Objectives

- (1) Organised sports and recreation activities are promoted on the site.
- (2) Other activities which are compatible with, or accessory to, organised sport and recreation are provided for where they do not detract from the safe and efficient operation of the site.
- (3) The amenity values of the precinct and surrounding areas are maintained.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I322.3. Policies

- (1) Recognise that this site is a purpose-built sport and recreation facility when considering whether other activities represent an efficient use of these physical resources.
- (2) Provide for a range of other activities which are compatible with, or accessory to, organised sport and recreation within the precinct where they are of a character and scale which will not displace organised sport and recreation activities.
- (3) Manage the activities conducted within the precinct to maintain its safe and efficient operation.
- (4) Manage adverse effects generated by the operation of the site to maintain the amenity and safety of the surrounding area.
- (5) Require proposed development to be located in accordance with the precinct plan.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I322.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I322.4.1 specifies the activity status of land use and development in the Mount Wellington 5 Precinct pursuant to section 9(3) of the Resource Management Act 1991.

A blank in Table 0.1 Activity table below means that the provisions of the overlays, zone or Auckland-wide apply.

Table I322.4.1: Activity table

	Activity	Activity status
Use		
(A1)	Any activity within this precinct that is not identified below	
(A2)	Organised sports and recreation	P
(A3)	Informal recreation	P
(A4)	Any permitted activity not meeting Standard I322.6.4 but meeting all other standards	C
(A5)	Concerts, events and festivals	P
(A6)	Markets, fairs and trade fairs	P
(A7)	Functions, conferences, gatherings and meetings	P
(A8)	Displays and exhibitions	P
(A9)	Accessory activities	P
Development		
(A10)	New buildings, building alterations or additions to a building	P
(A11)	Grandstands	P

I322.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table 0.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.

I322.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct, except that the following standards do not apply:

- Standard E25.6.17 Open Space – Sport and Active Recreation Zone interface
- Standard E27.6.2 Number of parking and loading spaces do not apply in this precinct

- Standard H7.11.1 Building height
- Standard H7.11.5 Gross floor area threshold
- Standard H7.11.6 Maximum site coverage
- Standard H7.11.7 Maximum impervious area

All activities listed in Table 0 Activity table must comply with the following activity standards unless otherwise specified.

I322.6.1. Noise

- (1) The noise (rating) levels from any activity as measured within the boundary of any site containing an activity sensitive to noise, must not be greater than the noise limits and duration in Table I322.6.1.1 Noise standards.

Table I322.6.1.1 Noise standards

Time, day, duration and frequency	Noise limit	Cumulative duration
Up to 5 special noise events between 8:00am and 10:00pm in any 12 month period	65dB L_{Aeq}	6 hours within any 12 hour period
Up to 15 special noise events between 8:00am and 10:00pm in any 12 month period	60dB L_{Aeq}	6 hours within any 12 hour period
General noise standards for all days including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:00pm	55dB L_{Aeq}	
General noise standards for all other times	40dB L_{Aeq} and 70dB L_{Amax}	

- (2) Compliance with noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) An adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.
- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) For the purposes of this standard, a special noise event exceeds the general noise limits but not the special noise event noise limit in Table I322.6.1 Noise standards.

I322.6.2. Lighting**I322.6.2.1. General lighting**

The Auckland-wide provisions of E24 Lighting apply with the following modifications:

- (1) The curfew and pre-curfew times are as listed in Table I322.6.2.1 Pre-curfew and curfew times.

Table I322.6.2.1 Pre-curfew and curfew times

	Times
Pre-curfew	8:00am – 10:00pm
Curfew	10:00pm – 8:00am

- (2) The illuminance limits must not exceed the limits as stated in Table I322.6.2.1 Illuminance limits.

Table I322.6.2.1.2 Illuminance limits

	Illuminance limits
Pre-curfew	125 lux (above background level)
Curfew	20 lux (above background level)

- (3) The pre-curfew luminous intensity limit (glare limit) is 10,000 candelas.

- (4) The average surface illuminance for an intentionally artificially lit building façade must not exceed 10 cd/m².

I322.6.2.2. Special lighting events

- (1) There may be 20 special lighting events in any 12 month period of 6 hours in duration per event (cumulative hours within any 12 hour period).
- (2) For the purposes of this standard, a special lighting event exceeds the general lighting limits in Standard I322.6.2.1 but not the modified limits listed below.
- (3) For special lighting events, the limits listed in Standard I322.6.2.1 General lighting apply with the following modifications:
- (a) the pre-curfew glare limit is 25,000 candelas;
- (b) the average surface illuminance must not exceed 50cd/m² for 5 special lighting events and 25cd/m² for the remaining 15 special lighting events; and

- (c) temporary lighting (including stage lighting and special effects lighting) may, within the pre-curfew period, exceed the illuminance limits and glare standards allowed within this precinct provided this is for no more than a total of 10 minutes in any 60 minute period.

I322.6.3. Impervious areas

- (1) The maximum impervious areas within this precinct must comply with the impervious areas illustrated on Mount Wellington 5: Precinct Plan 1.
- (2) Buildings over the hardcourt area illustrated on Mount Wellington 5: Precinct Plan 1 are excluded from calculations of the maximum site coverage.

I322.6.4. Parking

- (1) Parking for a maximum of 820 cars, areas for access, vehicle drop off, buses and ambulances must be retained within the precinct.

I322.6.5. Building height

- (1) Buildings must not exceed 12m in height (includes light poles).

I322.6.6. Building location

- (1) Buildings must be located within the building platform area illustrated on the Mount Wellington 5: Precinct plan 1.
- (2) Buildings which provide a weather proof covering over the hardcourt area illustrated on the Mount Wellington 5: Precinct plan 1 are exempted from this standard.

I322.7. Assessment – controlled activities

I322.7.1. Matters of control

The Council will reserve its control to all of the following matters when assessing a controlled activity resource consent application, in addition to the matters specified for the relevant controlled activities in the overlay, zone or Auckland-wide provisions:

- (1) any permitted activity not meeting Standard I322.6.4 but meeting all other standards:
 - (a) the effects of the increased number of vehicles on the surrounding transport network.

I322.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay, zone or Auckland-wide provisions:

- (1) any permitted activity not meeting Standard I322.6.4 but meeting all other standards:
 - (a) the effects of the increased number of vehicles on the surrounding transport network:

- (i) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
- (ii) the extent to which entry and exit points to the precinct will be managed to suitably accommodate traffic and pedestrian movements; and
- (iii) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I322.8. Assessment – restricted discretionary activities

I322.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for any relevant activities in the overlay, Auckland-wide and zone provisions:

- (1) any activity that does not comply with Standard I322.6.1 Noise:
 - (a) the effects of additional noise events, or events exceeding noise limits, on the amenity of the surrounding environment;
- (2) any activity that does not comply with Standard I322.6.2 Lighting:
 - (b) the effects of additional lighting events, or events exceeding lighting limits, on the amenity of the surrounding environment; and
 - (c) the effects of artificial lighting on the safety of the transport network.
- (3) any activity that does not comply with Standards I322.6.3 Impervious areas, I322.6.5 Building height or I322.6.6 Building location:
 - (a) the visual effects of the proposed building design and appearance on the surrounding environment;
 - (b) the effects of additional buildings on neighbouring sites, streets and public open spaces;
 - (c) the effects of the buildings on organised sport and recreation activities undertaken within the precinct; and
 - (d) the effects on the surrounding transport network.
- (4) any other restricted discretionary activity:
 - (a) the effects of the proposed activity on organised sport and recreation undertaken within the precinct.

I322.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide provisions and zone:

- (1) any activity that does not comply with Standard I322.6.1 Noise:
 - (a) the effects of additional noise events, or events exceeding noise limits, on the amenity of the surrounding environment.
 - (i) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance.
 - (ii) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time; and
 - (iii) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
- (2) any activity that does not comply with Standard I322.6.2 Lighting:
 - (a) the effects of additional lighting events, or events exceeding lighting limits, on the amenity of the surrounding environment.
 - (i) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (ii) the extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance; and
 - (iii) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
- (3) any activity that does not comply with Standards I322.6.3 Impervious areas, I322.6.5 Building height or I322.6.6 Building location:
 - (a) the visual effects of the proposed building design and appearance on the surrounding environment;

- (i) the extent to which building design and external appearance avoid, remedy or mitigate adverse effects on neighbours having regard to all of the following:
 - (ii) the amenity values and character of the surrounding area;
 - (iii) the functional and operational requirements of the precinct;
 - (iv) integrated CPTED principles into external building and layout design;
 - (v) long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones are avoided;
 - (vi) mechanical and electrical equipment is integrated into the building design as far as possible;
 - (vii) the use of quality, durable, fit for purpose and easily maintained materials for building design and construction; and,
 - (viii) landscaping has been utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (b) the effects of additional buildings on neighbouring sites, streets and public open spaces;
- (i) the extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (ii) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones);
 - (iii) whether there is an operational need to exceed height and/or height in relation to boundary standard/s; and
 - (iv) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (c) the effects of the buildings on organised sport and recreation activities undertaken within the precinct; and
- (i) whether the proposed activity is of a character, scale and intensity to ensure that adverse effects on the operation of organised sport and recreation activities, including its likely future use or intensification, are avoided, remedied or mitigated; and
- (d) the effects on the surrounding transport network.

- (i) whether there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (ii) whether a reduction in car parking will compromise the successful implementation of a Transport and Traffic Management Plan, where relevant or required;
 - (iii) whether the precinct has sufficient parking capacity to provide for the day to day needs of existing and proposed activities; and
 - (iv) whether proposed artificial lighting will create a traffic safety issue or enhance safety.
- (4) any other restricted discretionary activity:
- (a) the effects of the proposed activity on organised sport and recreation undertaken within the precinct:
 - (i) whether the proposed activity is of a character, scale and intensity to ensure that adverse effects on the operation of organised sport and recreation activities, including its likely future use or intensification, are avoided, remedied or mitigated.

I322.9. Special information requirements

There are no special information requirements for this precinct.

I322.10. Precinct plan

I322.10.1. Mount Wellington 5: Precinct plan 1

I323. Observatory Precinct

I323.1. Precinct Description

The Observatory Precinct includes both the Auckland Observatory and Planetarium (Stardome) located within One Tree Hill/ Maungakiekie Domain.

Auckland is one of the few cities in the world with both an astronomical observatory and a planetarium. Both of these facilities are valued regional assets.

The purpose of this precinct is to provide for the ongoing use and development of the Observatory and Planetarium. The precinct enables a range of activities that enhance the operation, use and enjoyment of these facilities and manages effects on the heritage values and landscape character of One Tree Hill/ Maungakiekie Domain.

The land within the precinct is scheduled:

- in the Historic Heritage Overlay as part of the extent of place identified for the One Tree Hill/ Maungakiekie Domain;
- in the Volcanic Viewshafts and Height Sensitive Areas Overlay; and
- as an outstanding natural feature in the Outstanding Natural Features Overlay and the Outstanding Natural Landscapes Overlay as part of the outstanding natural feature identified for the One Tree Hill/ Maungakiekie Domain.

The land within this precinct is zoned Open Space – Informal Recreation Zone.

I323.2. Objectives

- (1) Use and development enhances the operation, use and enjoyment of the Observatory and Planetarium and enables technical requirements to be met.
- (2) Use and development in the Observatory Precinct is compatible with the heritage values and landscape character of One Tree Hill/ Maungakiekie Domain.

The overlay, Auckland-wide and Open Space – Informal Recreation Zone objectives apply in this precinct in addition to those specified above.

I323.3. Policies

- (1) Enable activities that enhance the operation, use and enjoyment of the Observatory and Planetarium.
- (2) Enable development necessary to meet the technical requirements of the Observatory and Planetarium.
- (3) Manage development to ensure it is compatible with the heritage values and landscape character of the One Tree Hill/ Maungakiekie Domain.
- (4) Manage parking within the precinct to ensure the heritage and landscape character values of One Tree Hill/ Maungakiekie Domain are not adversely affected.
- (5) Manage the impacts of light spill on the Observatory from surrounding land uses.

The overlay, Auckland-wide and Open Space – Informal Recreation Zone policies apply in this precinct in addition to those specified above.

I323.4. Activity table

The overlay, Auckland-wide and Open Space – Informal Recreation Zone provisions apply in this precinct unless otherwise specified below.

Table I323.4.1 Activity table specifies the activity status of land use and development activities in the Observatory Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I323.4.1 Activity table

Activity		Activity status
Use		
(A1)	Restaurants and cafes, excluding a drive-through facility, accessory to use of the Observatory and Planetarium	P
(A2)	Conference facilities accessory to the Observatory and Planetarium	P
(A3)	Observatory and Planetarium activities	P
(A4)	Displays and exhibitions	P
Development		
(A5)	Internal and external alterations and additions to existing buildings	P
(A6)	Buildings where the cumulative total building coverage, or cumulative total footprint of buildings, is greater than 50% of the total precinct area	D
(A7)	Buildings associated with the Observatory Precinct which are not entirely located within the precinct boundary	D

I323.5. Notification

- (1) Any application for resource consent for an activity listed in Table I323.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I323.6. Standards

The zone standards do not apply in this precinct. The overlay and Auckland-wide standards apply in this precinct except for Standard E27.6.2 Number of parking and loading spaces in E.27 Transport.

Internal and external alterations and additions to existing buildings, provided for as a permitted activity in Table I323.4.1 Activity table, must comply with the following permitted activity standards:

I323.6.1. Maximum building height

- (1) Buildings must not exceed 9m above the height of the existing ground level in Area A as shown on Observatory Precinct: Precinct plan 1 – Maximum building height.
- (2) Buildings must not exceed 3m above the height of the existing ground level in Area B as shown on Observatory Precinct: Precinct plan 1 – Maximum building height.

I323.6.2. Maximum building coverage and building location

- (1) The maximum building coverage or cumulative total footprint of buildings must not exceed 50 per cent of the total precinct area.
- (2) Buildings associated with the Observatory and Planetarium must be entirely located within the precinct boundary.

I323.6.3. Maximum impervious area

- (1) The maximum impervious area must not exceed 70 per cent of the total precinct area.

I323.6.4. Number of parking spaces

- (1) The number of parking spaces must not exceed 15 parking spaces.

I323.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I323.8. Assessment – restricted discretionary activities

There are no restricted discretionary activities in this precinct.

I323.9. Special information requirements

There are no special information requirements in this precinct.

I323.10. Precinct plans

I323.10.1. Observatory Precinct: Precinct plan 1 – Maximum building height

I324 Ōkahu Bay Precinct

I324.1. Precinct Description

Ōkahu Bay has significant cultural value to Ngāti Whātua Ōrākei. The bay was the tribal base for Ngāti Whātua Ōrākei for many generations and provided an important source of kaimoana. The adjoining land was the location of Ngāti Whātua Ōrākei papakāinga into the 1950s.

Ōkahu Bay also is of significant recreational value to the wider Auckland community. The sheltered bay provides for a range of recreational activities including swimming, kayaking, sailing, and waka ama.

Moorings at Ōkahu Bay, including leaching from boat hulls, have had adverse effects on:

- Mana Whenua values in this significant cultural landscape, including visual effects and effects on the mauri of the water;
- water quality;
- ecological values; and
- public access and recreational use of the Coastal Marine Area (e.g. for paddling and kayaking).

Sufficient area is available in the Coastal - Mooring Zone to the west of Ōkahu Bay to accommodate additional moorings. Therefore, this precinct seeks to prevent the continued presence of moorings in Ōkahu Bay to avoid ongoing adverse effects on the environment and values of the bay, and to meet the objectives and policies of the Coastal Mooring Zone which seeks to consolidate moorings in appropriate locations. A 12 month 'grace period' is provided to enable the removal and/or relocation of moorings from Ōkahu Bay.

The zoning of this precinct is the Coastal - General Coastal Marine Zone.

I324.2. Objectives [rcp]

- (1) The mauri of coastal water and seabed is maintained and, where possible, restored and enhanced to enable traditional and cultural use of Ōkahu Bay and its resources by Mana Whenua.
- (2) Water and sediment quality is enhanced.
- (3) The life-supporting capacity and natural resources, including kaimoana, of Ōkahu Bay are protected and, where appropriate, enhanced.
- (4) Access to and within the bay for public recreation is protected and, where appropriate, enhanced.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I324.3. Policy [rcp]

- (1) Avoid vessels being moored at Ōkahu Bay.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I324.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I324.4.1 Activity table specifies the activity status of Coastal Marine Activity Structures and their use in the Ōkahu Bay Precinct pursuant to section 12 of the Resource Management Act 1991

Table I324.4.1 Activity table

Activity		Activity status
Use		
(A1)	Existing moorings, including the occupation and use of water space by the vessel to be moored within 12 months from the date this rule becomes operative	P
(A2)	New and existing moorings, including the occupation and use of water space by the vessel to be moored after 12 months from the date this rule becomes operative	Pr

I324.5. Notification

There is no notification rule for the Ōkahu Bay Precinct.

I324.6. Standards

The zone, Auckland-wide and overlay standards apply in this precinct.

I324.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I324.8. Assessment – restricted discretionary activities

There are no restricted discretionary activities in this precinct.

I324.9. Special information requirements

There are no special information requirements in this precinct.

I324.10. Precinct plans

There are no precinct plans for this precinct.

I325. Okahu Marine Precinct

I325.1. Precinct Description

The Okahu Marine Precinct is located at Okahu Bay, Tamaki Drive. It covers an area of approximately 4.5 hectares, including both the coastal marine area and the adjoining land at Orakei Marina, the Okahu landing and boat ramp, and Watene Reserve.

The purpose of the precinct is to provide for marina, marine-related and recreation activities in an integrated manner across land and sea. The precinct provides guidance for the future use and development of the precinct.

The precinct provides for marine-related activities and structures associated with Orakei marina and Okahu Landing, and recognises the value of the landing in providing access to the harbour. The public amenity and open space values of the precinct are also recognised, including the pedestrian and cycle connections that are a key part of the informal recreation use of the precinct and Tamaki Drive. Parts of the precinct provide for ancillary or temporary activities related to marine activities and the use of the public space.

The use of land within the precinct is prioritised for marine-related and recreation activities. No additional parking is required for these activities or associated accessory activities.

Overflow boat trailer parking for boats using the precinct is provided for in Watene Reserve.

The precinct is comprised of three sub-precincts as shown on the planning maps:

- Sub-precinct A applies to the Orakei Marina (including the coastal marine area and a cantilevered deck) and is zoned Coastal – Marina Zone.
- Sub-precinct B applies to the hardstand area (Okahu Landing) adjacent to the Orakei Marina that is used for a mix of recreation and marine-related activities and is zoned Open Space-Sport and Active Recreation Zone. This area is also included in the Sites and Places Of Significance to Mana Whenua Overlay.
- Sub-precinct B also applies to the boat ramp adjoining Okahu Landing and part of the coastal marine area. The area located below mean high water springs is zoned Coastal – General Coastal Marine Zone.
- Sub-precinct C applies to the adjacent Watene Reserve and provides for the overflow of trailer parking during peak periods. Sub-precinct C is zoned Open Space – Informal Recreation Zone. The Outstanding Natural Features Overlay applies to Sub-precinct C.

I325.2. Objectives [rcp/dp]

- (1) The Okahu Marine Precinct is managed in an integrated way that supports the precinct's multi-use functions and maintains the recreation, visual amenity, landscape and ecological values of Okahu Bay.
- (2) The ongoing use and development of Okahu Landing hardstand is provided for.

The overlay, Auckland-wide and underlying zone objectives apply in this precinct in addition to those specified above.

I325.3. Policies [rcp/dp]

- (1) Enable activities and development that reflect the coastal location on Tamaki Drive and the particular requirements of the marine recreation activities undertaken within each sub-precinct.
- (2) Recognise the need to manage parking associated with the marine recreation occurring within the precinct in a comprehensive manner.
- (3) Provide for informal recreation in the precinct, recognising the recreational trails linked to Tamaki Drive that provide for public access and safety.
- (4) Require assessment of buildings and structures not otherwise provided for in the precinct or the underlying zoning so that:
 - (a) sufficient land is available for the future long term provision of open space;
 - (b) public access via identified recreational trails is not restricted;
 - (c) sufficient car parking is available for boat users of the marina and the marine related sport and recreation facilities, particularly during peak boating times; and
 - (d) sufficient land is available to continue to undertake the environmental management regime associated with managing contaminants or waste material from the cleaning, painting and maintenance of vessels, and any potential reverse sensitivity effects due to the cleaning and maintenance activities in relation to the public access areas should be avoided, remedied or mitigated.
- (5) Require assessment of activities not otherwise provided for in the precinct or the underlying zoning so that:
 - (a) sufficient land is available for the future long term provision of open space; and
 - (b) sufficient parking is available for boat users of the marina and the marine related sport and recreation facilities, particularly during peak boating times.

The overlay, Auckland-wide and underlying zone policies apply in this precinct in addition to those specified above.

I325.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the underlying zone apply in this precinct unless otherwise specified below.

Table I325.4.1 specifies the activity status of land use, development and use of coastal marine area in the Okahu Marine Precinct pursuant to sections 9(3), 12(1), 12(2) and 12(3) of the Resource Management Act 1991.

A blank in Table I325.4.1 below means that the relevant overlay, zone and Auckland-wide provisions apply.

Table I325.4.1 Activity table[rcp/dp]

Activity		Activity status				
		Sub-precinct A		Sub-precinct B		Sub-precinct C
		CMA [rcp]	Land [dp]	CMA [rcp]	Land [dp]	Land [dp]

	underlying zoning					
(A13)	Activities not otherwise provided for in the precinct or the underlying zoning	D	D	D	D	D

I325.5. Notification

- (1) Any application for resource consent the following activities must be publicly notified:
 - (a) buildings and structures not otherwise provided for; or
 - (b) activities not otherwise provided for.
- (2) Any activity not otherwise listed above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I325.6. Standards

The overlay, Auckland-wide and zone standards apply in this precinct, unless otherwise specified below.

All activities listed as permitted activity in Table I325.4.1 must comply with the following standards.

I325.6.1. Marine retail

- (1) Marine retail must be accessory to marinas and marine related sport and recreation activities based in this precinct.
- (2) The gross floor area of an individual marine retail tenancy must not exceed 200m².
- (3) The total cumulative gross floor area of marine retail activities within the precinct must not exceed 300m².

I325.6.2. Restaurants and cafes

- (1) Restaurants and cafes must be accessory to marinas and marine related sport and recreation activities based in the Okahu Marine Precinct.
- (2) The gross floor area of a restaurant or cafe tenancy must not exceed 200m².
- (3) The total cumulative gross floor area of restaurant or cafe activities in the precinct must not exceed 300m².
- (4) The floor area limits specified in Standards I325.6.2(2) and (3) above do not apply to restaurants or cafes accessory to clubrooms that are not open to the general public.

I325.6.3. Offices

- (1) Offices must be accessory to marinas and marine related sport and recreation activities based in the Okahu Marine precinct.
- (2) The total cumulative gross floor area of offices within the precinct must not exceed 300m².
- (3) Any individual accessory office use must be directly related to a permitted activity and the size of the office must be secondary to that activity.

I325.6.4. Parking

- (1) The parking requirements of in E27 Transport do not apply within the Okahu Marine Precinct.
- (2) Parking of vehicles including trailers must be associated with marine sport and recreation activities.
- (3) A minimum of 79 vehicle parking spaces must be provided in Sub-precinct A.
- (4) A minimum of 77 vehicle parking spaces must be provided in Sub-precinct B.

Note 1. Vehicle parks may be used for trailer parks within Sub-precinct B in a manner determined by the landowner.

Note 2. The use of Sub-precinct C for vehicle and trailer parks is managed by the landowner.

I325.6.5. Building platforms

- (1) Buildings in Sub-precinct B must be located in the building areas shown on Okahu Marine Precinct: Precinct plan 1.

I325.6.6. Building height

- (1) Buildings must not exceed 9.5m in height.

I325.6.7. Yards

- (1) Yards within Sub-precinct B must comply with Table I325.6.7.1 Building yard within Sub-precinct B below.

Table I325.6.7.1 Building yard within Sub-precinct B

Yard	Building area 1 and 2	Building area 3
Front	No yard is required	5m front yard in relation to Tamaki Drive

I325.6.8. Impervious area

- (1) The maximum impervious area is 100 per cent of the site area for Sub-precinct B.

I325.6.9. Building coverage

- (1) Building coverage within Sub-precinct B must comply with the standards specified in Table I325.6.9.1 Building coverage below.

Table I325.6.9.1 Building coverage

Area	Building area 1	Building area 2	Building area 3
Building coverage	1600m ²	1500m ²	300m ²

I325.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I325.8. Assessment – restricted discretionary activities**I325.8.1. Matters of discretion**

The council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) grandstands and related structures:
 - (a) construction or works, methods, timing and hours of operation;
 - (b) location, extent, design and materials used; and
 - (c) effects on existing uses and activities.

I325.8.2. Assessment criteria

The council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) grandstands and related structures:
 - (a) whether construction or works are done at a time that will avoid or minimise, adverse effects on bird roosting, nesting and feeding, and recreational users of the coastal marine area;
 - (b) the extent to which construction or works hours of operation are limited to minimise effects of noise and disruption on nearby residential and open space areas;
 - (c) whether the form, intensity and scale of structures are designed to be sensitive to the marine environment and surrounding adjoining spaces and ensure efficient use of the coastal marine area by using the minimum area necessary for their purpose;
 - (d) the extent to which the design, materials and finish complement and enhance the coastal environment, open spaces and pedestrian linkages;
 - (e) whether the building material used for structures are appropriately marine treated. If relocated or recycled building material is used, it should be

treated to prevent the transference or introduction of harmful aquatic organisms; and

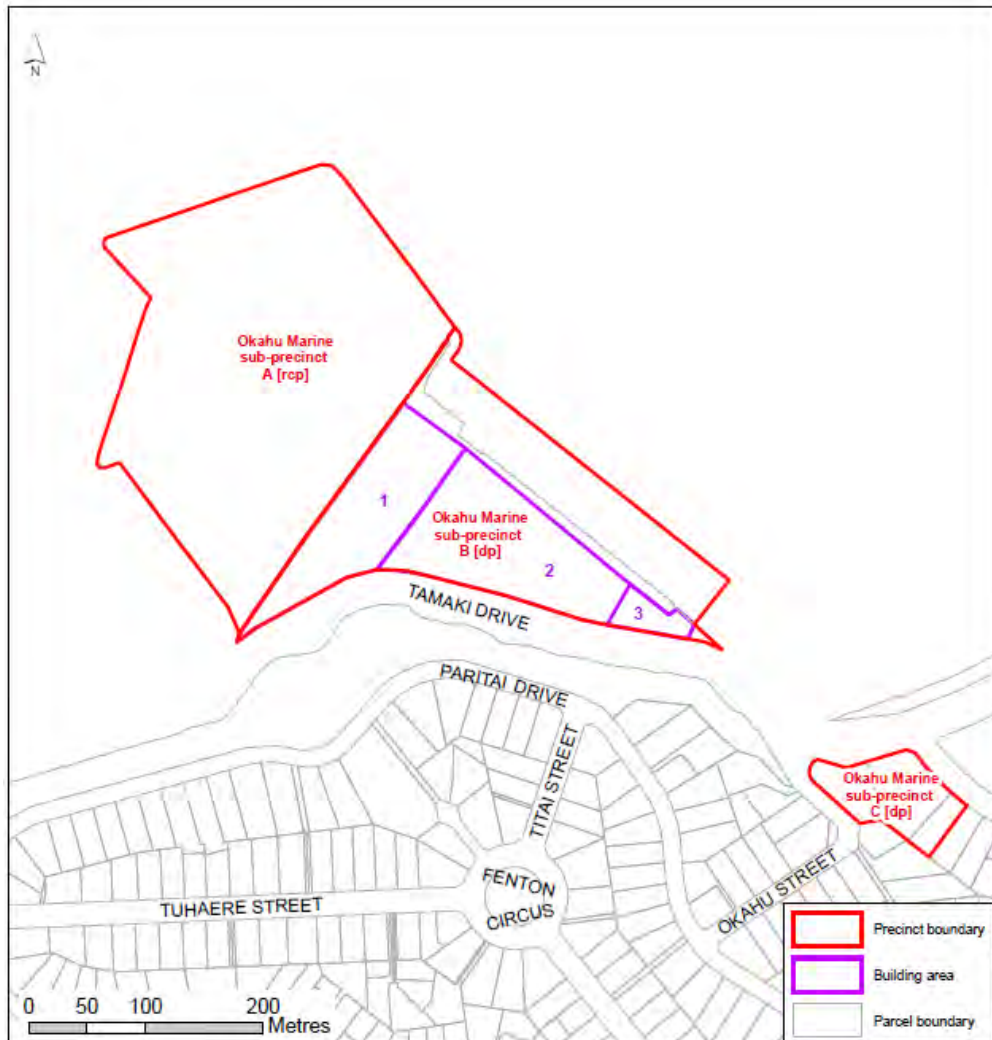

- (f) the extent to which the location of structures avoid impacts on the users of the sport and recreation facilities present within the precinct, particularly during peak boating times. It should not impact on access to and from dedicated boat storage, cleaning, painting and maintenance areas, or impact on users of the identified recreational trails.

1325.9. Special information requirements

There are no special information requirements in this precinct.

1325.10. Precinct plans

1325.10.1. Okahu Marine Precinct: Precinct plan 1- building areas within sub-precinct B

I326. Ōrākei 1 Precinct

I326.1. Precinct Description

The Ōrākei 1 Precinct includes the land identified as hapu reservation (land held for the purposes of a marae, church, urupa and related hapu amenities) and land identified for development for papakāinga and other commercial and non-commercial activities under the Ngāti Whātua Ōrākei Claims Settlement Act 2012.

The purpose of the Ōrākei 1 Precinct is to:

- enable development and land management which reflect the principles of the Ngāti Whātua Ōrākei Iwi Management Plan 2012;
- provide for a range of activities that support and enhance development for papakāinga and other commercial and non-commercial activities; and
- provide additional rules and assessment criteria to manage the effects of development.

The establishment of a joint management agreement under section 36 of the Resource Management Act 1991 is encouraged to provide for joint decision making on all resource consents or plan changes directly affecting the Ōrākei 1 Precinct. As part of this approval process, a design review panel would also be established to provide for the specific consideration of Maori identity and design. While the precinct does not rely on a joint management agreement, it is an important part of the planning context of the precinct.

The zoning of land within this precinct is a combination of:

- Special Purpose – Māori Purpose Zone;
- Residential – Terrace Housing and Apartment Buildings Zone;
- Residential – Mixed Housing Urban Zone;
- Business – Mixed Use Zone; and
- Open Space – Informal Recreation Zone.

I326.2. Objectives

- (1) The re-establishment of Ngāti Whātua Ōrākei on their Whenua Tūpuna (ancestral land) within an integrated and sustainable community environment which reflects Ngāti Whātua Ōrākei Mātauranga.
- (2) Ngāti Whātua Ōrākei is meaningfully involved in the management and decision making processes relating to Ngāti Whātua Ōrākei ancestral land.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I326.3. Policies

Kotahitanga and Whanaungatanga – community and relationships:

- (1) Promote a cultural sense of place, a location that promotes and supports interaction and engagement between tribal members and a community environment unique to Ngāti Whātua Ōrākei in Tāmaki Makaurau.

Wairuatanga – spiritual connections and building design:

- (2) Encourage design which promotes connection to significant Ngāti Whātua Ōrākei landmarks, cultural features and heritage connections.
- (3) Manage the building footprint, profile and height of buildings, where four or more dwellings are located on a site, to establish an integrated built form across the land area while also:
 - (a) creating a gateway entry to the community and a sense of awareness of entering a special residential environment;
 - (b) reinforcing and referencing local historic reference points and the wider cultural landscape;
 - (c) providing diversity in building forms and ownership models to accommodate a wide range of hapu and residents, including intergenerational whanau living opportunities and shared outdoor space;
 - (d) avoiding monotonous built form when viewed from public open space and sites within the residential zones outside of the precinct by ensuring a variation in building height and variations in building footprints and form; and
 - (e) complementing adjacent public open space by orientating buildings to enhance passive surveillance, and locating parking and servicing areas remote from public open space boundaries.

Kaitiakitanga – sustainable management:

- (4) Recognise and promote development and design solutions that protect or enhance natural, cultural and heritage values of Ngāti Whātua Ōrākei ancestral land.
- (5) Encourage, where four or more dwellings are located on a site, a form and layout of the development that enables the following sustainability initiatives:
 - (a) native planting and restoration of natural waterways;
 - (b) community gardens, including mahinga kai;
 - (c) low impact stormwater design, including the use of the Whenua Rangatira to achieve stormwater neutrality where practicable; and
 - (d) using the existing contour where possible and minimising large areas of cut and fill.

Mātauranga – traditional knowledge and identity:

- (6) Promote and provide for Ngāti Whātua Ōrākei Mātauranga in design and development.

Orangatanga – wellbeing:

- (7) Promote the establishment of community, social and employment facilities which enhance the economic and social wellbeing of Ngāti Whātua Ōrākei people and the wider community.
- (8) Maximise the opportunity to utilise the finite papakāinga land resource efficiently to house current and future generations of Ngāti Whātua Ōrākei people while avoiding or mitigating adverse effects on the surrounding environment.

Mauritanga – ecosystem enhancement and linkages:

- (9) Require development to maintain or enhance ecosystems and surrounding natural habitats, including the Whenua Rangatira.

Rangatiratanga – self determination

- (10) Establish a joint management agreement in accordance with section 36B of the Resource Management Act 1991 (or similar agreement) between Ngāti Whātua Ōrākei and the Council which:
 - (a) ensures Ngāti Whātua Ōrākei have equal decision-making powers in relation to policy and development decisions affecting their ancestral land; and
 - (b) provides an efficient process to assess the design attributes of new buildings and development.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I326.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I326.4.1 Activity table specifies the activity status of land use and development activities in the Ōrākei 1 Precinct pursuant to section 9(3) of the Resource Management Act.

A blank in Table I326.4.1 Activity table below means that the provisions of the zone or Auckland-wide provisions apply.

Table I326.4.1 Activity table

I326.5. Notification

- (1) Any application for resource consent for an activity listed in Table I326.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I326.6. Standards

The relevant overlay, zone and Auckland-wide standards apply in this precinct, unless otherwise provided for below:

I326.6.1. Horticulture

(1) Glasshouses must not exceed 50m² in size.

I326.6.2. Height in relation to boundary

(1) Where a height in relation to boundary standard applies in a zone, the standard only applies:

(a) at the external boundary of the precinct where it adjoins a site zoned Residential - Mixed Housing Urban Zone or Residential - Mixed Housing Suburban Zone; or

(b) at any internal boundary where sites are under separate ownership, and does not apply to the internal site boundaries within the precinct where land is under a single ownership and / or subject to a single application.

(2) No part of any building on 107-111 Kupe Street (Lots 208 DP 48825) shall project above a 35° recession plane measured from any point 2 metres above the ground level along the common boundary with 105 Kupe Street (Lot 2 DP 446155).

I326.6.3. Yards and building setbacks

(1) Where the Residential - Terrace Housing and Apartment Buildings Zone applies:

(a) Standard H6.6.9 Yards and Standard H6.6.8 Height in relation to boundary adjoining lower intensity zones only apply at the boundary of the precinct where it adjoins a site zoned Residential - Mixed Housing Urban Zone or Residential - Mixed Housing Suburban Zone; or

(b) at any internal boundary where sites are under separate ownership, and does not apply to the internal site boundaries within the precinct where the land is zoned Residential – Terrace Housing and Apartment Buildings Zone and is under single ownership and / or subject to a single application.

I326.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I326.8. Assessment – restricted discretionary activities

I326.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the Auckland wide or zone provisions:

(1) retirement villages, supported residential care, visitor accommodation, boarding houses:

(a) in the Special Purpose – Māori Purpose Zone the matters of discretion in H5.8.1(1) and H5.8.1(3) Matters of discretion for activities in the Residential – Mixed Housing Urban Zone; and

(b) in the Special Purpose – Māori Purpose Zone; Residential – Terrace Housing and Apartment Buildings Zone; Residential – Mixed Housing Urban Zone; Business – Mixed Use Zone; and Open Space – Informal Recreation Zone the integration of mātauranga and tikanga.

(2) public roads:

(a) transport effects;

(b) design and routes of public roads; and

(c) public pedestrian connections.

(3) new buildings, or additions and alterations to existing buildings, greater than 200m² for care centres, community facilities, education facilities, informal recreation and leisure, organised sport and recreation, healthcare facilities, offices or retail:

(a) integration of mātauranga and tikanga.

(4) four or more dwellings:

(a) cultural sense of place;

(b) building location, height and profile; and

(c) sustainability.

I326.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the Auckland-wide or zone provisions:

(1) retirement villages, supported residential care, visitor accommodation, boarding houses:

(a) in the Special Purpose – Māori Purpose Zone the assessment criteria in H5.8.2(1) and H5.8.2(3) Assessment criteria for activities in the Residential – Mixed Housing Urban Zone; and

(b) in the Special Purpose – Māori Purpose Zone; Residential – Terrace Housing and Apartment Buildings Zone; Residential – Mixed Housing Urban Zone; Business – Mixed Use Zone; and Open Space – Informal Recreation Zone, the extent to which the building design integrates mātauranga and tikanga principles.

(2) public Roads:

(a) the extent to which the location, physical extent and design of new public roads and associated public pedestrian connections integrate with existing and proposed public open space and provide for well-connected, and safe vehicular and pedestrian routes;

- (b) whether vehicle traffic through the marae area is avoided to the extent practicable; and
 - (c) the extent to which public pedestrian access across open space areas from Takitimu and Kupe Streets to Kitemoana Streets is established and reinforced.
- (3) new buildings, or additions and alterations to existing buildings, greater than 200m² for care centres, community facilities, education facilities, informal recreation and leisure, organised sport and recreation, healthcare facilities, offices or retail:
- (a) the extent to which the building design integrates mātauranga and tikanga principles.
- (4) four or more dwellings:
- (a) cultural sense of place:
 - (i) the extent to which the development reinforces and complements the marae as the heart of the community;
 - (ii) the extent to which opportunities for local community services, employment and places to shop are provided, particularly at the Takitimu Street / Kupe Street entrance to the Ōrākei precinct and near the marae; and
 - (iii) whether development establishes and reinforces the use and function of areas zoned open space and orientate views towards the Whenua Rangatira;
 - (b) building location, height and profile:
 - (i) whether building footprints, profile and height (rather than detailed building design) establish an integrated built form and spatial framework across the subject land area and address the matters in Policy I326.3(3) above; and
 - (c) sustainability
 - (i) whether the form and layout of the development enables the sustainability initiatives identified in Policy I326.3(5) above.

I326.9. Special information requirements

There are no special information requirements in this precinct.

I326.10. Precinct plans

I326.10.1 Orakei 1: Precinct Plan 1 - Ōrākei Papakāinga master plan

I327. Ōrākei 2 Precinct

I327.1. Precinct Description

The Ōrākei 2 Precinct applies to the Whenua Rangatira area which is set aside by the Ōrākei Act 1991 and the Ngāti Whātua Ōrākei Claims Settlement Act 2012 for the use and benefit of the members of the hapū and citizens of the City of Auckland. It is managed and controlled by the Ngāti Whātua Ōrākei Reserves Board comprising Council and Ngāti Whātua o Ōrākei representatives, as a recreation reserve, with a reserves management plan prepared under the processes established by the Reserves Act 1977.

The purpose of the Ōrākei 2 Precinct is to integrate the Whenua Rangatira Reserve Management Plan with the Plan provisions to ensure that development or use of the Whenua Rangatira provides for the sustained wellbeing of Ngāti Whātua Ōrākei while providing the land for the common use and benefit of the members of the hapū.

In addition to the reserve management plan, the establishment of a joint management agreement under section 36B of the Resource Management Act 1991 is encouraged to provide for joint decision making on resource consents or plan changes directly affecting the Ōrākei 2 precinct. As part of this approval process, a design review panel would also be established to provide for the specific consideration of Māori identity and design. While the precinct does not rely on a joint management agreement, it is an important part of the planning context of the precinct.

The Whenua Rangatira Reserve Management Plan applies a different management approach to the following sub-precincts of the Whenua Rangatira:

Sub-precinct A – Ōkahu Bay:

Sub-precinct A – Ōkahu Bay is at the western end of the Whenua Rangatira. Ōkahu Bay is the most readily accessible portion of the reserve for the public by both land and sea. It is located on the valley floor and is overlooked by surrounding residential development.

This part of the reserve is ideal for group activities, and has from time to time hosted large-scale entertainment such as circuses, music groups and waka arrivals. It is bisected by Tāmaki Drive, which separates it from the beachfront portion of the Whenua Rangatira at Ōkahu Bay. The physical separation by the road inhibits interaction between the two parts of the reserve.

The urupā and church are the most significant elements within this area. They are a reminder of the marae and papakāinga that once occupied the land. There is a strong visual and axial link from the marae, through this particular piece of the Whenua Rangatira, to the seashore of Ōkahu Bay and on to the Waitematā Harbour. The historical and cultural values of this area are an important component of the management of this part of the reserve.

Sub-precinct B – Takaparawhau:

Sub-precinct B – Takaparawhau is comprised of an elevated platform, edged with dramatic tree lined cliffs, comprises the bulk of the Whenua Rangatira. The more gentle

slopes are mown grassland, and legacy of the previous grazing regime of the land. Although divided by several gullies, it is spacious enough to accommodate a wide range of recreation pursuits. The area forms a natural gateway in conjunction with Maungauika (North Head) to the inner Waitemata Harbour.

There is little public activity on the land except on those special occasions when thousands of citizens flock to the Whenua Rangatira to watch events on the harbour. There is good access to some of the land, via Hapimana Street, but no promotion of the reserve as a facility for public use and enjoyment.

The area is part of the parcel of land returned to Ngāti Whātua Ōrākei and is viewed as a major part of their tūrangawaewae (place to stand with mana). The adjacent marae and papakāinga, together with cultural artifacts within the site give Takaparawhau a special character to be considered in the future management and development of the land.

Sub-precinct C – Tai Hara Paki:

Sub-precinct C – Tai Hara Paki is located to the west of the Michael Joseph Savage Memorial, Tai Hara Paki is a large sloping grass area with significant views to the north, and hosts a variety of public activities. It is the arrival point for visitors to the Michael Joseph Savage Memorial and the upper Whenua Rangatira and because of the vehicular access via Tamaki Drive, is visited by many families seeking open space for picnicking, kite flying and other similar activities.

Sub-precinct D – Kohimaramara:

Sub-precinct D - Kohimaramara is an area of the Whenua Rangatira to the north and east of Michael Joseph Savage Memorial. It is an elevated grassed area, edged with steep, vegetated slopes down towards the waterfront and Mission Bay.

Visually, it is strongly connected to the Mission Bay beach reserve and the Moehau Channel. There is pedestrian access from Mission Bay, leading directly to the Savage Memorial, but there is little other activity of note on this part of the site.

Sub-precinct E – Te Ngahere:

Sub-precinct E - Te Ngahere is an area of open space adjoining urban development. The higher portion which lies at the end of Kupe Street, is gently sloping and sits adjacent to the marae and papakāinga. It provides a good vantage point for wide views of the Hauraki Gulf. The lower portion includes a steep slope down towards Mission Bay to the east, and is less attractive for the kinds of passive recreation occurring on other parts of the Whenua Rangatira.

There are two memorials in this sub-precinct, reflecting events that occurred during the land protests in 1977, giving the area a special cultural significance. Vegetation consists of small areas of exotic species along the eastern boundary.

Sub-precinct F – Transition zone

Sub-precinct F – Transition zone provides a buffer between the hapu and the Whenua Rangatira while still enabling access from the papakāinga to the Whenua Rangatira.

The development within this zone, while supporting the marae activities, needs to complement the natural environment of the Whenua Rangatira.

The zoning of land within this precinct is Open Space – Informal Recreation zone.

The following overlays apply to the precinct:

- D17 Historic Heritage Overlay;
- D10 Outstanding Natural Features Overlay and the Outstanding Natural Landscapes Overlay (Sub-precinct A - in the Outstanding Natural Features Overlay and Outstanding Natural Landscapes Overlay);
- D9 Significant Ecological Areas Overlay.

I327.2. Objectives

- (1) The sustainable management of the cultural and physical resources of the Whenua Rangatira provides for wider community needs and the cultural and spiritual needs of the Ngāti Whātua Ōrākei hapū.
- (2) Development and activities are consistent with the principles of the Whenua Rangatira Reserve Management Plan and the Ngāti Whātua Iwi Management Plan 2012.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I327.3. Policies

- (1) Require development or activities on the Whenua Rangatira to:
 - (a) be complementary to the marae, urupā and papakāinga;
 - (b) respect the cultural and historical heritage of the Whenua Rangatira, including existing archaeological features; and
 - (c) give effect to the outcomes and principles contained in the Ngāti Whātua Ōrākei Iwi Management Plan 2012.
- (2) Encourage the enhancement and protection of environmentally sensitive physical elements in the landscape, including through:
 - (a) maintaining the integrity of the natural landforms with any landscaping, walkways, roadways or earthworks;
 - (b) buildings being compatible in scale, design and appearance and located to minimise any adverse effects on the physical landscape and neighbouring land; and
 - (c) maintaining a consistent theme of design or appearance.
- (3) Enable the provision of employment opportunities for the Ngāti Whātua Ōrākei hapu.

- (4) Provide for the use of open space and the recreational use for the wider community of Auckland.
- (5) Co-ordinate, and where possible integrate activities with other activities at Ōkahu Bay and elsewhere on the Whenua Rangatira.
- (6) Incorporate the cultural identity of Ngāti Whātua Ōrākei within the Whenua Rangatira as an integral part of Auckland's cultural development.
- (7) Align the management and development of the Whenua Rangatira with the Whenua Rangatira Reserve Management Plan, Ngāti Whātua Iwi Management Plan 2012, the Ōrākei Act 1991 and the Reserves Act 1977, including by:
 - (a) activities provided for within the Whenua Rangatira being of a scale and intensity consistent with the Whenua Rangatira Reserve Management Plan provisions or the Reserves Act 1977, and with the incorporated reserve management plan applying to the land; and
 - (b) activities, including walkways, public activities on the Whenua and new development are designed and located to ensure the privacy of the hapū on the papakāinga.
- (8) Safeguard the environmental qualities and amenities of the land, in addition to policies 1327.3(1) to (7), through managing use and development to maintain and enhance the values identified for each sub-precinct by:

Sub-precinct A – Ōkahu Bay:

- (a) requiring activities and development to respect the mana and privacy of the Urupā and church and have regard to the cultural significance of the earlier papakāinga and marae sites;
- (b) designing and locating development to improve the strong cultural connection between the land and sea by enhancing connections and removing barriers in this part of the Whenua Rangatira;
- (c) designing and locating development to maintain and enhance the strong visual and physical connections between the Urupā and the whareniui/marae;
- (d) requiring new buildings and structures to complement the scale and form of existing buildings;
- (e) avoiding adverse effects to the extent practicable and promoting actions that support positive effects on the beach and waters of Ōkahu Bay;
- (f) retaining and protecting the native trees in the area;
- (g) retaining and protecting the existing open space qualities;
- (h) encouraging provision to be made for the significant revegetation of gully systems where appropriate;

- (i) avoiding or mitigating the adverse effects of earthworks on the integrity of the existing landforms; and
- (j) requiring public access to all parts of the reserve to be provided, including access to:
 - (i) provide safe and easy access to the beachfront, papakāinga and Takaparawhau;
 - (ii) support waka culture and complementary activities;
 - (iii) maintain the ability to host other cultural events of public interest that are considered appropriate in the setting of Ōkahu Bay; and
 - (iv) provide for the safety of the public using Ōkahu Bay.

Sub-precinct B – Takaparawhau:

- (a) maintaining the importance of Takaparawhau as a highly visible landmark together with the underlying cultural attributes to provide a focal point at the entry to the Waitemata Harbour;
- (b) maintaining and enhancing the visual and cultural connections between the marae and Takaparawhau Point;
- (c) designing structures to respect and enhance the prominence of this part of the Whenua Rangatira and maintain the open and natural existing character;
- (d) maintaining to the extent practicable the visual importance of the tree covered cliffs and reserve, and the natural character of this part of the reserve;
- (e) avoiding adverse effects of drainage work on the existing and proposed revegetation projects;
- (f) maintaining the existing clear open space on the hilltops to preserve the character and visual qualities of Takaparawhau;
- (g) maintaining the integrity of the promontory as a major vantage point and view lines to the harbour;
- (h) improving access both to and within Takaparawhau to enable better public access to heritage sites and natural features on the periphery of the Whenua Rangatira;
- (i) maintaining the importance of Takaparawhau as a passive recreation area; and
- (j) limiting monuments, sculptures and other ornamental and viewing structures to 75 per cent of the height of the adjacent cliff to enable appropriate scale to be maintained.

Sub-precinct C – Tai Hara Paki:

- (a) maintaining the importance of Tai Hara Paki as a cultural gateway to the upper Whenua Rangatira;
- (b) supporting opportunities to provide facilities for manaakitanga including:
 - (i) facilities at the entrance to the marae; and
 - (ii) low-key facilities to enable the conduct of tribal, community or cultural activities (refer s.23 Ōrākei Act 1991).
- (c) designing buildings and structures to recognise and reflect the architecture and style of the adjoining wharenuī and wharekai, including through being low-key and of a scale that does not impinge on, or dominate the adjoining buildings on the marae;
- (d) locating buildings within the landscape and away from the visually dominant ridge lines;
- (e) maintaining the visual importance of this area of land fronting the marae;
- (f) preserving the natural qualities and character of this part of the reserve;
- (g) protecting the environmentally sensitive nature of the northern gully system from the adverse effects of development;
- (h) improving access both to and within Tai Hara Paki to enable better public access to heritage sites and natural features on the periphery of the Whenua Rangatira;
- (i) maintaining the importance of Tai Hara Paki as a passive recreation area; and
- (j) protecting the cultural significance of this area, especially its relationship to the adjoining marae.

Sub-precinct D – Kohimaramara:

- (a) maintaining the relationship to the marae, papakāinga and other Ngāti Whatua land in the area;
- (b) maintaining the importance of this area as the principal vantage point to the outer Hauraki Gulf;
- (c) designing buildings and structures to complement the character and scale of the existing structures/buildings and surrounding environment;
- (d) maintaining the visual importance of the tree covered cliffs and the natural character of this part of the reserve;
- (e) minimising any adverse effects on existing flora and proposed revegetation from drainage work;

- (f) managing any adverse effects of earthworks to maintain the natural character of the Whenua Rangatira;
- (g) improving access within the Kohimaramara Sub-precinct and to and from adjacent residential areas;
- (h) maintaining the relationship between the Michael Joseph Savage Memorial and the Whenua Rangatira; and
- (i) requiring development to be sympathetic to the existing form and character of the Savage Memorial.

Sub-precinct E – Te Ngahere:

- (a) maintaining the importance of Te Ngahere as a backdrop to the Mission Bay residential area and as an outlook for the adjacent residential land to the South;
- (b) protecting the cultural significance of the memorials located within this area;
- (c) protecting views from the adjacent residential development and papakāinga;
- (d) maintaining the visual importance of this part of the reserve and the existing natural character;
- (e) requiring development to address the need to protect the land from further erosion;
- (f) enhancing access both to and within Te Ngahere, especially from the surrounding residential areas;
- (g) providing for the reasonable privacy for adjoining residential areas; and
- (h) providing appropriate access to the marae and papakāinga, for the hapū and visitors.

Sub-precinct F – Transition zone:

- (a) managing activities and buildings to maintain and respect the privacy of the hapū;
- (b) supporting development that provides opportunities to provide manaakitanga, including support and amenity facilities at the entrance to the marae;
- (c) requiring the design of buildings or structures to recognise and reflect the architecture and style of the adjoining wharenuī and wharekai;
- (d) requiring buildings and structures to be low-key and of a scale that does not impinge on or dominate the adjoining buildings on the marae;
- (e) locating buildings to ensure that they visually complement the marae complex; and

- (f) managing activities to maintain the ability of the hapū to undertake its activities in an orderly and integrated manner, including formal welcoming on to the marae.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I327.4. Activity table

The overlay, Auckland-wide and zone provisions apply in this precinct unless otherwise specified below.

Table I327.4.1 Activity table specifies the activity status of land use and development activities in the Ōrākei 2 Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I327.4.1 Activity table

Activity		Activity status		
		Sub-precinct A	Sub-precinct B, C, D	Sub-precinct E and F
Use				
Mana Whenua				
(A1)	Urupā	P	NA	NA
Accommodation				
(A2)	Camping grounds	NC	NC	NC
(A3)	Workers accommodation	NC	NC	NC

Infrastructure				
(A7)	Parking; more than seven parking spaces	D	D	D
Development				
(A8)	Boat launching facilities for the launching of waka	D	NA	NA
(A9)	New buildings used for water related activities, including the storage, repair and maintenance of waka	D	NA	NA
(A10)	New buildings associated with	D	D	D

	cultural learning and manākitanga centres			
(A11)	New buildings used for recreation or community purposes	D	NA	D
(A12)	Development that does not comply with Standard I327.6.2 Impervious area threshold	D	D	D
(A13)	Development that does not comply with Standard I327.6.3 Building yard	D	D	D

I327.5. Notification

- (1) Any application for resource consent for an activity listed in Table I327.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I327.6. Standards

The standards in the overlay, Open Space – Informal Recreation Zone and Auckland-wide rules apply in this precinct, except for the following:

- Standard H7.11.7 (1)(b) Maximum impervious area - Open Space – Informal Recreation Zone

All activities, listed as permitted in Table I327.4.1 must comply with the following permitted activity standards.

I327.6.1. Horticulture

- (1) Glasshouses must not exceed 50m² in size.

I327.6.2. Impervious area threshold

- (1) The impervious area threshold for Sub-precincts A to F must not exceed the following:
- (g) Sub-precinct A – up to 10 per cent;
- (h) Sub-precinct B, C, D, E – up to 5 per cent; and
- (i) Sub-precinct F – up to 15 per cent.

I327.6.3. Building yard

- (1) New buildings and structures, other than walkway facilities, security lighting and directional signage, must not be located within a 20m wide yard measured from the southern and eastern boundary of Sub-precincts D, E and F, between Kupe Street and Tamaki Drive.

I327.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I327.8. Assessment – restricted discretionary activities

There are no restricted discretionary activities in this precinct.

I327.9. Special information requirements

There are no special information requirements in this precinct.

I327.10. Precinct plans

There are no precinct plans for this precinct

I328. Ōrākei Point Precinct

I328.1. Precinct Description

The Ōrākei Point Precinct applies to land located along Ōrākei Road adjoining the coastal marine area. The precinct is bisected by the North Island Main Trunk Railway.

The purpose of the precinct is to enable a comprehensively planned, transit oriented community, with development undertaken generally in accordance with a master plan, and the staged provision of public facilities and infrastructure. The master plan is shown on I328.10.5 Ōrākei Point: Precinct plan 5.

The Ōrākei Point precinct is divided into Sub-precincts A to F for the purposes of the different standards that apply in these areas. The precinct plans seek to maximise the opportunities offered by the precinct, while respecting the sensitivities of its coastal location and geological and heritage values.

Under I328.10.5 Ōrākei Point: Precinct plan 5, the railway corridor is capped by a podium, reducing noise and allowing development and public access across the precinct.

I328.10.5 Ōrākei Point: Precinct plan 5 also includes public plazas, a new Ōrākei train station, and a new loop road to re-enforce the public nature of the development.

I328.10.5 Ōrākei Point: Precinct plan 5 provides for 80,000m² of gross floor area, equating to approximately 700 apartments and a maximum of 10,000m² for both retail and office activities.

The zoning is primarily Business – Mixed Use Zone, apart from the land adjoining the railway line within the railway designation which is zoned Strategic Transport Corridor Zone. Land between the coastal marine area and the precinct in the north and west is zoned Open Space – Informal Recreation Zone and Open Space – Conservation Zone. There is also a small area of Coastal – Coastal Transition Zone land included within this precinct.

I328.2. Objectives

- (1) Ōrākei Point is comprehensively developed for mixed-use activities which integrate well with the public transport network.
- (2) High quality public open spaces are created, both within Ōrākei Point and around its seaward perimeter.
- (3) Principles of sustainability are adopted in the development.
- (4) Adverse effects from the current and anticipated future operation of the North Island Main Trunk Railway Line are avoided and mitigated.

The provisions of the D10 Outstanding Natural Feature Overlay and H13 Business – Mixed Use Zone and H22 Strategic Transport Corridor Zone apply in addition to those specified above unless otherwise specified.

I328.3. Policies

Transit Orientated Community

- (1) Promote future growth and improvements to public transport through the construction of a new covered railway station.
- (2) Require staging of infrastructure and public places in a manner that compliments built development.
- (3) Enable other modes of transport other than private motor vehicle by providing connections to public transport, and limiting parking.

Development is undertaken in a comprehensive manner

- (4) Promote development that is generally consistent with I328.10.5 Ōrākei Point: Precinct plan 5.
- (5) Require new development and public places to achieve an appropriate interface between buildings, public spaces and Ōrākei Point's coastal setting.
- (6) Promote high urban design standards.

High quality public open space

- (7) Provide a wide range of public spaces, including green spaces for passive recreation around the perimeter of Ōrākei Point, urban plazas and a street network with a strong pedestrian focus.
- (8) Provide a green corridor along Ōrākei Road and Ōrākei Basin by creating new public space and requiring landscaping and setback requirements.
- (9) Provide public plazas on the northern seaward side of Ōrākei Point maximising public views and amenity.

Sustainability in new development

- (10) Integrate development with public transport.
- (11) Orientate development and open spaces northwards to maximise solar access.
- (12) Design buildings to be adaptable to other suitable activities over time.

Adverse effects from the North Island Main Trunk Line are avoided or mitigated

- (13) Require a minimum level of acoustic amenity for occupiers of buildings through the design and construction of buildings and services.
- (14) Avoid and mitigate vibration effects, and diesel fumes associated with current and future operation of the railway line through the design and construction of buildings.

The provisions of the D10 Outstanding Natural Feature Overlay and H13 Business – Mixed Use Zone and H22 Strategic Transport Corridor Zone apply in addition to those specified above unless otherwise specified.

I328.4. Activity table

Table I328.4.1 Activity Table specifies the activity status of land use activities in the Ōrākei Point Precinct pursuant to section 9(3) of the Resource Management Act 1991.

The activities in the D10 Outstanding Natural Features Overlay and Auckland-wide provisions apply unless otherwise specified.

The provisions in the underlying D13 Business – Mixed Use Zone and D22 Strategic Transport Corridor Zone apply unless otherwise specified.

Table I328.4.1 Activity table

Activity		Activity status

(A22)	Use of buildings not complying with Standard I328.6.10	RD
(A23)	Construction of public open space, public accessways, overpasses, plazas and accessory buildings (excluding roads)	RD
(A24)	Construction of road network	P
(A25)	Buildings and works within the Special Tree Protection Area shown on I328.10.3 Ōrākei Point: Precinct plan 3	RD

I328.5. Notification

- (1) The following activities will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991:
- (a) any application for buildings, excavation or related works within the Special Tree Protection Areas that result in:
- (i) removal of more than 5 per cent of the canopy of any tree located within the Special Tree Protection Area; or
 - (ii) removal of three or more trees located within the Special Tree Protection Area; or
 - (iii) significant adverse effects on three or more trees located within the Special Tree Protection Area caused by any physical works or activities within the Special Tree Protection Area.
- (2) Any application for resource consent for an activity that does not comply with Standard I328.6.10 Use of buildings will be limited notified to New Zealand Rail Corporation and Ports of Auckland Limited.
- (3) Any activity in Table I328.4.1 Activity table not otherwise listed above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (4) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I328.6. Standards

All activities listed as permitted in Table I328.4.1 Activity table must comply with the following standards.

The zone, Auckland-wide and overlay standards apply in this precinct unless otherwise specified.

I328.6.1. Parking

- (1) Parking within the precinct must not exceed 1950 spaces unless the 200 park and ride parking spaces have been disestablished.
- (2) Where parking for the 200 park and ride spaces has been disestablished, parking within the precinct must not exceed 2150 spaces.
- (3) Parking that does not comply with Standard I328.6.1(1) and/or I328.6.1(2) is a non-complying activity.

I328.6.2. Parking (non-accessory) within sub-precinct F

- (1) Parking (non-accessory) within Sub-precinct F must not exceed 400 spaces, and can only be undertaken prior to the completion of development within Sub-precinct F (excluding parking provided ancillary to a permitted or restricted discretionary activity).
- (2) Parking (non-accessory) that does not comply with Standard I328.6.2(1) is a non-complying activity.

I328.6.3. Garden centres

- (1) Garden centres, including an ancillary café must only occupy up to 20 per cent of the gross floor area, and/or up to 5 per cent of the outdoor area.
- (2) Garden centres that do not meet Standard I328.6.3(1) are a discretionary activity

I328.6.4. Offices

- (1) Offices must have a total cumulative gross floor area of between 5,000m² and 10,000m².
- (2) Offices that do not meet Standard I328.6.4(1) are a discretionary activity.

I328.6.5. Food and beverage

- (1) Food and beverage activities must not operate between 11.00pm and 7:00am.

I328.6.6. Park and ride parking

- (1) Park and ride parking must provide a maximum of 200 parking spaces.
- (2) Park and ride parking that does not meet Standard I328.6.6(1) is a discretionary activity.

I328.6.7. Retail premises

- (1) The gross floor area of any individual tenancy (including ancillary on-site warehousing and storage) must not exceed 500m².
- (2) A single large floor plate retail tenancy (including ancillary onsite warehouse and storage) must not exceed 2,000m².
- (3) The total cumulative gross floor area of retail premises in Standards I328.6.7(1) and I328.6.7(2) must not exceed 10,000m².

- (4) A minimum gross floor area of 5,000m² must be provided
- (5) Retail premises that do not comply with any of Standards I328.6.7(1) to (4) for retail premises are a discretionary activity.

I328.6.8. Taverns

- (1) Taverns must have a maximum gross floor area of 500m².

I328.6.9. Artificial lighting

- (1) Artificial lighting may be used on a site producing on luminance in excess of 150lux, measured at any point on the site containing the light source in a horizontal or vertical plain at ground level.
- (2) Lighting that does not comply with Standard I328.6.9(1) is a non-complying activity.

I328.6.10. Use of buildings

- (1) Use of buildings for any permitted activity in Table I328.4.1 where located 30m either side of the land designated for railway purposes must be subject to a restrictive non-complaints encumbrance in favour of New Zealand Railways Corporation and the Ports of Auckland, in accordance with Standard I328.6.10(2).
- (2) For the purposes of the Ōrākei Point precinct and Standard I328.6.10 (1) a "restrictive non-complaints encumbrance" is a restrictive encumbrance registered on the title to the property or a binding agreement of encumbrance, in favour of New Zealand Railways Corporation and Ports of Auckland Limited, by the landowner (and binding successors in title) not to complain as to the effects generated by the lawful operation of the North Island Main Trunk railway.
- (3) The requirement in Standard I328.6.10(2) does not require the encumbrance to forego any right to lodge submissions in resource consent applications or plan changes in relation to the operation of the railway line (although an individual restrictive non-complaints encumbrance may do so. Details of the existence of encumbrance documents may be obtained from New Zealand Railways Corporation, Ports of Auckland Limited, their solicitors, or in the case of registered encumbrance by searching the title to the property.)

I328.6.11. Building height

- (1) Buildings within an identified building platform must not exceed the maximum number of floors above the podium shown on I328.10.1 Ōrākei Point: Precinct plan 1, provided that the overall height of the building (including roofs and roof top projections) must not exceed the maximum height (above datum) in meters also specified for that building platform.
- (2) For the purposes of the control above, the 'maximum number of floors' must be measured in each case as being above a nominal podium level of RL12.5, with the podium level storey counting as the first floor.

- (3) Buildings within that area identified as 'podium level' on I328.10.1 Ōrākei Point: Precinct plan 1 must not exceed the height above datum shown on the Plan for that section of the podium, provided that this height limit must not apply to the following buildings and structures located on or over the podium level:
- (a) balconies over roads and plazas which meet the assessment criteria in I328.8.2(1)(a) to (c);
 - (b) seating, bus shelters, pedestrian shelter structures, balustrades, light poles, signs or public artwork on roads or plazas; or
 - (c) buildings and structures associated with temporary activities.
 - (d) The "RL" shown on I328.10.1 Ōrākei Point: Precinct plan 1 must be Auckland Datum 1946 (mean sea level).

I328.6.12. Floor to floor height within buildings

- (1) The minimum floor to floor height within buildings must be 4m for the ground level of a building, provided that no minimum floor to floor height will apply to the ground or basement levels of buildings within Sub-precinct A, where those floors contain residential or parking.
- (2) The minimum floor to floor height for all other levels within a building must be 3m other than parking levels or to levels below the podium where no minimum floor height applies.
- (3) Standard I328.6.21(3) and (4) minimum floor to ceiling heights for residential units must be met.
- (4) The maximum floor to ceiling height limit on all levels within a building must be 4.5m, except that the maximum floor to ceiling height limit does not apply to:
 - (a) ground levels;
 - (b) other building levels used for entrance lobbies, circulation or foyers or as public entry and access to the covered railway station;
 - (c) parking levels;
 - (d) levels used for the rail station, lines and ancillary activities; or
 - (e) levels incorporating mezzanine floors.

I328.6.13. Roof-top control

- (1) Rooftop projections including lift towers, machinery rooms and plant which exceed the height of all parts of a parapet surrounding a roof on which the projections are located, must be enclosed in a structure or structures designed as an integral part of the roof of the building, refer to Figure I328.6.13.1 Ōrākei Point height controls .

Figure I328.6.13.1 Ōrākei Point height controls

Explanation:

Buildings are limited to the building platforms shown on the precinct plans to ensure development is consistent with I328.10.5 Ōrākei Point: Precinct plan 5. Building platforms are positioned to concentrate development on the inner and northern part of Ōrākei Point, thereby generally avoiding its Ōrākei Road and Ōrākei Basin edge and ensuring the greatest intensity of development closest to the railway station. Building platforms also provide for buildings to define and enclose public streets open spaces.

Appropriate building heights have been determined with reference to the landform of the wider visual and physical catchment. Maximum building heights have been determined for each of the building platforms, with reference to the landscape sensitivities of Ōrākei Point and I328.10.5 Ōrākei Point: Precinct plan 5. A range of building heights are specified to ensure variation in the roof profile of the overall

development and to have building heights at a scale appropriate to other buildings and adjoining roads and public open spaces. This is achieved by a combination of a maximum number of floors and a maximum RL, the later being set higher than the former to provide for and encourage pitched and varied roof forms rather than flat roofs.

Maximum heights of RL12.5, RL 16 and RL 14.5 are applied to the plaza podium levels, representing the top of the plaza and road level. The maximum height of RL16 is applied to one portion of the podium to allow the road to slope up from the general podium level of RL12.5 to meet Ōrākei Road at grade. A maximum height of RL5.5 is applied to the lower podium levels.

Minimum floor to floor heights have been applied to residential and commercial buildings to allow buildings to be adaptable to alternative uses and provide amenity for occupants.

Maximum floor to floor heights have been applied to ensure that buildings adhere to the scale allowed by the specified floor limits. Lobbies, foyers and public space within buildings have been excluded from the maximums to encourage such spaces to have generous volumes. The rail corridor has also been excluded from the maximum height limit in recognition of its functional need.

I328.6.14. Ōrākei Road recession plane and building landscaping

- (1) Buildings within the building platforms identified on I328.10.1 Ōrākei Point: Precinct plan 1 as being subject to the Ōrākei Road recession plane and building landscaping control must comply with the following:
 - (a) no part of the building must project through a plane starting at the level of Ōrākei Road, measured at the boundary of the site, and rising at 45° to its baseline parallel with the street boundary of the site;
 - (b) the face of the building to Ōrākei Road must be landscaped and must have sufficient soil depth and drainage to ensure proper plant growth;
 - (c) the building and landscaping must either be a terraced profile or have a modulated form so as to create a natural hill profile, to generally screen the bulk of buildings behind when viewed from Ōrākei Road level and must not be a literal regression of the 45° angle;
 - (d) no part of the building must exceed an overall height of RL 30 above Auckland Datum 1946 (mean sea level); and
 - (e) the upper most edge and sides of the sloping or terraced building face to Ōrākei Road must be fenced in a manner that satisfies the requirements of the Building Act 2004 and any subsequent amendments.

Explanation:

The Ōrākei Road Recession Plane and Building Landscaping control is applied to the buildings adjoining Ōrākei Road. The control ensures that the buildings maintain a

green face to Ōrākei Road and are set back from the road so as to maintain its open character.

I328.6.15. Site intensity

- (1) The maximum gross floor area within each sub-precinct must not exceed the area in Table I328.6.15.1.

Table I328.6.15.1 Maximum gross floor areas in sub-precincts

Sub-precinct	Maximum gross floor area
Sub-precinct A	16,000m ²
Sub-precinct B	18,000m ²
Sub-precinct C	9,000m ²
Sub-precinct D	13,000m ²
Sub-precinct E	9,000m ²
Sub-precinct F	15,000m ²
Total gross floor area	80,000m ²

- (2) The maximum gross floor area within each sub-precinct must be calculated as the combined total gross floor area of both existing and consented buildings within each of the identified building platforms, with:
- (a) 'consented buildings' meaning buildings for which resource consent has been granted, but not given effect to; and
 - (b) resource consents which have expired or lapsed, or which have been surrendered, not being used in the calculation of maximum gross floor area.
- (3) In addition to the matters excluded in the definition of gross floor area, the following must also be excluded from the calculation of gross floor area:
- (a) all outdoor balcony or deck space, whether enclosed or not;
 - (b) floor area used for parking, including associated access ramps, stairs, lifts and plant, where that floor area is:
 - (i) for Sub-precinct A, below RL 18 (measured above Auckland Datum 1946 (mean sea level));
 - (ii) for Sub-precincts B – F, below the podium levels shown on I328.10.1 Ōrākei Point: Precinct plan 1;
 - (iii) contained within the Ōrākei Road building(s) within the building platform shown on I328.10.1 Ōrākei Point - Precinct plan 1 as being subject to the Ōrākei Road Recession Plane and Building Landscaping Control; or
 - (iv) outdoor floor areas associated with garden centres.

Explanation:

The site intensity control limits the amount of gross floor area achievable within each of the sub-precinct areas. Maximum gross floor areas have been established to allow the development of appropriate densities of development (in terms of apartment numbers and commercial floor area) to create a vibrant transit oriented community which supports patronage of public transport, within the constraints imposed by the building platforms and height limits.

Maximum gross floor areas are identified on a sub-precinct basis. The development of individual building areas within each sub-precinct will need to be assessed at the time of resource consent application with reference to the quantum of gross floor area already taken up within the sub-precinct, by both existing and consented development.

Overall, the gross floor areas provided for within the precinct equates to a floor area ratio of approximately 1.8:1 of the entire area of the precinct.

I328.6.16. Verandah/Colonnade requirement

- (1) For buildings within building platforms identified as subject to a verandah/colonnade control on I328.10.2 Ōrākei Point - Precinct plan 2 a verandah/colonnade must be provided and must comply with all of the following:
 - (a) the verandah/colonnade must provide continuous pedestrian cover within the site along the entire building platform frontage identified as subject to a colonnade requirement;
 - (b) the verandah/colonnade must have a minimum height of 3.4m above the footpath immediately below;
 - (c) any colonnade must have a minimum unobstructed horizontal width of 2m;
and
 - (d) any verandah must comply with relevant bylaws relating to verandahs.

Explanation:

A verandah/colonnade is required along the western side of the loop road to provide for pedestrian cover between Ōrākei Road and the lee plaza and railway station entrance.

A verandah/colonnade is also required around the southern edge of the lee plaza to provide pedestrian cover to and around the plaza and to enhance the pedestrian amenity of the plaza.

I328.6.17. Pedestrian links

- (1) Pedestrian links connecting the road, plazas and open space land must be provided generally at the locations shown on I328.10.3 Ōrākei Point - Precinct plan 3 and must comply with all of the following:
 - (a) have a minimum width of 2m;

- (b) create a direct and logical pedestrian link through the site between public road, plaza and open space land;
- (c) be open to the sky or be covered with transparent glazing, except for a pedestrian link beneath the rail line; and
- (d) comply with relevant Crime Prevention Through Environmental Design principles.

Explanation:

Pedestrian links are required in the locations specified to provide for mid-block linkages between roads, plazas and public open space and to allow permeability through the site and development.

I328.6.18. Frontage height and activity control

- (1) Any building shown on I328.10.3 Ōrākei Point - Precinct plan 3 subject to a frontage height and activities control must comply with all of the following:
 - (a) the façade of the building must generally abut the building platform boundary identified as being subject to the frontage height control;
 - (b) the number of floors along that building platform boundary must be no less than the maximum number of floors specified on I328.10.1 Ōrākei Point - Precinct plan 1, except on the building platform subject to the Ōrākei Road Recession Plane and Building Landscaping Control where Standard I328.7.8(1)(b) does not apply; and
 - (c) 'frontage' shall be interpreted as meaning the external wall of a building which occupies the length of the road boundary and which rises from that boundary to a height no less than the minimum specified, but excludes vehicle entrances, loading bays, pedestrian entrances and lobbies, window and balcony recesses and similar architectural modulations.
- (2) Activities occupying the ground floor frontage of a building on a site identified on I328.10.3 Ōrākei Point - Precinct plan 3 must be limited to the following:
 - (a) entertainment facilities;
 - (b) garden centres;
 - (c) food and beverage;
 - (d) retail;
 - (e) taverns;
 - (f) community facilities; or
 - (g) offices.

- (3) Activities occupying the ground floor frontage of a building on a site identified on I328.10.3 Ōrākei Point - Precinct plan 3:
- (a) must occupy not less than 80 per cent of the length and not less than 10m of the depth of the ground floor road frontage of an identified site; and
 - (b) up to 20 per cent of the length of the frontage of identified sites may be occupied by building entrances, services entrances, vehicle access and service functions.

Explanation:

The frontage height and activities control is applied to certain building frontages to ensure that new buildings appropriately address and define roads and plazas through specified minimum number of floors appropriate to the scale and character of the streets and plaza they adjoin, while excluding certain building elements to provide for flexibility in design and avoiding potential visual monotony of regimented frontage forms.

On such identified frontages, ground floor activities are limited to entertainment, garden centres, restaurants, cafes and other eating places, retail and taverns to activate the road and plaza.

I328.6.19. Noise

- (1) Buildings within the Ōrākei Point precinct must be designed and constructed to ensure the internal noise limits in Table I328.6.19.1 Internal noise limits will not be exceeded.

Table I328.6.19.1 Internal noise limits

Receiving environment	L_{Aeq}, 1 hour
Residential – bedroom	35 dB
Residential – habitable rooms	40 dB
Commercial – offices	40 dB
Conference facilities and care centres	40 dB
Retail	45 dB

- (2) Sound insulation calculations must be based on external noise levels derived from 3D acoustic modelling software (Soundplan or Predictor) using:
- (a) a train sound power level of LWA127 dB as a point source travelling at 40 km/hr, and 4 trains per hour, and using the spectrum in Table I328.6.19.2 sound spectrum; and

Table I328.6.19.2 Sound spectrum

	Octave Band Centre Frequency (Hz)						
	63	125	250	500	1k	2k	4k
Sound Power Level (dB)	133	131	127	123	123	119	114

- (b) road traffic noise at the façade must be calculated with 3D modelling software and the current traffic flow rates on Ōrākei Road between 10.00 pm and 11.00 pm.
- (3) Sound from a moving point source (which propagates in the same manner as line source) can be modelled as such in 3D modelling software.
- (4) In addition to meeting Standard I328.6.19 (1) to (3) all bedrooms and other habitable spaces must be adequately ventilated or air conditioned, as determined by a suitably qualified mechanical engineer, to achieve reasonable internal temperatures during all but the extreme summer conditions and at a minimum meet the requirements of Clause G4 of the Building Regulations 1992.
- (5) Residential accommodation must not be located closer than 80m to any exposed rail line unless a report from a suitably qualified acoustic consultant demonstrates that the external criterion of LAeq,1hr 60 dB can be achieved within any primary outdoor living area using the source levels detailed in Standard I328.6.19 (2) (a).

I328.6.20. Noise emission

- (1) The noise level arising from any activity within the Ōrākei Point precinct must not exceed the following levels;
- (a) at the façade of any habitable space within the Ōrākei Point precinct the noise level in Table I328.6.20.1 Noise level at the façade of habitable spaces;

Table I328.6.20.1 Noise level at the façade of habitable spaces

Time	Noise level
7.00 am to 10.00 pm	LA10 60 dB
10.00 pm to 7.00 pm	LA10 55 dB L63 Hz 10 60 dB L125Hz 10 55 dB LAm _{ax} 75 dB

- (b) within the boundary of any residentially zoned property outside of the Ōrākei Point precinct, the noise level in Table I328.6.20.2 Noise level within the boundary of any residential zoned property outside of the Ōrākei Point precinct; and

Table I328.6.20.2 Noise level within the boundary of any residential zoned property outside of the Ōrākei Point precinct

Time	Noise level
7.00 am to 10.00	L _{A10} 50 dB
10.00 pm to 7.00	L _{A10} 40 dB L _{Amax} 75 dB

- (c) noise levels must be measured and assessed in accordance with the requirements of NZS6801:2008 Acoustics – Measurement of Environmental Sound and NZS6802:2008 Acoustics – Environmental Noise.

Explanation:

The purpose of this control is to provide a minimum level of internal acoustic amenity for occupants of buildings from the external noise sources generated by activities with the Ōrākei Point precinct (including the transport network) and to provide a maximum level of noise that activities other than residential activities can generate.

A general noise control is also applied to the Ōrākei Point precinct to avoid excessive noise occurring for a continuous period or duration so as to be damaging to public health or have an adverse effect on the amenity of the receiving environment.

I328.6.21. Standards for residential units

- (1) Residential units must comply with the minimum gross floor area in Table I328.6.21.1 Minimum gross floor area for residential units.

Table I328.6.21.1 Minimum gross floor area for residential units

Residential unit	Minimum gross floor area
One bedroom	45m ²
One bedroom plus study	55m ²
Two bedrooms	70m ²
Three bedrooms or more	90m ²

- (2) Minimum balcony sizes of at least 8m² must be provided in addition to the minimum gross floor area requirements in Table I328.6.21.1 Minimum gross floor area for residential units, and all balconies must be internalised (i.e. not projecting) for improved privacy, flexibility of use and protection from windy aspects.
- (3) The minimum floor to ceiling height for habitable rooms (including servicing) must be 2.4m except for multi-level or split-level apartments and mezzanine levels, in which case at least 50 per cent of the apartment

floor area must comply with the minimum 2.4m floor to ceiling height requirements.

- (4) Kitchens, bathrooms, hallways, toilets, lobbies, laundries and service areas must have a 2.3m minimum floor to ceiling height.
- (5) The minimum width of common area corridors is 1.5m.
- (6) The minimum width of a corridor/lobby space immediately adjacent to the lift is 2.7m, measured at 90° to the lift doors, for the full combined width of the lift doors.
- (7) Residential units must be designed to achieve the following minimum daylight standards:
 - (8) living rooms and living/dining areas must have a total clear glazed area of exterior wall no less than 20 per cent of the floor area of that space;
 - (9) bedrooms must have a total clear glazed area of exterior wall no less than 20 per cent of the floor area of that space; and
 - (10) entrance halls, kitchens, kitchen/dining rooms, bathrooms, toilets, and laundries may rely on borrowed or artificial light, other than where such building elements contain a window placed in an exterior wall parallel to a site boundary, other than the street boundary, then that window/wall must be set back from the boundary by a minimum of 1m.

Explanation:

Minimum unit standards are imposed within the Ōrākei Point precinct to ensure that each unit has an adequate level of amenity for the occupants. Such amenity includes the provision of minimum areas for apartments, floor to ceiling heights, widths of corridors and daylight standards. These standards are designed to ensure that apartments at Ōrākei Point are a desirable place to live.

1328.6.22. Mix of residential units

- (1) The combined number of one bedroom, one bedroom plus study and two bedroom units within the Ōrākei Point precinct must not exceed 80 per cent of the total number of residential units in the precinct.
- (2) No single building must comprise entirely one bedroom units and no more than:
 - (a) 10 per cent of units within the precinct can be one bedroom; and
 - (b) 15 per cent of units within the precinct can be one bedroom plus study.
- (3) The total number of residential units in the precinct must be calculated as the combined total of units in both existing and consented buildings where:
 - (a) 'consented buildings' means buildings for which resource consent has been granted, but not given effect to; and

- (b) resource consents which have expired or lapsed, or which have been surrendered must not be used in the calculation of residential units.

Explanation:

A mix of unit sizes is required to ensure that the housing stock within the Ōrākei Point precinct can provide for a variety of household types. The mix of unit sizes ensures that no one apartment size dominates and will provide for a wide demographic mix of occupants, including families, through setting minimums on the number of one bedroom apartments allowed. No provision is made for smaller studio units in the precinct under the gross floor area requirements for residential units.

I328.6.23. Private open space

- (1) All residential units must have an outdoor living area no less than 8m².
- (2) An outdoor living area must:
 - (a) have convenient access from a living room;
 - (b) may consist of either an exclusive area at ground level, a balcony (including a recessed or semi enclosed balcony or part of the balcony) or a roof top space exclusively available to that residential unit; and
 - (c) must comprise one continuous area rather than comprise the cumulative total of smaller areas.

Explanation:

Outdoor living areas are required to ensure that each unit has an adequate level of amenity for the occupants in the form of useable private open space.

I328.6.24. Visual privacy

- (1) Where the habitable room windows of a dwelling or a guestroom within visitor accommodation are less than 6m away, and have direct views of the habitable room windows of other residential units or a guestroom within a tourist facility within the same or adjacent sites, they must:
 - (a) be offset a minimum of 1m (horizontally or vertically) from the edge of one window to the edge of the other;
 - (b) have sill heights of 1.6m above floor level;
 - (c) have fixed obscure glazing in any part of the window below 1.6m above floor level; or
 - (d) be on the ground floor level and separated by a suitable screening device, including landscaping, of 1.6m minimum height.

Explanation:

This rule provides a balance between allowing the windows of upper storeys of new developments to have reasonable daylight and outlook while limiting intrusive overlooking of habitable rooms of units on adjoining sites.

I328.6.25. Residential outlook space

- (1) A residential outlook space must be provided:
 - (a) from each face of the building containing windows to principal living areas, (“principal living area” meaning the main communal living space within an accommodation unit for entertainment, recreation and relaxation), or bedrooms of any residential unit; and
 - (b) where windows to a principal living area or bedroom are provided from two or more faces of a building, outlook space must be provided to the face with the greatest window area of outlook.
- (2) The minimum dimensions for outlook space for principal living areas and for bedrooms is 6m, measured perpendicular to the exterior face of the building.
- (3) An outlook space may be over:
 - (a) the site on which the building is located;
 - (b) legal road;
 - (c) public open space;
 - (d) an area otherwise shown on I328.10.1 Ōrākei Point - Precinct plan 1 as being podium or open space and not a building platform above the podium levels;
 - (e) another site, where more than one building may share an outlook space, provided that:
 - (i) the outlook space must be secured in perpetuity for the benefit of the building by a legal instrument to be put in place prior to the commencement of construction; and
 - (ii) written approval of the owner of the adjoining site for the outlook space must be provided when the application for resource consent is lodged.
- (4) Balconies that have direct access from the principal living area or bedroom and are recessed within the exterior face of the building may be included in the calculation of outlook space to a maximum depth of 3m.

Explanation:

The purpose of this control is to safeguard outlook, daylight, sunlight and privacy for occupants of residential buildings. It is noted this is not a view protection control.

I328.6.26. Vibration

- (1) Occupied buildings within the Ōrākei Point precinct must be designed and constructed to ensure the levels of vibration in Table I328.6.26.1 Levels of vibration from trains will not be exceeded based on the procedures specified in the Norwegian Standard NS 8176E: 2nd edition September 2005 Vibration and Shock Measurement of Vibration in Buildings from Land Based Transport and Guidance to Evaluation of its Effects on Human Beings.

Table I328.6.26.1 Levels of vibration from trains

Receiving Environment	Maximum Weighted Velocity, V^w , ⁹⁵
Residential Accommodation	0.3 mm/s
Commercial/Retail Areas	0.6 mm/s

I328.6.27. Screening

- (1) Where any outdoor storage, refuse disposal area, service or parking area adjoins or directly faces land that is in an open space or residential zone, other than the outdoor area of a garden centre used for the display and sale of plants, pots, garden ornaments and outdoor furniture, a solid wall screen must be erected, to the following heights:
- (a) front boundary: 1.2m;
 - (b) side and rear boundaries: 1.8m; and
 - (c) the solid wall screen must be densely planted behind with vegetation and shrubs that will screen the areas during the year.

Explanation:

The purpose of this control is to ensure that unsightly outdoor storage, refuse disposal and parking areas are adequately screened to adjoining open space zoned land.

I328.6.28. Parking

- (1) The Auckland-wide rules in Chapter E27 Transport apply with the exception of the parking standards where the following rules apply:
- (a) where a site is located within the Ōrākei Point precinct the number of parking spaces must not exceed the maximum number of spaces in Table I328.6.28.1 Maximum permitted parking spaces;

Table I328.6.28.1 Maximum permitted parking spaces

Activity	Maximum permitted parking
Residential	One space per residential unit up to one bedroom (including one bedroom units plus study) Two spaces per residential unit two bedrooms or more
Offices	One space per 60m ² of gross floor area
Retail	One space per 40m ² of gross floor area
Garden Centre, including an ancillary café that incorporates up to 20 per cent of the gross floor area, and/or up to 5 per cent of the outdoor area	Garden Centre: one space per 40m ² of gross floor area plus one space per 100m ² of outdoor area Café: one space for every 4 café seats
All other activities	One space per 60m ² of gross floor area

- (2) The overall parking spaces within the Ōrākei Point precinct must be no more than 1750 spaces.
- (3) A minimum parking threshold of 75 per cent of the maximum parking requirement must apply.
- (4) The overall parking spaces in the precinct must be calculated as the combined total of spaces in both existing and consented buildings, with:
 - (a) 'consented buildings' meaning buildings for which resource consent has been granted, but not given effect to; and
 - (b) resource consents which have expired or lapsed, or which have been surrendered, not being used in the calculation of maximum gross floor area.
- (5) Parking may either be provided on the same site as the activity to which it relates, or on another site within the Ōrākei Point Precinct.
- (6) No minimum parking standards apply within the Ōrākei Point Precinct.
- (7) Podium level public on-street parking is not subject to the maximum permitted parking limitations or total overall parking in Standard I328.6.28(1)(a) or I328.6.28(2).
- (8) Park and ride parking up to a maximum of 200 spaces is not subject to the maximum permitted parking limitations or total overall parking in Standard I328.6.28(1)(a) or I328.6.28(2).
- (9) The loading standards in Chapter E27 Transport apply, except that loading requirements for individual buildings may be waived where a common

loading space or spaces are provided and are available and accessible to all buildings and activities within a particular sub- precinct.

- (10) No off-street loading is required for buildings and activities within Sub-precinct F.

Explanation:

The Ōrākei Point Precinct restricts the amount of parking which may be provided in recognition of the access limitations of Ōrākei Road and carrying capacity of the surrounding road network. There are no minimum parking requirements to allow the flexibility to provide as little parking as necessary to meet the requirements of a development. This recognises that the site is extremely well connected by public transport and acts as an incentive to developers to consider reducing parking in light of the other transport options that are available to Ōrākei Point.

I328.6.29. Staging and provision of public facilities, infrastructure, traffic and road improvements

- (1) Public facilities, infrastructure, traffic and road improvements must be established as a pre-requisite to development of each sub-precinct in accordance with Table I328.6.29.1 Staging of public facilities, infrastructure, traffic and road improvements as a pre-requisite to development of each sub-precinct and 'the link road', 'lee plaza' and 'waterfront plaza' must be as shown on I328.10.5 Ōrākei Point - Precinct plan 5.

Table I328.6.29.1 Staging of public facilities, infrastructure, traffic and road improvements as a pre-requisite to development of each sub-precinct

Column I	Column II	Column III	Column IV
Sub-precinct	Staging requirements	Public facilities and infrastructure	Traffic and road improvements
Sub-precinct A	No building or development must be undertaken within the sub- precinct until the public facilities and infrastructure set out in column III of this table have been established. No building or development within the sub-precinct must be occupied until the traffic and road improvements set out in this column IV have been completed.	Vesting in the council of an esplanade reserve with a minimum depth of 20m along the foreshore adjoining Sub-precinct A so that the reserve can provide continuous public access along its full length.	Closure of any alternative access onto Ōrākei Road (so that the only access onto Ōrākei Road is as shown on I328.10.5 Ōrākei Point: Precinct plan 5).
Sub-precinct B	No building or development above the podium level must be undertaken within the sub- precinct until the public facilities and infrastructure set out in column III of this table have been established.	a. Vesting of Ōrākei Road site frontage to the council for road widening, as shown on I328.10.5 Ōrākei Point - Precinct plan 5 and b. Vesting to the	a. Improvements to the alignment along Ōrākei Road, where feasible; and b. The provision of footpaths along the western side of Ōrākei Road, between 228 Ōrākei Road and the Shore Road roundabout); and

	<p>Note: this does not preclude the establishment of the parking levels and associated access below the podium level nor the establishment of the roads, plazas and another public places above the podium level prior to the public facilities and infrastructure set out in column III being established.</p> <p>No building or development within the sub-precinct must be occupied until the traffic and road improvements set out in column IV have been completed.</p>	<p>council of the Open Space zoned land at the northern end of the site at 246 Ōrākei Road (headland park); and</p> <p>c. Vesting in the council of an esplanade reserve with a minimum depth of 20m along the foreshore adjoining Sub-precinct A so that the reserve can provide continuous public access along its full length.</p>	<p>c. The provision of on or off road facilities for cyclists along Ōrākei Road; and</p> <p>d. The signalisation of the intersection of the southern access to the site with Ōrākei Road, generally in the position shown on the I328.10.5 Ōrākei Point - Precinct plan 5.</p>
Sub-precinct C	<p>No building or development must be undertaken within the sub-precinct until the public facilities and infrastructure set out in column III of this table have been established.</p> <p>No building or development within the sub-precinct must be occupied until the traffic and road improvements set out in column IV have been completed.</p>	<p>(a) to (c) above and:</p> <p>d. completion of that part of the podium level within sub-precinct B; and</p> <p>e. the establishment of lee plaza*; and</p> <p>f. completion of the railway entrance building*</p>	<p>(a) to (d) above and:</p> <p>e. Upgrading of the Kepa/Ōrākei/Ngapipi intersection from a roundabout to traffic signals, with a single right turn from Ngapipi Road to Ōrākei Road, but with two exit lanes on Kepa Road (to allow two right turn lanes from Ōrākei Road); and</p> <p>f. The provision of a second northbound lane on Ōrākei Road, from south of the southern site access, including vesting in the council the land identified as "Road Widening" on I328.10.1 Ōrākei Point - Precinct plan 1; and</p> <p>g. The signalisation of the intersection of the northern access to the site with Ōrākei Road, generally in the position shown on I328.20.5 Ōrākei Point - Precinct plan 5.</p>
Sub-precinct D	<p>No building or development must be undertaken within the sub-precinct until the public facilities and infrastructure set out in column III of this table have been established.</p>	<p>(a) to (f) above and:</p> <p>g. The establishment an vesting of the Link Road as a public road in strata</p>	<p>(a) to (g) above and:</p> <p>h. The provision of a flush median along Ōrākei Road, where feasible; and</p> <p>i. Further upgrading of the Ōrākei/Kepa/Ngapipi Road</p>

	No building or development within the precinct must be occupied until the traffic and road improvements set out in column IV have been completed.	within Sub-precincts B and C, including signalised intersections with Ōrākei Road	intersection, with two exit lanes to Ngapipi Road, plus widening of the approach from Kepa Road
Sub-precinct E	No building or development must be undertaken within the sub- precinct until the public facilities and infrastructure set out in column III of this table have been established. No building or development within the sub-precinct must be occupied until the traffic and road improvements set out in column IV have been completed.	(a) to (g) above and: h. Vesting to the council of the Open Space – Informal Recreation Zone land on the western edge of the sites at 228 Ōrākei Road and 236 Ōrākei Road to the railway land.	(a) to (i) above.
Sub-precinct F	No building or development must be undertaken within the sub- precinct until the public facilities and infrastructure set out in column III of this table have been established. No building or development within the sub-precinct must be occupied until the traffic and road improvements, and local purpose reserve vesting, set out in column IV have been completed.	(a) to (h) above and: i. Completion of that part of the podium level within Sub-precinct E; and j. Establishment of waterfront plaza*; and k. Public indoor and outdoor linkage between lee plaza and waterfront plaza*.	(a) to (i) above and: j. Vesting in the council, in fee simple as a local purpose reserve, the landscaped corridor shown in Ōrākei Point - Precinct plan 5 approximately 10m wide running parallel to and adjoining the northern side of Ōrākei Road between the two vehicle entrances shown on Ōrākei Point - Precinct plan 5, excluding the part of that corridor which also comprises part of the railway corridor.

- (2) The construction of lee and waterfront plazas, the linkages between the plazas and the railway station entrance building are required to satisfy assessment criteria as a restricted discretionary activity, including the requirements to legally establish safe public access to these public places and facilities.
- (3) Throughout the development of every sub-precinct, public pedestrian and service access to the Ōrākei Railway station and vehicle access from Ōrākei Road to the property at 236 Ōrākei Road (Lot 3 DP 112856) must be maintained.
- (4) The sequencing of development of each sub-precinct does not need to follow the order of sub-precinct numbering B- E, provided that the public facilities and infrastructure work in column III in Table I328.6.29.1 Staging of

public facilities, infrastructure, traffic and road improvements as a pre-requisite to development of each sub-precinct and the traffic and road improvements in column IV in Table I328.6.29.1 Staging of public facilities, infrastructure, traffic and road improvements as a pre-requisite to development of each sub-precinct, in respect of the earlier sub-precinct/s are established as a prerequisite to the development of the later sub-precinct.

- (5) An application for resource consent for development within any of the sub-precincts must provide details of how the public facilities and infrastructure set out in column III in Table I328.6.29.1 Staging of public facilities, infrastructure, traffic and road improvements as a pre-requisite to development of each sub-precinct have been provided.
- (6) Where any of the required public facilities and infrastructure set out in column III in Table I328.6.29.1 Staging of public facilities, infrastructure, traffic and road improvements as a pre-requisite to development of each sub-precinct have not been established at the time of resource consent for a development a resource consent for a restricted discretionary activity will be required for the new building, which must include:
 - (a) an explanation of the methods by which the public facilities and infrastructure will be established, prior to occupation of the building;
 - (b) a timetable for their establishment; and
 - (c) the methods may include conditions of resource consent or bonding to secure the public facilities and infrastructure and the resource consent will be assessed against the extent to which these methods and timetable are appropriate to ensure the public facilities and infrastructure will be established, prior to occupation of the building.
- (7) More than one sub-precinct may be constructed simultaneously provided the completion of relevant public facilities and infrastructure under this rule is bonded to the satisfaction of the Council by way of bank bond or bank guaranteed bond.

Explanation:

The provision of public facilities and infrastructure and traffic and road improvements is tied to the development of sub-precincts to ensure they are provided commensurate with the requirements of the development and to ensure the full public benefit outcomes of I328.10.5 Ōrākei Point - Precinct plan 5 are achieved.

The success of Ōrākei Point depends on the staged and coordinated provision of the covered rail, roads, plazas, linkages and infrastructure and roading upgrades.

I328.6.30. Network utility services

- (1) The Ōrākei Point precinct development controls do not apply to network utility services. The provisions of E26 Infrastructure apply.

Explanation:

The development controls of the Ōrākei Point precinct are intended to apply to building development only and not to the height, position and size of network utilities such as traffic signs, telephone booths, bus shelters and other infrastructure in roads and plazas.

I328.6.31. Ōrākei Point coastal yard

- (1) The Ōrākei Point coastal yard applies to land within a line 20m from mean high water springs as shown on I328.10.1 Ōrākei Point - Precinct plan 1 and use and development in the Ōrākei Point coastal yard must comply with the following:
 - (a) no building can be constructed within the Ōrākei Point coastal yard, other than paths and driveways and associated retaining, foundations, surfaces and structures that are in general accordance with I328.10.5 Ōrākei Point - Precinct plan 5 and approved as part of a resource consent;
 - (b) no person can, damage, alter, injure, destroy or partially destroy:
 - (i) any indigenous tree or vegetation; or
 - (ii) any exotic tree greater than 6m in height or 600mm in girth (measured at 500mm above ground level).
- (2) The Council may grant an application for restricted discretionary activity resource consent to remove or pollard vegetation or trees within the Ōrākei Point coastal yard if it is satisfied that the works are necessary to address dangerous, diseased or damaged vegetation and trees, compliance with and statutory or legal obligation or hardship, or any other cogent reason.
- (3) Consent will not be granted to the removal or pollarding of vegetation or trees within the Ōrākei Point coastal yard for the purpose of improving views unless the natural character of the coastal environment, the ecological and amenity values of the site and the health of the tree will not be adversely affected.
- (4) No other yard or building in relation to boundary control applies within the Ōrākei Point precinct.

Explanation:

The Ōrākei Point Coastal Yard is applied at the boundary of Open Space – Informal Recreation Zone land on the northern side of Ōrākei Point. The control is intended to ensure that buildings are appropriately set back from this coastal edge, thereby avoiding effects on its landscape and ecological values.

In other places within the Ōrākei Point precinct the position of buildings in relation to other buildings, roads and open space are controlled by the height and recession plane rules within the identified building platforms rather than yard controls. Buildings are generally encouraged to abut adjoining open space rather than be set back in

order that they appropriately address and define such open space to maximise opportunities for outlook and surveillance.

I328.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I328.8. Assessment – restricted discretionary activities

I328.8.1. Matters of discretion

The Council will reserve its discretion to all the following matters when assessing a restricted discretionary activity resource consent application in the Ōrākei Point Precinct in addition any other matters specified for restricted discretionary activities in the overlay, Auckland-wide, H13 Business – Mixed Use Zone and H22 Strategic Transport Corridor Zone.

(1) Buildings:

- (a) Building design and external appearance.
- (b) Public safety.
- (c) Creating a positive frontage.
- (d) Designing for landmark buildings (in particular Building H).
- (e) Activity relationship to public open spaces.
- (f) Centre vitality.
- (g) Design of parking, access and servicing.
- (h) Accommodation.
- (i) Site amenity.
- (j) Sustainability.
- (k) Ōrākei Road parking building.
- (l) Travel Demand Management Plan.
- (m) Construction management.
- (n) Traffic impact on roads and intersections.
- (o) Fencing.
- (p) Reverse sensitivity effects associated with the operation of the rail line and roads.

(2) Additions and alterations to existing buildings:

- (a) Building design and external appearance.

- (b) Public safety.
 - (c) Creating a positive frontage.
 - (d) Activity relationship to public open spaces.
 - (e) Centre vitality.
 - (f) Design of parking, access and servicing.
 - (g) Accommodation.
 - (h) Site amenity.
 - (i) Sustainability.
 - (j) Travel Demand Management Plan.
 - (k) Construction management.
 - (l) Traffic impact on roads and intersections.
 - (m) Fencing.
 - (n) Reverse sensitivity effects associated with the operation of the rail line and roads.
- (3) Community facilities between 500m² and 2,000m² gross floor area:
- (a) Building design and external appearance.
 - (b) Public safety.
 - (c) Creating a positive frontage.
 - (d) Activity relationship to public open spaces.
 - (e) Centre vitality.
 - (f) Design of parking, access and servicing.
 - (g) Accommodation.
 - (h) Site amenity.
 - (i) Sustainability.
 - (j) Travel Demand Management Plan.
 - (k) Construction management.
 - (l) Traffic impact on roads and intersections.
 - (m) Fencing.

- (n) Reverse sensitivity effects associated with the operation of the rail line and roads.
- (4) Use of buildings for any activity listed in this table as permitted where the site is located within 30m either side of the land designated for railway purposes and the site is not subject to a restrictive non-complaint encumbrance in favour of New Zealand Railways Corporation and Ports of Auckland Limited:
 - (a) Restrictive Non-complaint Encumbrance for the Ōrākei Point precinct.
 - (b) Reverse sensitivity effects associated with the operation of the rail line and roads.
 - (c) Fencing.
- (5) Buildings within the Special Tree Protection Area, in addition to the matters of discretion listed in I328.8.1(1):
 - (a) Existing tree protection.
 - (b) Tree Protection Plan.
 - (c) Site specific tree protection.
 - (d) Works within the Special Tree Protection Area.
- (6) Construction of public open space, public accessways, overpasses and plazas, and accessory buildings (excluding roads):
 - (a) Building design and external appearance.
 - (b) Public safety.
 - (c) Creating a positive frontage.
 - (d) Designing for landmark buildings (in particular Building H).
 - (e) Activity relationship to public open spaces.
 - (f) Centre vitality.
 - (g) Design of parking, access and servicing.
 - (h) Accommodation.
 - (i) Site amenity.
 - (j) Sustainability.
 - (k) Travel Demand Management Plan.
 - (l) Construction management.

- (m) Fencing.
- (n) Reverse sensitivity effects associated with the operation of the rail line and roads.
- (o) I328.10.3 Ōrākei Point - Precinct plan 3.
- (p) Public open spaces, public accessways and streets.
- (7) Parking (non-accessory) in Sub-precinct F:
 - (a) Design of parking, access and servicing.
 - (b) Large commercial parking.
 - (c) Ōrākei Road parking building.
 - (d) Site amenity.
 - (e) Sustainability.
 - (f) Travel Demand Management Plan.
 - (g) Construction management.
- (8) Parking between 1750 and 1950 spaces:
 - (a) Design of parking, access and servicing.
 - (b) Large commercial parking.
 - (c) Ōrākei Road parking building.
 - (d) Site amenity.
 - (e) Sustainability.
 - (f) Travel Demand Management Plan.
 - (g) Construction management.

I328.8.2. Assessment criteria

The council will consider the assessment criteria below for restricted discretionary activities, in addition to the relevant assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide H13 Business – Mixed Use Zone and H22 Strategic Corridor Zone.

- (1) Buildings - Building design and external appearance:
 - (a) New buildings should be generally consistent with I328.10.5 Ōrākei Point - Precinct plan 5 and their design and external appearance will be assessed as to whether:

- (i) buildings respond to the proportions, structural modules, and solid-void relationships of existing and proposed public spaces, streets and open spaces, and any existing or consented buildings or building forms otherwise shown on I328.10.5 Ōrākei Point - Precinct plan 5;
- (ii) the materials used on new development are responsive to materials used on neighbouring existing and proposed public spaces, streets and open spaces, and any existing or consented buildings or building forms otherwise shown on I328.10.5 Ōrākei Point: Precinct plan 5;
- (iii) the height of the proposed building is relative to its neighbours so as to ensure variation in roof height and roof form;
- (iv) the building design is of a high quality, showing variety and responsiveness to the local context in a way that contributes to the identity of Ōrākei Point at every scale, including the appearance from viewing points external to Ōrākei Point itself, including from public viewpoints on Tamaki Drive, Ngapiipi Road, Kepa Road, Lucerne Road and Shore Road;
- (v) the building facades are articulated to create shadows, and have a varied roofline and buildings use exterior materials with a coefficient of reflectivity of less than 55 per cent;
- (vi) sound building design precedents are introduced to provide visual cues to the building's overall scale and size and to avoid flat planes or blank facades devoid of modulation, relief or surface detail where visible from streets and public open space;
- (vii) the architectural design differentiates upper building levels from lower and ground levels;
- (viii) the overall form of buildings as seen from a distance is cognisant of the original landform and the existing silhouette of trees on the peninsula;
- (ix) the overall form of buildings complements the natural rise and fall of the land and existing trees on the peninsula;
- (x) buildings seen from a distance are varied and intricate in their rooflines and the patterns of light and shade resulting from balconies and other articulation of their facades;
- (xi) long flat roof profiles are avoided, while roof profiles which are varied are encouraged;
- (xii) roof profiles are designed as part of the overall building form and contribute to the architectural quality of the skyline as viewed from both ground level and the surrounding area, including the integration of plant, exhaust and intake units and other mechanical and electrical equipment into the overall rooftop design so that they are not visible from beyond Ōrākei Point;

- (xiii) durable, high quality, inert and easily maintained materials are used on the exterior of buildings;
 - (xiv) side or rear walls are used as an opportunity to introduce creative architectural solutions that provide interest in the façade including modulation, relief or surface detailing; and
 - (xv) balconies over roads project no more than 1.5m over the road, are no wider than 4m and are at least 7m above the surface of the road or footpath below.
- (b) Public safety: Applications will be assessed in respect of how they address public safety and whether:
- (i) consideration has been given to site amenity and safety considerations in the interim period prior to I328.10.5 Ōrākei Point - Precinct plan 5 being completed (including for example temporary site fencing and/or amenity planting);
 - (ii) safe public pedestrian and service access will be maintained to the Ōrākei rail station and methods provided to ensure that this access is maintained from public places at all times the rail service is operating (such methods may include the registration of legal instruments on the land title(s)); and
 - (iii) new development, including parking, is designed in accordance with principles of Crime Prevention Through Environmental Design principles.
- (c) Creating a positive frontage: Applications will be assessed in respect of the extent they create positive frontages and whether:
- (i) building frontages at street level and at the lee and waterfront plaza level contribute to pedestrian vitality, interest and public safety including through using a variety of architectural detail and maximising doors, window openings and balconies fronting streets and plazas;
 - (ii) ground floor spaces facing the street and plaza have windows and doors which look directly onto the street and plaza, with glazing comprising a major portion of the ground floor façade;
 - (iii) building entrances are visible and easily identifiable from the street and plaza and directly accessible from street and plaza level;
 - (iv) when fences and walls are erected between areas of public and private open space, the design of fences and walls is integrated with landscaping and in some cases a landscaped/land formed edge being more appropriate than solid fences or wall;
 - (v) passenger drop off points are located close to entrances;
 - (vi) building frontages alongside open space land contribute to vitality, interest and public safety including through using a variety of

architectural detail and maximising window openings and balconies fronting onto the public open spaces;

(vii) when the floor level of buildings fronting open space zoned land is above ground level to provide privacy to the occupants or to allow for the fall of the terrain, any foundation walls have a modulated form or are landscaped to avoid the appearance of stark retaining walls or undercroft openings;

(viii) buildings address and align to the street boundary of an identified building platform to a height appropriate to define and enclose the street and define the edge of public places, with minor modulation and variance of the frontage layout, such as recessed pedestrian entrances and windows being acceptable to avoid architectural monotony provided that the overall continuity of the frontage is not compromised;

(ix) buildings are designed so the back of a building avoids being oriented to streets, public plazas, or the foreshore open space zoned land and is orientated towards the backs of other buildings wherever practical;

(x) the rhythm and scale of architectural features, fenestration, finishes and colour harmonises with and complements the streetscape and public places, particularly where this would assist or strengthen the overall effect of the building frontage;

(xi) where large sites enable the development of an extensive street building frontage, the frontage is visually broken up through building separation and/or variation in building height, form and/or design to avoid monotonous building façades as viewed from streets and public open space and external viewing points;

(xii) primary entrances to buildings are located along the main street elevation;

(xiii) where possible, windows are designed to look directly onto the street and to adjoining public open spaces;

(xiv) building facades at middle levels provide richness, interest and depth, including architectural detail and balconies fronting streets, plazas and public open spaces and avoiding blank walls on frontages; and

(xv) large expanses of blank walls are avoided at upper levels on street, plaza and public open space frontage and servicing elements are avoided on these facades unless appropriately integrated into the façade design.

(d) Designing for landmark buildings (in particular Building H): The design of landmark buildings (particularly Building H) will be assessed as to whether:

- (i) the landmark building's overall form and the articulation of its façade announce its unique position on the street or plaza and/or its public function;
 - (ii) the landmark building articulation or façade treatment is used to express its unique position on the street or plaza, including reduced setbacks and feature elements such as awnings and parapets; and
 - (iii) the top of the landmark building is designed to distinguish it from adjacent buildings.
- (e) Activity relationship to public open spaces: Applications will be assessed in respect of their relationship to public open spaces and whether:
- (i) internal space at all levels within the building are designed to maximise outlook for occupants onto streets and public open spaces;
 - (ii) activities engage and activate streets, through site links and public open space at ground level;
 - (iii) parking areas that are located within buildings and are visible from streets or public open spaces are avoided;
 - (iv) building space with active uses is provided between parking areas within buildings and street and public open space frontages;
 - (v) ventilation, and fumes from parking structures or other uses avoid being exhausted into the adjacent pedestrian environment at podium level;
 - (vi) to avoid privatising adjoining publicly accessible open space the boundary between public, semi- public and private open space is clearly defined by either one or a combination of fencing or planting along the boundary of the private open space; and
 - (vii) fencing and planting is designed and located to be sufficiently transparent or of low enough height to ensure there are clear views of the open space in accordance with principles of Crime Prevention Through Environmental Design.
- (f) Centre vitality: Applications will be assessed for their contribution to centre vitality and whether:
- (i) buildings are designed to be highly adaptable to a variety of uses; for example, open structural frames and more than minimum floor-to-floor heights should be considered.
- (g) Design of parking, access and servicing: Applications for parking, access and servicing will be assessed as to whether:
- (i) parking, driveways and circulation are integrated into the overall site and building design;

- (ii) parking areas are located underground or within buildings, other than on-street public parking;
- (iii) parking is designed to minimise conflict between non-residential, residential and pedestrian traffic;
- (iv) when they occur on the subject site, public places and public access linkages shown on I328.10.5 Ōrākei Point - Precinct plan 5 are provided for, and methods to ensure public access to and over such public places and public access linkages are maintained at all times, excluding any areas set aside for outdoor dining (such methods may include the registration of legal instruments on the land title(s));
- (v) the proposed finished levels across the subject site allow for public access linkages through and around the site and between adjacent sites, where these are envisaged by I328.10.5 Ōrākei Point - Precinct plan 5;
- (vi) methods to legally secure public access at all times to the public places and the linkages referred to in the above criteria are provided, including in the interim period before I328.10.5 Ōrākei Point - Precinct plan 5 is completed, and including prior to the vesting of public roads (such methods may include the registration of legal instruments on the land title(s));
- (vii) methods to secure access to other properties within the Ōrākei Point precinct are provided;
- (viii) buildings are designed to provide strong architectural cues to accessways and through-site links, with clear and legible entrances, to enhance the visible sense of pedestrian access to the area;
- (ix) access to the development is clearly defined and identifiable to both vehicles and pedestrians as they approach the site and emerging from public transport/rail station, with a particular focus on way-finding methods to increase the legibility of the rail station;
- (x) the design of vehicle ingress and egress to sites is primarily considered from the perspective of pedestrians and cyclists, particularly in terms of visibility and the use of paving materials;
- (xi) frontages are designed as far as possible to avoid multiple service and access interruptions to frontage continuity;
- (xii) where possible vehicle access points are located away from the main road frontage to minimise vehicle crossing and accessways;
- (xiii) where development within Sub-precinct A occurs prior to the establishment of the link road, a temporary vehicular access to development in Sub-precinct A provides appropriate design, turning restrictions and position of the access drive and footpath crossing (a condition may be imposed on the resource consent requiring the

- closure of this temporary access upon the completion of construction of an alternative access to sub-precinct A directly from the link road);
- (xiv) access points are designed to be compatible with the visual appearance of the building(s);
 - (xv) integration of access for vehicular uses (cars, truck and buses) is used to minimise the crossing of pedestrian paths;
 - (xvi) accessways are designed to safely accommodate emergency services and other large vehicles;
 - (xvii) where alternative vehicle access is available, the creation of new vehicle crossings across frontages within the frontage height and activity control is avoided where practical;
 - (xviii) buildings and parking areas are designed to provide for disabled access, including to extent to which they comply with NZS 4121:2001 Design for access and mobility: buildings and associated facilities;
 - (xix) parking areas that are located within buildings and are visible from streets or public open spaces are avoided;
 - (xx) building space with active uses is provided between parking areas within buildings and street and public open space frontages; and
 - (xxi) ventilation and fumes from parking structures or other uses avoid being exhausted into the adjacent pedestrian environment at podium level.
- (h) Accommodation: Applications for accommodation will be assessed as to whether:
- (i) accommodation has natural through ventilation, and where there are external windows on more than one wall by window openings facing different directions, with, ventilation provided solely by mechanical means is not being appropriate;
 - (ii) internal design of every accommodation unit within a development maximises outlook, as distinct from views;
 - (iii) a mixture of apartment types is provided within each building; and
 - (iv) plans submitted as part of a resource consent application include a scaled floor plan showing the living arrangement and configuration within each residential or accommodation unit, including scaled furniture.
- (i) Site amenity: Applications will be assessed for their contribution to site amenity and whether:

- (i) screening and/or landscaping is provided for all parking, loading and servicing areas within buildings that are visible from streets or public open spaces;
 - (ii) site services such as mechanical, electrical and communications equipment are concealed from streets or public open spaces;
 - (iii) service areas are located in areas where they do not detract from the developments visual appeal; and
 - (iv) rubbish storage and recycling facilities are located away from habitable spaces and screened from public places.
- (j) Sustainability: Applications will be assessed for their sustainability and whether:
- (i) buildings are designed to be sustainable through the use of durable low maintenance materials, inert exterior cladding, maximising solar access and natural ventilation and the incorporation of mechanical and electrical systems that achieve energy efficiency;
 - (ii) living spaces within buildings are oriented toward the north to allow for provision of good natural light;
 - (iii) on-site landscaping generally consists of indigenous vegetation;
 - (iv) measures will be adopted to remove endemic lizards from works footprint prior to works commencing and relocate lizards (ideally to open space on the southern side of Ōrākei Road);
 - (v) on-site stormwater conservation measures will be incorporated where appropriate including rainwater harvesting devices, green roofs, site landscaping, rain gardens and wetland treatment systems and stormwater planter boxes (subject to soil contamination considerations);
 - (vi) separate infrastructure reports will be submitted with resource consent applications assessing infrastructure effects from proposed developments;
 - (vii) adequate storage space is provided for rubbish and recyclable material, in a location which is clearly visible within the site and easily accessible to occupants and collection vehicles;
 - (viii) building and demolition will be undertaken in a way that maximises the use of waste materials for reuse and recycling;
 - (ix) buildings will be insulated beyond the minimum standard to keep buildings warm in winter, cooler in summer, and reduce long term maintenance costs;
 - (x) buildings will be constructed using materials that have a high thermal mass such as bricks, concrete and stone to increase energy efficiency;

- (xi) buildings utilise external shades and overhangs, and internal blinds, louvres and curtains to maximise solar access in winter and minimise it in summer;
 - (xii) the lighting controls will enable occupants to minimise energy use;
 - (xiii) active solar technologies are incorporated into new development; and
 - (xiv) if solar water heaters are used, they are incorporated into the design of buildings with consideration of their visual impact.
- (k) Ōrākei Road parking building: The Ōrākei Road parking building will be assessed as to whether:
- (i) the sloping face of the Ōrākei Road parking building is landscaped in a manner that provides a terraced profile or has a modulated form so as to create a natural hill profile characteristic of volcanic forms within Auckland, with particular reference to the tuff ring form of Ōrākei Basin;
 - (ii) the face and roof of the building is landscaped and has sufficient soil depth and drainage to ensure proper plant growth;
 - (iii) a fence or appropriate barrier is to be erected at the top and sides of the slope for safety;
 - (iv) planting uses either low grasses and flaxes or trees, and generally consists of indigenous vegetation;
 - (v) the parking building and adjoining building are sufficiently separated by both an access lane and light well so as to achieve daylight access into a motor court;
 - (vi) a detailed landscape plan showing compliance with the above criteria and providing details on drainage, soil depth and watering and a maintenance plan is provided; and
 - (vii) prior to the 'green hill' covering the Ōrākei Point parking area being designed and constructed, an appropriately qualified landscape architect provides confirmation that planting on the slope can sustain a vegetative cover, including moderate sized trees, over the long term.

Figure I328.8.1.1 Diagram showing an example the Ōrākei Road parking building form and landscape contour

- (l) Travel Demand Management Plan: Any Travel Demand Management Plan should use tools and targets to encourage people to travel by alternative modes of transport other than by private car, including public transport, walking and cycling and ride sharing, and will be assessed on whether it includes:
- (i) information on existing vehicle, public transport, cycle and pedestrian infrastructure;
 - (ii) details on the initial implementation and continued development of the Travel Demand Management Plan;
 - (iii) methods to achieve and monitor the objectives of the Travel Demand Management Plan;
 - (iv) a description of the facilities to encourage alternative means of transport such as staff showers and bicycle racks; and
 - (v) the ratios for bicycle parking for private development set out in the ARTA Guidance Note for Cycle Parking Facilities 2007 as a guide for the provision of cycle parking.
- (m) Construction management: Applications will be assessed as to whether appropriate measures will be implemented during construction to avoid, remedy or mitigate any adverse effects associated with construction activities (which may be addressed through a construction management plan) including the effects on:
- (i) the coastal marine area through stormwater and sediment control measures;

- (ii) the safety and flow of pedestrian and vehicular traffic through appropriate location and management of construction site access locations, provision for off-loading of materials and receipt of waste materials and off-street parking for workers;
 - (iii) amenity and safety through appropriate construction site fencing or screening and location of workers facilities;
 - (iv) the road network through measures to avoid and/or clean up debris including wheel washing facilities and procedures to clean up debris; and
 - (v) access to the railway station, other sites and public areas.
- (n) Traffic impact on roads and intersections: Applications will be assessed for their traffic impact on roads and intersections and:
- (i) the extent of the actual or potential traffic effects of the development on the safety and flow of the road network, having particular regard to the impact of the traffic generated by the development on Ōrākei Road and its intersections; except
 - (ii) where the traffic and road improvements have been met, no assessment of the actual or potential traffic effects of the development is required.
- (o) Fencing: Fencing will be assessed as to whether:
- (i) any fencing abutting public open space is highly transparent with recessive powder coated finish;
 - (ii) the fencing incorporates landscape initiatives to improve the visual appearance at the interface to open space, as well as to deter tagging; and
 - (iii) the fencing will deter access to the railway portal.
- (p) Reverse sensitivity effects associated with the operation of the rail line and roads: Applications will be assessed for their reverse sensitivity effects associated with the operation of the rail line and roads and where buildings are to be occupied by residential units, visitor accommodation or other sensitive activities, whether:
- (i) where they located in accordance with Ōrākei Point - Precinct plan 5 they are appropriately designed to avoid or mitigate reverse sensitivity effects of noise, vibration and fumes associated with the current and future operation of the railway line, and noise effects from traffic;
 - (ii) where they are not located in accordance with Ōrākei Point - Precinct plan 5 they are appropriately located and designed to avoid or mitigate reverse sensitivity effects of noise, vibration and fumes associated with the current and future operation of the railway line, and noise effects from traffic;

- (iii) they are designed with particular regard to the location of bedrooms and other habitable rooms, the type and thickness of glass, and the presence or otherwise of opening windows or doors to the exterior; and
 - (iv) they include a design methodology for avoiding or mitigating adverse effects from noise, vibration and fumes associated with the current and future operation of the rail line with any resource consent application.
- (2) Additions and alterations to existing buildings: Applications for additions and alterations to existing buildings will be assessed on the extent to which they meet:
- (a) the assessment criteria for building design and external appearance in I328.8.2(1)(a)(i) to (xv);
 - (b) the assessment criteria for public safety in I328.8.2(1)(b)(i) to (iii);
 - (c) the assessment criteria for creating a positive frontage in I328.8.2(1)(c)(i) to (xv);
 - (d) the assessment criteria for an activity's relationship to public open spaces in I328.8.2(1)(e)(i) to (vii);
 - (e) the assessment criteria for centre vitality in I328.8.2(1)(f)(i);
 - (f) the assessment criteria for design of parking, access and servicing in I328.8.2(1)(g)(i) to (xxi);
 - (g) the assessment criteria for accommodation in I328.8.2(1)(h)(i) to (iv);
 - (h) the assessment criteria for site amenity in I328.8.2(1)(i)(i) to (iv);
 - (i) the assessment criteria for sustainability in I328.8.2(1)(j)(i) to (xiv);
 - (j) the assessment criteria for Travel Demand Management plan in I328.8.2(1)(l)(i) to (v);
 - (k) the assessment criteria for construction management in I328.8.2(1)(m)(i) to (v);
 - (l) the assessment criteria for traffic impact on roads and intersections in I328.8.2(1)(n)(i)(ii);
 - (m) the assessment criteria for fencing in I328.8.2(1)(o)(i) to (iii); and
 - (n) the assessment criteria for reverse sensitivity effects associated with the operation of the rail line and roads in I328.8.2(1)(p) (i) to (iv).

- (3) Community facilities between 500m² and 2,000m² gross floor area:
Applications for community facilities between 500m² and 2,000m² gross floor area will be assessed on the extent to which they meet:
- (a) the assessment criteria for building design and external appearance in I328.8.2(1)(a)(i) to (xv);
 - (b) the assessment criteria for public safety in I328.8.2(1)(b)(i) to (iii);
 - (c) the assessment criteria for creating a positive frontage in in I328.8.2(1)(c)(i) to (xv);
 - (d) the assessment criteria for an activity's relationship to public open spaces in I328.8.2(1)(e)(i) to (vii);
 - (e) the assessment criteria for centre vitality in I328.8.2(1)(f)(i);
 - (f) the assessment criteria for design of parking, access and servicing in I328.8.2(1)(g)(i) to (xix);
 - (g) the assessment criteria for accommodation in I328.8.2(1)(h)(i) to (iv);
 - (h) the assessment criteria for site amenity in I328.8.2(1)(i)(i) to (iv);
 - (i) the assessment criteria fo sustainability in I328.8.2(1)(j)(i) to(xiv);
 - (j) the assessment criteria for Travel Demand Management Plan in I328.8.2(1)(l)(i) to (v);
 - (k) the assessment criteria for construction management in I328.8.2(1)(m)(i) to (v);
 - (l) the assessment criteria for traffic impact on roads and intersections in I328.8.2(1)(n)(i);
 - (m) the assessment criteria for fencing in I328.8.2(1)(o)(i) to (iii); and
 - (n) the assessment criteria for reverse sensitivity effects associated with the operation of the rail line and roads in I328.8.2(1)(p)(i) to (iv).
- (4) Use of buildings for any permitted activity in Table I328.4.1 where the site is located within 30m either side of the land designated for railway purposes and the site is not subject to a restrictive non-complaint encumbrance in favour of New Zealand Railways Corporation and Ports of Auckland Limited: Any permitted activity in Table I328.4.1 within a building inside an area bounded by lines 30m either side of the land designated for railway purposes within the site on which the building is located that is not subject to a restrictive non-complaint encumbrance in favour of New Zealand Railways Corporation and Ports of Auckland Limited will be assessed on the extent to which:

- (a) the activity is sensitive to any adverse effects from the surrounding environment, including the effects of noise, vibration and fumes associated with the current and future operation of the railway line, and noise effects from traffic;
 - (b) the building occupied by the activity is located and designed to avoid or mitigate reverse sensitivity effects and any adverse effects of noise, vibration and fumes associated with the current and future operation of the railway line, and noise effects from traffic;
 - (c) the assessment criteria for reverse sensitivity effects associated with the operation of the rail line and roads in I328.8.2(1)(p)(i) to (iv) are met; and
 - (d) the assessment criteria for fencing in I328.8.2(1)(o)(i) to (iii) are met.
- (5) Buildings and works within the Special Tree Protection Area: Buildings and works within the Special Tree Protection Area, which applies to the trees existing as at 18 January 2010 located within the Special Tree Protection Area identified on Ōrākei Point - Precinct plan 3 and extends to the outer drip-line of the existing trees, will be assessed on whether:
- (a) existing trees or parts of trees within the Special Tree Protection Area will be retained except where:
 - (i) the tree or a part of the tree is structurally unsound;
 - (ii) removal of the tree or part of the tree would be beneficial to the health and growth of existing, more appropriate trees on the site, taking into account the size, appearance, health and conditions of those existing trees; or
 - (iii) the removal of the tree or part of the tree is necessary to provide for the access drive contained within Sub-precinct A or other public road shown on I328.10.5 Ōrākei Point - Precinct plan 5;
 - (b) works for building and vehicle access within the Special Tree Protection Area are necessary to give effect to, and generally accord with, I328.10.5 Ōrākei Point - Precinct plan 5;
 - (c) works for building and vehicle access within the Special Tree Protection Area are subject to an assessment and Tree Protection Plan prepared by a suitably qualified arborist; and
 - (d) the vehicle access within Sub-precinct A is designed to provide vehicle access from Ōrākei Road to the upper levels within Sub-precinct A, as shown in I328.10.5 Ōrākei Point - Precinct plan 5, while minimising adverse impacts on any tree.
 - (e) A Tree Protection Plan to assist in the design stages to avoid or minimise adverse effects on the trees in the Special Tree Protection Area must be

prepared by a suitably qualified arborist for approval by Council and will be assessed on whether it includes:

- (i) a pruning schedule including all pruning maintenance;
 - (ii) details on the proposed irrigation system including timing and monitoring;
 - (iii) details on the arboricultural monitoring including timing, frequency and memos; and
 - (iv) specific controls for works under tree crowns and in close proximity.
- (f) For site specific tree protection a supervising works arborist must monitor and supervise the site and ensure the conditions of consent are complied with and provide to Council written confirmation on:
- (i) whether the irrigation system has been commissioned and correct monitoring is in place;
 - (ii) the timing of the pre-commencement meeting and implementation of protection fencing;
 - (iii) all approved pruning, supervision of pruning and the completion of the pruning;
 - (iv) the preliminary excavations and proposed inspection adjacent to retained trees to ascertain appropriate protection methods are utilised and roots are pruned correctly;
 - (v) monthly updates of weekly inspections; and
 - (vi) a final report being provided that documents compliance and any issues of non-compliance along with any remedial works required.
- (g) Works within the Special Tree Protection Area shall be assessed on whether:
- (i) hazard fencing to be placed around the edges of trees is as specified by the supervising arborist;
 - (ii) preliminary excavations and exploratory inspections will be undertaken adjacent to the trees to determine root activity and ensure roots are pruned correctly;
 - (iii) confirmation is provided that an arborist will supervise the works within root zones of trees;
 - (iv) confirmation is provided that if roots are uncovered during works, the roots will be covered with Geotextile fabric and the ground and surface roots will be kept moist;
 - (v) confirmation is provided that all roots exposed during excavations that require removal will be cleanly cut back to the excavation surface

using a handsaw or secateurs in accordance with modern arboricultural practices;

- (vi) confirmation is provided that when concrete is to be poured in excavations that all exposed roots will be covered with polythene to prevent any contaminants contacting the exposed roots;
 - (vii) confirmation is provided that no machinery will be stored or operated within the root zone of any protected tree unless it is supported on an existing concrete or asphalt surface;
 - (viii) confirmation is provided that no materials, spoil, fill, soil or equipment will be stored or temporarily placed within the root zone of any protected tree unless it is approved by the works arborist and is on an existing hard surface;
 - (ix) confirmation is provided that people or machinery will not use the area of the root zone of any protected tree on the site for temporary or permanent access unless specifically mentioned in the consent application and conditions of consent;
 - (x) confirmation is provided that tree protection work will be completed prior to the main construction starting to ensure the tree protection methods are in place before multiple contractors are on site;
 - (xi) confirmation is provided that all site access will be formed away from the street trees and all services including drainage will be located outside the root zone of the protected trees unless specifically mentioned in the arboricultural report; and
 - (xii) confirmation is provided that pruning will be carried out in accordance with ANSI A300 Pruning Standards and be approved by the supervising arborist.
- (6) Construction of public open space, public accessways, overpasses, plazas and accessory buildings (excluding roads): The construction of public open space, public accessways, overpasses, plazas and accessory buildings (excluding roads) will be assessed on the extent to which they meet:
- (a) the assessment criteria for building design and external appearance in I328.8.2(1)(a)(i) to (xv);
 - (b) the assessment criteria for public safety in I328.8.2(1)(b)(i) to (iii);
 - (c) the assessment criteria for creating a positive frontage in in I328.8.2(1)(c)(i) to (xv);
 - (d) the assessment criteria for an activity's relationship to public open spaces in I328.8.2(1)(e)(i)
 - (e) to (vii);
 - (f) the assessment criteria for centre vitality in I328.8.2(1)(f)(i);

- (g) the assessment criteria for design of parking, access and servicing in I328.8.2(1)(g)(i) to (xxi);
- (h) the assessment criteria for accommodation in I328.8.2(1)(h)(i) to (iv);
- (i) the assessment criteria for site amenity in I328.8.2(1)(i)(i) to (iv);
- (j) the assessment criteria for sustainability in I328.8.2(1)(j)(i) to (xiv);
- (k) the assessment criteria for Travel Demand Management Plan in I328.8.2(1)(l)(i) to (v);
- (l) the assessment criteria for construction management in I328.8.2(1)(m)(i) to (v);
- (m) the assessment criteria for traffic impact on roads and intersections in I328.8.2(1)(n)(i);
- (n) the assessment criteria for fencing in I328.8.2(1)(o)(i) to (iii); and
- (o) the assessment criteria for reverse sensitivity effects associated with the operation of the rail line and roads in I328.8.2(1)(p) (i) to (iv).
- (p) The construction of public open space, public accessways, overpasses, plazas and accessory buildings (excluding roads) will be assessed on the extent to which the location and design is generally consistent with I328.10.5 Ōrākei Point - Precinct plan 5 and whether:
 - (i) public access linkages, bus stops, at-grade parking, drop-off points, pedestrian spaces, footpaths, roads; linkages to coastal boardwalks and other connections shown on I328.10.5 Ōrākei Point - Precinct plan 5 are provided for;
 - (ii) the proposed finished levels across the land area allow for public access linkages through and around the site, where these are envisaged by I328.10.5 Ōrākei Point - Precinct plan 5;
 - (iii) the methods to legally secure such linkages, including in the interim period before Ōrākei Point: Precinct plan 5 is fully given effect are provided;
 - (iv) the methods to secure access to other properties within the precinct are provided;
 - (v) consideration is given to site amenity and safety considerations in the interim period before I328.10.5 Ōrākei Point - Precinct plan 5 is fully given effect to; and
 - (vi) safe public pedestrian and service access will be maintained to the Ōrākei rail station and the methods provided to secure such access.
- (q) Public open spaces, accessways, streets, parks and plazas will be assessed on the extent to which;

- (i) they are designed to comply with safety guidelines; including the guidelines on informal surveillance, clear visibility of building entrances and public spaces, lighting, clear definition of space, and entrapment spots;
- (ii) buildings and parking areas are designed to provide for disabled access, including the extent to which they comply with NZS 4121:2001 Design for access and mobility: buildings and associated facilities;
- (iii) they are open and accessible to the public from a public place at all times, except where required to be closed for operational, safety or security reasons;
- (iv) methods to legally secure public access at all times to the public places and the linkages are provided, including in the interim period before Ōrākei Point: Precinct plan 5 is given effect to and including prior to the vesting of public roads (such methods may include the registration of legal instruments on the land title(s));
- (v) they are designed to attract people and have high quality and appropriate landscaping;
- (vi) public open spaces are integrated across the peninsula as a whole and with the design of buildings;
- (vii) public open spaces have a sense of order and proportion and regard to the human scale;
- (viii) public open spaces are orientated and designed to provide pedestrians with adequate access to sunlight, in particular, public spaces should be designed to maximise sunlight access between 10am and 2pm on the shortest day;
- (ix) public open space within or under a building provides adequate access to daylight and/or sunlight for public amenity;
- (x) for plant health for plants within or under buildings there is appropriate soil depth, drainage, watering and plant species;
- (xi) shade and shelter is provided for pedestrians, in conjunction with colonnades or verandas on adjoining buildings;
- (xii) attractive seating and landscaping is provided in appropriate locations and the landscaping comprises trees and shrubs which do not visually obscure the seating from public viewing;
- (xiii) robust, durable surfaces and materials are used;
- (xiv) soft and hard landscaping follows a consistent palette of materials and colours throughout Ōrākei Point, that give a distinctive sense of place, with reference to the cultural, geological and ecological values of the peninsula and its surrounds;

- (xv) provision is made for large specimen trees in tree pits within the plaza area;
 - (xvi) adequate provision is made for access and use of the public space by the disabled, including visually impaired;
 - (xvii) vegetation species used promote habitats and bird feeding;
 - (xviii) they are designed to encourage public use and provide surveillance at night and whether a lighting strategy is submitted for construction of public open space, accessways and plazas;
 - (xix) provision is made for activities to locate within the amenity areas or spill out into them from adjacent private space; and
 - (xx) buildings adjoining public open space are designed, and provide for, activities which attract people, especially at night (for example upper level residential accommodation with windows or balconies overlooking the public open space and adjoining cafes, restaurants or small shops.)
- (7) Parking (non-accessory) in Sub-precinct F: Parking (non-accessory) in Sub-precinct F will be assessed against the following:
- (a) The extent to which it meets the assessment criteria for design of parking, access and servicing in I328.8.2(1)(g)(i) to (xxi).
 - (b) Parking (non- accessory) in Sub-precinct F will be assessed on whether;
 - (i) the parking, in addition to 1750 parking spaces will have adverse impacts on the safety and flow of traffic on the road network;
 - (ii) the parking, in addition to 1750 parking spaces will provide for the traffic and parking demands of the development in the event that the required public transport improvements have not occurred, with the threshold for sufficient provision of public transport improvements being determined with regard to thresholds of; a train headway of at least 10 minutes in each direction during weekday commuter peak travel periods (i.e. train services to Ōrākei Station must be at least at 10 minute intervals) and bus connections to Ōrākei Station at least at 30 minute intervals;
 - (iii) in the use and staging of the parking, the parking in addition to the 1750 limit will only be provided after disestablishment of the 200 park and ride spaces within the precinct, and is only used ancillary to other activities within the precinct;
 - (iv) the parking will only be provided as a temporary use of unallocated spaces within a parking building and prior to the completion of development within sub- precinct F; and

- (v) the hours of operation of the parking take into account the operating hours and pricing incentives for associated traffic movements to avoid peak traffic flows.
- (c) The Ōrākei Road parking building will be assessed as to the extent it meets the following:
 - (i) the assessment criteria for the Ōrākei Road parking building in I328.8.2(1)(k);
 - (ii) the assessment criteria for site amenity in I328.8.2(1)(i)(i) to (iv);
 - (iii) the assessment criteria for sustainability in I328.8.2(1)(j)(i) to(xiv);
 - (iv) the assessment criteria for Travel Demand Management Plan in I328.8.2(1)(l)(i) to (iv);
 - (v) the assessment criteria for construction management in I328.8.2(1)(m)(i) to (v);
- (8) Parking for between 1750 and 1950 spaces: Applications for parking for between 1750 and 1950 spaces will be assessed as to the extent they meet the following:
 - (a) the assessment criteria for design of parking, access and servicing in I328.8.2(1)(g)(i) to (xxi);
 - (b) the assessment criteria for public safety in I328.8.2(1)(b)(i) to (iii);
 - (c) the assessment criteria for the Ōrākei Road parking building in I328.8.2(1)(k);
 - (d) the assessment criteria for site amenity in I328.8.2(1)(i)(i) to (iv);
 - (e) the assessment criteria for sustainability in I328.8.2(1)(j)(i) to(xiv);
 - (f) the assessment criteria for Travel Demand Management Plan in I328.8.2(1)(l)(i) to (iv); and
 - (g) the assessment criteria for construction management in I328.8.2(1)(m)(i) to (v).

I328.9. Special information requirements

- (1) An application for a new building must be accompanied by:
 - (a) Drawings showing the location and design of the proposed building relative to existing and proposed public spaces, streets and open spaces, and any approved buildings.
 - (b) Where changes are intended, the relationship of site contours to existing and proposed streets, any adjacent coastal environment or public open space.

- (c) The location and layout of open space areas (within the control of the landowner or leaseholder).
 - (d) The location of public and private linkages to, through and around the site.
 - (e) The location of vehicle access, parking areas and loading areas.
 - (f) Cross-sections showing the relationship of the building to adjoining public open space and streets.
 - (g) Building elevations and profiles viewed from locations within and outside of Ōrākei Point showing the building relative to its neighbours, including any approved buildings and allowable building envelopes on as yet undeveloped sites.
 - (h) Demonstration of the individual building's compliance with the cumulative activity, building gross floor area, parking, traffic generation threshold and mix of residential units controls, including the totals of both existing and consented development within the precinct.
 - (i) An urban design and universal access statement.
 - (j) A description of legal instruments that will be entered into to secure and maintain appropriate public access across the site in accordance with the requirements of Ōrākei Point: Precinct plan 5.
- (2) An application for construction and/or relocation of new buildings and new accessory buildings, including external additions to existing buildings, and accessory buildings within the special tree protection area must be accompanied by an arboricultural assessment, and a tree protection plan.
- (3) The arboricultural assessment must identify the potentially affected trees and all proposed building works within the Special Tree Protection Area. This assessment must be based on best practice methods and must be within the guidelines as set out in "Trees and Development: A Technical Guide to Preservation of Trees During Land Development". (Champaign IL: International Society of Arboricultural. Matheny, N., & Clark J.R, (1998)). The assessment must include the following:
- (a) an assessment of any modifications proposed to the tree crown and/or branches on the health of the tree;
 - (b) the extent of injury to tree roots and potential effects on the health of the tree;
 - (c) the effects of any earthworks on the tree;
 - (d) the effects of changes to hydrology, soil science, and ground levels on the tree;
 - (e) the effects of buildings on daylight to the tree canopy;

- (f) measures to avoid clearing native trees and shrubs that are known habitats during the breeding season for indigenous forest birds (October to February inclusive); and
- (g) specifications to minimise impacts and protect trees, both during the construction process and ongoing.

I329. Saint Heliers Precinct

I329.1. Precinct Description

The Saint Heliers Precinct covers the existing Saint Heliers commercial centre, including a small area at the south-western corner of St Heliers Bay Road and Polygon Road.

Saint Heliers is strongly defined by its relationship to the bay and beachfront of Saint Heliers Bay, the Hauraki Gulf, Rangitoto Island and Tāmaki Drive. The urban structure of Saint Heliers is based on the intersection of Tamaki Drive and St Heliers Bay Road, which forms the key axis of the centre and provides connections with the Village’s hinterland and the waterfront. This has led to a structure of primary and secondary commercial frontages and the differentiation of character within Saint Heliers Village.

The grid street network and its amphitheatre setting, adjacent to a large open space and foreshore, defines the seaside village character of the local centre. The retail precinct has a suburban character and is a compact, mixed use, pedestrian-orientated centre. There is a wide variety of commercial, retail, restaurant/café premises as well as community facilities including the St Heliers Community Library and the War Memorial Hall. There is a generally integrated relationship between the village centre and the adjacent residential neighbourhood.

The village has a significant number of buildings from the 1920s and 1930s together with a very small number from 1860 to 1920, and a mix of more recent buildings. Its sense of place is derived from a combination of its beachfront setting, the pattern of subdivision and roads, the diverse range of building types and styles, predominantly one and two storeys in height, and how buildings relate to their street frontages and the wider Saint Heliers Bay waterfront.

The purpose of the precinct is to maintain and enhance the key characteristics of Saint Heliers Village and to protect and enhance its important amenity values. The development provisions applying within the precinct encourage sympathetic development of high quality, reinforcing the village’s unique qualities but not so as to “freeze” the built environment. Change, whether by adaptive re-use of existing buildings, or through new development, is to be managed to protect the distinctive “sense of place” of the village. Innovative and congruent development intended to add to the qualities of Saint Heliers Village is encouraged.

The zoning of land within this precinct is Business – Local Centre Zone.

I329.2. Objective

- (1) Maintaining and enhancing the established character, beachside setting and amenity of Saint Heliers.
- (2) Enabling new development of high quality which reinforces the village’s established character, beach side setting and amenity.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I329.3. Policies

- (1) Manage building form so that adjacent streets retain the appearance of a predominant one to two storey streetscape.
- (2) Avoid new vehicle crossings, car parking and loading spaces on key streets within the precinct in order to retain and encourage the continuity of retail frontages.
- (3) Encourage new development that is compatible with the established built character of Saint Heliers, and contributes to its amenity and special qualities without requiring that development to mimic existing buildings, their lifestyle and materials.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I329.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide provisions apply in this precinct unless otherwise specified below.

I329.5. Activity table

Table I329.4.1 Activity table specifies the activity status of land use and development activities in the Saint Heliers Precinct pursuant to section 9(3) of the Resource Management Act 1991

Table I329.4.1 Activity table

Activity	Activity status
Refer to H11.4.1 Activity table in H11 Business – Local Centre Zone	
Buildings that do not comply with Standard I329.7.1	RD
Access and car parking that does not comply with Standard I329.7.2	RD

I329.6. Notification

- (1) Any application for resource consent for an activity listed in Table I329.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I329.7. Standards

The overlay, zone and Auckland-wide standards apply in this precinct, except that Standard H11.6.1 Building height in H11 Business – Local Centre Zone is replaced by Standard I329.7.1 below.

I329.7.1. Frontage alignment, setback and maximum height

Purpose: To manage the frontage alignment, frontage height and building height of development to maintain a low-scale built form of generally one to two storeys at the street frontage.

- (1) Buildings must not exceed 8.5m in height within 2.5m of the site frontage as shown in Figure I329.7.1 Frontage set back control below, except where:
 - (a) the construction of a balcony or parapet penetrates the frontage setback control by no more than 1.5m; or
 - (b) the construction of a roof penetrates the frontage setback control, provided it is no more than 9.5m high.
- (2) Where buildings or parts of buildings are not within 2.5m of the street boundary, they must not exceed 12.5m in height. Figure I329.7.2 Frontage set back control – balcony exception and Figure I329.7.3 Frontage setback control – roof exception below provide an explanation of the exceptions to this standard.
- (3) Buildings must be built to the street frontage, except where providing vehicle access in accordance with the Standard I329.7.2 Access and car parking below.

Figure I329.7.1 Frontage set back control

[CIV-2016-404-002338: Ancona Properties Limited]

Figure I329.7.2 Frontage setback control – balcony exception

Figure I329.7.3 Frontage setback control – roof exception

I329.7.2. Access and car parking

Purpose: To manage the location of vehicle crossings, car parking and loading spaces in order to retain and encourage a continuity of retail frontages.

- (1) New vehicle crossings must not be located on sites that front:
 - (a) Tamaki Drive, St Heliers Bay Road and the north side of Polygon Road between Maheke Street and St Heliers Bay Road; or
 - (b) Maheke Street, Turua Street and the north side of Polygon Road between St Heliers Bay Road and Lombard Street where vehicle access for car parking and loading is available by other means, such as rear service lanes, right-of-ways or from side roads.
- (2) Car parking and loading spaces, including car parking buildings, must not front Tamaki Drive, St Heliers Bay Road, Turua Street, Polygon Road, or Maheke Street.

I329.8. Assessment – controlled activities

There are no controlled activities within this precinct.

I329.9. Assessment – restricted discretionary activities

I329.9.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions.

- (1) Additional matters of discretion relating to activity H11.4.1(A49) Additions and alterations to existing buildings in the Business – Local Centre Zone:
 - (a) the effects of design, colour and materials with existing and surrounding buildings.
- (2) Additional matters of discretion relating to H11.4.1(A44) New buildings in the Business – Local Centre Zone:
 - (a) the effects of design, location and colour on the surrounding buildings;
 - (b) the effects of access and parking;
 - (c) traffic impact effects;
 - (d) stormwater effects; and
 - (e) the effects on residential amenity.
- (3) For frontage alignment, setback and maximum height:
 - (a) the effects of the buildings frontage alignment, setback and maximum height on the amenity values of the surrounding area.
- (4) For access and car parking:
 - (a) the effects on traffic movement and parking on the streets listed in Standard I329.7.2.

I329.9.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) Additional assessment criteria relating to activity H11.4.1(A49) Additions and alterations to existing buildings in the Business – Local Centre Zone:
 - (a) whether the additions and alterations maintain the integrity of existing buildings on the site. In particular, consideration is to be given to the overall building footprint, form, mass, scale, proportions, its relationship to the street and its overall contribution to the character of Saint Heliers;
 - (b) whether the detailed design features are compatible with key architectural features of the existing building;
 - (c) whether the materials and colours are compatible with the existing building; and
 - (d) whether the design of verandahs are compatible with the architectural form of existing or surrounding buildings.
- (2) Additional assessment criteria relating to H11.4.1(A44) New buildings in the Business – Local Centre Zone:
 - (a) whether new buildings contribute to the character of Saint Heliers and respond to the features of the surrounding context including topography, streetscape character and the existing or original street subdivision pattern;
 - (b) whether the visual interest at street level is maintained in order to enhance the pedestrian amenity of the street environment;
 - (c) whether buildings are designed to front streets, concentrating main entrances and windows on frontages facing the street;
 - (d) whether the roof design maintains or contributes to the varied roofscape of the centre as viewed from the surrounding residential area;
 - (e) whether the rooftop projections including towers, chimneys, lift towers, machinery rooms, air conditioning equipment, ventilation ducts and equipment, or water towers are integrated in an architecturally attractive manner as part of the overall design of the building;
 - (f) whether in the case of Polygon Road and Turua Street, buildings address the topographical difference at the south-eastern end where these streets intersect. Buildings may sit higher at the Polygon Road level and follow a reducing height towards the north;
 - (g) whether on-site car parking and vehicle circulation areas visually dominate views of the site from the surrounding public realm;

- (h) for development across two or more sites, including amalgamated sites:
 - (i) whether clarity of the grid-like structure is maintained and enhanced;
 - (ii) whether the number, variety, scale and quality of public spaces, such as streets, lanes, alleys, squares and/or parks, are maintained or enhanced;
and
 - (iii) whether pedestrian permeability and comfort are maintained or enhanced.

(3) For frontage alignment, setback and maximum height:

- (a) whether the additions and alterations or new buildings are visually and physically differentiated from those parts of the building below the frontage height;
- (b) whether the additions and alterations or new buildings are of a visually 'light' appearance which may involve a change of building materials and colour; and
- (c) a recess in the street frontage of a building may be appropriate where this creates a well-proportioned outdoor seating or dining area.

(4) For car parking and access

- (a) the extent to which car parking for the area and access to any site are compromised.

I329.10. Special information requirements

There are no special information requirements in this precinct.

I329.11. Precinct plans

There is no precinct plan for this precinct.

I330. Saint Lukes Precinct

I330.1. Precinct description

The objectives and policies of the Business – Town Centre Zone apply in the following precinct unless otherwise specified.

Saint Lukes Shopping Centre is one of Auckland's premier retail destinations and performs the role of anchor for the wider Saint Lukes Town Centre. It is strategically located in the western part of the Auckland isthmus and is well connected to the surrounding road network. Several bus routes serve the integrated shopping town centre and the Morningside railway station is within walking distance.

The three precinct plans provide for the future expansion and development of the Saint Lukes Shopping Centre. The principal focus of the precinct plans is to allow flexibility for the configuration of the Shopping Centre's expansion and to enable a range of permitted activities, while including a set of provisions to manage potential external effects.

Enabling the development of a mixed use environment is a key element of the development of a high density town centre at Saint Lukes. The Saint Lukes Shopping Centre itself may not contain all the elements that comprise the town centre but it will form its commercial heart. The precinct plan provisions enable and encourage the establishment of a wide range of uses including retail, entertainment, education, civic, commercial and residential activities.

The precinct plans facilitate an extension to Exeter Road, as a private road linking Exeter Road and Aroha Avenue that will provide safe, pleasant and convenient pedestrian access to the Shopping Centre from the residential areas to the east as well as promoting a pedestrian oriented focus for the expanded centre. Rules and assessment criteria are included to ensure a high level of pedestrian amenity and lower priority for motor vehicles along this road.

Intensity controls reflect the floor area of activity considered appropriate and sustainable, particularly in terms of potential traffic generation effects. In addition to the precinct plans providing for lateral expansion, the height controls provide for flexibility in the configuration of floor area, including higher buildings on two prime corners of the Saint Lukes Precinct, and a mixture of uses.

I330.2. Objectives

- (1) The future expansion, development and intensification of the Saint Lukes Shopping Centre is enabled.
- (2) Integrate the future outward expansion and development of the Saint Lukes Shopping Centre with nearby and adjoining residential and commercial areas.

I330.3. Policies

- (1) Enable and encourage the establishment of a wide range of uses including retail, entertainment, education, civic, commercial and residential activities.
- (2) Require development to manage potential effects on the surrounding residential and commercial areas, in particular effects on amenity and public safety.

- (3) Enable a private road extension linking Exeter Road and Aroha Avenue, that provides a safe, pleasant and convenient pedestrian access to the Saint Lukes Shopping Centres from the residential areas to the east as well as promoting a pedestrian-oriented focus for the expanded Shopping Centre.

I330.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I330.4.1 specifies the activity status of land use, development and subdivision activities in the Saint Lukes Precinct pursuant to sections 9(3) and 11 of the Resource Management Act 1991 or any combination of these sections where relevant.

Refer to Precinct plan 1 - activity areas for the location of area A and area B:

- area A dominant activities include retail, entertainment, restaurants, cafes and other eating places; and
- area B dominant activities include retail, offices and community facilities.

Table I330.4.1 Activity table

Activity		Area A	Area B
Use			
(A1)	Public transport facility	P	NC
(A2)	Parking accessory to permitted or approved activities	P	P
(A3)	Entertainment facilities	P	D
(A4)	Taverns	P	NC
(A5)	Warehousing and storage	P	NC
(A6)	Light manufacturing and servicing	D	D
Development			
(A7)	Construction of, or any addition to building(s) which: (a) are not within 30m of a boundary of the Saint Lukes Precinct; (b) increase the gross floor area on the Saint Lukes Precinct by less than 500m ²	P	P
(A8)	Any activity providing parking for more than 100 vehicles	C	C
(A9)	Construction and use of the proposed private link road from Exeter Road to Aroha Avenue	C	C
(A10)	New buildings or additions fronting Exeter Road Extension or Aroha Avenue	RD	RD
(A11)	New buildings or additions not provided for as a permitted activity	RD	RD

Subdivision			
(A12)	Subdivision	RD	RD
General			
(A13)	Activities that do not comply with Standard I330.6.1 Site intensity	D	D

I330.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I330.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I330.4.1 Activity table and which is not listed in I330.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I330.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct, unless otherwise specified below.

All activities listed as permitted, controlled and restricted discretionary in Table I330.4.1 must comply with the following standards.

I330.6.1. Site intensity

- (1) Overall gross floor area limitation:
 - (a) the maximum gross floor area on the Saint Lukes Precinct is 92,500m².
- (2) Specific gross floor area limitations:
 - (a) the maximum gross floor area for a combination of retail, entertainment facilities, taverns and cafes, restaurants and other eating places is 77,500m²; and
 - (b) the maximum gross floor area for offices is 15,000m².
- (3) Floor area incentive for dwellings fronting Aroha Avenue:
 - (a) Notwithstanding I330.6.1(1) above, the overall gross floor area limitation must be increased by 7.9m² gross floor area for every 1m² of gross floor area of residential development fronting Aroha Avenue, subject to a maximum increase of 7000m² gross floor area; and

- (b) Notwithstanding I330.6.1(2)(a) above, the maximum gross floor area must be increased by 5.7m² gross floor area for every 1m² of gross floor area of residential development fronting Aroha Avenue, subject to a maximum increase of 5000m² gross floor area.

I330.6.2. Building height

- (1) The maximum height of any new building must be in accordance with the following table provided that individual building elements above a height of 20m in height area 2 must not have a combined floor area in excess of 1500m². Refer to Precinct plan 2 - Building height areas for Datum locations.

Table I330.6.2.1 Building height

Height area	Height above datum	Datum	Datum RL
1	32.5m	Morningside	36.35
2	32.5m	Morningside	36.35
3	32.5m	Aroha	41.01
4	20m	Aroha	41.01
5	16m	Aroha	41.01
6	16m	Aroha	41.01

- (2) Notwithstanding I330.6.2(1) above, a building in height area 6 must not exceed 10m if that building is wholly occupied by non-residential activity.
- (3) Notwithstanding I330.6.2(1) above, for the purposes of assessing compliance with the maximum height rule in the Saint Lukes Precinct, no account shall be taken of any radio, television or communications aerials, ancillary plant or machinery room structures, which may collectively occupy up to 10 per cent of the roof area of any building, provided such structures do not exceed the maximum height limit by more than 6m.

I330.6.3. Exeter Road extension

- (1) The Exeter Road extension must be a pedestrian and vehicle link between Exeter Road and Aroha Avenue, located generally as shown on Precinct plan 1 - Activity areas.
- (2) With the exception of emergency service vehicles, heavy motor vehicles are not permitted to enter/exit Exeter Road extension at the Aroha Avenue end.
- (3) Continuous pedestrian shelter must be provided along each side of the street except for that area occupied by vehicle access. The shelter must have a minimum height of 3m and a maximum of 4.5m above the footpath immediately below. The shelter must be located no closer than 600mm from the kerb line of the road and, where practicable, must have a minimum width of 2.5m.

- (4) Buildings must directly adjoin the street frontage for not less than 50 per cent of their length with no part of the building facade located further than 5m from the street frontage at ground level. Where the building facade is set back at ground level, the area between the building and the street frontage must be not less than 7.5m in length and be occupied by activities or amenities such as outdoor seating, display, landscaping or pedestrian amenities.
- (5) A minimum of 70 per cent of the street facade of buildings at ground level must comprise glazing and pedestrian entries.
- (6) Glazing and balconies must comprise no less than 30 per cent of the street facade of the upper levels of any building.
- (7) The minimum height of building facades at the street frontage must be 8m.
- (8) The maximum gross floor area of individual tenancies within buildings fronting the street must be 2500m².
- (9) Parking must not be located in front of a building at the level of the Exeter Road extension between the building and the road but parking may be located on the street. Parking at or above street level within a building must be located more than 10m from the edge of the footpath nearest the building.

I330.6.4. Location of site access

- (1) Vehicle access to the Saint Lukes Precinct and primary pedestrian access to buildings must be located generally in accordance with Precinct plan 1 - Activity areas. Access into individual tenancies and driveways to parking spaces and service areas accessory to the activities within buildings with frontage to Aroha Avenue may be provided in addition to the entries shown on Precinct plan 1 - activity areas.

I330.6.5. Parking, loading and access

- (1) For the first 45,473m² of gross floor area a minimum of 2018 parking spaces are to be provided and maintained to the Council's satisfaction.
- (2) For gross floor area in excess of 45,473m², parking spaces are to be provided on the Saint Lukes Precinct in accordance with the following rates as a minimum:
 - (a) for retail activities: one space for every 22m² of gross floor area;
 - (b) for cinemas: one space for every 11 seats;
 - (c) for dwellings: one space per dwelling in addition to the Table I330.6.5.1 below; and
 - (d) for other activities: the rates set out in E27.6.2.4 Parking rates - area 2.

Table I330.6.5.1 Parking rates

Unit size	Parking
Two bedrooms or more and/or 75m ² gross floor area (includes 1 bedroom with gross floor area of 75m ² or more)	Maximum 2 car parks per dwelling
Visitor spaces	1 space for every 5 dwellings (to the nearest whole number)
Loading spaces	1 space for 10 dwellings or more

- (3) All parking areas must be interconnected within the Saint Lukes Precinct.
- (4) Loading spaces must be provided in accordance with the requirements of E27.6.2 Number of parking and loading spaces
- (5) provided that surplus loading spaces existing prior to development of additional floor space can be used to satisfy this requirement.
- (6) Parking and loading areas must be dimensioned and formed in accordance with the requirements of E27.6.3 Design of parking and loading spaces.
- (7) Sufficient space must be provided on the Saint Lukes Precinct so that no reverse manoeuvring on or off public roads is necessary by vehicles using parking or loading spaces.

I330.6.6. Required pedestrian plaza

- (1) A pedestrian plaza having a minimum area of 300m² must be provided on the Saint Lukes Precinct, or on an adjacent property readily accessed from the Saint Lukes Precinct. The plaza will be required no later than the completion of a cumulative additional 19,250m² gross floor area as a condition of consent. The plaza may be roofed, may be separate or integrated with any buildings, and must:
 - (a) have a minimum horizontal dimension of 16m;
 - (b) be readily accessible from adjoining street(s) during the regular trading hours of Saint Lukes centre;
 - (c) provide shelter from the prevailing south-west winds;
 - (d) receive sunlight between the hours of 11am-2pm throughout the year;
 - (e) be designed for personal safety; and
 - (f) provide accessible and comfortable seating which is not reserved for patrons of restaurants, cafes or other eating places.
- (2) For clarity, an area within a building at the corner of Morningside Drive and Exeter Road that meets the assessment criteria in I330.8.2(2) below may satisfy this requirement.

I330.6.7. Required road works

- (1) Unless determined by the council to be unnecessary, the following physical alterations to the road network will be required as conditions of consent:
- (a) when a cumulative additional 11,000m² gross floor area of activities other than offices plus up to 1500m² gross floor area of offices is constructed on the Saint Lukes Precinct:
 - (i) the installation of new traffic signals, including pedestrian crossings, at the intersection of Morningside Drive and Exeter Road;
 - (ii) the provision of an additional left turn lane from Morningside Drive into Saint Lukes Road generally as shown on Saint Lukes: Precinct plan 3 - Proposed access layout.
 - (b) When a cumulative additional 19,250m² gross floor area of activities other than offices plus up to 5,000m² gross floor area of offices is constructed on the Saint Lukes Precinct:
 - (i) the construction of the Exeter Road extension.
 - (c) when Exeter Road has been constructed:
 - (i) the implementation of traffic calming measures on Aroha Avenue. In relation to Aroha Avenue, the implementation of traffic calming must be undertaken in consultation with key stakeholders. Such measures must be designed to have regard to the following traffic principles:
 - reducing vehicle speeds to maintain residential amenity and public safety on Aroha Avenue;
 - minimising the likelihood that Aroha Avenue will become a 'rat run' route via the Exeter Road extension for traffic unrelated to Westfield Saint Lukes or local residents, while ensuring that Aroha Avenue and Bournemouth Avenue have a part to play in providing connectivity between Sandringham Road and Morningside Drive;
 - ensuring the measures are not so severe as to become a nuisance and/or a problem for existing road users and local residents;
 - ensuring the measures are not so severe as to discourage its use by Westfield Saint Lukes traffic;
 - not encouraging undesirable driver behaviour;
 - avoiding measures that will create safety issues for pedestrians and cyclists; and
 - ensuring traffic calming measures appear as an integral part of the design and appearance of the road reserve.

Note 1

Avoiding the potential for the Exeter Road extension to be used as a 'rat run' will primarily be achieved with the design of the Exeter Road extension to address the matters in I330.7.1(2).

The provision of an additional left turn lane from Morningside Drive into St Lukes Road will entail the relocation of part of the footpath onto the Saint Lukes Precinct and the construction of associated retaining walls. That part of the Saint Lukes Precinct occupied by the footpath, but not the associated retaining walls, must be vested with the council at no cost to the council.

The residents of Aroha Avenue must be consulted by the council on both the design and implementation of the traffic calming measures on Aroha Avenue.

I330.6.8. Additional off-site road works

- (1) In addition to the road works identified as being required in Standard I330.6.7 above, some or all of the following works, or financial contributions to partially fund such works, may be required as conditions of consent to deal with effects on the road network generated by development on the Saint Lukes Precinct.
- (2) Adjustments to the road layout and permitted turning movements at the car park access points on Morningside Drive. These works must not be required before the completion of a cumulative additional 5000m² gross floor area.
- (3) The reconfiguration of Saint Lukes Road at its intersection with Wagener Place, and the existing traffic islands, to provide:
 - (a) improved pedestrian access between development on the south side of Saint Lukes Road and the Saint Lukes Precinct;
 - (b) an additional west bound lane on Saint Lukes Road;
 - (c) an extended right turn lane into Fowlds Avenue;
 - (d) an extended right turn lane into Morningside Drive; and
 - (e) cycle lanes.
- (4) These works must not be required before the completion of a cumulative additional 16,500m² gross floor area of activities other than offices plus up to 2500m² gross floor area of offices.
- (5) Improvements to the intersection of Saint Lukes Road and New North Road to provide:
 - (a) an extension to the westbound approach lanes; and/or
 - (b) a double right turn from Saint Lukes Road, eastbound approach, into New North Road.

- (6) These works must not be required before the completion of a cumulative additional 19,250m² gross floor area of activities other than offices plus up to 5000m² gross floor area of offices.
- (7) Conditions of consent requiring the implementation of works at any of the locations listed in Standards I330.6.6 and I330.6.7 above may be imposed on individual applications for resource consent when the need for such works is demonstrated. Conditions of consent may also be imposed requiring monitoring of the traffic conditions, including consideration of the adjacent frequent public transport network at any of the listed locations and reporting of the monitoring results to the council. Remedial works may be required if the council determines this is necessary.
- (8) The amount of any contribution to the cost of any required works, either by works or by financial contribution, will be that proportion of the actual cost of road works required as a result of the particular application. The proportion that is payable on any application will be determined taking into account the amount of traffic generated by the development for which resource consent is being sought, relative to existing traffic, and the extent to which that development will use up additional capacity provided by the improvement works. In calculating the financial contribution payable, consideration will also be given to the benefits accruing to other road users and property owners in terms of actual usage and increased capacity.

I330.6.9. Other required works

- (1) If any of the existing cherry trees currently growing within the berm on either side of Exeter Road are removed to facilitate development work on the Saint Lukes Precinct, an equivalent number of cherry trees of a planting grade of 160l or larger must be planted elsewhere on the Saint Lukes Precinct, such as within a plaza area or as street trees along Exeter Road extension:
 - (a) the plaque currently located within the berm on the eastern side of the southern leg of Exeter Road commemorating the planting of the existing trees must be relocated near to the replacement trees in a location to be agreed with the council.
- (2) The following additional works must be implemented no later than the completion of a cumulative additional 40,000m² gross floor area:
 - (a) the construction of buildings adjoining the southwest corner of the site (corner Saint Lukes Road and Morningside Drive adjacent to Height Area 2 on Precinct plan 2) and the northwest corner of the site (corner Morningside Drive and Exeter Road adjacent to Height Area 3 on Precinct plan 2);
 - (b) improved pedestrian accessibility between the Mount Albert library and the Saint Lukes Shopping Centre by improving the configuration of the pedestrian crossing to the mall, clearing vegetation and improving directional signage within the mall and on the library site, and by providing

a covered walkway between the library and the subject Saint Lukes Precinct.

I330.6.10. Financial contributions/development contributions

- (1) A private development agreement detailing the proportional contribution towards the cost of off-site works and other financial contributions/development contributions will apply to development contemplated by this precinct. The private development agreement must specify the amount of the financial contributions/development contributions to be expended on any upgrades of roads, services or open spaces in the local area in the vicinity of the Saint Lukes Precinct (including any upgrades of Aroha Avenue in addition to the required traffic calming measures) to be carried out by the Council.

I330.7. Assessment – controlled activities

I330.7.1. Matters of control

The Council will reserve its control to the following matters when assessing a controlled activity resource consent application:

- (1) activities providing parking for more than 100 vehicles:
 - (a) the suitability of parking management strategy which:
 - (i) mitigates against the effects of spill over of parking onto neighbouring streets; and
 - (ii) provides for efficient use of on-site parking.
 - (b) the extent to which a site traffic management strategy provides for:
 - (i) vehicular access to and from the Saint Lukes Precinct in a manner which ensures adequate sight distances and prevents off-site congestion;
 - (ii) safe and efficient servicing of tenants operating within the Saint Lukes Precinct;
 - (iii) circulation of traffic within the Saint Lukes Precinct;
 - (iv) pedestrian safety including the separation of pedestrian and vehicle access and circulation and, where appropriate, the provision of circulation spaces specifically designed for shared use;
 - (v) security measures to ensure that any nuisance resulting from the inappropriate use of parking areas on the Saint Lukes Precinct is controlled; and
 - (vi) bicycle parking in a convenient location.
 - (c) the sufficiency of a travel demand management plan which details measures that will be undertaken to encourage the use of public transport and other modes of transport as alternatives to the use of private vehicles,

and which is to be implemented at the time the resource consent is exercised and continued thereafter.

(d) the design of vehicle access so that it:

- (i) provides for a high level of pedestrian amenity;
- (ii) provides and enhances pedestrian and vehicular safety minimises pedestrian crossing distances;
- (iii) provides adequate signage;
- (iv) maintains the intended pedestrian focused environments on the south west corner of the site (corner of Saint Lukes Road and Morningside Drive) and the Exeter Road extension; and
- (v) provides for or enhances access for a range of users, e.g. cars, motorcycles and bicycles.

(e) the design of the layout of parking areas to provide for personal safety.

(f) ensuring that any required works in Standards I330.6.6 and I330.6.7 above are undertaken in conjunction with the development in order to mitigate effects generated by that development.

(2) construction of the proposed Exeter Road extension linking Exeter Road with Aroha Avenue:

- (a) the Exeter Road extension is designed as a pedestrian oriented, at-grade street, encouraging slow movement of vehicles and providing a high level of pedestrian priority and amenity;
- (b) a high-quality, high amenity, pedestrian environment is achieved on both sides of the street by the use of such design elements as wide footpaths, underground services, and the coordinated use of high quality materials, street furniture, signage and lighting;
- (c) traffic calming measures to encourage the slow movement of vehicular traffic and enhance pedestrian safety are implemented, including narrower than usual traffic lanes, tight tracking curves, textured road surfaces or other accepted traffic engineering mechanisms;
- (d) traffic engineering measures are implemented to discourage vehicles from using the Exeter Road extension as a shortcut between Exeter Road and Aroha Avenue;
- (e) measures to discourage heavy motor vehicles from using Exeter Road extension are implemented, including signage, and road geometry and informing the tenants of the centre in writing of this requirement;
- (f) a management plan for the operation of Exeter Road extension addresses maximising the use of that road to distribute traffic around the Saint Lukes

Precinct while allowing for occasional use for special events and taking account of potential adverse effects on residents of Aroha Avenue; and

- (g) The required works in Standard I330.6.7 above are undertaken in conjunction with the development in order to mitigate effects generated by that development.

I330.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

- (1) activities providing parking for more than 100 vehicles:
- (a) Policy I330.3(2)
- (2) construction of the proposed Exeter Road extension linking Exeter Road with Aroha Avenue:
- (b) Policy I330.3(3)

I330.8. Assessment – restricted discretionary activities

I330.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the Auckland-wide or underlying zone provisions.:

- (1) new buildings and additions and alterations to existing buildings;
- (a) general criteria:
 - (i) building design and location;
 - (ii) stormwater;
 - (iii) water conservation and re-use; and
 - (iv) timing of required works.
 - (b) additional criteria for buildings on the Exeter Road/Morningside Drive and Saint Lukes Road/Morningside Drive corners:
 - (i) building mass;
 - (ii) additional criteria for buildings fronting Exeter Road extension:
 - building design;
 - additional criteria for pedestrian access to buildings:
 - visibility and accessibility;
 - movement;
 - amenity;

- safety;
 - legibility;
 - passive surveillance; and
 - streetscape.
- (2) vehicle or pedestrian access not meeting the locational requirements of Standards I330.6.4 and I330.6.5 of this precinct:
- (a) vehicle access; and
 - (b) pedestrian access.
- (3) parking not meeting the requirements of Standard I330.6.5 of this precinct:
- (a) parking and loading spaces;
 - (b) kerbs; and
 - (c) building line designations.
- (4) loading areas not meeting the requirements of Standard I330.6.5 of this precinct:
- (a) parking and loading spaces;
 - (b) kerbs; and
 - (c) building line designations;
- (5) subdivision:
- (a) permitted activities or activities granted consent;
 - (b) consistency with Saint Lukes precinct;
 - (c) dominant activity on-site; and
 - (d) works, infrastructure and contributions.

I330.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the Auckland-wide or zone provisions:

- (1) new buildings and additions and alterations to existing buildings - general criteria for building design:
 - (a) applications will be assessed in terms of, the extent to which:
 - (i) the design of those parts of any building visible from, and within 30m of, a road or residential or open space zone, is of high quality and, where appropriate, responds to and enhances the positive characteristics of the local streetscape;

- (ii) the scale, proportion and rhythm of architectural features and the fenestration, materials, finishes and colours (as appropriate) of proposed buildings addressing street frontages acknowledge the characteristics of the streetscape and provide street frontages with architectural design richness, interest and depth;
 - (iii) flat planes or blank facades devoid of modulation, relief or surface detail can be avoided;
 - (iv) any otherwise unavoidable blank walls are enlivened by display cases, artwork, articulation, modulation and cladding choice to provide architectural relief;
 - (v) long building frontages are visually broken up by variations in height, form and other design means such as variations in facade design and roofline, recesses, awnings, upper level balconies and other projections, materials and colours;
 - (vi) servicing elements are concealed where possible and not placed on facades unless integrated into the facade design;
 - (vii) exterior lighting is integrated with architectural and landscape design to minimise glare and light overspill onto adjacent properties and streets;
 - (viii) exterior signage and signage zones are integrated with the design of buildings;
 - (ix) any rooftop mechanical plant or other equipment is screened or integrated in the building design;
 - (x) buildings are designed to contribute to the prevention of crime through their design and configuration;
 - (xi) the location and design of buildings avoid or mitigate significant adverse shadowing effects, if any, on adjacent residential properties on Aroha Avenue and Cornwallis Street;
 - (xii) appropriate provision is made for the treatment and disposal of stormwater runoff from buildings and ancillary parking areas, including flood protection, in accordance with relevant standards;
 - (xiii) water conservation and water re-use has been considered where appropriate, having regard to costs and to the environmental benefits of groundwater recharge; and
 - (xiv) any required works in Standards I330.6.6, I330.6.7, I330.6.8 and I330.6.9 of this precinct are undertaken in conjunction with the development in order to mitigate effects generated by that development;
- (2) additional criteria for buildings on the Exeter Road/Morningside Drive and Saint Lukes Road/Morningside Drive corners:

(a) applications will be assessed in terms of the extent to which:

- (i) building mass at the corner of Morningside Drive and Exeter Road is fragmented to provide a generous pedestrian entry and level of amenity, and to visually, spatially and physically integrate the interior of the building with the street; and
- (ii) building mass at the corner of Saint Lukes Road and Morningside Drive architecturally reinforces, 'punctuates' and emphasises this prominent corner location by increased height, building mass, and/or the deployment of traditional urban design techniques such as providing a major pedestrian entrance or architecturally distinctive and vertically proportioned forms;

(b) additional criteria for buildings fronting Exeter Road extension:

- (i) applications will be assessed in terms of the extent to which building facades fronting the road contribute at street level to pedestrian vitality, interest and public safety, relative to a variety of architectural detail, and maximising visibility and access between buildings and adjacent pedestrian areas;

(c) additional criteria for pedestrian access to buildings:

- (i) applications will be assessed in terms of the extent to which:
 - entrances are clearly visible and easily accessible from the street and incorporate pedestrian shelter and amenity;
 - ease of movement, amenity, safety and legibility for pedestrians are provided or enhanced;
 - opportunities for passive surveillance are provided for or enhanced;
 - movement for a range of users, e.g. pedestrians, cyclists, people with disabilities, mobility scooters, is provided for or enhanced;
 - where pedestrian entries into the centre cannot be lined by active uses, for example where through a car park or corridor, a good quality of design and lighting is achieved, and vehicular and pedestrian traffic are separated to the extent practicable in order to minimise conflict; and
 - where pedestrian entrances are near public transport stops, they allow easy, direct and safe access into the centre and are lined by active uses;

(3) vehicle or pedestrian access not meeting the locational requirements of Standards I330.6.4 and I330.6.5 above:

(a) applications will be assessed in terms of the extent to which:

(i) vehicle access

- the extent to which the matters listed I330.7.1(1)(d) above are addressed and the extent to which vehicle access:
 - provides an effective connection to the Saint Lukes Precinct;
 - provides adequate sight distances;
 - prevents congestion caused by the ingress and egress entry and exit of vehicles.
- pedestrian access:
 - recognises pedestrian desire lines;
 - enhances overall site circulation, access and legibility;
 - provides easy connections to an extended pedestrian network linking adjacent sites and facilities e.g. Warren Freer Park and the Megacentre.

(4) parking and loading areas not meeting the requirements of Standard I330.6.5 above:

(a) applications will be assessed in terms of the extent to which:

(i) parking and loading areas:

- are properly graded, drained and sealed to prevent dust nuisance or concentrated runoff of water from the Saint Lukes Precinct;
- are located remote from residential zone boundaries. Where this is impracticable adequate screening should be provided in the form of fencing or landscaping, in order to reduce to an acceptable level any adverse aural or visual impacts on residentially zoned properties;
- have internal circulation designed to the satisfaction of the Council so that the particular requirements of individual proposals for safe and efficient vehicle circulation on site are attended to, and so that adverse effects on the roading network are prevented.

(ii) reduction in parking spaces: The following criteria apply only to parking areas (not loading areas) and only as they relate to the off-site effects of the activity:

- whether the amount of parking proposed is sufficient for the proposal having regard to:
 - the nature of the operation including the interaction between activities on the Saint Lukes precinct • the

availability and accessibility of public transport serving the Saint Lukes Precinct;

- the measures and commitments outlined in a travel plan for the Saint Lukes Precinct which will reduce the need for vehicle use to a level where parking demands can be satisfactorily addressed through efficient use of the proposed parking;
- the extent to which activity on the Saint Lukes Precinct have complementary parking demands.
- the effects of parking overspill from the reduction in parking on adjacent activities and on the transport network;
- the extent to which there is public parking on-street or off-street in the immediate vicinity with capacity and availability at the times required to serve the proposal;
- the extent to which the parking requirements of the proposal will be met by entering into a shared parking arrangement with another site in the immediate vicinity that has available parking spaces which are not required at the same times as the proposed activity;
- the extent to which it is physically practicable to provide the required parking on the site including in terms of the existing location of buildings and the availability of access to the road.

(iii) departure from loading spaces requirements:

- the effects of the proposed loading arrangements on the safe and efficient operation of the adjacent transport network;
- the specific business practice, operation or type of customer associated with the proposed activities;
- the extent to which an accessible and adequate on-street loading space is available nearby or can be created while having regard to other demands for kerbside use of the road.
- the extent to which the reduction in loading spaces will contribute to the efficient use of land and the growth and intensification provided for in the Saint Lukes Precinct.

(iv) favourable consideration may be given to the provision of stack parking subject to the following criteria:

- stacked parking occurs when access to a parking space is achieved through another parking space;
- stacked parking will generally only be allowed in special circumstances in order to alleviate adverse effects, where no feasible alternative exists;

- stacked parking may be allowed for one of the two required parking spaces for any residential development where each residential unit has two parking spaces physically associated with it;
- stacked parking may be a satisfactory means of providing staff parking where:
 - the staff parking area is clearly defined, marked and separated from other required parking on the Saint Lukes Precinct.

(v) kerbs:

- where a parking or manoeuvring area is adjacent to a road, a kerb or similar barrier, not less than 150mm high and at least 600mm from the road boundary, must be provided on those parts of the frontage not used for vehicular access.

(vi) building line designations:

- no required parking or loading spaces, manoeuvring area, or part thereof must be located between any building line designation and the road alignment shown on the planning maps.

(b) where it is desired to provide parking in excess of the Unitary Plan requirements, it may be feasible to operate stacked parking which must be specifically designed to the council's satisfaction. The satisfactory operation of the required parking area should not be compromised.

(5) subdivision:

(a) applications will be assessed in terms of the extent to which:

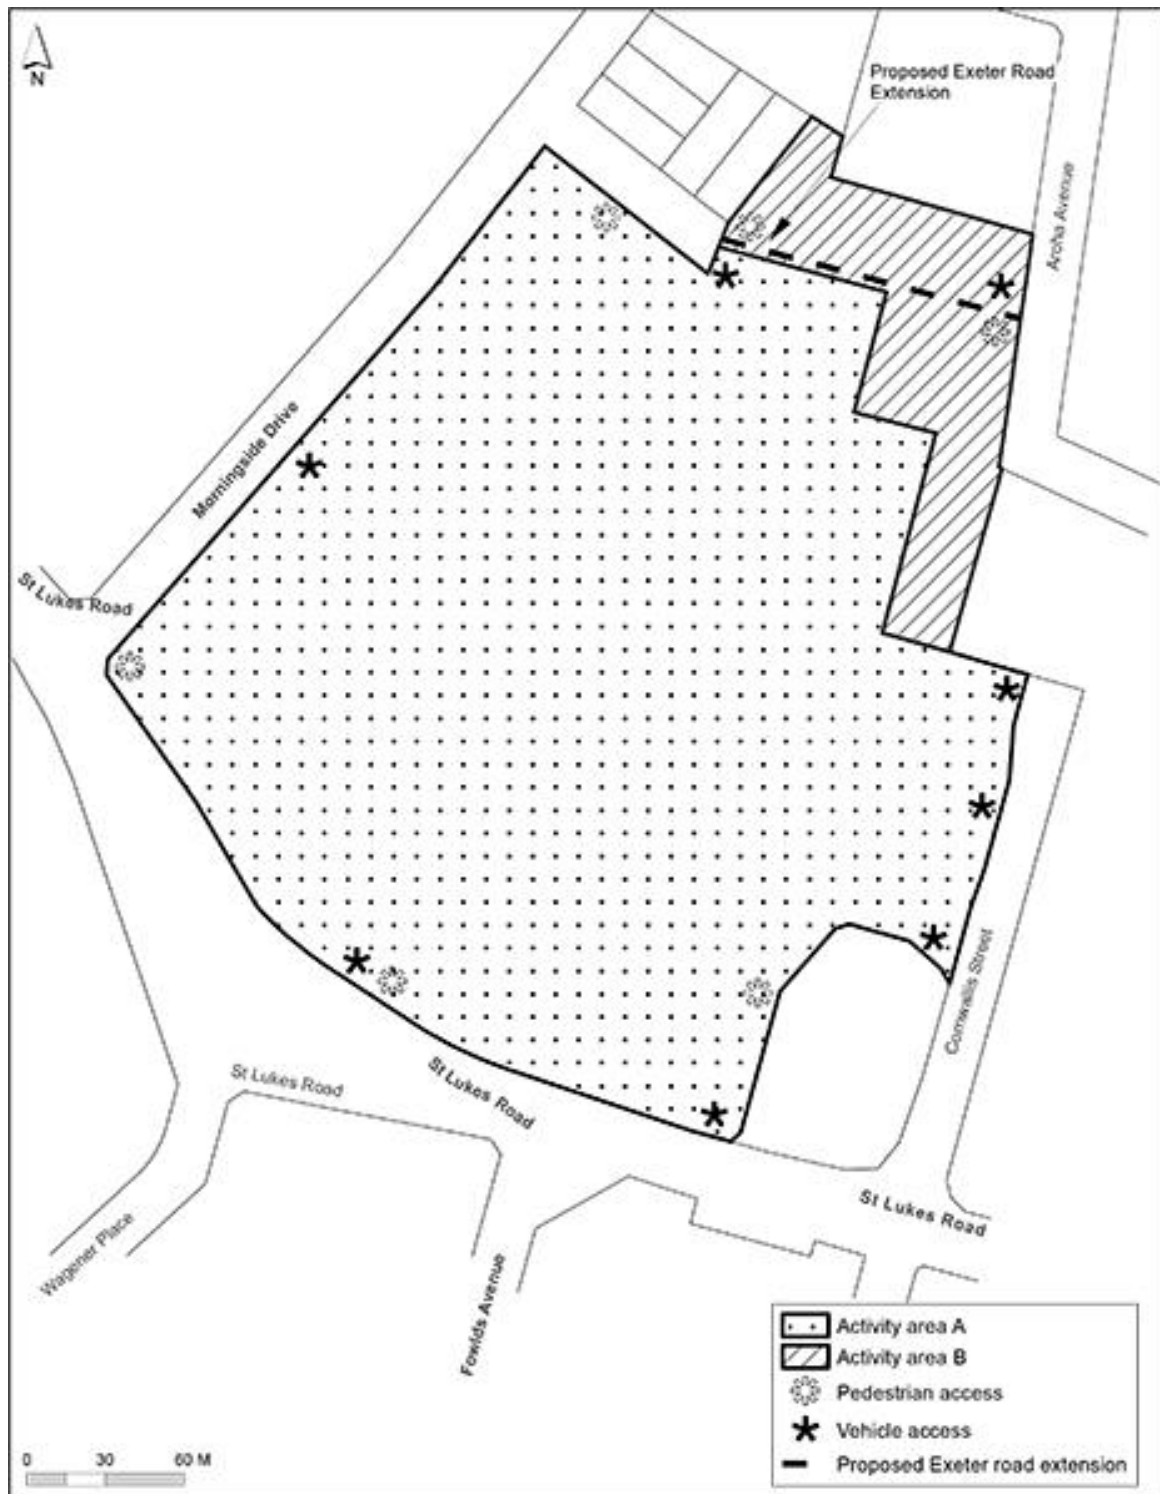

- (i) the proposed use of any new site or sites created is in accordance with the precinct's permitted activities or with an application for resource consent which has been granted or applied for concurrently;
- (ii) the subdivision is consistent with the precinct and will not adversely affect the operation and management of the dominant activity;
- (iii) the subdivision provides for the required works, infrastructure, and contributions in money as set out in Standard I330.6.10.

I330.9. Special information requirements

There are no special information requirements in this precinct.

I330.10. Precinct plans

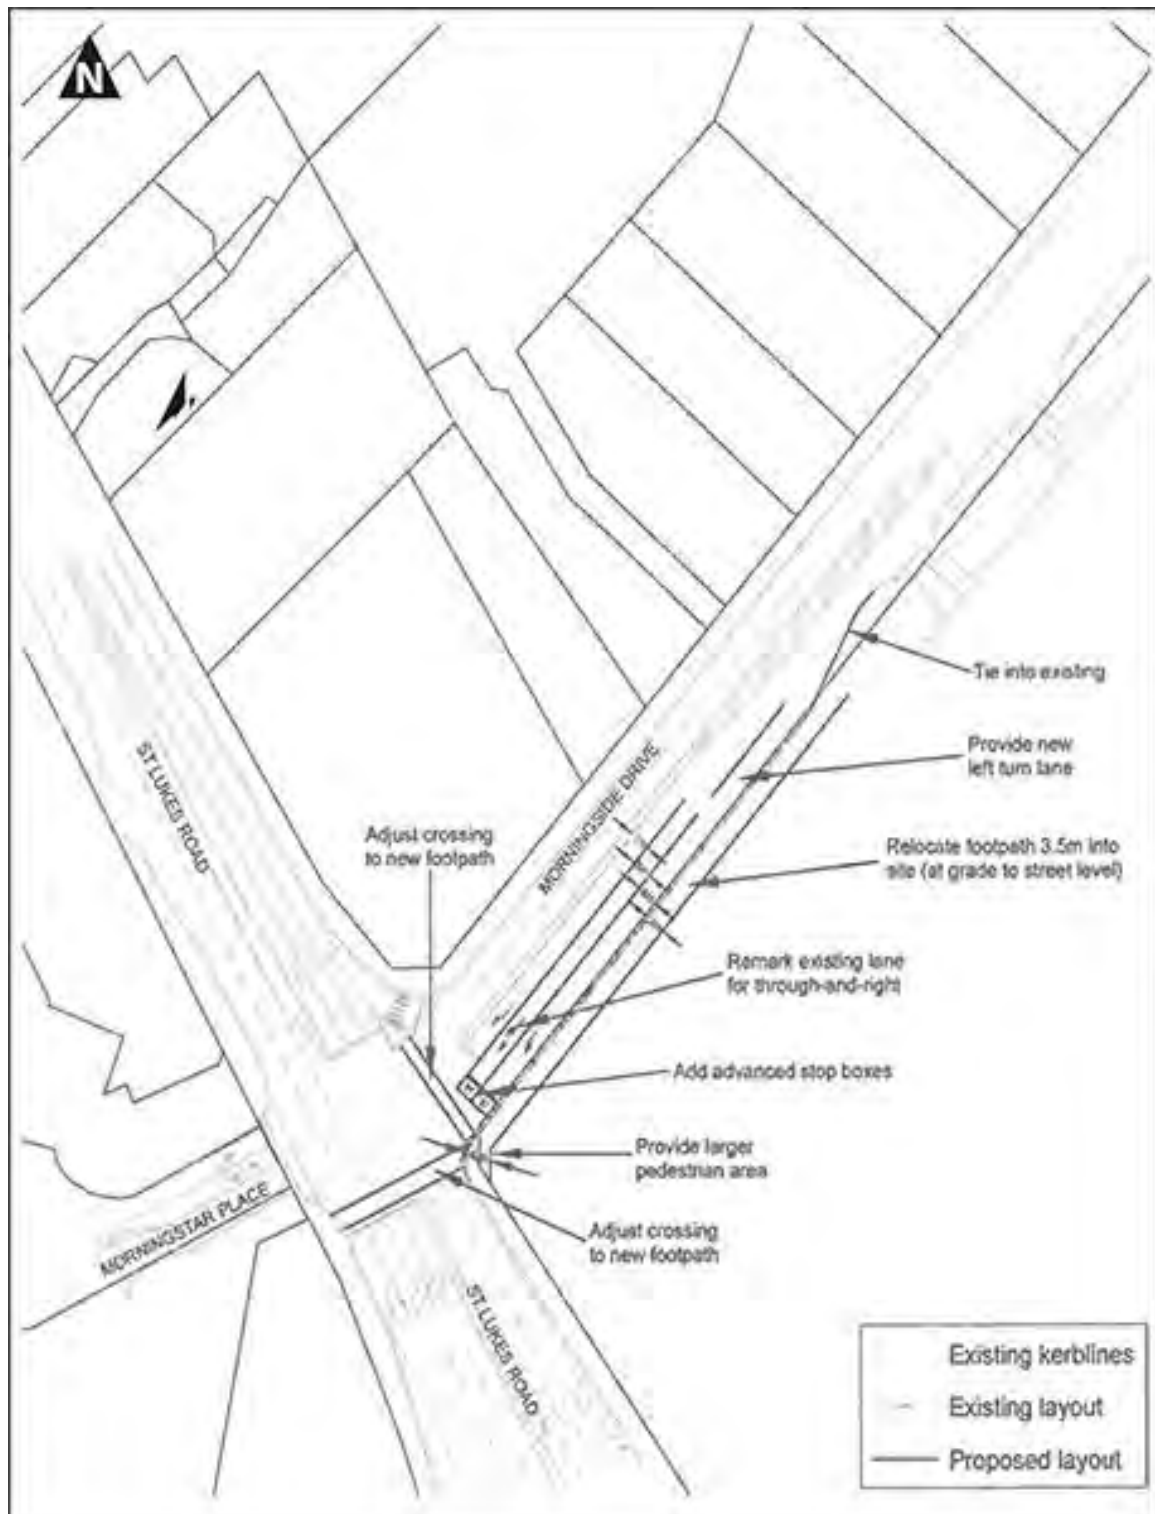

I330.10.1 Saint Lukes: Precinct plan 1 - Activity areas

1330.10.2 Saint Lukes: Precinct plan 2 - Building height areas

I330.10.3 Saint Lukes: Precinct plan 3 - Proposed access layout

I331. St John's Theological College Precinct

I331.1. Precinct Description

The precinct contains the existing St John's Theological College which is a residential college for the Anglican Church in New Zealand and Polynesia. The site was established as a residential college in 1846 by Bishop Selwyn and apart from during the two World Wars, has been in continuous use since then.

The purpose of the precinct is to provide for the ongoing operation and future expansion of the St John's Theological College in accordance with the St John's Theological College Trusts Act 1972 which applies to the site. The Act provides for the site to be used for the education of candidates for ordination, and for the education of students in the principles of the Christian religion, according to the doctrine and discipline of the Church of England. The site comprises teaching rooms, residential accommodation, a library building, an office, a chapel and graveyard as well as parking areas.

The precinct will provide for these ongoing activities to expand and also enable the development and operation of a range of activities to cater for the diverse requirements of the student population, employees and visitors. Community use of the facilities is also enabled.

The zoning of the land within this precinct is the Residential – Mixed Housing Suburban Zone.

I331.2. Objectives

- (1) Tertiary education facilities meet the education needs of their students, facilitate research and economic development, and provide for the well-being of employees staff, students and visitors.
- (2) Tertiary education facilities integrate positively with the wider community and environment and mitigate potential adverse effects.
- (3) New buildings and structures enhance the amenity values of the street, and open spaces and the neighbourhood, thereby reinforcing sense of place.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I331.3. Policies

- (1) Enable a range of activities on tertiary education facility sites, including tertiary education, research, health, recreation, student accommodation and appropriate accessory activities.
- (2) Require new buildings and significant additions and alterations to be designed in a manner that:
 - (a) makes efficient use of the site;
 - (b) contributes to the amenity of the surrounding area where development is located adjacent to a street or public open space;

- (c) enhances the existing and planned future form of the surrounding area; and
- (d) enhances the sense of place formed by the view from St John's Road.
- (3) Require screening or landscaping of waste management facilities, service areas/buildings and parking to enhance their appearance when viewed from adjacent residential zones, open space zones or the road.
- (4) Enable accessory activities to meet the needs of employees, students and visitors without undermining the function of nearby town centres as the primary location for business activities and while avoiding, remedying or mitigating adverse effects on the transport network.
- (5) Require new buildings to be designed in a manner that respects any adjacent existing heritage places on the site and provides a high standard of amenity.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I331.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the underlying zone apply in this precinct unless otherwise specified below.

Table I331.4.1 Activity table specifies the activity status of land use and development activities in the St John's Theological College Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I331.4.1 Activity table

Activity		Activity status
Use		
Residential		
(A1)	Student Accommodation	P
Commerce		
(A2)	Commercial services	P
(A3)	Licensed premises accessory to Tertiary education facilities	P
(A4)	Entertainment facilities accessory to Tertiary education facilities	P
(A5)	Conference facilities	D
Community		
(A6)	Care centres	P
(A7)	Community facilities	P
(A8)	Community use of education and tertiary education facilities	P
(A9)	Tertiary education facilities	P
(A10)	Informal recreation	P

(A11)	Organised sport and recreation	P
(A12)	Public amenities	P
(A13)	Displays and exhibitions	P
(A14)	Cemeteries	P
(A15)	Artworks	P
(A16)	Information facilities	P
Development		
(A17)	Buildings, alterations, additions and demolition unless otherwise specified below	P
(A18)	Buildings greater than 500m ² gross floor area	RD
(A19)	Buildings, external alterations, additions and demolition within the site and where the works is visible within 10m of a road or open space zone (excluding private roads)	RD
(A20)	Parking buildings	RD

I331.5. Notification

- (1) Any application for resource consent for an activity listed in Table I331.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I331.6. Standards

The overlay, Auckland-wide and zone standards apply in this precinct.

All activities listed as permitted and restricted discretionary in Table I331.4.1 Activity table must comply with the following standards.

I331.6.1. Building height

- (1) Buildings must not exceed the heights specified in the table below:

Building location	Maximum Building height (m)
Up to 20m from a site in the residential zones, open space zone or a road.	12m
Greater than 20m from a boundary with a site in the residential zones, open space zone or a road.	16m

I331.6.2. Yards

(1) Buildings must be located no closer than the yard dimension specified in the table below:

Yard	Dimension
Front, side and rear yards adjoining a site in the residential zones, open space zone or a road.	3m

I331.6.3. Height in relation to boundary

(1) The height in relation to boundary standard that applies in the adjoining residential zone applies to the adjoining St John's Theological Precinct boundary.

I331.6.4. Screening

(1) Any outdoor storage or rubbish collection areas that directly face and are visible from the residential zone or open space adjoining a boundary with, or on the opposite side of the road from the St John's Theological College Precinct must be screened from those areas by a solid wall or fence at least 1.8m high.

I331.6.5. Student accommodation

(1) Student accommodation must comply with the Residential - Terrace Housing and Apartment Buildings Zone Outlook Space Standard H6.6.13.

I331.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I331.8. Assessment – restricted discretionary activities

I331.8.1. Matters of discretion

The Council will reserve its discretion to all the following matters when assessing a restricted discretionary resource consent application:

- (1) Parking buildings and structures, buildings greater than 500m² gross floor area:
 - (a) building design, location and external appearance;
 - (b) ventilation;
 - (c) landscaping; and
 - (d) safety.

- (2) Buildings, external alterations, additions and demolition within the site and where the works is visible within 10m of a road or Open Space Zone (excluding private roads)
 - (a) building design location and external appearance.
- (3) Infringement of building height, height in relation to boundary:
 - (a) any special or unusual characteristic of the site which is relevant to the standard;
 - (b) where more than one standard will be infringed, the effects of all infringements are considered together;
 - (c) effects of additional building scale on neighbouring sites, streets and open spaces (sunlight access, dominance, visual amenity); and
 - (d) consistency with the planned future form and character of the zone and surrounding area.
- (4) Infringement of yards and screening standard:
 - (a) any special or unusual characteristic of the site which is relevant to the standard;
 - (b) where more than one standard will be infringed, the effects of all infringements are considered together; and
 - (c) effects on the amenity values of neighbouring roads and open spaces.

I331.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) Parking buildings, buildings greater than 500m² gross floor area.
 - (a) the extent to which the scale, bulk, location and design of tertiary education buildings or structures maintains the personal safety of tertiary education facility users;
 - (b) the extent to which the design of buildings contributes to the local streetscape and neighbourhood by enhancing the planned future form and character of the surrounding area;
 - (c) whether buildings and open spaces that front the street maintain or enhance pedestrian safety;
 - (d) the extent to which having regard to the functional and operational needs of the activity and the locality, buildings are designed to:

- (i) avoid blank walls on all levels, long unrelieved frontages and excessive bulk and scale where practicable;
 - (ii) visually break up the building mass into distinct elements to reflect a human scale;
 - (iii) incorporate varied roof profiles as part of the overall building form; and
 - (iv) integrate servicing elements on the façade and roof (roof plant, exhaust and intake units and roof equipment) as part of the overall design of the building.
- (e) Where provided, signage is to be designed as part of an overall comprehensive package for the site.
- (2) The scale, bulk and location of new buildings, external alterations, additions and demolition within the site and where the work is visible from and located within 10m of a road or open space (excluding private roads).
- (a) the extent to which proposals introduce creative architectural solutions that provide interest in the façade through modulation, relief or surface detailing especially for walls without windows and access points; and
 - (b) the extent to which proposals make use of entrances, windows and balconies overlooking streets and open spaces.
- (3) Building design, location and external appearance.
- (a) The scale, bulk, location and design of tertiary education buildings or structures.
 - (i) the extent to which adverse overshadowing, noise or privacy effects on adjoining residential zoned sites is minimised by landscaping, screening, and/or separation distances;
 - (ii) the extent to which a proposal protects historic heritage values associated with any scheduled historic heritage item;
 - (iii) whether the personal safety of tertiary education facility users is maintained;
 - (iv) the extent to which proposals have landscaping or fencing so the tertiary education facility building is compatible with its surroundings and provides privacy for adjoining and facing residential properties.
 - (b) The extent to which the design of buildings contributes to the local streetscape and sense of place by responding to the planned future form and quality of the surrounding area and significant natural landforms and landscape features.
 - (c) The extent to which buildings and open spaces that front the streets enhance the amenity values of the surrounding area and pedestrian safety.

- (d) The extent to which buildings are designed to:
 - (i) have regard to the functional requirements of the activity and the locality;
 - (ii) avoid blank walls on all levels, long unrelieved frontages and excessive bulk and scale;
 - (iii) maximise the use of entrances, windows and balconies overlooking streets and open spaces;
 - (iv) incorporate a variety of roof profiles as part of the overall building form; and
 - (v) integrate servicing elements on the façade and roof (roof plant, exhaust and intake units and roof equipment) as an part of the overall design of the building.
- (e) The extent to which signage is designed to be part of an overall comprehensive development package for the site.

(4) Infringement of building height, height in relation to boundary:

- (a) The extent to which buildings that exceed the building height and height in relation to boundary standard demonstrate that the height, location and design of the building allows reasonable sunlight and daylight access to:
 - (i) streets and open spaces;
 - (ii) adjoining sites, particularly those with residential and open space uses; and
 - (iii) the proposed building.

(5) Infringement of yards and screening standards:

- (a) The extent to which the proposal at ground and first floor levels achieves a recognisable level of street activation, building continuity along the frontage, visual quality, pedestrian amenity and safety.
- (b) The extent to which the proposal is in keeping with the scale and intensity of development anticipated on adjoining open space and residentially zoned sites.

I331.9. Special information requirements

There are no special information requirements in this precinct.

I331.10. Precinct plans

There are no Precinct plans in this precinct.

I332. Tāmaki Precinct

I332.1. Precinct Description

The Tāmaki Precinct applies to land located at 231 and 261 Morrin Road, Glen Innes (being Lots 1 and 2 DP 328428). The site is over 12 hectares in area. It has been owned by the University of Auckland since 1945 and was developed as its Tāmaki Innovation Campus. The precinct is occupied by the University of Auckland, Landcare Research and the Ministry for Primary Industries. The University will be exiting the site in the short to medium term. The purpose of the precinct is to enable the land to be used for other uses than those provided for in the Business - Mixed Use Zone along with on-going use for a range of teaching, research and associated activities. In addition to development of the site for future uses, possible changes to the existing buildings are provided for which allows flexibility for on-going tertiary education activities until such time as the precinct is comprehensively redeveloped.

The precinct fronts Merton Road, Morrin Road and the land designated for the future extension of Te Horeta Road (as proposed by Auckland Transport in the Auckland Manukau Eastern Transport Initiative). It has Morrin Reserve on part of its southern boundary and Colin Maiden Park is located on the other side of its Morrin Road frontage. The land is located adjacent to the Glen Innes Town Centre, has excellent access to a range of transport modes (rail station, the various access improvements proposed in the Auckland Manukau Eastern Transport Initiative, cycling and bus routes), is in close proximity to amenities and community facilities, and is surrounded by a range of commercial, light industrial and recreation uses but does not adjoin any residentially zoned land. The strategic location and other characteristics of this land and existing buildings provide an opportunity for the establishment of a wide range of commercial, health, education, residential, and limited retail uses. The site also presents an opportunity for substantial new buildings, including more intensive uses having regard to its large size and locational attributes. The site characteristics support a maximum height limit of 24m although the impact of the two Volcanic Viewshaft overlays (W12 and W13) will restrict development in the southern part of the precinct.

To ensure integrated development of this large land area in a comprehensive manner, the applicant is required to produce design guidelines and an overall plan for all the land included in the precinct as part of the first land use or subdivision resource consent on the site to demonstrate how the land would be developed. The first and subsequent land use and subdivision consent applications are required to be consistent with the design guidelines and overall plan approved as part of the first land use or subdivision resource consent on the site, or any approved variation.

New buildings, including additions to existing buildings and accessory buildings will be assessed against specified urban design matters in a comprehensive manner, in addition to assessment criteria set out in H13 Business – Mixed Use Zone policies H13.3 (3), (4) and (5) to achieve quality urban design outcomes and ensure that the land is used efficiently.

Site-specific controls are set out below with regards to height, the front yard and landscaping along Morrin Road and Merton Road, height in relation to boundary for

buildings near public open space boundaries, and a vehicle access restriction applying to Merton Road.

To ensure appropriate site development and support the amenity outcomes sought by the 6m yard to Merton Road and Morrin Road, motor vehicles sales, drive-through restaurants with entry/exits onto Merton Road or Morrin Road, as well as service stations fronting onto Merton Road or Morrin Road are listed as non-complying activities.

A requirement for the preparation of a comprehensive stormwater management plan prior to any development and/or subdivision of the site will ensure that appropriate measures are put in place to manage water quality and quantity.

Car parking maximums apply in the precinct and these will ensure an efficient use of the land and encourage patronage of public transportation, given the close proximity of the site to the Glen Innes bus and rail station facilities. A car parking limit, including a maximum number of 1530 office spaces which are required to be marked out at all times, is intended to mitigate congestion effects on the wider road network.

The zoning of land within this precinct is Business – Mixed Use Zone.

I332.2. Objectives

- (1) Tertiary education facilities and industrial laboratories are enabled to meet the education needs of their students, facilitate research and economic development, and provide for the well-being of employees, students and visitors.
- (2) Tertiary education facilities and industrial laboratories integrate positively with the wider community and environment and mitigate potential adverse effects.
- (3) Tertiary education facilities, industrial laboratories and business activities benefit from co-location in this precinct.
- (4) New buildings and structures respond to and positively contribute to the amenity values of streets, public open spaces and surrounding context, thereby reinforcing sense of place.
- (5) A range of activities is enabled as appropriate to the precinct's location adjacent to a town centre and surrounding commercial, recreation and transportation uses in an area with extensive amenities and community facilities.
- (6) New buildings and structures will be able to attain a greater scale given the site's large size and absence of sensitive adjoining land uses, while maintaining regionally significant views to Maungarei/Mount Wellington.
- (7) The new development and activities:
 - (a) are comprehensively planned;
 - (b) support the rapid and frequent service network;
 - (c) avoid effects on the safety and efficiency of the road network;
 - (d) avoid adverse effects on the function and amenity of Morrin Reserve;

- (8) Future subdivision and development can accommodate the management of stormwater generated by new development in the precinct applying a water sensitive design.
- (9) Parking provision is restricted to reduce traffic congestion and provide opportunities to improve amenity.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I332.3. Policies

- (1) Enable a range of activities and building development in the Tāmaki Precinct, including tertiary education, research, health, recreation, student accommodation and appropriate ancillary development and activities which are consistent with the precinct's location adjacent to the Glen Innes Town Centre and close proximity to public transport modes, recreation facilities, community facilities and other amenities.
- (2) Provide for activities which contribute to and benefit from co-location with a tertiary education facility, including research, innovation, learning, and related work experience.
- (3) Provide for detailed site-specific planning, development and implementation for a range of activities including those ancillary to tertiary education facilities with the requirement for the preparation of design guidelines and an overall plan at the time of the first land use or subdivision consent application for the precinct.
- (4) Require screening or landscaping of waste management facilities, service areas/buildings and parking to enhance their appearance when viewed from public places.
- (5) Provide for accessory activities to meet the needs of employees, students and visitors without undermining the function of nearby town centres as the primary location for business activities, and while avoiding, remedying or mitigating adverse effects on the transport network.
- (6) Provide for a 24m building height to recognise and provide for the opportunity for buildings of greater scale resulting from the strategic location and characteristics of the land and absence of sensitive adjoining land uses.
- (7) Promote the comprehensive development and redevelopment of the precinct.
- (8) Manage stormwater runoff comprehensively and require water sensitive stormwater management solutions to be integrated into the site design and development and to be implemented.
- (9) Enable direct access to public transport, pedestrian and cycle networks and Glen Innes Town Centre.

(10) Restrict vehicular access to Merton Road.

(11) Manage parking by placing a control on the amount of parking that can be provided on the precinct.

(12) Manage shading effects on Morrin Reserve.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I332.4. Activity table [rp/dp]

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I332.4.1 Activity table specifies the activity status of land use, development and subdivision activities in the Tamaki Precinct pursuant to sections 9(2), 9(3) and 11 of the Resource Management Act 1991 or any combination of all of these sections where relevant.

Table I332.4.1 Activity table

Activity		Activity status
Use		
(A1)	Activities not provided for	NC
Accommodation		
(A2)	Student accommodation	P
Commerce		
(A3)	Drive-through restaurant with entry/exit on to Merton Road or Morrin Road	NC
(A4)	Motor vehicle sales	NC
(A5)	Offices	P
(A6)	Service stations fronting Merton Road or Morrin Road	NC
Community		
(A7)	Community use of education and tertiary education facilities	P
(A8)	Hospitals with up to 50 beds	P
Development		
(A9)	External alterations and additions that are less than 10 per cent of the existing GFA of the building	P
(A10)	New buildings, or external alterations and additions that are more than 10 per cent of the existing GFA of the building	RD

(A11)	Parking in excess of numbers specified in I332.6.3	RD
(A12)	Development that is inconsistent with the overall plan for the precinct	RD
(A13)	Changes to the overall plan for the precinct	RD
(A14)	Development inconsistent with the approved Stormwater Management Plan for the precinct	RD
(A15)	Maintenance of stormwater management devices consistent with the approved Stormwater Management Plan for the precinct	P
(A16)	Flood mitigation works consistent with the approved Stormwater Management Plan for the precinct	P
Subdivision		
(A17)	Subdivision inconsistent with the approved design guidelines and overall plan for the precinct	RD
(A18)	Subdivision inconsistent with the approved Stormwater Management Plan for the precinct	RD

I332.5. Notification

- (1) Any application for resource consent for an activity listed in Table I332.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I332.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct, except for Standard H13.6.1 Maximum height of buildings.

All activities listed as permitted or restricted discretionary in Table I332.4.1 must comply with the following permitted activity standards.

I332.6.1. Maximum Building Height

- (1) Buildings must not exceed 24m in height

I332.6.2. Yards and landscaping

- (1) A 6m front yard is required adjoining the road boundary of Merton and Morrin Roads. No less than 60 per cent of the front yard must be landscaped and maintained to the satisfaction of the Council at all times and in such a manner as to create and preserve a good standard of amenity.

- (2) Café decks and patios are eligible to count as landscaping.
- (3) Individual site entries, car manoeuvring areas or carpark areas must not exceed 8 metres in width within the front yard required in (1) above.

I332.6.3. Parking

In addition to the parking standards set out in Standard E27.6.2 Number of parking and loading spaces, the following parking standards apply.

- (1) Parking may either be provided on the same site as the activity to which it relates, or on another site within the precinct.
- (2) Permitted parking on the land within the precinct:
 - (i) is restricted to a maximum of 3,780 spaces overall and, of that quantum, a maximum of 1,530 parking spaces for office activity, unless parking spaces for office activity are 1000 or less in which case a maximum of 4,250 spaces overall; and
 - (ii) all parking spaces for office activity must be clearly marked as such.
- (3) In the event that parking required by Table E27.6.2.3 Parking rates - area 1 exceeds the parking maximum in I332.6.3(2) above, then the parking maximum in I332.6.3(2) applies.

I332.6.4. Vehicle access

- (1) There must be no vehicle ingress or egress to the land in the Tāmaki Precinct from Merton Road.

I332.7. Assessment – controlled activities

I332.7.1. Matters of control

There are no controlled activities in this precinct.

I332.7.2. Assessment criteria

There are no controlled activities in this precinct.

I332.8. Assessment – restricted discretionary activities

I332.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions.

- (1) Stormwater Management Plan, amendments to a Stormwater Management Plan, a replacement Stormwater Management Plan or variations to the approved Stormwater Management Plan.
 - (a) The extent to which the design, location and capacity of infrastructure servicing is likely to meet the needs for such services in an appropriate manner.

- (b) Whether adequate provision has been made to ensure integration of development with neighbouring areas.
 - (c) Whether adequate provision has been made for staging of development.
 - (d) Whether adequate provision has been made for integrated stormwater management.
 - (e) Whether adequate provision has been made to ensure appropriate water quality outcomes.
 - (f) The extent to which provisions has been made to manage potential impact on overland flow paths including:
 - (i) obstruction of flows;
 - (ii) any change to location and capacity;
 - (iii) any change to overland flow on other properties.
 - (g) Whether adequate provision has been made to manage effects on existing infrastructure.
 - (h) The extent to which provision has been made to manage potential changes in flood depth and frequency upstream and downstream of the site and potential flooding of habitable floors.
 - (i) Whether adequate provision has been made for the treatment of stormwater and ensuring appropriate standards of stormwater quality before discharge from the site.
 - (j) Whether adequate provision has been made for on-going access and maintenance requirements.
 - (k) Whether appropriate methods of providing for long term maintenance and protection such as easements are identified.
- (2) Parking in excess of numbers specified in I332.6.3.
- (a) Whether adequate provision has been made to ensure accessibility to public transport and active mode networks.
 - (b) The extent to which provision has been made to manage the effects of traffic generated by activities in the precinct.
 - (c) The extent to which provision has been made to manage the effects of traffic generated by development in the precinct on capacity and safety of the road network.
- (3) New buildings, or external alterations and additions that are more than 10 per cent of the existing GFA of the building.

- (a) Whether the relationship of buildings to the street edges is appropriately managed.
 - (b) The extent to which provisions has been made to manage the effects arising from the height of development.
 - (c) The extent to which provision has been made to manage the sustainability of the design (reuse of existing buildings, passive solar design).
 - (d) The extent to which provision has been made to manage the quality and adaptability of buildings.
 - (e) Whether the orientation of buildings to roads and public places (existing and future) is appropriately managed.
 - (f) Whether the effects of fences and walls, along frontages and adjoining public places including reserves are appropriately managed.
 - (g) The extent to which provisions has been made to ensure provision of active frontages and continuity of frontages.
 - (h) Whether clear and legible entrances to buildings (including for vehicles) are provided to enhance the sense of pedestrian access and to minimise conflict.
 - (i) The methods used to integrate car parking underground or within buildings so it is not highly visible from the street, and to minimise any new areas of at-grade parking areas other than kerbside.
- (4) The overall plan for the use and development of all land within the Tāmaki Precinct.
- (a) The appropriateness of the design of the site layout having regard to the policies for the development of the precinct.
 - (b) The adequacy of the proposed arrangements for travel demand management having regard to the policies for the development of the precinct.
 - (c) The adequacy of the provision made for open space and the suitability of the proposed locations having regard to the policies for the development of the precinct.
 - (d) The adequacy of the provision made for infrastructure servicing to meet the needs for the planned development outcomes for the precinct.
 - (e) The arrangements made for the integration of development and use having regard to the policies for the development of the precinct.
 - (f) The proposed methods and arrangements for staging of development, infrastructure and services to ensure that the policies for the development

of the precinct are applied to the extent practicable throughout the progress of the development of the precinct.

I332.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions.

- (1) Stormwater Management Plan including amendments to a Stormwater Management Plan, a replacement Stormwater Management Plan or variations to the approved Stormwater Management Plan.
 - (a) The location and capacity of infrastructure servicing including the extent to which the proposed infrastructure is adequate to service all the land in the Tāmaki Precinct, including the proposed development having regard to Council standards.
 - (b) Whether the design of stormwater management devices has regard to Council standards for management of quality, volume and discharge and achieves appropriate water quality outcomes.
 - (c) Whether appropriate maintenance plans for the stormwater management devices are provided and whether access for maintenance is adequately provided.
 - (d) Consistency with any relevant network discharge consent or publicly available and current Council stormwater management plans and/or analysis.
 - (e) The extent to which the stormwater management plan has achieved integrated and effective stormwater management across all the land in the Tāmaki Precinct.
 - (f) Whether there is clear identification of those elements that are to be vested in Council and that they meet the Council requirements for vested infrastructure.
 - (g) The extent to which adverse effects of stormwater diversions and discharges are prevented or mitigated, including cumulative effects, to the extent possible having regard to:
 - (i) the nature, volume and peak flow of the stormwater discharge;
 - (ii) avoiding the creation or increase of flood risk to other properties;
 - (iii) options to manage stormwater on-site or the use of communal stormwater management measures.
 - (h) The extent to which floodplains and development are managed and whether overland flow paths have been identified and protected.

- (2) Parking in excess of numbers specified in I332.6.3.
- (a) Whether the provision of facilities on site is sufficient to accommodate the expected numbers of pedestrians, cyclists, moped, motorbike and public transport users.
 - (b) The extent to which the proposal achieves greater accessibility to existing or new pedestrian and cycle and public transport networks.
 - (c) The adequacy of provision for integration with, and avoidance of adverse effects on the safety and efficiency of the transport network of the surrounding area, including any necessary upgrades to the surrounding road network.
 - (d) The adequacy of any measures to mitigate adverse effects on the capacity of the adjacent roading network caused by expected traffic generation of a proposal.
 - (e) Whether the effects on existing and probable future traffic volumes on adjacent roads can be appropriately managed.
 - (f) Whether the proposal demonstrates the ability of the adjacent existing or planned roading network systems to handle increased traffic and the feasibility of improving the roading network systems to handle increased traffic.
- (3) The policies set out in H3.3 (4), (5) and (6) are to be applied for new buildings, or external alterations and additions that are more than 10 per cent of the existing GFA of the building.
- (4) The overall plan to manage the use and development of all land in the Tāmaki Precinct, and any proposed change to the plan are to be assessed in terms of the extent to which the layout of all the land in Tāmaki Precinct will achieve an urban structure that addresses the following matters:
- (a) A network of roads, intersections and connections providing for safe and efficient vehicle, pedestrian and cycle circulation through the site.
 - (b) Provision for convenient and direct pedestrian and cycle access to the Glen Innes town centre and public transport services.
 - (c) The layout of blocks and building platforms having regard to the circulation network and any open space.
 - (d) The relationship of the urban structure to surrounding development including Morrin Reserve, Colin Maiden Park and the Auckland Manukau Eastern Transport Initiative project.
 - (e) The number and location of vehicle access points, the form of roads, streets and intersections, and the extent to which proposed new access

points, roads, streets and intersections integrate with existing transportation infrastructure.

- (5) The provisions made for the management of travel demand including:
 - (a) the measures provided as part of the development to manage traffic demand, alternative transport options, including a travel management plan, and connections to public transport and key connections to and within the wider area;
 - (b) any travel management plan methods for the purposes of encouraging increased use of public transport and active modes (such as walking and cycling) as a means of travel to the site designed to discourage low occupancy private vehicle use for most users of the offices, and to meet or exceed the desired travel mode splits, would need to be finalised as a condition of consent.
- (6) The adequacy and appropriateness of the provision for open space and any connections to a public place the public open space network (parks, reserves and streets).
- (7) The availability of infrastructure and/or the ability to install and/or upgrade infrastructure to service the proposed development for stormwater, wastewater and water supply.
- (8) The extent to which the proposed development and use on the land in the Tāmaki Precinct, including any provision for the transport network or open space, integrates into a coherent form and function with any intended or consented use or development of the balance of the site.
- (9) Whether the timing of infrastructure coincides and is coordinated with the expected staging of development to facilitate integrated transport and land use planning.

Note: The staging of development of the land within the Tāmaki Precinct should be linked with the timing of infrastructure upgrades and where development is proposed ahead of upgrades the developer will be required to make development contributions or pay infrastructure growth charges to contribute towards the cost of any necessary infrastructure upgrades in the local area, resulting from the associated growth impacts resulting from development of the land.

I332.9. Special information requirements

- (1) An application for the first:
 - (a) subdivision consent (excluding any boundary adjustment or subdivision to provide for the existing Landcare parking shortfall; and the subdivision from the parent site (Lot 1 DP 328428) of a new title sufficient to contain the existing University of Auckland Data Centre building and the necessary curtilage, car parking and site access); or,

- (b) land use consent application (excluding additions to buildings that are less than 10 per cent of the existing GFA of the building);

must be accompanied by:

- (a) a comprehensive Stormwater Management Plan including stormwater quality and quantity management devices to service the development for all the land in the precinct which is in accordance with the additional matters of discretion and assessment criteria set out above;
- (b) an overall plan to manage the use and development for all the land in the Tāmaki Precinct that address the matters in paragraphs (i) to (xiii) below:
 - (i) site layout and circulation;
 - (ii) the number and location of vehicle access points;
 - (iii) building platforms;
 - (iv) proposed new roads and intersections;
 - (v) internal pedestrian and cycle network and connections to existing and future public pedestrian and cycle networks;
 - (vi) provision for the safe movement of pedestrians and cyclists across Merton Road to connect to the Glen Innes to Tāmaki Drive Shared Path;
 - (vii) maximum block size;
 - (viii) the relationship with the Auckland Manukau Eastern Transport Initiative project;
 - (ix) the form and location of roads and streets;
 - (x) the location of any open space;
 - (xi) travel demand management;
 - (xii) infrastructure servicing; and
 - (xiii) staging of development and infrastructure provision.

I332.10. Precinct plans

There are no precinct plans for this precinct.

I333. Three Kings

[ENV-2016-AKL-000224: South Epsom Planning Group Inc and Three Kings United Inc] – Addition sought

[CIV-2016-404-002302: South Epsom Planning Group Incorporated]

I333.1. Precinct description

The Three Kings Precinct provides for the development of a vibrant, sustainable urban village on the former quarries and the adjacent land at Three Kings.

The zoning of the land within the precinct is Residential - Terrace Housing and Apartment Buildings Zone, Business - Town Centre Zone, Open Space - Informal Recreation Zone and Open Space - Sport and Active Recreation Zone. Refer to the planning maps for the location and extent of the precinct.

The purpose of the precinct is to enable the integrated redevelopment of key sites within the Three Kings area in a way that will ensure high quality outcomes that support a compact city.

It will promote legacy developments that support the viability of this emerging centre and integrate the town centre, residential, open space and community facilities.

The proposed urban village is the result of an extensive master planning process. This precinct has been prepared in order to ensure that development proceeds in accordance with the planning parameters established through the master planning process.

The overall development will offer residents a unique lifestyle choice; residential living on the doorstep of an existing town centre, connected to high quality recreational facilities on a major public transport route. The expected outcomes of the precinct are set out below:

- (1) High amenity residential areas that will provide 1,200 to 1,500 additional homes to Auckland. There will be a number of housing typologies, including apartments, cascading apartments, and terrace housing. Cascading apartments are built above and cascade over the rock faces. Parking is subsumed within the building alongside the rock face with apartments sleeving the exterior of the car parking.
- (2) An open space network comprised of two high-quality/high-use sports fields and a broader network of walkways and cycleways. This network will provide for both active and passive recreation and also achieve important connections between the residential development and the town centre and the broader community.
- (3) Sightlines to Te Tātua o Riu-ki-uta (Big King). In addition the nature of development will offer distant views of Maungawhau (Mt Eden) and all of Maungakiekie (One Tree Hill) from two vantage points.
- (4) On-site management of all stormwater through the use of a series of green stormwater infrastructure such as (but not limited to) rain gardens, tree pits, swales, wetlands and soakage.
- (5) Reinforcement of public transport by providing direct connections from the new residential development to the major transport corridor of Mt Eden Road.

- (6) Assist in achieving higher functionality of the emerging Three Kings town centre by integrating the residential development with the centre.
- (7) A high quality of urban design to ensure that the overall development provides an attractive and functional environment.

Three Kings: Precinct plan 1 illustrates the broad development patterns within the Precinct. In particular, the residential, open space and business areas are shown along with the transport network (comprised of the primary road network, the primary and secondary access points, bus connections and the walkways and cycleways).

I333.2. Objectives

- (1) Higher density residential development is enabled, which integrates with the town centre, surrounding open spaces and community facilities and which supports the vitality of the adjoining town centre.
- (2) The precinct is redeveloped in a way that respects the volcanic landscape of Te Tātua o Riu-ki-uta, the cultural heritage of the area and the history of the quarry lands.
- (3) Infrastructure and site works that are necessary to support development within the precinct that are effective, robust, sustainable in the long term and meet sound environmental practice are enabled.
- (4) New buildings are designed to apply good urban design principles and address the unique characteristics of the site, reflecting design qualities outlined in the residential design guide.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I333.3. Policies

Comprehensive development

- (1) Provide for a density of development which results in an efficient use of land and which makes a significant contribution to growth within the region.
- (2) Ensure development is integrated and provides the required open spaces and infrastructure.
- (3) Require that the finished contours of the land support intensive residential redevelopment and achieves integration between the redeveloped precinct area and surrounding land uses.
- (4) Enable apartments and other higher density residential activities along the Mt Eden Road frontage and in the southern portion of the precinct so as to provide easy access to public transport and the activities located within the town centre.

- (5) Enable a range of housing types in order to create a variety of built form and diversity at the scales of the site, street and block, including terrace housing and apartments (including cascading apartments).
- (6) Require that the built form of development interacts positively with and improves the quality and safety of streets, public areas and open spaces.
- (7) Provide for quality open spaces which:
 - (a) include provision for active and passive recreation (including sports fields);
 - (b) create quality linkages and connections between the town centre, Te Tātua o Riu-ki-uta and the surrounding area;
 - (c) are designed to reinforce ecological values and linkages; and
 - (d) are designed and located to create a coherent network.
- (8) Require that Grahame Breed Drive is developed in a manner that will enable integration between the redeveloped precinct area and the town centre.
- (9) Provide for the works and activities necessary to facilitate the network of walkways, cycleways and connections and to ensure a high level of safety amenity and public enjoyment in the open space areas.
- (10) Enable high levels of walkability and pedestrian amenity with reduced reliance on private vehicles and greater use of alternative modes of transport such as walking, cycling and public transport.
- (11) Ensure that the layout and design of roads and connections are legible and permeable and include the following:
 - (a) a western route through to Mt Eden Road;
 - (b) a north south route that connects to the town centre; and
 - (c) a high quality street environment that promotes walking and cycling via direct, safe and well-designed pedestrian and cycle provisions.
- (12) Provide for an increase in permitted building height and number of storeys along Grahame Breed Drive where it has been demonstrated that the increased building form will be beneficial in terms of supporting and creating an attractive transition to the town centre.
- (13) Provide for a plaza which is integrated with the town centre and which provides outlook over the sports fields, sightlines to Te Tātua o Riu-ki-uta, and active uses at street level.
- (14) Provide for a high-quality shared space on the section of Grahame Breed Drive extension between the plaza and town centre, designed as a slow speed environment with equal priority given to vehicle and pedestrian movement.

- (15) Ensure that new buildings are suitably designed and respond to the site and result in positive urban design outcomes.

Culture and landscape

- (16) Protect locally significant views through the location of roads, open space and restricting built development from identified sightlines.
- (17) Recognise the landmark of Te Tātua o Riu-ki-uta and opportunities for its restoration are central to the design of redevelopment.
- (18) Protect Te Tātua o Riu-ki-uta through the creation of an open space buffer and appropriate native planting.
- (19) Require that the design and form of the redevelopment integrates reference to and celebrates the following:
- (a) the cultural heritage of the area;
 - (b) the history of the quarry site;
 - (c) the character of the wider area; and
 - (d) the original volcanic form of the land.
- (20) Promote Te Aranga Māori Design Principles in the urban renewal of the area.

Infrastructure [rp/dp]

- (21) Provide for stormwater quality treatment through the introduction of a treatment train system using source control (in the form of inert roofing and building materials), swales and rain gardens prior to controlled access to the aquifer.
- (22) Ensure that the stormwater management systems are well maintained with appropriate legal mechanisms obligating owners of private devices (including body corporates) to maintain them and providing access for maintenance by Council in the event this does not occur (easements in gross). The stormwater management system must include the use of sediment treatment systems (including rain gardens and tree pits) to protect soakage.
- (23) Consider methods to manage water quality, including controls on roofing materials.
- (24) Require that any contaminated land and/or other hazards are made safe and suitable for urban renewal in accordance with the precinct.
- (25) Provide for rehabilitation and filling of the former quarry areas and ensuring that appropriate compaction standards for residential and open space areas are met.

The underlying zone, Auckland-wide and overlay policies apply in this precinct in addition to those specified above.

I333.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the underlying zone apply in this precinct unless otherwise specified below.

Tables I333.4.1 & I333.4.2 Activity tables specify the activity status of land use, development and subdivision activities in the Three Kings Precinct pursuant to sections 9(2), 9(3) and 11 of the Resource Management Act 1991 or any combination of all of these sections where relevant.

Table I333.4.1 Activity table

Activity		Activity status
Use		
Accommodation		
(A1)	Dwellings	C
Commerce		
(A2)	Retail (including food and beverage) with a gross floor area under 250m ² gross floor area per tenancy	RD
(A3)	Retail, restaurants, cafes and other eating places with a gross floor area under 250m ² per tenancy within the area identified as Plaza (with residential above and below) shown on Three Kings: Precinct plan 1	P
Development		
(A4)	Alterations and additions to dwellings built after 30th September 2013	C
(A5)	Construction and/or relocation of residential units or any new building (including accessory buildings), including cascading apartments	C
(A6)	Minor cosmetic alterations to a building that does not change its external design and appearance	P
(A7)	Dwellings within the area identified as 'Plaza with active uses at Grahame Breed Drive level with residential above and below' on Three Kings: Precinct Plan 1	D
(A8)	Earthworks (to any level) greater than 2,500m ² .	RD
(A9)	Earthworks associated with the creation of Public Open Space	RD
(A10)	Earthworks associated with the creation of roading and other infrastructure	RD
(A11)	Rehabilitation of land within the precinct	RD
(A12)	Educational and cultural facilities	RD
(A13)	Any roading related or in-ground infrastructure works or works on land that is consistent with Three Kings: Precinct plan 1	RD
(A14)	Any infrastructure works or works not provided for as a permitted activity	RD
(A15)	Any activity, development or subdivision not otherwise provided for in the Terrace Housing and Apartment Buildings Zone or in this precinct	D

Subdivision		
(A16)	Subdivision in accordance with Three Kings: Precinct plan 1	RD
(A17)	Subdivision not in accordance with Three Kings: Precinct plan 1	D
(A18)	Subdivision for the purpose of: <ul style="list-style-type: none"> • Creating lots for infrastructure, including roading • Subdivision of zone boundaries 	RD

Table I333.4.2 Public Open Space zones

Activity		Activity status
Use		
Community		
(A19)	Education and Cultural Facilities	RD
Development		
(A20)	Rehabilitation of land within the precinct	RD
(A21)	Any infrastructure works or works on land	RD
Subdivision		
(A22)	Subdivision for the purpose of: <ul style="list-style-type: none"> • Creating lots for infrastructure, including roading • Subdivision of different zones 	RD

Note 1

For the purposes of this precinct 'rehabilitation' means the process to prepare the land for future alternate land uses and includes:

- necessary operations, works and extraction to modify rock faces and to re-contour land to ensure it is suitable for future open space uses as shown on the Three Kings Precinct plan 1;
- the extraction, processing and removal of rock, earth or other material as part of the process of finalising ground levels and rock faces and contours;
- fill operations including earthworks, compaction and storage of material;
- necessary temporary and permanent drainage, stormwater and roading services to enable rehabilitation;
- protection of future soakage areas from sedimentation during earthworks; and
- establishment of such roading and services suitable for future open space uses.

Note 2

For the purposes of this precinct 'cascading apartments' are built above and cascade over the rock faces. Parking is subsumed within the building alongside the rock face with

apartments sleeving the exterior of the car parking. The form of the cascading apartments means that habitable floor space is constructed below Mt Eden Road down to the Riu. But for the purposes of the height control, the maximum height measure is calculated from Mt Eden Road level and not from the finished level of the quarry floor.

I333.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I333.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Activity Tables I333.4.1 and I333.4.2 and which is not listed in I333.5.(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I333.6. Standards

The overlay, Auckland-wide and underlying zone standards apply in this precinct in addition to the following standards.

All activities listed as permitted or controlled in Tables I333.4.1 & I333.4.2 must comply with the following standards.

I333.6.1. General standards

- (1) Development must comply with Three Kings: Precinct plan 1.
- (2) The construction and/or relocation of dwellings into the precinct must not exceed 1500 dwellings within the precinct.
- (3) The construction and/or relocation of dwellings in the 'Area subject to additional density control' shown on the Three Kings: Precinct plan 1 must not exceed 400 dwellings.
- (4) The total gross floor area for education and cultural facilities must not exceed 1000m² within the precinct and must be located in either of the locations identified on the Three Kings: Precinct plan 1 as 'Whare Manaaki'.
- (5) The total gross floor for retail must not exceed 1000m² within the precinct (excluding the area identified as Plaza with residential above and below on Three Kings: Precinct plan 1).

I333.6.2. Height

[ENV-2016-AKL-000224: South Epsom Planning Group Inc and Three Kings United Inc]

- (1) The maximum building height is as shown on 'Three Kings Precinct plan 2 - Building Height'. It is stated as a maximum height above the identified Reduced Level (RL).

- (2) For the purpose of this control, ground level shall be deemed to be the RL level shown on 'Three Kings Precinct plan 2 - Building Height'.
- (3) For the purpose of determining ground level in the Height Sensitive Area referred to in Standard D14.6 (Volcanic Viewshafts and Height Sensitive Areas,) ground level is the RL level shown on 'Three Kings Precinct plan 2 - Building Height' or where no such RL is shown it is the height above the existing ground level.
- (4) The minimum finished ground level for residential development sites on land zoned Residential – Terrace Housing and Apartment Buildings Zone (excluding roads) in the 'area subject to additional density control' shown on the Three Kings: Precinct plan 1 shall be RL 64.

I333.6.3. Height in relation to boundary

- (1) Where the external boundary of the precinct abuts land zoned residential or open space the Height in Relation to Boundary Rule applying in those zones shall apply to land within the precinct that abuts that part of the external boundary but otherwise does not apply to the internal boundaries within the precinct, including boundaries zoned Residential - Terrace Housing and Apartment Buildings, Open Space – Informal Recreation Zone, Open Space - Sport and Active Recreation Zone or Business - Town Centre zones.

I333.6.4. Maximum impervious area, maximum building coverage, minimum landscaped area and stormwater permeable area

- (1) The impervious area must not exceed 70 per cent of the net site area.
- (2) The building coverage must not exceed 70 per cent of the net site area for buildings up to three storeys and must not exceed 65 per cent of the net site area for buildings of four stories or more.
- (3) The landscaped area of the site must not be less than 30 per cent of the net site area.
- (4) Increased maximum impervious area and reduced minimum required landscaping area may be achieved through open space areas in alternative parts of the precinct provided they are to an equivalent area as set out above.
- (5) Standards (1) to (4) above apply once a stormwater management plan has been approved which demonstrates that development up to the maximum permitted building coverage and impervious areas allowed by these standards can meet the requirements for the management of stormwater in this precinct.
- (6) Development standards (1) to (4) above do not apply to the cascading apartments.
- (7) The minimum stormwater permeable area is 50 per cent of all land forming part of the precinct.

I333.6.5. Yards

- (1) A front yard depth of no less than 2 metres is required (excluding basement space below the RL of the adjacent street level).
- (2) In addition to the above, a yard depth of no less than 3 metres is required along the external boundaries of the precinct where it abuts or faces residential or open space zoned land. Provided that balconies 3 metres or more above ground level, may protrude into the yard for distances no greater than 1 metre. For the avoidance of doubt, this 3m yard does not apply to internal boundaries within the precinct including street frontages and land adjoining open space zoned land.

I333.6.6. Outlook space and outdoor living space

- (1) Residential - Terrace Housing and Apartment Buildings Zone Standard H6.6.13 Outlook Space and H6.6.15 Outdoor Living Space shall apply except:
 - (a) that any development which has a balcony with an area of 8m² and a minimum width of 2 metres which has convenient access from the living room shall be deemed to meet the requirements of Residential - Terrace Housing and Apartment Buildings Zone Standard H6.6.15 (1); and
 - (b) The minimum exclusive area for dwellings and housing developments for the elderly and disabled shall be 18m².

I333.6.7. Volcanic Viewshafts: Height Sensitive Areas

- (1) For the purposes of determining whether the Height Sensitive Area height limits are exceeded under Standard D14.6, ground level on the western terrace shall be deemed to be RL 78 and RL 82 as shown on 'Three Kings: Precinct plan 2 - Building height' or where no RL is shown it is the height above existing ground level. Height for the purpose of Standard D14.6 must be measured from the identified RL using the rolling height method.

I333.6.8. Te Tātua o Riu-ki-uta sightlines

- (1) Buildings must not protrude into the sightlines shown on 'Three Kings: Precinct plan 3 - Te Tātua o Riu-ki-uta Sightlines'.

I333.6.9. Roading-related and in-ground infrastructure

- (1) Roading adjacent to the town centre and plaza must provide frontage to the Business - Town Centre Zone and Plaza (with residential above and below) shown on the 'Three Kings: Precinct plan 1'.
- (2) The area shown on 'Three Kings: Precinct plan 1' as 'Shared space' must be formed to create a high amenity shared space area providing slow speed vehicle access, cycleways and pedestrian movements through the plaza and to the residential areas to the north.

I333.6.10. Minimum apartment size

- (1) Dwellings must have a minimum net internal floor area as follows, except as provided for in Standard (21) below:
 - (a) 40m² for studio dwellings;
 - (b) 45m² for one or more bedroom dwellings.
- (2) Dwellings that have a minimum net internal floor area of 30m² must not exceed more than five per cent of the total number of dwellings within the precinct.

I333.6.11. Parking Standards

- (1) Parking within the precinct must be provided in accordance with the following requirements:
 - (a) not more than one parking space per studio or one bedroom dwelling unit shall be provided;
 - (b) not more than two parking spaces per dwelling unit containing two or more bedrooms shall be provided;
 - (c) parking for visitors shall be provided at a rate of not less than 0.2 parking spaces per dwelling;
 - (d) at least one cycle parking space shall be provided for each dwelling unit that does not have a dedicated garage; and
 - (e) visitor cycle parking shall be provided at a rate of one for every 20 dwellings within a single building.

I333.6.12. Subdivision and infrastructure consent standards

- (1) A resource consent application for subdivision or application for infrastructure consent must:
 - (a) Comprise land forming:
 - (i) the entire precinct; or
 - (ii) a minimum area of 2 hectares.
 - (b) Seek consent or illustrate how the subdivision will ensure integrated development of the following:
 - (i) the roading network;
 - (ii) infrastructure; and
 - (iii) earthworks.

I333.7. Assessment – controlled activities

I333.7.1. Matters of control

In addition to the matters specified for the relevant controlled activities in the zone, Auckland-wide, or overlay provisions, the Council will reserve its control to the following matters when assessing a controlled activity resource consent application for:

- (1) Alterations and additions to dwellings built after 30 September 2013; construction and/or relocation of residential units; and, any new building (including accessory buildings):
 - (a) design and appearance:
 - (i) the effects of the design, appearance and impact of all buildings and structures including elements of height, architectural treatment of building facade and overall scale on the amenity values of the natural and physical landscape;
 - (b) building interface with public spaces:
 - (i) the effects of the interface of buildings with open space, roads and other elements of the public realm;
 - (c) potential contamination of stormwater from roofing materials:
 - (i) the effects of potential contamination of stormwater and ground water arising from discharges from roofing materials;
 - (d) views of the rock face:
 - (i) the visual effects of major buildings on retention of views of the rock face which acknowledge the quarrying origins of the site;
 - (e) landscaping and building design:
 - (i) the effect of landscaping and design of the development related to its impact on the site and on abutting or facing residential or open space land;
 - (f) daylight and sunlight access:
 - (i) the effects of shadowing and loss of access to daylight and sunlight;
 - (g) observance of Te Tātua o Riu-ki-uta sightlines:
 - (i) the effects of proposed buildings on the retention or otherwise of the views identified on 'Three Kings Precinct plan 3 - Te Tātua o Riu-ki-uta Sightlines' across public roads and open space, between buildings and above buildings in the Riu;
 - (h) active use at street level of plaza:

- (i) the effects of any building located on the 'active use at street level' area shown on the Three Kings Precinct plan 1, on the intended quality publicly accessible plaza integrated to the town centre;
- (i) outlook to Te Tātua o Riu-ki-uta from northern face of plaza:
 - (i) The effects of the design of the northern face of the plaza building on the provision of outlook to Te Tātua o Riu-ki-uta;
- (j) reverse sensitivity for dwellings facing sports fields:
 - (i) the reverse sensitivity of effects of dwellings facing sports fields including regard to any internal noise attenuation provided;
- (k) urban design matters:
 - (i) the effects of the urban design of the development on the visual and amenity values of the people who live, work or play in the Three Kings Precinct or those who visit it.
- (2) Cascading apartments:
 - (a) residential frontages:
 - (i) the effect of residential frontages (such as balconies, terraces or other habitable spaces) on the amenity of public spaces, including the potential for mitigating such effects by ground level setback from the street frontage to accommodate front yards and outdoor living spaces;
 - (b) solar amenity:
 - (i) the effectiveness of the design of dwellings to optimise daylight access to internal spaces having regard to the orientation of the site;
 - (ii) the effects of the extent of sunlight access to the dwellings on the amenity of residents having regard to the orientation of the site;
 - (c) natural ventilation:
 - (i) the effects of building design on the provision of natural ventilation to dwellings;
 - (d) overshadowing impacts:
 - (i) the effects of overshadowing on the amenity values of those who inhabit or use affected buildings or open spaces;
 - (e) traffic and car parking:
 - (i) the potential visual and other adverse effects arising from large areas of on-site car parking exposed to views from the street and from public spaces;
 - (ii) the effects of location of car parking on diffusing traffic flow through the high and low streets and through the existing street network;

(iii) the effects of providing car parking in locations which are not the most easily and directly accessed by residents;

(f) heights and setbacks:

(i) the provision of setbacks to avoid adverse effects on the users of both the high (Mt Eden Road and Grahame Breed Drive) and low streets (streets in the Riu);

(ii) the visual effects of the bulk of the cascading apartments and the management of those effects through the use of setbacks and variation in setbacks;

(g) building coverage:

(i) The effects of building coverage beyond 65 per cent and 70 per cent having regard to:

- the benefit to overall resident amenity if encapsulated car parking is sleeved between the lower level apartments and the cliff face;
- the objectives of the zone relating to enabling higher density residential development;
- the overall open space within the precinct; and
- the extent of landscaping adjacent to the specific development;

(h) building frontage:

(i) the effects of the design and location of residential activities and spaces within residential frontages that adjoin public spaces including public roads, on the vitality and amenity of those using the public spaces; and

(ii) the effects of excessively long building frontages along the Grahame Breed Drive and Mt Eden Road frontages and the visual effects that arise as well as the effects on obscuring the views towards the maunga;

(i) housing mix:

(i) the effects of the mixture of housing types within the development having regard to the benefits of providing for a diverse range of residents and family types that could occupy the proposed development.

(j) safety and visual privacy:

(i) the effects of the design of ground level apartments in the development having regard to the extent of passive surveillance and the need for visual privacy for the residents of these apartments;

(k) CPTED principles:

- (i) the effects of building design and layout on the safety of residents and visitors to the precinct having regard to CPTED principles;
- (l) urban design and landscaping:
 - (i) the effects on amenity values of residents and visitors to the precinct arising from the development of the precinct having regard to the opportunities to mitigate any such effects and/or enhance amenity values through the application of good urban and landscape design.

I333.7.2. Assessment criteria

The Council will consider the relevant policies identified below for controlled activities, in addition to the assessment criteria or policies specified for assessment of the relevant controlled activities in the zone, Auckland wide or overlay provisions:

- (1) New Buildings except Cascading Apartments:
 - (a) design and appearance – refer to Policy I333.3 (15);
 - (b) building Interface with public spaces - refer to Policy I333.3 (6);
 - (c) potential contamination of stormwater from roofing materials - refer to Policy I333.3 (21);
 - (d) views of the rock face - refer to Policy I333.3 (19);
 - (e) landscaping and building design - refer to Policy I333.3 (15);
 - (f) daylight and sunlight access - refer to Policy I333.3 (15) and Residential - Terrace Housing and Apartment Buildings Zone Policy H6.3(4);
 - (g) observance of Te Tātua o Riu-ki-uta Sightlines - refer to Policies I333.3 (16), (17) &(19);
 - (h) active use at street level of plaza - refer to Policy I333.3 (13);
 - (i) outlook to Te Tātua o Riu-ki-uta from northern face of plaza - refer to Policy I333.3 (13);
 - (j) reverse sensitivity for dwellings facing sportsfields - refer to Policy I333.3 (6); and
 - (k) urban design matters - refer to Policy I333.3 (15).
- (2) Cascading Apartments:
 - (a) Residential Frontages - refer to Policy I333.3 (6);
 - (b) Solar Amenity - refer to Policy I333.3 (15) and Residential - Terrace Housing and Apartment Buildings Zone Policy H6.3(5);

- (c) Natural Ventilation - refer to Policy I333.3 (15);
- (d) Overshadowing Impacts - refer to Policy I333.3 (15) and Residential - Terrace Housing and Apartment Buildings Zone Policy H6.3(5);
- (e) Traffic & Car parking - refer to Policies I333.3 (6) & (15);
- (f) Heights and Setbacks - refer to Policies I333.3 (4), (6) ,(12) & (15);
- (g) Building Coverage - refer to Policies I333.3 (4) & (12);
- (h) Building Frontage - refer to Policy I333.3 (6);
- (i) Housing Mix - refer to Policy I333.3 (5);
- (j) Safety and Visual Privacy - refer to Policy I333.3 (6) and Residential - Terrace Housing and Apartment Buildings Zone Policy H6.3(5);
- (k) CPTED Principles - refer to Policy I333.3 (6); and
- (l) Urban Design and Landscaping - refer to Policy I333.3 (15).

I333.8. Assessment – restricted discretionary activities

I333.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) Retail activities:
 - (a) the effects on the neighbourhood character, residential amenity of residential spaces on the same and adjoining sites and in the surrounding residential area from all of the following:
 - (i) The location, form and appearance of the retail premises;
 - (ii) design of parking and access; and
 - (iii) noise, lighting and hours of operation.
- (2) Educational and Cultural Facilities:
 - (a) the provisions made to ensure protection of the amenity values of the Open Space zones and the particular relationships with Te Tātua o Riu-ki-uta including its landmark status and the protection of viewshafts to and from the Maunga;
 - (b) the manner in which Te Aranga Maori Design Principles are observed.

[ENV-2016-AKL-000224: South Epsom Planning Group Inc and Three Kings United Inc]

- (3) Rehabilitation of land including rock removal, earthworks and fill operations

- (a) operations, works and extraction of material to modify rock faces and to re-contour land having regard to the suitability of the resultant land form for future open space uses as shown on the Three Kings Precinct plan 1;
 - (b) extraction, processing and removal of rock, earth or other material having regard to consistency with the Precinct plan 2 proposals for final ground levels and contours;
 - (c) the nature and manner of fill operations including earthworks, compaction and storage of material;
 - (d) provisions for temporary and permanent drainage, stormwater and roading services to enable rehabilitation;
 - (e) the manner of protection of future soakage areas from sedimentation during earthworks;
 - (f) measures to enable establishment of roading and services suitable for future open space uses;
 - (g) any potential for noise arising from rehabilitation works to have significant adverse effects on amenity values having regard to:
 - (i) hours of operation;
 - (ii) noise levels, location of noise source, frequency, duration or other special characteristics of noise; and
 - (iii) mitigation measures
 - (h) any potential for vibration and blasting associated with rehabilitation works to have significant adverse effects on amenity values having regard to location of blasting, frequency, duration and time of day.
- (4) Subdivision including roading and associated earthworks and infrastructure:
- (a) the matters applying to urban subdivision for residential purposes will apply;
 - (b) the consistency of the design and method of implementation of the subdivision with precinct plans 1 to 4, including the provision for roads, walkways, stormwater management and other infrastructure; and
 - (c) the manner in which Te Aranga Maori Design Principles are observed.
- (5) Subdivision creating lots along zone boundaries:
- (a) the alignment of the cadastral boundaries created with Precinct plan 1 structure and zones.
- (6) The proposal provides for the effective development and management of the wastewater network including:

- (a) provision for a minimum of eight hours holding capacity at any pump station;
 - (b) diversion of stormwater from the existing public wastewater network to provide additional capacity for wastewater;
 - (c) the location and design of the pump station and connections to the wastewater network;
 - (d) sufficient capacity for the wastewater network to receive flows from the development;
 - (e) for any pump station emergency overflow area; its location, size, screening; and
 - (f) public access, information, management, maintenance and clean-up protocols.
- (7) The extent to which the proposal provides for the successful application of the principles of Te Aranga as embodied within the precinct, including:
- (a) bush landscaping of the boundary to the Te Tātua o Riu-ki-uta to successfully create an interface between the Maunga and the adjacent residential community;
 - (b) the development of green stormwater infrastructure planted with suitable native vegetation to serve as a functional stormwater management system which has high amenity;
 - (c) the use of culturally appropriate public art to celebrate the history and cultural dimensions of the area;
 - (d) the use of stone walls and other landscape forms that reflect early Maori occupation of the area;
 - (e) the use of native planting specific to the area;
 - (f) the acknowledgement of the four Maunga that were previously quarried through signage, landscaping and other appropriate forms; and
 - (g) the use of cultural narrative and names to celebrate the history and culture of the site and its people.
- (8) Management of stormwater, including groundwater levels, overland flow paths, design and implementation of a treatment train, soakage capacity and monitoring and maintenance requirements with reference to the following matters:
- (a) the development gives effect to the 'Three Kings: Precinct plan 4 – Stormwater Management Concept Plan' or such other management plan that will achieve a similar or better water quality outcome;

- (b) the proposal mitigates flooding effects on people and property by ensuring adequate, flood storage, soakage capacity and freeboard is provided. The habitable floor levels; must be 750mm above the 1% AEP flood level in catchment B, or 500mm above the 1% AEP flood levels in catchment C. The 1% AEP flood level shall be set based on the assumption that no soakage occurs from the sports field soakage areas in a 100yr ARI storm;
 - (c) the proposal includes an effective monitoring and maintenance programme which addresses sediment loads, treatment required for the protection of long term soakage capacity and the monitoring and maintenance required to maintain soakage capacity;
 - (d) development provides for on-site management of all stormwater through the use of a series of green stormwater infrastructure such as (but not limited to) rain gardens, tree pits, swales, wetlands and soakage;
 - (e) stormwater treatment is provided for high contaminant load generating activities, such as uncovered car parking, roads with 5,000 Vehicle Movements Per Day (VMPD) and high contaminant generating building materials such as exposed zinc or copper roofing;
 - (f) the ongoing maintenance of private stormwater devices has been provided for and the appropriateness of mechanisms to ensure monitoring and maintenance occurs to prevent soakage inlets from blocking (e.g. body corporate agreements, easements).
- (9) The stormwater management approach and wetland design including the following matters:
- (a) options for meeting mana whenua's desire to see direct physical connection between the aquifer water and the surface, supporting the principles of Kaitiakitanga (Mauri tu, Taiao, Ahikaa);
 - (b) where there is permanently ponded water, the issues of eutrophication, insects, odour and avian botulism.
- (10) Development within the Riu:
- (a) the design and implementation of development within the Riu having regard to the manner in which it provides for integrated development within the Precinct. In particular:
 - (i) how the road layout within the Riu provides for an integrated network of connected roads which service the area;
 - (ii) how public walkways connect the access points to the town centre and Mt Eden Road bus stop;
 - (iii) the provision of infrastructure in accordance with the stormwater management plan; and

(iv) how finished ground levels enable consistency with the rules of the Precinct and provide for the outcomes of the stormwater management plan and infrastructure requirements.

(b) where the Riu is developed in stages, demonstration that all infrastructure has sufficient capacity to service future stages.

(11) Infrastructure works:

(a) the consistency of the design and method of implementation of infrastructure works with Precinct plan 1 and Precinct plan 4 - Stormwater management concept plan.

(12) Transport:

(a) the effect on the safe and efficient functioning of the surrounding road network from the expected traffic generated by the activity;

(b) the road layout provision for local traffic and traffic using the site, and discourages use of the network as a bypass from Mt Albert Road to Mt Eden Road;

(c) entry and exit points to the site are designed to suitably accommodate all pedestrians, cyclists, and traffic movements, and in doing so, limit as much as possible disruption to traffic flows on the adjoining road network;

(d) provision for adequate pedestrian connections to public transport nodes and cycleways and walkways to the Town Centre, Te Tātua o Riu-ki-uta, Mt Eden Road and residential areas to the west and north;

(e) any building fronting Mt Eden Road has a single, direct access from Mt Eden Road;

(f) the location of activity on a major public transport route, and traffic demand management measures, enable a reduced level of required on-site parking;

(g) any car parking associated with the cascading apartment typology is provided within buildings below Mt Eden Road/Grahame Breed Drive street level and is screened from other parts of the site;

(h) the proposal includes the creation of two new roads serving the site; the primary access to Grahame Breed Drive with a second access at the northern end of the site;

(i) the proposal includes appropriate traffic management and safe pedestrian access at the intersection of Mt Eden Road and Grahame Breed Drive;

(j) the proposed road design and cross sections are appropriate to the function of the road in terms of the network, and provide for appropriate amenity. In assessing any resource consent, regard will be had to the

cross section of the road with different cross sections applying to primary access roads, roads which service residential lots and laneways;

- (k) the provision of public lifts within the locations shown on the Three Kings Precinct plan 1; and
- (l) the shared space identified on the Three Kings Precinct plan 1 provides for a high amenity, pedestrian and cycle friendly environment characterised by low vehicle speeds.

I333.8.2. Assessment criteria

The Council will consider the relevant policies and/or criteria identified below for restricted discretionary activities, in addition to the assessment criteria or policies specified for assessment of the relevant restricted discretionary activities in the zone, Auckland wide or overlay provisions:

- (1) Retail activities - refer to Policies I333.3(6), (11)(c), (15);
- (2) Educational and Cultural Facilities - refer to Policies I333.3(15) – (20);
- (3) Rehabilitation of land including rock removal, earthworks and fill operations - - refer to Policies I333.3(3),(16), (19), (20) – (25);
- (4) Subdivision including roading and associated earthworks and infrastructure - - refer to Policies I333.3(2) – (4),(7), (8), (10), (11), (16) – (25);
- (5) Subdivision creating lots along zone boundaries. Criterion – the extent to which the cadastral boundaries created are aligned with the zone boundaries;
- (6) Development within the Riu - refer to Policies I333.3(3),(5), (7), (9) – (11) & (15) –(22); and
- (7) Infrastructure works - refer to Policies I333.3(21) – (25).

I333.9. Special information requirements

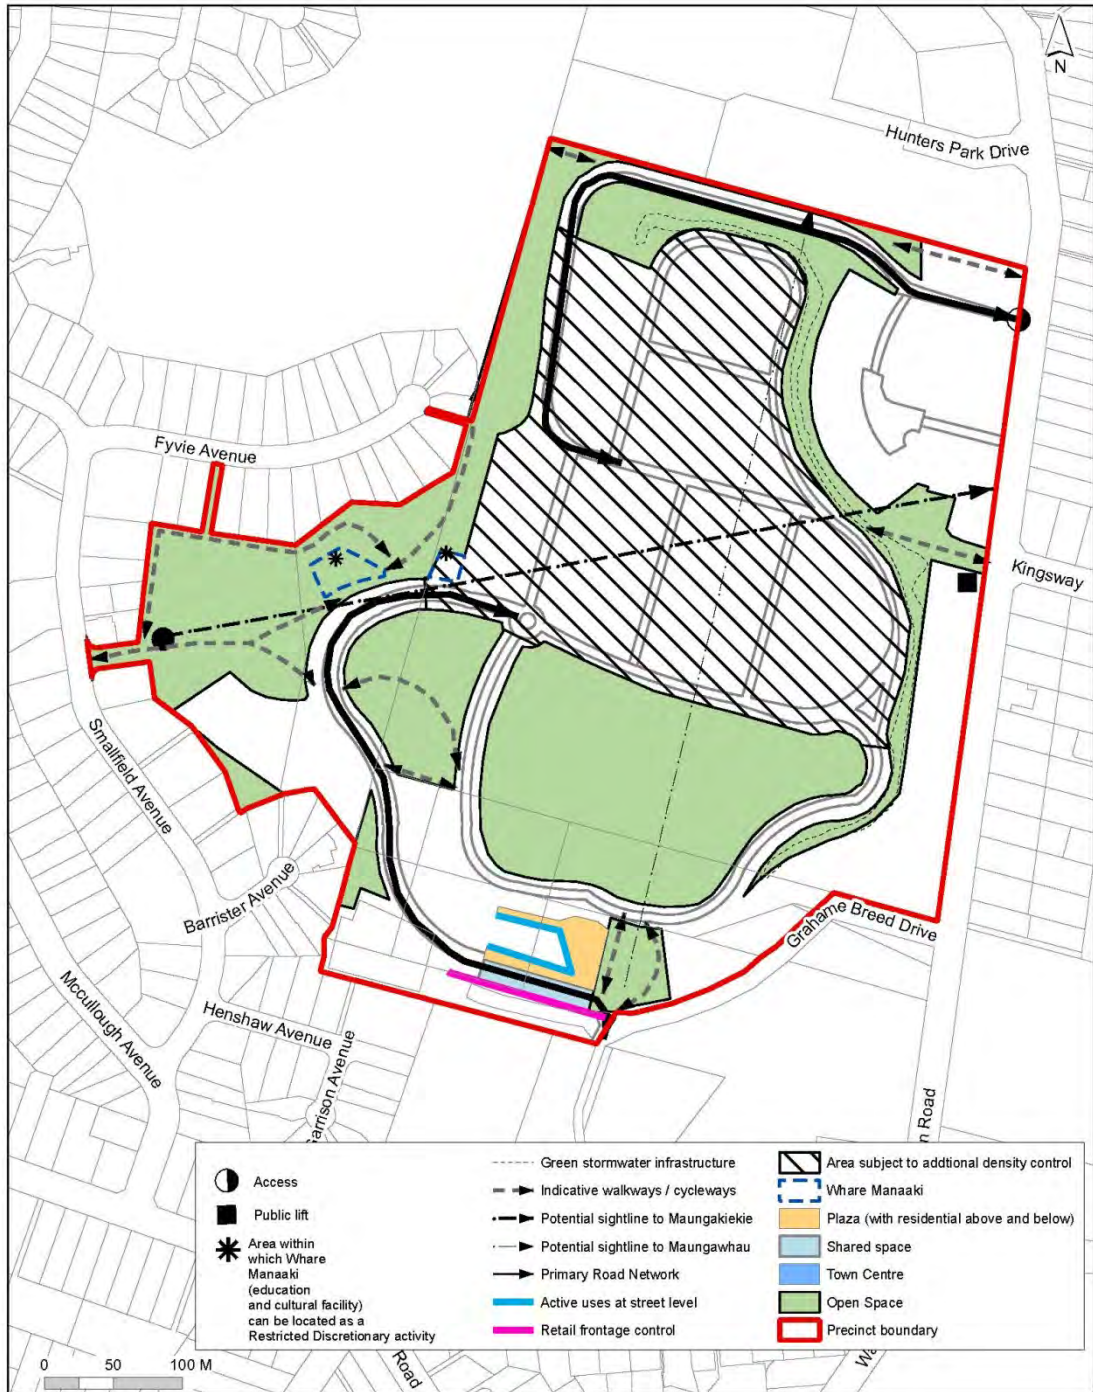

The special information requirements in the underlying zone and Auckland-wide provisions apply in this precinct, together with the following:

- (1) An application for a subdivision must be accompanied by the following supporting documents (unless these issues have been addressed through a previous subdivision consent):
 - (a) Outline of any particular infrastructure requirements that are unique to the precinct including the detailed assessment of stormwater, flooding, wastewater and transport;
 - (b) Cultural assessment and integration of the development to Te Tātua o Riu-ki-uta;
 - (c) Geotechnical assessment to include details of cut slope assessments during construction, development of specific local stability treatments for cut slopes, engineering filling criteria, and foundation criteria for structure design;

- (d) Landscape assessment and proposals to integrate aspects with the volcanic landscape;
- (e) Contamination assessment if not previously provided. This assessment shall be at Preliminary Site Investigation (PSI) level. However if the PSA demonstrates a probable presence of contaminated material then a detailed site investigation report is required; and
- (f) For development of land adjacent to the external boundaries of the precinct, a context assessment demonstrating how the development interfaces with surrounding land uses.

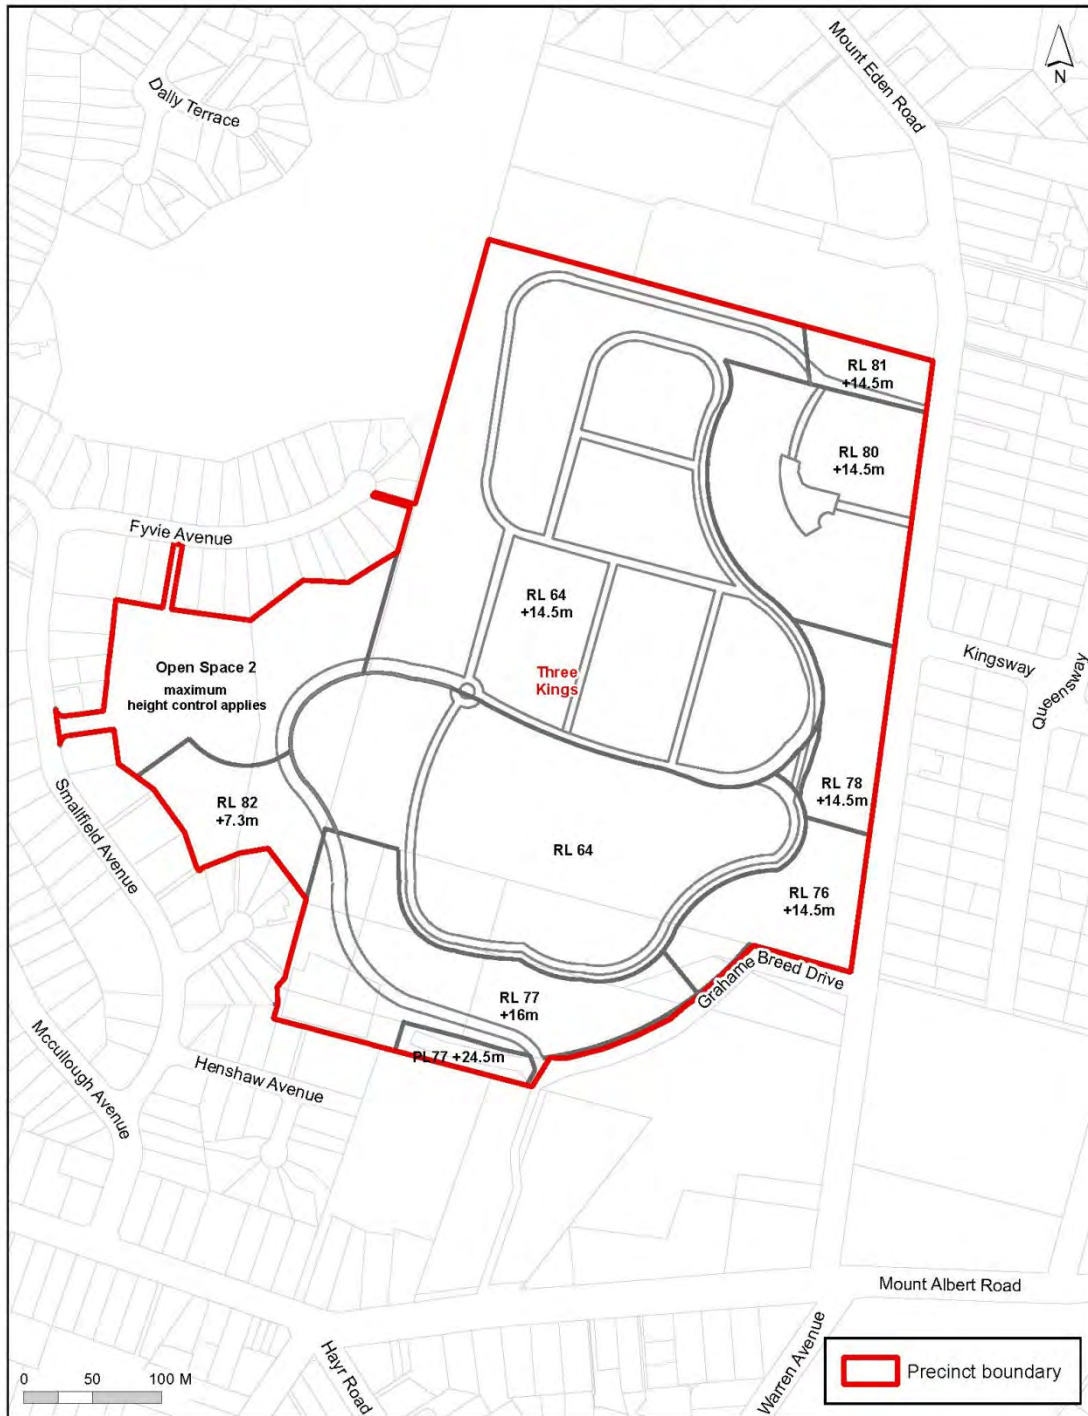

I333.10. Precinct plans

I333.10.1. Three Kings: Precinct plan 1

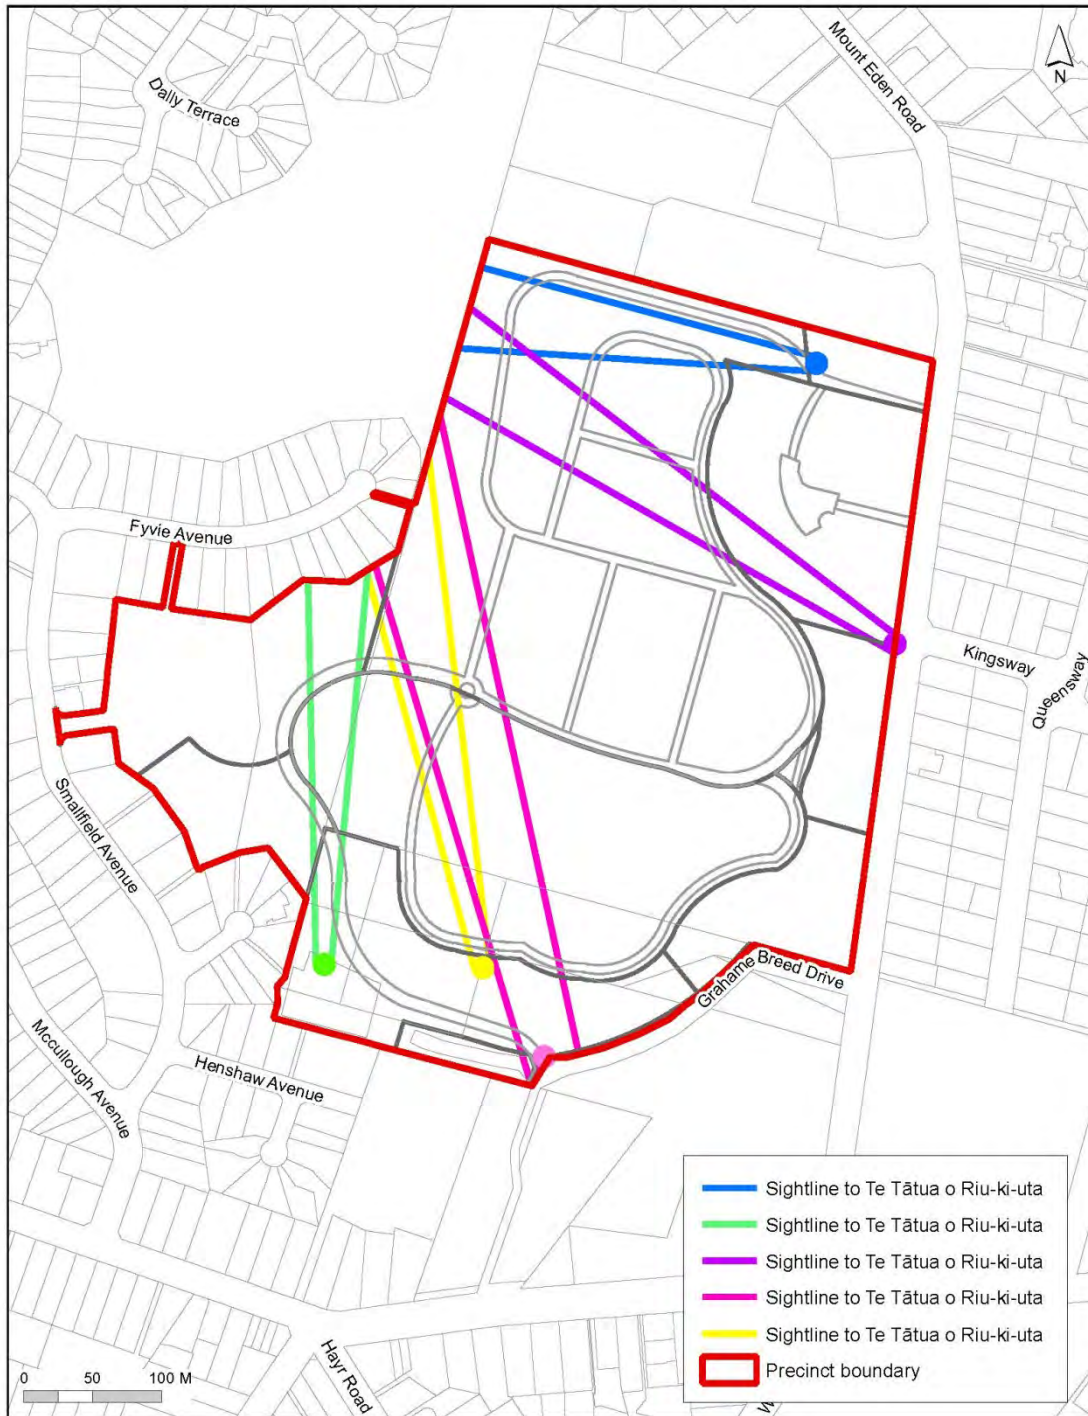

1333.10.2. Three Kings: Precinct plan 2 - Building Height

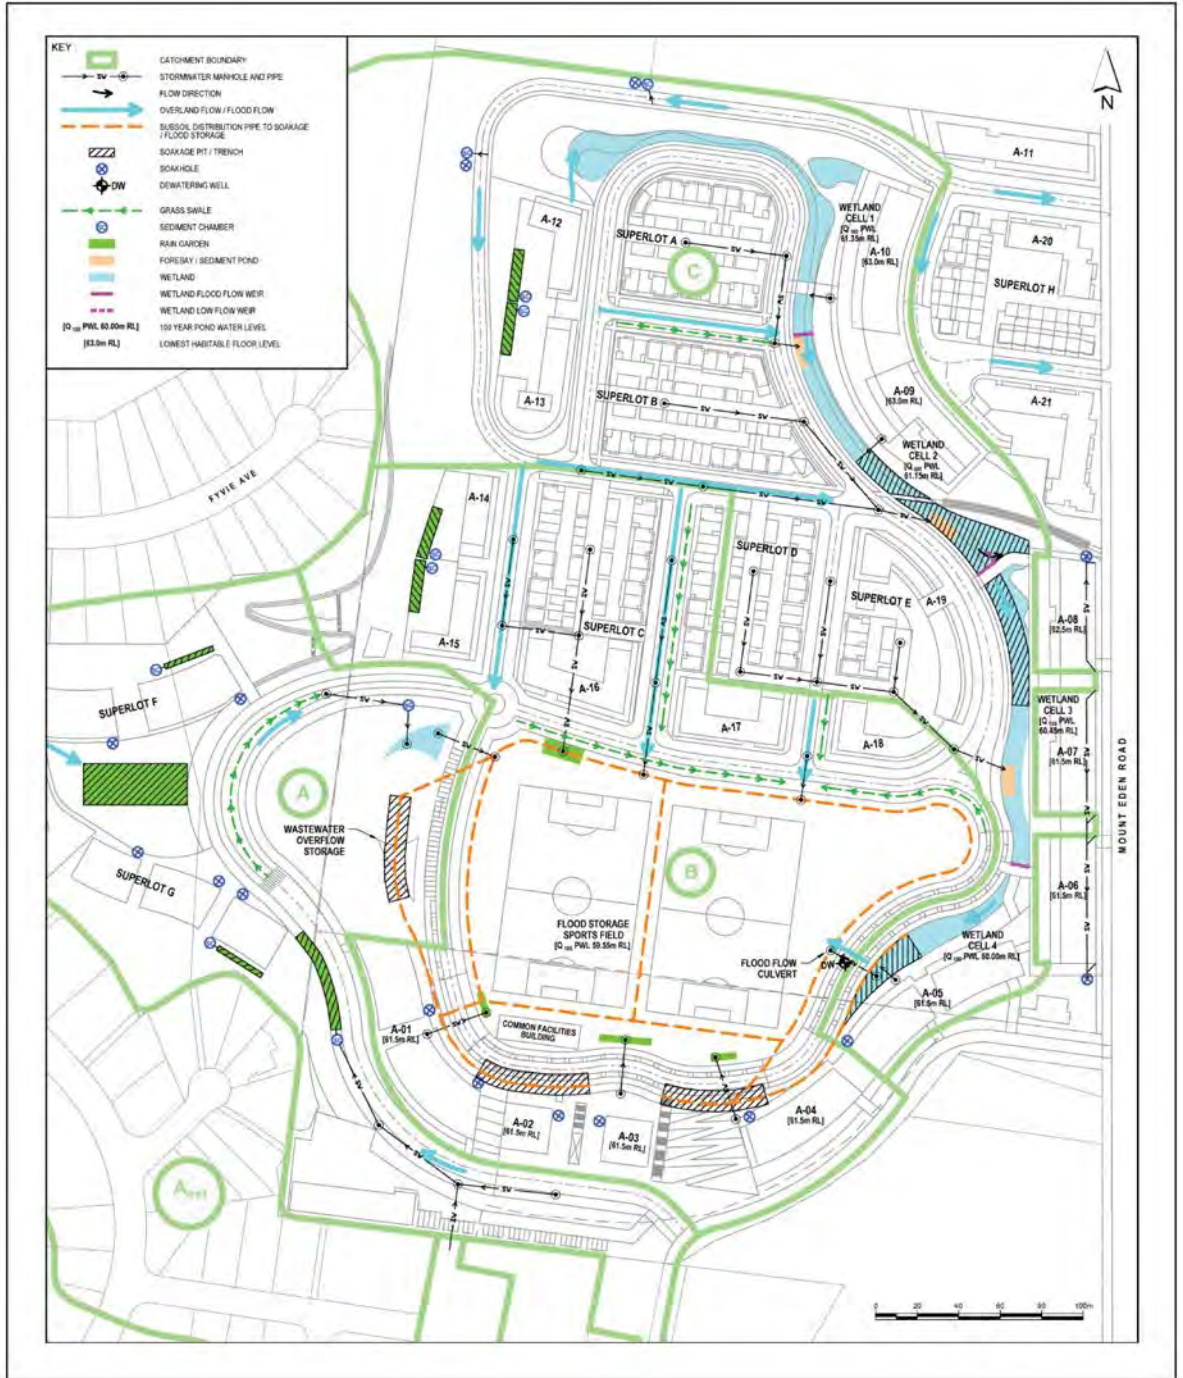

[ENV-2016-AKL-000224: South Epsom Planning Group Inc and Three Kings United Inc]

I333.10.3. Three Kings: Precinct plan 3 - Te Tātua o Riu-ki-uta Sightlines

1333.10.4. Three Kings: Precinct Plan 4 - Stormwater Management Concept Plan

I334. Wairaka Precinct

I334.1. Precinct Description

The Wairaka Precinct extends from the north western motorway at Point Chevalier in the north, through to Woodward Road in the south, and from Oakley Creek in the west to Carrington Road in the east, where the Unitec Institute of Technology (Unitec), the Crown, Waitemata District Health Board, one private landowner, and Ngati Whatua Orakei own contiguous blocks of land that make up the site.

The purpose of the Wairaka Precinct is to provide for a diverse urban community, including the ongoing development and operation of the tertiary education facility the development and operation of a range of community, recreation, and social activities, the development of a compact residential community, and commercial service activities. Business and Innovation activities are to be enabled, including activities which benefit from co-location with a major tertiary education institute. The Precinct enables new development to create an urban environment that caters for a diverse population, employees and visitors in the area and that integrates positively with the Point Chevalier, Mt Albert and Waterview communities.

The Wairaka Precinct will provide for a variety of housing typologies that help cater for Auckland's growth and the diverse community that will establish in this location. It will also provide a heart to the community, focused around the campus but with a range of community, commercial and social services. It will provide the opportunity for people to live, work, and learn within the Precinct, while enjoying the high amenity of the Wairaka environment.

The Wairaka Precinct provides for an urban community within which there is a high quality tertiary education institution.

The location and extent of a major tertiary education institution (Unitec) at Wairaka Precinct is significant to the region. The precinct is 64.5ha, and comprises twelve land titles and four owners. Unitec owns 83 per cent of the total land. In addition medical and light industrial activities also occur on the site.

The Wairaka Precinct provides overall objectives for the whole area, and three sub-precincts:

- Sub-precinct A provides for healthcare/hospital related purposes and is intended to accommodate the Mason Clinic
- Sub-precinct B provides for light manufacturing and servicing associated with laundry services and is intended to accommodate the current range of light industrial activities
- Sub-precinct C to the south and west of the precinct provides for a broad range of residential activities, together with supporting uses, activities appropriately located to a major tertiary education institution.

There are also particular attributes of the Wairaka Precinct, which contribute to the amenity of the precinct and the surrounding area and are to be retained through the development of the precinct. These include the following:

- The significant ecological area of Oakley Creek;
- An open space network linking areas within the Wairaka Precinct and providing amenity to neighbouring housing and business areas;
- A network of pedestrian and cycleway linkages that integrate with the area network;

- Retention of the open space storm water management area which services Wairaka and adjacent areas, and the amenity of the associated wetland;
- The Wairaka stream and the landscape amenity this affords, and
- The Historic Heritage overlay of the former Oakley Hospital, and identified trees on site.

The implementation of the Precinct plan requires a series of works. These focus on the open space and roading network giving access from the east to the important Oakley Creek public open space, and the walking and cycling connections linking east to west Waterview and areas further west to Point Chevalier/Mount Albert, and north to south Mount Albert to Point Chevalier. This precinct plan also provides key linkages on the western regional cycle network.

The precinct provides for stormwater treatment for all land within the precinct, prior to entering Oakley Creek. Currently the precinct also receives stormwater from an adjacent catchment in the Mt Albert area and it is expected that this will continue following development of the precinct.

Transport is an essential component to the implementation and redevelopment of the precinct and will require a series of works to avoid, remedy or mitigate adverse transport effects. Some measures such as the indicative primary road network and walking and cycling connections area are identified in the precinct. Other measures to avoid, remedy and mitigate other transport effects will be identified through the preparation of an Integrated Transport Assessment at the time of the first resource consent to significantly develop the site.

These measures could include the following:

- Providing a connected road network through the site;
- Providing a connected pedestrian and cycling network into and through the site, in particular convenient east-west and north-south cycle connections from the Oakley Creek over bridge to the proposed bus node and existing and proposed cycle networks beyond the site;
- Upgrading intersection access onto the site and avoiding, remedying and mitigating adverse effects on the surrounding transport network;
- Making provision for a bus node and road widening to support the public transport network;
- Managing vehicular movements through the connections to the south of the site;
- Managing parking to avoid, remedy, and mitigating adverse effects on the surrounding transport network; or
- Staging land use and development with any necessary infrastructure investment.

To reduce the potential of new development occurring in an uncoordinated manner, the precinct encourages the land owner/s to develop the land in accordance with the Precinct plan. This method provides for integrated development of the area and ensures high quality outcomes are achieved.

The zoning of land within the precinct varies. Refer to the planning maps for the location and the extent of the precinct.

I334.2. Objectives

- (1) The provision for a high quality of tertiary education institution and accessory activities in the precinct is continued, while also providing for growth, change and diversification of activities.
- (2) Comprehensive planning and integrated development of all sites within the precinct is achieved.
- (3) A mix of residential, business, tertiary education and community activities is provided, which maximises the efficient and effective use of land.
- (4) The healthcare/hospital facility, accessory activities and associated buildings, structures and infrastructure in Sub-precinct A (Mason Clinic) are provided for.
- (5) The commercial laundry service and accessory activities and associated buildings, structures and infrastructure in Sub-precinct B are provided for.
- (6) Identified heritage values are retained through the adaptation of the scheduled buildings and retention of identified trees, together with the management of the historic heritage, and Māori sites of significance on Oakley Creek land, and the contribution they make to the precinct's character and landscape, are recognised, protected and enhanced in the precinct.
- (7) Open spaces, cycling and pedestrian linkages from the Precinct to the wider area and neighbouring suburbs, including linkages between activities and open space nodes, are provided for and enhanced.
- (8) Development and/or subdivision within the precinct facilitates a transport network that:
 - (a) Integrates with, and avoids, remedies or mitigates adverse effects on the safety and efficiency of, the transport network within the precinct and the surrounding area, including providing any upgrades to the surrounding network; and
 - (b) Facilitates transport choices by providing for pedestrians, cyclists, public transport facilities, and vehicles.
- (9) Development of any roads connecting to the existing roading network to the south of the Precinct must be subject to specific resource consent processes to ensure that any private or public road connections must:
 - (a) Avoid these southern connections becoming a direct vehicle entrance for the Special Purpose - Tertiary Education Zone; and
 - (b) Be designed to minimise the amenity effects on existing residents.
- (10) An integrated urban environment is created, which:
 - (a) Incorporates high quality built form and urban design;

- (b) Recognises, protects and enhances the environmental attributes of Wairaka in planning and development of the Precinct;
 - (c) Avoids, mitigates and remedies adverse effects on the environment and existing stormwater, wastewater and road/s infrastructure, recognising that the precinct stormwater system services areas beyond Wairaka;
 - (d) Is developed in a comprehensive manner, which complements and fits within the landscape and character of the surrounding environment, and
 - (e) Contributes positively to the Mt Albert, Waterview and Point Chevalier communities.
- (11) Provide for retail, food and beverage and commercial services in identified locations to serve local demand within the Wairaka Precinct and at a scale and configuration which does not adversely affect the role, function and amenity of the Point Chevalier and Mt Albert town centres.

The zone, Auckland-wide and overlay objectives apply in this precinct in addition to those specified above.

I334.3. Policies

Wairaka Precinct - General

- (1) Enable and provide for a wide range of activities, including education, business, office, research, health, recreation, residential accommodation, community facilities and appropriate accessory activities.
- (2) Respond to future demand and changes in the manner of learning and the desire to integrate business and education within the Special Purpose - Tertiary Education Zone.
- (3) Recognise the benefits of allocating a high quality tertiary education institution within a diverse urban environment.
- (4) Promote comprehensive planning by enabling integrated development in accordance with the precinct plan that provides for any of the following:
 - (a) Tertiary education and associated research, and community activities;
 - (b) Provision for the ongoing operation of the Mason Clinic;
 - (c) Provision for the operation of the commercial laundry service;
 - (d) Residential accommodation;
 - (e) Economic development and employment;
 - (f) Public infrastructure that is integrated with existing infrastructure, recognising that Wairaka receives stormwater from an upstream sub-catchment;

- (g) Integrated transport and land use planning through the development of the precinct;
 - (h) Traffic management, including provision of pedestrian and cycle facilities, integration with public transport, parking provision and management;
 - (i) Identification and protection of significant landscape features, the adaptation of the scheduled historic buildings, identified trees and open space network;
 - (j) Public road and open space access to the Oakley Creek reserve; or
 - (k) Pedestrian and cycle connections to Point Chevalier, Waterview and Mt Albert.
- (5) Promote economic activity and provide for employment growth that will create opportunities for students, graduates and residents of the precinct and Auckland.
- (6) Encourage a mix of residential lifestyles and housing typologies to cater for a diverse residential community at Wairaka.
- (7) Provide for a mix of residential and business activities which will enable development of a residential core to the Wairaka Precinct.
- (8) Enable a broad range of educational, research, laboratory, office and business uses which meet the needs and respond to future changes in teaching, learning, and research requirements for a modern campus environment.
- (9) Provide for a broad range of business, office, innovation and research activities which will encourage employment and economic development to locate in Wairaka, including those which benefit from the co-location with a tertiary education institution.
- (10) Enable subdivision and development that is compatible with and sensitive to the ecological qualities of the Oakley Creek and the Motu Manawa Marine Reserve.

Built Form and Character

- (11) Encourage the retention and adaptation of the heritage and character buildings, and elements identified within the precinct.
- (12) Provide for the adaptation of the scheduled part of the heritage building for economically viable activities which ensure ongoing economic sustainability for this building and its integration into the Wairaka Precinct.
- (13) Require new buildings to be designed in a manner that provides for a high standard of amenity, recognises landscape values and, where appropriate, enhances the streetscape and gateway locations of the precinct.
- (14) Require proposals for new buildings, structures and infrastructure or additions to existing buildings, structures and infrastructure adjoining or adjacent to the scheduled historic heritage buildings, and/or the significant ecological area of

Oakley Creek to be sympathetic and provide contemporary and high-quality design, which enhances the precinct's built form and natural landscape.

Open Space

- (15) Provide for public open space, including a neighbourhood park in the northern portion of the precinct.
- (16) Provide public connections to Oakley Creek from Carrington Road through public roads and open space, giving quality public access to this ecological area.

Pedestrian and cycle access, street quality and safety

- (17) Require development to maintain and provide a varied and integrated network of pedestrian and cycle linkages, open space and plazas within the precinct.
- (18) Require the key pedestrian and cycle linkages through the precinct to be direct and convenient, well designed, safe and improve connectivity for all users.
- (19) Establish a network of roads which give public access through the precinct and a pedestrian and cycling connections to the Oakley Creek and Waterview pedestrian/cycle bridge.

Transport Planning

- (20) Require subdivision and development to be integrated with transport planning and infrastructure in a way that:
 - (a) Avoids, remedies or mitigates the adverse effects of the development on the transport network;
 - (b) Integrates with rail, bus, pedestrian and cycle connections;
 - (c) Implements as a minimum the transport elements within the Precinct Plan;
 - (d) Supports the provision of passenger transport services, linking to key public transport nodes such as the Mount Albert train station and Point Chevalier public transport services;
 - (e) Minimises traffic effects on pedestrian and residents' safety and amenity;
 - (f) Minimises overflow parking on roads occurring in the vicinity of the precinct; and
 - (g) Stages subdivision and development with necessary surrounding transport network infrastructure and upgrades where adverse effects on the transport network cannot be avoided, remedied and mitigated.
- (21) Enable parking areas to service the scheduled heritage building.
- (22) Manage the expected traffic generated by activities in the precinct to avoid, remedy and mitigate adverse effects on the safety and efficiency of the surrounding transport network, particularly at peak times. For the purpose of this

precinct, the surrounding transport network comprises Carrington Road, the Precinct's existing and proposed access points to Carrington Road, the Carrington Road/Woodward Road intersection, the Woodward Road/New North Road intersection, the Carrington Road/New North Road and Carrington Road/Great North Road intersections, Laurel Street, Renton Road, Rhodes Avenue and the other local roads bounded by Carrington Road, New North Road, and Oakley Creek.

- (23) Require an integrated transport assessment for the precinct for any new development greater than 2,500m² gross floor area in the Business - Mixed Use Zone or greater than 1,000m² gross floor area in the residential zones, unless that additional development was assessed as part of an earlier assessment of transportation effects that is no more than two years old.
- (24) Require an integrated transport assessment for the precinct as part of any southern road connection (public or private), the first subdivision in the Business - Mixed Use and residential zones (other than for controlled activities) or for any new development greater than 2,500m² gross floor area in the Business - Mixed Use Zone or greater than 1,000m² gross floor area in the residential zones.
- (25) Avoid parking buildings within the Special Purpose - Tertiary Education Zone having direct access from Laurel Street, Renton Road, Rhodes Avenue (or any extension of those roads) or the western road shown on the precinct plan.
- (26) Avoid direct vehicle access between the Special Purpose - Tertiary Education Zone and Laurel Street, Renton Road, Rhodes Avenue (or any extension of those roads).

Integrated development

- (27) Manage potential adverse amenity effects from buildings at the precinct boundary by:
 - (a) Establishing a 5m yard and graduated building heights to the southern residential interface
 - (b) Establishing a 10m setback from the boundary of land that fronts Oakley Creek
 - (c) Require graduated building heights and locate higher buildings away from the precinct boundary.
- (28) Encourage built form, activities, public open spaces and infrastructure to be planned and designed on a comprehensive land area basis, rather than on an individual site basis.
- (29) Provide for the retail (including food and beverage) activities in identified locations of the precinct which:
 - (a) meets the needs of the campus;

- (b) serves local demand within the precinct; and
- (c) creates the opportunity for retail (including food and beverage) activities in the Historic Heritage overlay.

(30) Limit retail activities (including food and beverage) fronting or accessed directly from Carrington Road, restricting the number and size of supermarkets, preventing the concentration of retail activities at a single location, and placing caps on the size of retail tenancies and the overall gross floor area of retail in order to not adversely affect the role, function and amenity of the Point Chevalier and Mount Albert town centres.

Subdivision

(31) Apply the subdivision controls of the zoning to the subsequent subdivision of the precinct or sub-precinct, subject to that subdivision also meeting the requirements of the precinct plan.

Sub-precinct A

(32) Provide for the range of healthcare and related accessory activities of the Mason Clinic.

(33) Enable detailed site-specific planning of the Mason Clinic to reflect how the healthcare/hospital facility will be used and developed.

(34) Limit the scale of accessory activities so they do not undermine the role of the precinct or result in adverse traffic effects, but still meet the requirements of those who work, live or use services and activities in this sub-precinct.

Sub-precinct B

(35) Provide for the range of light manufacturing and servicing activities associated with the commercial laundry service.

(36) Enable detailed site-specific planning of the commercial laundry service to reflect how the facility will be used and developed.

(37) Limit the scale of accessory activities so they do not undermine the role of the precinct or result in adverse traffic effects, but still meet the requirements of those who work or use services and activities in this sub-precinct.

(38) Recognise that should the commercial laundry service and associated activities on this sub-precinct relocate from Wairaka, then the activities and controls of the Wairaka Precinct would apply.

Sub-precinct C

(39) Provide a broad range of residential activities adjacent to the Oakley Creek and residential neighbourhoods to the south of the precinct.

- (40) Provide quality dwellings which face west across Oakley Creek, providing passive surveillance of the public lands within Oakley Creek Valley.

The zoning, Auckland-wide and overlay policies apply in this precinct in addition to those specified above.

I334.4. Activity tables

The provisions in the zoning, Auckland-wide provisions and any relevant overlays apply in this precinct unless otherwise specified below.

- The activities listed in Table H13.4.1 Activity table for H13 Business - Mixed Use Zone at line items: (A20), (A21), (A23), (A24) and (A25)
- The activities listed in Table H30.4.1 Activity table for Special Purpose – Tertiary Education Zone at line items (A3), (A4) and (A5)

Tables I334.4.1, I334.4.2 and I334.4.3 Activity table specify the activity status of land use, development and subdivision activities in the Wairaka Precinct pursuant to sections 9(3) and 11 of the Resource Management Act 1991 or any combination of all these sections where relevant.

Table I334.4.1 Wairaka Precinct (all of precinct except for sub-precinct B and C)

Activity		Activity status
Use		
Accommodation		
(A1)	Dwellings in the Special Purpose - Tertiary Education Zone up to a maximum gross floor area of 7,500m ²	P
(A2)	Student accommodation, boarding houses and visitor accommodation in the underlying Special Purpose – Tertiary Education Zone accessory to tertiary education facilities	P
Commerce		
(A3)	Food and beverage, offices, commercial services, conference facilities, visitor accommodation, residential, community facilities, recreation and leisure activities within the Historic Heritage Overlay	P
(A4)	Offices in the underlying Special Purpose – Tertiary Education Zone accessory to tertiary education facilities	P
(A5)	Retail (including food and beverage) up to 200m ² gross floor area per tenancy	P
(A6)	Retail (including food and beverage) comprising up to one tenancy between 201m ² and 300m ² gross floor area adjacent to, and accessed from, Farm Road	RD
(A7)	Retail (including food and beverage) comprising up to one tenancy between 201m ² and 300m ² gross floor area adjacent to the Historic Heritage Overlay	RD
(A8)	Retail (including food and beverage but excluding one supermarket) up to 1,200 m ² adjacent to, and accessed from, Farm Road	P
(A9)	One supermarket up to 1500m ² adjacent to, and accessed from, Farm Road	P

(A10)	Commercial services within 100 metres of a supermarket	D
(A11)	Retail (including food and beverage) adjoining the southern Carrington Road bus node between gate access 3 and 4 shown on the Precinct plan, up to 500m ² gross floor area or 5 tenancies	P
(A12)	Retail (including food and beverage) within 100 metres of the Carrington Road frontage, not otherwise provided for	D
(A13)	Supermarkets not otherwise provided for	NC
(A14)	Retail (including food and beverage) not otherwise provided for	D
Community facilities		
(A15)	Informal recreation	P
(A16)	Organised sport and recreation	P
Industry		
(A17)	Light manufacturing and servicing	D
(A18)	Repair and maintenance services	D
(A19)	Warehousing and storage	D
(A20)	Waste management facilities in the underlying Special Purpose – Tertiary Education Zone accessory to tertiary education facilities	D
Mana Whenua		
(A21)	Marae	P
Development		
(A22)	Parking buildings	RD
(A23)	Non-security floodlighting, fittings and supports and towers	P
(A24)	Public amenities	P
(A25)	Sports and recreation structures	P
(A26)	Parking buildings associated with any Special Purpose – Tertiary Education Zone uses with direct vehicle connection to Western Road or to Laurel Street, Renton Road or Rhodes Avenue (or any extension of those roads)	NC
(A27)	Extension of Laurel Street, Renton Road or Rhodes Avenue into the Precinct provided that a cul de sac is maintained	P
(A28)	Connection of any southern roads (or extensions to the southern roads that remain cul de sacs) to the Precinct with a private road (non-gated)	C
(A29)	Connection of any roads to the Precinct with a public road	RD
(A30)	Direct vehicle connection between Laurel Street, Renton Road or Rhodes Avenue and the Special Purpose – Tertiary Education Zone	NC
(A31)	Any development not otherwise listed in Table I334.4.1 that is generally in accordance with the precinct plan	RD
(A32)	Any development not otherwise listed in Table I334.4.1 that is not generally in accordance with the precinct plan	D
(A33)	Buildings that exceed Standard I334.6.4 Height	D
Subdivision		
(A34)	Any vacant lot subdivision proceeding in accordance with the precinct plan and which creates lots consistent with the zone boundaries	C
(A35)	Any vacant lot subdivision that is not generally in	D

	accordance with the precinct plan	
--	-----------------------------------	--

Activity		Activity status
(A38)	Informal recreation	P
(A39)	Public amenity structures	P
(A40)	Student accommodation, boarding houses and visitor accommodation accessory to tertiary education facilities	P
(A41)	Tertiary education and ancillary activities existing in the Residential - Mixed Housing Urban and Residential - Terrace Housing and Apartment Buildings zones at 1 November 2015	P
(A42)	Any development not otherwise listed in Table I334.4.3 that is generally in accordance with the precinct plan	RD
(A43)	Any development not otherwise listed in Table I334.4.3 that is not generally in accordance with the precinct plan	D
(A44)	Any vacant lot subdivision proceeding in accordance with the precinct plan and which creates lots consistent with the zone boundaries	C
(A45)	Any vacant lot subdivision that is not generally in accordance with the precinct plan	D
(A46)	Parking buildings within Residential - Mixed Housing Urban Zone	NC
(A47)	Parking buildings within the Residential - Terrace Housing and Apartment Buildings Zone for any uses other than serving the residents of that zone	NC
(A48)	Buildings that exceed the Standard I334.6.4 Height	D

I334.5. Notification

- (1) An application for resource consent for a controlled activity listed in Tables I334.4.1, and I334.4.3 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under s95A(4) of the Resource Management Act 1991.
- (2) Any other application for resource consent for an activity listed in Tables I334.4.1, I334.4.2 and I334.4.3 Activity table which is not listed in Standard I334.5(1) above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I334.6. Standards

The standards applicable to the overlays, zones and Auckland-wide provisions apply in this precinct.

All activities listed as permitted, controlled or restricted discretionary in Table I334.4.1, I334.4.2 and I334.4.3 Activity tables must comply with the following standards.

I334.6.1. Floodlights

- (1) Where floodlights are located adjacent to a residential zone, the hours of operation must not extend beyond:
- (a) 10pm Monday to Saturday; and
 - (b) 7.30pm Sunday and Public Holidays.
- (2) Floodlights must comply with the lighting standards in E24.6 Auckland-wide Standards – Lighting.

I334.6.2. Retail thresholds

- (1) The following thresholds apply in this precinct:
- (a) The total gross floor area of retail (including food and beverage and supermarket) must not exceed 6500m² for the whole precinct;
 - (b) the total gross floor area of retail (including food and beverage) within the Business - Mixed Use Zone must not exceed 4500m²; and
 - (c) The total gross floor area of retail (including food and beverage) within the Special Purpose - Tertiary Education Zone must not exceed 3000m².
- (2) The total gross floor area of retail (including food and beverage) in the Historic Heritage Place must not exceed 1000 m² subject to Standard I334.6.2(1)(a) above.
- (3) All retail activities adjacent within 100m of to the supermarket must not exceed 1200m².
- (4) Any supermarket, adjacent to and accessed from Farm Road, must not have vehicle access or parking directly off Carrington Road.

I334.6.3. Stormwater

- (1) All subdivision and development of the land in the precinct must be consistent with the approved stormwater management plan.

I334.6.4. Height

- (1) Standards in the table below apply rather than underlying zone heights unless specified. Buildings must not exceed the heights as set out below:

Building location	Maximum height (m)
Less than 20m from a boundary with Carrington Road (as at 1 November 2015) or the Open Space: Conservation Zone (excluding the Residential - Mixed Housing Urban and Residential - Terrace Housing and Apartment Buildings zones)	18m
Greater than or equal to 20m from a boundary with Carrington Road (as at 1 November 2015) or Open Space: Conservation Zone (excluding the Residential - Mixed Housing Urban, Residential - Terrace Housing and Apartment Buildings and Special Purpose - Healthcare Facility and Hospital zones)	27m
Residential - Mixed Housing Urban, Residential - Terrace Housing and Apartment Buildings and Special Purpose - Healthcare Facility and Hospital zones	Specified zone height applies
Buildings within the Residential - Mixed Housing Urban Zone and within 10m of the southern precinct boundary	8m

I334.6.5. Landscaping

- (1) At least 20 per cent of a site within the precinct must be landscaped, provided that the area of landscaping may be proportionately reduced by any required common areas of landscaping within the zone approved by the Council and protected by consent conditions.

I334.6.6. Precinct boundary set back

- (1) Buildings on land within Sub-precinct C adjoining residential zoned land outside the precinct and to the south must be set back a minimum width of 5m from the external precinct boundary. Planting requirements of Standards H13.6.5 and H13.6.6 Business - Mixed Use Zone apply.
- (2) Buildings on land adjoining Open Space - Conversation zoned land outside the precinct must be set back a minimum width of 10m from the external precinct boundary. Planting requirements of Standards H13.6.5 and H13.6.6 Business - Mixed Use Zone apply.
- (3) Buildings on land fronting Carrington Road must be set back a minimum width of 28.2m when measured from the eastern edge of the Carrington Road road reserve as at 1 November 2015. This setback area may be used for walkways, cycleways, public transport facilities, site access, street furniture, outdoor dining and cafes. Other areas within the 28.2m not used for these activities must be landscaped. This setback does not apply once the road widening affecting the Wairaka Precinct Carrington Road frontage has been vested in the Auckland Council.

I334.6.7. Tree protection

- (1) In addition to any notable tree, Subject to Standard I334.6.7(2) below, the following trees identified in I334.11.2 Precinct plan 2 – protected trees and in Table I334.6.7.1 below must not be altered, removed or have works undertaken within the dripline except as set out in I334.6.7(2) below. Trees located within an existing or future road-widening area along Carrington Road frontage are not subject to this control.
- (2) Tree works to the trees identified below must be carried out in accordance with all of the provisions applying to Notable Trees in D13 Notable Tree Overlay, with the exception that up to 20 per cent of live growth may be removed in any one year.

Table I334.6.7.1 - Identified Trees

ID	Common name	Auckland district	Numbers of trees	Location/ Street address	Legal description
1	Pohutakawa	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 1 DP 211427 2.62ha
2	Pohutakawa	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 1 DP 211427 2.62ha
3	Pohutakawa	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 1 DP 211427 2.62ha
5	Oak	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 1 DP 211427 2.62ha
7	Karaka	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 1 DP 211427 2.62ha
9	Oak	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 1 DP 211427 2.62ha
10	Oak	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 1 DP 211427 2.62ha
11	Oak	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 1 DP 211427 2.62ha

Proposed Auckland Unitary Plan Decisions Version with Annotated Appeals

22	Mediterranean Fan Palm	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
23	Mountain Coconut, Coco	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
24	Chinquapin	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
25	White Mulberry	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
26	Totara	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
27	Australian Francipani	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
28	Kauri	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
29	Three Kings Climber	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
30	Norfolk Pine	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
31	Pepper Tree, Peruvian	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 5 DP 314949
32	Golden Ash	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
33	Jacaranda	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
34	Golden Ash	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
35	Variegated Five Finger	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
36	Maidenhair Tree	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
37	Brazilian Coral Tree	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
38	Dogwood	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
39	Houpara	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
40	Oleander	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 4 DP 314949
41	Taupata	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 2 DP 406935
42	Camphor Tree	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Pt Allot 33 Parish of Titirangi
43	Plum Pine	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Pt Allot 33 Parish of Titirangi
44	Camellia	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Pt Allot 33 Parish of Titirangi
45	Kohuhu	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Pt Allot 33 Parish of Titirangi

46	Silver Poplar	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 2 DP 406935
47	Liquidambar	Isthmus	1	Carrington Road 1, Mount Albert (Unitec)	Lot 2 DP 406935

I334.6.8. Access

- (1) The primary traffic access to the precinct must be from Carrington Road at locations shown on the Precinct plan.
- (2) Any retail (including food and beverage) fronting the southern bus node, must not have vehicle access directly off Carrington Road.

I334.6.9. Parking

- (1) No parking is required for activities located within the scheduled heritage building other than for the provision of loading requirements.
- (2) There must be no parking provided at the bus node for retail activities.

I334.7. Assessment – controlled activities

I334.7.1. Matters of control

The Council will reserve its control to the following matters when assessing a controlled activity resource consent application, in addition to the matters specified for the relevant controlled activities in the zone, Auckland-wide, or overlay provisions:

- (1) Connection of Precinct to Laurel Street, Renton Road or Rhodes Avenue with a private (non-gated) road:
 - (a) traffic effects on adjoining streets and the transport network;
 - (b) amenity and safety of adjoining streets and those within the precinct;
 - (c) design of road connections;
 - (d) benefits of connections (excluding benefits related to diversion of traffic from Carrington road);
 - (e) provision of walkway and cycle access; and
 - (f) turning restrictions within the precinct to reduce the likelihood of traffic entering the precinct through the southern roads to access car parking buildings within the Special Purpose – Tertiary Education Zone.
- (2) Subdivision
 - (a) boundaries of the precinct and sub-precincts aligning with the proposed site boundaries.

I334.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the zone, Auckland-wide or overlay provisions:

- (1) Connection of Precinct to Laurel Street, Renton Road or Rhodes Avenue with a private (non-gated) road:
 - (a) the extent to which the design of the road and associated landscaping creates:
 - (i) access consistent with the local road function; and
 - (ii) street trees, planting and other landscaping features that ensure a good standard of amenity;
 - (b) the extent to which the introduction of appropriate traffic calming measures discourages non-local traffic and to manage speed;
 - (c) the extent to which the management of the private road through such measures as signage, surface treatment, landscaping and speed restrictions does restrict the use of these roads to only those vehicles with authorised access;
 - (d) the extent of any positive benefits arising from the proposed connection (excluding benefits relating to diversion of traffic from Carrington road);
 - (e) the provision of walkway and cycleway access is not restricted. The extent to which landscaping and treatment reflects an appropriate standard of design for public walkways and cycle-ways; and
 - (f) the extent to which turning restrictions within the precinct are needed to reduce the likelihood of traffic entering the precinct through the southern roads to access car parking buildings within the Special Purpose – Tertiary Education Zone.

Subdivision

- (1) The extent to which subdivision boundaries align with the sub-precinct boundaries and with the precinct plan shown in Precinct plan 1 (or with any approved road network).

I334.8. Assessment – restricted discretionary activities

I334.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the zones, Auckland-wide, or overlay provisions:

- (1) Retail (including food and beverage) comprising up to one tenancy between 201m² and 300m² gross floor area adjacent to, and accessed from, Farm Road and or adjacent to the bus hub or Oakley Hospital building:
 - (a) building interface with any public place;
 - (b) safety;
 - (c) services;
 - (d) traffic;
 - (e) travel plans and integrated transport assessments;
 - (f) design of parking and access; and
 - (g) degree of integration with other centres.
- (2) Parking buildings/structures:
 - (a) ground contours;
 - (b) building interface with public places;
 - (c) safety;
 - (d) services including infrastructure and stormwater management;
 - (e) traffic;
 - (f) travel plans and integrated transport assessments; and
 - (g) design of parking and access.
- (3) Connections between the Precinct and Laurel Street, Renton Road or Rhodes Avenue with a public road:
 - (a) traffic;
 - (b) amenity and safety;
 - (c) design of road connections; and
 - (d) benefits of road connections(excluding benefits related to diversion of traffic from Carrington road);
 - (e) provision of walkway and cycle access; and
 - (f) turning restrictions within the precinct to reduce the likelihood of traffic entering the precinct through the southern roads to access car parking buildings within the Special Purpose – Tertiary Education Zone.
- (4) Any development not otherwise listed in Tables I334.4.1 and I334.4.3 that is generally in accordance with the precinct plan:
 - (a) Effects of the location and design of the access on the safe and efficient operation of the adjacent transport network having regard to:
 - (i) visibility and safe sight distances;

- (ii) existing and future traffic conditions including speed, volume, type, current accident rate, and the need for safe manoeuvring;
 - (iii) proximity to and operation of intersections;
 - (iv) existing pedestrian numbers, and estimated future pedestrian numbers having regard to the level of development provided for in this Plan; and
 - (v) existing community or public infrastructure located in the adjoining road, such as bus stops, bus lanes and cycleways;
- (b) The location and capacity of infrastructure servicing:
- (i) the extent to which stormwater, wastewater, water supply, electricity and telecommunication infrastructure needs to be provided to adequately service the nature and staging of anticipated development within the application area;
 - (ii) The effects on receiving environments from the location and design of the Indicative Stormwater Management Area and stormwater devices including the following:
 - (i) management of the adverse effects on receiving environments, including cumulative effects (which may be informed by any publicly available current stormwater and/or catchment management plans and analyses);
 - (ii) BPO for the management of the adverse effects of the stormwater diversion and discharge on receiving environments;
 - (iii) implementation of stormwater management devices and other measures and programmes that give effect to the BPO;
 - (iv) management and mitigation of flood effects, including on buildings and property;
 - (v) methods and measures to avoid land instability, erosion, scour and flood risk to buildings and property;
 - (vi) location, design and method of the discharge; and
 - (vii) management of stormwater flow and contaminants and the implementation of stormwater management devices and other measures;
- (c) The effects on the recreation and amenity needs of the users of the precinct and surrounding residents through the provision of:
- (i) open spaces which are prominent and accessible by pedestrians;
 - (ii) the number and size of open spaces in proportion to the future intensity of the precinct and surrounding area; and
 - (iii) effective and safe pedestrian and/or cycle linkages;

- (a) The location, physical extent and design of open space;
 - (b) The location of anticipated land use activities within the development;
 - (c) The location and physical extent of parking areas; and
 - (d) The staging of development and the associated resource consent lapse period
 - (e) The location and form of building footprints and envelopes.
 - (f) Building scale and dominance (bulk and location).
- (5) For development and/or subdivision that does not comply with Standards: I334.6.1 Floodlights; I334.6.2 Retail thresholds; I334.6.3 Stormwater; I334.6.4 Height; I334.6.5 Landscaping; I334.6.6 Precinct boundary setback; I334.6.7 Tree protection; I334.6.8 Access; I334.6.9 Parking; the Council will restrict its discretion to all of the following matters when assessing a restricted discretionary resource consent application:
- (a) the matters of discretion in Rule C1.9(3) of the general provisions apply;
 - (b) any special or unusual characteristic of the site which is relevant to the standard;
 - (c) where more than one standard will be infringed, the effects of all infringements considered together; and
 - (d) the effects on the following relevant matters:
 - (i) floodlights – the effects on the amenity values of adjoining residential areas;
 - (ii) retail thresholds – the needs of the campus and serving the local demand within the precinct, the role function and amenity of the Point Chevalier and Mt Albert town centres;
 - (iii) stormwater – See Matter I334.8.1(4)(c) above;
 - (iv) height – the effects on the amenity values of open spaces and adjoining residential areas;
 - (v) landscaping – the street edge, the delineation of pedestrian routes, the visual and pedestrian amenity effects caused by access ways, parking and service areas;
 - (vi) precinct boundary set back - Interface with the public realm and effects on neighbouring sites, building scale and dominance (bulk and location), and Outlook and privacy;
 - (vii) trees – See restricted discretionary activity matters of discretion in Matters D13.8.1 Notable Trees Overlay
 - (viii) access – the primary access to the precinct being on Carrington Road, the amenity values of existing residents as a result

of the southern connections becoming a direct vehicle entrance to the precinct;

- (ix) parking – the heritage values of the Oakley Hospital, the efficiency of operation of the bus hub.

I334.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the zones, Auckland-wide or overlay provisions:

- (1) Retail (including food and beverage) comprising up to one tenancy between 201m² and 300m² gross floor area adjacent to, and accessed from, Farm Road and or adjacent to the bus hub or Oakley Hospital building
 - (a) Building interface with any public places;
 - (i) the extent to which buildings have clearly defined public fronts that address the street and public open spaces to positively contribute to those public spaces and pedestrian safety;
 - (ii) the extent to which pedestrian entrances are located on the street frontage and be clearly identifiable and conveniently accessible from the street;
 - (iii) the extent to which buildings provide legible entrances and exits to covered plazas, open spaces and pedestrian linkages;
 - (iv) the extent to which separate pedestrian entrances are provided for residential uses within mixed use buildings;
 - (v) the extent to which activities that engage and activate streets and public open spaces are provided at ground and first floor levels;
 - (vi) the extent to which internal space at all levels within buildings is designed to maximise outlook onto street and public open spaces;
 - (vii) the extent to which building heights and form are designed to allow a reasonable level of natural light into existing and planned communal open spaces within the precinct, appropriate to their intended use and whether they may require building form to be modified to the north of such spaces;
 - (viii) the extent to which buildings are designed to support high quality open spaces and where appropriate provide views to the wider landscape and/or surrounding streets, to enhance the legibility, accessibility and character of the campuses; and
 - (ix) the extent to which through-site links and covered plazas integrate with the existing or planned public realm and pedestrian network and whether they are:

- publicly accessible and attractive; and
- designed to provide a high level of pedestrian safety.

(b) Safety:

- (i) whether new and upgraded buildings and public open spaces are designed in accordance with crime safety principles. For the purpose of this assessment, internal open spaces, plazas, foyers, lanes and pedestrian and cycleway linkages within the campuses will be considered as if they are public open spaces;
- (ii) the extent to which open spaces, plazas, foyers, lanes and pedestrian linkages have multiple entrances and exits rather than a single way in and out of such places and spaces; and
- (iii) the adequacy of safety measures to the Mason Clinic site and the design of the interface between the Mason Clinic and the adjacent public spaces and sites to provide for sensitive design in a high quality urban village and environmentally sensitive area, while meeting security requirements.

(c) Services:

- (i) the extent to which stormwater, wastewater, water supply, and electricity and telecommunication infrastructure are provided to adequately service the nature and staging of anticipated development within the subject land area; and
- (ii) the extent to which the location of built form, public open space and stormwater management infrastructure provide for the establishment of future stormwater management features, which incorporate low impact stormwater design principles and improved water quality systems.

(d) Traffic:

- (i) whether traffic calming measures on internal roads and those roads connecting to the south of the precinct, discourage through traffic from outside the Wairaka Precinct, and slow traffic with an origin or destination in the Special Purpose - Tertiary Education Zone or southern neighbourhoods; and
- (ii) the extent to which proposed developments meet the requirements of any existing integrated transport assessment applying to the proposed development or any new integrated transport assessment or other traffic assessment lodged with any resource consent application.

(e) Traffic plans and integrated transport assessments:

- (i) the extent to which proposed developments meet the requirements of any existing integrated transport assessment applying to the proposed

development or any new integrated transport assessment or other traffic assessment lodged with any resource consent application and provides appropriate travel plans that are consistent with the Integrated Transport Assessment.

(f) Design of parking and access:

- (i) the extent to which parking buildings avoid fronting Carrington Road or Oakley Creek or have direct access from Laurel Street, Renton Road, Rhodes Avenue (or any extension of those streets), or the western road shown on the Precinct plan;
- (ii) the extent to which parking is screened from public open spaces and streets;
- (iii) the extent to which ventilation and fumes from parking structures or other uses do not vent into the adjacent pedestrian environment at ground level;
- (iv) the extent to which vehicle crossings and access ways prioritise pedestrian movement and in particular are designed to reduce vehicle speed and are separated from pedestrian access, or are designed as a shared space; and
- (v) the extent to which the design of pedestrian routes between parking areas, building entrances/lobbies and the street are accessible by people of all ages and physical abilities and provide a high level of pedestrian safety.

(g) Degree of integration with other centres:

- (i) the extent to which the location, scale and staging of anticipated activity types in the precinct mitigates potential conflicts with activities within neighbouring centres; and
- (ii) the extent to which the location, scale and staging of offices do not have adverse effects on the role of other centres, beyond those effects ordinarily associated with trade effects or trade competition.

(2) Parking buildings and structures

(a) Ground contours:

- (i) the extent to which the proposed finished contour levels across the subject land area avoid variations between the ground floor level of future buildings and adjoining existing and proposed public open space (where information is available); and
- (ii) The extent to which where ground floor dwellings or visitor accommodation is proposed, some minor variations between the ground floor level and the level of adjoining open space or street may be acceptable to provide for the privacy of residents and occupants/users.

(b) Building interface with public spaces:

- (i) the extent to which buildings have clearly defined public fronts that address the street and public open spaces to positively contribute to those public spaces and pedestrian safety;
- (ii) the extent to which pedestrian entrances are located on the street frontage and be clearly identifiable and conveniently accessible from the street;
- (iii) the extent to which buildings provide legible entrances and exits to covered plazas, open spaces and pedestrian linkages;
- (iv) the extent to which separate pedestrian entrances are provided for residential uses within mixed use buildings;
- (v) the extent to which activities that engage and activate streets and public open spaces are provided at ground and first floor levels;
- (vi) the extent to which internal space at all levels within buildings is designed to maximise outlook onto street and public open spaces;
- (vii) the extent to which building heights and form are designed to allow a reasonable level of natural light into existing and planned communal open spaces within the precinct, appropriate to their intended use. This may require building form to be modified to the north of such spaces;
- (viii) the extent to which buildings are designed to support high quality open spaces and where appropriate provide views to the wider landscape and/or surrounding streets, to enhance the legibility, accessibility and character of the campuses;
- (ix) whether through-site links and covered plazas integrate with the existing or planned public realm and pedestrian network and are publicly accessible, attractive and designed to provide a high level of pedestrian safety.

(c) Safety:

- (i) whether new and upgraded buildings and public open spaces are designed in accordance with crime safety principles. For the purpose of this assessment, internal open spaces, plazas, foyers, lanes and pedestrian and cycleway linkages within the campuses will be considered as if they are public open spaces;
- (ii) the extent to which open spaces, plazas, foyers, lanes and pedestrian linkages have multiple entrances and exits rather than a single way in and out of such places and spaces; and
- (iii) the adequacy of safety measures to the Mason Clinic site and the design of the interface between the Mason Clinic and the adjacent public spaces and sites to provide for sensitive design in a high quality

urban village and environmentally sensitive area, while meeting security requirements.

(d) Services including infrastructure and stormwater management:

- (i) the extent to which stormwater, wastewater, water supply, and electricity and telecommunication infrastructure are provided to adequately service the nature and staging of anticipated development within the subject land area; and
- (ii) the extent to which the location of built form, public open space and stormwater management infrastructure provide for the establishment of future stormwater management features, which incorporate low impact stormwater design principles and improved water quality systems.

(e) Traffic:

- (i) whether traffic calming measures on internal roads and those roads connecting to the south of the precinct, discourage through traffic from outside the Wairaka Precinct, and slow traffic with an origin or destination in the Special Purpose - Tertiary Education Zone or southern neighbourhoods; and

(f) Travel plans and integrated transport assessments:

- (i) the extent to which proposed developments meet the requirements of any existing integrated transport assessment applying to the proposed development or any new integrated transport assessment or other traffic assessment lodged with any resource consent application and provides appropriate travel plans that are consistent with the Integrated Transport Assessment.

(g) Design of parking and access

- (i) the extent to which parking buildings avoid fronting Carrington Road or Oakley Creek or have direct access from Laurel Street, Renton Road, Rhodes Avenue (or any extension of those streets), or the western road shown on the Precinct plan;
- (ii) the extent to which parking is screened from public open spaces and streets;
- (iii) the extent to which ventilation and fumes from parking structures or other uses do not vent into the adjacent pedestrian environment at ground level;
- (iv) the extent to which vehicle crossings and access ways prioritise pedestrian movement and in particular are designed to reduce vehicle speed and are separated from pedestrian access, or are designed as a shared space; and

- (v) the extent to which the design of pedestrian routes between parking areas, building entrances/lobbies and the street are accessible by people of all ages and physical abilities and provide a high level of pedestrian safety.

(3) Connections between the Precinct and Laurel Street, Renton Road or Rhodes Avenue with a public road:

(a) Traffic:

- (i) the extent to which traffic management measures on roads which connect to the south of the Precinct are designed to avoid the southern connection becoming the primary entrance for tertiary education uses or becoming a faster alternative to Carrington Road for non-local traffic;

(b) Amenity and safety:

- (i) whether the design of the road and associated landscaping creates:
 - access consistent with the local road function;
 - street trees, planting and other landscaping features that ensure a good standard of amenity; and
- (ii) the extent to which the introduction of appropriate traffic calming measures discourages non-local traffic and manages speed. Methods could include, but are not limited to, one lane sections, narrow carriageways, intersections designed to slow traffic and interrupt flow, avoidance of roundabouts which facilitate speedy movement through the precinct, and designing the carriageway as shared space with a meandering route.

(c) benefits of road connections(excluding benefits related to diversion of traffic from Carrington road):

- (i) the extent of any positive benefits arising from the proposed connection (excluding benefits related to diversion of traffic from Carrington Road) and the provision of walkway and cycleway access is not restricted.

(d) provision of walkway and cycle access:

- (i) the extent to which landscaping and treatment reflects an appropriate standard of design for public walkways and cycle-ways.

(e) turning restrictions within the precinct to reduce the likelihood of traffic entering the precinct through the southern roads to access car parking buildings within the Special Purpose – Tertiary Education Zone:

- (i) the extent to which turning restrictions within the precinct are needed to reduce the likelihood of traffic entering the precinct through the

southern roads to access car parking buildings within the Special Purpose – Tertiary Education Zone.

- (4) Any development not otherwise listed in Tables I334.4.1 and I334.4.3 that is generally in accordance with the precinct plan:
- (a) The extent to which effects of the location and design of the access on the safe and efficient operation of the adjacent transport network have been adequately assessed and managed having regard to:
 - (i) visibility and safe sight distances;
 - (ii) existing and future traffic conditions including speed, volume, type, current accident rate, and the need for safe manoeuvring;
 - (iii) proximity to and operation of intersections;
 - (iv) existing pedestrian numbers, and estimated future pedestrian numbers having regard to the level of development provided for in this Plan; and
 - (v) existing community or public infrastructure located in the adjoining road, such as bus stops, bus lanes and cycleways;
 - (b) The location and capacity of infrastructure servicing:
 - (i) the extent to which stormwater, wastewater, water supply, electricity and telecommunication infrastructure needs to be provided to adequately service the nature and staging of anticipated development within the application area; and
 - (ii) the extent to which stormwater management methods that utilise low impact stormwater design principles and improved water quality systems are provided.
 - (c) The effects on the recreation and amenity needs of the users of the precinct and surrounding residents through the provision of and pedestrian and/or cycle connections:
 - (i) The extent to which the design demonstrates the staging of wider network improvements to public open space, including covered plaza, open spaces, pedestrian walkways and cycleway linkages including:
 - the layout and design of open space and connections with neighbouring streets and open spaces;
 - integration with cultural landmarks, scheduled buildings, scheduled trees and historic heritage in and adjacent to the precinct; and
 - (d) the extent to which the location, physical extent and design of open space meets the demand of future occupants of the site and is of a high quality, providing for public use and accessibility, views, sunlight access and wind protection within the application area.

- (e) The location of land use activities within the development:
- (i) the extent to which the location and staging of anticipated activity types and/or the location, orientation or layout of buildings avoids or mitigates potential conflicts between activities within the subject land area; and
 - (ii) opportunities to establish community facilities for future occupants of the site and for the wider community are encouraged within the development
- (f) The location and physical extent of parking areas and vehicle access:
- (i) The extent to which parking, loading and servicing areas are integrated within the application area taking account of location and staging of anticipated activity types.
- (g) The staging of development and the associated resource consent lapse period:
- (i) Whether the proposal adequately details the methods by which the demolition and development of the site will be staged and managed to compliment the proposed open space, road and lane network and to avoid, remedy or mitigate adverse effects associated with vacant disused areas of the site.
- (h) The location and form of building footprints and envelopes.
- (i) the assessment criteria of the zone standards for new buildings and/or alterations and additions to buildings apply; and
 - (ii) the extent to which the new buildings or alterations and additions to buildings are consistent with the elements of the precinct plan, including the location of the transport network, open spaces and infrastructure.
 - (iii) the extent to which buildings that do not comply with the bulk and location and amenity controls demonstrate that the ground floor of a building fronting a street or public open space provides interest for pedestrians and opportunities for passive surveillance of the public realm.
 - (iv) Whether buildings activate the adjoining street or public open space by:
 - being sufficiently close to the street boundary and of a frontage height that contributes to street definition, enclosure and pedestrian amenity;
 - having a pedestrian entrance visible from the street and located sufficiently close to reinforce pedestrian movement along the street;

- providing a level of glazing that allows a reasonable degree of visibility between the street/public open space and building interior to contribute to pedestrian amenity and passive surveillance;
 - avoiding blank walls at ground level; and
 - providing convenient and direct entry between the street and the building for people of all ages and abilities.
- (v) Whether dwellings located on the ground floor of a building adjoining a street or public open space positively contribute to the public realm while achieving privacy and a good standard of amenity for occupiers of the dwelling, in particular by:
- providing balconies over-looking the street or public open space;
 - providing a planted and/or fenced setback to the street or public open space. Landscaping or fencing should be low enough to allow direct sightlines from a pedestrian in the street or public open space to the front of a balcony; and
 - raising the balcony and floor plate of the ground floor dwellings above the level of the adjoining street or public open space to a height sufficient to provide privacy for residents and enable them to overlook the street or public open space.
- (vi) The extent to which development that does not comply with the amenity controls demonstrates that:
- landscaping, including structural tree planting and shrubs, defines the street edge, delineates pedestrian routes and mitigates adverse visual and pedestrian amenity effects caused by access ways, parking and service areas. Whether landscaping is planted to ensure sight lines to or from site entrances are not obscured; and
 - where the side or rear yard controls are infringed, any adverse visual amenity and nuisance effects on neighbouring sites are mitigated with screening and landscaping.
- (i) Building scale and dominance (bulk and location):
- (i) the extent to which buildings that exceed the building height, height in relation to boundary and maximum building coverage demonstrate that the height, location and design of the building allows reasonable sunlight and daylight access to:
- streets and public open spaces;
 - adjoining sites, particularly those with residential uses; and

- the proposed building;
- (ii) the extent to which such buildings meet policies in the Special Purpose - Tertiary Education Zone and Wairaka Precinct;
- (iii) the extent to which the building is not visually dominating when viewed from the street, neighbouring sites, public open spaces and from distant locations;
- (iv) The extent to which buildings on corner sites demonstrate that additional building mass and height is appropriate in that location and makes a positive contribution to the streetscape;
- (v) whether activities and buildings that do not comply with the outlook control demonstrate that:
- (vi) occupants are provided with a good standard of outlook and privacy between useable/occupied spaces on the same and adjacent sites;
- (vii) the building positively contributes to passive surveillance of the street, rear/sides of site and streetscape amenity; and
- (viii) where the requirements of the outlook control are met, whether such buildings adversely affect the amenity of any complying new/ existing development on an adjoining site,.

I334.9. Special information requirements

An application for any subdivision or development must be accompanied by:

Integrated Transport Assessment

- (1) As part of any southern road connection (public or private), the first subdivision resource consent application in the Business - Mixed Use or residential zones (other than for controlled activities) or land use resource consent application for any development greater than 2,500m² gross floor area in the Business - Mixed Use Zone or greater than 1,000m² in the residential zones, the applicant is required to produce an integrated transport assessment for the precinct. An updated integrated transport assessment for the precinct will be required for all further development in excess of 2,500m² gross floor area in the Business - Mixed Use Zone or greater than 1,000m² gross floor area in the residential zones, unless that additional development was assessed as part of an Integrated Transport Assessment that is not more than two years old.

Stormwater Management Plan

- (1) The following applies to land use consent applications for the land in the precinct:
 - (a) as part of the first land use consent application (excluding developments of less than 1,000m² gross floor area in the Special Purpose - Tertiary

Education Zone; and developments less than 2,500m² in the Business - Mixed Use and Terrace Housing and Apartment Buildings zones), a comprehensive stormwater management plan which considers the appropriateness of any identified stormwater quality and quantity management devices to service the development must be prepared for all the land in the precinct.

- (b) the comprehensive stormwater management plan must be prepared in accordance with the information requirements in Requirement I334.9(3) below.
- (c) this standard does not apply where the land use application is in accordance with a subdivision consent previously approved on the basis of a previously approved comprehensive stormwater management plan

(2) A stormwater management plan that:

- (a) demonstrates how stormwater management will be managed across the precinct or development to avoid, remedy or mitigate adverse effects;
- (b) applies an integrated stormwater management approach, consistent with Policy E1.3.10 Water Quality and integrated management;
- (c) identifies any areas of on-site stormwater management and provides for these in development and subdivision;
- (d) identifies the location, extent and of any infrastructure, including communal stormwater management devices and any proposed new or upgrades to infrastructure;
- (e) integrates/interfaces with the wider stormwater network, including that outside of the precinct; and
- (f) demonstrates compliance with the Council's relevant codes of practice and infrastructure standards; OR

(3) Demonstrate how stormwater will be managed in accordance with the stormwater management plan prepared for the precinct.

An application for development that is or is not generally in accordance with the precinct plan must include the following:

(1) Plans showing:

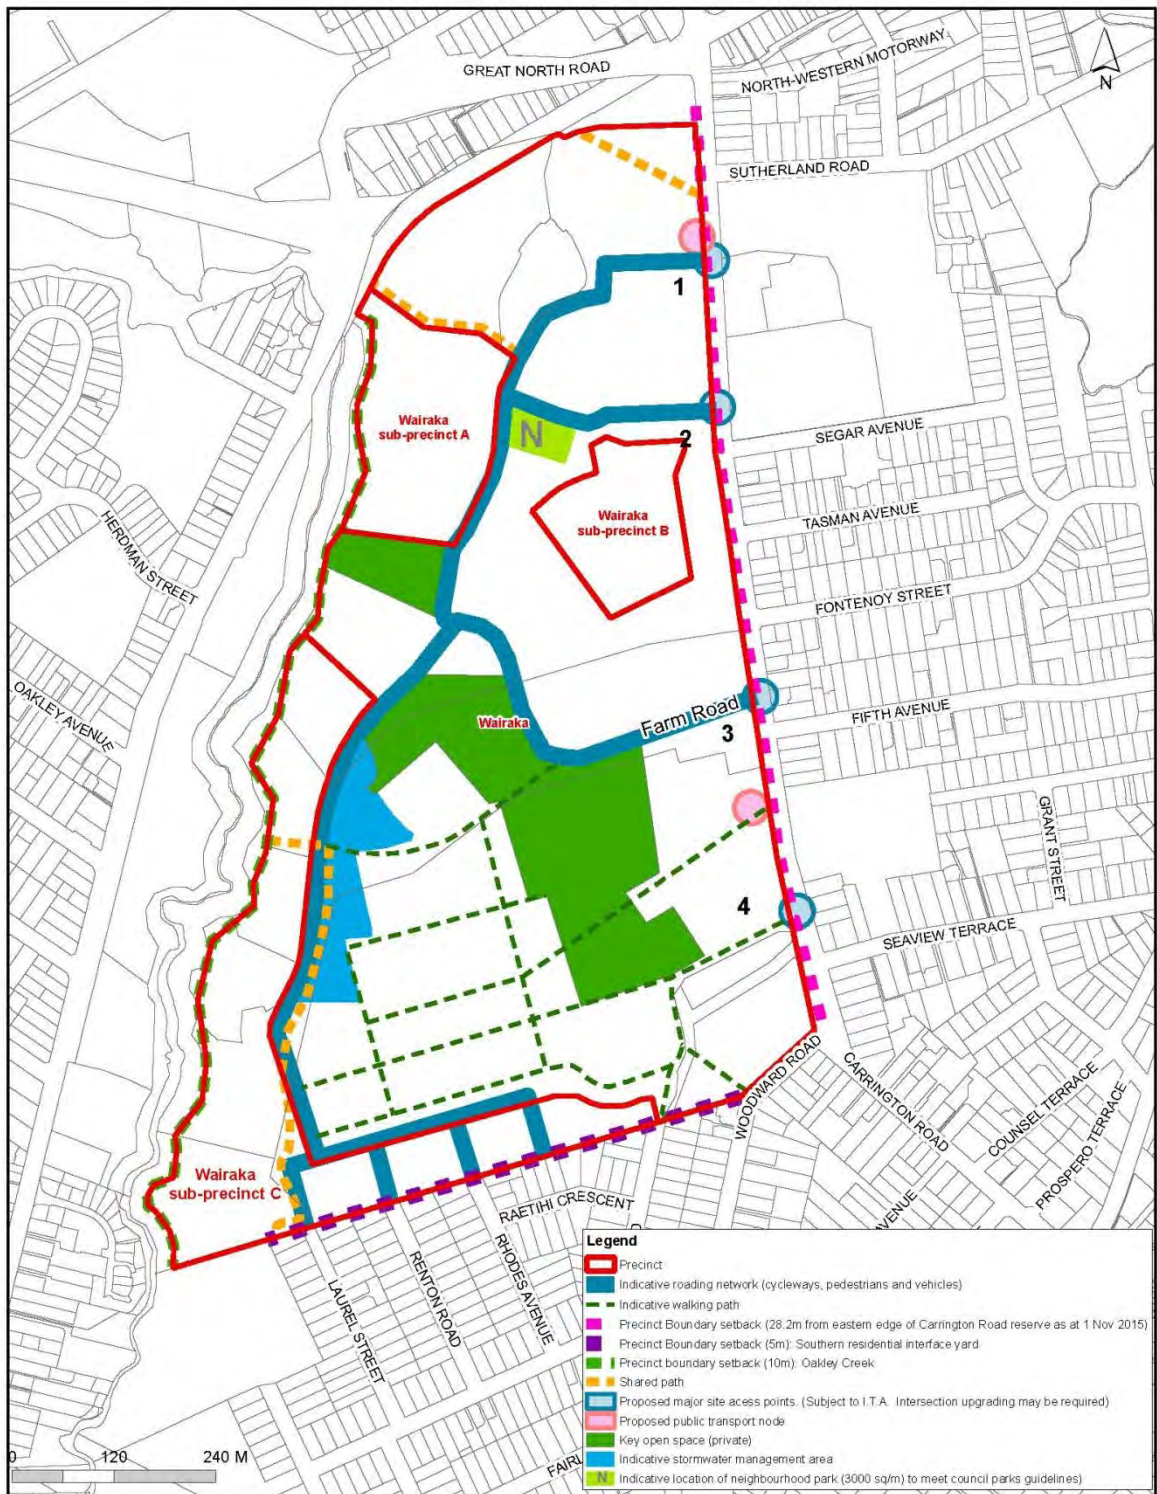

- (a) the overall context of the subject land area relative to existing buildings, public open space and transport connections and any approved buildings and approved framework plans generally;
- (b) where changes are intended, the relationship of site contours to existing and proposed streets, lanes, any public open space shown;

- (c) building footprints, profiles and height relative to existing and proposed streets, lanes and any existing or proposed public open space;
 - (d) the location and layout of public open space areas (within the control of the landowner or leaseholder), including the general location of soft and hard landscaping areas, such as pocket parks, plazas, pedestrian linkages, walkways, covered plazas and linking spaces that complement the existing public open space network;
 - (e) the location and layout of vehicle access, entries, exits, parking areas including number of spaces and loading and storage areas;
 - (f) the location and layout of services and infrastructure;
 - (g) the location and function of pedestrian, cycling and vehicle routes to and within the precinct, and their relationship to other areas. This must include representative street and lane cross sections showing the width of footpaths, cycle paths and traffic lanes;
 - (h) the general location and function of existing and proposed streets and lanes, including cross-sections where applicable; and
 - (i) indicative location and layout of proposed sites, including their site areas and buildings types.
- (2) Proposed building profile and height as viewed from all existing and proposed street frontages, existing and proposed public open spaces. For the purpose of this requirement, building profile means two-dimensional and three-dimensional building block elevations and building cross- sections showing:
- (a) overall building form and height (as opposed to detailed design);
 - (b) indicative proposed floor to ceiling heights of each building storey;
 - (c) areas at ground level adjoining public open space intended to be available for active uses; and
 - (d) areas of walls likely to contain windows for principal living areas of accommodation units to demonstrate how the outlook space development control will be met.
- (3) A landscape management plan for landscaped areas to be covenanted, public open space landscaping, roads and streetscapes and walkways. The plan must provide details on:
- (a) plant species schedules;
 - (b) planting specifications including individual tree planting locations;
 - (c) weed control and management;

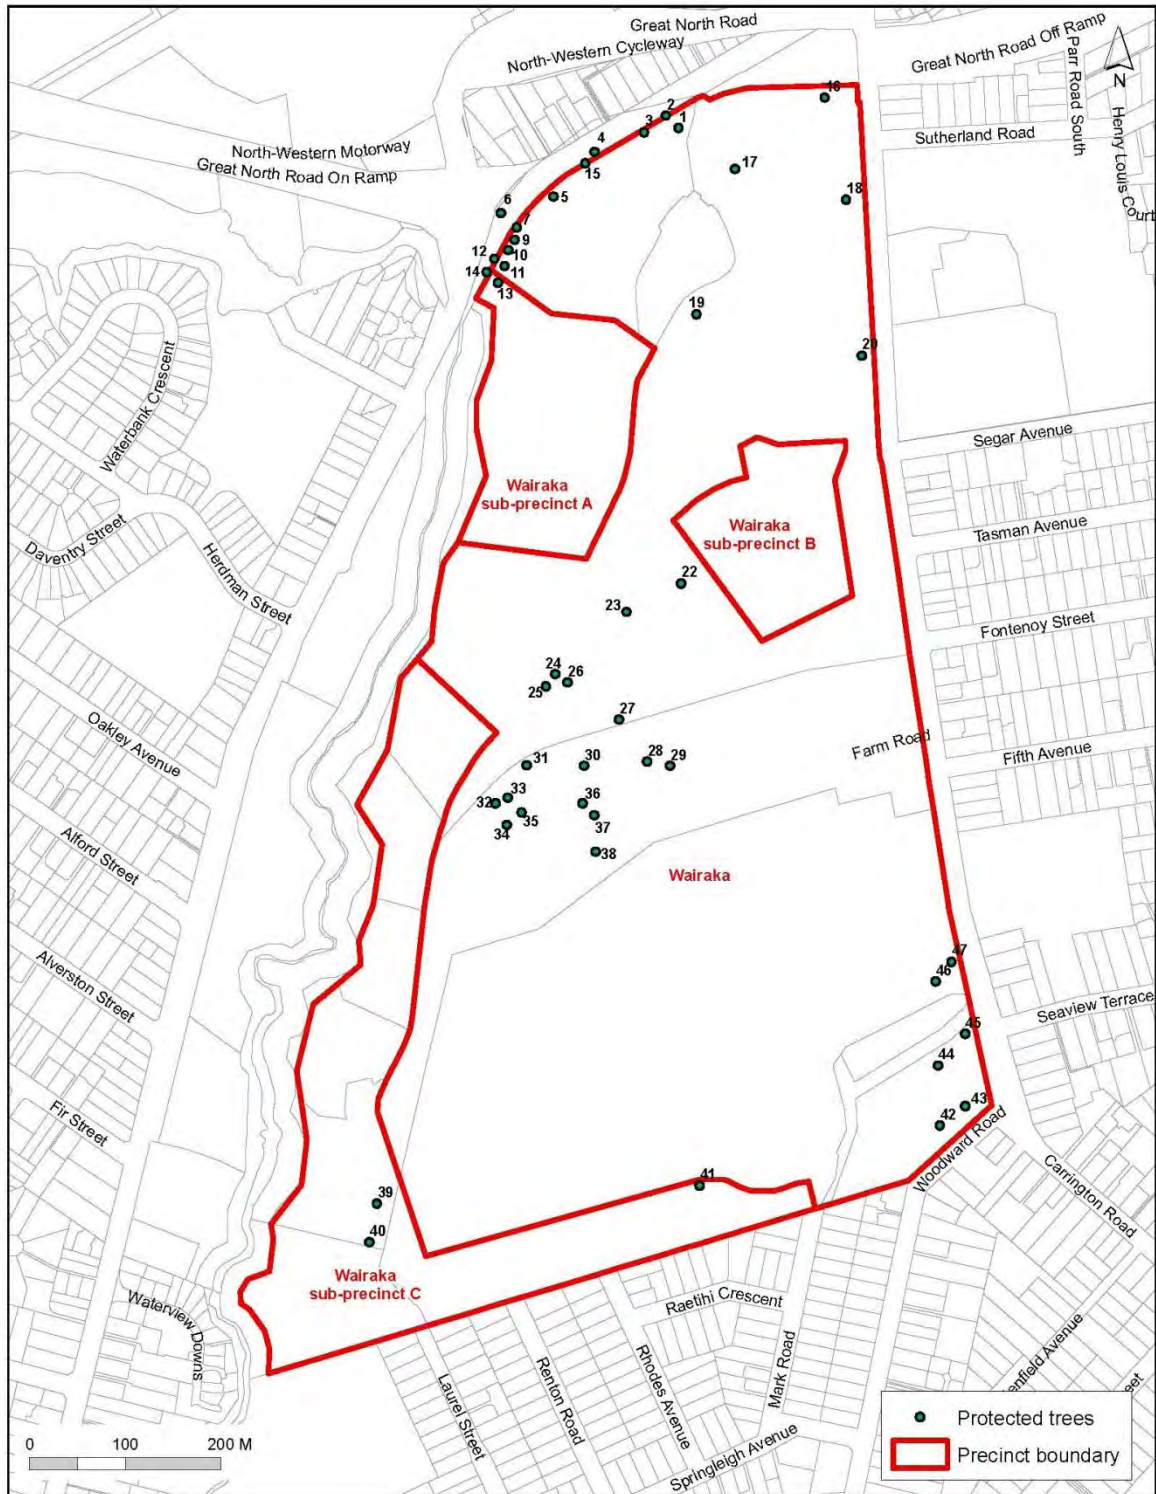

- (d) implementation; and
 - (e) the location and design of public seating, vehicle barriers, signage, pedestrian lighting, litter receptacles, and other amenity features in line with crime prevention through environmental design principles.
- (4) An infrastructure and stormwater management plan that demonstrates how the development will meet the controls and assessment criteria in this precinct regarding infrastructure and servicing, including:
- (a) location and extent of infrastructure, including areas of on-site stormwater management (if applicable) and integration/interface with the wider precinct;
 - (b) any proposed new or upgrade to infrastructure;
 - (c) staging of development; and
 - (d) compliance with the Council's relevant codes of practice and infrastructure standards.
- (5) A traffic management plan that demonstrates how the development will meet the controls and assessment criteria in this precinct regarding traffic generation and management, including:
- (a) a traffic management assessment demonstrating how the precinct will manage traffic demand, alternate transport options, connections to public transport and key connections to and within the precinct; and
 - (b) be prepared in accordance with current best practice guidelines adopted by Auckland Transport.
- (6) The general location of activity types with potential to influence the staging and design of development across the subject land area including:
- (a) general proposed activity types at activity interfaces, including activity types to be established adjacent to existing lawful activities (including industrial activities);
 - (b) proposed staging of demolition, earthworks and building development, and where information is available, the staging of public open space.

I334.10. Precinct plans

I334.10.1 Wairaka: Precinct plan 1

1334.10.2 Wairaka: Precinct plan 2 – Protected Trees

I335. Western Springs Stadium Precinct

I335.1. Precinct description

The Western Springs Stadium Precinct provides specific planning controls for the use and development of Western Springs Stadium as a multi-functional recreation, sporting and events venue within a natural amphitheatre that has a crowd capacity upwards of 50,000 people.

The zoning of the land within the Western Springs Stadium Precinct is the Special Purpose - Major Recreation Facility Zone.

Refer to the planning maps for the location and extent of the precinct.

I335.2. Objectives

- (1) Western Springs Stadium is protected as a regionally and nationally important venue for all of the following primary activities:
 - (a) organised sports and recreation;
 - (b) informal recreation;
 - (c) motorsport activities;
 - (d) concerts, events and festivals;
 - (e) markets, fairs and trade fairs;
 - (f) functions, conferences, gatherings and meetings; and
 - (g) displays and exhibitions.
- (2) A range of activities compatible with, or accessory to, the primary activities are enabled.
- (3) The adverse effects of the operation of Western Springs Stadium are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those listed above.

I335.3. Policies

- (1) Enable the safe and efficient operation of Western Springs Stadium for its primary activities.
- (2) Protect the primary activities of Western Springs Stadium from the reverse sensitivity effects of adjacent development.

- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
- (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of Western Springs Stadium, having regard to the amenity of surrounding properties.
- (5) Recognise that Western Springs Stadium’s primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those listed above.

I335.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E40 Temporary activities;
- (2) E25 Noise and vibration (noise provisions only);
- (3) E24 Lighting;

Table I335.4.1 Activity table specifies the activity status of land use and development activities in the Western Springs Stadium Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I335.4.1: Activity table

	Activity	Activity status
Use		
Primary activities		
(A1)	Organised sport and recreation	P
(A2)	Informal recreation	P
(A3)	Motorsport activities	P
(A4)	Motorsport activities not meeting Standard I335.6.3	D
(A5)	Concerts, events and festivals	P
(A6)	Markets, fairs and trade fairs	P
(A7)	Functions, conferences, gatherings and meetings	P

(A8)	Displays and exhibitions	P
(A9)	Any primary activity not meeting Standard I335.6.8 but meeting all other standards	C
Accessory activities		
(A10)	Accessory activities	P
(A11)	Any accessory activity not meeting Standard I335.6.8 but meeting all other standards	C
Compatible activities		
(A12)	Sports, recreation and community activities	P
(A13)	Professional fireworks displays meeting Standard I335.6.13	P
(A14)	Professional fireworks displays not meeting Standard I335.6.13	RD
(A15)	Helicopter flights meeting Standard I335.6.14	P
(A16)	Helicopter flights not meeting Standard I335.6.14	RD
(A17)	Filming activities	P
(A18)	Any compatible activity not meeting Standard I335.6.8 but meeting all other standards	C
Development		
(A19)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 20m in height	P
(A20)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m in height	RD
(A21)	Light towers and associated fittings up to and greater than 20m in height	P
(A22)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I335.6.11	RD
(A23)	Demolition of buildings	P
(A24)	Temporary buildings	P
(A25)	Workers' accommodation	P

I335.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I335.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.

- (2) Any application for resource consent for an activity listed in Table I335.4.1 Activity table and which is not listed in I335.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I335.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I335.4.1 must comply with the following standards unless otherwise stated. The following standards do not apply:

- (1) E27 Transport – Standards E27.6.1 Trip generation; and
- (2) E27 Transport – Standards E27.6.2. Number of parking and loading spaces

I335.6.1. Noise

- (1) Motorsport activities and the operation of the public address system are excluded from this standard.
- (2) The noise (rating) level from any activity as measured within the boundary of any site with a residential zone must not exceed the noise limits in Table I335.6.1.1.

Table I335.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Between 8:00am and 10:30pm	55dB L _{Aeq}
At all other times	40dB L _{Aeq} and 75dB L _{Amax}

- (3) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) Professional fireworks displays and helicopter flights are excluded from this standard.

I335.6.2. Special noise events

- (1) Special noise events do not include motorsport activities and the operation of the public address system.

- (2) The total number of special noise events in any 12 month period must not exceed the numbers and timeframes listed in Table I335.6.2.1.

Table I335.6.2.1: Numbers and timeframes of special noise events

Event	Timeframes	Number of events
High special noise events	10:00am to 10:00pm Sunday to Thursday (inclusive)	6
	10:00am to 11:00pm on Fridays and Saturdays	
Medium special noise events	10:00am to 10:00pm	4
Low special noise events	10:00am to 10:00pm	4

- (3) The noise (rating) level generated by special noise events must not exceed the noise limits listed in Table I335.6.2.2 when measured from the specified measurement locations.

Table I335.6.2.2 Noise Limits for special noise events

Event	Noise limit	Measurement location
High special noise events	82dB $L_{Aeq(5min)}$	Within the boundary of any property zoned residential on Old Mill Road, West View Road, Bullock Track or Great North Road
Medium special noise events	70dB $L_{Aeq(5min)}$	Within the boundary of any property zoned residential on Old Mill Road, West View Road, Bullock Track or Great North Road
Low special noise events	55dB $L_{Aeq(5min)}$	Within the boundary of any property zoned residential on Old Mill Road, West View Road
	70dB $L_{Aeq(5min)}$	Within the boundary of any property zoned residential on Bullock Track or Great North Road

- (4) Noise levels must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (5) Where $L_{Aeq(5min)}$ is specified, no 5 minute measurement sample can exceed the stated limit.
- (6) No duration correction or adjustment for special audible characteristics will be applied.
- (7) The prescribed time frames for the purpose of assessment according to NZS6802:2008 will be the timeframe for which any particular noise limit applies.
- (8) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (9) Testing and balancing of all sound systems including vocal checks by performers must cumulatively not exceed 2 hours. These checks must not commence before 10am on any day and must be completed by 7pm on the day of the special noise event. The duration of special noise events does not include sound checks, provided sound checks are limited to a cumulative duration of up to 2 hours.
- (10) Special noise events may occur consecutively over a day or days, but may not exceed the total number of special noise events allowed in any 12 month period provided that:
 - (a) There must be no more than 2 special noise events on any one day.
 - (b) There must be no more than 4 special noise events within any 2 week period.
- (11) A single special noise event must be limited to a total duration of 6 hours. Any special noise event lasting longer than 6 hours must be counted as 2 special noise events. The duration of a special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.
- (12) Professional fireworks displays and helicopter flights are excluded from this standard.

1335.6.3. Motorsport activities

- (1) Frequency
 - (a) Race meetings and practice sessions must be no longer than 5 hours from start to finish, including all breaks and warm-ups.
 - (b) Race meetings and practice sessions must start no earlier than midday. Practice sessions must conclude no later than 6pm and race meetings

must conclude no later than 10.30pm, except that any race meeting on a Sunday must conclude by 9.30pm.

- (c) Race meetings and practice sessions may only be held as follows:
 - (i) 2 practice sessions in October;
 - (ii) 3 race meetings in November;
 - (iii) 2 race meetings in December;
 - (iv) 3 race meetings in January;
 - (v) 3 race meetings in February; and
 - (vi) 1 race meeting in March.
- (d) There must be no race meetings on Christmas Eve, Christmas Day, Auckland Anniversary Day or Waitangi Day and one weekend per month from November to February (inclusive) must have no race meeting.
- (e) A draft event programme must be provided to the Council and notified publicly in June each year. The event programme may provide for a race meeting to be held on the day following the day it was scheduled for if the scheduled race meeting is rained out, however this may only occur in relation to 8 of the 12 race meetings and those meetings where rainouts are permitted must be specified in the event programme. A race meeting is deemed to be rained out if any of the scheduled races cannot take place due to rain. Only the races that were scheduled to be undertaken but could not be may be run on the rainout day.
- (f) Mechanical car park sweeping and grading of the track must not take place on Sundays, unless it is authorised as a rainout event.
- (g) Motor racing includes only those events held under the auspices of Speedway New Zealand.

(2) Noise

- (a) The noise (rating) level from motorsport activities within the Western Springs Stadium Precinct must not exceed 89dB $L_{Aeq(5min)}$ and 83dB $L_{Aeq(5hour)}$ when measured 10m inside any part of the northern boundary of the precinct that has a clear view of at least 75% of the track.
- (b) All noise sources from within the stadium (except localised contamination) must be measured during a motorsport activity to determine compliance with this noise limit, subject to all of the following:
 - (i) Noise levels must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise;

- (ii) No duration correction or adjustment for special audible characteristics will be applied; and
- (iii) Where $L_{Aeq(5min)}$, is specified, no 5 minute measurement sample can exceed the stated limit.

I335.6.4. Public address system

- (1) The noise (rating) level from the public address system within the Western Springs Stadium Precinct must not exceed 69dB $L_{Aeq(5min)}$ and 80dB L_{Amax} when measured at the boundary of any site within a residential zone.
- (2) Noise levels must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) No duration correction or adjustment for special audible characteristics will be applied.
- (4) Where $L_{Aeq(5min)}$, is specified, no 5 minute measurement sample can exceed the stated limit.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) The public address system may only to be used between 10:00am to 10:00pm Sunday to Thursday (inclusive) and 10:00am to 11:00pm on Fridays and Saturdays.
- (7) The public address system loudspeakers must not be used during racing.

I335.6.5. Post motorsport special noise events

These standards apply to events occurring when no motorsport activities also occur during the same calendar year. They provide for a range of activities in the event that motorsport activities are discontinued within the precinct.

- (1) There are no motorsport activities held in the same calendar year as a post motorsport special noise event.
- (2) The venue owner must provide the Council with written confirmation that no motorsport activities will occur within the same calendar year as a post motorsport special noise event.
- (3) There may be up to 30 post motorsport special noise events undertaken in any calendar year.
- (4) There must not be more than 3 post motorsport special noise events held within a 2 week period.
- (5) The noise level from any activity as measured within the boundary of any site with a residential zone must not exceed 70dB $L_{Aeq(5min)}$.

- (6) A single post motorsport special noise event must be limited to a total duration of 6 hours. Any special noise event lasting longer than 6 hours must be counted as 2 post motorsport special noise events. The duration of a post motorsport special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.
- (7) Post motorsport special noise events may only take place between the hours of 8am to 10pm Sunday to Thursday, and 8am to 10.30pm on Fridays and Saturdays.
- (8) Noise levels must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (9) An adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.
- (10) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (11) Where $L_{Aeq(5min)}$, is specified, no 5 minute measurement sample can exceed the stated limit.
- (12) Professional pyrotechnic fireworks displays and helicopter flights are excluded from this standard.

I335.6.6. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of these Standard I335.6.6, the curfew and pre-curfew times are as stated in Table I335.6.6.1.

Table I335.6.6.1: Pre-curfew and curfew times

		Times
Standard	Pre-curfew	7am to 10pm
	Curfew	10pm to 7am
Motorsport activities	Pre-curfew	Monday to Saturday: 7am to 11:30pm Sunday: 7am to 10.30pm
	Curfew	Monday to Saturday: 11:30pm to 7am Sunday: 10.30pm to 7am
Special lighting events	Pre-curfew	Sunday to Thursday: 7am to 12am Friday and Saturday: 7am to 12am
	Curfew	Sunday to Thursday: 12am to 7am Friday and Saturday: 12am to 7am

(5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:

- (a) the levels in Table I335.6.6.2 when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I335.6.6.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) the vertical illuminance limits in Table I335.6.6.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I335.6.6.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15 per cent (based on an adaptation luminance of 2 cd/m²) on any public road, calculated within each traffic lane in the direction of travel.
- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I335.6.6.4 and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I335.6.6.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd
Motorsport activities	25,000 cd
Special lighting events	25,000 cd

- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed 10 cd/m². The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.

I335.6.7. Special lighting events

- (1) The total number of special lighting events in any 12 month period must not exceed 19 events.
- (2) For the purpose of this standard, a special lighting event exceeds the standard lighting limits but does not exceed the special lighting limits listed in Tables I335.6.6.1 and I335.6.6.4.

I335.6.8. Traffic management

All activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 7,000 people and does not require the closure of a public road.

I335.6.9. Parking

- (1) Parking for a minimum of 110 cars must be retained within the precinct unless an authorised Transport and Traffic Management Plan is in effect.

I335.6.10. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone, must be screened from those areas.

I335.6.11. Interface control areas

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on the precinct plan. Temporary buildings are excluded from this standard.

I335.6.12. Height in relation to boundary

- (1) Along the boundaries where the Western Springs Stadium Precinct directly adjoins another zone, the height in relation to boundary standard that applies to the precinct is that which applies in the adjoining zone.
- (2) Where the Western Springs Stadium Precinct directly adjoins a road (excluding Stadium Road) or a zone with no height in relation to boundary standard, buildings must not project beyond a 45 degree recession plane measured from a point 8.5m vertically above ground level at the precinct boundary.
- (3) Temporary buildings, light towers and associated fittings are excluded from this height in relation to boundary standard.

I335.6.13. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 meters from any residential zone.
- (5) Displays must comply with 140dB L_{Zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I335.6.14. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 150m from any neighbouring site.

I335.6.15. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I335.7. Assessment – controlled activities

I335.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) The effects of the proposed activity on the safety and efficiency of the transport network.

I335.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I335.8. Assessment – restricted discretionary activities

I335.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Any activity that does not comply with noise and/or lighting standards:
 - (a) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) Any activity that does not comply with permitted helicopter flight standards:
 - (a) The effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties.
- (3) Any activity that does not comply with permitted professional fireworks display standards:
 - (a) The effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.

- (4) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m in height and/or which does not comply with height in relation to boundary standards:
 - (a) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I335.6.11:
 - (a) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) Any activity that does not comply with screening standards:
 - (a) The visual effects of rubbish and storage areas on residential and open space sites.

I335.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards;
and
 - (iii) the degree of non-compliance.
 - (b) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time.
 - (c) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
 - (d) the extent to which any artificial lighting will create a traffic safety issue.
 - (e) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing.

- (f) the extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance.
 - (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
 - (h) the extent to which additional special events adversely affect the amenity of surrounding properties having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of special event standards;
 - (iii) the additional number of special events; and
 - (iv) whether there is an operational need for the exceedance.
- (2) The effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
- (a) the extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (a) the extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (b) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones).
 - (c) whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s.
 - (d) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.

- (4) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (a) the extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
- (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) The visual effects of rubbish and storage areas on residential and open space zoned sites:
- (a) the extent to which screening is practicable.
 - (b) the extent to which distance and topographical matters mitigate likely adverse visual effects.

I335.9. Special information requirements

There are no special information requirements for this precinct.

I335.10. Precinct plans

I335.10.1. Western Springs Stadium: Precinct plan 1

I336. Sylvia Park Precinct

[ENV-2016-AKL-000193: Kiwi Property Group, Kiwi Property Holdings Limited and Sylvia Park Business Centre Limited]

I336.1. Precinct description

The underlying zoning of the land within the Sylvia Park precinct is the Business - Metropolitan Centre zone. Refer to the planning maps for the location and extent of the precinct.

Sylvia Park is located at 286 Mount Wellington Highway, Mount Wellington, and is identified as an emergent metropolitan centre in the Auckland Plan.

The purpose of the Sylvia Park precinct is to guide future development towards supporting a greater range of activities for it to become a metropolitan centre.

Achieving high quality development for buildings and publicly accessible open spaces, including the plaza, and others proposed, integrated with enhanced public transport facilities, will provide a community focal point with a unique sense of place.

Particular consideration needs to be given to building form, function, detailing and materials for new buildings. Future development should also recognise areas of remnant natural character, including Mutukaroa - Hamlins Hill and Panmure Basin. In addition, the precinct identifies a limited earthworks corridor which identifies the course of a historic, spiritual and culturally significant stream of importance to Mana Whenua. The path of the stream has been identified and commemorated onsite as part of its development. Some piling or service earthworks requiring resource consents may be necessary within the corridor.

I336.2. Objectives

- (1) Sylvia Park precinct provides a mix of residential, commercial, civic and community activities which promotes its role as a Metropolitan Centre.
- (2) Development within the Sylvia Park precinct is integrated with the surrounding urban environment, infrastructure and the natural values of the area.

The underlying Business Metropolitan Centre zone, Auckland-wide and overlay objectives apply in this precinct, in addition to those specified above.

I336.3. Policies

- (1) Enable and encourage Sylvia Park precinct to become a Metropolitan Centre by the establishment of a broader range of uses including residential, retail, community, entertainment, education, civic and commercial activities.
- (2) Require development to avoid or mitigate potential adverse effects on the environment, amenity and public safety of surrounding residential and commercial areas. Particular attention should be given to adverse effects in relation to the limited earthworks corridor and the transition in heights between the Metropolitan Centre and the surrounding residential areas and Business - Mixed Use zones.

- (3) Require development to deliver the Structural Elements identified in Precinct Plan 2 (I336.10.2) - Sylvia Park and to:
- (a) provide an integrated and legible urban form
 - (b) enable and encourage a mix of activities
 - (c) establish high-quality buildings in terms of external and internal appearance and functionality
 - (d) establish high-quality, vibrant and accessible streets and public spaces
 - (e) facilitate walking, cycling and public transport use to encourage sustainable transport patterns
 - (f) achieve a form of development that respects the surrounding cultural and physical environment
 - (g) provide high quality dwellings which cater for different stages through a range of dwelling sizes.
- (4) Ensure dominant activities in sub-precinct C are dwellings and home occupations to provide a transition area with the adjoining residential zone that integrates with the surrounding environment.

The underlying Business - Metropolitan Centre zone, Auckland-wide and overlay policies apply in this precinct, in addition to those specified above.

I336.4. Activity table

The underlying zone, Auckland-wide and relevant overlays activity tables apply in sub-precinct A and sub-precinct B unless otherwise specified below.

The sub-precinct C activity table below replaces the underlying zone activity table. The Auckland-wide and relevant overlays activity tables apply in this sub-precinct unless otherwise specified below.

Table I336.4.1 Activity table specify the activity status of land use and development in the Sylvia Park Precinct pursuant to sections 9(3) and 11 of the Resource Management Act 1991 or any combination of all these sections where relevant.

Table 0.4.1: Activity table

	Activity	Activity status
Use		
Sub-precincts A and sub-precinct B		
(A1)	Public places	P

Development - sub-precinct A – I336.10.1. Precinct Plan 1: Height areas		
(A2)	Buildings up to 27m	C
(A3)	Buildings between 27m and 72.5m	RD
(A4)	Buildings greater than 72.5m	D
Development – sub-precinct B - I336.10.1. Precinct Plan 1: Height areas		
(A5)	Buildings up to 27m	C
(A6)	Buildings greater than 27m	D
Site Intensity: Maximum basic allowable Gross Floor Area controls		
(A7)	Any combination of: retail; entertainment facilities; taverns; restaurants, cafes and other eating places up to 120,000m ² provided the maximum allowed GFA for retail does not exceed 102,000m ²	P
(A8)	Any combination of retail, entertainment facilities, taverns, restaurants, cafes and other eating places exceeding 120,000m ² but within the overall basic GFA limitation	RD
(A9)	Any combination of retail, entertainment facilities, taverns, restaurants, cafes and other eating places exceeding the 200,000m ² GFA limitation	D
(A10)	Offices up to 48,000m ²	P
Development - Sub-precinct C – I336.10.1. Precinct Plan 1: Height areas		
(A11)	Buildings up to 22.5m	C
(A12)	Buildings greater than 22.5m	D
Specific Activities - Sub-precinct C		
(A13)	Care centres	P
(A14)	Community facilities	P
(A15)	Healthcare facilities	P
(A16)	Home occupations	P
(A17)	Public places, informal recreation and leisure	P
(A18)	Dwellings	P
(A19)	All other activities in the Business - Metropolitan Centre zone not listed in this activity table, except those deemed as non-complying	D
Site Intensity: Maximum basic allowable Gross Floor Area controls		
(A20)	Up to 6000m ² of residential and other permitted activities	P
(A21)	A combined area of 3000m ² relating to care centres, community facilities and healthcare facilities	P

I336.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I336.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991. For the following activities council will consider limited notification may be given to identified Mana Whenua; being Ngati Paoa, Ngati Maru, Ngati Whanaunga and Ngati Tamatera for:
 - (a) A control infringement of Standard I336.6.8.
- (2) Any other application for resource consent for an activity listed in Table I336.4.1 Activity table above which is not listed in Standard I336.5(1) above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I336.6. Standards

The standards applicable to the overlays, zones and Auckland-wide provisions apply in this precinct unless otherwise specified below.

Business - Metropolitan Centre zone standards not applying to this precinct include:

- (1) Standard H9.6.1 Building height
- (2) Standard H9.6.4 Maximum tower dimension and tower separation
- (3) Standard H9.6.5 Residential at ground floor
- (4) Standard H9.6.7 Landscaping

All other standards in the Business - Metropolitan Centre zone, Auckland-wide standards and any relevant overlays apply in this precinct in addition to Standards I336.6.1 – I336.6.8 below:

I336.6.1. Site Intensity

- (1) The maximum total basic gross floor area on the site is 200,000m² subject to the limitations set out in the activity table under I336.4.1.
 - (a) Bonus accommodation floor area: Where floor area is developed for residential units, visitor accommodation, hotels, and boarding houses/hostels, the maximum basic GFA limitation may be exceeded by:
 - (i) up to 50,000m² as a permitted activity
 - (ii) over 50,000m² as a restricted discretionary activity

- (b) Office activity exceeding 48,000m² up to a maximum of 70,000m² GFA is a restricted discretionary activity.
- (c) Non-residential activities exceeding the standards above (as set out in the activity table) will be considered a discretionary activity.

I336.6.2. Home occupations

- (1) Refer to Standard H6.6.2 Home occupations

I336.6.3. Building height (shown in I336.10.1)

- (1) For the purposes of calculating height in the Sylvia Park precinct, the ground level of the site will be calculated based on the 'Geotechnical Completion Report for Earthworks' prepared for SKM by Tonkin & Taylor Ltd, dated May 2006.

- (2) Building platform – sub-precinct A and sub-precinct B

- (a) 'Height area– sub-precinct A'

- (i) The maximum height is 72.5m provided that all parts of buildings between 27m and 72.5m in height must:
 - In total, not exceed more than 15 per cent of the area of 'Height area - sub-precinct A'
 - in each case, not exceed a floor plate area of 3000m² and
 - be separated from each other by a minimum horizontal distance of 20m.

- (b) 'Height area – sub-precinct B'

- (i) Buildings must not exceed 27m in height.

- (3) Building platform – sub-precinct C

- (a) Buildings must not exceed 22.5m in height

- (4) Development that does not comply with clauses 1 to 3 above is a discretionary activity.

Development in sub-precincts A and B not complying with standards I336.6.4. to I336.6.7 below is a restricted discretionary activity.

I336.6.4. Frontage control

- (1) Within those parts of the site identified in I336.10.2 - Precinct Plan 2: Structuring Elements which are subject to the Frontage A control, the establishment of new buildings, or undertaking additions and alterations to existing buildings, must at ground level:

- (a) directly abut the road or any intervening public space to which the control relates
 - (b) have a minimum floor to floor height of 4m for a minimum depth of 8m
 - (c) have clear glazing for 75 per cent of its height for at least 50 per cent of the ground floor building frontage, other than vehicle entrances and loading bays, and pedestrian entrances and lobbies
 - (d) not include residential activity and/or car parking unless retail/commercial activity fronts the street and the residential activity and/or car parking is located behind the retail/commercial activity.
 - (e) The ground floor frontage of buildings used for commercial sexual services and strip clubs must screen the areas where the services take place, if they are directly visible from the street.
- (2) Within those parts of the site identified in I366.10.2 - Precinct Plan 2: Structuring Elements which are subject to the Frontage B control, the establishment of new buildings, or undertaking additions and alterations to existing buildings, must at ground level comply with clauses 1.b - e above.

I366.6.5. Vehicle access

- (1) Vehicle access to the site is limited to the entry/exit points identified in I366.10.2 - Precinct Plan 2: Structuring Elements.

I366.6.6. Heavy vehicle access

- (1) With the exception of emergency service vehicles, heavy motor vehicles are not permitted to enter or leave the site via Stud Way.
- (2) For the purpose of this rule, a heavy motor vehicle is a goods delivery vehicle and service vehicles with a gross laden weight exceeding 3500kg, where the gross laden weight is the total of the unladen weight of the vehicle and the maximum load the vehicle is generally allowed to carry at the time.

I366.6.7. Landscaping and on-site amenity areas

- (1) A minimum of 10 per cent of the site must be developed for landscaping and on-site amenity areas.
- (2) Landscaping must achieve visual enhancement of at-grade car parking areas visible from pedestrian access routes and roads subject to the frontage controls shown on I366.10.2, Precinct Plan 2: Structuring elements.
- (3) The 'Cone' (located over the existing open space as shown on I366.10.2 , Precinct Plan 2: Structuring Elements) must receive direct sunlight between 11am-2pm September - March inclusive.
- (4) For the purpose of this clause, on-site amenity areas includes the pedestrian plaza referred to as open space areas and those shown in I366.10.2, Precinct

Plan 2: Structuring Elements including playgrounds, water features, other amenity areas and pedestrian walkways.

I336.6.8. Limited earthworks corridor

- (1) Earthworks must not exceed 1m in depth below ground level within the limited earthworks corridor measured 5m either side of the centre line which is shown on I336.10.3 Limited earthworks corridor diagram.
- (2) For the purposes of this rule, ground level is defined as the reduced levels in the precinct as recorded on Tse Group Limited survey plans referenced Project No. 5019-01- 102/1, 102/2 and 102/3 dated 29 January 1999.
- (3) An infringement of the corridor control will be considered as a controlled activity.

I336.7. Assessment – Controlled Activities

I336.7.1. Matters of control

For activities/development that is a controlled activity in the Sylvia Park precinct, the council will reserve its control to the following matters, in addition to the matters specified for the relevant controlled activities in the Business - Metropolitan Centre zone, Auckland-wide or overlay provisions.

- (1) Buildings less than 27m in height
 - (a) general design principles
 - (b) building design
 - (c) street level interface
 - (d) upper floors and roof levels
 - (e) off-site road works
 - (f) limited earthworks corridor

I336.7.2. Assessment criteria

For activities/development that is a controlled activity in the Sylvia Park precinct, the following assessment criteria apply.

- (1) Buildings up to 27m in height
 - (a) General design principles
 - (i) The extent to which:
 - development provides an integrated and legible urban form
 - development provides a variation in building height

- development contributes to the prevention of crime through design and configuration.
- legible and safe pedestrian access routes as shown in Precinct Plan 2: Structuring Elements are provided between significant on-site activities, including public transportation facilities
- the scale and location of buildings provide a sense of enclosure to Mount Wellington Highway
- buildings are sustainable, using durable low maintenance materials, maximising solar access and natural ventilation, and incorporating mechanical and electrical systems that optimise energy efficiency
- on-site stormwater conservation measures are incorporated where appropriate, including rainwater harvesting devices, green roofs or rain gardens
- development has regard to the required works and management plans set out in I336.9 Special information requirements (1) (a) and (1) (b) of the Sylvia Park precinct
- development avoids, remedies or mitigates any adverse effect on the identification and commemorative measures in relation to the stream and limited earthworks corridor.

(b) Building design

(i) The extent to which:

- building design is of high-quality, showing creativity and responsiveness to the local context, including architectural character and expression, use of materials, articulation and modulation to create visual interest
- modulation of the facade is expressed at macro, medium and detail scales
- flat planes or blank facades devoid of modulation, relief or surface detail have been avoided where appropriate
- the building is of a form, location and orientation that minimises or avoids creating adverse shadowing, amenity and wind effects for:
 - the 'Cone', 'Green'(town square), Pedestrian Plaza as well as key future amenity areas within the Precinct or immediately adjacent
 - the pedestrian connections as shown in I336.10.2 -Precinct plan 2: Structuring elements
 - any residential zones in the vicinity of the precinct.

(c) At street level, the extent to which:

- (i) the building contributes to pedestrian vitality, interest and public safety through the use of architectural detail and maximising door and window openings
- (ii) building entrances are easily identifiable and accessible from street level, and provide pedestrian shelter

- (iii) separate pedestrian entrances have been provided for different uses within the building, particularly for residential activity
- (iv) vehicle accesses and loading facilities are designed for pedestrian safety in terms of location, visibility, and width.

(d) At upper levels and on rooftops, the extent to which:

- (i) large expanses of blank walls are avoided on road and public open space frontages
- (ii) architectural design differentiates upper building levels from middle and ground levels
- (iii) cantilevered balconies are avoided
- (iv) roof profiles should be part of the overall building form and contribute to the architectural quality of the skyline as viewed from both ground level and higher surrounding buildings. This includes the integration of plant, exhaust and intake units and other mechanical and electrical equipment into the overall rooftop design.

(e) Engineering

- (i) The extent to which the:
 - building design avoids or mitigates natural hazards arising from stormwater and stability issues in the precinct
 - design and location of the building impacts the overland flow path registered on the certificate of title.

(f) Other

- (i) Prior to construction starting, a site and traffic management plan has been provided to council's satisfaction, specifying:
 - the site manager and contact details
 - measures to maintain the site in a tidy condition in terms of disposal and storage of rubbish, storage and unloading of building materials and similar construction activities
 - measures for waste management, including designated sites for storage and collection of refuse and glass/plastic/can recycling bins in accordance with the council's waste reduction policy
 - procedures for controlling sediment runoff and the removal of soil debris and construction materials from public roads or places
 - proposed numbers and timing of truck movements throughout the day including identification of heavy vehicle routes which avoid residential streets
 - location of workers' conveniences
 - site entry/exit for construction vehicles
 - hours of construction and demolition

- dust control measures
 - location of site hoardings
 - procedures for managing construction traffic.
- (ii) Where development exceeds 148,000m², the extent to which on-site or off-site roading works are required to mitigate significant traffic effects covered in clause I336.9 (1) (a) (iv) below.
- (iii) Earthworks greater than 1m deep below ground level within the limited earthworks corridor
- Control is restricted to and applications will be assessed in terms of any effect on the relationship of Mana Whenua and their culture and traditions with wāhi tapu in the precinct, especially wāhi whenua and wāhi pito.
 - Conditions may be imposed on consents to avoid, remedy or mitigate any adverse effects of works to support Mana Whenua, including:
 - a requirement to notify the council and Mana Whenua before any earthworks start
 - supervision of works by a council-appointed archaeologist and Mana Whenua representatives
 - control how earthworks are managed, such as hand digging rather than mechanical digging
 - limits on the duration of the works
 - controls aimed at minimising the physical extent of the works
 - controls aimed at locating the works to minimise their effect on wāhi tapu

I336.8. Assessment – Restricted discretionary activities

I336.8.1. Matters of discretion

For activities and development that is a restricted discretionary activity in the Sylvia Park precinct, the council will restrict its discretion to the following matters in addition to the matters specified for the relevant restricted discretionary activities in the Business - Metropolitan Centre zone and the Auckland-wide rules:

- (1) Travel management
- (2) Trip generation
- (3) Building design over 27m in height and up to 72.5m
- (4) Frontage Control
- (5) Car parking
- (6) Vehicle Access
- (7) Heavy vehicle access
- (8) Landscaping and on-site amenity areas

I336.8.2. Assessment criteria

For activities and development that is a restricted discretionary activity in the Sylvia Park precinct, the following assessment criteria apply, in addition to the criteria specified for the relevant restricted discretionary activities in the Business - Metropolitan Centre zone, the Auckland-wide, or overlay provisions and having reference to the guiding principles set out in Sylvia Park precinct Policy 3:

- (1) Residential units, visitor accommodation, hotels, and boarding houses/hostels where the maximum combined total GFA exceeds 250,000m².
 - (a) the extent to which development contributes to achieving a modal shift toward more sustainable transport modes including any available information demonstrating the success or otherwise of travel management measures implemented at Sylvia Park.
- (2) Office activity exceeding 48,000m² up to a maximum of 70,000m² GFA and any combination of retail entertainment facilities, taverns, restaurants, cafes and other eating places between 120,000m² and 130,000m², provided retail activity does not exceed 102,000m².
 - (a) The extent to which development contributes to achieving a modal shift toward more sustainable transport modes including any available information demonstrating the success or otherwise of travel management measures implemented at Sylvia Park.
 - (b) The extent to which the activity will result in a total trip generation for Sylvia Park in excess of 4350 private vehicle trips per hour in weekday 4pm-6pm peaks.
 - (c) For the purposes of calculating this number, any unrealised GFA for:
 - (i) Retail entertainment facilities taverns restaurants, cafes and other eating places below the 120,000m² provided for as a permitted activity will be factored into the calculation at a rate of 2.61 trips per 100m²
 - (ii) Offices already consented or below the 48,000m² provided for as a permitted activity will be factored into the calculation at a rate of 1.65 trips per 100m².
 - (iii) The extent to which measures are proposed to mitigate adverse traffic effects where total private vehicle trips per hour in the weekday 4pm-6pm peaks exceeds 4350.
- (3) Buildings over 27m high in Height area sub-precinct A

In addition to the criteria for assessment of buildings as a controlled activity set out above, discretion is restricted to whether:

- (a) the building maintains or enhances visual amenity of development on the site as a whole as viewed from residential zones, and from public places outside the Sylvia Park precinct
 - (b) building scale and location provides an appropriate transition between the activities on the site and neighbouring residential activities
 - (c) views to and from Hamlins Hill are significantly compromised as a result of the concentration of large-scale building forms
 - (d) the building responds and relates appropriately to the scale of the surrounding public infrastructure, including the Southern Motorway, South Eastern Arterial (SEART), Mt Wellington Highway, and the main trunk railway line
 - (e) the building responds and relates appropriately to the scale and form of neighbouring onsite buildings
 - (f) the building provides an attractive silhouette against the sky when viewed from major public spaces within and around the site, making a positive contribution to the collective skyline of the commercial centre
 - (g) the location of the building has been considered in relation to its urban context and makes a positive contribution to the urban structure, particularly with regard to the distribution of other taller buildings and the location of public open spaces and amenities.
- (4) Frontage control
- (a) Where buildings do not front the road boundary, the extent to which intervening space is developed and designed as a public amenity area, including hard or soft landscaping.
 - (b) The extent to which the structural framework of the building enables conversion of the floor space to comply with future height and glazing requirements.
 - (c) The extent to which building design and/or landscaping features mitigate a reduction in glazing.
 - (d) The extent to which the building design and/or location adversely affects pedestrian amenity.
- (5) Car parking
- (a) Car parking and loading not meeting the requirements of Tables E27.6.2.3 and E27.6.2.4 in clause E27 of the Auckland-wide rules - Transport section will be assessed against the relevant matters set out in clause E27.6.3 of the Auckland-wide rules - Transport section.

(6) Vehicle access

- (a) The extent to which any new access will adversely affect the operational capacity and safety of the adjacent road network and amenity of adjacent sites.

(7) Heavy vehicle access

- (a) The extent to which heavy vehicle access may result in adverse effects in terms of road safety and residential amenity.

(8) Landscaping and on-site amenity areas

- (a) The extent to which the infringement may result in the loss of on-site amenity

I336.9. Special information requirements

An application for resource consent must be accompanied by:

(1) Required works and management plans

Works and management plans must be provided to council's satisfaction and protected by conditions on resource consents or by way of other mechanisms outside the Unitary Plan. Except as otherwise provided in this precinct, the works and management plans described below are to be funded by the landowner(s) or their nominee.

(a) Required works

(i) Pedestrian plaza

- A pedestrian plaza with a minimum area of 400m² must be provided within sub-precinct A south of the south-eastern arterial flyover and located so it can be conveniently accessed from other parts of the site, is sheltered from the wind, is designed for personal safety, and receive direct sunlight between 11am and 2pm. The design and location of the plaza must be approved by the council. The location of the plaza should be determined having regard to the alignment of nearby streets, the distribution of activities, and the configuration of buildings. The plaza is to be provided no later than the completion of 148,000m² of GFA of development on the site.

(ii) Drainage

- Any relocation, reconstruction or diversion of existing public sewer or stormwater drains through the site, necessary to allow development of the centre, must meet design standards specified by the relevant authority. Such work will be to the cost of the development except insofar as the relevant authority requests or requires that replacement

drains have a greater nominal capacity than the existing system and this extra capacity is required to serve land outside the development.

- Any existing drain requiring reconstruction due to its physical condition will be the subject of a financial contribution from the development to the extent only that additional capacity is required to service the development.
- A primary stormwater system of underground pipes or open channels must be provided to convey runoff from the site from storms with a 10-year return period.
- A secondary system of overland flow paths must be provided to convey additional runoff from the site from storms with a return period greater than 10 years, and up to 100 years.

(iii) Pedestrian and cycleway connection

- A new safe pedestrian and cycleway connection must be provided to connect the site to Lynton Road in the general location shown in Precinct Plan 2: Structuring Elements.
- The connection will have a minimum width of 5m and a design approved by the council.
- The connection is to be provided no later than completion of 148,000m² of GFA of development on the site.

(iv) Off-site roading works

- Council may require, as conditions upon resource consents, works or financial contributions so that any physical changes to the roading network required as a result of the redevelopment of the site in accordance with the core precinct are carried out.
- Conditions regarding on-site or off-site road works, including a requirement to signalise internal roundabouts, may be imposed on individual applications for resource consent that will increase total approved development on the site above 148,000m² as the need for such works becomes apparent. The amount of any financial contribution payable on any individual application will be the proportion of the actual cost of road works required as a result of the particular application. The proportion payable on any application will be determined taking into account the amount of traffic generated by the development of the centre for which resource consent is being sought, relative to existing traffic, and the extent to which that development will use up additional capacity provided by the intersection improvements. In calculating the financial contribution payable, consideration will also be given to the benefits accruing to

other road users and property owners in terms of actual usage and increased capacity.

(v) Financial contribution for off-site amenity

- A total financial contribution of \$1.5m is to be provided by the developer for works to improve off-site amenity in the local Panmure/Mt Wellington/Sylvia Park community. Such works may include children's play areas, street landscaping, paving and furniture, pedestrian facilities, and environmental improvements.
- The financial contribution must not be used to fund any works required to mitigate the adverse effects of the proposed northern access route linking Waipuna and Lynton roads to the precinct. Any acoustic or visual mitigation measures required as part of a resource consent must be separately funded by the developer.
- A financial contribution of \$750,000 was paid to council at the initial stage of development. A second contribution of \$750,000 is to be paid to the council no later than the completion of a total of 80,000m² GFA of development on the site.

(b) Management plans

(i) Transport plan

- A comprehensive transport plan must be developed, setting out:
 - the physical infrastructure to be established or that is currently established on-site to support the use of alternative forms of transport such as public transport; adequate facilities for cyclists - showers, lockers and changing facilities; carpool parking areas; travel reduction information boards in foyer areas for information such as timetables and route maps; and an internet service to enhance awareness of alternative transport services.
- The physical linkages to be provided on the site to link with surrounding pedestrian and cycle networks and public transport resources.
- Operational measures to encourage reduced vehicle trips, including car sharing schemes, public transport use incentives, flexitime, staggered working hours.
- A plan setting out how car parking for the site is to be managed in an integrated manner to optimise usage whilst facilitating the use of other modes to the greatest extent practicable.

- Any proposal to provide for the extension, relocation and/or improvement of the bus station in order to accommodate any increase in patronage or services.

Note

The transport plan must be submitted to the council for approval and thereafter updated as required and approved by the council prior to the grant of any resource consent involving additional GFA. An integrated transport assessment will be lodged with any application for resource consent involving additional gross floor area in excess of 5000m² GFA. The detail to be provided in the update of the transport plan and in any integrated transport assessment must be commensurate with the scale of the development proposed and its anticipated effects.

(ii) Landscape management plan

- Once development on the site exceeds 148,000m², a comprehensive landscape management plan must be developed setting out the overall landscape precinct for the site and details of maintenance plans. This plan must address both hard and soft landscaping, provision of public art, and the design precincts for plaza spaces. Landscaping must be developed and maintained on the site in accordance with the management plan. The plan must be updated as required and be part of any application involving significant new development on the site.
- The plan must be submitted to the council for approval and thereafter updated as required and approved by the council prior to the grant of any resource consent involving additional GFA.

(iii) Signage

- Once development on the site exceeds 148,000m², a comprehensive signage concept plan must be developed. Any applications for new signage must show how the proposed signage accords with the overall signage plan. The signage plan must be updated as required, including as part of any applications involving significant new development on the site.

Note

The signage plan must be submitted to the council for approval and thereafter updated as required and approved by the council prior to the grant of any resource consent involving new signage or applications under the signs bylaw.

(iv) Street amenity and maintenance

- Once development on the site exceeds 148,000m², a street amenity and maintenance plan must be prepared, setting out the design and maintenance of the internal street network. This must set out the design treatment of internal streets including details of paving

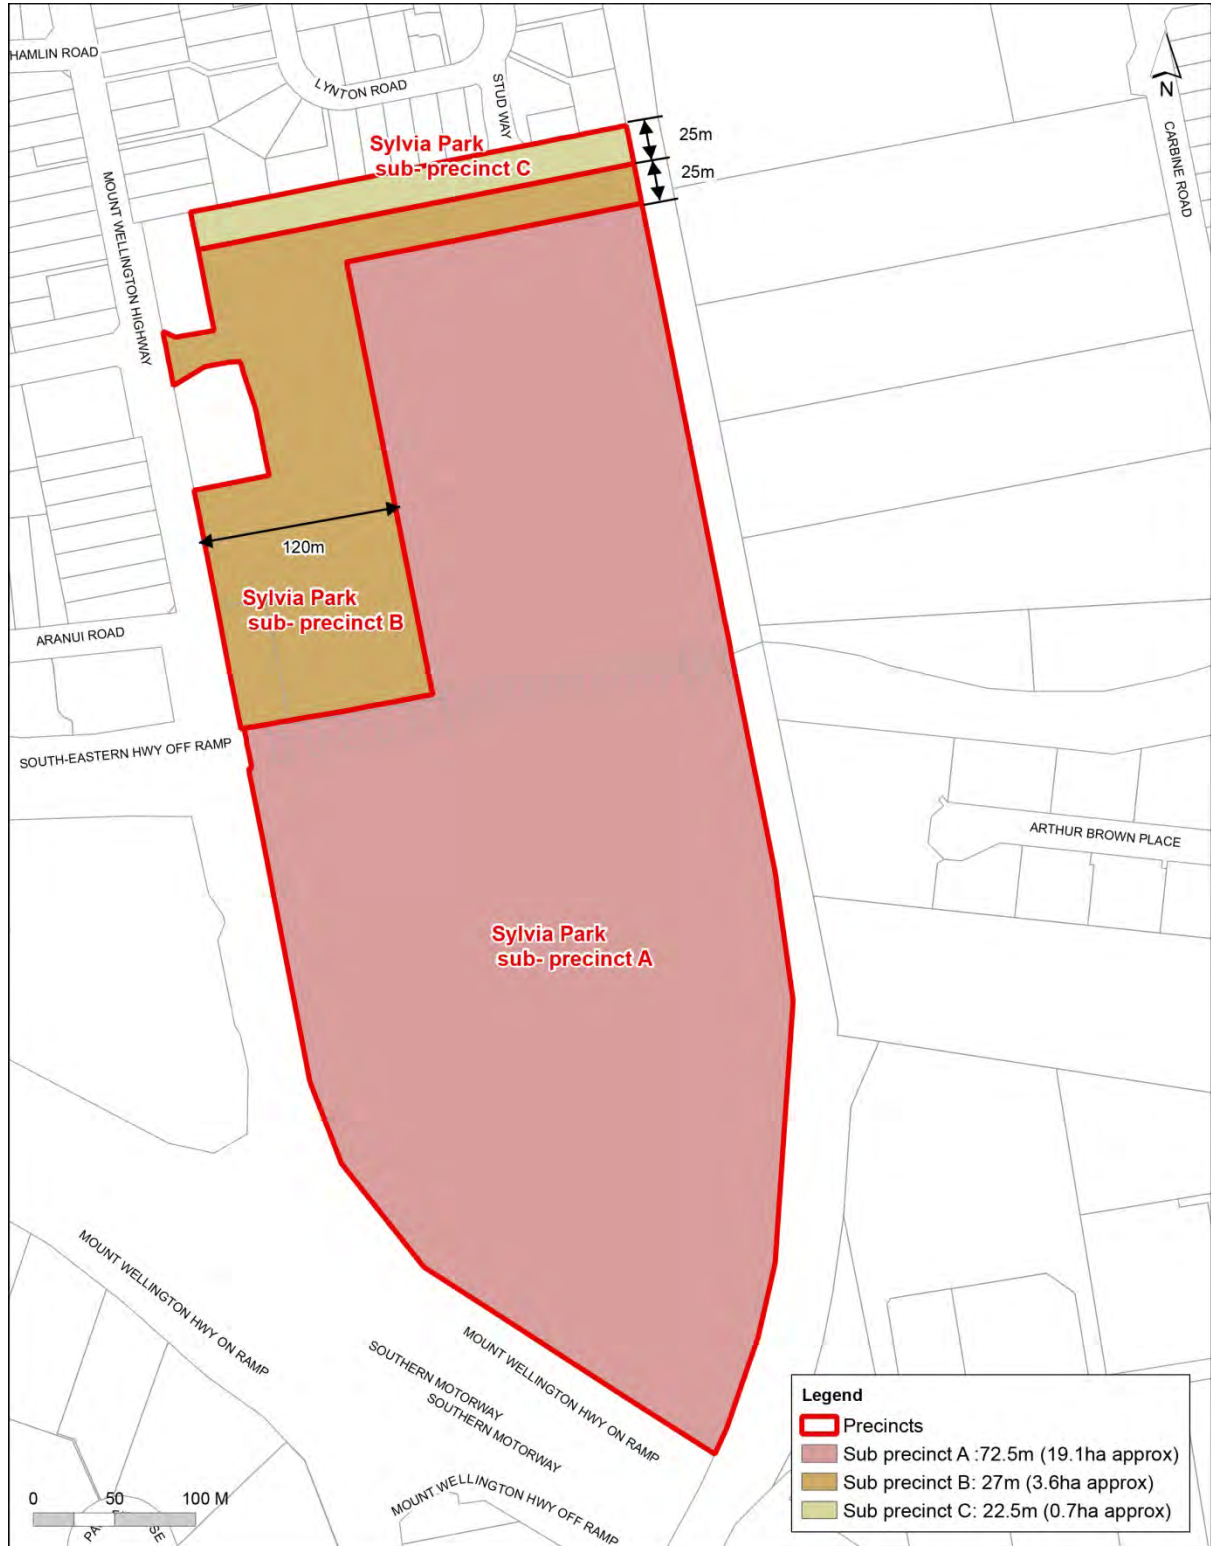

materials, public transport facilities, road signage, lighting and street furniture and how streets will be maintained. The street amenity and maintenance plan must be updated as required, including as part of any applications involving significant new development on the site.

I336 Sylvia Park Precinct

Appendix

There is an accompanying appendix to Sylvia Park precinct which is referred to in Standards – I336.6.3. (1) Building Height that refers to:

- Geotechnical completion report for earthworks, dated May 2006 prepared for SKM by Tonkin & Taylor Ltd

Due to the length of this report it has not been appended in this section. A copy is available on request.

I400. Ardmore 3 Precinct

I400.1. Precinct Description

The Ardmore 3 Precinct applies to land at 79-81 Mullins Road Ardmore (part Allotment 48 Parish of Papakura). The facilities on the site are used for science and technology research by the University of Auckland.

The purpose of the Ardmore 3 Precinct is to enable continuation of existing research in science and technology fields. The Precinct will facilitate the potential for further expansion of those facilities including the addition of teaching facilities and structures or facilities required to meet the wider purpose of the tertiary education facility.

The zoning of land within the precinct is Rural - Mixed Rural Zone.

I400.2. Objectives

- (1) Tertiary education facilities meet the education needs of their students, facilitate scientific and technology research and economic development, and provide for the well-being of employees, staff, students and visitors.
- (2) Tertiary education and complementary business activities benefit from co-location on tertiary education sites.
- (3) Tertiary education facilities integrate positively with, and mitigate potential adverse effects on, the wider community and rural environment.
- (4) New buildings and structures respond to, and positively contribute to, the amenity values of the mixed rural setting and surrounding context, landscape, and neighbouring rural community while ensuring that necessary facilities and structures required for the tertiary research work or teaching are enabled.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I400.3. Policies

- (1) Enable activities and development related to tertiary education scientific and technology research and appropriate accessory activities.
- (2) Require new buildings and significant additions and alterations to be designed in a manner that:
 - (a) makes efficient use of the site; and
 - (b) responds positively to the existing and future context of the Rural - Mixed Rural Zone and surrounding rural area.
- (3) Enable masts or aerials associated with tertiary education and scientific and technology research while having regard to the safety of aircraft departing or approaching Ardmore Airport.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I400.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the zone apply in this precinct unless otherwise specified below.

Table I400.4.1 specifies the activity status of land use and development activities in the Ardmore 3 Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I400.4.1 Activity Table

Activity		Activity status
Use		
(A1)	Activities accessory to tertiary education facilities not otherwise provided for	D
Residential		
(A2)	Dwellings accessory to tertiary education facilities	P
(A3)	Student accommodation accessory to tertiary education facilities	P
Commerce		
(A4)	Laboratories for tertiary education facilities	P
(A5)	Light manufacturing and servicing accessory to tertiary education facilities	P
(A6)	Offices accessory to tertiary education facilities	P
Community		
(A7)	Tertiary education facilities for scientific research and technology	P
(A8)	Tertiary education facilities that are not for scientific research and technology	D
Development		
(A9)	Accessory buildings for tertiary education facilities	P
(A10)	Buildings, alterations, additions and demolition unless otherwise specified below	P
(A11)	Buildings greater than 500m ² gross floor area	RD
(A12)	Buildings, external alterations, additions and demolition where the work is visible from and located within 10 metres of a road	RD
(A13)	Masts or aerials up to 40 metres in height	P
(A14)	Masts or aerials greater than 40 metres in height	D

I400.5. Notification

- (1) Any application for resource consent for an activity listed in Table I400.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I400.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct.

Masts or aerials over 30 metres in height listed in Table I400.4 Activity Table must also comply with the following permitted activity standard.

I400.6.1. Height over 30 metres

- (1) Any mast or aerial over 30 metres in height (above ground level) must display a low intensity obstruction light (meeting the International Civil Aviation Organization standard for a Type A obstruction light) at all times, and all supporting guys extending above 30 metres must be fitted with high visibility flags, secured to the guys at no less than 5 metre intervals.

I400.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I400.8. Assessment – restricted discretionary activities

I400.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) buildings greater than 500m² gross floor area, buildings, external alterations, additions and demolition where the work is visible from and located within 10 metres of a road:
- (a) the effect of the scale, location and design on the surrounding rural and airport environment.
- (2) for masts that do not comply with Standard I400.6.1:
- (a) the effect on the operation of Ardmore Airport;
 - (b) the functional and operational needs of, and benefits derived from, the mast; and
 - (c) the effect on visual amenity.

I400.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) buildings greater than 500m² gross floor area, buildings, external alterations, additions and demolition where the work is visible from and located within 10 metres of a road:
 - (a) the effect of the scale, location and design on the surrounding rural and airport environment:
 - (i) refer to Policy I400.3(2);
- (2) for masts that do not comply with Standard I400.6.1:
 - (a) operation of Ardmore Airport:
 - (i) whether the safety of the airport operations is adversely affected by the proposed mast;
 - (b) the functional and operational needs of, and benefits derived from, the mast;
 - (i) the extent to which the functional and operational requirements of the mast affects or necessitates its location, form, height and size; and
 - (ii) the extent to which the mast will benefit and contribute to the social, economic and cultural and environmental wellbeing of businesses, people and communities;
 - (c) the effect on visual amenity.
 - (i) the extent to which the adverse visual effects of masts on the amenity values of the surrounding rural environment and adjoining properties, are avoided, remedied or mitigated;

I400.9. Special information requirements

There are no special information requirements in this precinct.

I400.10. Precinct plans

There is no precinct plan for this precinct.

I401. Ardmore Airport Precinct

I401.1. Precinct Description

This precinct consists of two sub-precincts. These are the Ardmore Airport Sub-precinct Airport applying to the Ardmore Airport, and the Ardmore Airport Sub-precinct Residential applying to 24 residential properties adjoining the airport in Village Way, Ardmore.

The purpose of the Ardmore Airport Sub-precinct Airport is to enable the efficient use and development of the land and its operational facilities. The purpose of the Ardmore Airport Sub-precinct Residential is to enable the continued existing residential use but limit further development so as not to adversely the development of Ardmore Airport.

This precinct is within the Aircraft Noise Overlay. The purpose of the overlay is to manage the subdivision and location of sensitive activities in areas of high cumulative noise around airports.

The zone is the Special Purpose - Airports and Airfields Zone. This is a shell zone with no provisions.

I401.2. Objectives

- (1) The efficient operation and development of the Ardmore Airport.
- (2) Development of the Ardmore Airport maintains the amenity values of adjoining areas.
- (3) The continued residential use and maintenance of the character and amenity of the 24 Village Way properties.
- (4) Prevent the establishment of additional dwellings in Village Way.

The Auckland-wide and overlay objectives apply in this precinct in addition to those specified above.

I401.3. Policies

Airport Sub-precinct

- (1) Allow for the continued efficient operation of the existing airport including aircraft take-off and landing, associated equipment, maintenance and repair, manufacture and assembly.
- (2) Provide for activities associated with the needs of visitors, employees and businesses located at the airport.
- (3) Enable a limited range of non-aviation activities, where these activities do not adversely effect the long term growth and development of the airport.
- (4) Prevent the establishment of residential activities.

(5) Require development of the airport to be of a high standard of amenity through the layout and placement of buildings, car parking, access and landscape elements.

(6) Prevent reverse sensitivity effects on the airport.

Residential Sub-precinct

(7) Maintain the residential character and amenity of Village Way in a way that does not adversely affect the efficient operation and development of Ardmore Airport.

(8) Restrict future land use, subdivision and development in Village Way.

The Auckland-wide and overlay policies and apply in this precinct in addition to those specified above.

I401.4. Activity table

The following tables specify the activity status of land use activities in the Ardmore Airport Precinct pursuant to section 9(3) of the Resource Management Act 1991. The zone applies, but there are no rules in the zone. The Auckland-wide and overlay provisions apply in this precinct in addition to those specified below. In particular, note that the provisions in the Aircraft Noise Overlay apply in this precinct.

Table I401.4.1 Activity Table – Airport Sub-precinct

(A31)	More than one dwelling per site	NC

I401.5. Notification

- (1) Any application for resource consent for an activity within the Airport Sub-precinct that infringes standard I401.6.1.1 Retail must be publicly notified.
- (2) Any application for resource consent for an activity listed in Table I401.4.1 Activity Table – Airport Sub-precinct and Table I401.4.1 Activity Table – Residential Sub-precinct and which is not listed in I401.5(1) above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When determining who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I401.6. Standards**I401.6.1. Airport Sub-precinct**

All activities listed as permitted in Table I401.4.1 Activity Table – Airport Sub-precinct must comply with the following permitted activity standards. The overlay and Auckland-wide standards apply in the Airport Sub-precinct, in addition to the following standards.

The entire sub-precinct will be treated as a single site for the purposes of applying these standards.

I401.6.1.1. Retail

- (1) The total amount of gross floor area for retail within the precinct must not exceed 7500m² (excluding aviation activities and trade suppliers).

I401.6.1.2. Non-aviation activities

- (1) The total amount of site area and associated car parking and access ways used for activities that are not associated with aircraft operations or associated with the operation of the airport must not exceed 15 hectares.
- (2) Activities and development that do not comply with I401.6.1.2(1) are a discretionary activity.

I401.6.1.3. Aviation activities and aircraft operations

- (1) Aviation activity or aircraft operations must comply with the conditions of designation 200 – Ardmore Airport Limited.

I401.6.1.4. Building height

- (1) Buildings must not exceed 20m in height.

I401.6.1.5. Yards

- (1) Front, side and rear yards must be 5m.

I401.6.1.6. Storage areas

- (1) Any outdoor storage or rubbish collection areas must be screened from public view by a solid wall or fence.

I401.6.2. Residential Sub-precinct

All activities listed as permitted in Table I401.4.2 Activity Table – Residential Sub-precinct must comply with the following permitted activity standards. The overlay and Auckland-wide standards apply in the Airport Sub-precinct, in addition to the following standards.

- (1) The standards in the Residential - Single House Zone.
- (2) The standards in the Aircraft Noise Overlay.

I401.6.2.1. Yards

Buildings must be set back from the site boundary by the minimum depth listed below.

- (1) Rear Yard: 3m

I401.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I401.8. Assessment – restricted discretionary activities

I401.8.1. Matters of discretion

The council will reserve its discretion to the following matters when assessing a restricted discretionary resource consent application.

- (1) rural commercial services and rural industries
 - (a) noise;
 - (b) traffic volume and safety; and
 - (c) layout, design and appearance.
- (2) driver training; vehicle product launches and demonstrations; vehicle testing:
 - (a) noise;
 - (b) layout, design and appearance;
 - (c) parking and access; and
 - (d) lighting.
- (3) trade suppliers:
 - (a) intensity and scale;
 - (b) reverse sensitivity and displacement of industrial activities; and
 - (c) design of parking, access and servicing.
- (4) infringement of standards
 - (a) height
 - (i) scale and form of the building; and
 - (ii) visual amenity.
 - (b) yards
 - (i) amenity of adjoining sites; and
 - (ii) visual amenity.
 - (c) storage
 - (i) visual amenity.
- (5) Residential Sub-precinct

When assessing a resource consent application for a standard infringement in the Residential Sub-precinct, the Council will restrict its discretion to the relevant matters specified in the Aircraft Noise Overlay for Ardmore Airport and the Residential - Single House Zone.

I401.8.2. Assessment criteria

The council will consider the relevant assessment criteria below for restricted discretionary activities.

- (1) rural commercial services and rural industries:

- (a) noise from fans, ventilators, heaters, or other machines, or from onsite activities should be adequately mitigated;
 - (b) the design and location of the buildings, and the associated traffic, should avoid, remedy or mitigate adverse effects on the road network or traffic safety;
 - (c) the location and design of facilities and car park areas associated with the activity should;
 - (d) be compatible with the predominant purpose of the Ardmore Airport Precinct and not generate reverse sensitivity effects on the operation of the airport; and
 - (e) protect and maintain access to essential services located on the site.
- (2) Driver training; vehicle product launches and demonstrations; vehicle testing
- (a) noise arising from the activities and the congregation of people should not create significant adverse effect (including cumulative effect) on the health and well-being of nearby residents.
 - (b) a noise management plan may be required detailing the control measures which would be put into practice and should include:
 - (i) timing and duration of the proposed activity;
 - (ii) (the proposed measures used to mitigate the noise;
 - (iii) the extent, necessity and appropriateness of activities on public holidays; and
 - (iv) an acoustic design certificate from a professional acoustic engineer demonstrating that the standards proposed will not be exceeded.
 - (c) the location and design of facilities and car park areas associated with the activities should:
 - (i) fit well with the predominant purpose of the Ardmore Airport zone and not generate reverse sensitivity effects on the operation of the airport; and
 - (ii) protect and maintain access to essential services located on the site
 - (iii) The demand for short term or long term car parking within the adjoining roads should not affect the operation or safety of the road network.
 - (iv) On-site facilities should be provided to cater for any short-term car parking demand.
 - (v) Indirect light spill and glare should not cause adverse effects on the safety, amenity, including night time amenity and sleep disturbance, of neighbouring residential properties or roads.

(vi) Lighting should not affect the safe operation of the airport.

(3) trade suppliers:

- (a) the intensity and scale of the land use activity, in particular, the number of people involved and traffic generated by the activity, should be compatible with the planned future form and character of the surrounding area;
- (b) trade supplier activities should not reduce the ability of aviation activities and other industrial activities to establish and operate within the Ardmore Airport Precinct;
- (c) the cumulative effects of the activity should not result in creating a retail hub within the Ardmore Airport Precinct and should not adversely affect the function and vitality of the surrounding retail centres;
- (d) parking should be located in order of preference, to the rear of the building or separated from the street frontage by uses that activate the street. For Ardmore Airport Precinct there is no preference for underground parking;
- (e) vehicle crossings and access ways should be designed to reduce vehicle speed, be visually attractive and clearly signal to both vehicles and pedestrians the presence of a crossing or access way;
- (f) surface parking should be softened with landscaping, including tree planting. As a guide, one tree should be planted every sixth parking bay;
- (g) pedestrian access between parking areas, building entrances/lobbies and the street should provide equal physical access for people of all ages and physical abilities and provide a high level of pedestrian safety;
- (h) separate vehicle and pedestrian access should be provided within parking areas, and between parking areas, buildings and the street. Shared pedestrian and vehicle access may be appropriate where a lane or street is proposed within a development site. The shared access should prioritise pedestrian movement;
- (i) ventilation and fumes from parking structures or other uses should not be vented into the adjacent pedestrian environment at ground level;
- (j) in greenfield locations and large redevelopment sites, service lanes should be provided within urban blocks to allow access to the rear of buildings and to minimise gaps in the streetscape. Development in Ardmore Airport Precinct is not required to provide service lanes; and
- (k) where ramps are necessary they should be minimal in length and integrated into the design of the building.

(4) infringement of standards

- (a) scale and form of the building:

- (i) whether the proposed height of the structure will have an adverse effect on airport safety.
- (b) amenity of adjoining sites
 - (ii) whether the proposed structure will have an adverse effect on the visual and landscape amenity values of adjoining sites.
- (c) visual amenity
 - (i) whether the proposed height of the structure will have an adverse effect on visual amenity values; and
 - (ii) when assessing storage areas, whether the proposal includes methods of ensuring any parts of an activity visible from any public place will be maintained in a tidy condition and whether location of by products or refuse should be screened from public view in order to maintain a reasonable level of visual amenity.

I401.9. Special information requirements

There are no special information requirements for this precinct.

I401.10. Precinct plans

There are no precinct plans in this precinct.

I402. Auckland Airport Precinct

I402.1. Precinct Description

The precinct applies to the Auckland International Airport and its surrounds. Its purpose is to enable the efficient operation and development of the airport and the associated land and activities in recognition of its role in connecting Auckland to other parts of New Zealand and the world. The Auckland Airport Precinct is comprised of three sub-precincts: Core Sub-precinct, Gateway Sub-precinct and Coastal Sub-precinct.

The Core Sub-precinct encompasses the land surrounding the existing runway and proposed northern runway. The Core Sub-precinct is the hub of airport operations. It provides for the day to day requirements of the airport plus support activities. Current development includes a single runway, taxiways, aircraft manoeuvring, flight and passenger terminals, and facilities for aircraft maintenance. Support facilities include administration, businesses and recreation. It is anticipated that a second runway to the north of the existing runway, together with associated infrastructure and facilities, will be developed. The Core Sub-precinct provides a regulatory regime to efficiently operate and to expand to accommodate increasing passenger and freight volumes.

The Gateway Sub-precinct includes the land to the north of the proposed northern runway which is suitable for commercial and industrial development associated with the airport.

The Coastal Sub-precinct comprises the airport's operational area within the coastal marine area. The Coastal Sub-precinct provides for the continued use of the coastal marine area for activities necessary for the ongoing operation and development of the airport, while recognising the values of the coastal environment. Existing impacts on the coastal marine area include noise associated with aircraft movements, aircraft in the airspace above the coastal marine area and restrictions on use of the harbour around the airport. The coastal marine area also receives stormwater discharges from the airport and accommodates structures, such as ramps, bridges, lighting and navigation devices.

The airport area and the adjacent coastal environment has significant value to Mana Whenua in the area in terms of historical, spiritual and cultural associations. Most of the water area to the south of the southern runway is valued for its habitat, particularly as a feeding ground for international migratory wading birds. The Ihumatao fossil forest lies to the north west of the existing southern runway. It is identified as an Outstanding Natural Feature and is considered to be nationally important.

Auckland Airport holds designations over part of the land that enable current operations and provide for further development, including the new northern runway. Aircraft operations and testing of aircraft engines are managed through the designation conditions

The underlying zoning of land within this precinct is Special Purpose – Airports and Airfields Zone and Coastal – General Coastal Marine zone. The Special Purpose – Airports and Airfields Zone is a shell zone with no provisions.

I402.2. Objectives [rcp/dp]

- (1) The efficient operation and continued development of the Auckland Airport to meet future demand is enabled recognising its national and international significance
- (2) The efficient use and development of the business land and operational facilities are enabled.
- (3) The operation of the Airport is protected from reverse sensitivity effects
- (4) Publicly accessible areas of the airport and areas visible from main transport routes and the Māngere Gateway heritage route are designed to a high-quality and meet amenity standards relating to streetscape, site design and appearance.
- (5) The ecological, geological, recreational, cultural, spiritual and landscape values of the Manukau Harbour coastal environment in the vicinity of the airport are protected while providing for the operational requirements of the Auckland Airport within the Auckland Airport Coastal Sub-precinct.
- (6) The ecological, geological, recreational, cultural, spiritual and landscape values are considered when subdivision and development occurs in the Gateway sub-precinct.
- (7) Manage natural hazards and the adverse effects of activities on natural resources while providing for the operational and functional requirements of Auckland Airport.

The Auckland-wide and overlay objectives apply in this precinct in addition to those specified above.

I402.3. Policies [rcp/dp]

- (1) Provide for activities related to the operation and development of the airport and business land.
- (2) Provide for activities associated with the needs of airport passengers, visitors and employees and businesses.
- (3) Encourage developments to achieve a high standard of amenity in the layout of buildings, car parking, access and landscape elements in publicly accessible areas.
- (4) Require adverse effects on the ecological, geological, cultural, landscape and historic heritage values of the coastal environment in the vicinity of the airport to be avoided, remedied or mitigated while recognising the operational requirements of the Auckland Airport Coastal Sub-precinct.
- (5) Require development of sites adjoining the Gateway heritage route to be designed in a way that users of those roads will perceive an environment where natural design elements are integrated with the built environment.

- (6) Require the development and vesting of open space along the Oruarangi Creek and encourage the development of open space amenity areas within the remaining land in Auckland Airport ownership.
- (7) Encourage subdivision and development within Gateway Sub-precinct area A-F to achieve a high standard of urban design and amenity and demonstrate integration with any neighbouring Gateway Sub-precinct area within the Auckland Airport Precinct.
- (8) Manage land use activities in the Gateway Sub-precinct to:
 - (a) require that the predominant land use activities are those associated with the airport operation, warehousing and distribution, transport, storage, manufacturing, construction and wholesale trade; and
 - (b) confine retail activities to those required to provide the convenience and shopping needs of employees in and visitors to the Auckland Airport, adjacent business zones, and aviation activities.
- (9) Avoid uses and developments within the Coastal Sub-precinct which would adversely affect airport operations or pose any risk to safety.
- (10) Provide for activities and structures associated with bird management that encourage birds away from the runway and flight paths of aircraft.
- (11) Use, development and occupation associated with the operational needs of the airport will generally be considered appropriate within the Coastal Sub-precinct.
- (12) Require subdivision and development within the Gateway Sub-precinct to recognise and provide for the relationship of Mana Whenua with their ancestral lands, water, sites, waahi tapu and other taonga.
- (13) Provide for the integrated management of natural resources and natural hazards while recognising the operational and functional requirements of Auckland Airport and ensuring that adverse effects are avoided, remedied or mitigated.

The Auckland-wide and overlay policies apply in this precinct in addition to those specified above.

I402.4. Activity table

The following tables specify the activity status activities in the Auckland Airport Precinct:

- Table I402.4.1 Activity Table – Core Sub-precinct and Gateway Sub-precinct for land use, development and subdivision activities pursuant to section 9(3) and section 11 of the Resource Management Act 1991).
- Table I402.4.2 Activity Table – Coastal Sub-precinct for use and activities/works (including associated discharges) / structures and any associated occupation

pursuant to section 12(1), 12(2) and 12(3) and section 15 of the Resource Management Act 1991).

- Table I402.4.3 Activity Table – Replacement Auckland-wide provisions for land use and development pursuant to section 9(3); diversion and discharge pursuant to sections 14 and 15; disturbance, deposition in, piping and reclamation of streams pursuant to section 13;

The Auckland-wide and overlay provisions apply in this precinct unless otherwise specified below.

Table I402.4.1 Activity Table – Core Sub-precinct and Gateway Sub-precinct

Activity		Activity status	
		Core Sub-Precinct	Gateway Sub-Precinct
Use			
Infrastructure			
(A1)	Any activity associated with the airport operation (not including aircraft operations, runways and the testing of in situ aircraft engines) including taxiways and other aircraft movement areas, aprons, terminals, rescue facilities, navigation and safety aids, maintenance and servicing facilities, catering facilities, freight facilities, quarantine and incineration facilities, fuelling facilities, storm water facilities, roads, monitoring activities, site investigation activities, landscaping, flags and signs	P	P
(A2)	Stormwater facilities to be vested in council	C	C
(A3)	Stormwater facilities not to be vested in council	P	P
(A4)	Any activity associated with the needs of Airport passengers, visitors and employees, and Airport businesses, and not otherwise listed in this table	P	D
(A5)	Bus depots and public transport facilities	P	P
(A6)	Parking	P	P
(A7)	Park-and-ride	P	P
Accommodation			
(A8)	Camping grounds	P	P
(A9)	Workers' accommodation	P	P
(A10)	Visitor accommodation complying with Standard I402.6.5 Visitor accommodation	P	P
(A11)	Visitor accommodation not complying with Standard I402.6.5 Visitor accommodation	NA	D
Commerce			
(A12)	Offices complying with Standard I402.6.6 Offices	P	P
(A13)	Offices not complying with Standard I402.6.6 Offices	NA	D

(A14)	Retail complying with Standard I402.6.1 Retail	P	P
(A15)	Retail that does not comply with Standard I402.6.1 Retail	NC	NC
(A16)	Large format retail	P	NC
(A17)	Food and beverage complying with Standard I402.6.8 Food and beverage	P	P
(A18)	Food and beverage not complying with Standard I402.6.8 Food and beverage	NA	D
(A19)	Dairies complying with Standard I402.6.7 Dairies	P	P
(A20)	Dairies not complying with Standard I402.6.7 Dairies	NA	D
(A21)	Motor vehicle sales	P	P
(A22)	Trade suppliers	P	P
(A23)	Service stations	P	P
(A24)	Markets	P	NC

(A27)	Public amenities	P	P
(A28)	Informal recreation	P	P
(A29)	Organised sport and recreation	P	P
(A30)	Healthcare facilities	P	P
(A31)	Community facilities	P	P
(A32)	Education facilities	P	P
(A33)	Aviation training facilities	P	P
(A34)	Care centres	P	P
(A35)	Artworks	P	P
(A36)	Emergency services	P	P
Industry			
(A37)	Industrial activities	P	P
(A38)	Waste management facilities	D	NC
Rural			
(A39)	Farming	P	P
(A40)	Animal breeding or boarding	P	P
Development and subdivision			
(A41)	Demolition of buildings or structures	P	P
(A42)	Relocation of the Rennie/Jones Homestead	P	P
(A43)	Any building, structures and works including new or modified parking areas or subdivision in Gateway Sub-precinct area A – F in accordance with I402 10.1 Auckland Airport: Precinct plan 1 and complying with	NA	C

	the subdivision Standard I402.6.19 Subdivision		
(A44)	Any building, structures and works or subdivision in Gateway Sub-precinct area A – F that is not in accordance with either one of or both of: I402 10.1 Auckland Airport: Precinct plan 1, or the subdivision Standard I402.6.19 Subdivision	NA	RD
(A45)	Buildings, structures and works outside Gateway Sub-precinct area A – F	P	NA
(A46)	Additions and alterations to buildings within Gateway Sub-precinct area A - F	NA	P
(A47)	Subdivision outside Gateway Sub-precinct area A – F complying with the subdivision Standard I402.6.19 Subdivision	P	NA
(A48)	Subdivision outside Gateway Sub-precinct area A – F that does not comply with the subdivision Standard I402.6.19 Subdivision	RD	NA

Table I402.4.2 Activity Table Coastal Sub-precinct [rcp]

Activity		Activity status	
		Outside SEA-M 1 or ONF overlays	Within SEA-M 1 or ONF overlays
(A49)	Aircraft operations and activities associated with the operation of the airport	P	P
(A50)	Activities associated with research into flora and fauna of the coastal marine area	P	P
(A51)	Bird management activities and structures	P	P
(A52)	Navigational aids and airport light structures	P	P
(A53)	Maintenance, repair or reconstruction of existing lawful coastal marine area structures or buildings	P	P
(A54)	Demolition or removal of any buildings or coastal marine area structures	P	P
(A55)	Coastal marine area structures associated with airport activity which are not otherwise listed as a permitted activity	C	RD
(A56)	Any activity, including any activity directly associated with the carrying out of a permitted activity, which does not comply with a standard	RD	RD
(A57)	Reclamation and drainage works associated with runway and runway end safety area construction and operation	D	NC
(A58)	Any activity, work or structure not provided for that will or is likely to adversely affect the safe operation of aircraft, including but not limited to: <ul style="list-style-type: none"> activity in conflict with the obstacle limitation 	Pr	Pr

	<p>surfaces as detailed in designation 1102</p> <ul style="list-style-type: none"> activity in conflict with the runway end protection areas identified in designation 1102 artificial light (other than for airport purposes) 		
(A59)	Anchoring of vessels (excluding emergency vessels)	Pr	Pr

Table I402.4.3 Activity table – Replacement Auckland Wide Rules (All sub-precincts)

Activity		Activity status
Diversion and Discharge of Stormwater (these provisions replace the Auckland-wide rules at E8 Stormwater – Discharge and diversion) [rcp/rp/dp]		
(A60)	New impervious areas not serviced by the consented stormwater network and meeting the permitted activity standards in I402.6.9 [dp]	P
(A61)	New impervious areas not serviced by the consented stormwater network that do not meet permitted activity standards in I402.6.9 [dp]	RD
(A62)	Stormwater network discharge [rcp/rp]	D
Reclamation and piping of intermittent streams (these provisions replace Auckland wide rules at E3 Lakes, rivers, streams and wetlands) [rp]		
(A63)	Reclamation and piping of intermittent and ephemeral streams, upstream of a stream reach which has been consented for reclamation or piping, including the associated structures, bed disturbance or depositing any substance, diversion of water and incidental temporary damming of water	P
Earthworks (these provisions replace Auckland wide rules at E11 Land disturbance – Regional and E12 Land disturbance – District)		
(A64)	Earthworks undertaken by a network utility operator for operation, use, maintenance, repair and minor infrastructure upgrading [dp/rp]	Refer to E11 and E12
(A65)	General earthworks [dp]	P
(A66)	Comprehensive earthworks consent comprising one or more sub-precincts [rp]	C
(A67)	General earthworks [rp] not otherwise listed	Refer to E11 and E12
Natural hazards and flooding (these provisions replace the Auckland-wide rules at Chapter E33 Natural hazards and flooding) [dp]		
(A68)	Activities which are permitted in E36 Natural hazards and flooding	P
(A69)	Activities which are permitted in E36 Natural hazards and flooding but does not comply with standards in E36 Natural hazards and flooding, or standards in this precinct	C
(A70)	Buildings, structures and works associated with the airport	P

	operation including taxiways and other aircraft movement areas, aprons, terminals, rescue facilities, navigation and safety aids, maintenance and servicing facilities, catering facilities, freight facilities, quarantine and incineration facilities, fuelling facilities, storm water facilities, roads, and monitoring activities in any hazard area	
(A71)	Buildings, structures and works in areas which may be subject to land instability	P
(A72)	Modification of an overland flowpath (piping diversion, build over, reduction in capacity, diversion of entry and exit points)	P
(A73)	Buildings, structures and works (except those containing visitor accommodation) within a 1 %AEP floodplain, flood sensitive area, or overland flow path that are unable to comply with the permitted activity standards	C
(A74)	Buildings, structures and works that are unable to comply with the permitted activity standards for land which may be subject to: <ul style="list-style-type: none"> • coastal erosion • land instability • the 1% AEP coastal storm inundation (CSI) plus 1m of sea level rise (CSI1) 	C
(A75)	Buildings containing visitor accommodation located within the 1% AEP flood plain	RD
(A76)	New hard coastal protection structures above mean high water springs	C
(A77)	Activities that do not meet I402.6.11.2 controlled activities	D

I402.5. Notification

- (1) An application for resource consent for a controlled activity listed in Activity Table I402.4.1, Activity Table I402.4.2 and Activity Table I402.4.3 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Activity Table I402.4.1, Activity Table I402.4.2 and Activity Table I402.4.3 and which is not listed in I402.5(1) above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When determining who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I402.6. Standards

The Auckland-wide and overlay standards apply in this precinct unless specified below. The standards apply to permitted activities, controlled activities and restricted discretionary activities.

I402.6.1. Retail

- (1) Retail (where the goods being sold have not been manufactured on site) in Gateway Sub-precinct area C and D must be less than 200m² gross floor area per tenancy and with a total combined gross floor area of less than 3000m²
- (2) Retail (where the goods being sold have been manufactured within the tenancy) must not exceed the lesser of 25 per cent of the gross floor area set aside for manufacturing or 250m².

I402.6.2. Māngere Gateway heritage route and walkway

- (3) The portion of the Māngere Gateway heritage route (as shown in I402.6.2 Auckland Airport: Precinct plan 1), except for Gateway Sub-precinct area A – C, is to be constructed at each stage of any development within the relevant Gateway Sub-precinct areas. In addition, a full walkway linkage must be provided from Gateway Sub-precinct area D to the boundary of Gateway Sub-precinct area F as part of the first stage.
- (4) Development that does not comply with I402.6.2(1) above is a non-complying activity.

I402.6.3. Open space

- (1) The area shown in the I402.6.2 Auckland Airport: Precinct plan 1 as open space adjoining the Oruarangi Creek in Gateway Sub-precinct area C-F is to be vested by Auckland Airport in Council.

I402.6.4. Noise

- (1) Any use of land for any purpose other than:
 - (a) runway
 - (b) aircraft operations
 - (c) testing of in situ aircraft engines
 - (d) the use of audible bird scaring devices for the discouragement of birds;must not exceed the following noise limits set out in Table I402.6.4.1 Noise within a residential zone or within the notional boundary of any dwelling outside the Special Purpose - Airports and Airfields Zone in the Special Purpose Māori Purpose Zone, Rural - Rural Production Zone, or Rural - Countryside Living Zone.

Table I402.6.4.1 Noise

Average maximum level			Maximum
dB L _{Aeq}			dB L _{Amax}
Monday to Saturday 7am–6pm	Monday to Saturday 6am–10pm and Sunday and public holidays 7am–10pm	At all other times	10pm–7am
55	50	45	70

- (2) Activities that do not comply with Standard I402.6.4(1) above are discretionary activities.

I402.6.5. Visitor accommodation

- (1) Visitor accommodation must be located within the Core Sub-precinct or Gateway Sub-precinct area A-D.

I402.6.6. Offices

- (1) Offices within Gateway Sub-precinct area A, E, and F must:
- be accessory to a permitted activity, and located within the same building as that permitted activity, and
 - occupy no more than 75 per cent of the total gross floor area of the buildings on the site.

I402.6.7. Dairies

- (1) Dairies must be located within the Core Sub-precinct or Gateway Sub-precinct area A-D.

I402.6.8. Food and beverage

- (1) Food and beverage must be located within the Core Sub-precinct or Gateway Sub-precinct area A-D.

I402.6.9. New impervious area not serviced by the consented stormwater network

- The new impervious area is less than 1,000 m².
- The discharge must not cause or increase scouring or erosion at the point of discharge.
- The discharge must not result in, or increase, flooding of other properties external to the Auckland Airport zone in events up to the 10 per cent AEP or the inundation of buildings in events up to the 1 per cent AEP.
- The discharge must not cause nuisance or damage to other properties.
- The drainage network must be managed and maintained to minimise erosion, sediment generation and sediment discharge.

I402.6.10. General earthworks [dp]

General earthworks [dp] that do not comply with the following standards are subject to the rules provided in Activity Tables E12.4.1, E12.4.2 and E12.4.3 of E12 Land disturbance – District.

- (1) The earthworks shall not occur within the following areas unless explicitly authorised by an existing resource consent:
 - (a) a Site or Place of Significance to Mana Whenua.
 - (b) a Significant Ecological Area;
 - (c) a Historic Heritage place or extent of place;
 - (d) an Outstanding Natural Feature; or
 - (e) the dripline of a notable tree.
- (2) Best practice erosion and sediment control measures must be implemented for the duration of the earthworks. Note: This is generally deemed to be compliance with Auckland Council Technical Publication 90 Erosion and Sediment Control Guideline for Land Disturbing Activities in the Auckland Region or similar design.
- (3) Any stormwater from outside the exposed area shall be kept separate and diverted from the earthworks area.
- (4) The area shall be stabilised by re-vegetation or other suitable means as soon as practicable but no later than 3 months after completion of the works.
- (5) Works must not result in any instability of land or structures at or beyond the boundary of the site where the earthworks occurs.
- (6) There shall be no untreated point source discharge of sediment contaminated stormwater to surface water from the activity.

I402.6.11. Flooding and natural hazards

I402.6.11.1. Permitted activities

- (1) Buildings, structures and associated works in areas which may be subject to land instability must not:
 - (a) result in or increase a natural hazard or the potential effect of the natural hazard on properties external to the precinct;
 - (b) have any adverse effects on public safety that will endanger human life.
- (2) Modification of an overland flowpath (piping diversion, build over, reduction in capacity, diversion of entry and exit points):
 - (a) the path and capacity of the overland flow path where it exits the precinct to an adjoining site must not be altered by the works.

I402.6.11.2. Controlled Activities

(1) For buildings, structures and works (except those containing visitor accommodation) within a 1 %AEP floodplain, flood sensitive area, overland flow path or on land which may be subject to coastal erosion, land instability or the 1% AEP coastal storm inundation (CSI) plus 1m of sea level rise (CSI1) that are unable to comply with the permitted activity standards must provide a report from a suitably qualified and experienced professional to the Council which

(a) identifies the risk, taking into account where relevant:

- (i) the vulnerability of the activity, and
- (ii) potential for risks to adjacent land and activities outside the zone;

(b) identifies and proposes flood management methods appropriate for the particular activity to address the risk identified.

I402.6.12. Building height

(1) In the Core Sub-precinct: maximum height must comply with the Obstacle Limitation Surface (Designation 1102), otherwise no height restriction applies.

(2) In the Gateway Sub-precinct: maximum height: 20m and must comply with the Obstacle Limitation Surface (Designation 1102).

I402.6.13. Height in relation to boundary

(1) Buildings must not exceed a height of 2.5m measured vertically above ground level at front boundaries adjoining a public open space zone. Thereafter, buildings must be setback 1m for every additional 1.43m in height (55 degrees recession plane).

I402.6.14. Yards

(1) Buildings must be set back from the relevant boundary by the minimum depth listed in Table I402.6.14.1 Yards below.

Table I402.6.14.1 Yards

Yard	Permitted	Restricted discretionary
Front	Nil in Core Sub-precinct and 5m in Gateway Sub-precinct	<5m in Gateway Sub-precinct
Rear	Nil unless adjoining public open spaces when a 10m setback must be provided	<10m setback from a public open space zone – restricted discretionary
Side	Nil unless adjoining public open spaces when a 10m setback must be provided	<10m setback from a public open space zone – restricted discretionary

Coastal protection yard	20m	< 20m – restricted discretionary
-------------------------	-----	----------------------------------

I402.6.15. Landscape design

- (1) All required yard setbacks and carpark perimeters excluding car parking and manouvering area and vehicle and pedestrian access must be landscaped with grassed areas and the planting of suitable trees, hedging and groundcover to result in a consistent, high-quality standard of urban landscape throughout the precinct.

I402.6.16. Storage areas

- (1) External storage areas which are visible from open spaces zones and public roads must be maintained in a tidy condition.
- (2) Exposure of storage areas and by-products, refuse or refuse containers of any kind to public view must be minimised by the use of buildings, planting or a screen wall or fence.

I402.6.17. Auckland Airport Coastal Sub-precinct (below mean high water springs)

- (1) Any excess building material, spoil, construction equipment or litter must be removed from the coastal marine area within 24 hours of completion of any works.
- (2) Any visible disturbance to the substrate of the coastal marine area must be remedied or restored within 48 hours of the completion of the works within the Significant Ecological Area - Marine 1 and Outstanding Natural Features and within seven days of the completion of the works in other parts of the coastal marine area.
- (3) Written advice must be given to the council harbourmaster and the National Topo/Hydro Authority at Land Information New Zealand at least five working days prior to work starting on any structures within the coastal marine area.
- (4) Maintenance, repair or reconstruction of existing lawful coastal marine area structures or buildings must:
 - (a) maintain the structure or building in a good and safe working condition;
 - (b) not use materials which alter the form or external appearance of the structure in more than a minor way;
 - (c) not change the area occupied by the structure.
- (5) Demolition or removal of any buildings or coastal marine area structures:
 - (a) Any part of a structure or building that is not removed must not protrude above the foreshore or seabed so that it creates a hazard to safe navigation or public access.

- (6) The removal or demolition of any lawfully established structure or building is authorised, or undertaken, by the consent holder or owner of the structure.

I402.6.18. Parking

- (1) The Auckland wide parking standards shall not apply in the precinct. Within the Gateway Sub-precinct and within 500m of the northern boundary of the Core Sub-precinct, where it does not adjoin the Gateway Sub-precinct, the number of parking spaces provided must meet the following standards:
 - (a) for all warehousing, industrial, and office activities one parking space per employee and one space per visitor expected to be present at any one time; and
 - (b) for all other activities, be adequate to serve the demand associated with a site/tenancy or, in instances where consolidated parking has been provided, a combination of sites/tenancies.

I402.6.19. Subdivision

- (1) Minimum frontage:
 - (a) Front sites: 23m
 - (b) Rear sites: 9m
- (2) Minimum site area: 2000m².

I402.7. Assessment – controlled activities

I402.7.1. Matters of control

The council will reserve its control to the following matters when assessing a controlled activity resource consent application.

- (1) Coastal marine area structures associated with airport activities which are not otherwise listed as a permitted activity:
 - (a) construction or works methods, timing and hours of operation;
 - (b) function, location, extent, design and materials;
 - (c) adverse effects arising from disturbance of the foreshore and seabed;
 - (d) adverse effects arising from deposition of material in the coastal marine area;
 - (e) adverse effects on cultural values, indigenous flora and indigenous vegetation;
 - (f) any discharge of contaminants;
 - (g) the duration of the consent; and
 - (h) monitoring of the consent.

- (2) Buildings, structures or works including, new or modified parking areas, or subdivision within Gateway Sub-precinct area A – F in accordance within I402.10.1 Auckland Airport: Precinct plan 1 and complying with Standard I402.6.19 Subdivision:
 - (a) site layout;
 - (b) design and external appearance of buildings and landscape design; and
 - (c) parking.
- (3) Stormwater facilities to be vested in council:
 - (a) visual effects;
 - (b) size and location;
 - (c) access for maintenance; and
 - (d) landscaping.
- (4) Comprehensive earthworks consent (Regional Plan only) comprising one or more precincts:
 - (a) an annual earthworks management plan;
 - (b) erosion and sediment control measures;
 - (c) staging, timing and duration of works;
 - (d) effects on stormwater and flooding;
 - (e) effects on land stability and erosion;
 - (f) whether the works are permitted by the Unitary Plan or the Airport's designation;
 - (g) effects on the identified values of the relevant Overlay;
 - (h) effects on Mana Whenua values;
 - (i) effects in the watercourse, wetland, or coastal marine area; and
 - (j) Monitoring.
- (5) Buildings, structures and works (except those containing visitor accommodation) within a 1 %AEP floodplain, flood sensitive area, or overland flow path or on land which may be subject to coastal erosion, land instability or the 1% AEP coastal storm inundation (CSI) plus 1m of sea level rise (CSI1) that are unable to comply with the permitted activity standards:
 - (a) the management methods proposed, taking into account the extent and nature of the hazard, including the design of the building, structure or works;

- (b) timing and duration of works; and
 - (c) monitoring of the consent.
- (6) Hard coastal protection structures above mean high water springs:
- (a) construction of works, methods, timing and hours of operation;
 - (b) location, extent, design and materials;
 - (c) adverse effects arising from disturbance of the associated area;
 - (d) adverse effects arising from the deposition of material;
 - (e) the removal of indigenous vegetation;
 - (f) any discharge of contaminants;
 - (g) the duration of consent; and
 - (h) monitoring of the consent.

I402.7.2. Assessment criteria

The council will consider the relevant assessment criteria below for controlled activities.

- (1) Coastal marine area structures associated with airport activities which are not otherwise listed as a permitted activity (outside Significant Ecological Area - Marine 1 and Outstanding Natural Features)
- (a) the extent to which coastal marine area structures are limited to those:
 - (iii) that have a functional or operational need to be located in the coastal marine area, or that are for infrastructure that cannot reasonably or practicably be located outside the coastal marine area; or
 - (iv) where the proposed purpose or use cannot reasonably or practicably be accommodated on existing structures or facilities.
 - (b) the extent to which measures avoid, remedy or mitigate adverse effects on coastal processes, ecological values, cultural values, water quality and natural character;
 - (c) the extent to which construction or works methods avoid, remedy or mitigate adverse effects, particularly on water quality and sedimentation;
 - (d) whether construction or works are to be done at a time that will avoid or minimise, adverse effects on marine mammals, bird roosting, nesting and feeding, and recreational users of the coastal marine area;
 - (e) whether construction or works hours of operation are limited to minimise effects of noise and disruption on existing activities, and on nearby residential and open space areas;

- (f) the extent to which the structure is located and designed to avoid, remedy or mitigate adverse effects on the environment;
 - (g) the extent to which the form, intensity and scale of works, structures and buildings are sensitive to the marine environment and surrounding adjoining spaces;
 - (h) whether works and structures ensure efficient use of the coastal marine area is made by using the minimum area necessary for their purpose; and
 - (i) the extent to which materials used are compatible with the surrounding coastal environment, and where practicable are consistent with the natural materials at the site. This should take into account the physical characteristics of the materials used, including texture, colour, composition, grain size, level of contamination and potential for leaching.
- (2) Any buildings, structures or works including, new or modified parking areas or subdivision within Gateway Sub-precinct area A - F in accordance with I402.10.1 Auckland Airport: Precinct plan 1, and / or not complying with Stand I402.6.19 Subdivision:
- (a) Site layout:
 - (i) the site layout should reinforce or enhance the street pattern;
 - (ii) (the site layout should be compatible with the site development of adjoining sites and the streetscape;
 - (iii) the building should align with the street and where streets are curved, the building should align with that curve, or alternatively should be stepped in plan in relation to the curve;
 - (iv) buildings on corner sites should be designed to respond to the site's prominence in the roading network and the adjoining road intersection; and
 - (v) car parking areas should be designed and located to ensure an attractive site layout, particularly when viewed from the road or public open spaces.
 - (b) Design and external appearance of buildings and landscape design:
 - (i) the scale, form, design, height, and colour of the proposed building or structures (including fencing) should be sympathetic to existing built development and the wider natural, cultural and built heritage and landscape values of the area;
 - (ii) building and landscape design should be used to frame and define edges to roads, parks and stormwater reserves, and to emphasise key intersections;
 - (iii) service areas, loading docks and car parks should be separated from and not facing the front yard;

- (iv) passive surveillance of reserves and public open spaces from the adjacent buildings should be provided for those windows, balconies, indoor and outdoor activities that overlook these areas;
- (v) site levels, building scale, development intensity, building form, colour and texture should be used to reduce the apparent height and size of large buildings when viewed from the Mangere Gateway heritage route, open spaces, or Special Purpose - Maori Purpose Zone;
- (vi) the main pedestrian entry to buildings should be clearly recognisable from the street;
- (vii) in the case of any building that will contain an activity that will attract tourists, the building should be designed with features such as artwork that reflects the heritage of the Airport Gateway Sub-precinct, and features including generous areas of glazing, verandahs over entrance areas, and a high quality of landscape planting around those parts of the building accessible to visitors should be provided;
- (viii) front activities (i.e. the more active office, showroom or similar activities) should be located fronting adjacent streets and reserves; and conversely 'back' activities (i.e. warehouse, distribution, industrial, storage) should be in less visible locations;
- (ix) materials and colours of buildings (including buildings on adjoining sites) should be consistent;
- (x) any security fencing should be integrated with planting and buildings so as to avoid any adverse visual effect on adjacent roads, parks and stormwater management areas;
- (xi) low glare, high cut-off exterior lighting should be used, and integrated with the building and landscape designs;
- (xii) signage should be integrated with the building and landscape design;
- (xiii) planting along road frontages should achieve continuity to enhance the streetscape and character of the locality;
- (xiv) the landscape treatment should be of a similar scale as the proposed development, to provide adequate visual softening of large buildings and to screen car parking, loading and storage areas; and
- (xv) the proposed landscaping should be integrated with the type, quality, character and standard of landscape design developed for the relevant Gateway Sub-precinct area .

(c) Parking

- (i) whether the car parking numbers provided comply with standard I402.6.18 Parking.
- (ii) parking areas shall be appropriately designed and provided either on site or within nominated shared or consolidated parking areas.

(iii) where numbers of staff and potential demand justifies it, appropriate provision shall be to be made for cyclists, including cycle storage.

(3) Stormwater facilities to be vested in council:

- (a) adverse visual effects (including cumulative adverse effects) on the existing character of an area, should be avoided, remedied or mitigated;
- (b) the size and location of the proposed stormwater detention or retention ponds should internalise or mitigate the adverse effects;
- (c) stormwater detention or retention ponds, located in open spaces, should minimise any potential interference with public use and enjoyment of the public open spaces;
- (d) safe and direct access should be provided to enable maintenance;
- (e) landscaping should screen infrastructure to mitigate visual impact on the surrounding natural and built environments; and
- (f) potential health and safety hazards should be adequately fenced.

(4) Comprehensive earthworks consent (regional plan only) comprising one or more precincts:

- (a) provision of an earthworks management plan which details the following:
 - (i) site specific erosion and sediment control plans;
 - (ii) areas of expected earthworking operations for the following 12 months, including location and area of works; details of construction methods to be employed, including timing and duration as well as site boundaries;
 - (iii) areas where works have been completed during the preceding 12 months; and
 - (iv) details of chemical flocculation systems to be installed for each earthworks site greater than 1 hectare.
- (b) the suitability of proposed erosion and sediment control measures to manage erosion and discharge of contaminants and minimise water quality effects;
- (c) the appropriateness of proposed staging of works and progressive stabilisation, or the need for such where that is not proposed;
- (d) The proposed timing and duration of works;
- (e) How effects on flow paths that convey stormwater during rainfall events will be appropriately minimised;

- (f) Where relevant, the extent to which the earthworks avoids or exacerbates natural hazards including flooding at the site or at any location upstream or downstream of the works;
 - (g) The extent to which the earthworks will affect the stability and erosion potential of the site and surrounding area;
 - (h) The extent to which the earthworks, its design, location and execution are necessary to accommodate development otherwise permitted by the Unitary Plan and/or the airports designation;
 - (i) Measures to avoid, remedy or mitigate adverse effects on any relevant overlay;
 - (j) Measure to avoid, remedy or mitigate adverse effects on mana whenua values;
 - (k) Measures to avoid, remedy or mitigate adverse effects on a watercourse, wetland, or coastal marine area; and
 - (l) Information and monitoring requirements.
- (5) Buildings, structures and works (except those containing visitor accommodation) within a 1% AEP floodplain, flood sensitive area, or overland flow path that are unable to comply with the permitted activity standards:
- (a) whether the methods used to identify the flood hazard and associated risk are appropriate in the context of Auckland Airport.
 - (b) whether the design and management methods are appropriate in the context of Auckland Airport to address the flood hazard, including consideration of:
 - (i) the characteristics of the hazard, such as depth, extent and velocity of water;
 - (ii) public safety (endangerment of life);
 - (iii) the nature of the activity proposed; and
 - (iv) maintenance, monitoring and reporting requirements.
- (6) Buildings, structures and works that are unable to comply with the permitted activity standards for land which may be subject to coastal erosion, land instability or the 1% AEP coastal storm inundation (CSI) plus 1m of sea level rise (CSI1)
- (a) whether the methods used to identify the coastal hazard or land instability and associated risk are appropriate in the context of Auckland Airport.
 - (b) whether the design and management methods are appropriate in the context of Auckland Airport to address the coastal hazard or land instability risk, including consideration of:

- (i) the characteristics of the hazard, such as its extent and nature;
- (ii) the nature of the activity proposed; and
- (iii) maintenance, monitoring and reporting requirements.

I402.8. Assessment – restricted discretionary activities

I402.8.1. Matters of discretion

The council will restrict its discretion to the following matters when assessing a restricted discretionary resource consent application.

- (1) any buildings, structures, works or subdivision within Gateway Sub-precinct area A – F which is not in accordance with I402.10.1 Auckland Airport: Precinct plan 1
 - (a) site layout;
 - (b) design and external appearance of buildings and landscape design;
 - (c) design consistency within and between Gateway Sub-precinct areas;
 - (d) coherent design for the Māngere Gateway heritage route, George Bolt Memorial Drive and surrounds;
 - (e) land use and transport integration;
 - (f) Gateway Sub-precinct areas C – F – relationship to open space;
 - (g) adverse effects on heritage resources;
 - (h) Gateway Sub-precinct areas C and D – comprehensive development of the commercial centre; and
 - (i) landscape treatment.
- (2) Any subdivision outside Gateway Sub-precinct area A-F not complying with Rule I402.6.19
 - (a) form and layout of the subdivision;
 - (b) safety and efficiency of the adjacent street network; and
 - (c) adverse effects on cultural values.
- (3) Coastal marine area structures associated with airport activities which are not otherwise listed as a permitted activity (within Significant Ecological Area - Marine 1 and Outstanding Natural Features)
 - (a) construction or works methods, timing and hours of operation;
 - (b) location, extent, design and materials;
 - (c) adverse effects on the identified values of the Significant Ecological Area or Outstanding Natural Feature;

- (d) adverse effects arising from disturbance of the foreshore and seabed;
 - (e) adverse effects arising from deposition of material in the coastal marine area;
 - (f) removal of indigenous vegetation;
 - (g) any discharge of contaminants;
 - (h) duration of the consent; and
 - (i) monitoring of the consent.
- (4) Standard infringements in the Gateway Sub-precinct or Core Sub-Precinct:
- (a) building scale and site layout;
 - (b) landscape design; and
 - (c) parking in the Gateway Sub-precinct and parking within 500m of the northern boundary of the Core Sub-precinct where it does not adjoin the Gateway Sub-precinct and any measures to avoid, remedy or mitigate the adverse effects of overspill parking in these areas.
- (5) Standard infringements in the Coastal Sub-precinct:
- (a) construction or works methods, timing and hours of operation;
 - (b) location, extent, design and materials;
 - (c) adverse effects of the infringement on the coastal marine area or the identified values of the Significant Ecological Area or Outstanding Natural Feature (if applicable);
 - (d) adverse effects of the infringement arising from the disturbance of the foreshore and seabed;
 - (e) adverse effects of the infringement on safe navigation or public access;
 - (f) positive effects which arise from the infringement;
 - (g) duration of the consent; and
 - (h) monitoring of the consent.
- (6) New impervious areas not serviced by the stormwater network that do not meet permitted activity standards
- (a) The adverse effects of non-compliance with standard I402.6.9 New impervious area not serviced by the consented stormwater network
 - (b) and prevention or minimisation of those effects

- (7) Buildings containing visitor accommodation located within the 1% AEP flood plain
 - (c) Management of people and property during a 1% AEP flood event.
 - (d) Design and provision of safe access to and from the building.
 - (e) The location of sleeping or living areas.
 - (f) Monitoring.

I402.8.2. Assessment criteria

The council will consider the relevant assessment criteria below for restricted discretionary activities.

- (1) any building, structure, works or subdivision within Gateway Sub-precinct area A – F not in accordance with I402.10.1 Auckland Airport: Precinct plan 1:
 - (a) site layout:
 - (i) the site layout should reinforce or enhance the street pattern;
 - (ii) the site layout should be compatible with the site development of adjoining sites and the streetscape;
 - (iii) the building should align with the street, to create a clear spatial system along the street. Where streets are curved, the building should align with that curve, or alternatively should be stepped in plan in relation to the curve;
 - (iv) buildings on corner sites should be designed to respond to the site's prominence in the roading network and the adjoining road intersection; and
 - (v) car parking areas should be designed and located to ensure an attractive site layout, particularly when viewed from the road or public open spaces.
 - (b) design and external appearance of buildings and landscape design:
 - (i) the scale, form, design, height, and colour of the proposed building or structures (including fencing) should be sympathetic to existing built development and the wider natural, cultural and built heritage and landscape values of the area;
 - (ii) building and landscape design should be used to frame and define edges to roads, parks and stormwater reserves, and to emphasise key intersections;
 - (iii) service areas, loading docks and car parks should be separated from and not facing the front yard;

- (iv) passive surveillance of reserves and public open spaces from the adjacent buildings should be provided for windows, balconies, indoor and outdoor activities overlooking these areas;
 - (v) site levels, building scale, development intensity, building form, colour and texture should be used to reduce the apparent height and size of large buildings when viewed from the Māngere Gateway heritage route or open spaces;
 - (vi) the main pedestrian entry to buildings should be clearly recognisable from the street;
 - (vii) in the case of any building that will contain an activity that will attract tourists, the building should be designed with features such as artwork that reflects the heritage of the Gateway Sub-precinct, and features including generous areas of glazing, verandahs over entrance areas, and a high quality of landscape planting around those parts of the building accessible to visitors should be provided;
 - (viii) in the case of any building visible from the Special Purpose - Māori Purpose Zone or an open space zone (existing or proposed), the building design and external appearance should include measures such as building setback and landscape planting that respond sensitively to cultural and landscape values;
 - (ix) front activities (i.e. the more active office, showroom or similar activities) should be located fronting adjacent streets and reserves; and conversely 'back' activities (i.e. warehouse, distribution, industrial, storage) should be in less visible locations;
 - (x) materials and colours of buildings (including buildings on adjoining sites) should be consistent; and
 - (xi) any security fencing should be integrated with planting and buildings so as to avoid any adverse visual effect on adjacent roads, parks and stormwater management areas;
 - (xii) low glare, high cut-off exterior lighting should be used, and integrated with the building and landscape designs;
 - (xiii) signage should be integrated with the building and landscape design;
 - (xiv) planting along road frontages should achieve continuity to enhance the streetscape and character of the locality;
 - (xv) the landscape treatment should be of a similar scale as the proposed development, to provide adequate visual softening of large buildings and to screen car parking, loading and storage areas;
 - (xvi) the proposed landscaping should be integrated with the type, quality, character and standard of landscape design developed for the relevant Gateway Sub-precinct area.
- (c) design consistency within and between Gateway Sub-precinct areas:

- (i) the buildings structures or works should be designed having regard to the context of adjoining Gateway Sub-precinct areas and other surrounding land, natural features and buildings, structures and works.
- (d) coherent design for the Mangere Gateway heritage route, George Bolt Memorial Drive, and surrounds:
- (i) the building, structures and works should promote a coherent design for the Mangere Gateway heritage route, George Bolt Memorial Drive, and adjoining land, including:
 - a. ensuring a coherent spatial structure formed by the relationship of buildings to the street and to one another;
 - b. minimising the number of vehicle entrances onto the street;
 - c. aligning buildings to the street;
 - d. locating buildings, structures and works, and access points to sites, so that heavy vehicle traffic (except buses) is discouraged on the Gateway heritage route;
 - e. locating the office component of a development at the front (street) part of the development;
 - f. using consistent materials on buildings;
 - g. using consistent planting, paving, lighting and fencing;
 - h. ensuring existing trees and shelter belts are retained where they may contribute to maintaining amenity values;
 - i. providing trees along road berms and within front yards which should be capable of reaching a similar scale as nearby buildings;
 - j. avoiding security fencing being closer to the front boundary of the site than the buildings on the site; and
 - k. enhancing the natural character of open space.
 - (ii) Pou, art, sculpture or other public amenity features should be of an appropriate design to represent the Māori and European history of the area and be located on land adjoining the Mangere Gateway heritage route, in order to promote a distinctiveness or sense of place appropriate for the wider heritage area. Note pou, art, sculpture and other public amenity features should generally be located only in space areas or on sites that will attract tourists.
- (e) land use and transport integration:
- (i) A full integrated transport assessment should be submitted with the application, and include consideration of:
 - a. all modes of transport that would support the land uses proposed;

- b. in Gateway Sub-precinct areas B, C and D, the possible location of and linkages to rapid transport networks;
 - c. a location policy that ensures specified development takes place in locations within the Gateway Sub-precinct area that, where relevant, supports sustainable transport mode share;
 - d. planning and development tools to facilitate sustainable transport;
 - e. travel plans, as appropriate to encourage uptake of sustainable transport options by employers and visitors;
 - f. car parking standards with justification for the number of spaces proposed, so land is used efficiently and effectively;
 - g. provision, where appropriate, to be made for cyclists, including cycle storage; and
 - h. any relevant funding matters.
- (ii) Sufficient roads should be provided to create a connected roading pattern that avoids the need for rear sites;
 - (iii) Roads should be designed to a consistent, high-quality standard;
 - (iv) Sufficient cycleway and walkway linkages and facilities should be provided, and should be designed to contribute to the employment, visitor and recreational user attractiveness of the heritage area;
 - (v) The street and site layout should avoid adverse effects on the safety and efficiency of the adjacent road network; and
 - (vi) The street layout and street design should encourage heavy traffic movements (except buses) away from the Māori Purpose Zone and away from the Gateway heritage route, except where there is no available alternative route for heavy traffic.
- (f) Gateway Sub-precinct areas C-F - relationship to open spaces:
- (i) development proposals for the public open space areas identified in the precincts should generally reflect an informal or passive design that reflects the historic rural character, cultural and heritage values of the area including as viewed from the Mangere Gateway Heritage Route; and
 - (ii) strong open space and visual connections to and around Waitomokia and Oruarangi Creeks should be created, and include provision for pedestrian and cycle linkages and locations for cultural, landscape and historical interpretive features.
- (g) adverse effects on heritage resources
- (i) the development proposal should identify and incorporate any cultural heritage resources, in a way that integrates with and enhances those resources.

- (h) Gateway Sub-precinct areas C and D: comprehensive development of the commercial centre
 - (i) a comprehensive design, including building location, landscape and building design guidelines (including materials and colouring) for the commercial centre within Gateway Sub-precinct areas C and D, should be carried out.
 - (i) landscape treatment
 - (i) consistent landscape design should be established and maintained along the Gateway Heritage Route and George Bolt Memorial Drive.
 - (ii) existing trees and shelterbelts that enhance the amenity of buildings, structures and works should be retained.
 - (iii) the form of new planting should enhance the amenity of buildings, structures and works.
- (2) Any subdivision outside Gateway Sub-precinct areas A - F not complying with Rule I402.6.19:
 - (a) The form and layout of the subdivision, should avoid, remedy or mitigate significant adverse effects on the safety and efficiency of the adjacent street network.
 - (b) The extent to which the form and layout of the subdivision will avoid, remedy or mitigate adverse effects on cultural values.
- (3) Standard infringements
 - (a) The proposed height of the structure should not have an adverse effect on airport safety or visual amenity values.
 - (b) The proposed structure should not have an adverse effect on the visual or landscape amenity values of adjoining sites.
 - (c) When assessing the matter of coastal protection yards, the proposed structure should not have an adverse effect on the coastal environment, including visual or landscape amenity, water quality, vegetation or habitats.
 - (d) When assessing landscape design, the proposal should achieve a high standard of visual amenity values in those parts of the Auckland Airport zone where visitors and passengers are likely to be present, such as the entry and exit points to the airport.
 - (e) When assessing storage areas, the proposal should include methods of ensuring any parts of an activity visible from public places will be maintained in a tidy condition. The location of by-products or refuse should be screened from public view in order to maintain a reasonable level of visual amenity.

- (f) When assessing parking where the supply of parking is insufficient to meet the parking development standard in the Gateway Sub-precinct and within 500m of the northern boundary of the Core Sub-precinct where it does not adjoin the Gateway Sub-precinct the proposal should include any measures, conditions or arrangements to ensure there is no more than minor adverse effects from parking overspill on adjacent activities and the safe and efficient operation of the adjoining and nearby transport network.
- (4) coastal marine area structures associated with airport activities which are not otherwise listed as a permitted activity (within Significant Ecological Area - Marine 1 and Outstanding Natural Features):
- (a) coastal marine area structures should be limited to those:
 - (i) that have a functional or operational need to be located in the coastal marine area, or that are for infrastructure that cannot reasonably or practicably be located outside the coastal marine area; and
 - (ii) that cannot reasonably or practicably be accommodated on existing structures or facilities.
 - (b) the following measures should be taken to avoid, remedy or mitigate adverse effects on coastal processes, ecological values, cultural values, water quality and natural character:
 - (i) construction methods and site works should avoid, remedy or mitigate adverse effects, particularly on water quality and sedimentation;
 - (ii) construction or works should be done at a time that avoids or minimises, adverse effects on marine mammals, bird roosting, nesting and feeding, and cultural and recreational users of the coastal marine area; and
 - (iii) the hours of operation of construction or works should minimise adverse effects of noise and disruption on existing activities, and on nearby residential, marae and open spaces.
 - (c) the work should be located and designed to avoid, remedy or mitigate adverse effects on the environment;
 - (d) the form, intensity and scale of works, structures and buildings should be sensitive to the marine environment and surrounding adjoining spaces;
 - (e) works and structures should ensure efficient use of the coastal marine area is made by using the minimum area necessary for their purpose; and
 - (f) the materials used should be compatible with the surrounding coastal environment, and where practicable be consistent with the natural materials at the site. This should take into account the physical

characteristics of the materials used, including texture, colour, composition, grain size, level of contamination and potential for leaching.

(5) Standard infringements in the Coastal Sub-precinct

- (a) adverse effects of the infringement on the coastal marine area or the identified values of the Significant Ecological Area or Outstanding Natural Features should be avoided, remedied or mitigated.
- (b) adverse effects of the infringement arising from the disturbance of the foreshore and seabed should be avoided, remedied or mitigated.
- (c) adverse effects of the infringement on safe navigation or public access should be avoided, remedied or mitigated.
- (d) the positive effects which arise from the infringement should be considered alongside any adverse effects.

(6) New impervious areas not serviced by the stormwater network that do not meet permitted activity controls:

- (a) the extent to which the proposal prevents or minimises the adverse effects of the discharge, including cumulative effects, to the extent possible having regard to:
 - (i) the nature, volume and peak flow of the stormwater discharge;
 - (ii) the sensitivity of the receiving environment to stormwater contaminants and flows including any areas of identified degraded coastal water quality;
 - (iii) avoiding the creation or increase of flood risk to other properties external to the Auckland Airport Precinct;
 - (iv) practical limitations on the measures that may be used;
 - (v) maintaining water levels in underlying peat soils and ground stability (where relevant);
 - (vi) Mana Whenua values; and
 - (vii) the management of contaminants from any area where there is a likelihood or risk of high levels of contaminants being generated and discharged.
- (b) options for discharge where there is no available stormwater network.
- (c) consistency with any relevant network discharge consent or publicly available and current Auckland Council stormwater management plans/analysis.
- (d) opportunities to reduce existing adverse effects and enhance receiving environments.

(e) the effects on marine sediment quality.

(7) Buildings containing visitor accommodation located within the 1% AEP flood plain

(a) Adequacy of methods to respond to the identified risks including the following:

(i) actions that can be taken to ensure the safety of people in the building during a flood event, including safe refuge areas and/or evacuation procedures; and

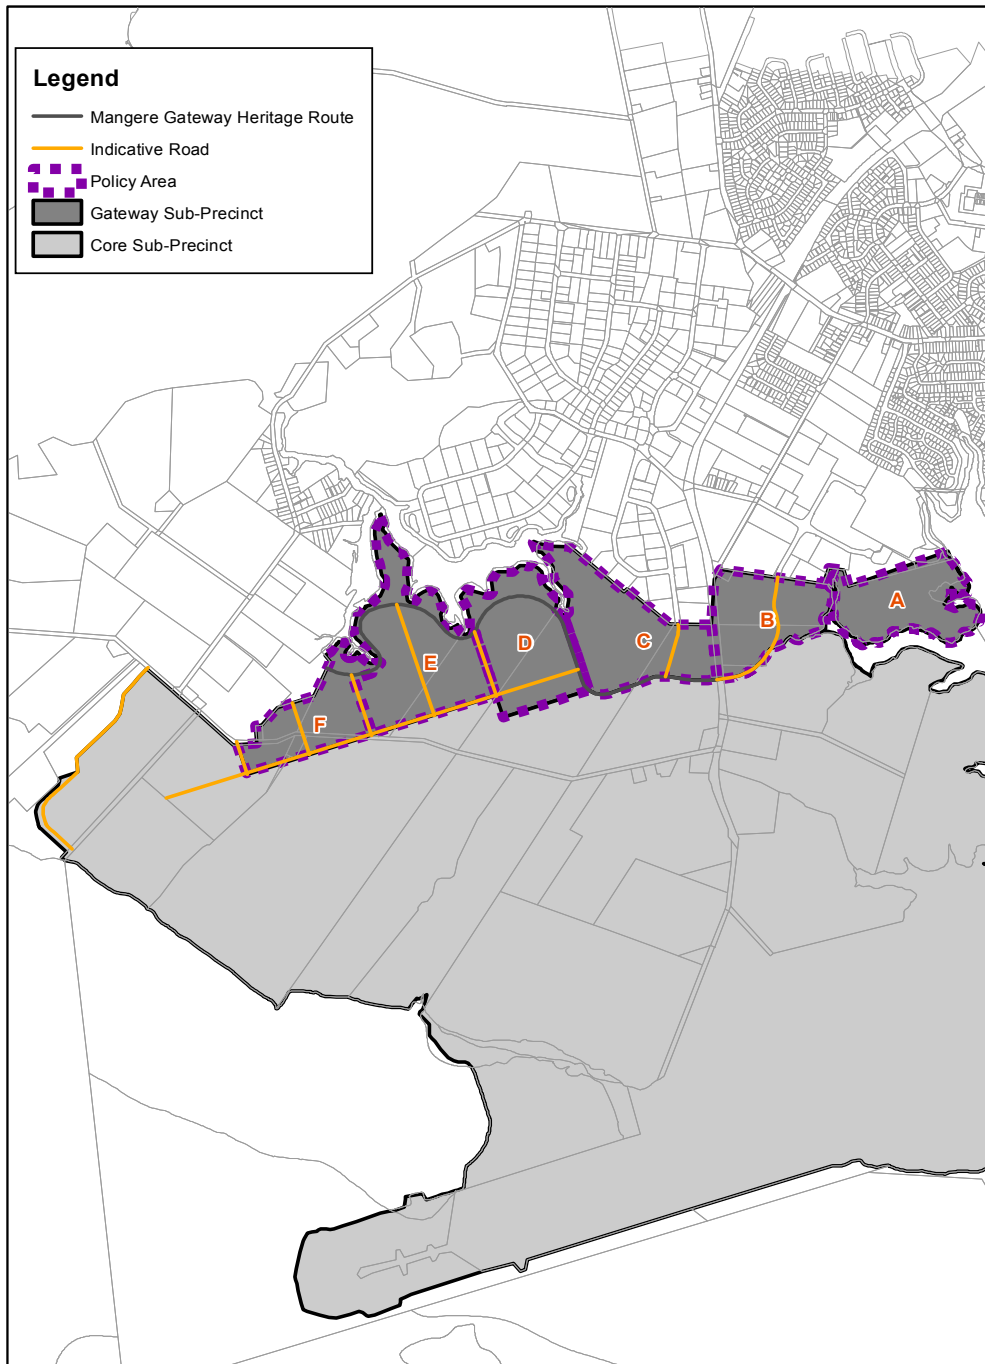

(ii) the location of accommodation and the extent to which physical measures are proposed to manage risks to the occupants.

I402.9. Special information requirements

There are no special information requirements for this precinct.

I402.10. Precinct plans

H1.11.1 Auckland Airport : Precinct plan 1

I403. Beachlands 1

I403.1. Precinct Description

Beachlands is a rural and coastal village located on the eastern side of Auckland, adjoining the Tamaki Strait coastline. The original Beachlands village was laid out in the 1920s as a marine garden suburb. It is characterised by the following key features:

- a grid-based roads pattern with informal road construction and generous verges
- a “green” landscape resulting from significantly vegetated front and rear yards.
- a low-density character with rectangular-shaped allotments of a consistent size and frontage (20m).
- few or no rear sites.

More recent subdivision in the area bounded by Bell Road, Third View Avenue, Beachlands Road and Whitford- Maraetai Road has seen some departure from this pattern; however the village retains a significant rural and coastal character.

The Beachlands 1 Precinct covers approximately 122ha of land. Its purpose is to provide for residential expansion to the south of the existing Beachlands village and to the west of the Pine Harbour marina development in a way that integrates with and maintains and enhances the key features of Beachlands village.

I403.10.1 Beachlands 1: Precinct plan 1 guides the future development of this precinct. The grid based roads pattern shown on I403.10.2 Beachlands 1: Precinct plan 2 road network is a critical element in achieving integration between the precinct, Beachlands village and Pine Harbour marina. Site sizes, site shape, pedestrian linkages and reserve network connectivity in the precinct enables integration with the existing village. The location of the proposed stormwater ponds has been identified in the I403.10.1 Beachlands 1: Precinct plan 1. The location and size of the proposed stormwater ponds is indicative only and will be defined as part of the subdivision consent process.

The zoning of land within this precinct is the Residential - Single House Zone. Refer to the planning maps for the location and extent of the precinct.

I403.2. Objectives [rp/dp]

- (1) The precinct contributes to the growth and development of Beachlands village and ensures that future land use, subdivision and development is contained within the precinct and integrates with the existing Beachlands village to the north, Pine Harbour marina development to the west and the business area in Beachlands 2 Precinct.
- (2) Subdivision and development establishes and maintains a low density, open, spacious rural and coastal village character.
- (3) A well connected and integrated transport network is achieved that reflects the rectilinear grid roads pattern of Beachlands and the importance of transportation links between Beachlands and Pine Harbour Marina.

- (4) Public open space is provided for and treated as integrated features in any development.
- (5) Infrastructure is provided in an effective and efficient way.
- (6) Stormwater runoff and riparian margins are managed in a sustainable way.
- (7) The rural character and appearance of Jack Lachlan Drive is maintained.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I403.3. Policies [rp/dp]

General

- (1) Require that land use, subdivision and development be generally in accordance with the I403.10.1 Beachlands 1: Precinct plan 1.
- (2) Maintain the long-term growth limit of Beachlands village with the precinct boundary.
- (3) Create a clear distinction between the urban area of Beachlands and the Whitford rural area to the south and east by requiring edge treatment planting along the full length of Jack Lachlan Drive.

Integrated growth

- (4) Require subdivision and land use activities to be designed in a way that integrates with the roads pattern, open space pattern and rural and coastal character of the Beachlands village.

Low-density coastal character

- (5) Maintain the existing pattern of development and low-density character of the area.

Subdivision, use and development

- (6) Require a development pattern characterised as one house per site.
- (7) Require a minimum site size of 800m² unless otherwise stated in the I403.10.1 Beachlands 1: Precinct plan 1.
- (8) Require the road layout to be designed and constructed to achieve a grid based pattern of development as shown in the I403.10.1 Beachlands 1: Precinct plan 1.
- (9) Avoid the creation of rear sites unless otherwise stated in the I403.10.1 Beachlands 1: Precinct plan 1.
- (10) Encourage the development of buildings that have a coastal appearance using materials, colours and features that complement the rural and coastal character of the original village.
- (11) Require that accessory buildings are single storey.

- (12) Retain a sense of openness between properties, and create a vegetated appearance through tree planting.
- (13) Limit high fencing that dominates the streetscape and creates an urban appearance. Encourage the retention of significant native vegetation and trees.
- (14) Encourage the retention of significant native vegetation and trees.
- (15) Require planting of new vegetation to achieve privacy and maintain a coastal landscaped appearance. Encourage development to front natural watercourses and public open spaces.
- (16) Encourage development to front natural watercourses and public open spaces.

Business development

- (17) Avoid activities that adversely affect the amenities of residential sites or sense of residential cohesion within the precinct.
- (18) Require retail and commercial activities to be located within existing business zones.

Public open space

- (19) Require public open spaces to be fronted by park edge roads to ensure a high degree of accessibility to public open spaces within the precinct.

Infrastructure

- (20) Require that all development is connected to a public reticulated sewerage system.
- (21) Require sustainable supply of potable water to meet the servicing demands of expected activities on the site.

Stormwater management

- (22) Require subdivision and land use activities to avoid or mitigate the adverse effects of stormwater runoff on receiving environments through incorporating the stormwater management areas shown on I403.10.1 Beachlands 1: Precinct plan 1 or implement alternative solutions which will achieve the same or better stormwater management outcomes.
- (23) Require the planting of vegetation along the riparian margins of stormwater management areas.
- (24) Require development to front to natural watercourses, generally across public roads.

Landscaping along Whitford–Maraetai Road

- (25) Require the provision of a landscaped buffer area along the full length of Whitford-Maraetai Road as shown in the I403.10.1 Beachlands 1 Precinct plan 1.

(26) Require planting of the landscape buffer area with native and exotic species in accordance with I403.11.1 Beachlands 1: Beachlands Village Design Guidelines.

(27) Protect views from Whitford-Maraetai Road to the Hauraki Gulf by means of the view corridor through the landscape buffer area identified in I403.11.1 Beachlands 1: Beachlands Village Design Guidelines.

Jack Lachlan Drive

(28) Maintain the appearance of Jack Lachlan Drive as a rural road and reduce the visual impact of urban development by:

(a) Limiting the number of roads that intersect with Jack Lachlan Drive.

(b) Limiting direct vehicle access from adjoining sites to Jack Lachlan Drive, and where direct access is required, encourage the use of shared driveways.

(c) Requiring screen planting between any development and the boundary of sites adjoining Jack Lachlan Drive except where it is necessary to provide access.

(d) Requiring street tree planting on the north side of Jack Lachlan Drive to create a lineal effect and reduce the visual impact of urban development

The relevant overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I403.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the zone apply in this precinct unless otherwise specified below.

Table I403.4.1 Activity table specifies the activity status of land use, development and subdivision activities in the Beachlands 1 Precinct pursuant to section 9(2), 9(3) and 11 of the Resource Management Act 1991 or any combination of all of these sections where relevant.

A blank in Table I403.4.1 Activity table below means that the provisions of the zone or the Auckland-wide provisions apply.

Table I403.4.1 Activity table

Activity		Activity status
Use		
(A1)	Any of the activities listed in the Residential - Single House Zone but located within this precinct other than those activities listed below.	
(A2)	More than one dwelling per site	NC
(A3)	Any activity requiring wastewater servicing that is connected to a public reticulated sewerage system	P

(A4)	Any activity requiring wastewater servicing that is connected to a public reticulated sewerage system	NC
(A5)	The conversion of an existing dwelling into two dwellings where the dwelling complies with H3.4.1(A4) of the Residential – Single House Zone.	NC
(A6)	Public open space located in the specified area on the Precinct plans: I403.10.1 Beachlands 1: Precinct plan 1	P
(A7)	Public open space located outside of the specified area on the Precinct plans: I403.10.1 Beachlands 1: Precinct plan 1	D
(A8)	Recreational walkways located generally in accordance with the indicative walkway shown in I403.10.1 Beachlands 1: Precinct plan 1.	P
(A9)	Recreational walkways not located in accordance with the indicative walkway shown in I403.10.1 Beachlands 1: Precinct plan 1.	D
(A10)	Any activity which does not comply with the following standards: I403.6.13 Street trees; I403.6.14 Landscape buffer area; and I403.6.15 Planted hedge – Jack Lachlan Drive	D
(A11)	Any activity which does not comply with the following standards: I403.6.8.1 Site area; I403.6.9.1 Site frontage; I403.6.10.1 Rear sites; and/or I403.6.11 Site layout	NC
Commerce		
(A12)	Dairies up to 100m ² gross floor area per site	NC
(A13)	Service station on an arterial road	NC
(A14)	Park-and-Ride	D
Development		
(A15)	New buildings within the stormwater management areas shown on I403.10.1 Beachlands 1: Precinct plan 1.	D
(A16)	Construction, reconstruction and / or formation or reformation of roads, and open space areas in accordance with the Precinct plans: I403.10.1 Beachlands 1: Precinct plan 1 and I403.10.2 Beachlands 1: Precinct plan 2 road network	P
(A17)	New buildings and any modifications to a building other than those listed above	
Subdivision		

(A18)	Subdivision	
-------	-------------	--

I403.5. Notification

- (1) Any application for resource consent for an activity listed in Table I403.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I403.6. Standards

The provisions in any relevant overlays, Auckland-wide provisions and the zone apply in this precinct unless otherwise specified below.

All activities in Table I403.4.1 Activity Table must comply with the following standards.

I403.6.1. Building height

- (1) Accessory buildings must not exceed a height of 4m and must be single storey. Height is to be measured using the rolling height method.

I403.6.2. Yards

- (1) A building or parts of a building must be set back from the relevant boundary to the minimum depth listed in Table I403.6.2.1 Yards below.

Table I403.6.2.1 Yards

Yard	Minimum depth
Front and Corner Sites	
Front	8m except as follows: 6m for - sites adjoining Jack Lachlan Drive that are subject to standard I403.6.14 - yards adjoining a stormwater management area or public open space. 3m for - one yard only on a corner site - sites that adjoin a stormwater management area or public open space or a street.
Side	One yard must be a minimum of 2m and one yard must be a minimum of 3m
Rear	8m

Rear sites	
All yards	8m for at least two yards and 3m for any other yard

I403.6.3. Maximum impervious area

(1) The maximum impervious area must not exceed 40 per cent of site area.

I403.6.4. Building coverage

(1) The maximum building coverage must not exceed 30 per cent of net site area.

I403.6.5. Water storage tank

(1) Provision must be made for minimum water storage per dwelling of two 25,000 litre tanks.

(2) All dwellings must comply with the minimum roof areas listed in Table I403.6.5.1 Minimum roof areas for water storage below:

Table I403.6.5.1 Minimum roof areas for water storage

Number of bedrooms	Minimum roof area (m²) connected to the water storage tank
1	100
2	160
3 and above	230

(3) Private water storage tanks must not be visible from the street.

(4) Standards I403.6.5(1) and (2) do not apply to activities where a connection to a reticulated bore water supply is provided to the site.

I403.6.6. Fences

(1) Fences along side and rear boundaries must not exceed 1.8m in height.

(2) Fences adjoining areas shown as public open space or stormwater management areas on I403.10.1 Beachlands 1: Precinct plan 1 must not exceed 1.2m in height and must comprise at least 50 per cent visually permeable fencing.

(3) Fences adjoining that part of Jack Lachlan Drive specified as 'no direct access permitted' on I403.10.1 Beachlands 1: Precinct plan 1 must not be visible from Jack Lachlan Drive after the full establishment of the hedge required under Standard I403.6.15.

I403.6.7. Road network

(1) Where the subdivision is of an existing site that adjoins Beachlands Road, the first stage must include a public road connection to Beachlands Road.

Where the subdivision is of an existing site that adjoins Karaka Road, the first stage of subdivision must include a public road connection to Karaka Road. Where the subdivision is of an existing site that adjoins Jack Lachlan Drive, the first stage of subdivision must include a public road connection to Jack Lachlan Drive.

- (2) Where a collector road is shown I403.10.2 Beachlands 1: Precinct plan 2 – road network the entire length of the collector road through the site must be established as part of the first stage of subdivision except for:
 - (e) Lot 2 DP 325925, where the collector road must be established prior to the issue of a s. 224(c) certificate under the RMA for more than 80 residential sites within the land contained in that site.
- (3) There must be no direct vehicle access off the Whitford-Maraetai Road.
- (4) Sites must not be served by a jointly owned access or similar shared access except for:
 - (a) the lanes shown on I403.10.2 Beachlands 1: Precinct plan 2 – road network; and
 - (b) entrance strips and private ways required to access rear sites identified in I403.10.1 Beachlands 1: Precinct plan 1.
- (5) Road levels must enable integration with the existing or potential road layout on adjoining sites.
- (6) Lot 1079 DP 21695 is able to be used for access purposes for Lot 1119 DP 21695 subject to the Auckland-wide subdivision controls.
- (7) Direct vehicle access to Jack Lachlan Drive must not be provided in the area specified as 'no direct site access permitted' on the I403.10.1 Beachlands 1: Precinct plan 1.
- (8) Where a site adjoins Jack Lachlan Drive and direct vehicle access is permitted, shared access driveways must be used.
- (9) Subject to the following exceptions, Jack Lachlan Drive is to be retained in its current rural standard formation to maintain its appearance as a rural rather than urban road. Where any alteration to the current rural standard formation is proposed it must be limited to: kerb and channelling of the road edge for those areas of Jack Lachlan Drive where there is no alternative to provide for stormwater runoff from adjacent residential development, and/or
 - (a) kerb and channelling of the road edge which is necessary to provide for vehicle access from adjacent residential development or new road intersections with Jack Lachlan Drive, and/or
 - (b) a footpath of appropriate rural character (gravelled surface or similar).
- (10) Where a specified centre line for a proposed road is shown in on I403.10.2 Beachlands 1: Precinct plan 2 – road network any application for subdivision

that does not comply with standards I403.6.7.1 to I403.6.7.9 above is a non-complying activity.

- (11) Where a specified centre line for a proposed road is not shown in I403.10.2 Beachlands 1: Precinct plan 2 – road network any application for subdivision that does not comply with standards I403.6.7.1 to I403.6.7.9 above is a restricted discretionary activity.

I403.6.8. Site area

- (1) The minimum net site area must be 800m², except that:
- (a) the minimum site area may be reduced to 750m² in Sub-precinct A and 700m² in Sub-precinct B as shown on I403.10.1 Beachlands 1: Precinct plan 1.
 - (b) the minimum site area may be reduced as a discretionary activity where an application for subdivision relates to a development for a retirement village.

I403.6.9. Site frontage

- (1) The minimum site frontage must be as follows:
- (a) front sites: 20m;
 - (b) rear sites: 3m.

I403.6.10. Rear sites

- (1) There must be no rear sites, except to the maximum number of rear sites within each block shown in I403.10.1 Beachlands 1: Precinct plan 1.

I403.6.11. Site layout

- (1) The layout of the sites within the street blocks shown on the I403.10.1 Beachlands 1: Precinct plan 1 must be of a configuration which is in accordance with Figure I403.6.11.1 Site Layout below, except for the street blocks containing rear sites or sites which adjoin but do not have vehicle access to Jack Lachlan Drive in which case the layout of the sites must make allowance for those sites but otherwise be in general accordance with the illustration below:

Figure I403.6.11.1 Site layout

- (2) The layout of the sites within the street blocks shall be such that it enables all future buildings to be designed to face and front onto the active street frontage, except:
- (a) where sites directly adjoin stormwater management areas in which case the buildings shall be designed to face and front onto the reserves.
 - (b) rear sites.
 - (c) where sites adjoin but do not gain access from Jack Lachlan Drive.

I403.6.12. Stormwater management areas

- (1) All riparian margin areas within the stormwater management area must comprise planting at a minimum density of 1.4m centres (5100 stems per hectare) provided that a greater density may be required in some situations, for instance where there is significant weed infestation or planting is in the proximity of streams or wetlands.
- (2) The applicant will be responsible for implementing the revegetation plan/programme for a period of two years from the time of planting, which must be secured by suitable legal instrument on the certificate of title.

- (3) Upon development or subdivision of sites containing land within the stormwater management area and flood plain, such land may be vested in Council subject to Council's approval.

I403.6.13. Street trees

- (1) Street tree planting on the north side of Jack Lachlan Drive must create a lineal effect so that the trees, rather than the built development behind, become the dominant visual feature as viewed from the road.
- (2) All species selected for street tree planting must be approved by the council.

I403.6.14. Landscape buffer area

- (1) A landscape buffer area must be developed along Whitford–Maraetai Road as shown in the precinct plan I403.10.1 Beachlands 1: Precinct plan 1. The buffer area must:
 - (a) be consistent with the widths indicated in the precinct plan I403.10.1 Beachlands 1: Precinct plan 1 being a minimum width of 15m at any point;
 - (b) where it is within any existing site, must be established as a condition of any subdivision of that site;
 - (c) be planted in accordance with the landscape plan for the buffer area and the planting scheduled contained in I403.11.1 Beachlands 1 Beachlands Village Design Guidelines, prior to the issuing by the council of the s. 224(c) certificate under the Resource Management Act 1991 in relation to the subdivision referred to in Standard I403.6.14.1(a) above.
- (2) The applicant is responsible for the maintenance of the buffer area, including weed control, mulching and watering and any necessary plant replacement, for a period of three years from the time of planting.
- (3) The buffer area must be vested in the council free-of-charge (and without any impact on the development contribution required for the subdivision) at a time to be determined in the subdivision consent, being no more than two years after council issues the s. 224(c) certificate under the Resource Management Act 1991.

I403.6.15. Planted hedge – Jack Lachlan Drive

- (1) Where a site adjoins that part of Jack Lachlan Drive specified as 'no direct site access permitted' on I403.10.1 Beachlands 1: Precinct plan 1 a planted hedge is to be provided for the full length of the Jack Lachlan Drive boundary of the site. The hedge species selected must be capable of reaching and be maintained at a height of no less than 2m. The planted hedge will be subject to appropriate legal protection, arranged at the time of subdivision.

I403.7. Assessment – controlled activities

There are no controlled activities in this precinct

I403.8. Assessment – restricted discretionary activities

I403.8.1. Matters of discretion

The Council will restrict its discretion to the following matters, in addition to the matters specified for the relevant restricted discretionary activities in the Residential - Single House zone:

- (a) character and amenity of the neighbourhood;
- (b) Beachlands Village Precinct Design Guidelines.

In addition to the general matters set out in Rule C1.9(3) Infringements of standards the specific matters set out for the infringement in the Residential - Single House zone, the Council will restrict its discretion to the matters below:

- (a) Building height;
 - (i) disruption of views
- (2) Subdivision

In addition to the matters of discretion for the relevant restricted discretionary activity in the Auckland-wide subdivision rules, the Council will restrict its discretion to the matters below for subdivision

- (a) Subdivision in accordance with the Beachlands 1: Precinct plan
 - (i) road network;
 - (ii) stormwater management;
 - (iii) Beachlands Village Design Guidelines;
 - (iv) rear sites.

I403.8.2. Assessment criteria

Council will consider the relevant assessment criteria below for restricted discretionary activities:

- (1) Character and amenity of the neighbourhood
 - (a) The extent to which the design, layout, intensity, external appearance and landscaping of the buildings and sites should enhance the rural and coastal village character and amenity values identified in the Beachlands 1 precinct objectives and policies.
 - (b) In the case of non-residential activities, the extent to which the character of the activity and its effects are compatible with the rural and coastal village character and amenity values identified in the Beachlands 1 Precinct objectives and policies.

(2) Beachlands Village Design Guidelines

- (a) The extent to which the proposed activity complies with the principles contained in the Beachlands Village Design Guidelines.

(3) Standards

(a) Building height

- (i) The extent to which buildings are compatible with the height and visual character of the streetscape, surrounding area and the character of the Beachlands village; and/or
- (ii) Whether buildings disrupt the views to the sea and the coastal edge from Whitford-Maraetai Road.

(4) Subdivision

In addition to the criteria for the relevant restricted discretionary activity in the Auckland-wide subdivision rules, the following assessment criteria apply,

(a) Subdivision in accordance with a Precinct Plan

Road network

- (i) Whether the road pattern produces a rectangular grid layout consistent with that shown in I403.10.2 Beachlands 1: Precinct plan 2 – road network
- (ii) All roads should be designed to enable integration with existing or potential road layouts on adjoining sites.
- (iii) The extent to which the road pattern is designed to enhance public access to reserves and take advantage of coastal and rural vistas.

(b) Stormwater management

- (i) The extent to which the revegetation plan for stormwater management areas retain existing trees either on a permanent basis or until the new planting has been established.

(c) Beachlands Village Design Guidelines

- (i) The extent to which the proposed subdivision meets the principles contained in the Beachlands Village Design Guidelines 0.1 Beachlands 1 Beachlands Village Design Guidelines.

(d) Rear sites

- (i) Whether rear sites that will ultimately front a proposed local road shown in I403.10.1 Beachlands 1 Precinct plan 1 are designed to enable all future buildings to face and front the proposed local road.

(e) Jack Lachlan Drive Edge

- (i) Whether sites in excess of 800m² adjoin the majority of the length of Jack Lachlan Drive.

I403.9. Special information requirements

(1) Where landscaping is required, a resource consent application must be accompanied by the following information:

(a) A planting plan for the landscape buffer area that provides detail of the:

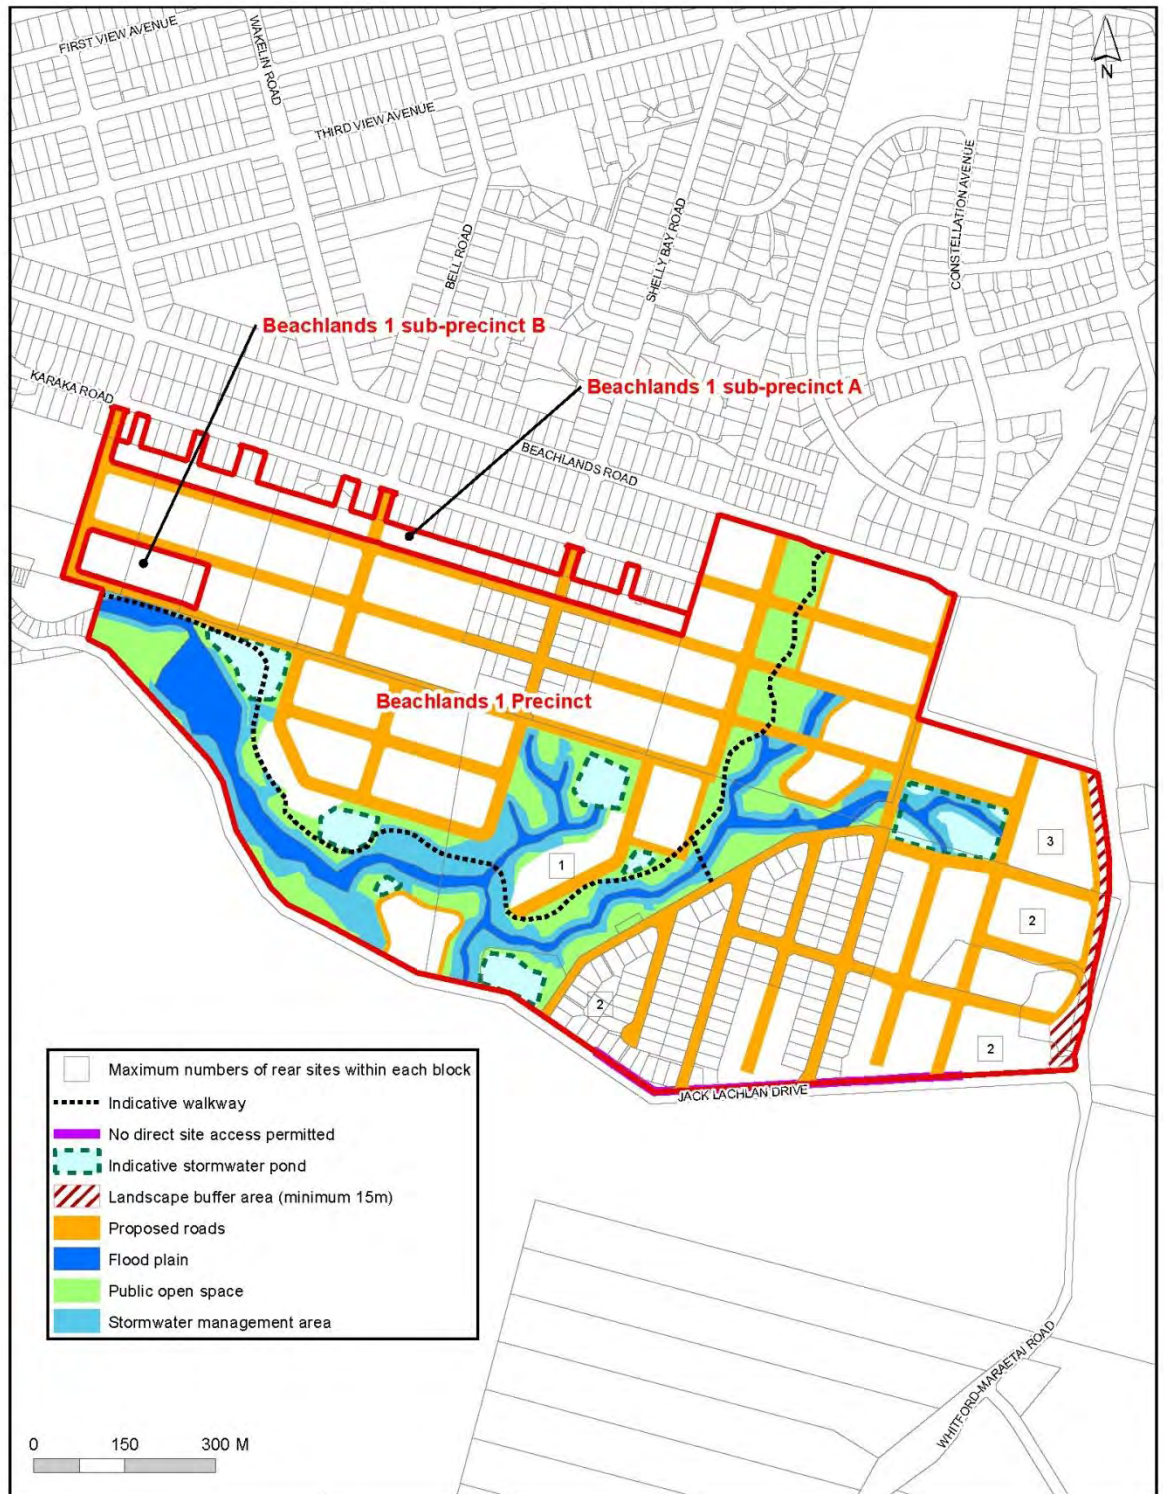

- (i) site preparation for planting, weed and pest control;
- (ii) existing trees to be retained, species to be planted, size of plants, where they are to be planted and density of planting;
- (iii) maintenance of planting, including fertiliser, replacing dead plants, animal and plant pest control and mulching.

(b) A re-vegetation plan/programme, including:

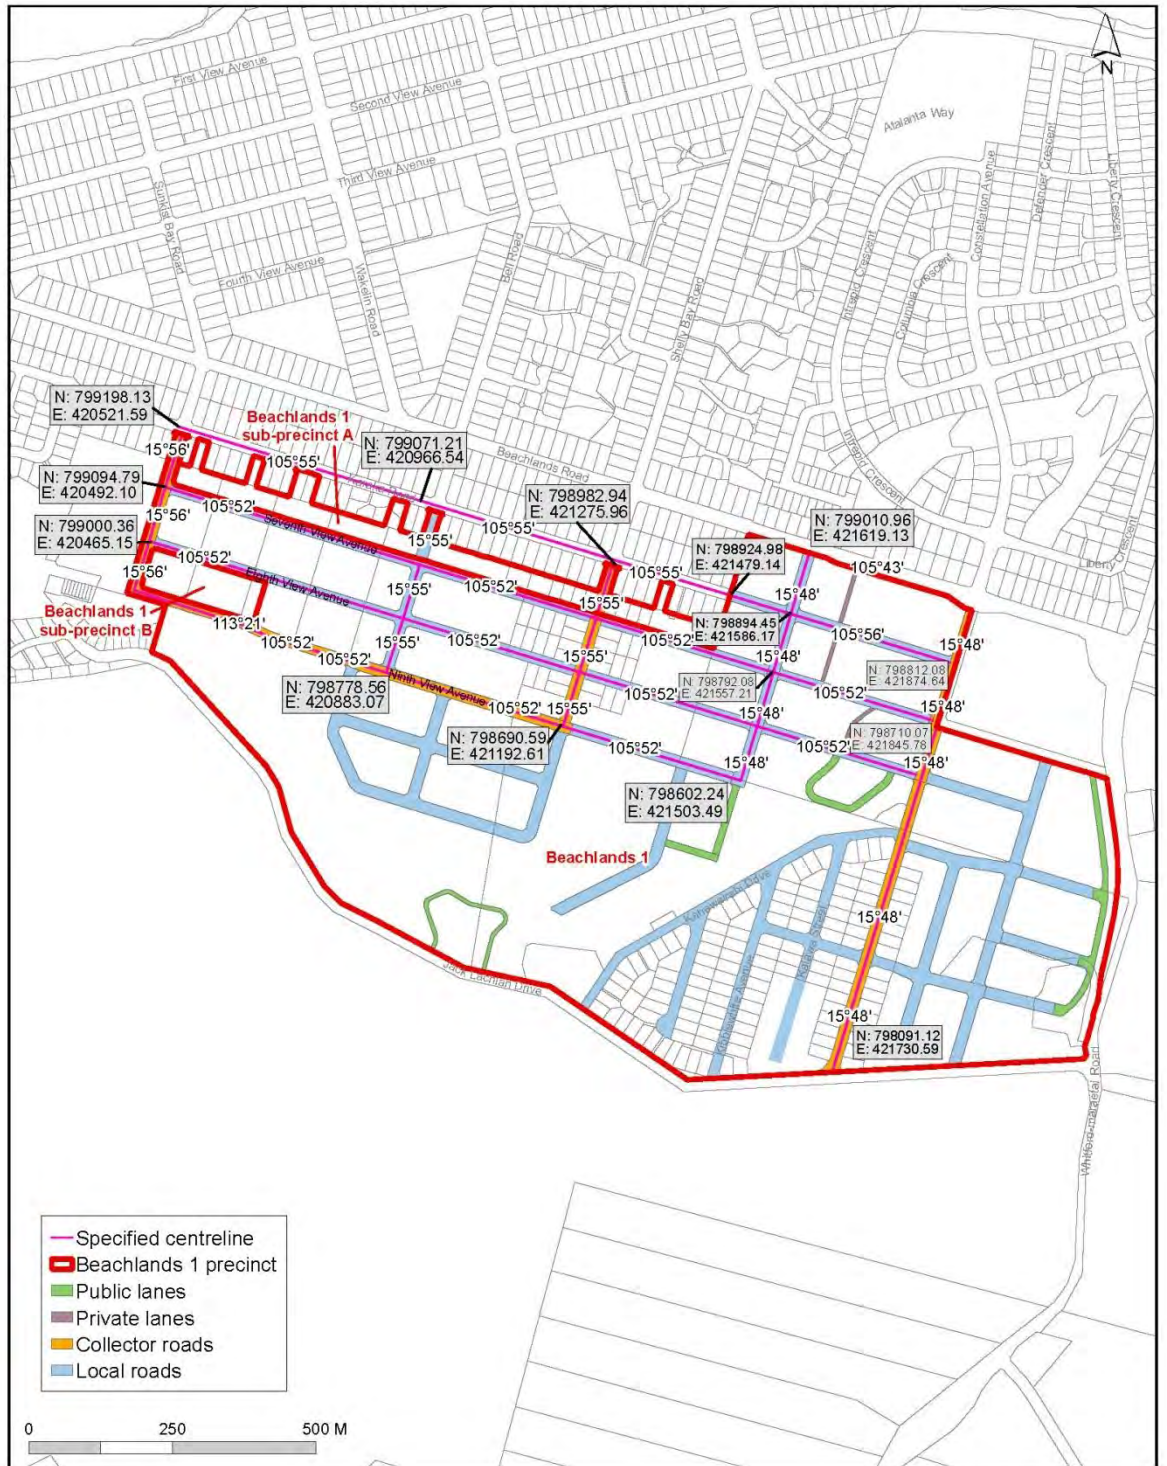

- (i) pre-planting site assessment and planting plan assessment;
- (ii) an annual monitoring programme.

I403.11.1. Beachlands 1 Beachlands Village Design Guidelines

PROPOSED PLAN CHANGE NO. 30

Beachlands Village New Avenues

DESIGN GUIDELINES

Plan Change 30

Beachlands New Avenues Design Guidelines

Bulk, Location and Orientation

What is meant by Bulk, Location and Orientation?

Bulk, location and orientation describe the way a building sits on its site and relates to its physical context. 'Bulk' refers to the overall massing of a building, 'location' means the position of the building on the site and 'orientation' describes the way internal spaces are directed to physical and environmental elements such as sun, views or the street.

Bulk, location and orientation can have a significant impact on the environmental qualities of both the public and private domain. Design issues to be resolved include the quality and quantity of open space provided for inhabitants; the access to daylight for residents, both within the development and in adjacent developments; and the overall quality of the public realm.

Basic Principles

- > Make best use of solar access for dwellings both within the development and on neighbouring sites.
- > Ensure the building mass, location and orientation enhance the quality of communal open space areas.

Design Guidelines

- > Position and orient the building(s) to maximise north facing walls so as to optimise natural sunlight to living spaces.
- > Consider building configurations such as 'L' shaped and courtyards, which respond to the streetscape while optimising solar access.
- > Consider different building heights for different parts of the building to further aid solar access.
- > Design and position the building on the site to provide larger areas of consolidated open space. 'Leftover' spaces should be minimised.
- > Ensure buildings are separated with sufficient distance to allow solar access and prevent overshadowing.
- > Maximise dual orientation opportunities.
- > Single aspect units should have a northerly or easterly aspect and a reduced depth to allow for access of a natural light.

Building Envelopes

What are Building Envelopes?

A building envelope is the volume that defines the extent of a building in any direction. It describes the overall shape and mass of the building zone within which a future building can be built.

Building envelopes are defined by the length, depth and height of the building zone, measured in metres. Building envelopes should be at least 20-25% greater than their achievable floor area to allow for interesting and attractive façade treatments.

Design Guidelines

- > Identify the building type most appropriate for the given building envelope.
- > Maintain sufficient distances between windows and doors of opposing dwellings and minimise views from other dwellings into private back yards.
- > Front all buildings onto the street or access way where possible.
- > The majority of living rooms shall receive some sunlight.

Basic Principles

- > Building envelopes shape the three-dimensional form of an area by determining appropriate density for a site and its context.
- > Building envelopes can be used to define the street hierarchy, points of difference, intersection hierarchy and open space.
- > Building envelopes shape the relationship of dwelling units to each other, and influence both the privacy and amenity of residents. The size of the building envelope needs to ensure human scale, and take account of views and outlook as well as daylight and solar access for dwellings.

What is Open Space?

Open space is designed space that provides core amenities to adjacent buildings, such as daylight and ventilation; outlook and views; and visual privacy. It can also provide the opportunity for recreation and social activities and water cycle management.

Open space can be public, private, or communal. The scale and design of the space will depend on the number of units provided and the context of the site.

Design Guidelines

- > Communal open space should be considered in terms of the urban context. The proximity of public parks, recreational facilities and other amenities will have a bearing on the scale and design.
- > Consolidate open space in the site into well defined areas where communal ownership is clear.
- > Locate public open space adjacent to public streets, and avoid backyards located adjacent to public open space. Public open space shall be ordered by public streets which are fronted by buildings.
- > Locate public open space to include areas of significant natural features.

Basic Principles

- > Provide core amenities as outlined above to residents.
- > Ensure residents have ready access to passive and active recreational opportunities. This will depend on the size of the development.
- > Provide areas on the site for landscaping and vegetative stormwater treatment and filtration.
- > Enhance user safety in public open space by ensuring a high degree of surveillance of public open space.
- > Protect significant natural features and maximise public accessibility to them.
- > Protect privacy of dwellings from public use of open space.

Visual Privacy

What is meant by Visual Privacy?

Visual privacy describes how private the interior and private exterior spaces of a dwelling are hidden from outside view. The degree of visual privacy provided will affect residents' ability to carry out private functions within the confines of their home and private open space.

Basic Principles

- > Provide adequate levels of visual privacy both inside the dwelling and outside, in private open spaces.
- > Optimise visual privacy without compromising views, outlook and ventilation.

Design Guidelines

- > Create visual privacy between buildings both on site and on neighbouring properties by:
- > Ensuring adequate building separation and setbacks
- > Providing separation between windows and communal open space and through-site access routes
- > Considering the orientation of buildings relative to neighbours.
- > Using building design elements e.g. recessed balconies, screens, fences or landscape elements.

Boundary Treatment

What is meant by Boundary Treatment?

Boundary treatments are a very important consideration in good site design. The way that boundaries are defined can impact on the understanding of private and public areas and can also convey differences in function or ownership of open space. The design of boundary treatments will affect residents' real and perceived privacy and security. Boundary design also provides an opportunity to reinforce the identity of developments in Beachlands. Front, side and rear boundaries may require different treatments depending on adjacent properties. Design of boundary treatments affects neighbourhood amenity, in particular the amenity of dwellings from interfacing activities.

Basic Principles

- > Provide clear definition between different functions, different owners and between public and private space.
- > Ensure privacy and security.
- > Reinforce the identify of the development and enhance the street scene.

Design Guidelines

Boundary design should consider and respond to the associated contexts of street, side and rear locations. Considerations may include: height, position and openings and material selection.

- > Design fences and walls which provide privacy and security while preserving outlook, light and air.
- > Contribute to the amenity of the public domain by limiting the length and height of blank fences and retaining walls along street frontages.
- > Use planting to complement scale and street scene.
- > Select materials which are graffiti resistant and easily cleaned.

Landscape Design

What is Landscape Design?

Landscape design is the design of the site areas not covered by building. Landscape design is a critical part of development as it provides amenity to residents and can significantly enhance the adjacent public realm.

Basic Principles

- > Provide privacy, outlook, views and a high level of amenity for residents.
- > Minimise and control the impacts of stormwater runoff.
- > Enhance environmental conditions within the development and provide a habitat for native plants and animals.
- > Improve air quality within urban environments.
- > Ensure that trees form part of the design.

Design Guidelines

- > Enhance open spaces with landscape design that provides shade through trees and structures.
- > Use landscape design to indicate entries and to differentiate private space from communal space.
- > Use landscape design to screen cars.
- > Design landscapes which respond to the street scene.
- > Enhance the energy efficiency and solar efficiency of the dwellings through the appropriate type and placement of trees.
- > Contribute to storm water management through the use of vegetative filtration techniques and choosing appropriate plant species.
- > Ensure that appropriate soil conditions and irrigation; appropriate species; and ongoing maintenance are considered and integrated into the design.
- > Conserve existing trees which contribute significantly to landscape amenity.
- > Include tree planting within public open space (including streets) consistent with local landscape identity.

Street Frontage and Enclosure

What are street frontage and enclosure?

The relationship of buildings to the street can help create streets that are attractive and lively, encouraging pedestrian activity and safety. Safety is enhanced by a high degree of mutual surveillance, allowing residents to see what is happening on the street and creating a sense of local stewardship of public spaces. The sense of 'eyes on the street' helps improve the pedestrians sense of safety, as well as discouraging unwanted behaviours and improving household security. For streets to feel safe and comfortable, there also needs to be a degree of enclosure from buildings lining and addressing the street, providing a clearly-defined public space.

Basic Principles

- > Maintain good mutual visual communication between the users of the street and buildings.
- > Ensure that private open space which is not visible from the street is not readily accessed by intruders.

Design Guidelines

- > Ensure majority of dwellings front onto streets.
- > Position a kitchen, living room or workroom fronting the street.
- > At least one front room of each dwelling shall have a view to the street or access way.
- > Use the form of the building or other devices to enhance the occupiers' visual contact with street.

- > Building entries shall have a transitional space that is easily visible from the street.
- > Visitors may be seen from within the dwelling without opening the door.
- > Contribute to the amenity of the public domain by limiting the length and height of blank fences and retaining walls along street frontages.

Pedestrian Access

What is meant by Pedestrian Access?

Pedestrian access describes the walkable areas in and around development. Pedestrian access to development should deliver safe, high quality and pleasant, walkable environments which prioritise people. The design should ensure access for the able and mobility-impaired alike. Well designed pedestrian areas will ensure residents and visitors can easily access dwellings and communal space and will facilitate connections with the public realm. Pedestrian access to dwellings should be easily understood by visitors and take priority over vehicle access and manoeuvring.

Basic Principles

- > Provide well designed pedestrian areas which facilitate connections with the public realm.
- > Ensure all residents and visitors (able bodied, mobility or sensory-impaired) are able to readily access dwellings and communal areas. Consider people who use prams and wheelchairs, people with bicycles and the elderly, and design minimum grade ramps, paths, access ways and lifts to accommodate their needs.
- > Separate pedestrian access from vehicle movements and give priority to people moving from the street to the entrance of the dwelling.

Design Guidelines

- > Consider site layout, context and topography in terms of developing a scheme which maximises accessibility.
- > Ensure high quality accessible design to all pedestrian routes. Consider providing public and semi-public access through the site as appropriate to enhance connections to the public realm.
- > Ensure equitable access from the street and carparking areas. Incorporate accessible elements such as ramps into the overall landscape design.
- > Ensure access ways are an appropriate width to enable two people to pass comfortably.
- > Differentiate pedestrian and vehicular access ways.
- > Provide direct street access to as many dwellings as possible, to maximise activity on the ground floor and create a sense of address and arrival for individual dwellings.

Building Entry

Why is Building Entry important?

The entry to a building provides an interface between public and private spaces. As such, it has the potential to contribute to both building identity and the quality of street scene.

Basic Principles

- > Provide an obvious entry point for the building.
- > Ensure the entrance is suitable for able bodied and mobility impaired people.
- > Ensure letterboxes are designed and located to complement the building and provide easy access.

Design Guidelines

- > Improve building appearance and contribute to the street quality by ensuring entrances are integrated yet identifiable elements within the street. Coordinate entrances with existing street elements such as street planning and pedestrian routes.
- > Use separate entries for different functions such as pedestrian and vehicle access, and different activities. Multiple entry points will help to animate and activate the street.
- > Ensure entrances are accessible to the able and mobility or sensory-impaired alike.
- > Ensure entrances are well lit, highly visible spaces that provide shelter from the elements but avoid ambiguous publicly accessible blind areas. Position letter boxes for convenient access by residents and posties. The mail slot should be between 600mm and 1600mm from the ground.
- > Ensure the design and location of letter boxes does not detract from the appearance of the building.

Vehicles and Parking

Why is the design of Vehicles and Parking important?

Parking requirements and vehicle access can have significant impacts on site layout, building design, landscaping and stormwater management. These will affect the quality of our environments in Manukau and should therefore be considered early on in the design process.

Vehicle entry points should ideally integrate access for car parking and should be designed to avoid conflicts with existing traffic patterns and pedestrian movement. Access should be designed as an integral part of the site layout, building façade and streetscape. Vehicle entries should be consolidated to retain a sense of enclosure to the street and minimise interruption to pedestrian movement along the footpath. Garages should be located and designed to minimise visual dominance of the street, and to reinforce pedestrian entries and movement. Good surveillance from surrounding houses increases security for surface parking, but needs to be mitigated with landscape and paving treatments to improve the outlook from dwellings.

Basic Principles

- > Provide sufficient car parking for residents and visitors allowing for the size and type of development proposed; its proximity to recreational and retail services and facilities; and access to public transport.
- > Ensure car parking and vehicle access are integrated into the overall planning and design of the site, streetscape and building form.
- > Ensure vehicle access does not impede the active use of street frontages or quality street design.
- > Ensure streets provide safe and convenient vehicle access to dwellings.
- > Minimise detrimental effects of vehicle access and garages on amenity of the neighbourhood and of the development.
- > Dwellings provide good surveillance of driveways and parking areas.

Safety

How can residential design deal with Safety?

The design and layout of buildings can contribute to real and perceived levels of safety and security for residents and building users. The principles of secure design include casual surveillance, clear definitions of territory, controlled access and management of spaces.

Basic Principles

- > Ensure developments are designed to be safe and secure for residents and visitors.
- > Minimise opportunities for crime and contribute to the safety of the public realm.

Design Guidelines

- > Clearly define the boundaries between private and public space.
- > Provide visible, functional and safer building entrances by ensuring entrances address the street and establish clear sight lines from the foyer through the entrance to the street.
- > Ensure all entrances and access routes are well lit (e.g. from parking areas, to individual units, etc).
- > Encourage casual surveillance by orienting living areas towards views over communal or public spaces.
- > Avoid blind corners or dark alcoves which might conceal intruders near entrances, lifts, stairwells, indoor car parks and walkways.
- > Provide appropriate levels of illumination throughout the development.

Building Form

What is Building Form?

Building Form is the basic relationship of built elements to one another and how they combine to characterise the streets they form part of.

Basic Principles

- > Encourage a best practice architectural response in residential building design in Beachlands.
- > Encourage an attractive relationship between public and private realms that facilitates outlook and social interaction whilst balancing the need for privacy.
- > Contribute to the character and definition of the public realm.
- > Contribute buildings that have appropriate scale and proportion.

Design Guidelines

- > Organise the building in to a series of basic shapes
- > Ensure there is a logic to the interrelationship and that they 'fit' together in a natural way

Façade Design

Façade design can influence the apparent scale and appearance of a building. Rhythms and patterns created by the proportions of the façade, the modulation of external walls and the regular repetition of façade elements can improve the legibility of the building, balance the right to outlook with the need for privacy, and provide visual interest to Manukau's streets and neighbourhoods. The façade design of the buildings should reflect the neighbourhood context in form, modulation and materials, without needing to mimic the existing buildings. That allows new development to reinforce the local sense of place, while the neighbourhood is changing and evolving. Even at a larger scale building, the building design can reflect a human scale with the interplay of elements on the façade, and reinforce that it is occupied and alive.

Balconies and Outdoor Space

Why are Balconies important?

Balconies provide outdoor space and increase amenity and lifestyle options for residents of multi-unit developments. They extend the living area of a unit, provide private open space and offer opportunities for outlook and to enjoy being outside. Balconies also operate as important architectural components and can provide a means of organising and articulating the facade design.

Basic Principles

- > To ensure all dwellings have access to private open space.
- > To ensure the design of balconies is functional and considered in terms of the local context and climate.
- > To ensure balconies are designed as an integral part of the building's architectural form and detail.
- > To contribute to animated, active streets by providing opportunities for passive (watching) or active engagement (conversation) with passers-by.
- > Enhance the amenity value for residents by providing outdoor areas which are private, secure and sunny, in the form of back yards or balconies.
- > Back yards shall not be visible from the street and shall not easily accessed by intruders without detection.

Design Guidelines

- > Ensure all dwellings have at least one primary balcony when no other private open space is provided.

Primary balconies should:

- > Accessed off a primary living area.
- > Be of sufficient size and shape to accommodate outdoor furniture i.e. table and chairs and thereby encourage indoor/outdoor living. Minimum 2.5m depth.
- > Consider balcony design in terms of the local context and climate.
- > Be orientated to the north, east or west to maximise opportunities for solar access.
- > Use environmental controls such as canopies, pergolas, adjustable louvres and shutters to regulate sun and wind exposure.
- > Utilise innovative solutions such as operable screens and Juliet balconies in locations where noise or wind prevent other options.

- > Choose balcony typology – cantilevered, recessed or semi-recessed – in response to daylight, wind acoustic and visual privacy.
- > Ensure balcony size and proportion does not prevent solar access to adjacent apartments or below.
- > Ensure balcony design prevents direct sightlines into the apartment from the street and neighbouring residences.
- > Balustrade design should facilitate outlook and casual surveillance of the street while ensuring safety and privacy for residents.
- > Consider materials and detailing to provide a portion of solid to transparent material which will prevent direct sightlines from the street.
- > Consider the proportions of the screening provided. It should be designed to conceal a person seated looking at the view, clothes drying, or storage of bicycles.

Materials

Why is the choice of Materials an important consideration in residential development?

The choice of materials used both internally and externally will affect the appearance of the development and how well it performs and endures over time. Robust materials that are easy to maintain will help to ensure communal spaces and areas prone to wear retain their appearance for many years.

Basic Principles

- > To promote quality buildings that maintain their appearance over time.
- > To encourage the use of materials that are appropriate for purpose, climate and conditions.
- > To encourage the use of local materials that express a sense of place.

Design Guidelines

- > Choose enduring materials that are easy to maintain and retain their appearance over time.
- > Choose materials that are fit for purpose e.g. exterior tiles that are exposed to the elements should be non-slip.
- > Consider the local environment and choose materials that are appropriate for the conditions e.g. many materials are not appropriate for coastal environments.
- > Consider the use of local materials that reflect the local environment and character.
- > Consider the use of different materials to break down the scale of large buildings. Materials should be used to express different building elements rather than applied in a paint by numbers fashion.
- > When using a combination of materials, consider how one will affect another and detail appropriately to avoid unsightly reactions e.g. plaster staining around copper overflows.

Roof Design

Why is Roof Design important?

Roof design plays an important role in the architectural composition and expression of a building. The shape and form of a roof should also be considered in terms of the local environment and context. Good roof design takes into account its visibility from different vantage points within the local context. These might include views from adjacent taller buildings, or the outline when viewed from street level, and may even extend to its place within a larger skyline, when viewed from different points within the Manukau region.

Basic Principles

- > To ensure roof design which reflects the layout and composition of the building, whilst contributing positively to both its expression and performance.
- > To ensure roof design which responds to the local environment and context.
- > To facilitate building health and longevity through good weather tightness practice.

Roof example 1

Design Guidelines

Roof design should reflect the desired built form. Issues to consider include:

- > Minimising the appearance of large buildings by breaking down the massing to minimise apparent bulk or to relate to existing finer grained context. For example, the use of saw tooth roofs in warehouse style buildings.
- > Relating the proposed roof to the existing context in urban areas, through the choice of materials or chosen pitch. However, direct replication of single family dwellings should be avoided, as their scale and details is often inappropriate for larger buildings.
- > Minimising the detail and impact of the roof in situations where it is desirable to express a strong horizontal datum. This may be in response to the existing adjacent context.
- > The size, shape and scale of the building, its overall form (in three dimensions) and the design of the elevations. This will extend to the design of parapets and other junctions with elevations and also to the selection of roofing materials.
- > Consider the roof design in terms of the orientation and micro-climate of the site. For example, extended eaves may provide sun shading to north-facing walls while roof design may provide additional weathering protection around openings in exposed or coastal locations.

Roof example 2

Design Guidelines

- > Consider incorporating service elements into the roof design to minimise their visual impact. These may include: lift over-runs, service plants, chimneys, telecommunications aerials, vent stacks, signage, down pipes and gutters.

Provide for the present or future use of the roof for sustainable purposes such as:

- > Water collection and storage in rainwater tanks.
- > Photovoltaic applications. This will require appropriately oriented and angled roof surfaces.
- > Sustainable design features. For example green roofs and water features.
- > Consider the provision of habitable space within the roof structure. This will depend on the shape and size of the roof space but might take the form of attic space or penthouse apartments.

Water Management

Why is Water Management an important issue for the residential building design?

Water management is an important issue when addressing sustainable building practice. It needs to be approached in two different ways. Firstly, in terms of reducing demand from the water mains and secondly, in terms of the catchment and management of stormwater, in order to prevent erosion and the pollution of our waterways and encourage reuse for grey water activities.

Basic Principles

- > To minimise the consumption of mains supply potable water.
- > To minimise the volumes of urban stormwater run-off.

Design Guidelines

- > Encourage use of water efficient AAA rated appliances.
- > Use dual-flush toilet cisterns and specify low-flow taps.
- > Promote stormwater catchment in rainwater tanks for reuse as grey water.
- > Reuse grey water collected for uses such as washing the car, watering the garden etc.
- > Specify native indigenous species in landscape design.
- > Consider natural stormwater filtration and absorption schemes which employ engineered, landscaping devices such as swales, rain gardens and infiltration ponds.
- > Consider collection of roof water for use on public gardens.

Energy Efficiency

Why is Energy Efficiency important in residential design?

Building design which optimises thermal performance and comfort and access to daylight will have a positive effect on: the energy efficiency of the building; the level of amenity for occupants; and the running cost of the building. In doing so, it will promote sustainable building practice and reduce greenhouse gas emissions over the life cycle of the development.

Basic Principles

- > To reduce or eliminate reliance on mechanical heating and cooling systems.
- > To reduce or eliminate reliance on fossil fuels.
- > To reduce or eliminate greenhouse gas emissions.
- > To support and promote sustainable building practices and renewable energy initiatives.

Design Guidelines

Employ passive solar design principles to maximise heat storage in winter and facilitate convective cooling in summer. This can be achieved by:

- > Providing thermal mass in floors and walls particularly on the northern side of the building.
- > Using materials with heat storage capacity such as polished concrete, tile or timber, as opposed to carpet which has an isolative effect.
- > Minimising the number of south-facing apartments. These should represent no more than 10% of the total number of dwellings.
- > Providing insulation over and above the code requirements. Consider using R2.6 or higher in ceilings; R2.2 or higher in walls and R2.0 in floors.
- > Consider photovoltaic panels for generation of electricity for public areas.

Maximise the efficiency of mechanical space heating and cooling by:

- > Targeting areas which require heating or cooling rather than the whole apartment.
- > Providing an 'air lock' in the form of an entrance lobby or vestibule which is separated from living rooms by doors.
- > Consider externally environmental controls such as awnings and screens to prevent heat from entering the apartment.

Ensure building design supports the present or future installation of photovoltaic panels by:

- > Considering the pitch and design of the roof in terms of optimum angle and orientation of photovoltaic panels.
- > Ensuring landscaping and in particular tree placement does not overshadow existing or planned panels.

Maximise the efficiency of hot water systems by:

- > Using systems with a greenhouse score of 3.5 or higher that are appropriate for the development and insulating the chosen system to further improve efficiency.
- > Installing water-saving devices such as low-flow taps and dual-flush toilets.

Reduce dependence on artificial lighting by:

- > Utilising a range of different lighting fittings to allow for a variety of activities to be carried out in different rooms.
- > Providing different lighting options within a room e.g. low level background lighting supplemented by task lighting for use as required.
- > Providing separate switching for special purpose lighting.
- > Using energy saving forms of lighting for common areas e.g. compact fluorescents and solar lighting for open spaces and public areas.
- > Making use of motion detectors for common areas such as entrances, outdoor security areas and garages.
- > Ensuring optimum energy efficiency from household appliances.
- > Choosing renewable energy sources, or those which minimise greenhouse emissions.

Daylight Access

Why is Natural Daylight important?

Natural daylight is an important aspect of residential design because it reduces the need for artificial light, thereby increasing energy efficiency and amenity. Daylight comprises both skylight (diffuse light from the sky), and sunlight (direct beam radiation from the sun). It is constantly changing according to the time of day, time of year and the weather and it is this variability that provides interest to interiors and helps to create satisfying places in which to work and live.

Basic Principles

- > To ensure that all habitable rooms have access to natural daylight. Where possible, this should be extended to service rooms (such as kitchens and bathrooms).
- > To ensure sufficient day lighting in order to reduce the reliance on artificial lighting during daylight hours.
- > To promote environmental controls which allow residents to regulate the quantity of daylight as required.

Design Guidelines

- > Consider the siting, shape and orientation of the building, in terms of optimising the number of dwellings with northern aspect.
- > Ensure communal open space receives direct daylight during winter months and provides adequate shading during the summer season.
- > Ensure the optimum number of units receive direct daylight access to habitable rooms and private open space.
- > Utilise skylights, clerestory windows and fanlights to supplement daylight access through regular windows.
- > Promote double height spaces in areas where daylight access is limited, to assist daylight penetration into living areas and private open spaces.
- > Restrict the depth of single aspect units.
- > Ensure single storey, single aspect units are oriented to the north or east.
- > Ensure the unit layout positions living areas to the north and service areas to the south.
- > Minimise the number of south-facing units. Where unavoidable, increase the area of glazing.
- > Make use of light shelves to reflect light into deep units.

Manage glare and provide shading during summer months through the use of:

- > Environmental controls such as eaves, canopies, balconies, louvered screens and planting.
- > Ensure external glare is minimised by avoiding reflective films and other high glare finishes.
- > The use of light wells as a primary source of daylight should be restricted to non-habitable rooms only.

- > No more than 10% of units within a development should be single aspect and south-facing.
- > These criteria may be reviewed if a project can demonstrate how site constraints and orientation prevent the achievement of these standards. Such a scheme would be expected to achieve optimal performance within these constraints.

Service Design

Why is Service Design important?

All residential development requires site facilities for such services as rubbish, storage, laundry drying, and mail delivery. Such services need to be functional but should be sited where they are unobtrusive and safe, accessible to residents but secure from intruders.

Basic Principles

- > Design services to minimise any acoustic transmission.
- > Ensure electrical and telecommunication sockets are sufficient in number and conveniently located in rooms when furnished.
- > Design services to ensure they do not compromise visual amenity or presentation of the building.
- > Provide site services which meet the needs and provide convenience for residents.
- > Ensure facilities are unobtrusive, practical and easily maintained.

Design Guidelines

- > Insulate pipes for acoustic privacy.
- > Locate wastewater stacks adjacent to non-habitable rooms to further reduce the impact of any pipe noises.
- > Ensure socket locations are off set both between rooms and between adjacent units. This limits noise transmission through sockets.
- > Ensure electrical and telecommunication sockets are co-ordinated and sufficient in number. Consider the location and requirements of appliances and additional lamps once the apartment is furnished.
- > Plumbing and waste pipes should be located within the building rather than exposed on the exterior walls.
- > The design and location of down pipes and rainwater heads should be incorporated into the façade design.
- > Ensure overflows and down pipes from balconies are designed to contribute to the visual amenity and presentation of the building.
- > Site facilities provided should be an adequate size to service the number of units, located and/or screened in a way that reduces visual clutter but is secure for residents to use.
- > Facilities need to be adequately screened and ventilated (particularly rubbish storage) and easily cleaned and maintained.
- > In developments with over 10 units, consideration should be given to providing an on-site bulk rubbish service rather than individual wheelie bins for each unit that create clutter and block streets on rubbish collection days.

I404. Beachlands 2

I404.1. Precinct Description

The Beachlands 2 precinct covers approximately 6 hectares of land at the corner of Beachlands and Whitford–Maraetai Roads. Its purpose is to provide for an integrated business centre that provides a wide range of retail and commercial activities to service the needs of the growing community while ensuring the design and layout does not compromise the character of Beachlands as a rural and coastal settlement.

1404.10.1 Beachlands 2: Precinct plan 1 guides the future development of this precinct and identifies car and pedestrian transport links that connect with neighbouring sites and existing road networks. 1404.10.2 Beachlands 2: Precinct plan 2 identifies the different height areas that apply to the sub-precincts and landscape buffer areas to protect the amenity and character of the area and neighbouring sites. The figures contained in 0 set out the indicative landscape design and street typology.

It is important to ensure that the development form, look and feel of the local centre is sympathetic to the character of the existing Beachlands settlement. Development within the local centre therefore needs to be designed specifically for the Beachlands community and setting.

The zoning of the land within this precinct is Business - Local Centre Zone. Refer to planning maps for the location and extent of the precinct and three sub-precincts.

I404.2. Objectives

- (1) Development within the Beachlands 2 Precinct maintains and complements the amenity values and character of the surrounding residential, rural and open space areas.
- (2) Provide for a local centre at Beachlands in a location and at a scale that caters for the retail and commercial needs of the existing and future community.
- (3) The design and form of development within the Beachlands 2 Precinct responds to the open, outdoors orientated character, and rural and coastal context of the existing Beachlands settlement.
- (4) Development and/or subdivision within the Beachlands 2 Precinct facilitates a transport network that:
 - (a) integrates with, and manages adverse effects on, the safety and efficiency of the transport network of the surrounding Beachlands area, including any upgrades to the surrounding network;
 - (b) facilitates transport choices by providing for pedestrians, cyclists, public transport facilities, and vehicles; and
 - (c) is designed and constructed in a manner that is consistent with the requirements of Auckland Transport and any relevant code of practice or engineering standards.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I404.3. Policies

- (1) Maintain and enhance the character and amenity associated with the new business area by undertaking development in accordance with the precinct plans and Landscape Design Framework.
- (2) Restrict the height of buildings and provide landscaped areas to protect views from Whitford-Maraetai Road to the Hauraki Gulf.
- (3) Require subdivision and/or development within the precinct to provide for a transport network that:
 - (a) as a minimum, is in accordance with the transport network elements shown on the precinct plan(s);
 - (b) supports safe and efficient movement of pedestrians, cyclists, public transport and vehicles; and
 - (c) is designed and constructed in accordance with the requirements of Auckland Transport and any relevant code of practice or engineering standards.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I404.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the zone apply in this precinct unless otherwise specified below.

Table I404.4.1 Activity table specifies the activity status of land use and development activities in the Beachlands 2 Precinct pursuant to section 9(3) of the Resource Management Act 1991

Table I404.4.1 Activity table

Activity		Activity status		
		Sub-precinct A	Sub-precinct B	Sub-precinct C
Use				
General				
(A1)	Any land use activity not in accordance with 1404.10.1 Beachlands 2: Precinct plan 1	D	D	D
(A2)	Any activity that does not comply with Standard I404.6.7 Subdivision – landscape buffer area	D	N/A	N/A

Commerce				
(A2)	Trade suppliers	P	NC	RD
(A3)	Drive-through restaurants	P	NC	RD
(A4)	Food and beverage	P	RD	P
(A5)	Retail	P	RD	RD
(A6)	Conference facilities	P	P	P
(A7)	Supermarkets	P	NC	NC
Development				
(A8)	Construction, reconstruction and / or formation or reformation of roads, at grade car parking areas and open space areas	RD	RD	RD
(A9)	Vehicle access from Whitford-Maraetai Road that is not in accordance with 1404.10.1 Beachlands 2: Precinct plan 1	NC	NC	NC

I404.5. Notification

- (1) Any application for resource consent for an activity listed in Table I404.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I404.6. Standards

The relevant overlay, Auckland-wide and zone standards apply in this precinct unless otherwise specified below.

All activities listed in Table I404.4.1 Activity table must comply with the following activity standards.

I404.6.1. Building height

- (1) Buildings in Height Area A as shown on I404.10.2 Beachlands 2: Precinct plan 2 must not exceed two storeys in height (excluding basements and basement car parks) with a maximum height of RL 47.00 above Mean Sea Level, Auckland Vertical Datum 1946.
- (2) Buildings in Height Area B as shown on 1404.10.2 Beachlands 2: Precinct plan 2 must not exceed three storeys in height (excluding basements and basement car parks) with a maximum height of RL 49.30 above Mean Sea Level, Auckland Vertical Datum 1946.

I404.6.2. Side Yards

- (1) Sites located within Sub-precinct C must have a 3 metre side yard on each side or a 6 metre side yard on one side.
- (2) Within Sub-precinct C at least 50 per cent of the side yard including a strip adjoining and parallel with the side boundary and having a minimum width of 2 metres, excluding any area required for vehicular and pedestrian access or any area adjoining the Landscape Buffer Area required along the Whitford-Maraetai Road as shown on I404.10.2 Beachlands 2: Precinct Plan 2, must be landscaped, planted and maintained in trees, shrubs and grass.

I404.6.3. Verandahs

- (1) All buildings with frontage to Active Street Frontage 1 as shown on I404.10.1 Beachlands 2: Precinct plan 1 must have a verandah.
- (2) All buildings with frontage to Active Street Frontage 2 as shown on I404.10.1 Beachlands 2: Precinct plan 1 must be designed to face onto the street, provide the main entrance out to the public realm and provide a minimum of 40 per cent glazing on the street frontage façade.

I404.6.4. Staging of development

- (1) The first stage of any development within the precinct must include:
 - (a) the development of the 15 metre Landscape Buffer Area adjoining Whitford-Maraetai Road as shown on I404.10.2 Beachlands 2: Precinct plan 2, and the Open Space Area adjoining Beachlands Road, as shown on I404.10.1 Beachlands 2: Precinct plan 1;
 - (b) development of the Surface Carpark area as shown on the I404.10.1 Beachlands 2: Precinct plan 1; and
 - (c) construction and vesting with Council of a road between Beachlands Road and the boundary of Lot 2 DP 325925, no later than the time at which any part of Sub-precinct A of the business development is open to the public.
- (2) The building identified as Building 1 on I404.10.1 Beachlands 2: Precinct plan 1 must be constructed before or at the same time as the construction of any other building on the site, in order to sleeve the development from Beachlands Road.

I404.6.5. Landscaping

- (1) All roads, at grade parking areas and open space areas (including plazas) must be landscaped in general accordance with the figures contained in 0 Figures.
- (2) The Landscape Buffer Area as shown on I404.10.2 Beachlands 2: Precinct plan 2 must be accessed from Karaka Road for maintenance purposes (physical vehicle access is not required to the Landscape Buffer Area from the road but provision should be available within the surrounding local road network for the parking of maintenance vehicles).

I404.6.6. Lighting

- (1) All artificial lighting must comply with the levels and limits of Environmental Lighting category 3 as identified in E24.6 Standards.

I404.6.7. Subdivision – landscape buffer area

- (1) A Landscape Buffer Area must be developed along Whitford–Maraetai Road as shown on I404.10.2 Beachlands 2 Precinct plan 2. The buffer area must:
 - (a) be consistent with the widths indicated in I404.11.10 Beachlands 2 Figure 10: Open space - plaza and being a minimum width of 15 metres at any point;
 - (b) where it is within any existing site, must be established as a condition of any subdivision of that site; and
 - (c) be planted in accordance with the landscape plan for the buffer area and the planting scheduled contained in I404.11.10 Beachlands 2 Figure 10: Open space - plaza 10, prior to the issuing by the Council of the section 224(c) certificate under the Resource Management Act 1991.
- (2) The consent holder must be responsible for the maintenance of the buffer area, including weed control, mulching and watering and any necessary plant replacement, for a period of two years from the time of planting.
- (3) The buffer area must be vested in the Council free-of-charge at a time to be determined in the subdivision consent, being no more than two years after council issues the section 224(c) certificate under the Resource Management Act 1991.
- (4) Any activity that does not comply with Standard I404.6.7 Subdivision – landscape buffer area (1)-(3) above is a discretionary activity.

I404.6.8. Road Layout

- (1) Roads must be designed so that carriageways align at intersections with other existing or proposed roads.

I404.7. Assessment – controlled activities

There are no controlled activities within the precinct.

I404.8. Assessment – restricted discretionary activities

I404.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) trade suppliers & drive -through restaurants in Sub-precinct C, food and beverage in Sub-precinct B, and retail in Sub-precinct B and C:
 - (a) delay to the creation of a main street character along Karaka Road; and

- (b) visual amenity and character.
- (2) construction or reconstruction and / or formation or reformation of roads, at grade car parking areas and open space areas:
 - (a) visual amenity values;
 - (b) streetscape character;
 - (c) the extent, type and nature of landscaping;
 - (d) the maintenance of plantings;
 - (e) lighting; and
 - (f) road design;
- (3) building height:
 - (a) disruption of views.
- (4) side yards:
 - (a) landscaping; and
 - (b) character generated by the coverage of buildings on sites adjoining the Whitford-Maraetai Road.
- (5) staging of the development
 - (a) streetscape amenity and character;
 - (b) visual amenity; and
 - (c) pedestrian amenity and safety.

I404.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) trade suppliers and drive-through restaurants in Sub-precinct C, food and beverage in Sub-precinct B and retail in Sub-precincts B and C:
 - (a) the extent to which the development within Sub-precinct B results in a delay to the completion of development along Karaka Road that could compromise the achievement of a main street character along this road; and
 - (b) the extent to which any delay to the completion of development along Karaka Road creates adverse effects on visual amenity and character.
- (2) construction or reconstruction and / or formation or reformation of roads, at grade car parking areas and open space areas:

- (a) the extent to which the landscape proposal is designed to create visual interest and contribute to the visual amenity of the business area and surrounding area;
 - (b) the extent to which the landscape proposal relates appropriately to, and is designed to further enhance, the existing streetscape and landscape character of the local centre;
 - (c) the extent to which the landscape proposal softens the visual impact of structures and minimise conflicts of scale;
 - (d) the extent to which the landscape proposal provides an appropriate level of visual screening of parking and loading areas and outdoor storage areas;
 - (e) the extent to which the landscape proposal adequately provides for the maintenance of plantings at a reasonable maintenance cost;
 - (f) the extent to which the location and design of the at grade car parking areas provide for convenience and a safe and efficient circulation pattern; and
 - (g) the extent to which the planting within the at grade car parking areas contributes to creating a sense of place within the local centre consistent with 0 Figures, without affecting visibility at intersections or pedestrian and traffic safety.
- (3) Building height:
- (a) whether the height of the building disrupts views north to the sea and coastal edge from the Whitford-Maraetai Road; and
 - (b) the extent to which the proposed height of the buildings and other structures are compatible with the prevailing character of the surrounding Beachlands area.
- (4) Yards:
- (a) whether the development within the yard detracts from the character and amenity values of the area, in particular the amenity of sites adjoining the Whitford-Maraetai Road; and
 - (b) whether the development within the yard disrupts views north to the sea and coastal edge from the Whitford-Maraetai Road.
- (5) Staging of the development:
- (a) the extent to which the building design and any interim screening or landscaping between the supermarket and Beachlands Road provides adequate mitigation of adverse visual effects of the supermarket as viewed from Beachlands Road, until such time as a building is established between

the supermarket and Beachlands Road as envisaged by I1.10.1 Beachlands 2: Precinct plan 1.

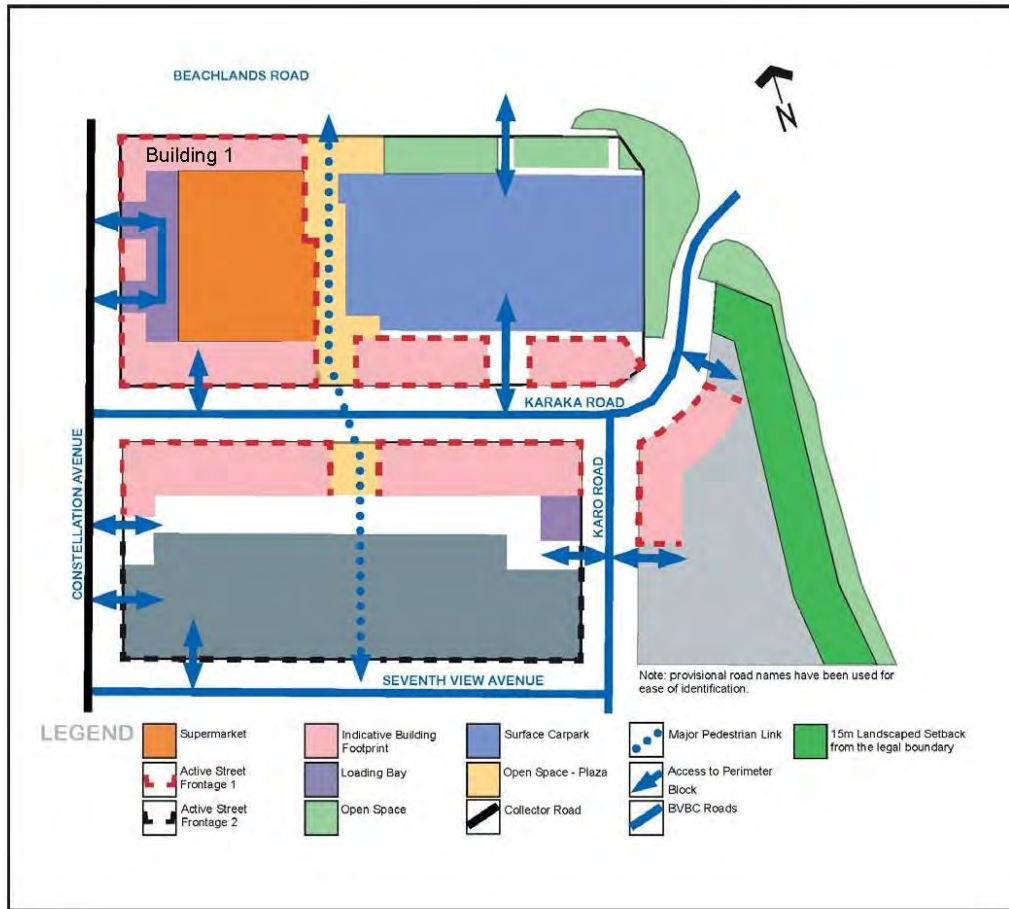

I404.9. Special information requirements

An application where landscaping is required must be accompanied by:

- (1) A planting plan for the landscape buffer area that provides detail of the:
 - (a) site preparation for planting, weed and pest control;
 - (b) existing trees to be retained, species to be planted, size of plants, where they are to be planted and density of planting; and
 - (c) maintenance of planting, including fertiliser, replacing dead plants, animal and plant pest control and mulching.
- (2) A re-vegetation plan/programme, including:
 - (a) pre-planting site assessment and planting plan assessment an annual monitoring programme.

I405. Big Bay Precinct

I405.1. Precinct Description

The Big Bay precinct identifies areas for growth at Big Bay on the Awhitu Peninsula, providing for limited residential density and protection and enhancement of vegetation and other features at the time of subdivision.

Sub-precincts A, B and C are zoned Residential – Rural and Coastal Settlement Zone. An area south of Sub-precinct C is zoned Rural – Mixed Rural Zone, and a small northern part of precinct is zoned Rural – Rural Coastal Zone. New residential development is limited to Sub-precincts B and C with other areas of the Precinct included to provide for mitigating ecological protection, enhancement and/or planting.

I405.2. Objectives

- (1) Limited subdivision and development is provided for within the Big Bay Precinct.
- (2) The natural environment, amenity and character values of Big Bay are maintained and enhanced, while providing for appropriate subdivision and development.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I405.3. Policies

- (1) Require subdivision and development to acknowledge, address and implement features identified on the Big Bay: Precinct Plan 1.
- (2) Enable opportunities for self-servicing sites.
- (3) Enable subdivision and development opportunities that:
 - (a) achieves site sizes appropriate to the amenity and character of the precinct;
 - (b) implements lower-density sites at the edge of the settlement;
 - (c) limits growth through a contained village form; and,
 - (d) includes amenity and ecological enhancement plantings and protects these plantings and existing indigenous vegetation.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I405.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

A blank in Table I405.4.1 Activity table below means that the provisions of the overlays, zone or Auckland-wide apply.

Table I405.4.1 Activity table specifies the activity status of subdivision activities in the Big Bay Precinct pursuant to section 11 of the Resource Management Act 1991.

Table I405.4.1 Activity table

Activity		Activity status
Use and development		
(A1)	All activities and development provided in H2 Residential - Rural and Coastal Settlement Zone	
Subdivision		
(A2)	Subdivision that is referenced as (A10 to (A6) in E38 Subdivision – Urban under Table E38.4.1 – Activity table – subdivision for specific purposes.	
(A3)	Subdivision which complies with Standards I405.6.1 to I405.6.5	RD
(A4)	Subdivision which does not comply with Standards I405.6.1 to I405.6.5	NC

I405.5. Notification

- (1) Any application for resource consent for an activity listed in Table I405.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I405.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct in addition to the following standards.

All restricted discretionary activities listed in Table I405.4.1 must comply with the following activity standards.

I405.6.1. Specified building area

- (1) In Sub-precincts B and C, buildings must be located within the specified building areas shown on the precinct plan, or be in compliance with a consent notice attached to the certificate of title.

I405.6.2. Restricted areas for buildings and earthworks

- (1) Buildings and earthworks must be located outside any ecological and amenity planting areas, or wetland protection and enhancement areas, shown on the precinct plan.

I405.6.3. Minimum site size

- (1) Sites in Sub-precinct A must not have a site area less than 2500m².

(2) Sites in Sub-precincts B and C must not have a site area less than 5000m².

I405.6.4. Limit on number of sites

(1) In Sub-precincts B and C, no more than the seven lots for residential purposes (inclusive of the existing dwellings) can be created in each sub-precinct.

I405.6.5. Protected and enhancement areas

Protection and maintenance covenants must be prepared over areas identified for ecological and amenity planting, indigenous vegetation protection, or wetland protection and enhancement, shown on the precinct plan. These must be implemented by way of a consent notice or registration of a covenant on the certificate of title.

I405.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I405.8. Assessment – restricted discretionary activities

I405.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

(1) Subdivision and infringements of subdivision standards:

- (a) the extent to which the subdivision is consistent with the precinct plan
- (b) whether any building envelopes shown on the plan of subdivision are located in the areas specified on the precinct plan;
- (c) the extent to which the layout of any roads, vehicle access ways or pedestrian walkways shown on the precinct is consistent with the layout shown on the precinct plan;
- (d) the extent to which provision is made for the protection and planting of vegetation and wetlands in accordance with the policies for the precinct; and,
- (e) the extent to which provision is made for the protection and enhancement of landscape character.

I405.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

(1) the extent to which the design of the subdivision, the layout of any roads, vehicle access ways or pedestrian walkways and the location of any specified building areas shown on the plan of subdivision is consistent with the precinct plan;

- (2) the extent to which subdivision is designed to protect existing indigenous vegetation and wetlands and provide for the planting of new vegetation in ecological and amenity planting areas to mitigate the effects of development on the landscape;
- (3) whether subdivision of the lot shown with a proposed lookout on the precinct plan provides an appropriate design for a public lookout with public access and legal mechanisms to provide for this facility;
- (4) the extent to which a site will be visible from the coastal and marine area and the need for a consent notice to be recorded on the certificate of title limiting the reflectivity level of colours and materials of any future building or structure; and
- (5) whether the reflectivity level range is between 0 and 40 per cent for external walls and 0 and 25 per cent for roofs based on British Standards BS5252 – standard specification colour ranges.

I405.9. Special information requirements

There are no special information requirements in this precinct.

I405.10. Precinct plans

I405.10.1 Big Bay Precinct: Precinct plan 1

I406. Bombay 1 Precinct

I406.1. Precinct description

The zoning of land within this precinct is the Business – Neighbourhood Centre Zone.

The precinct applies to two sites located at 2038 Great South Road and 216 Mill Road, which are located in proximity to the Bombay on and off ramps of State Highway 1.

The purpose of the precinct is to provide for establishment and operation of motorway service areas in proximity to the Bombay motorway junction. The precinct seeks to restrict activities to those needed to meet the demands of motorists for convenient services, while ensuring safe and efficient movement of traffic in proximity to the State Highway 1, adequate on-site infrastructure and the amenity effects on adjacent properties are minimised. The precinct also makes provision for suitable rural activities, acknowledging its semi-rural location.

I406.2. Objectives

- (1) Motorway and rural service activities are established within adjacent to the State Highway 1 Bombay on and off ramps.
- (2) The site layout and design provides safe and convenient access for pedestrians and vehicles.
- (3) The amenity values of land adjoining the precinct are maintained and protected.
- (4) Buildings and activities with the site do not interfere with the safety or efficiency of the surrounding road network.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above with the exception of Objective H12.2(6).

I406.3. Policies

- (1) Restrict activities in the precinct to those that will not generate adverse effects, including cumulative effects, on the function, role and amenity of neighbouring town centres, beyond those effects ordinarily associated with trade effects or trade competition.
- (2) Enable activities in the precinct that serve motorway users and those reliant on high levels of access to district arterial roads.
- (3) Manage activities and development within the precinct to maintain amenity values of adjacent areas.
- (4) Design the site layout access to ensure safe and convenient access for vehicles and pedestrians
- (5) Locate buildings and activities so that they do not interfere with the safety or efficiency of the surrounding road network.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above with the exception of Policy H12.3(15) and Policy H12.3(16)(a)

I406.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I406.4.1 Activity table specifies the activity status of land use and development activities in the Bombay 1 Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I406.4.1 Activity table

Activity		Activity status
Use		
Residential		
(A1)	Visitor accommodation	P
Commerce		
(A2)	Service stations	P
(A3)	Retail not exceeding 70m ² gross floor area within Sub-precinct A	P
(A4)	Retail not otherwise provided for	NC
(A5)	Produce sales in sub-precinct A	P
(A6)	Food and beverage	P
(A7)	Drive-through restaurants	P
(A8)	Offices accessory to the primary activity on the site and: (a) the office gross floor area does not exceed 30 per cent of all buildings on the site; or (b) the office gross floor area does not exceed 100m ²	P
(A9)	Offices	NC
Community		
(A10)	Emergency services	P
Industry		
(A11)	Industrial activities	NC
Rural		
(A12)	Farming in Sub-precinct A	P
Development		
(A13)	New buildings	RD
(A14)	Additions and alterations to buildings that are less than: (a) 25 per cent of the existing gross floor area or the building; or	P

	(b) 250m ² whichever is lesser	
(A15)	Internal alterations to buildings	P
(A16)	Additions and Alterations not otherwise provided for	RD
General		
(A17)	Activities not otherwise provided for	NC
(A18)	Development that does not comply with Standard I406.6.1 or I406.6.2	D

I406.5. Notification

- (1) Any application for resource consent for an activity listed in Table I406.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I406.6. Standards

The standards below replace the standards of the Business – Neighbourhood Centre Zone. The overlay and Auckland-wide standards apply in this precinct unless otherwise specified below.

All activities listed as permitted or restricted discretionary in Table I406.4.1 Activity table must comply with the following standards.

I406.6.1. Stormwater

- (1) All new activities within Sub-precinct B must have an on-site stormwater management system, able to contain a 5% AEP event 10- minute storm event from the site without overflowing. The system must empty within a 24 hour time period.
- (2) On-site stormwater management measures must be designed and located such that any overtopping or failure of the measures does not result in the discharge of contaminants into natural waterways.

I406.6.2. Vehicle access

- (1) Vehicle access within Sub-precinct B must be in the locations identified on Precinct plan 1.

I406.6.3. Produce sales

- (1) Produce sales in Sub-precinct A must not exceed two permanent premises and one market area.
- (2) Only produce grown or produced on the site, or on a site owned by the same landholder, may be sold or offered for sale.

I406.6.4. Building height

- (1) Buildings must not exceed 7.5m in height.

I406.6.5. Yards

- (1) A building or parts of a building must be set back from all boundaries by a minimum depth of 5m.

I406.6.6. Landscaping

- (1) A landscape buffer of 5m in depth must be provided on all boundaries excluding access points.
- (2) Yards must be planted with a mixture of trees, shrubs or ground cover plants (including grass) within and along the full extent of the yard for a depth of five metres.

I406.6.7. Location of fuel dispensers

- (1) To prevent vehicles queuing onto surrounding roads, fuel dispensing units or points must be at least 12 metres from the midpoint of the vehicle crossing measured from the boundary. For fuel dispensers catering for trucks this distance must be at least 18 metres.

I406.7. Assessment – controlled activities

There are no controlled activities in this section.

I406.8. Assessment – restricted discretionary activities

I406.8.1. Matters of discretion

The Council will reserve its discretion to all of the following matters when assessing a restricted discretionary resource consent application:

- (1) new buildings and alterations and additions to buildings not otherwise provided for:
 - (a) building design and external appearance;
 - (b) design of parking, access and servicing; and
 - (c) on-site infrastructure.
- (2) building height:
 - (a) effects on the planned built character of the precinct; and
 - (b) effects on amenity.
- (3) yards:
 - (c) effects on the transport network; and
 - (d) effects on amenity.
- (4) landscaping:

(a) effects on amenity.

(5) location of fuel dispensers:

(a) effects on transport network.

I406.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities:

(1) new buildings and alterations and additions to buildings not otherwise provided for:

(a) building design and external appearance:

(i) the extent to which buildings are designed to relate to each other and the features and characteristics of the site, its immediate and wider rural environment including the site's location at the entry into Bombay, along with achieving high design standards for the built elements.

(b) design of parking, access and servicing:

(i) the extent to which at grade parking is softened with landscaping, including tree planting;

(ii) the extent to which vehicle crossings and access ways are designed to reduce vehicle speed, be visually attractive and clearly signal to both vehicles and pedestrians the presence of a crossing or access way;

(iii) the extent to which a safe and convenient pedestrian environment with a good standard of amenity is created within the site which:

- provides direct and well defined routes;
- links car parking areas to building access points;
- incorporates pedestrian linkages to adjacent sites, streets and public open spaces, (where appropriate);

(c) on-site infrastructure:

(i) whether adequate on-site infrastructure is provided to service the activities;

(2) building height:

(a) the extent to which the proposed height of the buildings is compatible with the planned built character of the precinct;

(b) whether the additional building height adversely affect amenity values and the character of the area, in particular the amenity of neighbouring rural sites

(3) yards:

- (a) whether proposed activities or buildings within yards adversely affect the safe and efficient operation of the surrounding road network;
- (b) whether proposed buildings or activities within the 5m yard adversely affect amenity values and the character of the area, in particular the amenity of neighbouring rural sites

(4) landscaping:

- (a) the extent to which landscaping softens the visual impact of buildings and activities so they do not visually detract from the locality including views from the motorway.

(5) location of fuel dispensers:

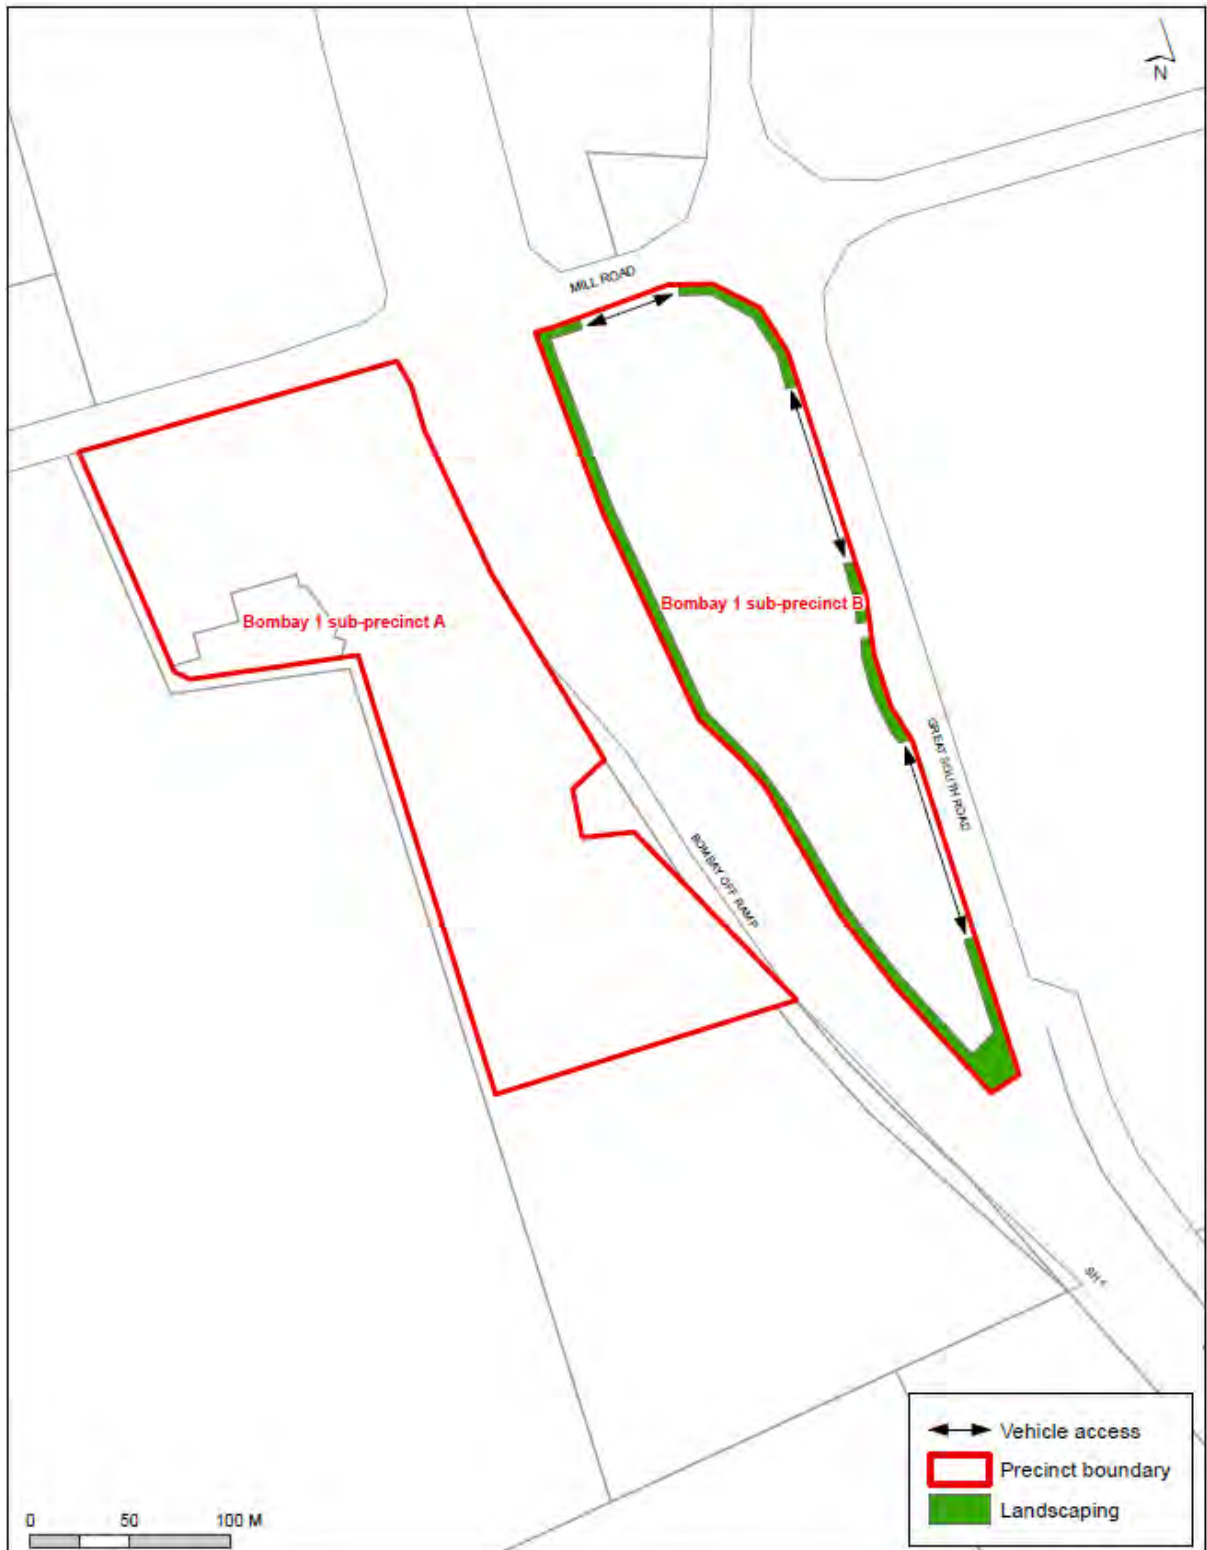

- (a) whether fuel dispensers are positioned so that they do not result in vehicles queuing onto surrounding roads or generate conflict at the access points to the precinct.

I406.9. Special information requirements

There are no special information requirements in this precinct.

I406.10. Precinct plans

I406.10.1 Bombay 1: Precinct plan 1

I407. Bruce Pulman Park Precinct

I407.1. Precinct description

The Bruce Pulman Park is a 65 hectare community and recreation facility adjoining Walters Road in Takinini.

The Bruce Pulman Park Precinct provides specific planning provisions for the operation, development and redevelopment of Bruce Pulman Park.

The zoning of the land within the Bruce Pulman Park Precinct is the Special Purpose - Major Recreation Facility Zone.

I407.2. Objectives

- (1) Bruce Pulman Park is protected as a regionally and nationally important venue for all of the following primary activities:
 - (a) organised sports and recreation
 - (b) informal recreation
 - (c) concerts, events and festivals;
 - (d) markets, fairs and trade fairs;
 - (e) functions, conferences, gatherings and meetings; and
 - (f) displays and exhibitions.
- (2) A range of activities compatible with, or accessory to, the primary activities are enabled.
- (3) The open space amenity values of Bruce Pulman Park are maintained.
- (4) The adverse effects of the operation of Bruce Pulman Park are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those listed above.

I407.3. Policies

- (1) Enable the safe and efficient operation of Bruce Pulman Park for its primary activities.
- (2) Protect the primary activities of Bruce Pulman Park from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:

- (a) avoid, remedy or mitigate adverse effects;
 - (b) maintain the open space amenity values of the precinct; and
 - (c) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of Bruce Pulman Park, having regard to the amenity of surrounding properties.
- (5) Recognise that the Bruce Pulman Park's primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those listed above.

I407.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E40 Temporary activities;
- (2) E25 Noise and vibration (noise provisions only);
- (3) E24 Lighting;

Table I407.4.1 Activity table specifies the activity status of land use and development activities in the Bruce Pulman Park Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I407.4.1: Activity table

	Activity	Activity status
Use		
Primary activities

(A17)	Camping grounds that do not meet Standard I407.6.14	D
(A18)	Care centres limited to no more than one care centre within the precinct and with a gross floor area no greater than 1,000m ²	P
(A19)	Care centres not otherwise provided for	RD
(A20)	Any compatible activity not meeting Standard I407.6.5 but meeting all other standards	C
Development		
(A21)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 15m in height	P
(A22)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15m but up to 35m in height	RD
(A23)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 35m in height	D
(A24)	Light towers and associated fittings up to and greater than 35m in height	P
(A25)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I407.6.8	RD
(A26)	Demolition of buildings	P
(A27)	Temporary buildings	P
(A28)	Workers' accommodation	P

I407.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I407.4.1 Activity table above will be considered without public or limited

notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.

- (2) Any application for resource consent for an activity listed in Table I407.4.1 Activity table and which is not listed in I407.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I407.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I407.4.1 must comply with the following activity standards unless otherwise stated. The following standards do not apply:

- (1) E27 Transport – Standard E27.6.1 Trip generation; and
- (2) E27 Transport – Standard E27.6.2. Number of parking and loading spaces.

I407.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing activity sensitive to noise must not exceed the noise limits in Table I407.6.1.1.

Table I407.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Up to 5 special noise events between 8:00am and 10:30pm in any 12 month period	75dB L _{Aeq(5min)}
Up to 15 special noise events between 8:00am and 10:30pm in any 12 month period	65dB L _{Aeq(5min)}
General noise standards for all days including Christmas Day, Good Friday & Anzac Day between 8:00am and 10:30pm	55dB L _{Aeq}
General noise standards for all other times	40dB L _{Aeq} and 70dB L _{Amax}

- (2) Noise limits must measure in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.

- (3) For special noise events an adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.
- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) Where $L_{Aeq (5min)}$ is specified, no 5 minute measurement sample can exceed the stated limit.
- (7) Professional fireworks displays and helicopter flights are excluded from this standard.

I407.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I407.6.2, the curfew and pre-curfew times are as stated in Table I407.6.2.1.

Table I407.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 11pm
Curfew	11pm – 7am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:
 - (a) The limits in Table I407.6.2.2 when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance

limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I407.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

(b) The vertical illuminance limits in Table I407.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I407.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

(6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15 per cent (based on an adaption luminance of 2 cd/m^2) on any public road, calculated within each traffic lane in the direction of travel.

(7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I407.6.2.4 and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I407.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd
Special lighting events	25,000 cd

(8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I407.6.2.5. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting

installations) – International Commission on Illumination ISBN 3 901 906 19 3.

(9) Professional fireworks displays are excluded from this standard.

Table I407.6.2.5: Building façade luminance

	Luminance limit
Standard	10 cd/m ²
Special lighting events	25 cd/m ²

I407.6.3. Special noise events

- (1) The total number of special noise events in any 12 month period must not exceed 20 events.
- (2) For the purpose of this standard, a special noise event exceeds the standard noise limits but does not exceed the special noise limits listed in Table I407.6.1.1.
- (3) Special noise events may occur consecutively over a day or days, but may not exceed the total number of special noise events allowed in any 12 month period provided that:
 - (a) There must be no more than 2 special noise events on any one day.
 - (b) There must be no more than 4 special noise events within any 2 week period.
- (4) A single special noise event must be limited to a total duration of 6 hours. Any special noise event lasting longer than 6 hours must be counted as 2 special noise events. The duration of a special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.

I407.6.4. Special lighting events

- (1) The total number of special lighting events in any 12 month period must not exceed 25 events.
- (2) For the purpose of this standard, a special lighting event exceeds the standard lighting limits but does not exceed the special lighting limits listed in Tables I407.6.2.4 and I407.6.2.5.

I407.6.5. Traffic management

- (1) Activities must meet at least one of the following traffic management standards:
 - (a) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or

(b) The activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

(2) Standard I407.6.5 does not apply to organised sport and recreation and informal recreation activities.

I407.6.6. Parking

(1) Any loss of existing formed and marked parking spaces from 30 September 2013, must be accommodated elsewhere within the precinct unless the number of parking spaces provided exceeds the requirements set out in E27 Transport – Standard E27.6.2 Number of parking and loading spaces.

I407.6.7. Screening

(1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas

I407.6.8. Interface control areas

(1) New buildings, external building alterations or additions to a building for a primary, compatible, or accessory building must be located outside the Interface Control Area (ICA) as illustrated on the precinct plan or have a footprint less than 200m². Temporary buildings are excluded from this standard.

I407.6.9. Height in relation to boundary

- (1) Along the boundaries where the Bruce Pulman Park Precinct directly adjoins a residential zone or road, excluding Walters Road, Porchester Road and Kuaka Drive, the height in relation to boundary standard that applies to the precinct is that which applies in the residential zone nearest the boundary.
- (2) Where the Bruce Pulman Park Precinct directly adjoins Walters Road, Porchester Road or Kuaka Drive, buildings must not project beyond a 45 degree recession plane measured from a point 8.5m vertically above ground level on the precinct boundary.
- (3) Temporary buildings, light towers and associated fittings are excluded from this standard

I407.6.10. Maximum building coverage

(1) The building coverage of the precinct must not exceed 30 per cent.

I407.6.11. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 metres from any residential zone.
- (5) Displays must comply with 140dB L_{Zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I407.6.12. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 150m from any neighbouring site.

I407.6.13. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I407.6.14. Camping grounds

- (1) No more than 20 self-contained motorhomes can use Bruce Pulman Park as an overnight stop-over on any day.
- (2) The operation of a stopover facility for self-contained motorhomes may not exceed a cumulative duration of 3 consecutive nights (72 hours) when stopping on a casual basis.
- (3) The operation of a stopover facility for self-contained motorhomes may not exceed a cumulative duration of 14 consecutive nights (336 hours) when stopping for a specific activity which is longer than 3 consecutive nights.
- (4) The motorhome stop-over areas must be restricted to those areas described below as being:
 - (a) the easternmost portion of the car parking area immediately adjacent to the netball centre;
 - (b) the car parking area located immediately to the south of the Team Sports Building; and
 - (c) the car parking area located immediately to the south of the rugby fields that are located adjacent to the Team Sports Building.
- (5) Motorhomes must not be driven on or parked on grassed areas of the Bruce Pulman Park Precinct.

I407.7. Assessment – controlled activities

I407.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) The effects of the proposed activity on the safety and efficiency of the transport network.

I407.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Effects on the safety and efficiency of the transport network:
 - (a) The extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements.
 - (b) The extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) The extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I407.8. Assessment – restricted discretionary activities

I407.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Any activity that does not comply with noise and/or lighting standards:
 - (a) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) Any activity that does not comply with permitted helicopter flight standard
 - (a) the effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties.
- (3) Any activity that does not comply with permitted professional fireworks display standard:
 - (a) the effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) Care centres not otherwise provided for:
 - (a) the effects of the proposed activity on the efficient operation of the primary activities of the site; and
 - (b) the effects of traffic and parking on the safety and efficiency of the transport network.

- (5) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15m and up to 35m in height and/or which does not comply with height in relation to boundary standards:
 - (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (6) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I407.6.8:
 - (a) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (7) Any activity that does not comply with a building coverage standard:
 - (a) The effects on the open space amenity values of the precinct.
- (8) Any activity that does not comply with screening standards:
 - (a) The visual effects of rubbish and storage areas on residential and open space zoned sites.

I407.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay and Auckland-wide provisions:

- (1) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) Whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and,
 - (iii) the degree of non-compliance.
 - (b) Whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time.
 - (c) The extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
 - (d) The extent to which any artificial lighting will create a traffic safety issue.

- (e) Whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing.
- (f) The extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance; and,
- (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
- (h) the extent to which additional special events adversely affect the amenity of surrounding properties having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of special event standards;
 - (iii) the additional number of special events; and
 - (iv) whether there is an operational need for the exceedance.
- (2) The effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
 - (a) the extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
 - (a) the extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones.
 - (b) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones).
 - (c) whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard.
 - (d) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or

mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.

- (4) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
 - (a) The extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) The effects of the proposed activity on the efficient operation of the primary activity of the site:
 - (a) Whether the activity is of a character, scale and intensity to ensure that adverse effects on the operation of the primary activity, including its likely future use or intensification, are avoided, remedied or mitigated.
- (6) The effects of traffic and parking on the safety and efficiency of the transport network:
 - (a) Whether there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements.
 - (b) Whether a reduction in carparking will compromise the successful implementation of a Transport and Traffic Management Plan, where relevant or required.
 - (c) Whether the precinct has sufficient parking capacity to provide for the day to day needs of existing and proposed activities.
- (7) The effects on the open space amenity values of the precinct:

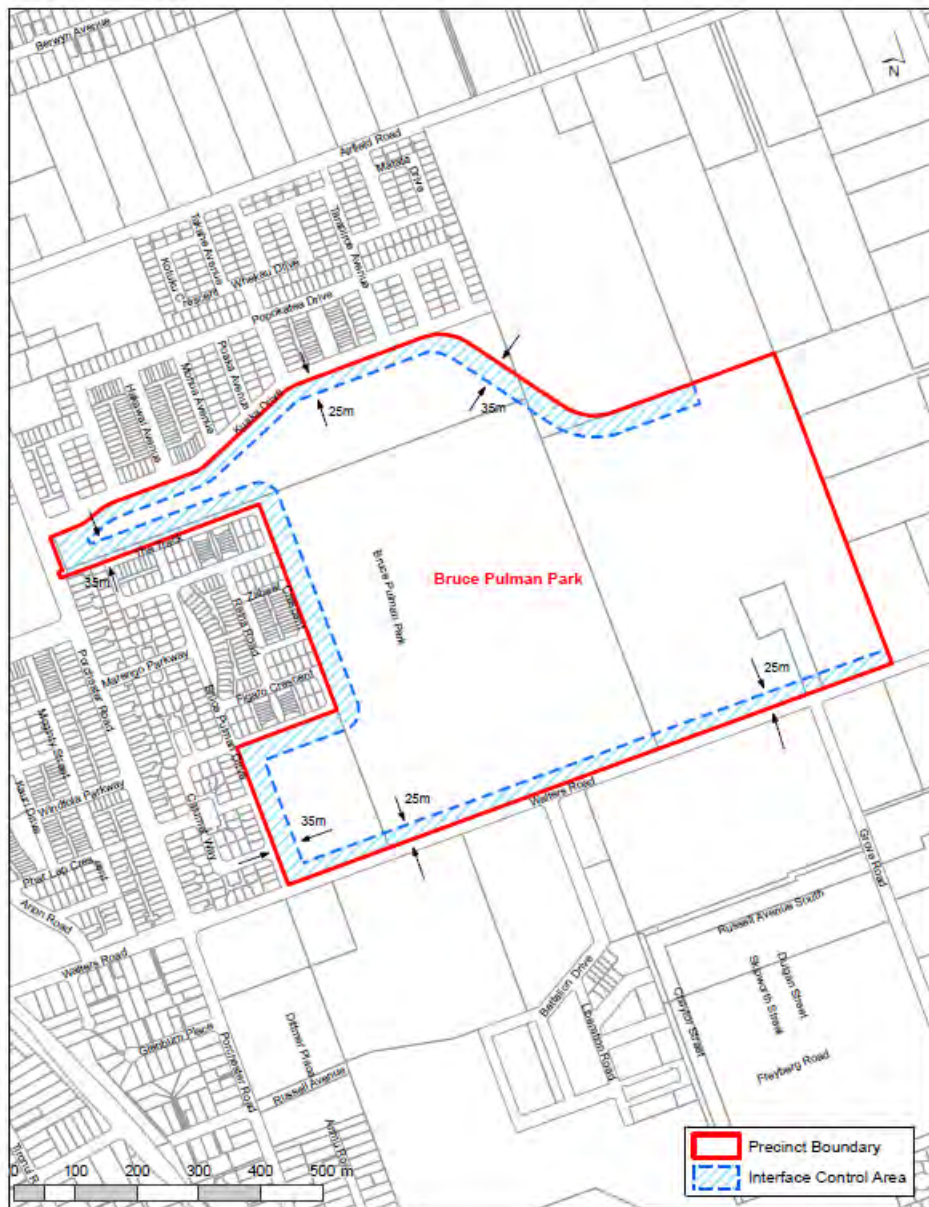

- (a) The extent to which proposed development will affect the perception of built form to open space within the precinct.
- (8) The visual effects of rubbish and storage areas on residential and open space zoned sites:
 - (a) the extent to which screening is practicable.
 - (b) the extent to which distance and topographical matters mitigate likely adverse visual effects.

I407.9. Special information requirements

There are no special information requirements for this precinct.

I407.10. Precinct plans

I407.10.1. Bruce Pulman Park: Precinct plan 1

I408. Clevedon Precinct

I408.1. Precinct Description

Clevedon is a rural village situated on the Wairoa River. The precinct area is between the Wairoa River and Taitaia Stream and comprises 847ha. It lies at a key interface between town and country and, for many urban Aucklanders, provides an important connection to rural living and rural activities.

The purpose of the precinct is to incorporate the outcomes of the Clevedon Village Sustainable Development Plan into the PAUP and provide for integrated growth in a coordinated manner and sustainable management of the area.

Key features include open space, indicative walkways, indicative bridle trails, areas of development opportunities and development restriction areas, wetlands, ponds and indicative road network.

The precinct is made up of five sub-precincts:

- Clevedon Village sub-precincts A and B zoned Residential - Single House Zone.
- Clevedon Village sub-precinct C zoned Rural - Countryside Living Zone.
- Clevedon Village sub-precinct D is zoned Business - Neighbourhood Centre Zone.
- Clevedon Village sub-precinct E is zoned Residential - Single House Zone or Open Space – Community Zone or Open Space – Conservation or Open Space – Sport and Active Recreation Zone

Refer to I408.10.1 Clevedon Precinct plan 1: Sub-precincts for the location of the Sub-precincts.

Sub-precinct A is generally located within an 800m radius of the Village Centre. The purpose of the sub-precinct is to create a compact residential area within 10 minutes walking distance of the village centre.

Sub-precinct B applies to land located on the outer edge of the existing village. The purpose of the sub-precinct is to create a transition from the more compact village to the surrounding rural farming area beyond. The sub-precinct provides for homestead type residential development set within larger grounds, reflecting a more rural residential character.

Sub-precinct C is situated at the outer edges of the precinct. The purpose of the sub-precinct is to provide for a range of part time farming activities from which produce can support local activities, such as the Clevedon Farmers' Market. The sub-precinct provides for small rural holdings as a transition between the new residential area and the wider rural area beyond. It is envisaged that these land holdings can enable lifestyle farming and other rural activities.

The provisions within the sub-precinct promote cluster housing to deter the fragmentation of land and at the same time enable small scale equestrian or farming activities. Cluster housing will also assist in reducing the visual impact of development and in preserving key views by grouping buildings, maintaining wildlife corridors and

enabling parcels of land only partially impacted by the floodplain to be developed where there is a suitable building platform and wastewater disposal field (where relevant) outside the floodplain.

I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network identifies areas where additional subdivision is contemplated with a density ranging between 1 dwelling per 2 hectares and 1 dwelling per 10 hectares. The lots with the greatest density opportunity are generally located within 800m from the edge of the business zone, an accepted walkable distance when intensifying areas. These lots also contain sufficient high ground and landscape capacity to accommodate additional units at an increased density.

A section of Papakura-Clevedon Road has been identified as sensitive to development. This may undermine the transition between the residential areas of Clevedon and the wider rural area beyond. I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network also identifies an area where development is restricted on properties along Papakura-Clevedon Road and Tourist Road. The area protects the rural character and experience when travelling into Clevedon by restricting new dwelling units to being located along the road corridor, controlling new vehicle access points and by requiring specific riparian planting that preserve the character along this section of Papakura-Clevedon Road.

Particular rules applying to the development restriction area reinforce the rural village character and landscape qualities of Clevedon, while minimising adverse effects of rural activities on adjoining residential land.

Low lying land subject to flooding is subject to building restrictions to ensure the effects of flooding are not exacerbated and can continue to be managed. Careful siting of dwellings and accessory buildings on higher ground is required to manage flood risk and to maintain the open rural character of the remaining areas of property within flood plains.

Provision for bridle paths at the time of subdivision is also promoted to enhance the amenity values of Clevedon and facilitate the safe movement of horses and riders through the area.

Sub-precinct D applies on and to the west of the main street of Clevedon. The purpose of the sub-precinct is to reinforce the area as a local service centre for Clevedon Village precinct and surrounds and recognise Clevedon village provides services for those travelling, visiting or passing through Clevedon.

Sub-precinct E applies to various sites throughout the precinct that provide for open space and/or community activities. The zone provisions apply for these sites except for provisions relation to floodplains and bridle paths.

Floodplains and Coastal Storm Inundation Areas

Large areas of the Clevedon Precinct are subject to flooding and coastal storm inundation. The Clevedon Precinct includes provisions relating to works, subdivision and development within these areas.

Re-Vegetation Area

The subdivision provisions seek to achieve extensive planting and re-vegetation within the lots identified above to mitigate adverse effects of residential development and enhance natural and amenity values. The location of the re-vegetation takes into account restoration of the riparian margins and floodplains, extension of existing ecological corridors and enhancement of existing vegetation.

Additional subdivision controls apply to Pt Allot 5 Wairoa Psh & Pt Allot 9 DP 3036 & Pt DP 10672 & DP 5258 Blk Wairoa SD & Lot 2 DP 142381 & Lot 3 DP 142381 & Lot2 DP 186158 as shown on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network.

While the subdivision provisions apply to sub-precinct A, B, C and D all re-vegetation is anticipated to be located within the sub-precinct C. I1.10.3 Clevedon Precinct plan 3: Re-vegetation area identifies the location of the planting within this sub-precinct.

The planting and re-vegetation within this area is closely tied to any future development and subdivision. Any development layout, landscape plan and management plans for the landholding will demonstrate the extent of riparian planting along Taitaia stream and nature and extent of planting within the floodplain to ensure that the function of the floodplain to safely store and convey flow is retained.

The re-vegetation area within Sub-precinct C includes a 'no build' 40m wide planted "Village Gateway Corridor" along Papakura-Clevedon Road. This planting buffer is to be located outside the road corridor, on private land and is to be planted as part of the development. This area may include wetlands and ponds as part of the stormwater management plan. It may also provide for new local roading connections to adjoining development. It is anticipated that planting within this area will be part of Stage 1 of any development.

Protection of planting and re-vegetation within the area will be by way of consent notices on titles. Development within this area is anticipated to occur in a comprehensive manner to achieve the outcomes sought by the precinct.

I408.2. Objectives [rp/dp]

- (1) A new boundary for the expansion of Clevedon is established that provides a clear differentiation between urban and rural areas.
- (2) Development and/or subdivision within the precinct facilitates a transport network that:
 - (a) integrates with, and avoids adverse effects on the safety and efficiency of, the transport network of the surrounding area, including any upgrades to the surrounding network;
 - (b) facilitates transport choices by providing for pedestrians, equestrian users, cyclists, public transport facilities, and vehicles; and

- (c) is designed and constructed in a manner that is consistent with the requirements of Auckland Transport and any relevant code of practice or engineering standards.
- (3) The collection, treatment and disposal of wastewater is managed to avoid, remedy or mitigate any adverse effects on the water quality of the receiving environments of the Wairoa river catchment.
- (4) The adverse effects on property and the environment from flooding and coastal storm inundation is avoided where practicable or otherwise minimised and mitigated.
- (5) Small-scale retail activities are enabled and large scale retail is restricted within Sub-precinct D.
- (6) Development is serviced with a reliable supply of water of an appropriate quality and quantity for both domestic use and firefighting purposes.

The zone, Auckland-wide and overlay objectives apply in this precinct in addition to those specified above.

I408.3. Policies [rp/dp]

- (1) Require subdivision, use and development to be generally in accordance with I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network.
- (2) Establish a development pattern that has the village core, at its centre dispersing through to the rural environs.
- (3) Subdivision, use and development must:
 - (a) provide a range of living choices and lifestyles;
 - (b) retain significant landscape elements and key views along identified corridors;
 - (c) provide a high degree of connectivity through a well-connected movement network and facilitate safe walking, cycling and horse riding, including the identification of walking, cycling and bridle paths;
 - (d) protect water quality and ensure that the rate of run-off throughout the development cycle is similar to pre-development levels;
 - (e) provide open space and public access to the Wairoa River;
 - (f) promote passive surveillance of public space by design and placement of buildings;
 - (g) ensure that there is a legible boundary to the urban area and countryside living; and
 - (h) maintain or enhance the existing character and its rural environs.

- (4) Enable residential, business, community facilities, rural lifestyle and farming activities and a range of open spaces including a village green.
- (5) Enable the clustering of dwellings in areas identified on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network
- (6) Require subdivision and/or development to provide for a transport network that:
 - (a) as a minimum, is in accordance with the transport network elements shown on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network;
 - (b) supports safe and efficient movement of pedestrians, equestrian users, cyclists, public transport and vehicles; and
 - (c) is designed and constructed in accordance with the requirements of Auckland Transport and any relevant code of practice or engineering standards.
- (7) Require wastewater disposal in all sub-precincts except Sub-precinct C to connect to a public wastewater collection and disposal system.
- (8) Require stormwater run-off to be collected, treated and disposed of in a way that avoids, remedies or mitigates adverse effects on adjacent sites or sites upstream or downstream in the catchment area.
- (9) Require subdivision, use and development within the 1% AEP flood plain and areas affected by coastal storm inundation to:
 - (a) locate building platforms and areas for wastewater disposal within natural contours/landforms outside the floodplain and inundation areas, taking into account the effects of future climate change;
 - (b) avoid significant modification of the 1% AEP flood plain;
 - (c) not compromise or reduce the flood storage and conveyance function of the 1% AEP flood plain and overland flow paths; and
 - (d) manage the provision and development of necessary infrastructure to minimise effects on hydrology.
- (10) Ensure development does not increase adverse effects from flood hazards, including increased flood, depths and velocities, experienced upstream or downstream of the site, taking into account the hydrological characteristics of the catchment and the vulnerability of activities within them.
- (11) Ensure sufficient capacity of water supply of potable standard is available for use including (but not limited to) firefighting requirements.

The zone, Auckland-wide and overlay policies apply in this precinct in addition to those specified above.

I408.4. Activity table [rp/dp]

The provisions in the zone, Auckland-wide provisions and any relevant overlays apply in this precinct unless otherwise specified below.

Table I408.4.1 Activity table specifies the activity status of land use, development and subdivision activities in the Clevedon Precinct pursuant to sections 9(2) and 9(3) of the Resource Management Act 1991.

Table I408.4.1 Activity Table

Activity		Activity Status (Sub-precinct)				
		A	B	C	D	E
Use and development						
Activities						
(A1)	Dwellings within Development Restriction Area shown on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network	NA	NA	NC	NA	NA
(A2)	Dwellings on land subject to re-vegetation area shown on Precinct plan 2 that complies with I408.6.6 and Precinct Plan 2: Re vegetation Areas	RD	RD	RD	RD	
(A3)	Dwellings within the 40m 'Village Gateway Corridor' along Papakura Clevedon Road on land subject to the re-vegetation area identified on I408.10.3 Clevedon Precinct plan 3: Re-vegetation area.	NC	NC	NC	NC	
(A4)	Any activity that results in the construction or modification of vehicle access points onto Papakura-Clevedon Road to service development, from land in the re-vegetation area shown on I408.10.3 Clevedon Precinct plan 3: Re-vegetation area	RD	RD	RD	RD	
(A5)	New activities in accordance with zones on lots existing on 19 October 2012.	D	D	D	NA	
Earthworks						
(A6)	Land modifications to the 1% AEP floodplain including construction of building platforms or buildings or private wastewater systems and associated earthworks and fill	D	D	D	D	D
(A7)	Land modification that leads to an	NC	NC	NC	NC	NC

	increase in flood levels upstream or downstream that affects buildings for storm events up to and including the 1% AEP						
Access							
(A8)	Any activity that results in the construction or modification of vehicle access points onto Papakura-Clevedon Road to service development from land subject to the re-vegetation area shown on I408.10.3 Clevedon Precinct plan 3: Re-vegetation area	NC	NC	NC	NC	NA	
Commerce							
(A9)	Retail exceeding 450m ² and up to 1500m ² GFA per tenancy	NC	NC	NC	RD		
(A10)	Retail exceeding 1500sqm GFA per tenancy	NC	NC	NC	D		
(A11)	Supermarket exceeding 450m ² GFA and up to 1500m ² GFA per tenancy	NC	NC	NC	RD		
(A12)	Supermarket exceeding 1500sqm GFA per tenancy	NC	NC	NC	D		
(A13)	One retail tenancy per site exceeding 1500m ² gross floor area	NC	NC	NC	D		
(A14)	Retail services ancillary to a church and not exceeding 100m ² gross floor area	D	NC	NC	NC		
(A15)	Funeral director's premises	D	NC	NC	NC		
(A16)	Light manufacturing and servicing not exceeding 100m ² GFA on sites not fronting Papakura Clevedon Road	NC	NC	NC	RD		
(A17)	Light manufacturing and servicing on sites fronting Papakura Clevedon Road	NC	NC	NC	NC		
(A18)	Trade Suppliers	NC	NC	NC	D		
Rural							
(A19)	Farming (until a connection to a public waste water reticulation system is made available)	P	P	P	P		
(A20)	Farming (when a connection to a public waste water reticulation system is available)	D	D	P	NC		
(A21)	Bridle trails and walkways	RD	RD	RD	RD	RD	
Subdivision							
(A22)	Subdivision that does not comply with I408.6.4 Subdivision or I408.6.5 Minimum site size	NC					

(A23)	Subdivision that does not comply with I408.6.2 Wastewater until 1 October 2016 or until such time as all necessary planning approvals for a public reticulated wastewater treatment and disposal systems are obtained, whichever is the earliest date	Pr	
(A24)	Subdivision that does not comply with I408.6.2 Wastewater after 1 October 2016 or until such time as all necessary planning approvals for a public reticulated wastewater treatment and disposal systems are obtained, whichever is the earliest date	NC	

I408.5. Notification

- (1) The Council will consider restricted discretionary resource consent applications for subdivision without the need for public notification. However, limited notification may be undertaken, including notice being given to any land owner within the precinct who has not provided their written approval.
- (2) Any activity not otherwise listed above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

I408.6. Standards

The zone, Auckland-wide and overlay standards apply in this precinct unless otherwise specified below. All activities listed in Table I408.4.1 Activity table must comply with the following standards.

I408.6.1. Building coverage

- (1) Maximum building coverage within Sub-precinct C for clustered lots is 20 per cent of the net site area.

I408.6.2. Wastewater

- (1) All activities and all new sites, excluding activities or sites created in Sub-precinct C, requiring wastewater servicing must be connected to a public wastewater system.
- (2) Any activity on a lot existing as of 19 October 2012 that does not comply with I408.6.2(1) is a discretionary activity
- (3) Any activity on a lot created after of 19 October 2012 that does not comply with I408.6.2(1) is a non-complying activity.
- (4) Where lots are created in Sub-precinct C, any on-site wastewater servicing should be situated outside of the 1% AEP floodplain.

I408.6.3. Water Supply

- (1) Provision must be made for minimum water storage per household of 50,000 litres where no home sprinklers are installed, or 30,000 litres where home sprinklers are installed.
- (2) 0(1) does not apply where a site is serviced by a reticulated potable water supply.
- (3) Any activity that does not comply with I408.6.23(1) or (2) is a non-complying activity.

I408.6.4. Subdivision

- (1) Where an application for subdivision consent incorporates two or more adjoining existing sites, the total area of the land subject to the application may be treated as one site for the sole purpose of subdivisional configuration and design. "Existing lot" means all the land held in a separate Certificate of Title on 19 October 2012.
- (2) The following standards apply in respect of subdivision in Sub-precinct C:
 - (a) Subdivisions are permitted to be made in stages by reference to the existing lot.
 - (b) The calculation of average lot density is to be based on the gross lot area subject to the subdivision.
 - (c) In respect of any lot within a subdivision that would be capable of further subdivision under these rules, no further subdivision must be undertaken of that lot that would result in the total permitted density being exceeded with respect to the existing lot.
 - (d) Where an application for subdivision consent is for an existing lot that contains land both inside and outside of the Clevedon Precinct, the area of land contained within the Clevedon precinct will be considered the "existing lot" or "parent allotment". The land outside of the Clevedon precinct must not be used in the calculation of the average lot size for subdivision.
 - (e) Each lot created must be between 2,500m² and 6000m² exclusive of any access areas and should contain a building platform along with sufficient land for effluent disposal fields.
 - (f) Balance lot must be held under either single or joint ownership.
 - (g) Housing clusters:
 - (i) must consist of no more than 5 dwellings (where applicable);
 - (ii) must be separated by a planting buffer from the adjoining sub-precinct; and

- (iii) a minimum of 50m separation must be provided between building frontages within clusters to allow sufficient space for the creation of a central communal area.
- (h) No new building platforms for dwellings are to be located within the Development Restriction Area identified in I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network.
- (i) No new vehicle crossings to Papakura-Clevedon Road are to be established to service new lots in the Development Restriction area identified in I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network.

I408.6.5. Minimum site size

- (1) The minimum net site area in Table H1.6.5.1 must be met.

Table I408.6.5.1 Minimum site size

Sub-precinct	Minimum net site area
Sub-precinct A	500m ²
Sub-precinct B	800m ² , with a maximum net site area of 2000m ² and an average net site area of 1000m ²
Sub-precinct C	<ul style="list-style-type: none"> • not exceeding 1 dwelling per 4ha; or • not exceeding 1 dwelling per 2 ha on land identified as areas of increased subdivision opportunity on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network, • not exceeding 1 dwelling per 3.5ha on Lot 2 DP 323974 (CT 96760), or • not exceeding 1 dwelling per 10ha on Pt Allot 2 Wairoa Psh Blk VII Wairoa SD & Pt Allot 21 Wairoa Psh Blk VII Wairoa SD (CT 48C/657) for part of the landholding subject to a development restriction area as identified on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network

I408.6.6. Planting within the re-vegetation area

- (1) All riparian yards and areas within 1% AEP floodplain must be planted in general accordance with I408.10.3 Clevedon Precinct plan 3: Re-vegetation area.
- (2) Planting and re-vegetation within the re-vegetation area must be predominantly of native plant species to achieve a canopy height in the range of at least 6m to 8m at maturity.
- (3) Planting within the Village Gateway Corridor must be no less than 40m wide on either side of the Papakura Clevedon Road corridor as identified on I408.10.3 Clevedon Precinct plan 3: Re-vegetation area and as part of Stage 1 of the development.

(4) Riparian margin planting on both sides of the Taitaia Stream (Pt Allot 2 Wairoa Psh Blk VII Wairoa SD & Pt Allot 21 Wairoa Psh Blk VII Wairoa SD (CT 48C/657)) is to comprise of a selection of species which grow up to at least 2m when mature.

(5) Any activity that does not comply with I408.6.6(1-4) is a non-complying activity.

I408.6.7. Roading Network

(1) Roads are provided in accordance with the indicative alignments and road types in I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network except that the alignment of indicative proposed roads depicted on the network plan should be determined at the time of subdivision.

(2) Roads provided to the east and west of the Business - Neighbourhood Centre Zone are to incorporate public parking as shown on Figure I408.6.7.4.4 Proposed Road East of Clevedon Sub-precinct D.

(3) Roads are to be designed and constructed in accordance with the requirements of Auckland Transport and any relevant engineering standards and codes of practice.

(4) All new roads shown in I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network are built in accordance with Figure I408.6.7.4.1 Proposed local road, Figure I408.6.7.4.2 Proposed typical rural interface local road, Figure I408.6.7.4.3 Proposed road west of Clevedon Sub-precinct D, Figure I408.6.7.4.4 Proposed road east of Clevedon Sub-precinct D and Figure I408.6.7.4.5 Proposed road - re-vegetation area.

(5) A maximum of two vehicle access points along Papakura Clevedon Road and within the planted Village Gateway corridor area may be created. One of these may be located on the northern side of Papakura Clevedon Road and the other on the southern side of this road, to service development planned within the re-vegetation area.

Figure I408.6.7.4.1 Proposed local road

Figure I408.6.7.4.2 Proposed typical rural interface local road

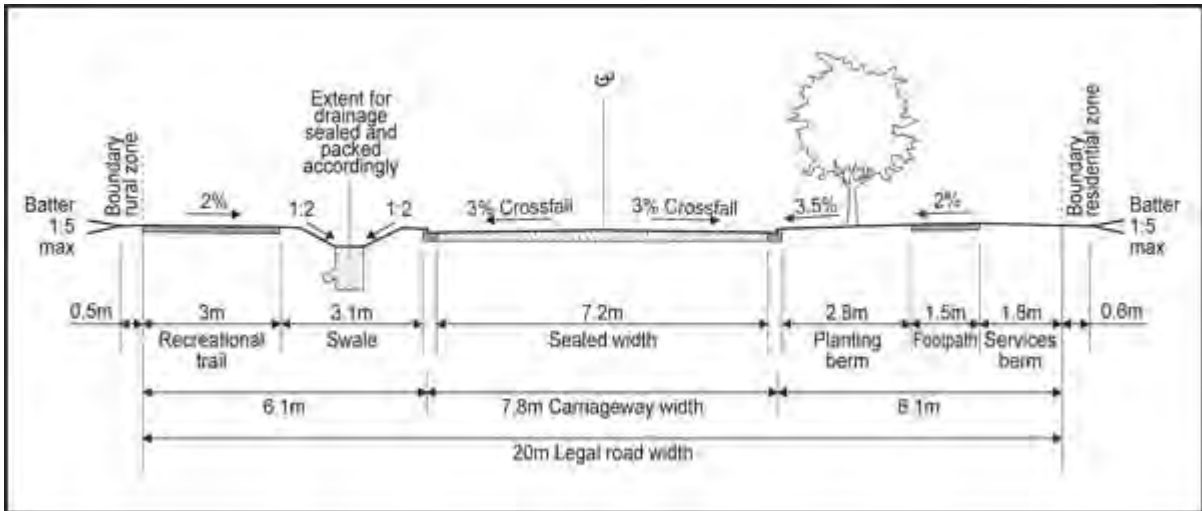

Figure I408.6.7.4.3 Proposed road west of Clevedon Sub-precinct D

Figure I408.6.7.4.4 Proposed road east of Clevedon Sub-precinct D

Figure I408.6.7.4.5 Proposed road - re-vegetation area

I408.6.8. Bridle trails and walkways

- (1) Bridle trails independent of road - the minimum width between boundaries must be 5m and an appropriate surface formation width of 3m and water tables and culverts should be provided as required for stormwater control.
- (2) Bridle trails along road berms - the minimum legal width must be 3m and minimum 2m appropriate surface formation should be provided.
- (3) Bridle trails must be marked by way of bollards, fencing or any other suitable method considered appropriate for local conditions.
- (4) Where a walkway route is provided by means of a pedestrian accessway independent of the road, the legal width of the access way at any point must not be less than 6m unless in the opinion of the Council, a reduced width provides the required level of access

- (5) Walkways should be constructed in accordance with NZS HB8630:2004 – Design of Walking Tracks.

I408.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I408.8. Assessment – restricted discretionary activities

I408.8.1. Matters of discretion

The council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the zone, Auckland wide, or overlay provisions.

I408.8.1.1. Dwellings on land in the re-vegetation area shown on I408.10.3 Clevedon Precinct plan 3: Re-vegetation area:

- (1) Landscape and amenity values;
- (2) Retention of vegetation and new planting;
- (3) Screening of buildings;
- (4) Land modifications;
- (5) Siting of buildings in relation to the vegetation buffer; and
- (6) Legal mechanism for the protection of vegetation.

I408.8.1.2. Bridle trails and walkways:

- (1) Design, location, and layout; and
- (2) Legal mechanism for the protection.

I408.8.1.3. Any activity that results in the construction or modification of vehicle access points onto Papakura-Clevedon Road to service development, from land in the re-vegetation area shown on I408.10.3 Clevedon Precinct plan 3: Re-vegetation area:

- (1) Treatment and design of intersections.

I408.8.1.4. Retail between 450m² and 1500m² GFA:

- (1) Design, location and layout;
- (2) Intensity and scale; and
- (3) Design and external appearance

I408.8.1.5. Supermarket between 450m² and 1500m² GFA:

- (1) Design, location and layout;
- (2) Intensity and scale; and

(3) Design and external appearance.

I408.8.1.6. Light Manufacturing & Servicing not exceeding 100sqm GFA:

(1) Design, location and layout;

(2) Intensity and scale; and

(3) Design and external appearance.

I408.8.1.7. Building Coverage 100sqm GFA:

(1) Scale of the buildings.

I408.8.2. Assessment criteria

The council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the zone, Auckland wide or overlay provisions:

(1) Design, location, layout amenity and scale:

(a) the extent to which the scale and physical development of the site is generally consistent with the scale of development expected by the subdivision controls, objectives and policies applying within the precinct;

(b) the extent to which the design of buildings including their bulk and scale generates adverse effects on the amenity of the Clevedon Precinct;

(c) whether buildings and structures, including any outdoor areas associated with the relevant activity are sited and designed in a manner that avoids adverse effects on amenity including visual dominance, privacy, shading of adjoining properties and whether the building and structures blend in with the existing rural character;

(d) the extent to which there is variety in building design including articulation and utilisation of a range of building materials, and the buildings avoid unrelieved blank walls or facades to all external boundaries of the site; and

(e) whether the siting of buildings in sub-precincts A, B, C and D provides sufficient setbacks so that landscaping can be established between the buildings and the external site boundaries.

(2) Character:

(a) whether the proposal retains existing trees and shelterbelts, where they contribute to rural character and rural amenity;

(b) the extent to which the proposal enhances the character of the Rural - Countryside living Zone and responds sensitively to cultural, natural and landscape values of Clevedon Precinct; and

- (c) whether the proposal protects the view corridors (identified on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network) and creates strong visual connections to the new open areas or spaces that are existing or have been proposed, including bridle trails and pedestrian linkages.

(3) Landscaping and retention of vegetation and new planting:

(a) the extent to which the landscaping:

- (i) Creates a well vegetated environment and is compatible with the surrounding neighbourhood, and the specific planting character of the adjoining streetscape and contributes positively to the streetscape and any adjoining open space;
- (ii) Visually relieves bulk of the proposed buildings and mitigates large areas of impermeable surfaces including car parking areas;
- (iii) Provides visual privacy between building and adjoining properties;
- (iv) Screens other structures and infrastructure, including any above ground water storage tanks are well integrated into the landscape concept for the site; and
- (v) Retains and incorporates existing mature trees on the land including significant vegetation, especially those near property boundaries.

(b) The extent to which the planting within the re-vegetation area is appropriately planted with suitable planting in accordance with I408.10.3 Clevedon Precinct plan 3: Re-vegetation area;

(c) The extent to which the existing vegetation within the flood plain is retained where practicable, and sufficient re-vegetation is provided for screening and as a backdrop where necessary, to ensure that buildings are integrated with the natural character of the landscape;

(d) Siting of buildings in relation to the vegetation buffer:

- (i) the extent to which Earthworks are necessary for the creation of a building platform and access cause disturbance to the landform and character of the site, and such areas should be appropriately planted as soon as practicable, having regard to the planting season; and
- (ii) whether the proposed buildings or building platforms are appropriately located in relation to the vegetation buffer and are sufficiently set-back for the planting to establish and flourish.

(e) Legal mechanism for the protection of vegetation:

- (i) whether the planting and re-vegetation areas should be protected by way of consent notices or other legal mechanism; and

- (ii) whether the subdivision developer or subsequent owner should be responsible for the implementation of the re-vegetation plan/ programme for a period of 2 years from the time of planting;

(4) Location of trails and access:

- (a) the extent to which walkways and bridle trails shown on the plan of subdivision are in general accordance with I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network;
- (b) whether walkways and bridle trails are at a practical grade and alignment and link to any other trails shown or formed on adjacent properties; and
- (c) whether trails that are to be held in private ownership the construction, maintenance, management of stock and public access to the trails are made available through a detailed Trail Management Plan.
- (d) whether the route of the walkways and bridle trails is in general accordance with I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network.
- (e) For land where trails have not been shown:
 - (i) whether the trails are of a practical grade and alignment and linked to any other trails shown on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network or formed on adjoining properties;
 - (ii) in Sub-precinct-C, whether trails give regard to rural uses and in particular livestock farming; and
 - (iii) whether the trails capture the full potential of the landscape; and
- (f) Bridle trails must be located and constructed at a practicable alignment and grade.

(5) Treatment and design of intersections:

- (a) whether appropriate intersection and design upgrades on Papakura Clevedon Road proposed ensures safe movements of vehicles, pedestrians, cyclists and equestrian users to and from new development areas, taking into account the likely operating speeds on this road; and
- (b) whether any works designed to reduce the speed of traffic within the road corridor provides for safe and convenient equestrian users, pedestrian and cycle passage.

(6) Intensity and scale

- (a) the extent to which the intensity and scale of the activity and associated car parking are compatible with the built character and amenity of the village.

(7) Design and external appearance

- (a) the extent to which the design of the buildings and structures including carparking areas maintains the amenity of the village and the qualities of the streetscape surrounding the site.

(8) Scale

- (a) the extent to which the additional building coverage causes dominance or intrusion on adjoining properties;
- (b) the extent to which the additional coverage is compatible with the height and visual character of the streetscape and village character; and
- (c) the extent to which the design and external appearance resulting from increased coverage makes a positive contribution to the streetscape.

I408.9. Special information requirements

Applications for land use or subdivision must be accompanied by the following information (as applicable):

- (1) The exact boundaries of the sub-precinct, which must be identified in general accordance with those in I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network.
- (2) A connected roading pattern, the location and design of all roads, that lie within or are required to access the sub-precinct and confirmation of the final alignment of any indicative proposed roads depicted in I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network.
- (3) The layout of roading and services showing connections with existing networks and capability for future connections.
- (4) A variety of site sizes and location of building platforms outside of 1% AEP floodplain.
- (5) The position and size of reserves including esplanade reserves and stormwater and drainage reserves.
- (6) Alignment of roading and reserves with view corridors in general accordance with I408.10.2 Clevedon Precinct Plan 2: Development restriction area and road network.
- (7) The layout and alignment of bridle trails and walkways.
- (8) The identification and protection of historic heritage, whether or not identified as a historic heritage overlay on the planning maps.
- (9) A streetscape and landscape treatment plan, in sufficient detail to enable establishment of a coherent design throughout the sub-precincts. Such landscaping plan must show and explain:

- (a) Those trees and groups of trees that are proposed to be retained; and
 - (b) the form (including density, species, depth and height) of planting that is proposed to be undertaken within the sub-precinct.
- (10) Detail on how development will avoid or mitigate adverse effects arising from the flood plain /overland flow path identified within the sub-precinct, as part of an integrated Stormwater Management Plan.
- (11) The likely staging of the development.
- (12) Evidence of liaison with any adjoining landowners or affected owners and the council in respect of proposed roads, service and trail way connections between properties to ensure integration.
- (13) A Management Plan for the entire site setting out the details of the future ownership of the sites, design, maintenance and use of the:
- (a) buffer areas;
 - (b) central communal open space;
 - (c) residential access road(s); and
 - (d) any sections of bridle trails and walkways proposed.
- (14) Where trails are proposed to be held under private ownership, this should be supported by a Trail Management Plan and should provide detail on:
- (a) management of public access to the trails including information on hours of access, circumstances and reasons where public access to the trails has been restricted;
 - (b) circumstances and reasons where public access to the trails has been restricted;
 - (c) connectivity between sections of the trails with adjoining properties;
 - (d) promote consistent treatment for signage, surface formation, information, etc across all sections of the trails; and
 - (e) an appropriate legal mechanism for securing the above.
- (15) For re-vegetation areas:
- (a) the layout of predominantly native planting and re-vegetation patterns in relation to riparian margins, stormwater systems and open spaces;
 - (b) planting within the Village Gateway Corridor to be not less than 40m wide measured from the edge of Papakura Clevedon Road road reserve shown on I408.10.2 Clevedon Precinct plan 2: Development restriction area and road network.

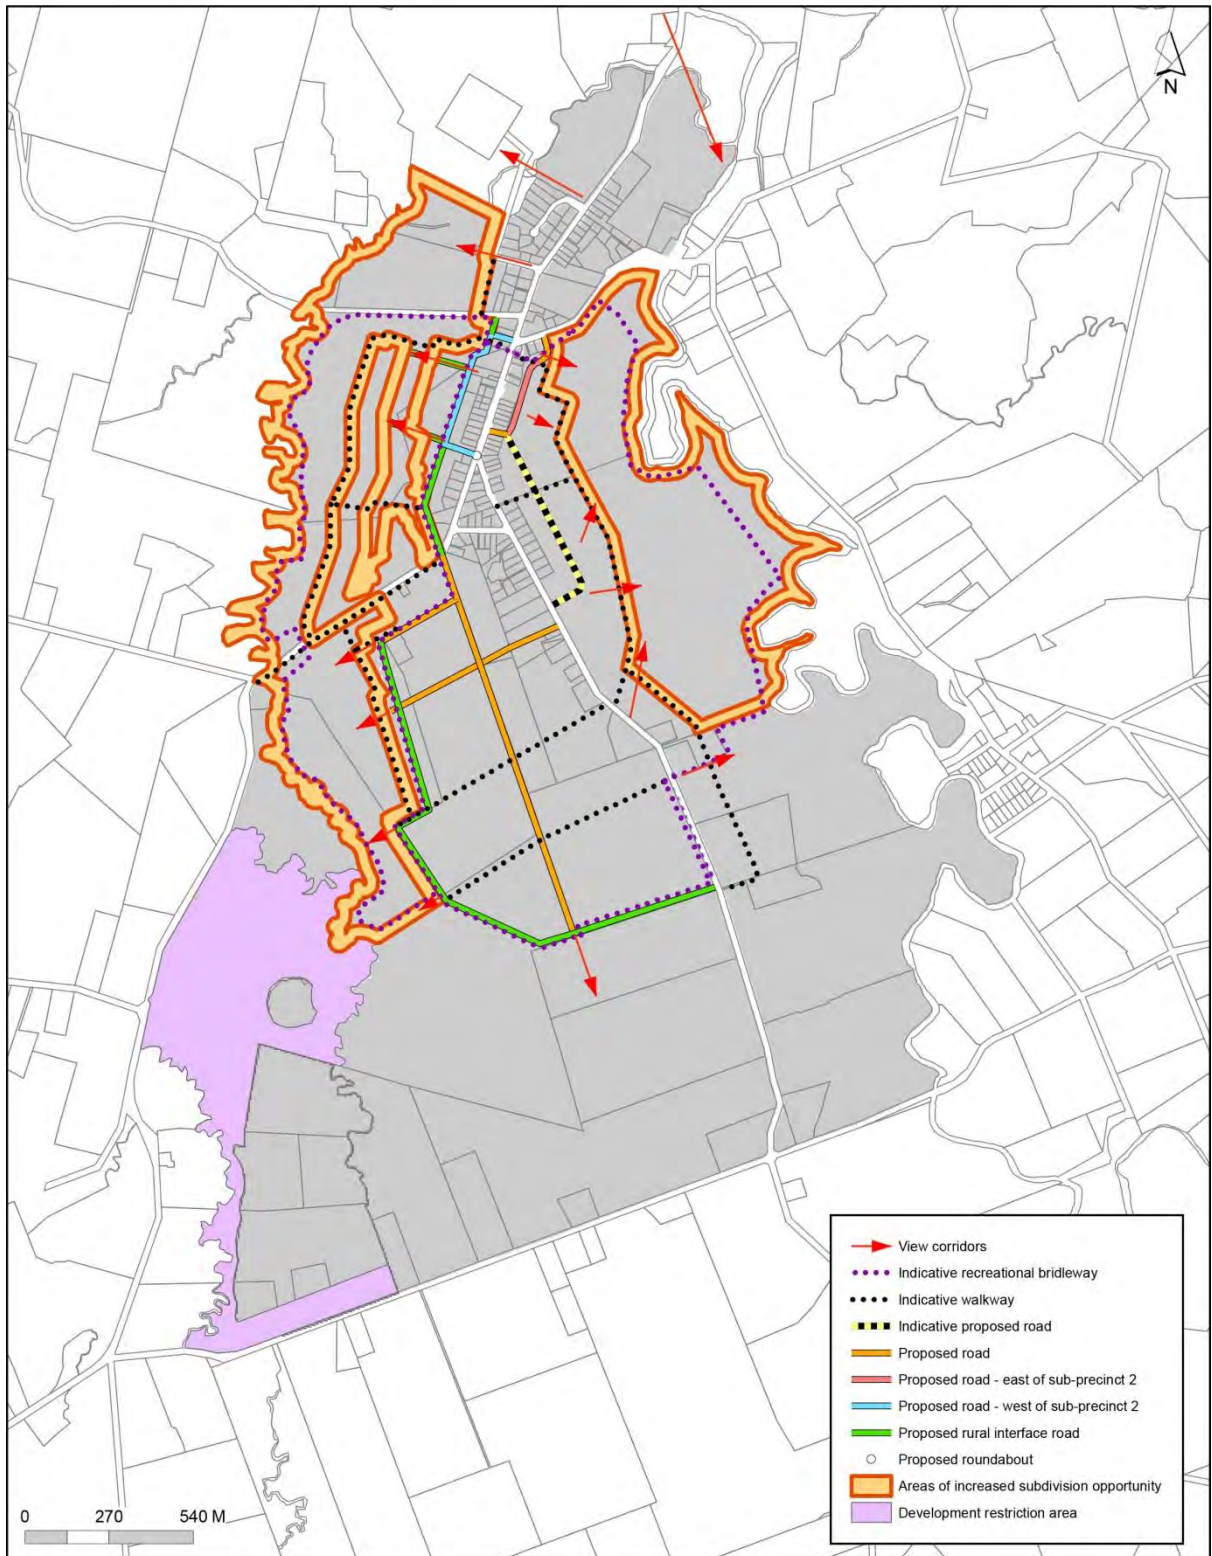

- (c) Native planting and re-vegetation plan including the protection of such planting should be secured by way of consent notice or covenant which should include a requirement for a programme of weed and pest control
- (16) Subdivision proposed on land subject to development restriction area, the subdivision plan must show the location of building platforms clear of the overlay area, the layout and alignment of access using existing vehicle crossings to proposed building platforms.
- (17) An Integrated Transport Assessment.
- (18) Connection to a public wastewater system for all buildings which has been designed and configured to service the upstream catchment in its ultimate land use.

I408.10. Precinct plans

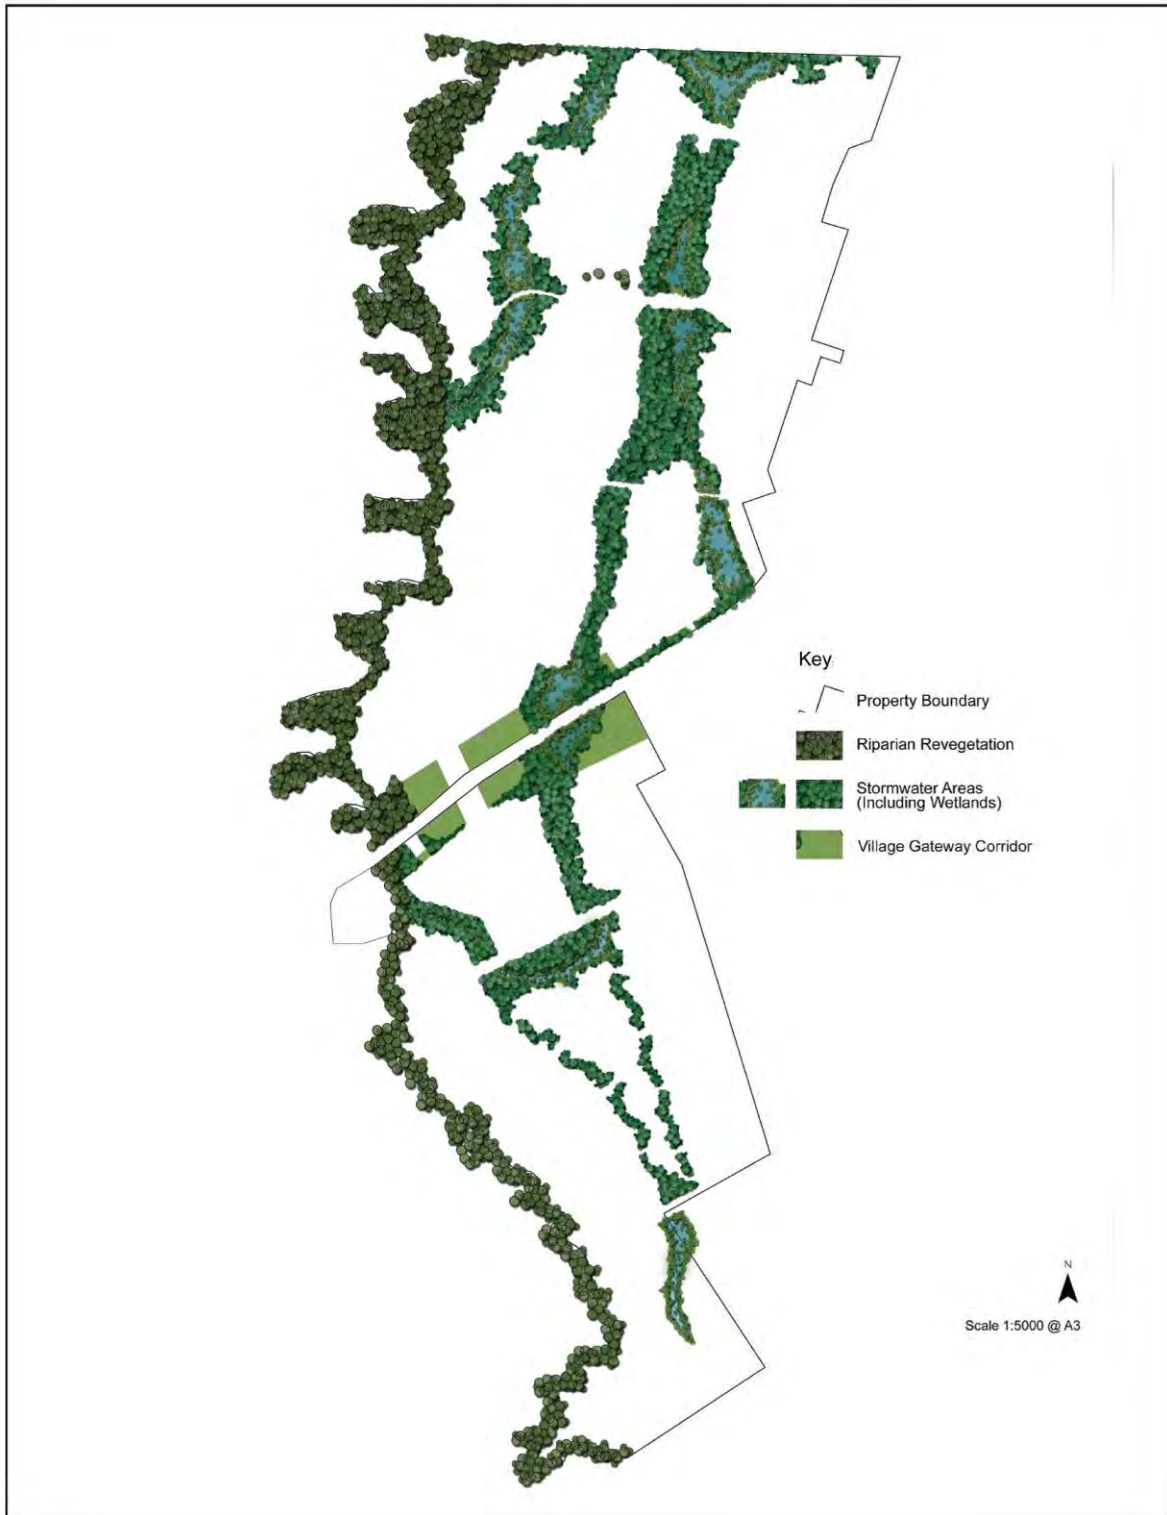

I408.10.1. Clevedon Precinct plan 1: Sub-precincts

I408.10.2. Clevedon Precinct plan 2: Development restriction area and road network

I408.10.3. Clevedon Precinct plan 3: Re-vegetation areas

I409. Clevedon Waterways Precinct

I409.1. Precinct description

The Clevedon Waterways precinct comprises 234.1 hectares of land next to the Wairoa River located approximately 5km to the northeast of Clevedon Village. The precinct includes 123.3 hectares to the east of North Road that will support residential canal housing and 110.8 hectares to the west of North Road to be utilised partly as a wastewater disposal field (if not connected to the Clevedon system), and open space.

The purpose of the Clevedon Waterways precinct is to allow for a canal-based maritime village of up to 350 dwellings together with surrounding public open space, green infrastructure, a small village hub, a lock and weir and a network of walking and cycle trails.

The development of the Clevedon Waterways Precinct will necessitate the declaration of the land required to create the canals. The canals will become part of the Coastal Marine Area (CMA) and will require a number of coastal permits for the design and construction of the works which abut and form the bed of the CMA. It will be necessary to obtain the permits at an early stage of the development process.

The holder of the coastal permits will be responsible for compliance with the terms of the applications and for on-going requirements and conditions of the permits and the terms of any occupation of the CMA by structures. At a subsequent stage the consent holder will need to transfer the permits to an appropriately constituted body made up of those who have secured the right to access the CMA created by the canal development.

It is expected that these permits will include a range of environmental management provisions that will be implemented through some form of berth holders or mooring holders licence that will require the holders of those berths or moorings to be obliged to accept individual responsibility for management of adverse effects on the coastal environment.

The Clevedon Waterways: Precinct plan 1 applies to the whole precinct area and shows sub-precinct boundaries. Key features include canal locations, open space, and indicative walkways. Clevedon Waterways: Precinct plan 2 – Landscape design provides the landscape design vision for the precinct. Figure 1 – Entrance road and Figure 2 – Perimeter road show the indicative road typologies. The precinct is made up of four sub-precincts A, B, C and D:

Sub-precinct A

Sub-precinct A applies to the flat land between North Road and the Wairoa River and is approximately 56 hectares in area. The purpose of the sub-precinct is to create a unique form of canal housing with the associated waterways, boat berths, and the access to the Wairoa River via a lock and weir. Specific design controls for the sub-precinct will reduce the visual impact of the buildings, create building platforms above the 1% AEP floodplain, provide for sea level rise, and give effect to a maritime village identity.

Sub-precinct B

Sub-precinct B is situated adjacent to the main road entrance to the precinct where it meets the canals and is approximately 4.0 hectares in area. The purpose of the sub-precinct is to reinforce the area as a local service centre for Clevedon Waterways precinct and to recognise appropriate business and community uses. More intensive housing options are to be enabled.

Sub-precinct C

The Precinct Plan identifies this area as being located around the perimeter of the precinct and is approximately 62 hectares in area. It provides a buffer and transition between the village area and the surrounding farmland and river/coastal environment. The purpose of Sub-precinct C is the creation of open space intended to reduce the potential impacts of the canal development on the rural and river environment, provide public access to the river, and passive recreation opportunities. It also incorporates the enhancement of the existing natural streams with riparian margin planting and wetlands.

Sub-precinct D

This sub-precinct relates to the 110.8 hectare block of land to the west of North Road. The purpose of Sub-precinct D is to provide a wastewater disposal field on farmland, bush protection, plus walking trails for village residents.

Sub-precinct E

This sub-precinct relates to the canal areas which will have a current zoning of Rural and Coastal Settlement Zone and when development is completed will become part of the Coastal – General Coastal Marine Zone.

The zoning of the Clevedon Waterways precinct is as follows:

- (a) Clevedon Waterways Sub-precinct A is zoned Residential - Rural and Coastal Settlement Zone;
- (b) Clevedon Waterways Sub-precinct B is zoned Business - Neighbourhood Centre Zone;
- (c) Clevedon Waterways Sub-precinct C is zoned Open Space - Informal Recreation Zone;
- (d) Clevedon Waterways Sub-precinct D is zoned Rural - Mixed Rural Zone;
- (e) Clevedon Waterways Sub-precinct E is zoned Residential - Rural and Coastal Settlement Zone but will become Coastal – General Coastal Marine Zone when the canal development is completed.

I409.2. Objectives [rcp/rp/dp]

- (1) The declamation for the canal development and the proposed use and occupation of the Coastal Marine Area for activities associated with the canal development including access and berthing of vessels authorised by the necessary coastal permits.

- (2) On-going responsibility for the exercise of the coastal permits transferred to a body representing those persons who have purchased water frontage sites in the development.
- (3) Subdivision and development occurs in accordance with the Clevedon Waterways precinct plan.
- (4) A new maritime community is created in an integrated and sustainable manner that protects and enhances the existing rural and natural coastal environment.
- (5) A network of appropriately designed canals and islands are created to provide stable building platforms that minimise hazards from flooding and sea level rise, while protecting water quality.
- (6) A unique housing and lifestyle choice is provided through the creation of a high quality residential environment comprising a range of housing densities, and typologies that integrate with the canals.
- (7) A surrounding open space area which mitigates visual impacts to the adjoining rural zones and provides public access to the river and streams, and boat access to the coastal marine area is created.
- (8) Existing streams are enhanced.
- (9) Sites of Value to Mana Whenua and archaeology are sustainably managed.
- (10) Implementation of a stormwater management network that uses Integrated stormwater management, as a core development approach, protects the ecological and cultural values of the receiving environment and integrates with the public open space network is implemented.
- (11) Subdivision and development is integrated and avoids, remedies or mitigates adverse effects on the existing road network.
- (12) The neighbourhood centre is developed in a way that achieves its key functions and role as a commercial and community centre with higher density living for the precinct with a maritime identity and without adversely affecting the Clevedon Village centre.

The overlay, Auckland-wide and underlying zone objectives apply in this precinct in addition to those specified above.

I409.3. Policies [rcp/rp/dp]

- (1) Obtain coastal permits for areas that will abut or form the bed of the Coastal Marine Area at an early stage so that the requirements for design and construction of these areas can be established prior to detailed design of earthworks and site development.
- (2) Require structural elements of the Clevedon Waterways precinct plan to be incorporated into all subdivision and development within the precinct to achieve:

- (a) a network of canals and islands designed to maximise canal water quality;
 - (b) a lock and a weir at the entrance to the Wairoa River to control canal water levels, water quality, sedimentation, recreational boat access and allow public access around the perimeter of the precinct;
 - (c) a perimeter park that provides for pedestrian and cycleway connections and provides areas of native lowland forest, along with riparian planting for existing streams flowing through it;
 - (d) public access to canals adjoining the village business centre via open space where the canal access aligns to provide a visual focus into the precinct; and
 - (e) a landscape design in accordance with the Clevedon Waterways: Precinct plan 2 – Landscape design to frame the canals, integrate the precinct with the rural landscape and restore riparian vegetation.
- (3) Make provision for the constitution of a body representing those persons who have purchased water frontage sites in the development and enable transfer of the exercise of overall coastal permits to that body at an appropriate time.
- (4) Ensure that those persons who have purchased water frontage sites in the development are licenced to use and occupy the Coastal Marine Area subject to compliance with specific provisions to protect the coastal environment in accordance with the requirements of the overall coastal permits.
- (5) Ensure that development provides a mix of lot sizes, housing typologies and densities to reflect a choice in living environment.
- (6) Ensure that the design of buildings at key building locations as defined on Clevedon Waterways: Precinct plan 1 are sensitive to their visually prominent siting and reflect the maritime architectural style.
- (7) Require that development achieves a cohesive maritime architectural style and character with reference to:
- (a) materials and levels of detailing;
 - (b) colour palettes;
 - (c) high quality building and facade designs that are well articulated;
 - (d) building block sizes and envelopes that are limited in length to break up the appearance of mass, weight and bulk; and
 - (e) variation in the canal edge.
- (8) Ensure that the building platforms address potential hazards and do not compromise the hydrology of the Wairoa River during flood events.

- (9) Employ an integrated water management system encompassing water, stormwater and wastewater that maintains or enhances the ecological function of the existing streams and the Wairoa River.
- (10) The relationship of Mana Whenua with the coastal environment is recognised and provided for, and that any land use or development activities within the precinct, and particular those in close proximity to the Wairoa River, do not have significant adverse effects on wāhi tapu and other taonga.
- (11) Require the internal road network to provide for pedestrians and cyclists, to ensure low vehicle speeds, and incorporate lowland native forest plantings.
- (12) Ensure that the intersection with North Road is upgraded to provide safe access into the precinct.
- (13) Enable the establishment of business uses at an appropriate village scale within Sub-precinct B including marine and port activities for the benefit of canal residents.
- (14) Enable community uses, such as clubs directly related to the use of the maritime environment, within Sub-precinct B provided that the scale of use and the design of any structures associated with the use are appropriate.

The overlay, Auckland-wide and underlying zone policies apply in this precinct in addition to those specified above.

I409.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the underlying zone apply in this precinct unless otherwise specified below.

Table I409.4.1 Activity table specifies the activity status of land use, development and subdivision activities in the Clevedon Waterways Sub-precinct A pursuant to section 9(3) of the Resource Management Act 1991. The activity status of works, use and occupation of the coastal marine area is specified in Tables I409.4.5 Activity Table - Works (and associated discharges) in the coastal marine area, I409.4.6 Activity Table - Use and activities and associated occupation of the common marine and coastal area and I409.4.7 Activity Table - Structures, occupation of the Coastal Marine Area and their use below.

Table I409.4.1 Activity Status in Sub-precinct A

Activity		Activity status
Residential		
(A1)	Visitor accommodation up to 200m ² gross floor area per site	RD
(A2)	Dwellings	P
Commerce		
(A3)	Restaurants and cafes up to 100m ²	D

(A4)	Maritime passenger operations	D
Community		
(A5)	Clubrooms for marine-related clubs	D
(A6)	Recreation facilities	D
(A7)	Organised sport and recreation	P
Development		
(A8)	Alterations and additions to dwellings	RD
(A9)	Accessory buildings not complying with permitted activity controls	RD
(A10)	Dwellings not exceeding one per site on sites greater than 450m ²	P
Subdivision		
(A11)	Subdivision in Sub-precinct A that is in accordance with the subdivision controls below	RD
(A12)	Subdivision in Sub-precinct A that is not in accordance with the subdivision controls below, or prior to the approval of a structure plan	NC
(A13)	Subdivision that does not comply with I409.6.1 below or will create households over the development cap.	NC

Table I409.4.2 Activity Status in Sub-precinct B specifies the activity status of land use, development and subdivision activities in the Clevedon Waterways Sub-precinct B pursuant to section 9(3) of the Resource Management Act 1991. The activity status of works, use and occupation of the coastal marine area is specified in Table I409.4.5 Activity Table - Works (and associated discharges) in the coastal marine area, I409.4.6 Activity Table - Use and activities and associated occupation of the common marine and coastal area and I409.4.7 Activity Table - Structures, occupation of the Coastal Marine Area and their use below.

Table I409.4.2 Activity Status in Sub-precinct B

Activity		Activity status
Residential		
(A14)	Visitor accommodation up to 200m ² gross floor area per site	D
Commerce		
(A15)	Marine retail	P
(A16)	Marine industry	D
(A17)	Maritime passenger operations	D
(A18)	Storage and sale of fuel and oil for vessels – maximum of 100m ² gross floor area	D
Community		
(A19)	Community facilities	RD
(A20)	Clubrooms for marine-related clubs	RD

(A21)	Recreation facilities	RD
(A22)	Organised sport and recreation	P
(A23)	Public transport facilities	P
(A24)	Public amenities	P
Development		
(A25)	Maritime passenger facilities	D
(A26)	Park and ride facilities	D
Subdivision		
(A27)	Subdivision in Sub-precinct B that is in accordance with the subdivision controls below	RD
(A28)	Subdivision in Sub-precinct B that is not in accordance with the subdivision controls below, or prior to the approval of a structure plan	NC
(A29)	Subdivision that does not comply with I409.6.1 below or will create households over the development cap.	NC

Table I409.4.3 Activity Status in Sub-precinct C specifies the activity status of land use, development and subdivision activities in the Clevedon Waterways Sub-precinct C pursuant to sections 9(2) and 9(3) of the Resource Management Act 1991. The activity status of works, use and occupation of the coastal marine area is specified in Table I409.4.5 Activity Table - Works (and associated discharges) in the coastal marine area, I409.4.6 Activity Table - Use and activities and associated occupation of the common marine and coastal area and I409.4.7 Activity Table - Structures, occupation of the Coastal Marine Area and their uses below.

Table I409.4.3 Activity Status in Sub-precinct C [rp/dp]

Activity		Activity status
Residential		
(A30)	Visitor accommodation up to 200m ² gross floor area per site	NC
Commerce		
(A31)	Restaurants and cafes, up to 100m ² excluding a drive-through facility, which are up to 100m ² gross floor area and accessory to a permitted activity	D
Infrastructure		
(A32)	Wastewater treatment plant	D
(A33)	Stormwater management devices	RD
(A34)	Lock and weir for boat passage and associated earthworks	RD
(A35)	Vehicle parking and associated vehicle access	D
Community		
(A36)	Clubrooms for marine-related clubs	D
(A37)	Recreation facilities	D

(A38)	Organised sport and recreation	P
Development		
(A39)	New buildings and external alterations to existing buildings	RD
(A40)	Floodlighting, fittings and supports and towers	RD
(A41)	Observation areas, viewing platforms, and boardwalks	P
Subdivision		
(A42)	Subdivision in Sub-precinct C apart from network utilities	NC
(A43)	Subdivision that does not comply with I409.6.1 below or will create households over the development cap.	NC

Table I409.4.4 Activity Status in Sub-precinct D specifies the activity status of land use, development and subdivision activities in the Clevedon Waterways Sub-precinct D pursuant to section 9(3) and 15 of the Resource Management Act 1991. The activity status of works, use and occupation of the coastal marine area is specified in Table I409.4.5 Activity Table - Works (and associated discharges) in the coastal marine area, I409.4.6 Activity Table - Use and activities and associated occupation of the common marine and coastal area and I409.4.7 Activity Table - Structures, occupation of the Coastal Marine Area and their uses below.

Table I409.4.4 Activity Status in Sub-precinct D [rp/dp]

Activity		Activity status
Use		
Residential		
(A44)	Existing Dwellings and accessory buildings	P
(A45)	Any land use, activity not in accordance with the Clevedon Waterways precinct plan, except as specified	D
Farming		
(A46)	Farming	P
Development		
(A47)	Wastewater treatment activities related to Clevedon Waterways precinct	RD
(A48)	Any development not in accordance with the Clevedon Waterways precinct plan, except as specified	D
Subdivision		
(A49)	Any subdivision not in accordance with the Clevedon Waterways precinct plan, except as specified	D
(A50)	Subdivision that does not comply with I409.6.1 below or will create households over the development cap.	NC

Tables I409.4.5 Activity Table - Works (and associated discharges) in the coastal marine area, I409.4.6 Activity Table - Use and activities and associated occupation of the common marine and coastal area and I409.4.7 Activity Table - Structures, occupation of the CMA and their uses specify the activity status on use of coastal marine area pursuant to sections 12(1), 12(2) and 12 (3) of the Resource Management Act 1991

including any associated discharges of contaminants into water pursuant to section 15 of the Resource Management Act 1991.

The provisions in the Coastal – General Coastal Marine Zone apply to the coastal marine area of the Coastal – Marina Zone unless otherwise specified in the following provisions.

Table I409.4.5 Activity Table - Works (and associated discharges) in the coastal marine area (Sub-precinct E) [rcp]

Activity		Status in the coastal marine area [rcp]
Works (and associated discharges) in the coastal marine area (pursuant to section 12(1) and section 15 of the Resource Management Act 1991)		
(A51)	Declamation	D
(A52)	Declamation for boat berths adjoining residential and neighbourhood centre canal lots that do not exceed 8m width and 12m depth.	RD

Table I409.4.6 Activity Table - Use and activities and associated occupation of the common marine and coastal area (Sub-precinct E) [rcp]

Activity		Status in the coastal marine area [rcp]
Use and activities (pursuant to section 12(3) of the Resource Management Act 1991) and associated occupation of the common marine and coastal area (pursuant to section 12(2) of the Resource Management Act 1991)		
(A53)	Maritime passenger operations	D
(A54)	Dwellings	NC
(A55)	Recreation facilities when the activity is on an existing CMA structure or where consent is being sought for that structure	P
(A56)	Organised sport and recreation when the activity is on an existing CMA structure or where consent is being sought for that structure	P
(A57)	Storage and sale of fuel and oil for vessels – maximum of 100m ² gross floor area when the activity is on an existing CMA structure or where consent is being sought for that structure	D
(A58)	Marine retail when the activity is on an existing CMA structure or where consent is being sought for that structure	P
(A59)	Clubrooms for marine-related clubs when the activity is on an existing CMA structure or where consent is being sought for that structure	P
(A60)	Marine industry when the activity is on an existing CMA structure or where consent is being sought for that structure	RD
(A61)	Vehicle parking on lawfully existing CMA structures associated	P

	with a marina	
(A62)	Marine and port activities.	P

Table I409.4.7 Activity Table - Structures, occupation of the CMA and their use (Sub-precinct E) [rcp]

Activity	Status in the coastal marine area [rcp]	
Structures, construction in the coastal marine area (pursuant to section 12(1) of the Resource Management Act 1991), and occupation of the Common Marine and Coastal Area (pursuant to section 12(2) of the Resource Management Act 1991) and their use (pursuant to section 12(3) of the Resource Management Act 1991)		
(A63)	Lock and weir for boat passage and associated earthworks	RD
(A64)	Marina Berths including occupation and use by vessel to be moored	RD
(A65)	Wharves, jetties, piers and boat ramps	RD
(A66)	Marine and port accessory structures and services	RD
(A67)	Maritime passenger facilities	RD
(A68)	Public transport facilities	P
(A69)	Observation areas, viewing platforms and boardwalks	RD
(A70)	CMA structures or buildings not otherwise provided for	D

I409.5. Notification

- (1) Any application for resource consent for an activity listed in Table I409.4.1 Activity Status in Sub-precinct A above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I409.6. Standards

The overlay, Auckland-wide and underlying zone standards apply in this precinct.

All activities listed as permitted in Table I409.4.1 Activity table in Sub-precinct A and Table I409.4.2 Activity table in Sub-precinct B must comply with the following permitted activity standards.

I409.6.1. Development cap

Purpose: To ensure that the wastewater system can meet demand.

- (1) The total number of households must not exceed 350 over the precinct.

I409.6.2. Density

- (1) The number of dwellings in Sub-precinct A on a site must not exceed the limits specified below.

Table I409.6.2.1 Number of dwellings in Sub-precinct A

House Typology	Dwellings
Single dwelling	1 dwelling per site
Attached Housing site Duplex – two units side by side sharing a common wall	2 dwellings
Attached Housing site Triplex – three units side by side sharing a common wall between each unit	3 dwellings

- (2) Attached housing sites cannot exceed 20 per cent of the total number of dwellings in the whole of the Sub-precinct A.

I409.6.3. Maximum height of buildings

- (1) Buildings in Sub-precinct A must not exceed a height of 8m.
- (2) Buildings in Sub-precinct B must not exceed a height of 10m.
- (3) Development that does not comply with this standard is a discretionary activity.

I409.6.4. Height in relation to boundary

Purpose: To ensure that buildings are orientated to the canals and incorporate maritime design features.

- (1) The height in relation to boundary control does not apply to the boundaries on the canal frontage.

I409.6.5. Common walls

Purpose: enable attached dwellings where provided in Sub-precincts A and B.

- (1) The side yard in I409.6.6(1) below does not apply in Sub-precincts A and B where a common wall is proposed.

I409.6.6. Yards

Purpose:

- Front, and Rear yards: to promote a feeling of spaciousness in the village setting.
- Canal Frontage Yard: to maintain a separation to the canals to allow access and an openness in keeping with the maritime setting.

Note: for the purposes of this standard "Canal Frontage Yard" means a yard between the boundary fronting any canal and a parallel line to this extending the full width of the site.

(1) Yards must comply with the following:

Table I409.6.6.1 Yard distances

Yard	Sub-precinct A	Sub-precinct B
Front	6m	0m
Side	1m	1m
Rear	3m	3m
Canal Frontage Yard	2m	2m

(2) Buildings, decks and terraces must not exceed a height of 0.5m above ground level in any Canal Frontage yard. Any associated handrail shall not exceed a height of 1m above such a deck or terrace.

(3) Carports and garages must not be located in the front yard.

I409.6.7. Building coverage and impervious areas

Purpose: Provide for a suitable dwelling floor area whilst still maintaining a rural/coastal character, and manage the stormwater runoff generated on-site.

(1) The maximum building coverage and maximum impervious area for all sites in Sub-precincts A and C shall not exceed the percentages set out below

Table I409.6.7.1 Building coverage and impervious areas

Sub-precinct	A	C
Building coverage	45% for Attached Housing sites	5%
Impervious area	60%	Lesser of 10% or 5000m ²

I409.6.8. Fences

Purpose: provide an open character to the canals and roads in the precinct to reflect the coastal and rural setting.

(1) There shall be no fences within the front yard or canal frontage yard.

I409.6.9. Landscaping

Purpose: Provide for the integration of the precinct into the rural and coastal landscape, and to create a unique canal character, minimising the discharge of stormwater contaminants.

(1) In Sub-precinct A, landscaped areas which in total comprise at least 40 per cent of each site must be provided. The landscaped area must be in accordance with a Council approved planting plan.

(2) Within Sub-precinct C no less than 30 per cent shall be planted for re-vegetation purposes in accordance with a Council approved planting plan. The planted area may include areas re-vegetated for the purposes of on-site stormwater mitigation and riparian restoration.

- (3) Planting must be maintained for a period of not less than 2 years and any plants that die during that time must be replaced.

I409.6.10. Water supply

Purpose: ensure new dwellings and activities have adequate water supply and wastewater services that minimise effects on water quality.

- (1) All new dwellings are designed to achieve the following:
- (a) water conservation devices in all proposed buildings must, as a minimum, include:
 - (i) Dual flush 11/5.5 litre toilets or 6/3 litre flush toilets with standard fixtures;
 - (ii) Showerhead flow restrictors; and
 - (iii) Aerator taps;
 - (b) potable water requirements supplied by rainwater tanks. Rain tank capacity for attached housing and apartment typologies can be provided in either individual or as communal rainwater systems. Provision may be made for topping up the tanks from a supplementary communal groundwater source;
 - (c) provision must be made for sufficient water supply and access to water supplies for fire fighting consistent with NZ Fire Service Fire Fighting Water Supplies Code of Practice SNZ PAS 4509:2008;
 - (d) within Sub-precincts A and B water storage tanks must be screened from the street frontage and Open Space zones; and
 - (e) where a site is serviced by a reticulated potable water supply, standard I409.6.10(1)(b) shall not apply.

I409.6.11. Minimum lot size Sub-precinct A

- (1) Subdivision for stand-alone dwellings in Sub-precinct A must not create sites having a site area of less than 450m² and the average net site area of the sites in any application must not be less than 700m²
- (2) Attached housing developments must comply with the following minimum net site areas:

Table I409.6.11.1 Minimum net site size Sub-precinct A

Sub Precinct A	Minimum net site area
Duplex (Two units side by side sharing a common wall)	500m ²
Triplex (Three units side by side sharing a common wall between each unit)	750m ²

- (3) Subdivision of attached housing sites to create individual sites for dwellings may only occur once land use consent has been granted, or in combination with a land use consent for dwellings on the sites. In such cases, the number, size and location of all sites for the subdivision must be in accordance with the land use consent.

I409.6.12. Site Layout

- (1) The layout of the sites within Sub-precinct A shall have a minimum frontage of 12m to the canals.
- (2) Sub-precinct B shall provide an open space as a village square with frontages to the canals and entrance road to the precinct, and be of at least 1200m² in size.
- (3) There are to be central open spaces, and headland open spaces abutting the main canal on each island, and open spaces opposite these on the canal perimeter.

I409.6.13. Roading Standards

Purpose: Provide a safe and legible street network within the precinct, and appropriate improvements to existing roads immediately adjoining the precinct.

- (1) Roads and bridges within the precinct must be located generally as illustrated on the Clevedon Waterways: Precinct plan 1, and in general accordance with the roading typologies shown on Figure 1 – Entrance road and Figure 2 – Perimeter road.
- (2) All roads must be constructed at least 0.5m above the 1% AEP floodplain.
- (3) The entrance and perimeter roads shall be designed to maximise pedestrian and cycling access in accordance with Figure 1 – Entrance road and Figure 2 – Perimeter road and in accordance with relevant infrastructure design standards.
- (4) The roads on the islands shall be shared spaces.
- (5) Subdivision applications must be accompanied by a programme detailing the upgrading of North Road at the intersection into the proposed precinct, including a description of any upgrade works that will be undertaken, and the timing of the upgrade works.
- (6) The roads shall be planted with street trees in accordance with Clevedon Waterways: Precinct plan 2 - Landscape design and in conjunction with stormwater management devices as per Clause I409.6.13(7) below
- (7) Stormwater management devices shall be located within the road reserve to fully mitigate the effects of stormwater discharges from accessways and roads, on the canal and river water quality.
- (8) Driveways and vehicle crossings shall be located so that they integrate with on-road stormwater treatment devices and on-street vehicle parking areas and runoff shall not flow directly onto the road surface.

I409.6.14. Wastewater servicing

Purpose: To ensure wastewater disposal is provided by a system that can function effectively.

- (1) Every residential and commercial unit shall be connected to the Clevedon Waterways Wastewater Treatment Plant and shall include any primary on-site treatment facility.
- (2) If the precinct is to be serviced by a reticulated public wastewater network, clause I409.6.14(1) above shall not apply.

I409.6.15. Stormwater Management

Purpose: To minimise the adverse effects on the quality of stormwater entering the canals and river.

- (1) 100% of the total constructed impervious areas are required to be mitigated (excluding roofs) to remove 75% of total suspended solids on a long-term average basis.
- (2) For Sub-precinct C:
 - (a) all riparian margins are to be planted in accordance with a Council approved planting plan, and incorporate any stormwater management devices in accordance with Clevedon Waterways: Precinct plan 2 – Landscape design.

I409.6.16. Landscaping

Purpose: To integrate the precinct with the surrounding rural landscape, restore a native backdrop to the river edge, and to create a unique canal character.

- (1) Any subdivision in Sub-precincts A and B shall be designed in accordance with Clevedon Waterways: Precinct plan 2 – Landscape design. All applications for subdivision must be accompanied by a landscaping plan as specified in the special information requirements of this precinct.
- (2) Within Sub-precincts A and B the planting and landscaping must be provided in the road corridors and other identified open spaces in accordance with an approved landscaping plan.
- (3) The design of the parkland in Sub-precinct C shall incorporate the enhancement of existing natural streams and riparian planting, along with native kahikatea planting in accordance with Clevedon Waterways: Precinct plan 2 – Landscape design.

I409.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I409.8. Assessment – restricted discretionary activities

I409.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) Matters of discretion for all restricted discretionary activities listed in Tables I409.4.1 to I409.4.7:
 - (a) consistency with Clevedon Waterways: Precinct plan 1;
 - (b) consistency with Clevedon Waterways: Precinct plan 2 – Landscape design;
 - (c) geotechnical matters including site stability and flooding;
 - (d) canal engineering and earthworks methodology;
 - (e) stormwater management, effects on coastal processes, and water quality;
 - (f) development design and its interface with the public open spaces including canals and roads;
 - (g) traffic and parking;
 - (h) noise levels, lighting and hours of operation; and,
 - (i) views and visual amenity.
- (2) Additional Matters for discretion for the following activities:
 - (a) subdivision in Sub-precincts A and B that is in accordance with the Clevedon Waterways precinct plan:
 - (i) the extent of retention, protection and enhancement and adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural, ecological and landscape features;
 - (ii) protection or enhancement of cultural heritage and archaeological sites;
 - (iii) intensity and scale, including in relation to adjoining rural and coastal amenity;
 - (iv) design of open spaces, and effects on public access, navigation and safety;
 - (v) on-going maintenance and ownership structure; and

- (vi) subdivision into sites for attached housing.
- (b) visitor Accommodation.
- (c) recreation facilities.
- (d) new buildings and alterations to existing buildings in Sub-precinct C:
 - (i) the extent of retention, protection and enhancement and adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural, ecological and landscape features;
 - (ii) protection or enhancement of cultural heritage and archaeological sites;
 - (iii) intensity and scale, including in relation to adjoining rural and coastal amenity; and
 - (iv) design of open spaces, and effects on public access, navigation and safety.
- (e) Alterations and additions to dwellings and accessory buildings:
 - (i) The extent of retention, protection and enhancement and adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural, ecological and landscape features;
 - (ii) Protection or enhancement of cultural heritage and archaeological sites;
 - (iii) Intensity and scale, including in relation to adjoining rural and coastal amenity; and,
 - (iv) Design of open spaces, and effects on public access, navigation and safety.
- (f) Restaurants and Cafes:
 - (i) Protection or enhancement of cultural heritage and archaeological sites;
 - (ii) Intensity and scale, including in relation to adjoining rural and coastal amenity; and
 - (iii) Design of open spaces, and effects on public access, navigation and safety.
- (g) Weir and lock:
 - (i) Protection or enhancement of cultural heritage and archaeological sites;

- (ii) Design of open spaces, and effects on public access, navigation and safety; and
 - (iii) On-going maintenance and ownership structure.
- (h) Observation areas, viewing platforms, and boardwalks:
- (i) The extent of retention, protection and enhancement and adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural, ecological and landscape features;
 - (ii) Protection or enhancement of cultural heritage and archaeological sites;
 - (iii) Intensity and scale, including in relation to adjoining rural and coastal amenity;
 - (iv) Design of open spaces, and effects on public access, navigation and safety; and
 - (v) On-going maintenance and ownership structure.
- (i) Marine industry and other marine and port activities:
- (i) The extent of retention, protection and enhancement and adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural, ecological and landscape features;
 - (ii) Protection or enhancement of cultural heritage and archaeological sites; and
 - (iii) Intensity and scale, including in relation to adjoining rural and coastal amenity.
- (3) Additional matters of discretion for the following activities:
- (a) Marine and Port facilities:
- (i) The extent of retention, protection and enhancement and adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural, ecological and landscape features;
 - (ii) Protection or enhancement of cultural heritage and archaeological sites;
 - (iii) Intensity and scale, including in relation to adjoining rural and coastal amenity;

- (iv) Design of open spaces, and effects on public access, navigation and safety; and
 - (v) On-going maintenance and ownership structure.
- (b) Wharves, jetties, piers and boat ramps.
- (c) Marina berths, including occupation and use by vessel to be moored.
- (d) Marine and port accessory structures and services:
- (i) The extent of retention, protection and enhancement and adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural, ecological and landscape features;
 - (ii) Protection or enhancement of cultural heritage and archaeological sites;
 - (iii) Intensity and scale, including in relation to adjoining rural and coastal amenity;
 - (iv) Design of open spaces, and effects on public access, navigation and safety; and
 - (v) On-going maintenance and ownership structure.
- (e) Community facilities:
- (i) The extent of retention, protection and enhancement and adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural, ecological and landscape features;
 - (ii) Protection or enhancement of cultural heritage and archaeological sites;
 - (iii) Intensity and scale, including in relation to adjoining rural and coastal amenity; and
 - (iv) On-going maintenance and ownership structure.
- (f) Declaration for boat berths adjoining residential and neighbourhood centre canal lots that do not exceed 8m width and 12m depth:
- (i) Protection or enhancement of cultural heritage and archaeological sites;
 - (ii) Intensity and scale, including in relation to adjoining rural and coastal amenity; and
 - (iii) Design of open spaces, and effects on public access, navigation and safety.

(4) Matters of discretion for the following activities:

- (a) Infringement of standard I409.6.6 Yards:
 - (i) Location of carports and garages;
 - (ii) Orientation of buildings to the canals;
 - (iii) Access adjoining the canals; and
 - (iv) Landscape character of the coastal environment.
- (b) Infringement of standard I409.6.7 and I409.6.9, building coverage, impervious areas and landscaping:
 - (i) Landscape character of the coastal environment; and
 - (ii) The avoidance of impacts on water quality of the canals and Wairoa River.

I409.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) Subdivision in Sub-precincts A and B that is in accordance with the Clevedon Waterways precinct plan and amendments to structure plan:
 - (a) the extent to which the proposal is consistent with the precinct objectives and policies and Clevedon Waterways: Precinct Plan 1, Clevedon Waterways: Precinct Plan 2 – Landscape design, and Figure 1 – Entrance road and Figure 2 – Perimeter road;
 - (b) whether the proposed layout creates a canal environment where the majority of the lots within the neighbourhood centre have frontage to the canals;
 - (c) whether the proposed open spaces within the islands and canal perimeter are designed to create bands of kahikatea dominant planting through the housing areas and provide a natural element to the main canal;
 - (d) the extent to which the edge of the canal is varied and indented to create interest and a unique coastal character, and to allow a variety of marina berth options;
 - (e) whether the design provides lots for buildings in key locations, particularly along the main canal to create a distinctive character;
 - (f) the extent to which the subdivision demonstrates appropriate sediment control techniques to create the canals to ensure that water quality of the Wairoa River is not altered during construction;

- (g) whether building platforms of engineered fill are of sufficient height to be above the 1% AEP floodplain flood level plus 1m sea level rise, following the settlement of fill;
- (h) whether sufficient public access is provided to the canals by way of shore based facilities;
- (i) the extent to which the roading layout provides safe and attractive, non-linear transport routes that maximise the safety of cyclists and pedestrians, integrates stormwater treatment devices and landscaping, and are safe with respect to natural hazards;
- (j) the extent to which the sites of value to Mana Whenua and archaeological sites are avoided where possible particularly in proximity to the riverbank of the Wairoa River, with the resulting design recognising Mana Whenua values;
- (k) whether building design themes established through design guidelines achieve cohesive high quality architecture integrated with the waterways, with an emphasis on maritime and natural character;
- (l) the extent to which subdivision into sites of not less than 500m² for attached housing developments ensure that:
 - (i) the proposed attached housing development area and associated housing typology is in accordance with any approved structure plan;
 - (ii) the number of dwellings in all attached housing areas within the precinct will not exceed 20% of the likely total number of dwellings in the whole of the precinct;
 - (iii) each dwelling unit has least an 8m frontage to the canals or immediately adjacent public access to the canals; and
 - (iv) the site is not a rear site.
- (2) Infringements of standards I409.6.6, I409.6.7 and I409.6.9:
 - (a) whether carports and garages located in the front yard avoid adverse effects on the maintenance of the rural/coastal character;
 - (b) whether buildings are orientated towards the canals, while maintaining privacy between sites;
 - (c) whether access is maintained adjoining the canals to allow for engagement with the canal 'streets';
 - (d) whether landscape character of the coastal environment and precinct is maintained; and
 - (e) whether the proposal appropriately manages any potential impact on the water quality of the canals and of the Wairoa River.

- (3) The Council will consider the relevant assessment criteria below for the other activities listed in I409.8.1 above:
- (a) the objectives and policies for the precinct;
 - (b) whether visitor accommodation is small in scale and complements the canal environment, providing a boat-house style of accommodation;
 - (c) whether the design of buildings engages with the canals, with their primary orientation to the water, with materials employed to merge with the rural/coastal landscape;
 - (d) the extent to which any proposed development design accords with design guidelines;
 - (e) whether buildings on CMA structures are minor in extent, have regard to navigational moorings and the coastal environment;
 - (f) whether community/recreation buildings demonstrate the ability to be used for a variety of purposes;
 - (g) the extent to which redevelopment, additions and alterations complement the existing maritime character and have regard to the architectural elements which contribute to character such as cladding and the relationship with the canal edge;
 - (h) the extent to which landscape treatment creates a woodland setting with a lowland native theme, softens the canal edge and is integrated with planting on the road reserve to provide a high standard of amenity;
 - (i) the extent to which business uses serving the local community in the Neighbourhood Centre are designed, developed, and operated to:
 - (i) be easily accessible by walking, cycling or boat;
 - (ii) have an attractive canal and street frontage; and
 - (iii) provide a wide esplanade walkway along the canal edge for public access;
 - (j) whether marine industry is provided to service the local community or maritime transport;
 - (k) whether changes to the canal edge are minor in extent and provide variation in the canal edge;
 - (l) whether the lock and weir provides public access across, and is located to minimise adverse effects on the river, including its cultural heritage and ecology;

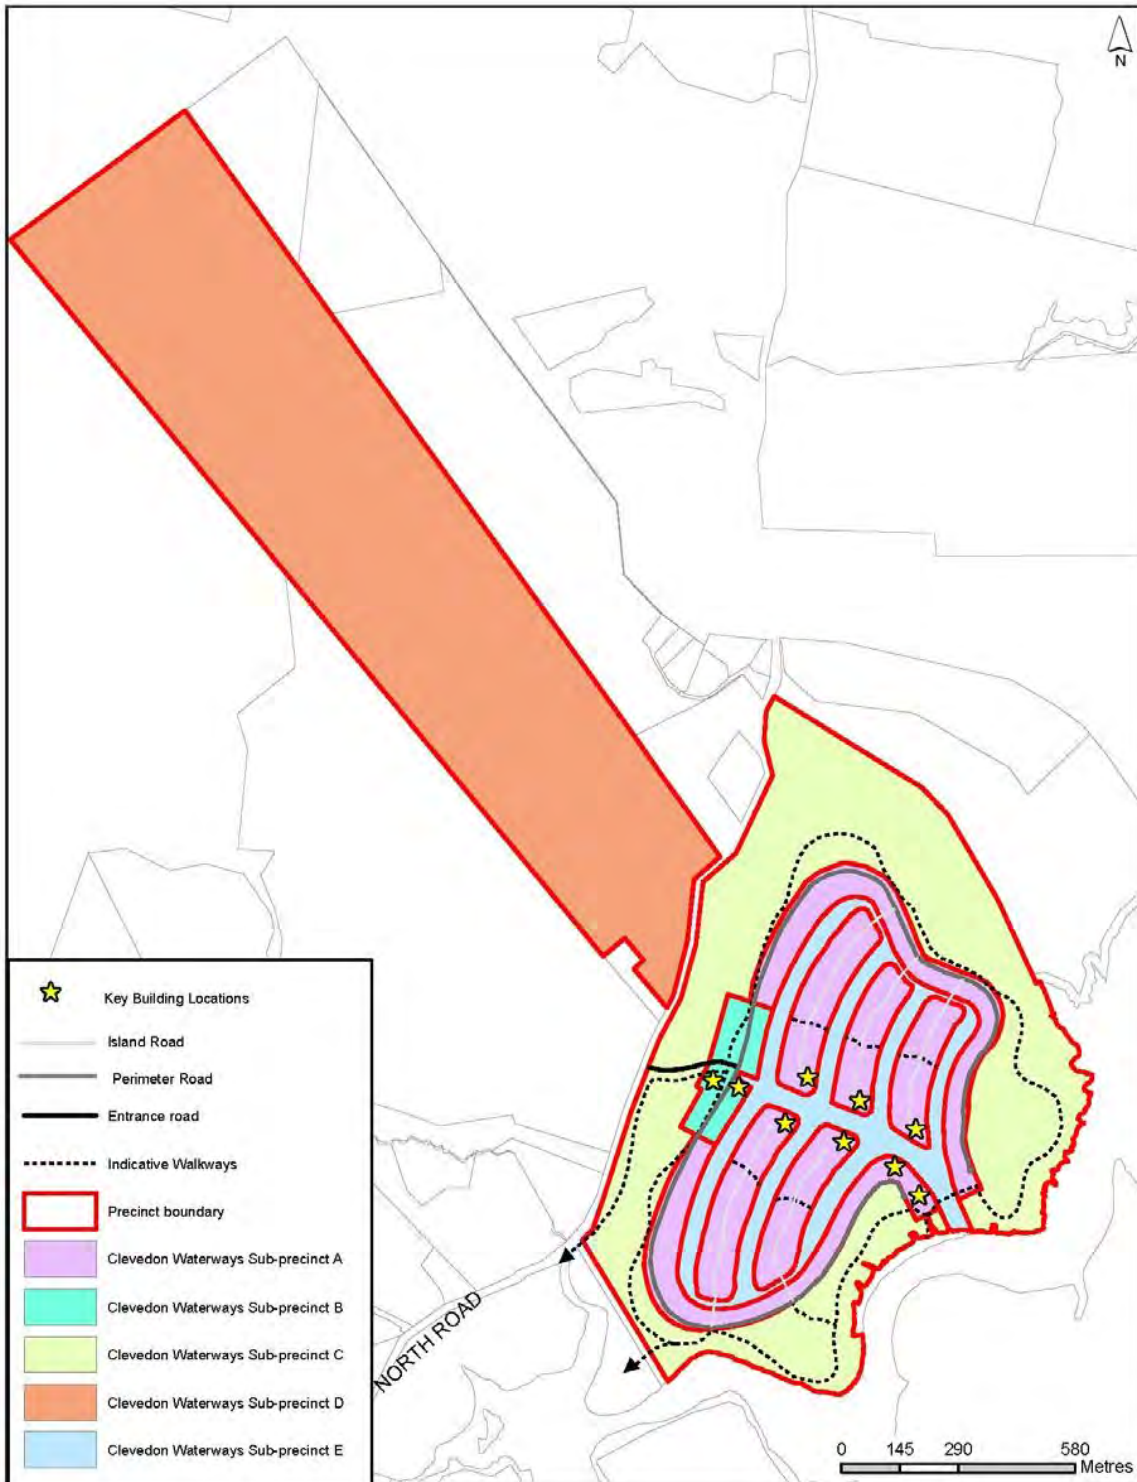

- (m) the extent to which car parking avoids large areas of sealed parking unrelieved by landscape work or planting and demonstrates consistency with the Precinct planting plan;
- (n) the extent to which infrastructure for stormwater, wastewater and water supply are designed to ensure minimisation of water use, stormwater and wastewater generation and maximise water re-use; and
- (o) whether sites of value to Mana Whenua and archaeological sites are avoided to the extent possible, particularly in proximity with the riverbank of the Wairoa River where known sites are given enhanced protection.
- (p) Whether Mana Whenua values are recognised.

I409.9. Special information requirements

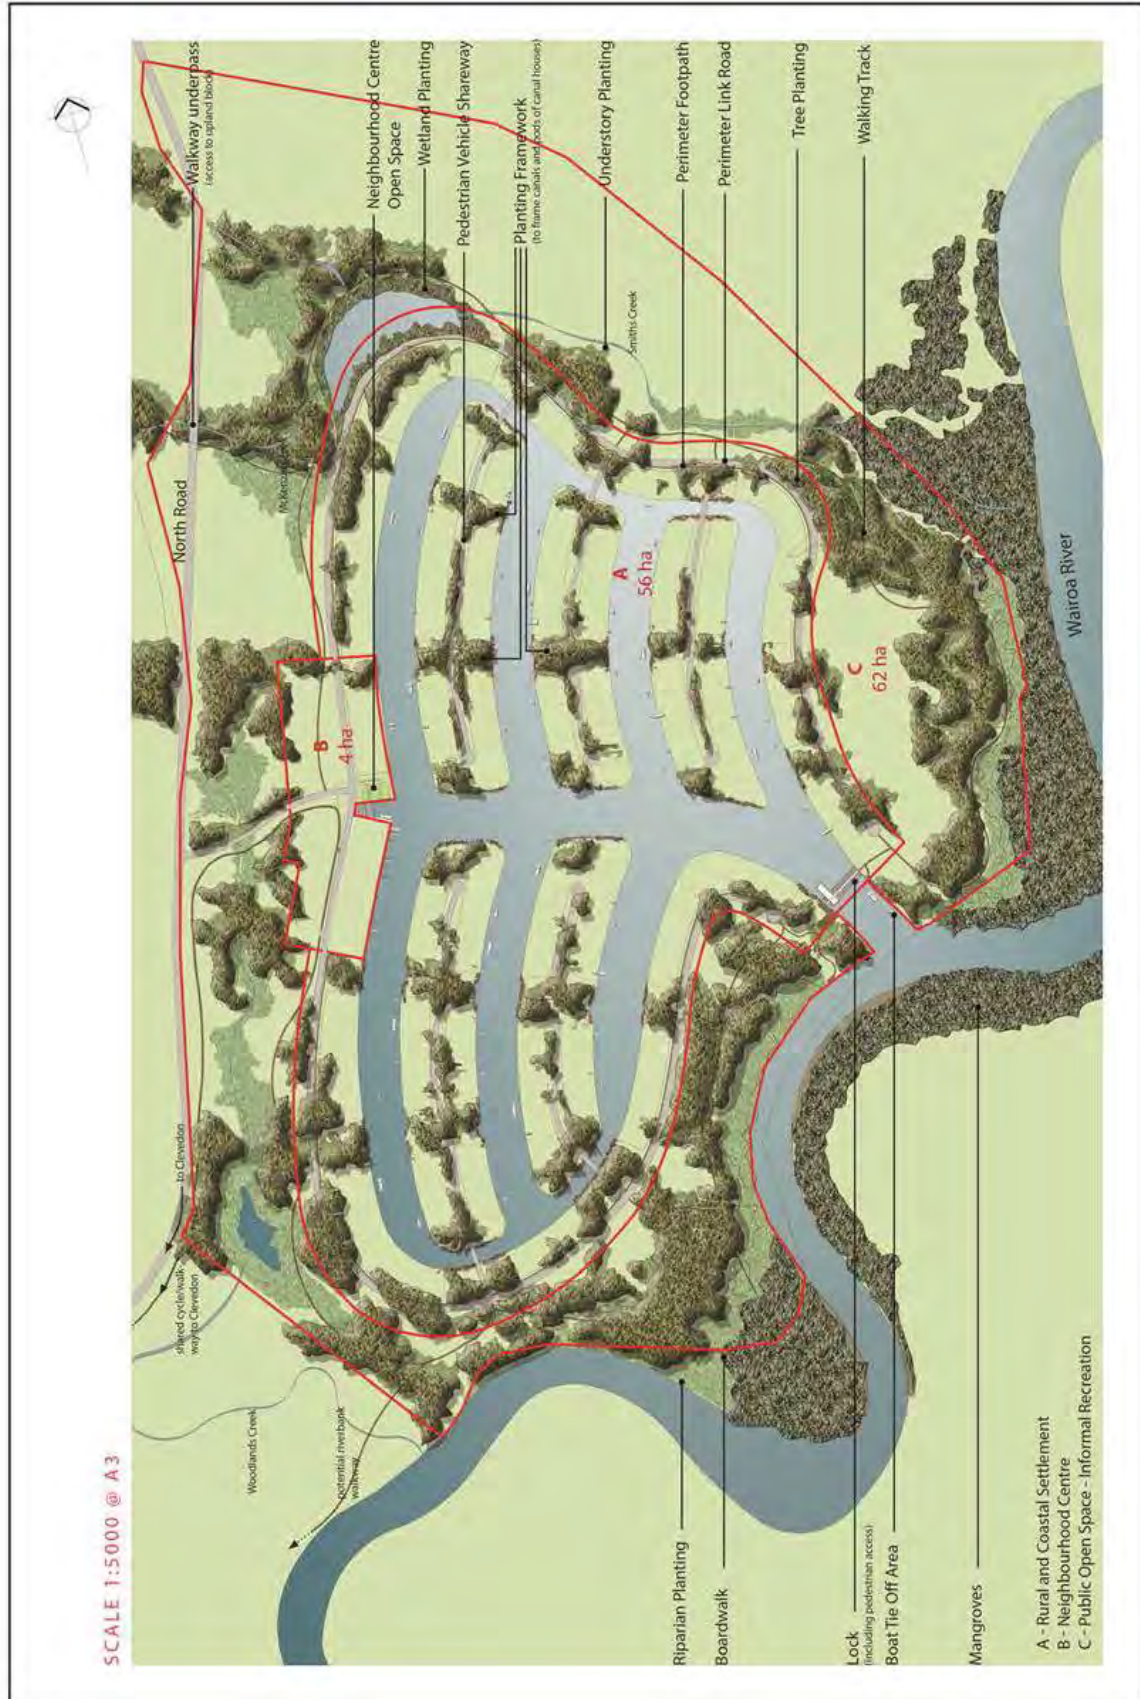

- (1) An application for restricted discretionary activities and dwellings must be accompanied by:
 - (a) a landscape plan which must include the following information:
 - (i) identification of the area of land to be planted;
 - (ii) identification of all existing areas of vegetation and any riparian or coastal planting;
 - (iii) details of soil quality and depth including any required soil reconditioning of compacted areas as the result of declamation and fill processes;
 - (iv) species types, source of plant material, maturity of planting and density of planting;
 - (v) details of timing of planting and possible staging of planting;
 - (vi) details of maintenance programme to be implemented and a programme for replanting where the survival rate of planting is less than 90 per cent;
 - (vii) details of on-going maintenance and ownership structure; and
 - (viii) identification of areas of land on which cultural heritage and archaeological sites are located, and details of appropriate planting, fencing and on-going maintenance of those areas.
- (4) Applications for development in Sub-precinct A and B may be accompanied by a design assessment report from the Clevedon Waterways Design Review Panel subject to such a panel being constituted.
- (5) Any application for subdivision must be accompanied by a site/development design guide for the relevant Sub-precinct.

I409.10. Precinct plans

I409.10.1. Clevedon Waterways: Precinct plan 1

I409.10.2. Clevedon Waterways: Precinct plan 2 - Landscape design

I410. Drury South Industrial Precinct

I410.1. Precinct description

The Drury South Industrial Precinct applies to approximately 361ha of land, bounded by State Highway 1 in the west, the Drury Quarry and the Hunua foothills in the east, the rural areas of Fitzgerald Road in the north and Ararimu Road in the south, as shown on Precinct Plan 1. The transportation network development requirements of the precinct are shown on Precinct plan 2. The precinct is characterised by a flat to subdued contour and is traversed by the Hingaia Stream and its tributaries including the Maketu Streams. Land which surrounds and defines the precinct has more pronounced topographical contours. The precinct lies between the Drury and Ramarama interchanges on State Highway 1 and local traffic patterns are dominated by truck traffic accessing the Drury Quarry.

The zones within the precinct are Business – Light Industry Zone, Business – Heavy Industry Zone, and Open Space – Conservation Zone. The purpose of the precinct is to provide for land extensive industrial activity and employment opportunities as well as provide for areas of stormwater management, existing and proposed network utility infrastructure, public open space and proposed roads, while recognising the ecological, cultural, landscape and other environmental constraints of the locality.

The precinct is divided into the following sub-precincts:

- Sub-precinct A Light Industry (approximately 115ha)
- Sub-precinct B Motorway Edge (Light Industry) (approximately 80ha)
- Sub-precinct C Commercial Services (Light Industry) (approximately 21ha)
- Sub-precinct D Open Space / Stormwater Management (approximately 101ha)
- Sub-precinct E: Heavy Industry (approximately 46ha).

Sub-precinct A is zoned Business – Light Industry Zone. Activities within the sub-precinct are subject to additional standards.

Sub-precinct B is zoned Business – Light Industry Zone. The Transpower switchyard is located within this sub-precinct. Activities in the sub-precinct are subject to additional landscaping and building layout design standards.

Sub-precinct C is zoned Business – Light Industry Zone. The sub-precinct provides for offices, commercial services and small-scale retail activities (such as food) and activities to support the industrial activities in the majority of the precinct.

Sub-precinct D is zoned Business – Light Industry Zone but provides for recreational uses and will be rezoned to an appropriate zone (e.g. Open Space - Informal Recreation Zone) once the Public Open Space / Stormwater Management Areas shown on Precinct Plan 1 are developed and vested.

Sub-precinct E has an underlying zoning of Business – Heavy Industry Zone. Activities within the sub-precinct are subject to additional standards.

I410.2. Objectives [rp/dp]

The objectives of the underlying Business – Light Industry Zone apply in sub-precincts A-C, the objectives of the Open Space – Informal Recreation Zone apply in sub-precinct D, the objectives of the underlying Business – Heavy Industry Zone apply in sub-precinct E and the Auckland-wide objectives as well as the precinct objectives below apply throughout in this the precinct, unless there is a conflict between the precinct objectives and the Auckland-wide objectives or underlying zone objectives, in which case the precinct objectives prevail.

- (1) Development maintains and enhances the stream ecology and the natural vegetation and habitat values of the Hingaia and Maketu streams.
- (2) The cultural heritage values of the precinct are maintained and enhanced.
- (3) Landscape and visual amenity values within the precinct are maintained and enhanced (particularly when viewed from State Highway 1).
- (4) The air quality, acoustic and other amenity values of surrounding areas are protected.
- (5) The establishment of a convenient and well-designed industrial area with good quality streetscapes and a commercial service precinct is facilitated.
- (6) The timely and co-ordinated provision of robust and sustainable road, stormwater, water, wastewater, energy and communications infrastructure networks are provided.
- (7) A transport network to facilitate the safe and efficient movement of people, goods and services and manage effects on the safe and efficient operation of the surrounding transport network.
- (8) Development and subsequent land use within the precinct avoids reverse sensitivity effects on the operations of the Drury Quarry, activities within the Business – Heavy Industry Zone or the adjoining rural area.
- (9) Development and land use within the precinct avoids adverse effects on significant existing high voltage electricity, natural gas and communications infrastructure.
- (10) Subdivision and development in the precinct area avoids the adverse effects of stormwater runoff on surface and groundwater quality and avoids increased flood risks to habitable buildings upstream and downstream of the precinct.
- (11) Visual and physical links to the surrounding area are protected.
- (12) Landscaping themes are complementary, consistent and coherent throughout the precinct.
- (13) Activities sensitive to traffic noise are controlled on the strategic freight network (Spine Road and New Quarry Access Road) serving the Drury Quarry.

I410.3. Policies [rp/dp]

The policies of the underlying Light Industry zone apply in sub-precincts A-C, the policies of the Open Space – Informal Recreation Zone apply in Sub-precinct D, the policies of the Business – Heavy Industry Zone apply in sub-precinct E and the Auckland-wide policies as well as the precinct policies below apply throughout the precinct unless there is a conflict between the precinct policies or underlying zone policies and the Auckland-wide policies, in which case the precinct policies prevail.

- (1) Protect and enhance the significant streams and vegetation within Sub-precinct D.
- (2) Enhance the biodiversity of ecological resources and linkages and restore degraded ecosystems while reducing stream bank erosion through riparian planting along retained watercourses in sub-precincts B and D.
- (3) Reflect the cultural heritage values of the Hingaia and Maketu streams as cultural linkages between historical hill top pa and coastal areas in the development of sub-precinct D.
- (4) Maintain a sense of openness and naturalness on land adjacent to State Highway 1.
- (5) Maintain visual and physical links to the surrounding area within the precinct.
- (6) Utilise complementary, consistent and coherent landscaping themes throughout the precinct.
- (7) Design and construct attractive wetland areas for stormwater treatment and detention that also provide reserve and visual amenity opportunities.
- (8) Provide public open space buffer areas between the land to be developed for business activities and surrounding rural land.
- (9) Ensure buildings in Sub-precinct C address and engage the street and public realm and exhibit a high standard of amenity and pedestrian safety and convenience.
- (10) Locate higher employee generating activities in Sub-precinct C close to potential public transport routes.
- (11) Provide for transport infrastructure and connections including the spine road to support safe and efficient movement within the precinct and to and from the surrounding transport network.
- (12) Provide high quality public open spaces in Sub-precinct D that result in opportunities for passive surveillance.
- (13) Provide adequate stormwater, water, wastewater, communications and energy networks in a timely and co-ordinated manner to service industrial activity within the precinct.

- (14) Co-ordinate road network (including the state highway) improvements both within and outside the precinct with development within the precinct.
- (15) Make adequate provision within Sub-precinct D to detain the 100 year Average Recurrence Interval (ARI) event without adverse effects on the extent of flooding of upstream and downstream areas.
- (16) Provide sufficient floodplain storage within Sub-precinct D to avoid increasing flood risk upstream and downstream, and manage increased flood risk within the precinct, to habitable rooms for all flood events from the 50% and up to the 1% AEP.
- (17) Undertake earthworks to form the modified floodplain in a manner which ensures flood effects on downstream or upstream areas are not exacerbated.
- (18) Avoid locating buildings within the 100 year ARI modified floodplain.
- (19) Avoid locating infrastructure within the 100 year modified ARI floodplain unless it can be designed to be resilient to flood related damage and does not exacerbate flood risks for upstream or downstream activities.
- (20) Identify overland flowpaths in a stormwater management plan or discharge consent and ensure that that they remain unobstructed and able to convey surface water runoff safely into the reticulated stormwater network.
- (21) Avoid or mitigate adverse effects on surface or groundwater quality from stormwater runoff within the precinct through on-site stormwater management and containment and the provision of catchment based stormwater treatment ponds.
- (22) Mitigate any diversion or piping of existing degraded or modified watercourses by the ecological enhancement and landscape planting of existing natural and diverted watercourses within and immediately adjacent to the precinct.
- (23) Avoid the establishment of sensitive residential land uses within the precinct.
- (24) Avoid locating potentially sensitive commercial services within 500 metres of the Quarry zone boundary or within 100 metres of the Business – Heavy Industry Zone or any rural zone boundary.
- (25) Control activities potentially sensitive to traffic noise on the strategic freight network (Spine Road and New Quarry Access Road) serving the Drury Quarry.
- (26) Manage development and subsequent land use to minimise adverse effects on the efficient and safe operation of existing high voltage electrical transmission and distribution lines, fibre optic cables and the Vector natural gas pipeline.

I410.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

In the event of a conflict between the zone or Auckland-wide rules and the precinct rules, the precinct rules prevail.

Table I410.4.1 specifies the activity status of development and subdivision activities in the sub-precincts A-C and E pursuant to sections 9(3) and 11 of the Resource Management Act 1991.

Table I410.4.1 Activity table 1 – Sub-precincts A to E

Activity		Activity status
Development		
(A1)	Subdivision or any development of land which precedes a subdivision being undertaken which complies with Standard I410.6.3 below. (Note that for the purposes of this rule "development" means the carrying out of any work on the land including any earthworks or site preparation activities and the construction or alteration of any building)	RD
(A2)	Subdivision or any development of land which precedes a subdivision being undertaken which does not comply with Standard I410.6.3 below, or results in increased flood risk to habitable rooms for all flood events from the 50% and up to 1% AEP flood event downstream and upstream of the Structure Plan area.	NC
(A3)	The creation of vehicle access to any site with frontage to or from the Spine Road shown on Precinct Plan 2 which also has frontage to another road shown on that Plan	RD

Table I410.4.2 specifies the activity status of land use activities in Sub-precinct A pursuant to section 9(3) of the Resource Management Act 1991.

I410.5. Notification

- (1) An application for resource consent for a controlled activity listed in Tables I410.4.1 - I410.4.6 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Tables I410.4.1 - I410.4.6 and which is not listed in I410.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I410.6. Standards

The overlay, Auckland-wide and zone standards apply in this precinct, unless otherwise specified below.

I410.6.1. Sub-precinct C

All activities listed as permitted in Table I410.4.4 must comply with the following standards

I410.6.1.1. Dairies

- (1) Dairies must not exceed 200m² gross floor area.
- (2) Dairies must be located more than 100 metres from the nearest rural zone boundary.

I410.6.1.2. Food and beverage

- (1) Food and beverage must not exceed 200m² gross floor area.
- (2) Food and beverage must be located more than 100 metres from the nearest rural zone boundary.

I410.6.1.3. Childcare centres

- (1) Childcare centres must be located more than 500 metres from the nearest Business – Heavy Industry Zone boundary.
- (2) Childcare centres must be located more than 100 metres from the nearest rural zone boundary.

I410.6.1.4. Healthcare facilities

- (1) Healthcare facilities must be located more than 500 metres from the nearest Business – Heavy Industry Zone boundary.

- (2) Healthcare facilities must be located more than 100 metres from the nearest rural zone boundary.

I410.6.2. Sub-precincts A-E

The standards are those listed in the Auckland-wide rules (in respect of sub-precincts A-E), Business – Light Industry Zone (in respect of sub-precincts A-C), the Open Space – Informal Recreation Zone (in respect of sub-precinct D) and the Business – Heavy Industry Zone (in respect of Sub-precinct E) except as follows:

- (1) A minimum parking rate of 1 space per 40m² gross floor area applies to commercial services in Sub-precinct C
- (2) Buildings must not exceed 25m in height in Sub-precinct E.
- (3) Within the Drury South Industrial Precinct the industrial zone height in relation to boundary control will not apply, and instead, buildings must not project beyond a 45 degree recession plane measured from a point 2 metres vertically above ground level along the residential or public open space boundary.
- (4) All new roads must be designed and constructed to comply with the provisions of New Zealand Standard NZS6806:2010 "Acoustics – Road Traffic Noise – New and Altered Roads".
- (5) The upward waste light ratio from any luminaire must not be more than 3 per cent. The upward waste light ratio is defined as: "The ratio of the light flux emitted above the horizontal by a luminaire to the total light flux emitted, expressed as a percentage, evaluated for the upcast angle".
- (6) The front yard landscaping of sites used for an industrial purpose must comprise a 3 metre wide continuous (except for those areas used for vehicle and pedestrian access) planting of multi-row Phormium tenax (flax) planted at 1.5 metre centres in staggered rows on a grid. This planting requirement must not apply to sites within sub-precincts B or C. Any required security fence must be setback a minimum of 3 metres from the front boundary and such fencing (whether in front yards or on rear or side boundaries) must be 2 metre maximum height and must not incorporate barbed or razor wire or an angled top. Fence posts and wire mesh are to be black coloured.
- (7) All side boundaries of sites in the Business – Light Industry Zone and all side and rear boundaries of sites in the Business – Heavy Industry Zone must be planted with a row of either Leyland Cypress, Casuarina (sheoak) or Macrocarpa at 3 metre centres located 1.5 metres in from the side or rear boundary and buildings must be setback from the relevant boundary by a minimum of 3.5 metres. This requirement must not apply to sites within sub-precincts B, C or D. Where sites with side or rear boundaries abut State Highway 1 within Sub-precinct B, all such boundaries must be

planted with a double row of Leyland Cypress with 2 metres between rows and trees within each row planted at 3 metre centres. Tree rows are to be staggered and the first row is to be located 1.5 metres in from the side or rear boundary and buildings must be setback from the relevant boundary by a minimum of 5.5 metres accordingly. Any noise attenuation wall or fence designed to deflect noise arising from State Highway 1 must be fully screened by planting in views from the motorway.

- (8) Within Sub-precinct B no less than 30 per cent of the net site area of each site is to be in permeable landscape area (including any on site stormwater treatment). Where on site car parking adopts a layout fully conforming with the fully planted permeable carpark design layout detailed in Figure I410.6.2.1 below, the permeable landscape area may be reduced to no less than 20 per cent of the site area.

Figure I410.6.2.1 Carpark design

- (9) Within the Sub-precinct C the ground floor of all buildings must have a minimum floor to ceiling height of 4.5 metres to allow long term adaptive reuse of light industrial buildings for commercial services activities.
- (10) Any land modification to form the 1% AEP modified flood plain must:
- (a) not reduce flood storage capacity in the precinct; and
 - (b) not change the flood characteristics upstream or downstream of the precinct for all flood events from the 50% and up to the 1% AEP flood event in ways that result in an increase in peak flood levels.

I410.6.3. Subdivision or development preceding subdivision in Sub-precincts A – E

- (1) Proposed roads (including pedestrian and bicycle routes) identified on the Precinct Plan 1 and Precinct Plan 2, must be constructed and vested in council upon subdivision or development of the relevant area at no cost to the council. Proposed roads must be located generally in the position indicated on Precinct plan 1 but the precise location will be subject to detailed engineering and subdivision design.

- (2) The land identified as part of Sub-precinct D on the Precinct plan 1 and Precinct Plan 2 must be developed and vested in council upon subdivision or development of the relevant area at no cost to the council. Proposed reserves and stormwater management areas must be located generally in the position indicated on the structure plan but precise location will be subject to detailed engineering and subdivision design. Vegetated buffers not less than 40 metres in total width are to be provided along stream corridors within stormwater management areas and must include a minimum of 10 metres of native riparian planting either side of the stream edge. Off-site stormwater management services including wetlands and the primary and secondary stormwater conveyance system is to be vested at no cost to the council in accordance with a network discharge consent or other relevant discharge consent or a stormwater management plan approved by the Council. All stormwater management areas and wetlands must be designed to serve a dual function to treat stormwater and provide ecological benefits.
- (3) Reticulated water services must be supplied to the precinct and all new water infrastructure must be fully funded (including consenting costs) by the developer(s) of the land within the precinct. Such services must be provided to the relevant part of the precinct in advance of or concurrent with a resource consent for subdivision and development provided that any necessary resource consents or designations for the reticulated water services have been granted.
- (4) Wastewater services are to be provided to the precinct either by (in no particular order):
 - (a) the construction of a connection to Watercare's existing wastewater network and any necessary upgrading of that network that is required to service the Precinct; and/or
 - (b) the construction of a Wastewater Treatment Plant to service the Precinct, or a larger catchment if required.

In either case wastewater services are to be provided in a manner approved by Watercare and constructed to Watercare's design and operational standards. The developer(s) must fully fund (including consenting costs) all new wastewater infrastructure required to service the Precinct. Wastewater services must be provided to the relevant part of the Precinct in advance of or concurrent with a resource consent for subdivision and development provided that any necessary resource consents or designations for the reticulated water services have been granted. In the event that a new regional wastewater treatment plant becomes available to service the precinct, and subject to approval from Watercare, the precinct could be connected to that plant.

Note: that for the purposes of the Standards I410.6.3(1)-(4) above, references to "Watercare" means Watercare Services Limited and references to "development" means the carrying out of any work on the land including any

earthworks or site preparation activities and the construction or alteration of any building.

I410.7. Assessment – controlled activities

I410.7.1. Matters of control

The Council will reserve its control to all of the following matters when assessing a controlled activity resource consent application:

- (1) new buildings (excluding buildings for network utilities) or additions to buildings not otherwise provided for as permitted activities in Sub-precinct B:
 - (a) retention of existing vegetation;
 - (b) planting;
 - (c) building design and appearance;
 - (d) parking area design;
 - (e) storage and waste management location and design; and
 - (f) vehicular access;
- (2) new buildings (excluding buildings for network utilities) or additions to buildings not otherwise provided for as permitted activities in Sub-precinct C:
 - (a) building design;
 - (b) parking area design;
 - (c) signs;
 - (d) service area location;
 - (e) vehicular access; and
 - (f) mitigation of traffic noise.

I410.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities:

- (1) new buildings (excluding buildings for network utilities) or additions to buildings not otherwise provided for as permitted activities in Sub-precinct B:
 - (a) retention of existing vegetation:
 - (i) the extent to which layouts retain and protect existing mature trees, particularly those of indigenous species, where these contribute to the site character and amenity.
 - (b) planting:

- (i) the extent to which planting is designed to have a large scale landscape effect and combine native as well as appropriate exotic species to provide seasonal change and quality amenity; or
 - (ii) where public open space land adjoins the motorway, the extent to which boundary planting that creates a continuous visual barrier to eastward views from the State Highway 1 corridor is avoided and whether landscape design emphasises the current sequence of intermittent views to the Hunua Ranges from the State Highway 1 corridor and the pattern of variable depth of such views;
- (c) building design and appearance:
- (i) the extent to which buildings are located with design consideration for their visibility and reduced visual impact as viewed from the State Highway 1 corridor and the desirability of maintaining a sense of openness as seen from the motorway; or
 - (ii) the extent to which the visual mass of larger buildings is minimised by employing the following methods:
 - utilising subdued, recessive colours;
 - providing variation in materials and finish for facades viewed from the motorway;
 - creating variation of roof profiles with consideration given to the overall roofscape viewed from the motorway;
 - all rooftop servicing and plant should be designed as an integral part of the roofscape with particular consideration given to the view from the motorway;
- (d) parking area design:
- (i) the extent to which parking areas are designed to incorporate trees to break up the scale of hard surface areas; or
 - (ii) the extent to which the fully planted permeable carpark design layout (refer Figure I410.6.2.1 above) style of parking is adopted within Sub-precinct B;
- (e) storage and waste management location and design:
- (i) the extent to which storage and waste management activities are located and/or designed to be screened from view of State Highway 1;
- (f) vehicular access:
- (i) the extent to which proposed vehicle access to sites adjoining the Spine Road and New Quarry Access Road shown on the Precinct plan 2 minimises any conflict with safety and efficiency of these routes as part of the strategic freight network;

(2) new buildings (excluding buildings for network utilities) or additions to buildings not otherwise provided for as permitted activities in Sub-precinct C:

(a) building design:

- (i) the extent to which buildings on corner lots are designed to provide for a quality architectural response to the corner. Appropriate design responses would be provision of additional height at the corner, windows and activities addressing both street frontages and avoiding blank walls to one or both sides of the corner; or
- (ii) the extent to which built development fronts the street with a quality recognisable pedestrian entry to the street;

(b) parking area design:

- (i) the extent to which parking is provided on the road network adjacent to sub-precinct C areas and on-site parking layouts are designed in accordance with the typical layout identified in Appendix I410.11.1.

(c) signs:

- (i) the extent to which signs for each sub-precinct C development are coordinated including the physical location of signs, their type-face, style and content;

(d) service area location:

- (i) the extent to which service areas are located so as to avoid observation from a public road with access either from a service lane, incorporation within the main building or full screening of service/storage and dock areas;

(e) vehicular access:

- (i) the extent to which proposed vehicle access to sites adjoining the Spine Road and New Quarry Access Road shown on the Precinct plan 2 minimises any conflict with safety and efficiency of these routes as part of the strategic freight network;

(f) mitigation of traffic noise:

- (i) the extent to which premises offering food and beverages, health professional rooms and childcare centres (being permitted activities which may be sensitive to heavy commercial vehicle traffic noise) are designed to mitigate traffic noise effects. Mitigation measures may include acoustic treatment of buildings and arranging site layout so noise sensitive activities are screened from the heavy traffic noise.

I410.8. Assessment – restricted discretionary activities

I410.8.1. Matters of discretion

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) subdivision or any development of land which precedes a subdivision being undertaken which complies with Standard I410.6.3:
 - (a) the relevant council and Auckland Transport development code or codes of practice;
 - (b) geotechnical and seismic;
 - (c) servicing and development sequencing;
 - (d) design and layout;
 - (e) earthworks;
 - (f) transportation network development requirements;
 - (g) ecology;
 - (h) Counties Power 110 Kv sub-transmission lines; and
 - (i) stormwater management;
- (2) the creation of vehicle access to any site with frontage to or from the Spine Road shown on Precinct Plan 2 which also has frontage to another road shown on that plan:
 - (a) effect of the location and design of the access on the safe and efficient operation of the adjacent transport network; and
 - (b) adequacy of access arrangements.

I410.8.2. Assessment criteria

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) subdivision or any development of land which precedes a subdivision being undertaken which complies with Standard I410.6.3:
 - (a) the extent to which the subdivision or development is in accordance with the relevant codes or codes of practice or engineering standards;
 - (b) the extent to which the subdivided lots or the land on which the development is to be undertaken are geotechnically suitable for the development of a permitted activity or an activity for which resource

consent has been obtained. This may include an assessment of the following:

- (i) any proposed fill materials;
 - (ii) stability in areas of deep cut particularly adjacent to the boundaries of the Precinct;
 - (iii) settlement and stability issues associated with the Hingaia and Maketu streams;
 - (iv) time dependent settlement;
 - (v) ground seismicity and buffer zone; or
 - (vi) liquefaction;
- (c) the extent to which subdivision and development occurs in a logical and sequential manner in relation to:
- (i) the implementation of improvements and/or upgrades to the roading network;
 - (ii) the establishment of the stormwater management areas within sub-precinct D identified on Precinct Plan 1 and catchment wide stormwater management devices as identified in the relevant discharge consent and/or stormwater management plan required by the special information requirements below;
 - (iii) the provision for overland flowpaths identified in an approved discharge consent and/or stormwater management plan required by the special information requirements below; or
 - (iv) the provision of wastewater facilities, water supply, electricity, gas and telecommunications, including the protection and /or relocation of any existing local electricity, gas and communications assets;
- (d) the extent to which subdivision design and layout gives effect to the objectives and policies identified for the Drury South Industrial Precinct and the subdivision design assessment criteria set out in Appendix I410.11.1.
- (e) the extent to which the earthworks required by the subdivision or development:
- (i) avoid or mitigate adverse effects on land stability, existing underground infrastructure facilities (such as the Vector gas pipeline and Telecom telecommunications cables), and groundwater quantity and quality;
 - (ii) avoid or mitigate adverse effects on the visual quality of the landscape or natural landforms, watercourses, habitats or vegetation;

- (iii) avoid or mitigate adverse effects on traffic management within the area or create damage, danger, or nuisance to surrounding residents or the Ramarama School;
 - (iv) consider opportunities to recharge the aquifer using treated stormwater where permeable soils are available;
 - (v) ensure that the creation of level development platforms are contoured to integrate with the surrounding street environment and open space corridors;
 - (vi) screen retaining walls from public view;
 - (vii) provide and maintain continuity of overland flow paths both within the site, as well as upstream and downstream; and where overland flow paths are diverted and/or altered show how:
 - potential effects on other properties from the diversion or alteration is avoided or mitigated;
 - effects from scouring and erosion are mitigated;
 - further changes to the overland flow path will be limited, when appropriate through an easement in favour of Council;
 - (viii) if located in the 1% AEP modified flood plain, including earthworks for the formation of stormwater management devices such as wetlands and/or for necessary infrastructure (including associated landscaping and accessways), whether:
 - the design of the device, including associated earthworks, landscaping and accessways avoids impeding flood flows or otherwise exacerbating flood risk upstream or downstream of the site and how such effects can be avoided;
 - the design of the device or mitigation works is resilient to damage from the full range of flood events;
 - access to the device for maintenance is provided and maintenance plans address potential effects that may result from the proposed access route;
- (f) the extent to which the following transportation network requirements are met:
- (i) whether subdivision or development will result in the central 'Spine Road' being progressively constructed on an alignment consistent with that indicated in Precinct plan 2;
 - (ii) whether the following road projects indicatively shown on Precinct plan 2 will be completed before any buildings within the precinct are occupied:

- the realignment of existing Quarry Road onto the alignment of the 'Spine Road' from the State Highway 1 over-bridge to the southern extent of the first stage of subdivision;
 - the upgrading of the existing Quarry Road/Great South Road intersection;
 - the provision of traffic signals or an alternative upgrade which achieves equivalent transport performance at the existing Great South Road/State Highway 22 (Karaka Road) intersection;
 - under the scenario where development of the Precinct proceeds in advance of the Mill Road Corridor Project, the upgrading of the right turn bay on Waihoehoe Road at the Waihoehoe Road/Fitzgerald Road intersection;
- (iii) whether a new dedicated pedestrian path and cycleway has been constructed between the existing Drury township and the precinct before development and occupation of more than 25 hectares of Industrial zoned land within the precinct occurs;
- (iv) whether Ramarama Road, at the northern boundary of the precinct, is closed to all vehicular traffic by the time 58 hectares of the developable area in the Ramarama Road Transport Area defined on Precinct Plan 2 has been subdivided or developed;
- (v) whether the Link Road from the Spine Road to Fitzgerald Road shown on Precinct Plan 2 is provided and shoulder widening, intersection treatments and localised widening works within the existing road reserve on Fitzgerald Road between the Link Road and Waihoehoe Road is undertaken before Ramarama Road is closed at the northern boundary of the Precinct;
- (vi) whether the 'Avenue' Road and the portion of the Spine Road shown on Precinct Plan 2 is provided as the adjacent Sub-precinct C is developed;
- (vii) whether Ramarama Road, at the southern boundary of the precinct, is closed to all vehicular traffic by the time 89 hectares of Industrial zoned land within the precinct has been subdivided or developed;
- (viii) whether the southern portion of the Spine Road that connects to Ararimu Road is constructed before:
- Ramarama Road is closed at the southern boundary of the Precinct; or
 - any development of the precinct south of the New Quarry Access Road shown on Precinct Plan 2 occurs;
- (ix) whether State Highway 1 Ramarama Interchange is capable of accommodating the traffic from the subdivided and developed portion

of the precinct including the predicted traffic from the land which is the subject of the application. To enable assessment of this criterion, applications for subdivision or development must include a traffic assessment of the effects of the subdivision or development on the interchange prepared by a qualified and experienced traffic engineer.

Note: This criterion will be considered to be met where such an assessment includes a review undertaken by or on behalf of NZTA which confirms that there is sufficient capacity or planned capacity at this interchange to accommodate the predicted increase in traffic;

- (g) in respect of those new areas of planting in stormwater management and wetland areas in Sub-precinct D the extent to which:
 - (i) plants should be eco-sourced as close as possible to the developed area;
 - (ii) the mechanisms proposed ensure the weed and pest management programme and the herpetofaunal mitigation/rehabilitation plan are implemented;
 - (iii) The public open space area that adjoins the southern boundary of the Precinct will provide the basis of an ecological corridor linkage of 30 metres in width between the southern buffer in the Precinct and bush areas in the Special Purpose – Quarry Zone when planted with suitable tree species at the time of subdivision of the adjoining industrial zoned land;
- (h) whether the existing 110kV Counties Power electricity lines are provided for in the existing positions in any subdivision or whether the existing lines can be relocated in agreement with Counties Power;
- (i) whether the stormwater management plan and works proposed as part of the subdivision or development:
 - (i) comply with any approved discharge consent;
 - (ii) are effective in avoiding, remedying or mitigating the potential adverse effects of stormwater discharge on water quality and flood hazards. In the case of stormwater management facilities within private land this assessment will include how the operation and maintenance of such facilities is to be secured by way of appropriate covenants or consent notices;
 - (iii) can effectively contain all the natural and diverted streams and their margins, wetlands, and other off-site stormwater management devices;
 - (iv) provide for overland flowpaths;
 - (v) require a bond or other security to be provided to ensure that the stormwater management works will be completed, with such bond to

be released when the works are completed and the stormwater management areas and their devices are vested in council;

- (vi) ensure that subdivision and development does not result in increased flood risk to habitable rooms for all flood events from the 50% and up to 1% AEP flood event downstream and upstream of the precinct;
- (2) the creation of vehicle access to any site with frontage to or from the Spine Road shown on Precinct plan 2 which also has frontage to another road shown on that plan:
- (a) any adverse effect from the location and design of the access on the safe and efficient operation of the adjacent transport network, including public transport, cyclists and general traffic, having regard to:
 - (i) the number of other access points to or from the Spine Road in the vicinity of the proposed access;
 - (ii) whether conflicts will be reduced by the presence of a raised central median which prevents right turning in the vicinity of the site;
 - (iii) visibility and safe sight distances particularly the extent to which vehicles entering/exiting the site can see, and be seen by, pedestrians, cyclists and other vehicles on the footpath and road carriageway;
 - (iv) existing and future traffic conditions including speed, volume, type, current accident rate, and the need for safe manoeuvring in all weathers;
 - (v) existing pedestrian numbers, and estimated future pedestrian numbers having regard to the level of development provided for in the this Plan; and
 - (vi) existing community or public infrastructure located in the adjoining road, such as bus stops, bus lanes and cycleways.
 - (b) whether the access arrangements are practicable and adequate having regard to site limitations and layout, and arrangement of buildings and activities, users and operational requirements, and having regard to whether the site can reasonably be served by shared or amalgamated access with another site or sites on the Spine Road where the sites in question are held in the same ownership.

I410.9. Special information requirements

I410.9.1. Earthworks plans

- (1) Any application for subdivision or development must be accompanied by detailed earthworks plans. Such plans must:
 - (a) describe the nature and scale of the proposed earthworks, such as the extent of cut and/or fill, sources of fill and how the cut and fill is to be transported;

- (b) describe the construction management and communication methods to be followed to minimise nuisances and disruption to surrounding residents and Ramarama School (in particular, dust, traffic and noise impacts) during the construction period; and
- (c) provide detailed design of the modified flood plain.

I410.9.2. Ecological management plans

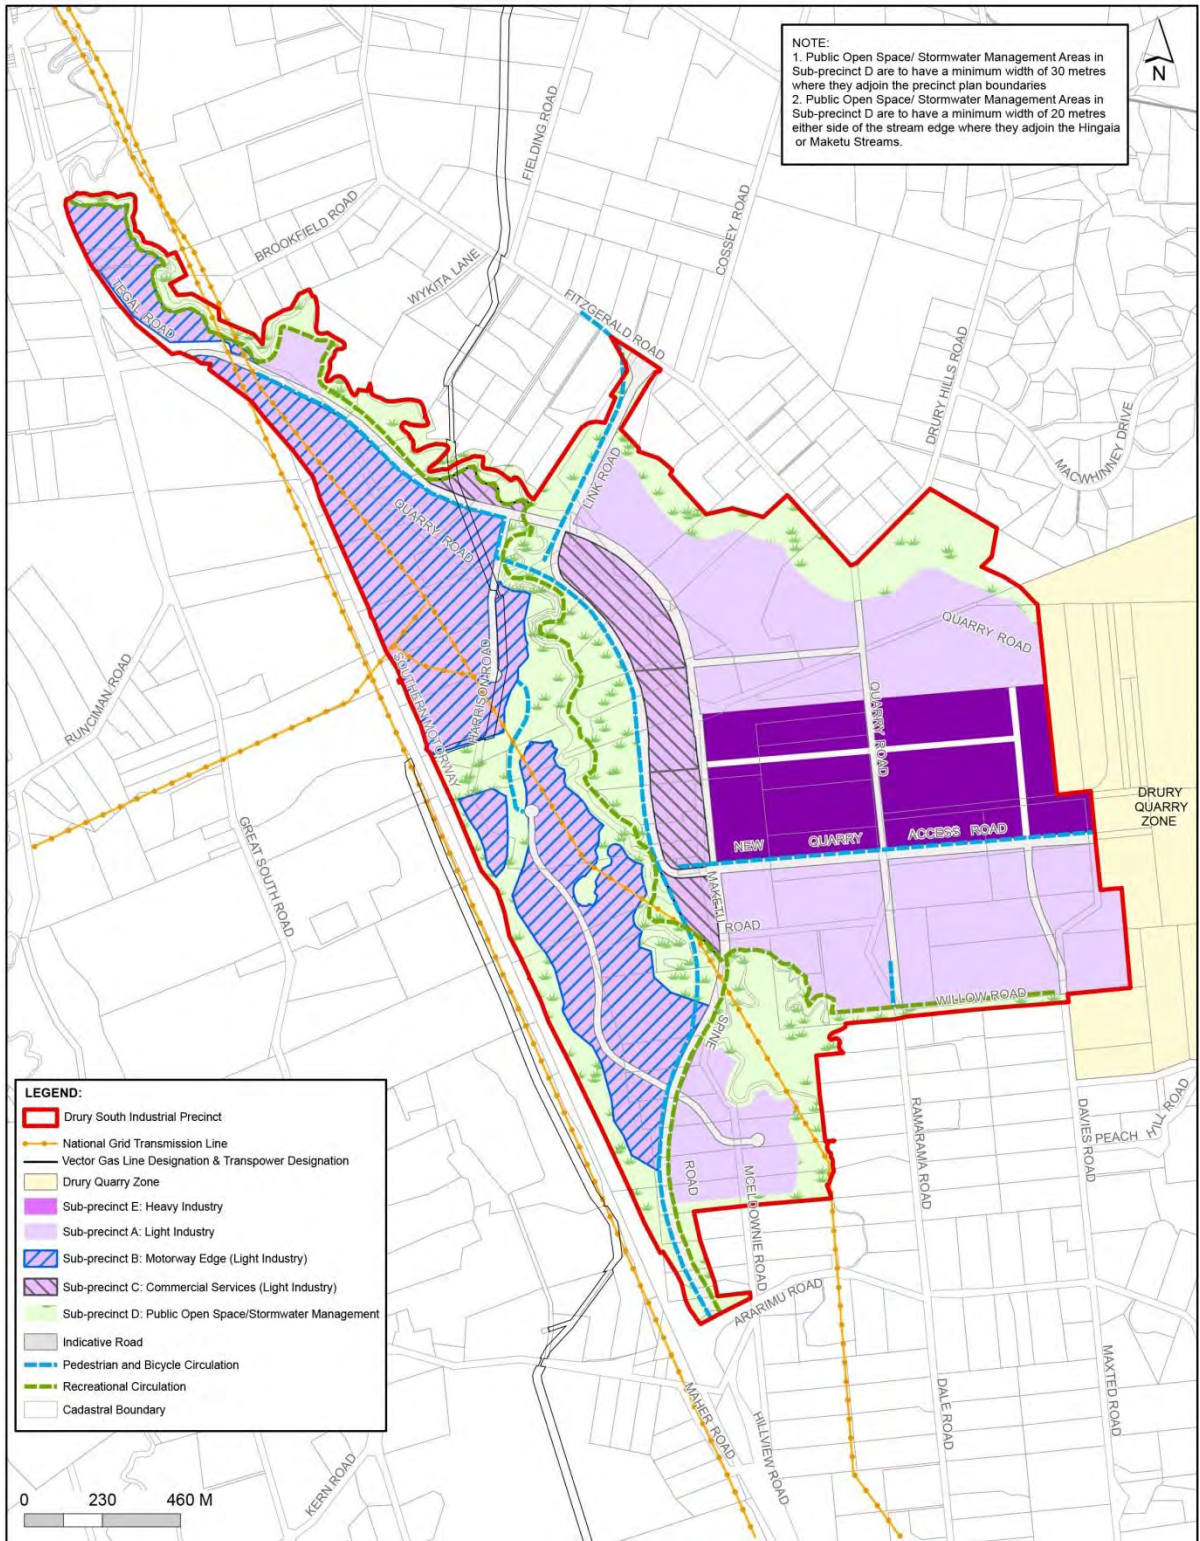

- (1) In respect of any new areas of planting in Sub-precinct D the following must be provided:
 - (a) a weed and pest management programme for any new areas of planting within the stormwater management areas and wetland areas and remaining indigenous forest fragments in Sub-precinct D; and
 - (b) a herpetofaunal mitigation/rehabilitation plan which targets only potentially suitable lizard habitat for relocation searches.

I410.9.3. Stormwater management report and plans

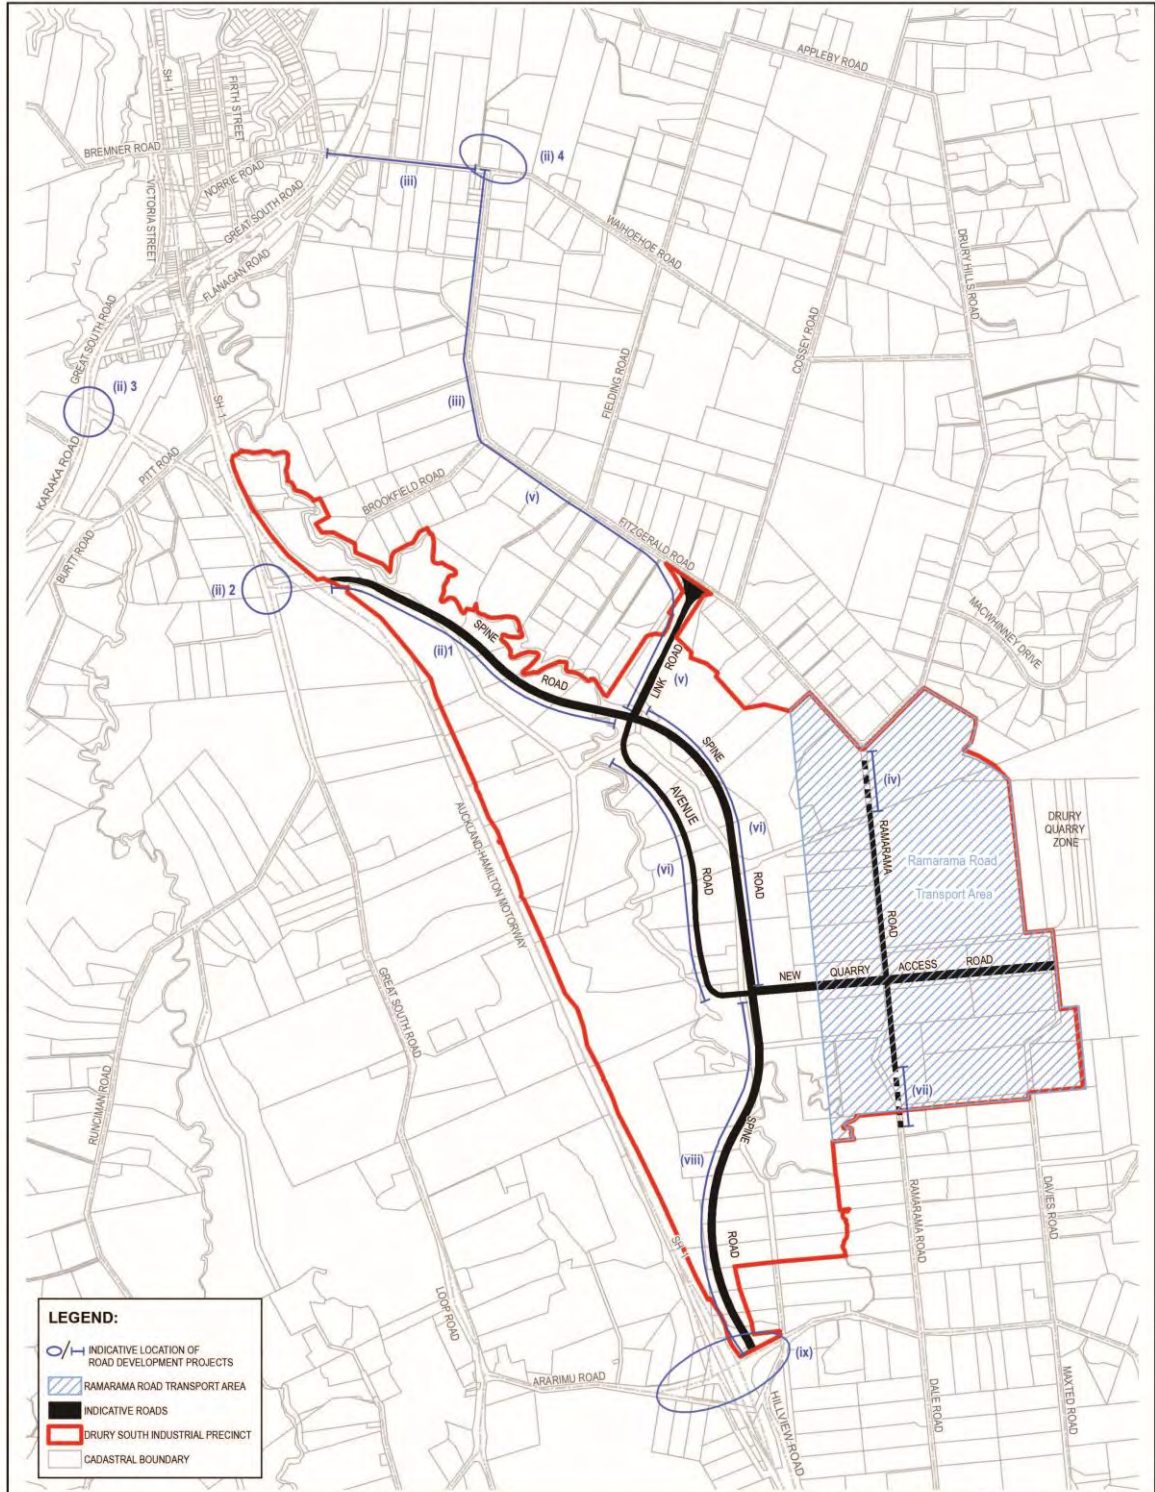

- (1) Any application for subdivision or development preceding subdivision must be accompanied by detailed stormwater management report and plans. Such report and plans must:
 - (a) describe how the plans comply with the conditions of any relevant discharge consent;
 - (b) identify overland flow paths;
 - (c) describe the nature and extent of any off-site stormwater management devices and how these devices are to be delivered if they are on land outside the application site;
 - (d) if stormwater management devices are to be located within the modified 1% AEP floodplain, describe how these devices are to be designed to be resilient to flood-related damage while not exacerbating flood risks for upstream or downstream activities;
 - (e) where streams are to be diverted and/or recreated as identified on the precinct plan, describe how this is to be achieved in a way that ensures that they function in a manner similar to natural stream systems. Detailed landscape treatment plans will be required to demonstrate:
 - (i) the proposed long section and cross sections;
 - (ii) how the new stream banks are to be stabilised;
 - (iii) how pool – riffles - run sequences are to be formed; and
 - (iv) how stormwater outlets are controlled.

I410.10. Precinct plans

1410.10.1 Drury South Industrial: Precinct plan 1

I410.11. Appendices

I410.11.1 Drury South Industrial: Appendix 1

APPENDIX 5B.4.A: DRURY SOUTH STRUCTURE PLAN AREA –
SUBDIVISION DESIGN ASSESSMENT CRITERIA

PURPOSE OF APPENDIX 5B.4.A

Within the Drury South Structure Plan area, applications for restricted discretionary activity subdivision consent will be assessed in terms of a series of matters to which the Council will restrict the exercise of its discretion. One of the matters which the Council will have regard to as set out in Rule 6.15.2.5 is:

The extent to which the subdivision design and layout complies with and gives effect to the objectives and policies identified on the Drury South Structure Plan in Part 5B.4 Section 1 of the District Plan and the assessment criteria set out in Appendix 5B.4.A

In addition, the criteria will also be used in the consideration of discretionary applications for subdivision, as appropriate.

This appendix sets out assessment criteria under a number of “Design Elements”. Accompanying illustrations are intended to support the text and represent good design solutions, but are not intended to represent the only design solution. All illustrations are indicative only.

Each Design Element includes an explanation, which summarises the rationale for the particular Design Element and expands on the individual criteria. The explanation may be used as further guidance in interpreting the intention of the criteria and assessing the extent to which the proposal accords with them.

INFORMATION REQUIREMENTS

The applicant shall provide a written assessment describing how the criteria for each Design Element are addressed. Applicants will have to demonstrate that the provisions of the criteria have been acknowledged.

It is recognised that certain proposals will not achieve absolute accord with all criteria. Where necessary, in regard to a criterion demonstrably not met, the applicant shall explain with reference to the explanation for the particular Design Element:

- Whether site constraints inhibit the ability to address the criterion, and/or;
- How the intention of the criterion is met by the proposal, and/or ;
- Whether the proposal represents a better design solution than that suggested by the criterion.

Planting plans and maintenance plans for recreation and esplanade reserves and stormwater management areas will need to be submitted with applications for subdivision consent and approved by the Council.

Design Element 1 – Road, Reserve and Access Networks:

1. Earthworks should be undertaken principally at the initial subdivision stage, and where appropriate the creation of reasonably flat sites should occur at the bulk earthworks stage (in order to avoid creating retaining walls at site development stage).
2. Road patterns should maximise convenient / direct access to the spine road and limit connection to existing rural roads (such as Ararimu Road) except where this relates to the wider essential network.
3. The road pattern should facilitate access to and accessibility within 'commercial service precincts'.
4. Road patterns should be logical and contribute to the legibility of and ease of wayfinding within the area (refer Diagrams 1 and 2 for generic legibility and proposed street hierarchy).
5. Subdivision layout design should achieve protection and enhancement of all significant streams / tributaries to be retained and their riparian corridors (20m minimum either side from edge of stream) and concentrate open space as part of the riparian network (refer Diagram 3).
6. Subdivision layout design should achieve an interconnected open space and movement network.
7. Safe pedestrian and cycle routes through the structure plan area should be integrated with the riparian, reserve and road design.
8. Equestrian bridle trails should be integrated with riparian reserve development and provide access to the large centrally located public open space / stormwater management area.
9. Layouts should retain mature trees within the riparian corridors, particularly those of indigenous species.
10. In Motorway Edge Precinct areas layouts should seek to retain as many existing established trees, particularly those of indigenous species, as possible.
11. In Motorway Edge Precinct areas access to sites off the spine road should be combined wherever practicable.

Diagram 1: Legible road hierarchy to assist wayfinding

Diagram 2: Road hierarchy

Explanation:

Design Element 1 pertains to the overall site topography and the general layout of the networks of roads, reserves and other access linkages that make up the public space of the industrial business zone. These should be considered in an integrated fashion together with the development blocks that they create.

The existing site topography within the proposed zone area is relatively flat although bulk earthworks including cut and fill will be required to establish levels for future development above the flood plain and appropriate falls across the land

The riparian corridors of the Hingaia and Maketu Streams and their significant tributaries will remain an important feature of the site topography once the zone is established. Vegetation associated with these corridors is also important to the structuring, screening and ecology of the area and its proposed activities.

The riparian corridors also provide a focus for future recreation and open space development and form part of the enhancement framework for the zone.

Diagram 3: Open space concentrated along Hingaia Maketu, Roslyn and Northern Diversion Stream corridors

The road network and hierarchy (refer Diagrams 1 and 2), as illustrated in the Drury South Structure Plan has been designed to efficiently direct traffic into and out of the zone connecting to the Southern Motorway (SH1) at both the Ramarama (south) and Drury (north) interchanges. The Ramarama interchange and Quarry Road / Great South Road through to the Drury Interchange will be upgraded to improve vehicle access and safety. The proposed spine road link is important to the legibility and traffic efficiency of the proposed zone area; this route will provide the primary connection into and out of the zone with other streets connected to the spine road through corridor.

The proposed street network has also been designed to limit the impact of vehicles destined for the new zoned area on existing rural residential and community roads such as the road accessing and adjacent to the Ramarama School. Implementation of the street network to achieve the beneficial improvements to heavy vehicle (including quarry truck) and other zone related traffic movement is imperative as a part of delivery of the zone.

By their nature the Commercial Services Precinct areas will require a finer grain street network with smaller street blocks, greater walkability, good service access and parking.

A legible road pattern (refer Diagram 1) is one that is easily understandable for the people that use it and that provides cues for first time users as well as those habitual users. Consistent road design and landscape themes can further emphasise the position of each street in the road hierarchy and in the pattern of streets in the wider area. Road patterns that are logical and easy to comprehend and navigate make an area feel more comfortable and help to provide a sense of identity.

Design Element 2 – Block Size, Lot Type and Orientation:

1. Blocks should be of a scale and shape to achieve a permeable street layout suited to the industrial landuse.
2. All lots should front onto and be accessed directly from a legal road. Rear lots are to be avoided (*refer Diagram 4*).
3. Through lots (with dual road frontage) are permissible (*refer Diagram 4*).

Explanation:

Design Element 2 describes the principles for consideration in the layout of blocks and lots within the proposed business zone area.

Blocks within an industrial area can be larger than those within finer grain residential or Commercial Services areas. A good permeable and well connected street network is however still required to facilitate access, provide an appropriate street address and reduce traffic volumes on side streets.

Diagram 4: All lots should front onto a legal road; through lots are permissible

Lots need to be of a size and shape to accommodate large scale, land extensive landuses and flexible to enable reasonable long term growth. At the same time rear lots are considered undesirable with a preference for development to address the street.

Design Element – Roads and Accessways:

1. In addition to transport engineering and Council’s Code of Practice requirements, road cross sections should be appropriate to the nature of the function that they provide and also reflect urban design legibility considerations – i.e. wayfinding. Refer typical cross sections (Appendix 1) for road hierarchy comprising; Arterial (e.g. spine road extension); Link Road, new quarry access road (Parkway Road) (*refer also Diagram 2 for street hierarchy*).
2. Cyclists should be accommodated on the street carriageway or on a shared footpath/cycle route with wider dimension to accommodate both functions.
3. A consistent palette of traffic management tools should be used across the Drury South business zoned land. Traffic management devices such as chicanes, speed humps and other such restrictive management devices are not expected, however the use of thematic planting and measures such as localised narrowing to create thresholds or define changes in the street environment could be used.
4. All streets are required to accommodate strong avenue specimen tree planting. Refer Cross Sections Appendix 1. This planting is required to achieve the breaking up of the overall scale of the development particularly as seen from elevated locations, as well as to establish the enhanced amenity and character of the zone.
5. In addition to the street avenue planting a planted central median is (with and without specimen trees) also required on the roads identified as ‘Arterial’ (Spine and Link Roads) and ‘Parkway’ refer Appendix 1 Cross Sections.

Explanation:

Design Element 3 pertains to principles for the design of roads and other access routes within the zone. Road design should be appropriate to function and provide practical widths for vehicular access, including for emergency vehicles, parking, planting and services. Useful minimum dimensions are:

- Four traffic lanes on arterial road 15.2m
- Two traffic lanes on local road 8.2m
- Cycle lane 1.5m
- Parallel parking lane 2.5m
- Service/utilities strip 3.0m
- Footpath 1.5m to 3.0m

The use of parallel kerbside parking is efficient in using the road as circulation area and reducing the need for onsite visitor parking. Kerbside parking lanes may be defined and delineated with planting bays if desired as illustrated in the road Cross Sections Attachment1.

Pedestrian and cycle paths should generally be integrated with road and reserve design. Paths which are separated from vehicle routes should be designed for safety.

Design Element 4 – Reserves, Stormwater Management Areas and Riparian Planting:

1. Stormwater detention and treatment reserves should be located in general accordance with the locations shown in the Drury South Structure Plan and in accordance with the adopted Catchment Management Plan, the Council's code of practice and relevant regional technical publications. The Cross Sections (Attachment 2) illustrate the Typical Wetland Stormwater Pond and Typical Stream Corridor Cross Sections.
2. Stormwater ponds should be designed to fit in with the surrounding landscape and appear as an integrally designed infrastructural component of the overall setting.
3. Vegetated buffers, not less than 40m in total width for any retained permanent or diverted stream, should be provided on the margins of streams, ponds and wetlands and should:
 - Include native species as identified in Attachment3
 - Include native trees on the lower and upper banks of ponds predominantly to the north and west to provide shade.
 - Provide a minimum of 10m of native planting either side of the stream corridor including shallow water rushes and sedges.
 - Avoid vegetation that will exacerbate flooding and the blockage of water flood flows along the immediate riparian corridor.

The only exception to these requirements is the retained permanent stream in the northwest of the structure plan area (adjacent to the Transpower site) which will be subject to a minimum requirement of 10m of native planting either side of the stream corridor only.

Note: Attachment 5 sets out 'Stream and Wetland Rehabilitation Guidelines (June 2013) for the DSSP area.

4. Walkways / cycleways along riparian corridors and through buffer planting should be designed to minimise any impacts on ecological function and give due consideration to personal safety and CPTED principles (refer Attachment2).
5. Edge buffer reserves should be located in accordance with the Drury South Structure Plan, be a minimum of 30m in width and be planted in generally accordance with Diagram 5 below.

Diagram 5: Typical landscape buffer cross section

6. Suitable mechanisms to ensure the establishment and ongoing maintenance of landscaping of reserves and stormwater management areas until those areas are vested in the Council will be required to ensure the long term success of any landscaping.

Explanation:

Design Element 4 pertains to matters for consideration for locating, sizing and designing reserves stormwater management areas and riparian planting. These areas will be generally located in accordance with the locations shown in the Drury South Structure Plan; regard should also be given to Design Element 5 when designing reserves within the zone area.

The principal reserve network within the zone, as illustrated in the Drury South Structure Plan, is structured around riparian protection and enhancement as well as stormwater management including detention and treatment. The reserve network is however designed for multiple functions and values including passive and active recreation, pedestrian / cycle commuter access, ecological values, visual screening / separation and aesthetic amenity.

The zone also includes buffer reserves the main purpose of which is to physically and visually screen and separate adjacent existing land uses and residents from the zone. These reserves are planted to maintain a robust rural character with a woodlot/ shelter belt form of land management. Whilst providing multiple functions including walking / cycling, biodiversity and aesthetic values their primary function will remain as that of a buffer to landuses outside of the zone.

Design Element 5 – Reserve Interface Design:

1. Reserves intended for public recreation and use should be designed to be bounded by public roads as much as possible given topographical and natural feature constraints. (Note proposed buffer reserves are not intended to be bounded by public roads)
2. Where reserves or riparian buffer areas adjoin lots the boundary should be securely delineated and fenced to avoid encroachment (refer Diagram 5).

Explanation:

Reserves intended for public use that are well fronted by public roads are more secure because of the informal surveillance from the road and activities that interface with the road across the carriageway. Ideally not less than half the total length of legal boundary of any reserve should adjoin a legal road.

Design Element 5a – Earthworks and Retaining Walls

1. Changes of level adjoining streets and open space corridors should be achieved by gently battering and contouring land.
2. Where retaining walls are required, they should be screened from public view. This may be achieved by planting and breaking up the vertical extent of walls through physical stepping.

Additional Overlay Precinct Criteria

In the case of subdivision within the Motorway Edge Precincts and the Commercial Service Precincts the following criteria shall also apply and take precedence over the general assessment criteria for subdivision stated above, where this is inconsistency or conflict.

Additional Design Element 6: Subdivision within Motorway Edge Precinct

1. Earthworks should be designed to retain a more natural, undulating topography and character outside of building platforms and other areas required through function to retain a flat topography.
2. Intersections between public roads serving the precinct and the north south primary road (spine road corridor) should be minimised.

Additional Design Element 7: Subdivision within Commercial Services Precinct

1. Where through lots with dual street frontage are created, these should provide frontage to both street edges (i.e. no rear elevations to the street). The primary frontage should be to the spine road.

APPENDIX 5B.4B: DRURY SOUTH STRUCTURE PLAN AREA – MOTORWAY
EDGE PRECINCT AND COMMERCIAL SERVICES
PRECINCT ASSESSMENT CRITERIA

PURPOSE OF APPENDIX 5B.4.B

In the Motorway Edge Precinct and Commercial Services Precinct within the Drury South Structure Plan area building design and appearance, landscape design and internal site layout are listed as controlled activities if they also comply with the standards and terms specified in 6.11.7.2.

Rule 6.15.1 sets out controlled activity assessment criteria for all controlled activities in the industrial zones and contains the following clause:

“In the case of the Motorway Edge Precinct and the Commercial Service Precinct within the Drury South Structure Plan Area (Part 5B.4 in Section One of the District Plan) the Council will, in addition to the criteria set out in (a) to (f) above, assess the application against the criteria set out for those precincts in Appendix 5B.4.B in Section One of the District Plan.”

In addition, these criteria will also be used as appropriate in the consideration of restricted discretionary and discretionary activity applications involving the construction or alteration of buildings.

This Appendix sets out assessment criteria under a number of “Design Elements” for both the Motorway Edge Precinct and the Commercial Services Precinct.

The criteria listed under each Design Element are intended to give flexibility, enabling site responsive designs, while ensuring that development provides a positive contribution to the amenity of the Drury South Structure Plan Area.

The criteria are intended to guide development rather than prescribe exact design and layout. Most criteria are illustrated. The illustrations are intended to support the text and are representative of good design solutions, but are not necessarily intended to represent the only design solution.

Each Design Element includes an explanation, which summarises the rationale for the particular Design Element and expands on the individual criteria. The explanation may be used as further guidance in interpreting the intention of the criteria and assessing the extent to which the proposal accords with them.

INFORMATION REQUIREMENTS

The applicant shall provide a written assessment describing how the criteria for each Design Element are addressed. Applicants will have to demonstrate that the provisions of the criteria have been acknowledged. It is recognised that certain proposals will not achieve absolute accord with all criteria. Where necessary, in regard to a criterion demonstrably not met, the applicant shall explain with reference to the explanation for the particular Design Element:

- whether site constraints inhibit the ability to address the criterion, and/or;
- how the intention of the criterion is met by the proposal, and/or ;
- whether the proposal represents a better design solution than that suggested by the criterion.

Applicants will also be required to provide a Landscape Concept Plan with sufficient detail to ensure that the relevant assessment criteria are able to be considered, identifying hard and soft landscaping treatment, large grade specimen trees (species and planting size), groupings of ground covers and shrubs with species schedule.

MOTORWAY EDGE PRECINCT DESIGN ASSESSMENT CRITERIA

The following criteria shall apply to building design and appearance, landscape design and internal site layout within the Motorway Edge Precinct where activities are listed as controlled activities.

Design Element – Internal Private Access Roads:

1. Specimen tree planting should be provided on all public and internal private access roads within the Motorway Edge Precinct.

Design Element – Existing Vegetation:

1. Where ever possible layouts should retain and protect existing mature trees, particularly those of indigenous species, where these contribute to the site character and amenity.

Design Element – Planting:

1. Planting should be designed to have a large scale landscape effect and combine native as well as appropriate exotic species to provide seasonal change and quality amenity.
2. Where reserve land adjoins the motorway boundary planting that creates a continuous visual barrier to eastward views from the SH1 (Southern Motorway) corridor should be avoided, however landscape design should emphasise the current sequence of intermittent views to the Hunua Ranges from the SH1 corridor and the pattern of variable depth of such views.
3. Where industrial sites adjoin the motorway boundary, a detailed rule applies requiring a double row of Leyland Cypress to create the appearance of a rural shelterbelt providing a continuous visual barrier defining the curve in the motorway alignment.

Design Element – Buildings:

1. Buildings should be located with design consideration for their visibility and reduced visual impact as viewed from the SH1, (Southern Motorway) corridor and the desirability of maintaining a sense of openness as seen from the motorway.
2. The visual mass of larger buildings should be minimised by employing the following methods:
 - Utilising subdued, recessive colours;
 - Providing variation in materials and finish for facades viewed from the motorway;
 - Creating variation of roof profiles with consideration given to the overall roofscape viewed from the motorway;
 - All rooftop servicing and plant should be designed as an integral part of the roofscape with particular consideration given to the view from the motorway.

Design Element – Parking Areas:

1. Parking areas should be designed to incorporate trees to break up the scale of hard surface areas.
2. Adoption of the Fully Planted Permeable Carpark Design Layout (refer Diagram 6) style of parking is advocated within the Motorway Edge Precinct.

Design Element – Internal Site layout:

1. Storage and waste management activities should be located and / or designed to be screened from view of the State Highway.

Diagram 6: Fully planted permeable carpark design layout - detail

COMMERCIAL SERVICES PRECINCT DESIGN ASSESSMENT CRITERIA

The following criteria shall apply to building design and appearance, landscape design and internal site layout within the Commercial Services Precinct where activities are listed as controlled activities.

Design Element – Block Size, Lot Type and Orientation:

1. Buildings on corner lots should be designed to provide for a quality architectural response to the corner. Appropriate design responses would be provision of additional height at the corner, windows and activities addressing both street frontages (avoidance of blank walls to one or both sides of the corner). Service activities such as loading docks or storage yards should not be located on corners or any site frontage.

Design Element – Street Interface Design:

1. Built development should front the street with a quality recognisable pedestrian entry to the street.
2. Parking should be provided on the road network adjacent to Commercial Service Precinct areas with on site parking layouts designed in accordance with the typical layout identified (refer Attachment 4).

Design Element – Signage:

1. Signage for each Commercial Services Precinct development should be coordinated including the physical location of signs, their type face, style and content with a maximum of two signs per business, one located to address the street frontage and one to identify the building entry (a third sign is permissible where the service access is separate from building entry or there are multiple entries).

Design Element – Service Areas:

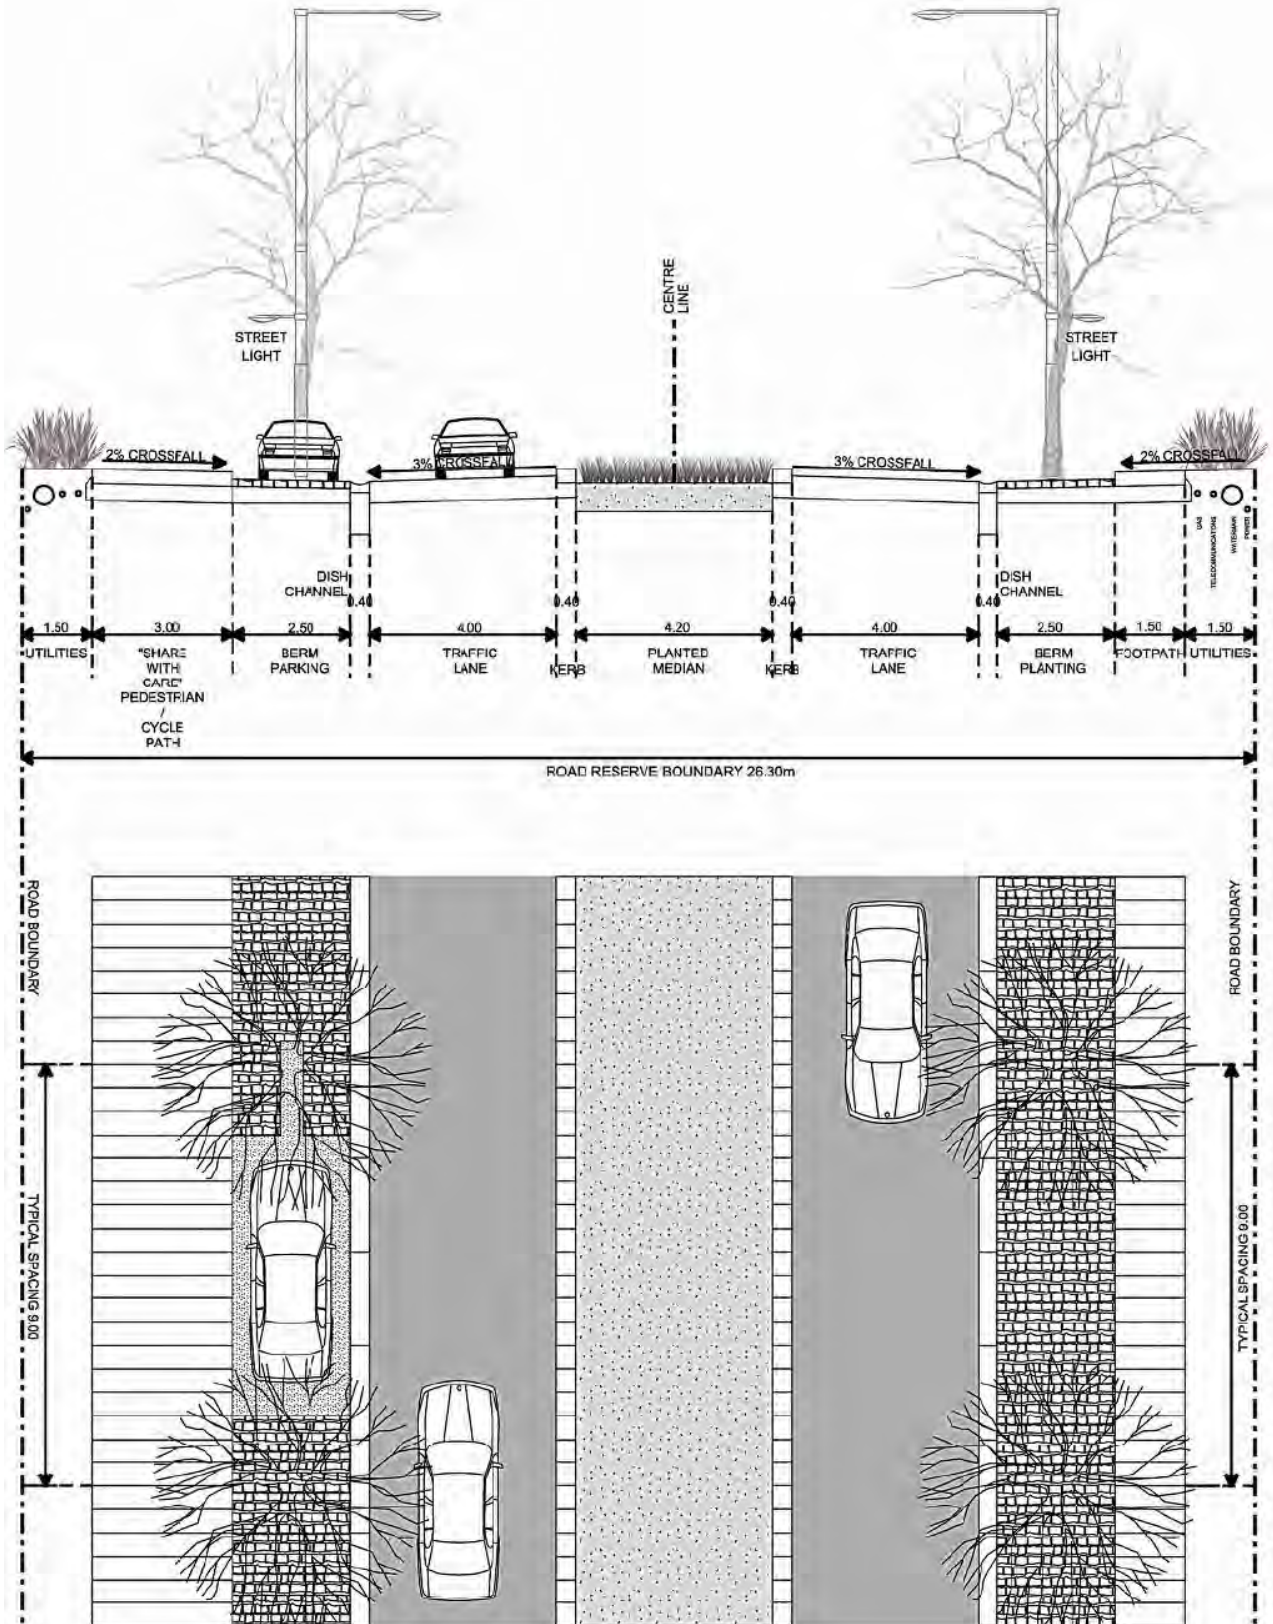

1. Service areas should be located so as to avoid observation from a public road with access either from a service lane, incorporation within the main building or full screening of service / storage and dock areas.

Drury South Structure Plan
Indigenous Species Plant List

Note: The species underlined are recognised as being rare/uncommon in the Auckland region.

Wetland Species	
Schoenoplectus tabernaemontani also Eleocharis sphacelata	Multiple Māori names include kukuta and kutakuta.
Carex virgata and Carex secta	Pukio
Baumea articulata	Jointed twig-rush
Typha orientalis	Raupō
<u>Myriophyllum robustum</u>	Stout water milfoil
Baumea tenax	
Isachne glabosa	Swamp grass
Phormium tenax	Particularly the variety known to Maori as 'Muka' - soft for weaving

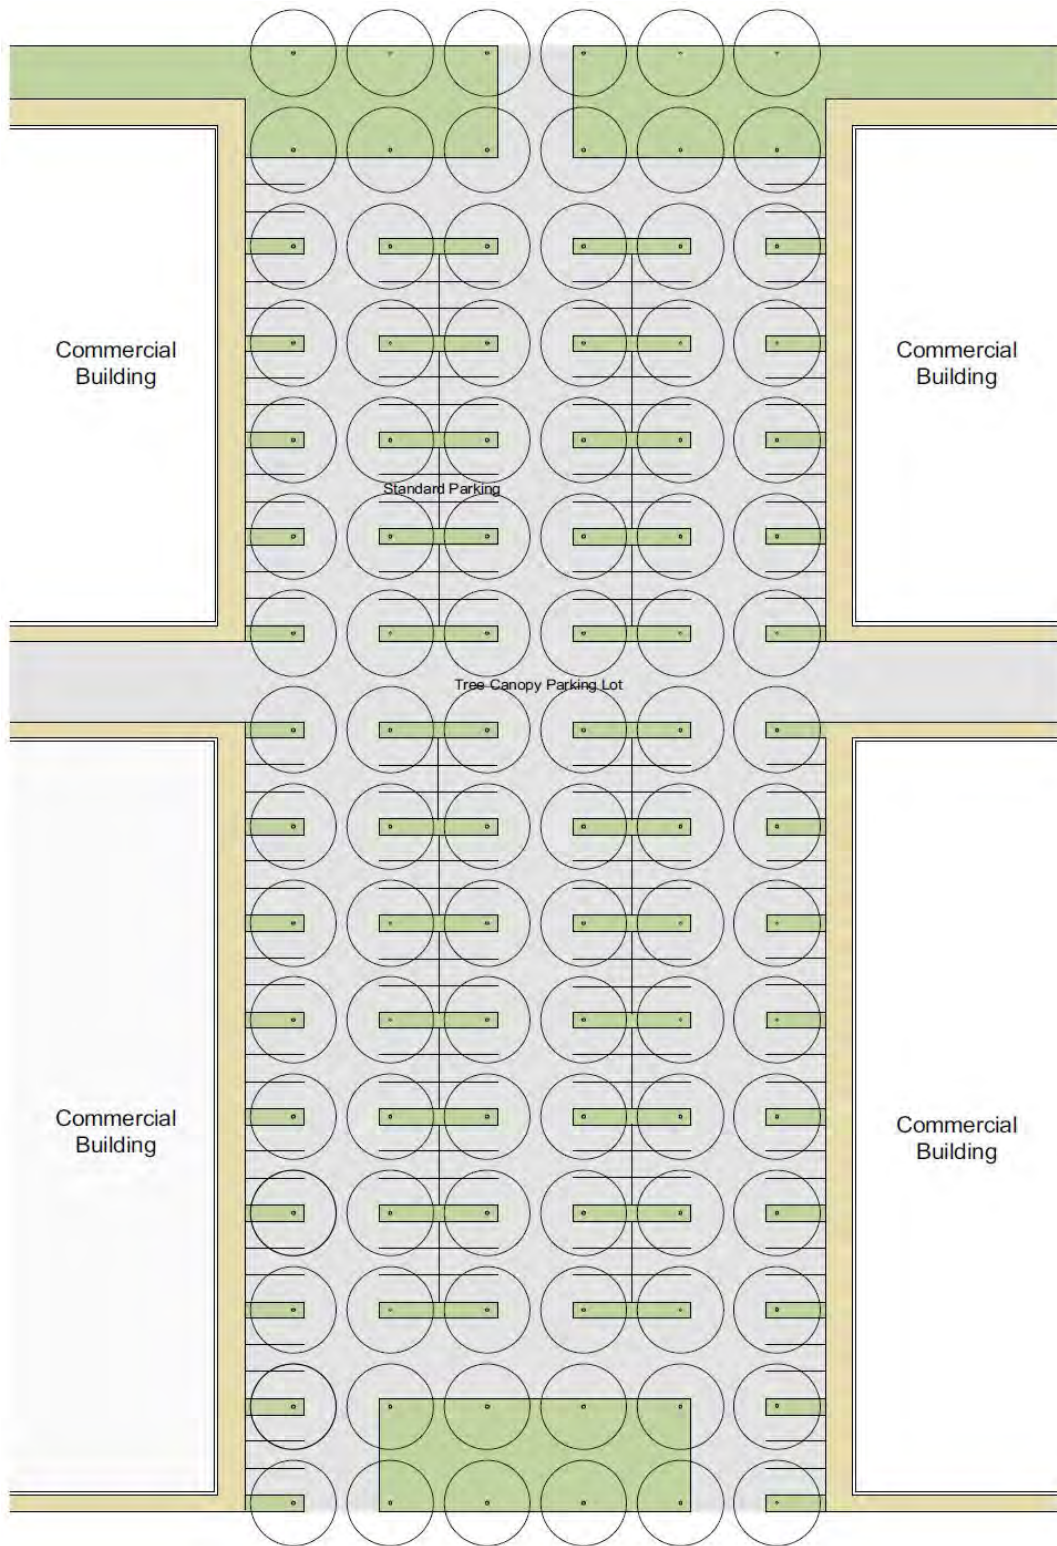

Riparian Marginal Species	
Freycinetia baueriana	Kie kei
Alectryon excelsa	Titoki
Vitex lucens	Puriri
Prumnopitys taxifolia	Matai
Sophora microphlla	Kowhai
Rhopalostylis sapida	Nikau
Hoheria populnea	Lacebark
Corynocarpus laevigatus	Karaka
<u>Plagianthus betulinus</u>	Manatu
Pennantia corymbosa	Kaikomako
Hedycarya arborea	Pigeonwood
Aristolelia serrata	Makomako

Kunzea ericoides	Kanuka
Cordyline australis	Ti whanake
Dysoxylum spectabile	Kohekohe
Coprosma grandifolia	Kanono
<u>Streblus banksii</u>	Towai
Streblus microphylla	Turepo
<u>Myrsine divaricata</u>	Weeping matipo
<u>Marrattia salicina</u>	King fern

Swamp Forest Species	
<u>Syzygium maire</u>	Maire, tawake
Laurelia novae-zelandiae	Pukatea
Carpodetus serratus	Putaputaweta
Phormium tenax	Harakeke
Coprosma tenuicaulis	Hukihuki
Dacrycarpus dacrydioides	Kahikatea
Blechnum novae-zelandiae	Swamp kiokio
Cortaderia fulvida	Toetoe
<u>Astelia grandis</u>	Swamp astelia
Schefflera digitata	Pate
Podocarpus totara	Totara

Typical Commercial Services Precinct Access and Car Park Layout

TYPICAL COMMERCIAL LAYOUT

I411. ECOLight Stadium Precinct

I411.1. Precinct description

The ECOLight Stadium Precinct provides specific planning controls for the use of ECOLight Stadium. ECOLight Stadium is located in Pukekohe and is currently the home of Counties Manukau Rugby Union Steelers.

The zoning of the land within the ECOLight Stadium Precinct is Special Purpose - Major Recreation Facility Zone. Refer to the planning maps for the location and extent of the precinct.

I411.2. Objectives

- (1) The ECOLight Stadium is protected as a regionally and nationally important venue for organised sports and recreation, and informal recreation.
- (2) A range of activities compatible with, or accessory to, the primary activities are enabled.
- (3) The adverse effects of the operation of the ECOLight Stadium are avoided, remedied or mitigated as far as is practicable recognising that the primary activities will by virtue of their nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

I411.3. Policies

- (1) Enable the safe and efficient operation of the ECOLight Stadium for its primary activities.
- (2) Protect the primary activities of the ECOLight Stadium from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activities.
- (4) Manage the adverse effects of the operation of the ECOLight Stadium, having regard to the amenity of surrounding properties.
- (5) Recognise that the ECOLight Stadium's primary activities may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

I411.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below.

- (1) E24 Lighting

(2) E25 Noise and vibration (noise provisions only);

(3) E40 Temporary activities;

Table I411.4.1 specifies the activity status of land use and development activities in the ECOLight Stadium Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I411.4.1: Activity table

	Activity	Activity status
Use		
(A1)	Organised sport and recreation	P
(A2)	Informal recreation	P
(A3)	Any primary activity not meeting Standard I411.6.5 but meeting all other standards	C
Accessory activities		
(A4)	Accessory activities	P
(A5)	Any accessory activity not meeting Standard I411.6.5 but meeting all other standards	C
Compatible activities		
(A6)	Concerts, events and festivals	P
(A7)	Markets, fairs and trade fairs	P
(A8)	Functions, conferences, gatherings and meetings	P
(A9)	Displays and exhibitions	P
(A10)	Sports, recreation and community activities	P
(A11)	Professional fireworks displays meeting Standard I411.6.10	P
(A12)	Professional fireworks displays not meeting Standard I411.6.10	RD
(A13)	Helicopter flights meeting Standard I411.6.11	P
(A14)	Helicopter flights not meeting Standard I411.6.11	RD
(A15)	Filming activities	P
(A16)	Any compatible activity not meeting Standard I411.6.5 but meeting all other standards	C
Development		
(A17)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 15m in height	P
(A18)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15m but up to 20m in height	RD

(A19)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m in height	D
(A20)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I411.6.8	RD
(A21)	Light towers and associated fittings up to and greater than 20m in height	P
(A22)	Demolition of buildings	P
(A23)	Temporary buildings	P
(A24)	Workers' accommodation	P

I411.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I411.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I411.4.1 Activity table and which is not listed in I411.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I411.6. Standards

The overlay and Auckland-wide standards apply in this precinct, unless otherwise specified below. The following standards do not apply:

- (1) E27 Transport – Standard E27.6.1 Trip generation; and
- (2) E27 Transport – Standard E27.6.2 Number of parking and loading spaces.

All permitted, controlled or restricted discretionary activities listed in Table I411.4.1 must comply with the following activity standards unless otherwise stated.

I411.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing activity sensitive to noise must not exceed the noise limits in Table I411.6.1.1 Noise standards.

Table I411.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Up to 5 special noise events between 8:00am and 10:30pm in any 12 month period	75dB $L_{Aeq(5min)}$
Up to 15 special noise events between 8:00am and 10:30pm in any 12 month period	65dB $L_{Aeq(5min)}$
General noise standards for all days including Christmas Day, Good Friday & Anzac Day, between 8:00am and 10:30pm	55dB L_{Aeq}
General noise standards for all other times	40dB L_{Aeq} and 70dB L_{Amax}

- (2) Noise limits must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) For special noise events an adjustment must not be applied to amplified music or amplified voice sounds containing special audible characteristics (with respect to section 6.3 of NZS6802:2008) but other sources of sound may have an adjustment applied if necessary in accordance with the same section.
- (4) The prescribed time frames for the purpose of assessment according to NZS6802:2008 must be the timeframe for which any particular noise limit applies.
- (5) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (6) Where $L_{Aeq(5min)}$, is specified, no 5 minute measurement sample can exceed the stated limit.
- (7) Professional fireworks displays and helicopter flights are excluded from this standard.

I411.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).

- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I411.6.2, the curfew and pre-curfew times are as stated in Table I411.6.2.1 Pre-curfew and curfew times.

Table I411.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7.00am – 10.30pm
Curfew	10.30pm – 7.00am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following;
- (a) the limits in Table I411.6.2.2 Horizontal and vertical illuminance at a boundary when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I411.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) The vertical illuminance limits in Table I411.6.2.3 Vertical illuminance at a window when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I411.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15 per cent (based on an

adaption luminance of 2cd/m^2) on any public road, calculated within each traffic lane in the direction of travel.

- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I411.6.2.4 Pre-curfew luminous intensity and 1,000 candelas for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I411.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd
Special lighting events	25,000 cd

- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I411.6.2.5 Building façade luminance. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.

- (9) Professional fireworks displays are excluded from this standard.

Table I411.6.2.5: Building façade luminance

	Luminance limit
Standard	10 cd/m^2
Special lighting events	25 cd/m^2

I411.6.3. Special noise events

- (1) The total number of special noise events in any 12 month period must not exceed 20 events.
- (2) For the purpose of this standard, a special noise event exceeds the standard noise limits but does not exceed the special noise limits listed in Table I411.6.1.1 Noise standards.
- (3) Special noise events may occur consecutively over a day or days, but may not exceed the total number of special noise events allowed in any 12 month period provided that:
- (a) there must be no more than two special noise events on any one day.

(b) there must be no more than four special noise events within any two week period.

- (4) A single special noise event must be limited to a total duration of six hours. Any special noise event lasting longer than six hours must be counted as two special noise events. The duration of a special noise event must be determined by the cumulative length of time that the standard noise limits are exceeded.

I411.6.4. Special lighting events

- (1) The total number of special lighting events in any 12 month period must not exceed 25 events.
- (2) For the purpose of this standard, a special lighting event exceeds the standard lighting limits but does not exceed the special lighting limits listed in Tables I411.6.2.4 Pre-curfew luminous intensity and I411.6.2.5 Building façade luminance.

I411.6.5. Traffic management

Activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

I411.6.6. Parking

- (1) Any loss of existing formed and marked parking spaces from 30 September 2013, must be accommodated elsewhere within the precinct unless the number of parking spaces provided exceeds the requirements set out in E27 Transport – district rule E27.6.2 Number of parking and loading spaces.

I411.6.7. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas.

I411.6.8. Interface control areas

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on the precinct plan. Temporary buildings are excluded from this standard.

I411.6.9. Height in relation to boundary

- (1) Where the ECOLight Stadium Precinct directly adjoins another zone, the height in relation to boundary standard that applies in the adjoining zone applies to the adjoining ECOLight Stadium Precinct boundary.
- (2) Where the ECOLight Stadium Precinct directly adjoins a road or a zone with no height in relation to boundary standard, buildings must not project

buildings must not project beyond a 45 degree recession plane measured from a point 8.5 metres vertically above ground level along the precinct boundary.

- (3) Temporary buildings, light towers and associated fittings are excluded from this standard.

I411.6.10. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 metres from any residential zone.
- (5) Displays must comply with 140dB $L_{Z_{peak}}$ at any point in the audience area and within the boundary of any activity sensitive to noise.

I411.6.11. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 150 metres from any neighbouring site.

I411.6.12. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I411.7. Assessment – controlled activities

I411.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) the effects of the proposed activity on the safety and efficiency of the transport network.

I411.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and

- (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I411.8. Assessment – restricted discretionary activities

I411.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) any activity that does not comply with noise and/or lighting standards:
 - (a) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) any activity that does not comply with permitted helicopter flight standards:
 - (a) the effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties.
- (3) any activity that does not comply with permitted professional fireworks display standards:
 - (a) the effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15 metres and up to 20 metres in height and/or which does not comply with height in relation to boundary standards:
 - (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I411.6.8 Interface control areas:
 - (a) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) any activity that does not comply with screening standards:
 - (a) the visual effects of rubbish and storage areas on residential and open space zoned sites.

I411.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and,
 - (iii) the degree of non-compliance;
 - (b) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time;
 - (c) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement;
 - (d) the extent to which any artificial lighting will create a traffic safety issue;
 - (e) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (f) the extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance;
 - (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment; and
 - (h) the extent to which additional special events adversely affect the amenity of surrounding properties having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of special event standards;
 - (iii) the additional number of special events; and
 - (iv) whether there is an operational need for the exceedance.

- (2) the effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
 - (a) the extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces:
 - (a) the extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones;
 - (b) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones);
 - (c) whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s; and
 - (d) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (4) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces:
 - (a) the extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;

- (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) the visual effects of rubbish and storage areas on residential and open space zoned sites:
- (a) the extent to which screening is practicable; and
 - (b) the extent to which distance and topographical matters mitigate likely adverse visual effects.

I411.9. Special information requirements

There are no special information requirements for this precinct.

I411.10. Precinct plans

I411.10.1. ECOLight Stadium: Precinct plan 1

I412. Flat Bush Precinct

I412.1. Precinct description

The Flat Bush precinct covers approximately 1730ha of land adjacent to the Rural Urban Boundary.

The Flat Bush Precinct incorporates the provisions of the Flat Bush Precinct plan and includes ten sub-precincts. The sub-precincts vary the subdivision controls of the respective underlying zones in relation to block design, road design and road construction standards.

The precinct is divided into the following sub-precincts and areas and contains the objectives, policies and standards relevant to subdivision, development and earthworks in the precinct plan area.

Flat Bush Residential Sub-precincts

These eight Sub-precincts apply to land within the urban residential zones:

Flat Bush Sub-precinct A (General)

This Sub-precinct is generally located on the low-lying lands within 1.5 km of the Flat Bush Town Centre and Barry Curtis Park. It promotes higher residential densities than have been achieved in the past, and is characterised by a diverse range of housing types.

Flat Bush Sub-precinct B (Central)

This Sub-precinct has a residential emphasis and is generally located within a 5 minute walk of the Flat Bush Town Centre. It is a sub-precinct where higher residential densities are to be promoted.

Flat Bush Sub-precinct D (Arterial)

This Sub-precinct is generally located within 60m of the main road networks and enables a range of residential activities. It is envisaged that sites fronting arterial routes will contain apartments and terrace/semi-detached housing up to a maximum height of 4 storeys.

Flat Bush Sub-precinct E (Barry Curtis Edge)

This Sub-precinct is located around the perimeter of Barry Curtis Park, which is a substantial public open space of approximately 90ha. All parts of this Sub-precinct are located within a 10 to 15 minute walk from the Flat Bush Town Centre. It is anticipated that the highest residential densities in the Flat Bush area will be developed in this Sub-precinct, including apartment buildings overlooking the Park of generally up to 6 storeys.

Flat Bush Sub-precinct F (Local Centre)

This Sub-precinct is similar to the Flat Bush Sub-precinct A (General) but is located immediately around three Neighbourhood Centres in, or immediately adjacent to, the Flat Bush Precinct. It has a residential emphasis and is generally located within 400m or a five minute walk of the Neighbourhood Centres.

Flat Bush Sub-precinct G (Open Space)

The land contained within this Sub-precinct surrounds the main waterways (Stormwater Management Areas) within the Flat Bush catchment and as a result is generally linear in shape. It runs along key identified corridors from the lower end of the catchment in the vicinity of Barry Curtis Park, through to the upper catchment. It is noted that land within this Sub-precinct does not include land within the 100-year flood plain, as this land is specifically required for drainage purposes. The fundamental purpose of this Sub-precinct is to include land to be set aside as open space for passive informal recreation and leisure activities and to mitigate the adverse environmental effects created by urban development.

Flat Bush Sub-precinct H (Mixed Housing Suburban)

This Sub-precinct relates to land in the upper McQuoids Road / Flat Bush School Road area that transitions to the upper catchment area. It therefore anticipates a medium density residential environment with development controls to ensure a degree of spaciousness.

Flat Bush Sub-precinct K (Single House)

This area relates to steeper land in the upper McQuoids Road / Flat Bush School Road area that transitions to the upper catchment area. It therefore anticipates lower density residential environment with development controls to ensure a degree of spaciousness.

These two Sub-precincts apply outside the urban areas:

Flat Bush Sub-precinct I (Countryside Transition)

This Sub-precinct relates to land within the upper catchment area and alongside the many streams and waterways in the Sub-precinct. The Sub-precinct further functions to protect and enhance the natural environmental qualities found within the Sub-precinct, while providing for appropriate countryside living.

Flat Bush Sub-precinct J (Conservation and Stormwater Management)

This Sub-precinct covers the steep gully areas and waterways that have been identified as warranting environmental enhancement. The function of the Sub-precinct is to improve the overall ecological condition of these gullies and waterways and ensure a level of open space by limiting development in these sensitive areas and undertaking riparian planting and allowing areas of existing native vegetation to regenerate. The riparian planting will enhance the ecological condition of streams, maintain stream bank stability and reduce the level of erosion and flooding created within the catchment where existing exotic planting exists. Land covered by this Sub-precinct is to remain in private ownership and is to be kept free from buildings and structures.

Flat Bush Sub-precinct C

Sub-precinct C is the subject of operative Plan Variation 8, pursuant to the Housing Accords and Special Housing Areas Act 2013. Accordingly, Sub-precinct C is not subject to the provisions of the Flat Bush Precinct.

Flat Bush Precinct outside sub-precincts

Areas which fall within the boundaries of the Flat Bush Precinct and which are not within the boundaries of any sub-precinct are not subject to any of the standards or other

provisions which apply to those sub-precincts. The provisions of the zoning, Auckland-wide and overlays apply to the areas of Flat Bush Precinct which lie outside any sub-precincts.

Flat Bush conservation and stormwater management area

The Flat Bush conservation and stormwater management area lies over part of the land within Flat Bush Sub-precinct J (Conservation and Stormwater Management). The purpose of this sub-precinct is to improve the overall ecological condition of these gullies and waterways by requiring riparian planting and allowing areas of existing native vegetation to regenerate. The riparian planting will enhance the ecological condition of streams, maintain stream bank stability and reduce the level of erosion and flooding created within the catchment where existing exotic planting exists.

Areas covered by this overlay are to remain in private ownership and are to be kept free from buildings and structures.

The zoning of land within the Flat Bush Sub-precincts A,B and D to K is set out in the following table:

Table I412.1.1 - Zoning of land within this precinct

Zones	Sub-precincts
Residential - Mixed Housing Urban and Residential - Mixed Housing Suburban	Flat Bush Sub-precinct A (General)
Residential - Terrace Housing and Apartment Buildings	Flat Bush Sub-precinct B (Central)
Residential - Terrace Housing and Apartment Buildings and Residential - Mixed Housing Suburban	Flat Bush Sub-precinct D (Arterial)
Residential - Terrace Housing and Apartment Buildings and Residential - Mixed Housing Urban	Flat Bush Sub-precinct E (Barry Curtis Edge)
Residential - Terrace Housing and Apartment Buildings	Flat Bush Sub-precinct F (Local Centre)
Residential Mixed Housing Suburban	Flat Bush Sub-precinct G (Open Space)
Residential Mixed Housing Suburban	Flat Bush Sub-precinct H (Mixed Housing suburban)
Residential - Single House	Flat Bush Sub-precinct K (Single House)
Residential - Large Lot	Flat Bush Sub-precinct I (Countryside Transition)
Rural - Countryside Living	Flat Bush Sub-precinct J (Conservation and Stormwater Management)
A noted above areas of the Flat Bush Precinct that lie outside the boundaries of any of the sub-precincts listed above are subject to the provisions of the zone.	

I412.2. Objective

I412.2.1. Objectives for Flat Bush Precinct

- (1) A well-connected, adaptable, safe, attractive and healthy environment for living, working and movement with an emphasis on the importance of the public realm, is achieved.
- (2) An appropriate range of physical and social infrastructure and facilities enhance the resulting urban environment and address any adverse effects of urbanisation.
- (3) Ecology of remnant native vegetation and waterways are protected, sustained, restored and enhanced.
- (4) A pattern of commercial activities based on an identifiable community focus is established which is supported by office or institutional activities and small scale business and mixed use activities along nominated main roads and in close proximity to the town and neighbourhood centres.
- (5) A safe, efficient, well-connected and integrated transport system is established within and beyond the Flat Bush area that provides a choice of travel modes.
- (6) High quality residential amenity is promoted for all types of housing that reflects and responds to community needs and the physical environment both now and in the future.
- (7) Stormwater runoff is managed to enable the maintenance and enhancement of natural waterways, native forest and wetlands and to provide passive recreational opportunities as well as pedestrian and cycle access.
- (8) The adverse effects on Auckland International Airport of activities sensitive to aircraft noise within the medium aircraft noise area (MANA) in the Flat Bush Precinct are minimised.

I412.2.2. Objectives for Flat Bush Sub-precincts A, B, D, E, F, G, H and K

- (1) An integrated, medium to high density residential environment which has high levels of amenity, supports a range of travel modes, allows for a range of living opportunities and incorporates opportunities for compatible small scale employment.
- (2) A street grid that, combined with the park edge road network, provides a legible urban pattern that reveals the Flat Bush landscape.
- (3) In Sub-precincts H and K, the landscape quality, water and soil resources, native forest, wetlands and open space amenity values of this highly visible landscape in the mid to upper reaches of the Flat Bush basin along with a degree of spaciousness in this medium to low density residential sub-precinct is maintained and enhanced.

I412.2.3. Objectives for Flat Bush Sub-precincts I and J

- (1) The landscape quality, water and soil resources, native forest, wetlands and open space amenity values of this highly visible landscape in the mid to upper

reaches of the Flat Bush basin along with the spaciousness in these low density residential sub-precincts is maintained and enhanced.

The zone, Auckland-wide and overlay objectives apply in this precinct in addition to those specified above.

I412.3. Policies

I412.3.1. Policies for Flat Bush Precinct

- (1) Enable land uses within Sub-precincts that orient primarily towards business, residential and open space activities and provide a gradation of residential activity density by:
 - (a) focusing the highest allowable densities around the Flat Bush Town Centre, Flat Bush Neighbourhood Centres, the perimeter of Barry Curtis Park and along arterial roads;
 - (b) allowing medium/higher densities within the remaining residential areas; and
 - (c) locating less intensive residential areas at the extremities of the Flat Bush Precinct Plan area.
- (2) Enable an integrated road and transport system by guiding the design and layout of subdivision to provide connectivity and the opportunity for a variety of travel modes.
- (3) Encourage riparian planting along waterways to:
 - (a) maintain and enhance water quality and aquatic habitats;
 - (b) enhance existing native forest and wetland areas within the catchment; and
 - (c) reduce stream bank erosion.
- (4) Require subdivision and development to be of a type, density and design that does not detract from, and is supportive of, the specific environmental outcomes identified for each Sub-precinct.
- (5) Require subdivision and development to incorporate sustainable management principles as part of the land modification process to comply with safe practices in the identification, assessment, treatment and/or remediation of asbestos-containing materials.
- (6) Require subdivision, land use and development to maintain and enhance the natural character and ecological values of the wider Flat Bush precinct and provide access to such features so they contribute to the unique character of the area by:
 - (a) using the conservation and stormwater management area and subdivision standards to maintain and enhance identified watercourses and environmental corridors; and

- (b) requiring street patterns to maximise long views to the environmental corridors where practical and having regard to topography.
- (7) Require open space corridors to be edged by streets and maintain physical integration between the open space and street environment e.g. significant grade changes are avoided.
- (8) Avoid residential development beyond the average site size control within the MANA to minimise the effects of aircraft noise on residents.

I412.3.2. Policies for Flat Bush Sub-precincts A, B, D, E, F, G, H and K

- (1) Encourage higher density residential development in close proximity to the Town Centre/Neighbourhood Centres, main arterials and public open space including Barry Curtis Park.
- (2) Maximise vehicular and pedestrian connectivity/permeability of the street network wherever possible.
- (3) Promote development where streets are to form blocks that enable:
 - (a) future development to conform to a perimeter block pattern of development where buildings front roads; and
 - (b) there is sufficient space between the rear of opposing dwellings to provide privacy.
- (4) Promote and maintain interconnectivity between sub-catchments.
- (5) In Sub-precinct H and K, require medium to lower densities and site coverage to create spacious urban development with reduced visual impact.

I412.3.3. Policies Flat Bush Sub-precincts I and J

- (1) Require lower densities and site coverage to create spacious rural and transitional urban development with reduced visual impact.
- (2) Require riparian planting of native species within the conservation and stormwater management area to:
 - (a) maintain and enhance water quality and aquatic habitats, existing native forest and wetland areas within the catchment; and
 - (b) improve general landscape qualities and to prevent stream bank erosion.
- (3) Require that activities, buildings and structures are designed and located to:
 - (a) retain significant native vegetation, including riparian vegetation; and
 - (b) protect the ecological and landscape values associated with the area.

The zone, Auckland-wide and overlay policies apply in this precinct in addition to those specified above.

I412.4. Activity table

The activity status of activities in the underlying zone, and Auckland-wide provisions apply in this precinct unless otherwise specified below.

Table I412.4.1 specifies the activity status of land use, development and subdivision activities in the Flat Bush Precinct pursuant to section 9(3) and 11 of the Resource Management Act 1991 or any combination of these sections where relevant.

Table I412.4.1 Activity status of land use, development and subdivision activities in the Flat Bush Precinct

Activity		Activity status by Sub-precinct									
		A	B	D	E	F	G	H	I	J	K
Residential											
(A1)	One dwelling per site	P	P	P	P	P	NA	P	P	NA	P
(A2)	Two or more dwellings (including integrated landuse and subdivision resource consent)	RD	RD	RD	RD	RD	NA	RD	RD	NA	RD
Development											
(A3)	Alterations and additions to existing dwellings involving habitable room(s) within the Moderate Aircraft Noise Area	RD	RD	RD	RD	RD	P	RD	RD	NC	RD
(A4)	Cluster Housing on sites greater than 20ha	NA	NA	NA	NA	NA	NA	NA	D	D	NA
Community Facilities

Subdivision											
<p>Note: The Auckland-wide standards for Subdivision apply. Under E38 Subdivision – Urban, Activity Table E38.4.2, (A18) “Vacant sites subdivision involving a parent site of 1ha or greater complying with standard E38.8.3.1” require a discretionary activity consent. The following subdivision activities that are listed as RD and involve a parent site of 1 Ha or more therefore become discretionary activities if the parent site is 1 ha or more.</p>											
(A14)	Any subdivision activity that is integrated with a land use consent that does not comply with the site size identified in I412.6.2.1 and the minimum site dimensions identified in I412.6.2.2.	RD	RD	RD	RD	RD	NA	NA	NA	NA	NA
(A15)	Any subdivision activity on sites that include more than one sub-precinct, and which varies from the maximum or minimum average site size requirements specified in I412.6.2.1	RD	RD	RD	RD	RD	NA	NA	NA	NA	NA
(A16)	Any subdivision that contains land within the Sub-precinct J	NA	NA	NA	NA	NA	NA	NA	RD	RD	NA
(A17)	Any subdivision that does not comply with I412.6.2.3	D	D	D	D	D	D	D	D	D	D

(A18)	Any activity (including subdivision) which includes wastewater disposal in the Sub-precinct I	NA	NA	NA	NA	NA	NA	NA	RD	NA	NA
(A19)	Any subdivision, building or structure within the Sub-precinct J	NA	NA	NA	NA	NA	NA	RD	RD	RD	RD
(A20)	Any subdivision, building or structure within the Sub-precinct G	RD	RD	RD	RD	RD	RD	NA	NA	NA	NA

I412.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I412.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under s95A(4) of the Resource Management Act 1991.
- (2) A resource consent application under I412.6.2.4(2)(e) – Alternative Road Layouts may be considered on a limited notified basis within the sub-catchment areas as shown on Precinct Plan 3. Sub-catchments.
- (3) Any other application for resource consent for an activity with a different activity status listed in Table I412.4.1 above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (4) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I412.6. Standards

I412.6.1. Permitted activity standards

The overlay, zone and Auckland-wide standards apply in this precinct except the following;

- (1) The following standards within Residential - Mixed Housing Suburban Zone and Residential - Mixed Housing Urban Zone do not apply.
 - (a) Outlook;
 - (b) Separation between Buildings within a site; and
 - (c) Maximum building length.

All activities listed as permitted and restricted discretionary in table I414.4.1 Activity table must comply with the following permitted activity standards:

I412.6.1.1. Density

- (1) The following density requirements shall apply within the Flat Bush Sub-precincts:

Table I412.6.1.1.1 Density requirements

	Sub-Precinct									
	A	B	D	E	F	G	H	I	J	K
Minimum density (sqm net site area per dwelling)	425	300	425	250	425	NA	<u>520</u>	2000	NA	<u>1000</u>
Maximum allowable density within the MANA area (sqm per dwelling)	400	NA	150	180	300	NA	NA	NA	NA	<u>NA</u>
Maximum density	NA	NA	NA	NA	NA	NA	NA	5000	NA	NA

- (2) Site size in Sub-precincts H, I and K may include land within Sub-precinct J and land in Sub-precinct G which is not required for open space purposes.

- (3) Any application not meeting the density requirements of I412.6.1.1(1) shall be a non-complying activity.

I412.6.1.2. Building height

- (1) Buildings must not exceed the maximum height in the table below:

Table I412.6.1.2.1 Building height

	Sub-Precinct									
	A	B	D	E	F	G	H	I	J	K
Maximum height in meters	9	9	12	16	9	8	8	8	8	8

I412.6.1.3. Height in Relation to Boundary

- (1) The following height in relation to boundary controls apply:

- (a) for all lots, the height in relation to boundary control does not apply to the street boundary;

- (b) in the case of front lots (not being a corner lot or adjacent to a corner lot) a building height in relation to boundary of 5m and 45° must apply on side boundaries adjoining other front lots, up to a maximum distance of 8m from the rear boundary;
- (c) a height in relation to boundary of 2.5m and either 45° (for east or west boundaries), 55° (for north boundaries), 35° (for southern boundaries) must apply to the remaining part of any side boundary that is within 8m from the rear boundary;
- (d) in the case of front lots which adjoin a corner lot the following apply:
 - (i) on side boundaries that adjoin the shortest side boundary of the corner lot, a height in relation to boundary of 2.5m and either 45° (for east or west boundaries), 55° (for north boundaries), 35° (for southern boundaries) must apply to the whole length of the boundary including where that side boundary extends beyond the corner lot;
 - (ii) on side boundaries that adjoin the longest side boundary of the corner lot, a building height in relation to boundary of 5m and 45° must apply up to a maximum distance of 8m from the rear boundary. Standard I412.6.1.3(1)(c) must apply to the remaining part of the side boundary that is within 8m from the rear boundary; and
 - (iii) in relation to the shortest side boundary of a corner lot (including where that side boundary extends beyond the corner lot) all windows above the ground floor level facing the corner lot (or facing a lot adjoining the corner lot) must have a window sill level at least 1.6m above the floor level or be fitted with opaque glass;
- (e) in the case of corner lots the following apply:
 - (i) on the shortest side boundary of the corner lot, a height in relation to boundary of 2.5m and either 45° (for east or west boundaries), 55° (for north boundaries), 35° (for southern boundaries) must apply;
 - (ii) on the longest side boundary of the corner lot, a building height in relation to boundary of 5m and 45° must apply up to a maximum distance of 8m from the side boundary. A height in relation to boundary of 2.5m and either 45° (for east or west boundaries), 55° (for north boundaries), 35° (for southern boundaries) must apply to the remaining part of the side boundary that is within 8 m from the rear boundary; and
 - (iii) all buildings within 6m of the shortest side boundary must be limited to a single storey and a 5m maximum height;
- (f) exceptions for Height in Relation to Boundary identified in I412.6.1.3(1)(a)-(e) above:

- (i) a gable end including fascia up to a maximum of 7m² may intrude into the height in relation to boundary recession plane. For the purposes of this standard a gable end is defined as the triangular sides of a building with a gable roof where the wall reaches all the way to the ridge;
- (ii) no account shall be taken of minor projections such as radio and television aerials, antennas, solar heating devices and chimneys (not exceeding 2.0m in any horizontal direction and projecting no more than 2.0m above the maximum permitted height of the main structure);
- (iii) where a site abuts an entrance strip, private way, access lot, access way or public walkway the furthest boundary of these may be deemed to be the site boundary for the purpose of this standard; and
- (iv) there is no height in relation to boundary applicable to the length of the common wall between abutting buildings.

I412.6.1.4. Yards

- (1) A building or parts of a building must be set back from the relevant boundary by the minimum depth listed in Table I412.6.1.4.1 below.

Table I412.6.1.4.1 Yards

	Sub-Precinct									
	A	B	D	E	F	G	H	I	J	K
Front Yard in meters	3	NA	0	0	3	0	4	6	6	4
Side Yard in meters	1.2	1.2	1.2	1.2	1.2	0	3	6	0	3
Rear yard ¹ in meters	8	8	8	8	8	0	8	6	0	8

- (2) Provided that:
 - (a) rear yards on all sites must be a minimum of 8m (except 6m in Sub-precinct I), except that a single storey building (or part of a building) up to a maximum height of 5m is permitted within the rear yard provided that it is no closer than 3m from the rear boundary;
 - (b) the rear yard required above does not apply where the site adjoins a rear lane or access lot; and
 - (c) for rear sites (except in Sub-precinct I), all yards must be a minimum of 3m.

I412.6.1.5. Building coverage

- (1) The maximum building coverage must not exceed the relevant percentage set out in table I412.6.1.5.1 below.

Table I412.6.1.5.1 Maximum building coverage (as a percent of the site)

	Maximum Building Coverage (as a percent of the site)									
	Sub-Precinct									
	A	B	D	E	F	G	H	I	J	K
Sites over 400sqm net site area	40	40	50	50	40	NA	35	15	NA	30
Sites between 200sqm-399sqm net site area	40	45	50	50	45	NA	NA	NA	NA	NA
Sites under 200sqm net site area	50	50	50	50	50	NA	NA	NA	NA	NA

I412.6.1.6. Impervious Area

- (1) The maximum impervious area must not exceed 70 per cent of the gross site area.

I412.6.1.7. Fences

- (1) Where land within Flat Bush Precinct adjoins Flat Bush Sub-precincts G or J, the boundary fencing or walls along the common boundaries shall be limited to a maximum height of 1.8m.

I412.6.2. Subdivision**I412.6.2.1. Minimum and average lot sizes**

- (1) Minimum and average site sizes shall comply with the table below and the controls which follow:

Table I412.6.2.1.1 Minimum and average lot sizes

	Sub-Precinct							
	A	B	D	E	F	H	I	K
Average Site size in sqm	325 to 425	NA	325 to 425	325 to 425	325 to 425	NA	5000	NA
Average Site size in sqm within MANA	425 to 450	NA	NA	NA	NA	NA	NA	NA
Minimum site size in sqm	325	NA	325	325	325	520	2000	1000

- (a) average or minimum site size in Sub-precincts H, I and K may include land within Sub-precinct J;
- (b) no minimum lot sizes apply to an integrated land use and subdivision application;
- (c) additional Development Standards to be met in the Flat Bush Sub-precinct I:
- (i) subdivision creating sites will only be permitted on land held in a separate Certificate of Title on 27 October 2010 (the existing site); and
 - (ii) subdivisions are permitted to be made in stages by reference back to the existing site. Multiple subdivision consent applications may not be used to negate the provision for an average site size or the maximum number of sites that would be permitted by the subdivision of the existing site;
- (d) Any application not meeting any of the above requirements shall be a non-complying activity.

I412.6.2.2. Minimum site dimensions

- (1) Minimum sites dimensions shall comply with the table below:

Table I412.6.2.2.1 Minimum site dimensions

	Sub-Precincts		
	A, B, D, E & F	H & K	J
Front Site Minimum Width in metres	12.5	20	25
Front Site Minimum Depth in metres	26	26	NA
Front Site Legal Width of Back Lanes in metres	7	NA	NA
Rear sites	NC	NA	NA

- (2) There shall be no minimum site size within Sub-precincts A, B, D, E, & F where subdivision is proposed as part of an integrated land use consent, provided that within the MANA the maximum allowable densities set out in Standard I412.6.1.1 are complied with.
- (3) Any application not meeting the above requirements shall be a discretionary activity.

I412.6.2.3. Subdivision standards applying to land within Sub-precincts G and J

- (1) The following subdivision standards apply to land within Sub-precincts G and J:
 - (a) standards for Sub-precinct G:
 - (i) upon development or subdivision of sites containing land within Sub-precinct G, such areas shall be vested in the Council for public open space purposes;
 - (ii) all Stormwater Management Areas are indicative only and the exact boundaries are subject to final stormwater modelling;
 - (iii) all land contained within the Sub-precinct G that is vested in Council upon subdivision, development or by direct purchase, shall be administered in accordance with the Standards set out below for Sub-precinct J;
 - (iv) where all or part of the land identified within the Sub-precinct G is not required to be vested in Council as public open space, the area status shall no longer apply and the provisions of the underlying Zone will apply; and
 - (v) where land is no longer required as a Stormwater Management Area within the Flat Bush area the land shall be administered in accordance with the provisions for Sub-precinct G;
 - (b) standards for Sub-precinct J:
 - (i) access to all sites and all building platforms within the subdivision shall be wholly outside Sub-precinct J;
 - (ii) where an application for subdivision consent includes two or more adjoining sites, the combined areas may be treated as one site for the sole purpose of subdivision design and configuration, provided that the average site size and minimum site size are in accordance with Table I412.6.2.1.1.
 - (iii) land within Sub-precinct J to be set aside for planting and to be secured by consent notice shall be planted and a programme of weed and pest control shall be provided for in the consent notice;
 - (iv) a Riparian Planting Plan shall be provided as part of any application for land modification, development and subdivision; and

- (v) the developer shall be responsible for the routine maintenance and replacement of any planting they provide for a period of two years from the time of planting.

I412.6.2.4. Movement Network

(1) All subdivision shall comply with the following controls:

- (a) roads shall be provided in accordance with the indicative alignments in Figure 1 Collector Road Park Edge with development on one side and the Precinct Plan 2. Road Network shall be constructed to the standards contained within Table I412.6.2.4.2: Construction Standards for Additional Road Types within the Flat Bush Precinct Plan Area or, where not contained in Table I412.6.2.4.2, the relevant Auckland Wide standards shall apply;
- (b) all new subdivisions, roads and sites shall comply with the standards and terms in Table I412.6.2.4.1 Connected Movement Network and shall be built in accordance with the cross sections in Figures 1 through to Figure 5.

Table I412.6.2.4.1 Connected Movement Network

	Sub-Precinct									
	A	B	D	E	F	G	H	I	J	K
Maximum Block Length in metres	250	250	250	250	250	NA	NA	NA	NA	NA
Maximum Block Perimeter Distance in metres	700	700	700	700	700	NA	NA	NA	NA	NA
Maximum cul-de-sac lengths (excluding turning circle) in metres	0	0	0	0	0	NA	200	NA	NA	200

Table I412.6.2.4.2 Construction Standards For Additional Road Types Within The Flat Bush Precinct Plan Area

Types of road	Road	Carriage -way	Max. grade	Figure
Collector Road Park Edge with development on one side in metres	19.6	9.2	8.33%	Refer Figure 1
Collector Road Park Edge – Bridge in metres	15	7	8.33%	Refer Figure 2

Collector Road Park Edge - with public open space on both sides in metres	17.4	7	8.33%	Refer Figure 3
Flat Bush Local Road in metres	18.2	7.8	12.5%	Refer Figure 4
Flat Bush Local Road Park Edge in metres	14	7.8	12.5%	Refer Figure 5
Flat Bush Special Local Road Park Edge	14	8.1	2.5%	Refer Figure 6

(2) Alternative road layouts:

- (a) alternative road layouts may be proposed which demonstrate the implications for the whole sub-catchment within which the changes are proposed as identified in Precinct Plan 3. Sub-catchments shall be constructed to the standards contained within Table I412.6.2.4.2 Construction Standards for Additional Road Types within the Flat Bush Precinct Plan Area, or where not contained in Table I412.6.2.4.1 Connected Movement Network;
- (b) all alternative road layouts shall meet the requirements of Standard I412.6.2.4(1)(b) and shall not alter the position of arterial roads as identified in Precinct Plan 2. Road Network;
- (c) all alternative road layouts must maintain the position of key specified local road connections between sub catchment areas, as indicated in Precinct Plan 4. Key Road Connections;
- (d) in the Sub-precincts A, B, D, E, & F the block depth shall accommodate the minimum site dimension as specified in Standard I412.6.2.2 Minimum site dimensions; and
- (e) any application not meeting the above requirements shall be a restricted discretionary activity.

I412.7. Assessment – controlled activities

I412.7.1. Matters of control

(1) The Council will reserve its control to the matters below for the activities listed as controlled in the precinct activity tables:

- (a) formed Bridle Trails and Mountain Bike Trails in Sub-precincts F and I:
 - (i) location and design; and
 - (ii) personal safety and damage to and effects on neighbouring properties.

I412.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the zone or Auckland-wide provisions:

- (1) Formed Bridle Trails and Mountain Bike Trails in Sub-precincts G and J:

(a) location and design:

- (i) whether the bridle trail provides for safe and convenient access and addresses effects on the safe and efficient operation of the adjoining road network; and
- (ii) whether the access has a minimal adverse effect on pedestrian access and safety and/or the recreational or environmental functions of the areas;

(b) personal safety and damage to and effects on neighbouring properties

- (i) whether the activity results in a dangerous situation to other public open space users or otherwise detracts from other users enjoyment of the public open space.
- (ii) the activity should not cause damage to neighbouring residential properties.

I412.8. Assessment – restricted discretionary activities

I412.8.1. Matters of discretion

(1) The Council will restrict its discretion to the matters listed below when assessing a restricted discretionary activity resource consent application listed in Table I412.4.1 Activity table, in addition to the matters specified for the relevant restricted discretionary activities in the zone or Auckland-wide provisions:

(a) restricted discretionary activity within Sub-precinct J:

- (i) existing native vegetation, riparian planting, ecosystem and natural landscape quality;
- (ii) placement of buildings infrastructure and other structures; and
- (iii) site stability;

(b) restricted discretionary activity within all other sub-precincts:

- (i) existing native vegetation, riparian planting, ecosystem and natural landscape quality;
- (ii) placement of buildings infrastructure and other structures;
- (iii) design and external appearance;
- (iv) servicing - Wastewater disposal and discharge of contaminants; and
- (v) site stability.

(2) For construction of more than two or more dwellings within Flat Bush Sub-precincts A or B (including integrated land use and subdivision):

(a) subdivision as part of an Integrated Land Use.

(3) The Council will restrict its discretion to the matters listed below when assessing a restricted discretionary activity resource consent for infringements of I412.6.1

Permitted Activity Standards and I412.6.2 Standards for Subdivision, in addition to the matters specified in the zone, or Auckland-wide provisions:

- (a) infringements of I412.6.2 Standards for Subdivision:
 - (i) road Standards;
 - (ii) provision of Back Lanes;
 - (iii) legibility of Network, Safety, Block Pattern and Neighbourhood Identity;
 - (iv) movement Network: Maximum Block Length and Maximum Block Perimeter Distance;
 - (v) variations in the maximum or minimum allowable average site sizes after adjustment of the boundaries between adjoining sub-precincts and areas;
 - (vi) design and Layout of Subdivision, Staging, Design and External Appearance;
 - (vii) impact of Previous Subdivision within Sub-precinct I; and
 - (viii) movement network;
- (b) Infringements of I412.6.2.4(2) Alternative Road Layouts
 - (i) legibility of Network, Safety, Block Pattern and Neighbourhood Identity; and
 - (ii) movement network.

I412.8.2. Assessment criteria

I412.8.2.1. Assessment criteria for Listed Restricted Discretionary Activities

The Council will consider the relevant assessment criteria below for activities listed as restricted discretionary activities in Table I412.4.1, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the zone, or Auckland-wide provisions:

- (1) Existing native vegetation, riparian planting, ecosystem and natural landscape quality:
 - (a) the development should not alter the existing topography of the site or affect existing natural features or existing native vegetation;
 - (b) the development should not adversely affect the ability in the future to protect land within Sub-precinct J from development and undertake native riparian planting;
 - (c) the development should propose a Riparian Planting Plan for Sub-precinct J that should add ecological and amenity values as public open space;
 - (d) the proposal should avoid adverse effects on the freshwater and terrestrial ecosystems including the quality of the water and riparian vegetation, areas of native forest and wetlands or on the natural

habitats of birds, aquatic species and wildlife found within Sub-precincts G or J;

- (e) the proposal should not impact on the natural landscape quality of Sub-precincts F or I;
- (f) the proposed planting should be sufficiently robust to survive in the proposed location;
- (g) the pest and weed management programme for the area should protect the planting from damage and ensure plant survival; and
- (h) a refundable bond may be required to ensure that the riparian planting undertaken in accordance with the approved riparian planting plan survives for a two-year period from the time of planting.

(2) Placement of buildings infrastructure and other structures:

- (a) the design and external appearance of a building or structure in terms of scale, form, materials and colour should respect the natural character and aesthetic qualities of the sub-precinct;
- (b) the proposed building or structure should make a positive contribution to the built form of the surrounding streetscape and to any existing buildings on the public open space; and
- (c) the placement of buildings and structures should avoid Sub-precinct J.

(3) Design and external appearance:

- (a) the proposed building or structure should be sympathetic to the surrounding natural landscape qualities and characteristics;
- (b) the car parking and access for the proposed building or structure should be safe and convenient while still maintaining an acceptable aesthetic quality;
- (c) the proposed activity should not generate noise levels that adversely affect the amenity of adjoining properties and whether any mitigation measures are proposed to reduce noise effects on these properties;
- (d) the development must satisfactory provide for attenuation of aircraft noise;
- (e) the design and external appearance of buildings including the scale, articulation, orientation and spacing should complement the existing buildings in the vicinity;
- (f) the bulk or repetitive form of buildings should not detract from the visual amenities of the neighbourhood; and
- (g) the car parking should be safe and convenient while still maintaining an acceptable aesthetic quality as viewed from the street, in particular the hard paved areas associated with parking and garaging should not dominate the streetscape.

- (4) Servicing - Wastewater disposal and discharge of contaminants:
- (a) the site should have sufficient area available to accommodate an adequate wastewater disposal system which should not create an erosion, land instability or water pollution problem and that should not adversely affect the stormwater treatment and discharge systems on the site, or adversely affect public health and safety;
 - (b) adequate provision should be made on site for rubbish storage and servicing and the areas should be adequately screened from view from public places and neighbouring sites; and
 - (c) the proposal should not generate any dust, smoke, fumes or other discharges to air which would potentially detract amenity values of the area.
- (5) Site stability:
- (a) the building, structure or activity should not adversely affect the stability of the site or adjacent sites.
- (6) For construction of two or more dwellings within Flat Bush Precincts (including integrated land use and subdivision):
- (a) subdivision as part of an Integrated Land Use;
 - (b) the proposed subdivision should follow rational boundaries with regard to access, privacy, amenity etc;
 - (c) acceptable levels of private outdoor living should be achieved for each dwelling; and
 - (d) restrictions should be included in the proposal such as, limitations on placements of windows, no build yard areas and maximum heights to ensure that privacy and avoiding domination of buildings is achieved.

I412.8.2.2. Assessment criteria for Restricted Discretionary Activities

The Council will restrict its discretion to the matters listed below when assessing a restricted discretionary activity resource consent for infringements of I412.6.1 Permitted Activity Standards and I412.6.2 Standards for Subdivision, in addition to the matters specified in the underlying zone or Auckland-wide provisions:

- (1) Infringements of I412.6.2 Standards for Subdivision:
- (a) road Standards:
 - (i) cycleways should provide continuous routes between subdivisions; and
 - (ii) subdivisional road and site layout and dimensions should optimise the orientation of the sites to the sun in terms of their likely future development;
 - (b) provision of back lanes that connect roads and/or provide alternative access to the rear of residential sites:

- (i) back lanes should be limited in length to ensure that long repetitive lanes are avoided;
 - (ii) building line restrictions should be introduced in relation to rear lanes to ensure that adequate opportunities are provided for landscaping and to limit repetitive building forms;
- (c) legibility of Network, Safety, Block Pattern and Neighbourhood Identity:
- (i) whether changes to the park edge local roads have adverse impacts on the design, amenity and usability of the adjacent open space and result in substantially greater earthworks and retaining structures adjacent to the open space than would otherwise be required;
 - (ii) whether the proposal avoids adverse effects on the clarity, legibility and connectivity of the roading network with particular regard to any cumulative effect which might arise with regard to the wider neighbourhood in each sub-catchment as shown on Precinct Plan 3. Sub-catchments;
 - (iii) whether the proposal achieves straight roads that maximise legibility to reveal the topography and strengthen visual connection to the wider landscape;
 - (iv) whether the proposed layout promotes good connectivity by all modes of travel including short walking routes to potential bus routes and other community infrastructure such as schools, neighbourhood centres and public open space;
 - (v) whether the proposal achieves a neighbourhood identity by maximising connections to landscape features and to other features such as schools, neighbourhood centres, public open space and community facilities;
 - (vi) whether the proposed layout contributes to a clear and legible understanding of the neighbourhood within the wider context;
 - (vii) whether the proposed road layout creates flexibility for a range of potential activities and residential densities to occur in appropriate places now and in the future;
 - (viii) whether vehicle access should be restricted (including on arterial routes) to achieve spatial outcomes that reinforce a sense of place and achieve a high quality public realm;
 - (ix) whether the proposed block pattern results in the opportunity to create regular shaped sections with the inherent flexibility to be developed for a range of potential activities and residential densities now and into the future;

- (x) whether the proposed street design and layout provides for consistency of treatment down lengths of street and appropriate integration to adjoining areas; and
 - (xi) whether the proposal impacts the clarity and legibility of the roading network with particular regard to the sub-catchment within which the proposed subdivision is located, as shown in Precinct Plan 3. Sub-catchments;
- (d) Movement Network: Maximum Block Length and Maximum Block Perimeter Distance:
- (i) whether the proposed road layout provides for convenient and safe access for pedestrian, cycle and vehicle users;
 - (ii) whether the proposed road layout provides for a clear and easily understood network that is easy to navigate through for all users; and
 - (iii) whether the proposed road layout is constrained by topography, trees or bush to be retained and/or fragmented land ownership and/or existing buildings;
- (e) variations in the maximum or minimum allowable average site sizes after adjustment of the boundaries between adjoining Sub-precincts:
- Note: This assessment is intended to apply where the Sub-precinct boundaries, as defined on the relevant planning maps, have been modified. In such instances the Council will assess whether the proposed subdivision yields the same number of sites as it would have in the case of a subdivision which complied with the maximum or minimum subdivision standards had the Sub-precinct boundary(s) remained unaltered.
- (i) whether the target densities of each of the adjoining sub-precincts are being generally achieved; and
 - (ii) the extent to which the average site size in each of the adjoining sub-precincts differs from the requirements of I412.6.2.1.
- (f) design and layout of subdivision, staging and design:
- (i) in the case of a staged subdivision, whether each stage of subdivision complies with the development and performance standards (including density) of the Sub-precinct. Council may, by way of either a consent notice or a condition of consent, require that any such density shortfall or surplus be made good in, or be carried forward to, subsequent stages of the subdivision;
 - (ii) whether the subdivision design provides an adequate buffer between the proposed sites and the conservation and stormwater management area;

- (iii) whether the design and layout of the subdivision protects land in the conservation and stormwater management area from inappropriate development; and
 - (iv) whether the subdivision provides an appropriate structure for the future ownership and management of land within the conservation and stormwater management area having regard to the native riparian planting requirement and on-going maintenance responsibilities. Whether the proposal achieves neighbourhood identity by maximising connections to landscape features and to other features such as schools, neighbourhood centres, public open space and community facilities;
- (g) impact of previous subdivision within Sub-precinct I where the site previously subdivided has reduced the average site size of the original subdivision below the average density of one per 5000sqm:
 - (i) whether the proposed subdivision detracts from the character of the area;
 - (ii) whether the proposed subdivision has sufficient open space within the conservation and stormwater management area to offset the effects of further subdivision on the site;
 - (iii) whether the proposed subdivision allows sufficient space for wastewater disposal outside of the conservation and stormwater management area; and
 - (iv) whether the proposed subdivision makes use of existing infrastructure including private ways, roads, reticulated water, wastewater disposal and power;
- (h) movement network:
 - (i) whether there are topographical, geotechnical or other environmental factors or constraints which indicate that changes to collector, park edge and local roads would improve the road layout from that set out in Precinct Plan 4;
 - (ii) whether the proposed road layout respects and relates to the existing contour and avoid permanent features such as steep cut faces and retaining structures which are highly visible;
 - (iii) whether the layout promotes good vehicular and pedestrian connectivity within the area including to community infrastructure such as bus stops, schools, neighbourhood centres, public open space and community facilities;
 - (iv) whether the proposal achieves an acceptable low impact stormwater management solution having regard to integrating good urban design and stormwater management solutions;

- (v) whether the road serves only a small number of dwellings or is for a short length;
- (vi) whether an alternative design of the road addresses traffic and pedestrian volumes, safety and amenity and access for emergency vehicles;
- (vii) whether on-street car parking is catered for;
- (viii) whether a footpath is required or is desirable on both sides of the road; and
- (ix) whether visual and physical differentiation is required and, if so, the modified section of road links appropriately with adjoining sections of road.

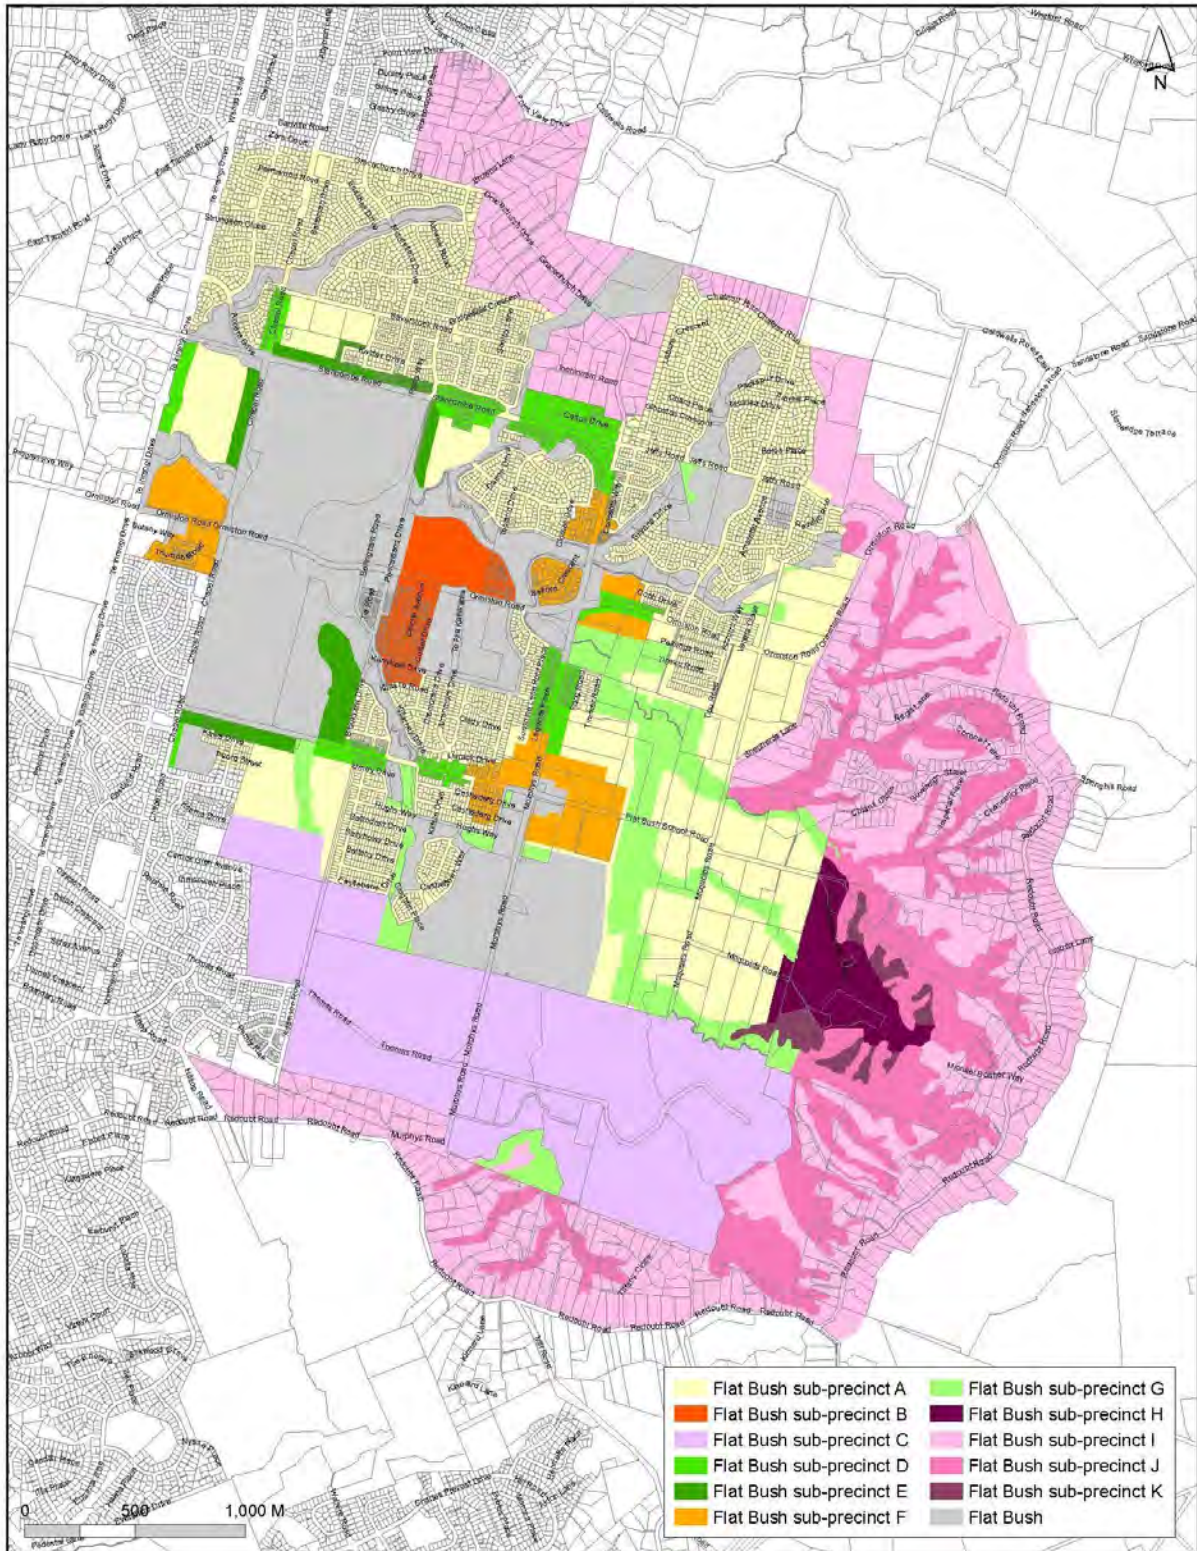

I412.9. Special information requirements

An application for land modification, development and subdivision must be accompanied by:

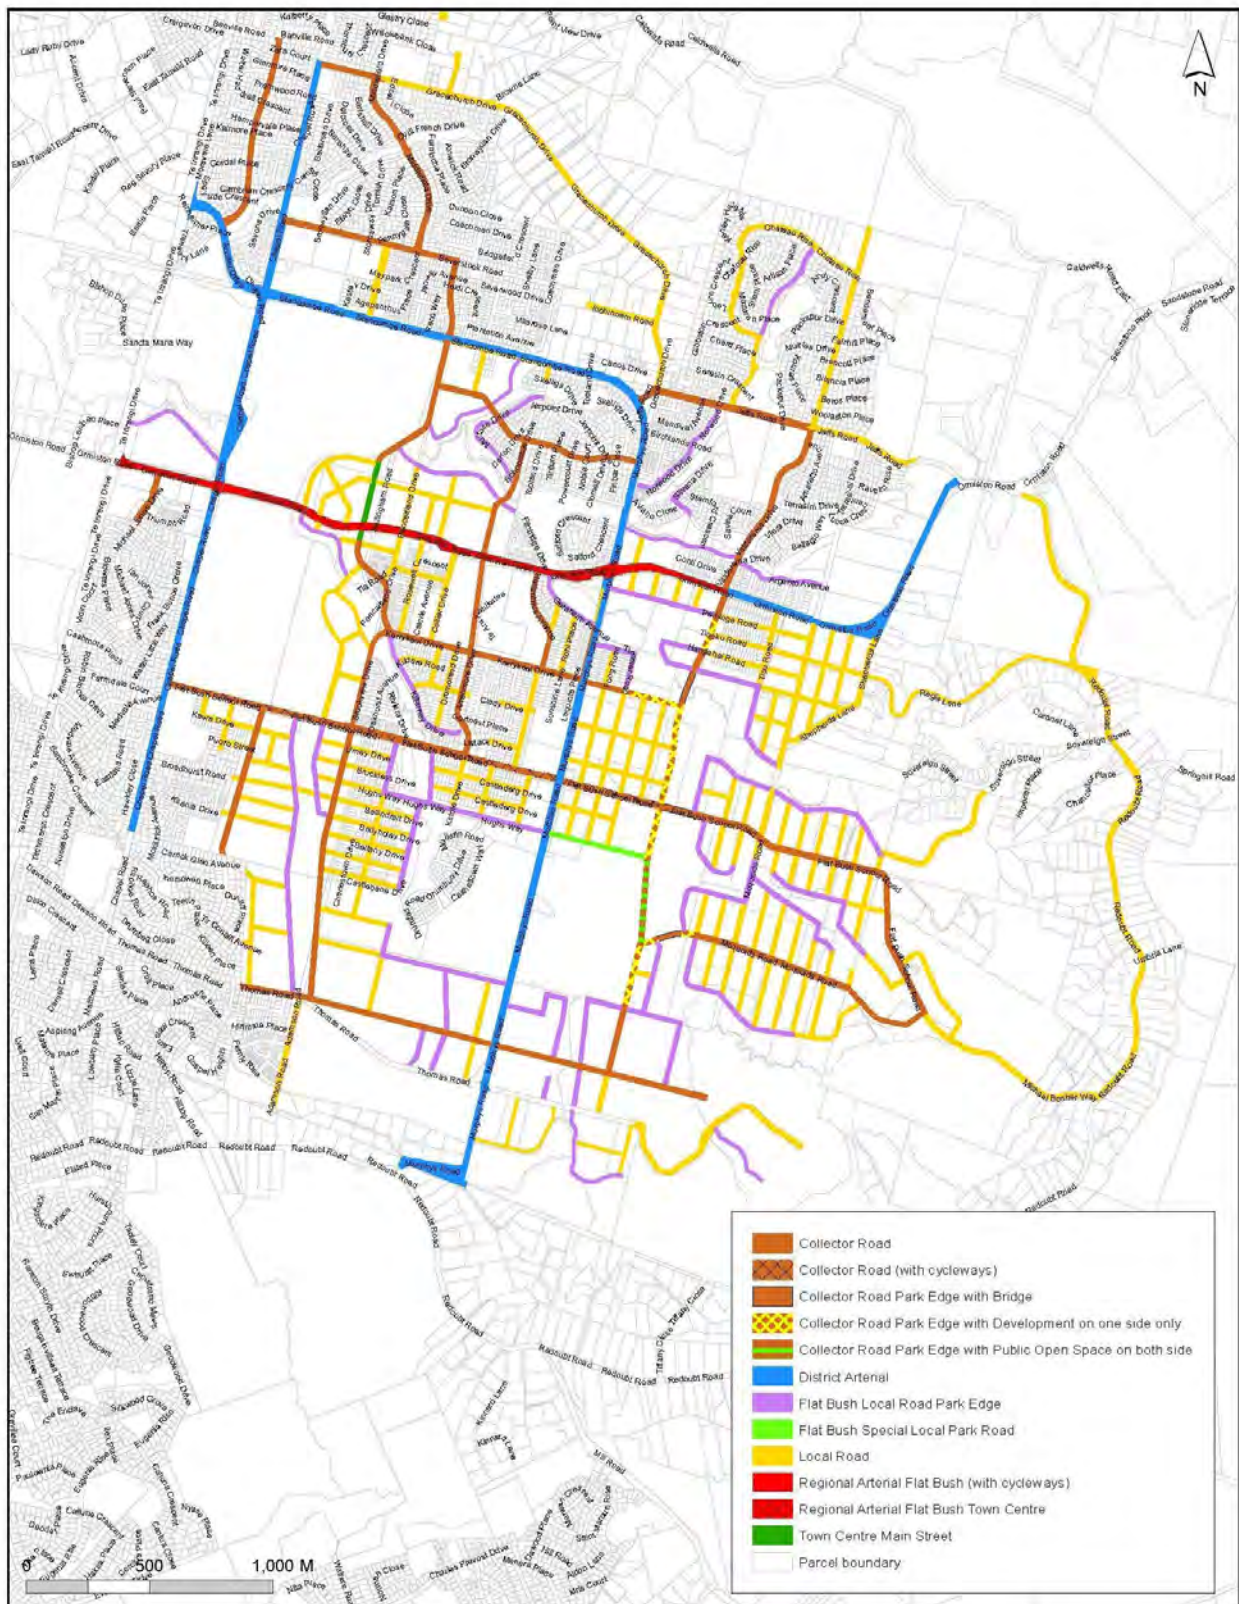

- (1) A riparian planting plan.

1412.10. Flat Bush Precinct Plans

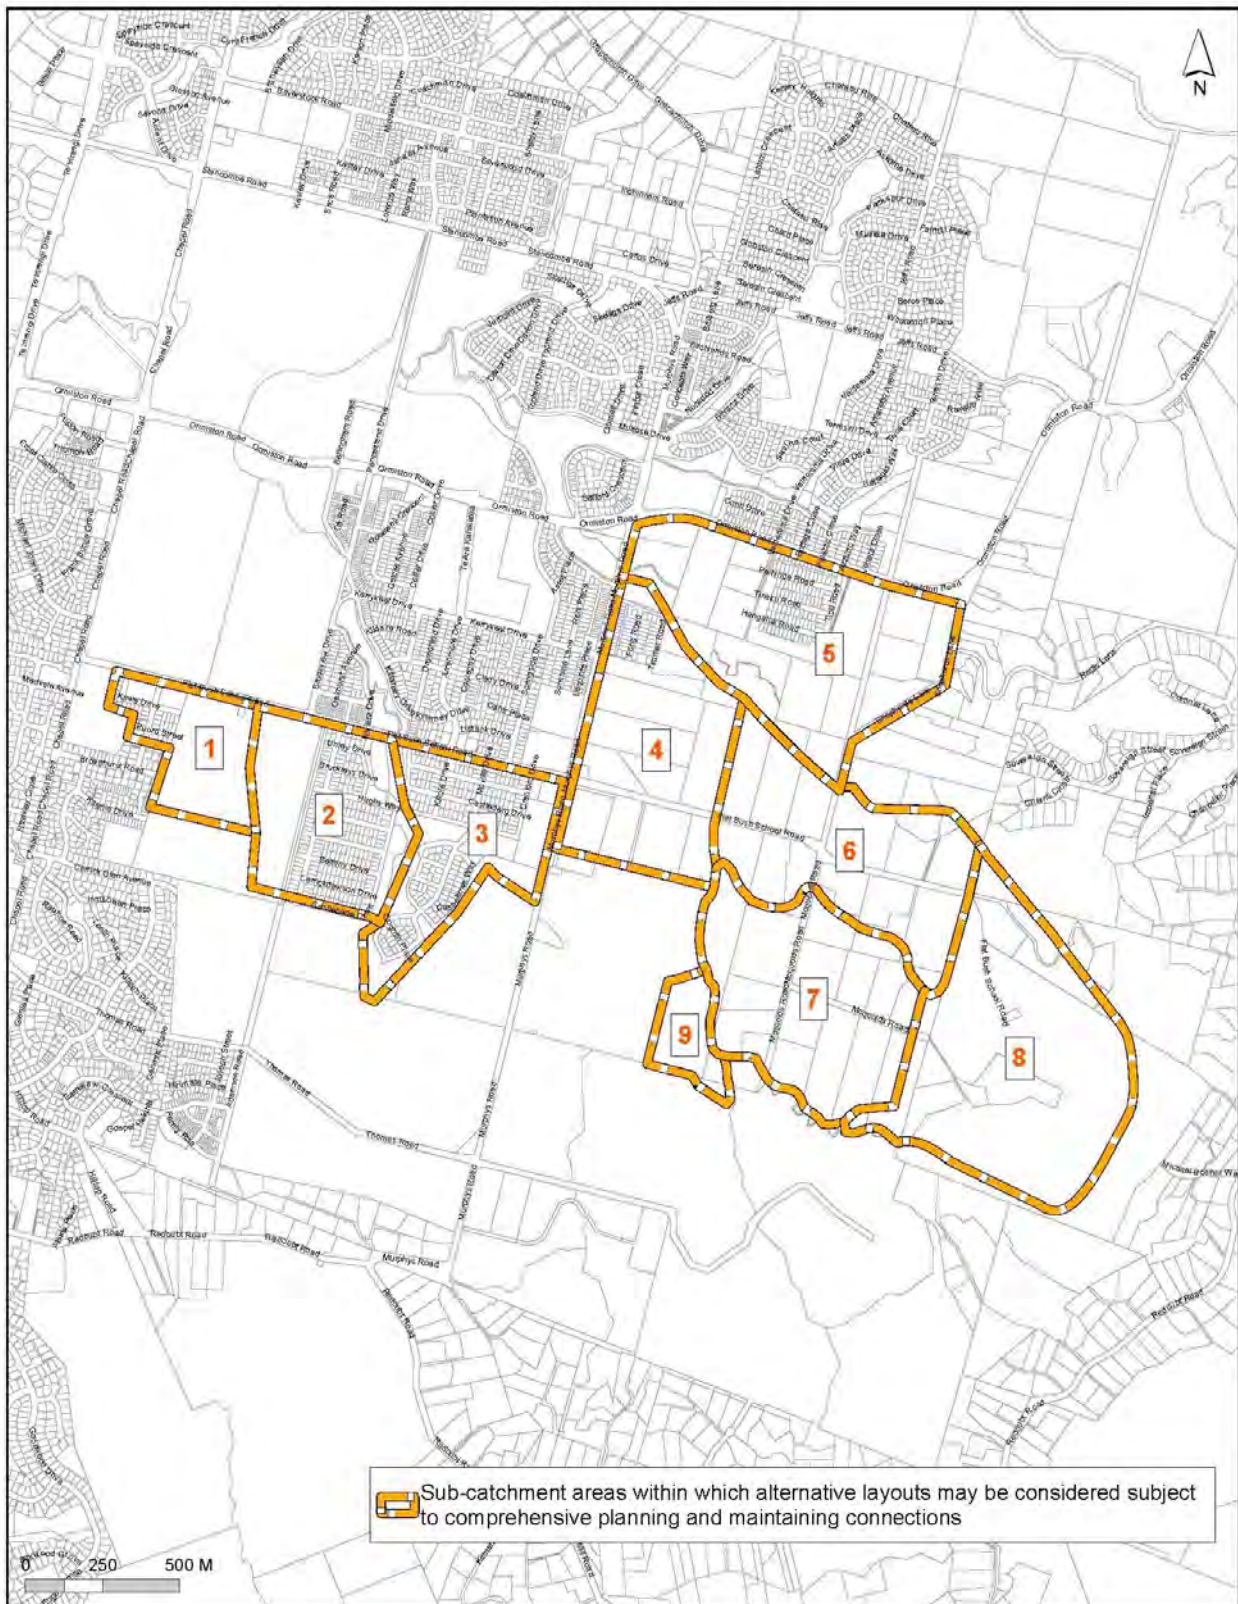

1412.10.1. Flat Bush: Precinct plan 1 - Sub-precincts Boundary

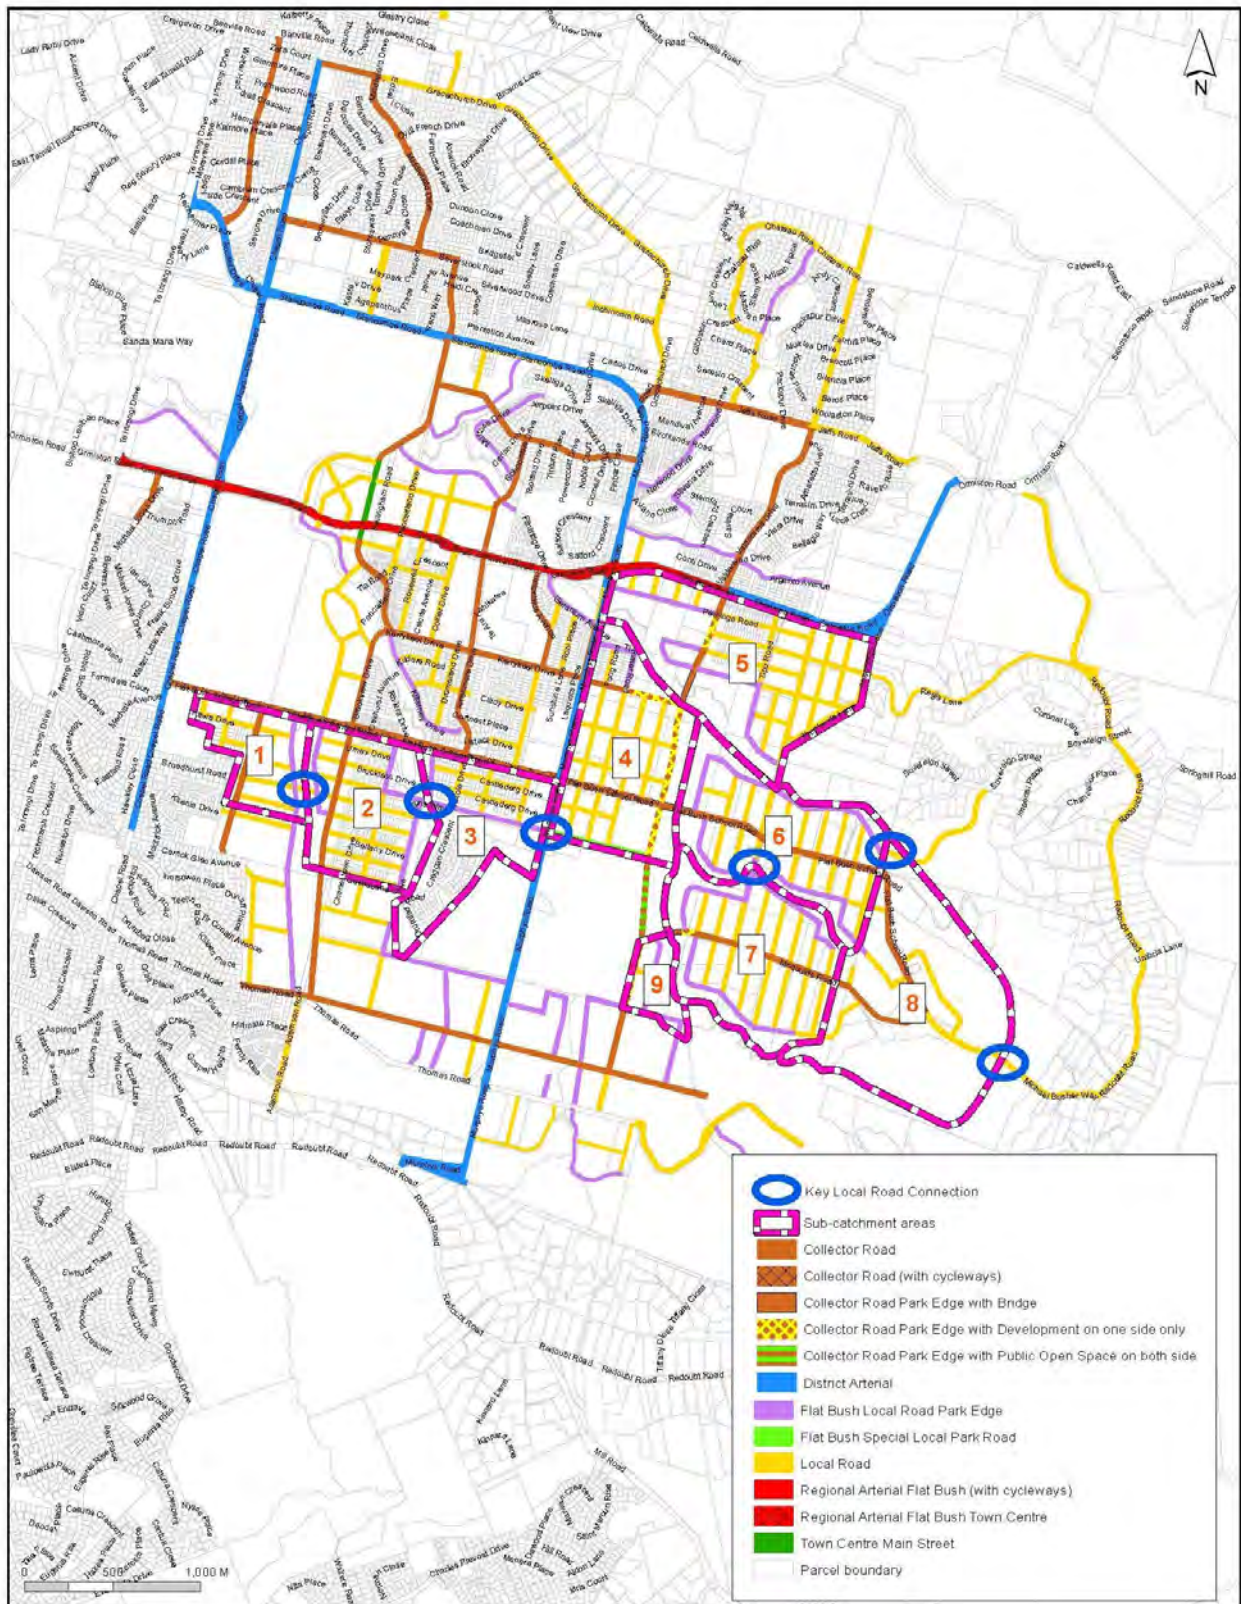

1412.10.2. Flat Bush: Precinct plan 2 – Road Network

1412.10.3. Flat Bush: Precinct plan 3 – Sub-catchments

1412.10.4. Flat Bush: Precinct plan 4 – Key Connections

I413. Franklin A&P Showgrounds Precinct

I413.1. Precinct description

The Franklin A&P Showgrounds Precinct provides specific planning controls for the use of the Franklin A&P Showgrounds. The Franklin A&P Showgrounds is a rural showgrounds situated on Station Road, Pukekohe.

The overlay, Auckland-wide and zone objectives and policies apply in this precinct in addition to those listed below.

The zoning of the land within the Franklin A&P Showgrounds Precinct is the Special Purpose - Major Recreation Facility Zone. Refer to the planning maps for the location and extent of the precinct.

I413.2. Objectives

- (1) The Franklin A&P Showgrounds are protected as a regionally and nationally important venue for horse racing.
- (2) A range of activities compatible with, or accessory to, the primary activity are enabled.
- (3) The adverse effects of the operation of the Franklin A&P Showgrounds are avoided, remedied or mitigated as far as is practicable, recognising that the primary activity will by virtue of its nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

I413.3. Policies

- (1) Enable the safe and efficient operation of the Franklin A&P Showgrounds for its primary activity.
- (2) Protect the primary activity of the Franklin A&P Showgrounds from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities where they achieve all of the following:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activity.
- (4) Manage the adverse effects of the operation of the Franklin A&P Showgrounds, having regard to the amenity of surrounding properties.
- (5) Recognise that the Franklin A&P Showgrounds primary activity may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

I413.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct unless otherwise specified below. The following provisions do not apply:

- (1) E24 Lighting;
- (2) E25 Noise and vibration (noise provisions only); and
- (3) E40 Temporary activities.

Table I413.4.1 Activity table specifies the activity status of land use and development activities in the Franklin A&P Showgrounds Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I413.4.1 Activity table

	Activity	Activity status
Use		
Primary activity		
(A1)	Horse racing	P
(A2)	Any primary activity not meeting Standard I413.6.3 but meeting all other standards	C
Accessory activities		
(A3)	Accessory activities	P
(A4)	Any accessory activity not meeting Standard I413.6.3 but meeting all other standards	C
Compatible activities		
(A5)	Organised sport and recreation	P
(A6)	Informal recreation	P
(A7)	Auctions	P
(A8)	Markets, fairs and trade fairs	P
(A9)	Filming activities	P
(A10)	Displays and exhibitions	P
(A11)	Sports, recreation and community activities	P
(A12)	Education activities	P
(A13)	Visitor accommodation with a gross floor area up to 500m ²	P
(A14)	Visitor accommodation with a gross floor area greater than 500m ²	D
(A15)	Camping grounds that meet Standard I413.6.10	P
(A16)	Camping grounds not meeting Standard I413.6.10	D
(A17)	Professional fireworks displays meeting Standard I413.6.8	P

(A18)	Professional fireworks pyrotechnics displays not meeting Standard I413.6.8	RD
(A19)	Helicopter flights meeting Standard I413.6.9	P
(A20)	Helicopter flights not meeting Standard I413.6.9	RD
(A21)	Any compatible activity not meeting Standard I413.6.3 but meeting all other standards	C
Development		
(A22)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 10m in height	P
(A23)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 10m and up to 15m in height	RD
(A24)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15m in height	D
(A25)	Light towers and associated fittings up to and greater than 15m in height	P
(A26)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I413.6.6	RD
(A27)	Demolition of buildings	P
(A28)	Temporary buildings	P
(A29)	Workers' accommodation	P

I413.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I413.4.1 Activity table above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I413.4.1 Activity table and which is not listed in I413.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I413.6. Standards

The overlay and Auckland-wide standards apply in this precinct, unless otherwise specified below. The following standards do not apply:

- (1) Standard E27.6.1 Trip generation; and
- (2) Standard E27.6.2 Number of parking and loading spaces.

All permitted, controlled or restricted discretionary activities listed in Table I413.4.1 Activity table must comply with the following activity standards unless otherwise stated.

I413.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing activity sensitive to noise must not exceed the noise limits in Table I413.6.1.1 Noise standards.

Table I413.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Any day including Christmas Day, Good Friday and Anzac Day between 8:00am and 10:00pm	55dB L _{Aeq}
At all other times	40dB L _{Aeq} and 70dB L _{Amax}

- (2) Noise levels must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (4) Professional fireworks displays and helicopter flights are excluded from this standard.

I413.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I413.6.2, the curfew and pre-curfew times are as stated in Table I413.6.2.1 Pre-curfew and curfew times.

Table I413.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7.00am – 10:30pm
Curfew	10:30pm – 7.00am

(5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:

- (a) the limits in Table I413.6.2.2 Horizontal and vertical illuminance at a boundary when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I413.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

- (b) the vertical illuminance limits in Table I413.6.2.3 Vertical illuminance at a window when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I413.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

(6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15 per cent (based on an adaption luminance of 2cd/m^2) on any public road, calculated within each traffic lane in the direction of travel.

(7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I413.6.2.4 Pre-curfew luminous intensity and 1,000 candelas for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I413.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd

(8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I413.6.2.5 Building façade luminance. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.

(9) Professional fireworks displays are excluded from this standard.

Table I413.6.2.5: Building façade luminance

	Luminance limit
Standard	10 cd/m ²

I413.6.3. Traffic management

All activities must meet at least one of the following traffic management standards:

- (1) the activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) the activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

I413.6.4. Parking

- (1) Any loss of existing formed and marked parking spaces from 30 September 2013 must be accommodated elsewhere within the precinct unless the number of parking spaces provided exceeds the requirements set out in E27.6.2 Number of parking and loading spaces.

I413.6.5. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas

I413.6.6. Interface control areas

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on the Franklin A&P Showgrounds: Precinct plan 1. Temporary buildings are excluded from this standard.

I413.6.7. Height in relation to boundary

- (1) Along the boundaries where the Franklin A&P Showgrounds Precinct directly adjoins a zone, the height in relation to boundary standard that applies in the adjoining zone will also apply to the precinct boundary.
- (2) Where the Franklin A&P Showgrounds Precinct directly adjoins a road or a zone with no height in relation to boundary standard, buildings must not project beyond a 45 degree recession plane measured from a point 8.5 metres vertically above ground level on the precinct boundary.
- (3) Temporary buildings, light towers and associated fittings are excluded from this height in relation to boundary standard

I413.6.8. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.
- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 meters from any residential zone.
- (5) Displays must comply with 140dB L_{zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I413.6.9. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landings and departures must take place at least 150 metres from any neighbouring site.

I413.6.10. Camping grounds

- (1) The operation of any camping activities may not exceed:
 - (a) three consecutive nights (72 hours) when stopping on a casual basis; or
 - (b) when camping to attend a specific event which is longer than three consecutive nights, camping activities may occur over the duration of the event up to a maximum of 14 consecutive nights.

I413.6.11. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I413.7. Assessment – controlled activities

I413.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) the effects of the proposed activity on the safety and efficiency of the transport network.

I413.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) the effects of the proposed activity on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (b) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (c) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I413.8. Assessment – restricted discretionary activities

I413.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) any activity that does not comply with noise and/or lighting standards:
 - (a) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) any activity that does not comply with permitted helicopter flight standard:
 - (a) the effects of non-compliance with the permitted helicopter flight standard on the amenity of surrounding properties.
- (3) any activity that does not comply with permitted professional fireworks display standard:
 - (a) the effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 20m and up to 25m in height and/or which does not comply with height in relation to boundary standards:

- (a) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard **Error! Reference source not found.**
 - (a) the visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) any activity that does not comply with screening standards:
 - (a) the visual effects of rubbish and storage areas on residential and open space sites.

I413.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) the effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance;
 - (b) whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time;
 - (c) the extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.
 - (d) the extent to which any artificial lighting will create a traffic safety issue;
 - (e) whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (f) the extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance; and

- (g) whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
- (2) the effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
- (a) the extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) the visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (a) the extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas;
 - (b) the extent to which the height, location and design of the building allows reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites;
 - (c) the extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties;

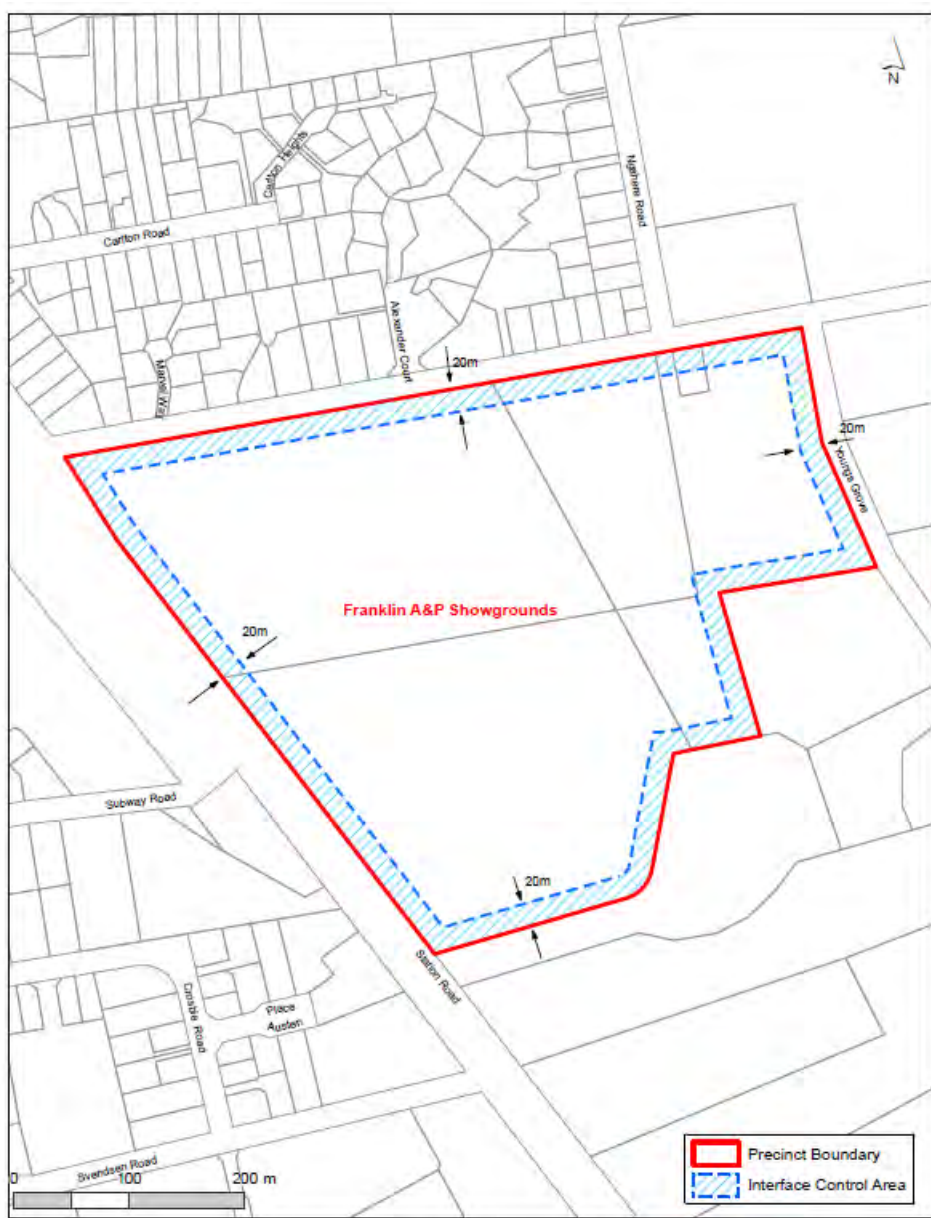

- (d) whether there is an operational need to exceed height and/or height in relation to boundary standard/s; and
 - (e) the extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the operational needs of the facility.
- (4) the visual effects of rubbish and storage areas on residential and open space zoned sites:
- (a) the extent to which screening is practicable; and
 - (b) the extent to which distance and topographical matters mitigate likely adverse visual effects.

I413.9. Special information requirements

There are no special information requirements for this precinct.

I413.10. Precinct plans

I413.10.1. Franklin A&P Showgrounds: Precinct plan 1

I414. Franklin Trotting Club Precinct

I414.1. Precinct description

The Franklin Trotting Club Precinct provides specific planning controls for the use of the Franklin Trotting Club. The Franklin Trotting Club is a horse racing complex situated on Station Road, Pukekohe.

The zoning of the land within the Franklin Trotting Club Precinct is Special Purpose - Major Recreation Facility Zone. The overlay, Auckland-wide and zone objectives and policies apply in this precinct in addition to those listed below.

Refer to the planning maps for the location and extent of the precinct.

I414.2. Objectives

- (1) The Franklin Trotting Club is protected as a regionally and nationally important venue for horse racing.
- (2) A range of activities compatible with, or accessory to, the primary activity are enabled.
- (3) The adverse effects of the operation of the Franklin Trotting Club are avoided, remedied or mitigated as far as is practicable recognising that the primary activity will by virtue of its nature, character, scale and intensity, generate adverse effects on surrounding land uses which are not able to be fully internalised.

I414.3. Policies

- (1) Enable the safe and efficient operation of the Franklin Trotting Club for its primary activity.
- (2) Protect the primary activity of the Franklin Trotting Club from the reverse sensitivity effects of adjacent development.
- (3) Enable a range of accessory and compatible activities which:
 - (a) avoid, remedy or mitigate adverse effects; and
 - (b) are of a character and scale which will not displace the primary activity.
- (4) Manage the adverse effects of the operation of the Franklin Trotting Club, having regard to the amenity of surrounding properties.
- (5) Recognise that the Franklin Trotting Club's primary activity may generate adverse effects that are not able to be fully internalised and may need to be further mitigated by limiting or controlling their scheduling, duration and frequency.

I414.4. Activity table

The provisions in any relevant overlays and Auckland-wide apply in this precinct except those specified below.

- (1) E24 Lighting;

- (2) E25 Noise and vibration (noise provisions only);
- (3) E27 Transport – Rule E27.6.1;
- (4) E27 Transport – Rule E27.6.2; and
- (5) E40 Temporary activities.

Table I414.4.1 specifies the activity status of land use and development activities in the Franklin Trotting Club Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I414.4.1: Activity table

	Activity	Activity status
Use		
Primary activity		
(A1)	Horse racing	P
(A2)	Horse racing not meeting Standard I414.6.3 but meeting all other standards	C
Accessory activities		
(A3)	Accessory activities	P
(A4)	Any accessory activity not meeting Standard I414.6.3 but meeting all other standards	C
Compatible activities		
(A5)	Organised sport and recreation	P
(A6)	Informal recreation	P
(A7)	Markets, fairs and trade fairs	P
(A8)	Filming activities	P
(A9)	Displays and exhibitions	P
(A10)	Sports, recreation and community activities	P
(A11)	Professional fireworks displays meeting Standard I414.6.8	P
(A12)	Professional fireworks pyrotechnics displays not meeting Standard I414.6.8	RD
(A13)	Helicopter flights meeting Standard I414.6.9	P
(A14)	Helicopter flights not meeting Standard I414.6.9	RD
(A15)	Any compatible activity not meeting Standard I414.6.3 but meeting all other standards	C
Development		
(A16)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity up to 10m in height	P

(A17)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 10m and up to 15m in height	RD
(A18)	New buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 15m in height	D
(A19)	Light towers and associated fittings up to and greater than 15m in height	P
(A20)	New buildings, building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I414.6.6	RD
(A21)	Demolition of buildings	P
(A22)	Temporary buildings	P
(A23)	Workers' accomodation	P

I414.5. Notification

- (1) An application for resource consent for a controlled activity listed in Table I414.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for an activity listed in Table I414.4.1 Activity table and which is not listed in I414.5(1) will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (3) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I414.6. Standards

All permitted, controlled or restricted discretionary activities listed in Table I414.4.1 must comply with the following activity standards unless otherwise stated.

I414.6.1. Noise

- (1) The noise (rating) level from any activity as measured within the boundary of any site containing activity sensitive to noise must not exceed the noise limits in Table I414.6.1.1.

Table I414.6.1.1: Noise standards

Time, day, duration and frequency	Noise limit
Any day including Christmas Day, Good Friday and Anzac Day between 8:00am and 10:00pm	55dB L _{Aeq}
At all other times	40dB L _{Aeq} and 70dB L _{Amax}

- (2) Noise levels must be measured in accordance with NZS 6801:2008 Acoustics – Measurement of Environmental Sound and assessed in accordance with NZS 6802:2008 Acoustics – Environmental Noise.
- (3) Crowd noise is to be excluded from any assessment of compliance with these limits.
- (4) Professional fireworks displays and helicopter flights are excluded from this standard.

I414.6.2. Lighting

- (1) Lighting limits must be measured and assessed in accordance with Standard AS 4282-1997 (Control of the Obtrusive Effects of Outdoor Lighting). In the event of any conflict between these documents and the lighting standards set out below, the below standards will prevail.
- (2) Any calculation must be based on a maintenance factor of 1.0 (i.e. no depreciation).
- (3) Where measurements of any illuminance above background levels from the use of artificial lighting cannot be made because the owner will not turn off artificial lighting, measurements may be made in areas of a similar nature that are not affected by the artificial light. The result of these measures may be used for determining the effect of the artificial light.
- (4) For the purposes of Standard I414.6.2, the curfew and pre-curfew times are as stated in Table I414.6.2.1.

Table I414.6.2.1: Pre-curfew and curfew times

	Times
Pre-curfew	7am – 10pm
Curfew	10pm – 7am

- (5) The added illuminance from the use of any artificial lighting on any site must not exceed either one of the following:
 - (a) The limits in Table I414.6.2.2 when measured at the boundary of any adjacent site containing a lawfully established dwelling. The illuminance

limit will apply horizontally and vertically at any point on the boundary and at any height; or

Table I414.6.2.2: Horizontal and vertical illuminance at a boundary

	Illuminance limit
Pre-curfew	100 lux (above the background level)
Curfew	10 lux (above the background level)

(b) The vertical illuminance limits in Table I414.6.2.3 when measured at the windows of habitable rooms of a lawfully established dwelling.

Table I414.6.2.3: Vertical illuminance at a window

	Vertical illuminance limit
Pre-curfew	10 lux
Curfew	2 lux

- (6) Outdoor artificial lighting operating on any site between sunset and sunrise must not exceed a threshold increment limit of 15% (based on an adaption luminance of 2cd/m^2) on any public road, calculated within each traffic lane in the direction of travel.
- (7) Any exterior lighting must be selected, located, aimed, adjusted and/or screened to ensure that glare resulting from the lighting does not exceed the applicable limits for pre-curfew times in Table I414.6.2.4 and 1,000 cd for curfew times at the windows of habitable rooms of a lawfully established dwelling or at the boundary of any residential site where a dwelling does not yet exist.

Table I414.6.2.4: Pre-curfew luminous intensity

	Pre-curfew luminous intensity limit
Standard	10,000 cd

- (8) The average surface luminance for an intentionally artificially lit building façade must not exceed the limits in Table I414.6.2.5. The values may be determined by calculation or measurement in accordance with CIE 150:2003 (Guide on the limitation of the effects of obtrusive light from outdoor lighting installations) – International Commission on Illumination ISBN 3 901 906 19 3.

(9) Professional fireworks displays are excluded from this standard.

Table I414.6.2.5: Building façade luminance

	Luminance limit
Standard	10 cd/m ²

I414.6.3. Traffic management

All activities must meet at least one of the following traffic management standards:

- (1) The activity and management of associated transport and traffic effects is undertaken in accordance with a Transport and Traffic Management Plan authorised by Auckland Transport; or
- (2) The activity generates a crowd of less than 5,000 people and does not require the closure of a public road.

I414.6.4. Parking

- (1) Any loss of existing formed and marked parking spaces from 30 September 2013 must be accommodated elsewhere within the precinct unless the number of parking spaces provided exceeds the requirements set out in E27 Transport – district rule E27.6.2.

I414.6.5. Screening

- (1) Any outdoor storage or rubbish collection areas that are visible from a residential zone or an open space zone must be screened from those areas

I414.6.6. Interface control areas

- (1) New buildings, external building alterations or additions to a building must be located outside the Interface Control Area (ICA) as illustrated on the precinct plan. Temporary buildings are excluded from this standard.

I414.6.7. Height in relation to boundary

- (1) Along the boundaries where the Franklin Trotting Club Precinct directly adjoins a zone, the height in relation to boundary standard that applies in the adjoining zone will also apply to the precinct boundary.
- (2) Where the Franklin Trotting Club Precinct directly adjoins a road or a zone with no height in relation to boundary standard, buildings must not project beyond a 45 degree recession plane measured from a point 8.5m vertically above ground level on the precinct boundary.
- (3) Temporary buildings, light towers and associated fittings are excluded from this height in relation to boundary standard.

I414.6.8. Professional fireworks displays

- (1) Displays are limited to 3 in any 12 month period.
- (2) Displays must not exceed 15 minutes in duration.

- (3) Displays must be finished by 10:30pm.
- (4) Fireworks must be discharged at least 120 meters from any residential zone.
- (5) Displays must comply with 140dB L_{zpeak} at any point in the audience area and within the boundary of any activity sensitive to noise.

I414.6.9. Helicopter flights

- (1) There must be no more than 30 helicopter movements in any 12 month period and 10 on any day (where an arriving flight and a departing flight comprises two movements).
- (2) Landing and departures must take place at least 150m from any neighbouring site.

I414.6.10. Temporary buildings

- (1) Temporary buildings must be erected for a continuous period of no greater than 90 days, excluding set up and dismantling time.

I414.7. Assessment – controlled activities

I414.7.1. Matters of control

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the overlay or Auckland-wide provisions:

- (1) The effects of the proposed activity on the safety and efficiency of the transport network.

I414.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Effects on the safety and efficiency of the transport network:
 - (a) the extent to which there are likely to be adverse effects on the safe and efficient operation of the transport network and pedestrian movements;
 - (a) the extent to which entry and exit points to the precinct will be managed to accommodate traffic and pedestrian movements; and
 - (b) the extent to which any proposed mitigation measures will address adverse traffic and parking effects. Such measures may include travel planning, providing alternatives to private vehicle trips and the preparation and implementation of a Transport and Traffic Management Plan (prepared by a suitably qualified and experienced person).

I414.8. Assessment – restricted discretionary activities

I414.8.1. Matters of discretion

The Council will restrict its discretion to the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) Any activity that does not comply with noise and/or lighting standards:
 - (a) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks.
- (2) Any activity that does not comply with permitted helicopter flight standards:
 - (a) The effects of non-compliance with the permitted helicopter flight standards on the amenity of surrounding properties.
- (3) Any activity that does not comply with permitted professional fireworks display standards:
 - (a) The effects of non-compliance with the permitted fireworks display standard on the amenity of surrounding properties.
- (4) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity greater than 10m and up to 15m in height and/or which does not comply with height in relation to boundary standards:
 - (a) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces.
- (5) Any new buildings, external building alterations or additions to a building for a primary, compatible, or accessory activity not meeting Standard I414.6.6:
 - (a) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (6) Any activity that does not comply with screening standards:
 - (a) The visual effects of rubbish and storage areas on residential and open space sites.

I414.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant activities in the overlay and Auckland-wide provisions:

- (1) The effects of non-compliance with a noise and/or lighting standard on the amenity values of surrounding properties and safety of transport networks:
 - (a) Whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:

- (i) the cumulative noise effects of other activities which are permitted on the site;
 - (ii) the cumulative effect of numerous infringements of noise standards; and
 - (iii) the degree of non-compliance;
 - (b) Whether people likely to be affected by the exceedance of noise standards will be given reasonable notice of the likely effects of the infringement including start time and end time;
 - (c) The extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement;
 - (d) The extent to which any artificial lighting will create a traffic safety issue;
 - (e) Whether the number, placement, design, height, colour, orientation and screening of light fittings and light support structures minimise light spill, glare, and loss of night time viewing;
 - (f) The extent to which the amount of light falling into habitable rooms of during the hours of darkness is minimised to control effects on indoor amenity and sleep disturbance; and
 - (g) Whether the artificial lighting is necessary, suitable and adequately protects the amenity of the surrounding environment.
- (2) The effects of non-compliance with the permitted helicopter flight and/or fireworks display standard on the amenity of surrounding properties:
- (a) The extent to which the additional activities adversely affect the amenity of surrounding properties, having regard to all of the following:
 - (i) the sensitivity of the surrounding environment;
 - (ii) the cumulative effect of numerous infringements of this standard;
 - (iii) the additional number of activities; and
 - (iv) whether there is an operational need for the exceedance.
- (3) The visual effects of the additional bulk and scale of buildings on the amenity of private properties, streets and public open spaces:
- (a) The extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites, particularly those in residential zones;

- (b) The extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties (particularly those in residential zones);
 - (c) Whether there is an operational, technical or locational need to exceed height and/or height in relation to boundary standard/s; and
 - (d) The extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (4) The visual effects of the building design and external appearance on the amenity of private properties, streets and public open spaces.
- (a) The extent to which the building design and external appearance avoids, remedies or mitigates adverse effects on the surrounding area having regard to all of the following:
 - (i) the amenity values and character of the surrounding area;
 - (ii) the functional and operational requirements of the precinct;
 - (iii) whether crime prevention through environmental design (CPTED) principles have been integrated into external building and layout design;
 - (iv) whether long unrelieved frontages and excessive bulk and scale when viewed from the public realm and residential zones have been avoided;
 - (v) whether mechanical and electrical equipment has been integrated into the building design as far as is practicable;
 - (vi) whether quality, durable, fit for purpose and easily maintained materials have been used for building design and construction; and,
 - (vii) whether landscape design is utilised to enhance the visual appearance of the development, including around parking areas and service areas.
- (5) The visual effects of rubbish and storage areas on residential and open space zoned sites:
- (a) The extent to which screening is practicable; and
 - (b) The extent to which distance and topographical matters mitigate likely adverse visual effects.

I414.9. Special information requirements

There are no special information requirements for this precinct.

I414.10. Precinct plans

I414.10.1. Franklin Trotting Club: Precinct plan 1

I415. Glenbrook Steel Mill Precinct

I415.1. Precinct description

The purpose of the Glenbrook Steel Mill Precinct is to support and enable the continued operation of the existing steel mill and associated facilities.

The Glenbrook Steel Mill is located on Mission Bush Road, Glenbrook and is a significant industrial resource within the Auckland region. This precinct seeks to provide for the mill's growth and operation in a way that continues to support the local, regional and national economy.

The zoning of land within this precinct is the Business - Heavy Industry Zone.

I415.2. Objective [dp]

- (1) The Glenbrook Steel Mill is enabled to contribute to the social and economic wellbeing of the Auckland Region.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I415.3. Policies [rp/dp]

- (1) That a range of activities which are necessary to the functional and operational needs of the steel mill are enabled.
- (2) The character and amenity of the rural environment surrounding the steel mill is maintained and noise monitoring is undertaken.
- (3) The natural character and amenity values of the coastal environment are managed.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I415.4. Activity table

The provisions in any relevant overlays, zone and Auckland-wide apply in this precinct unless otherwise specified below.

Table I415.4.1 Activity table specifies the activity status of land use and development activities in the Glenbrook Steel Mill Precinct pursuant to sections 9(2) and 9(3) of the Resource Management Act 1991.

Table I415.4.1: Activity table [rp/dp]

Activity		Activity status
Use		
Residential		
(A1)	Workers' accommodation up to 10 dwellings	P
(A2)	Workers' accommodation greater than 10 dwellings	D

Community		
(A3)	Information facilities	P
Development		
Network utilities		
(A4)	Electricity generating facilities	P
(A5)	Electricity generating facilities not meeting the relevant standards in E26 Infrastructure	RD
(A6)	Unenclosed substations	P
(A7)	Unenclosed substations not meeting the relevant standards in E26 Infrastructure	RD
(A8)	Underground gas and petroleum product transmission pipelines at a gauge pressure up to 2000 kilopascals including any aerial crossings of streams or other low lying areas using bridges or any other structures, and ancillary underground equipment and fittings	P
(A9)	Underground gas and petroleum product transmission pipelines at a gauge pressure exceeding 2000 kilopascals including any aerial crossings of streams or other low lying areas using bridges or any other structures, and ancillary underground equipment and fittings	D
(A10)	Aboveground pipelines and attached ancillary structures for the conveyance of water, wastewater and stormwater	P
(A11)	Aboveground pipelines and attached ancillary structures for the conveyance of water, wastewater and stormwater not meeting the relevant standards in E26 Infrastructure	RD
General		
(A12)	Activities not provided for in the Business - Heavy Industry Zone	D

I415.5. Notification

- (1) Any application for resource consent for an activity listed in Table I415.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I415.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct, except the following:

- H16 Business - Heavy Industry Zone - Rule H16.6.4.
- E25 Noise and vibration - Rule E25.6.5.

All activities listed as permitted and restricted discretionary in Table I415.4.1 Activity table must comply with the following activity standards unless otherwise specified.

I415.6.1. Yards for production and non-production buildings

- (1) All new production buildings must be set back a minimum of 150 metres from the boundaries of the precinct.
- (2) Non-production buildings are defined as the following buildings within this precinct:
 - (a) buildings related to security;
 - (b) buildings related to information facilities;
 - (c) dwellings and accessory buildings for workers' accommodation;
 - (d) buildings used solely for storage (excluding buildings for the storage of dangerous goods or hazardous substances);
 - (e) buildings not exceeding 100 square metres related to any underground supply of energy or water;
 - (f) temporary buildings;
 - (g) buildings related to recreation for, or the training of, employees;
 - (h) rail lines, roadways and similar ancillary works, services or areas, including accessory buildings necessary for their effective operation; and
 - (i) weighbridges.
- (3) All non-production buildings must be set back a minimum of 30m from the precinct boundary except as specified by Standard I415.6.3.

I415.6.2. Landscaping

- (1) Landscaping must be provided within the yards of this precinct.
- (2) All landscaping must be designed and implemented to significantly soften the appearance of production buildings, parking and loading areas, driveways and service areas when viewed from the public road.
- (3) All plants used for landscaping must be pre-grown, long-life, suitable for the locality and generally of low maintenance.
- (4) All landscaping must be maintained, including plant and animal pest management and the replacement of dead plants, within the nearest planting season.

I415.6.3. Coastal protection yard

- (1) No building or part of any building may be erected closer than 60 metres from mean high water springs of the Waiuku Estuary.

- (2) Earthworks in the coastal protection yard, which are unrelated to stormwater or wastewater infrastructure, must not exceed a total volume of 25m³ or a total area of 250m².
- (3) Any bare ground arising from earthworks, which is not proposed for further use or development, must be revegetated as soon as practicable.
- (4) Stormwater and wastewater discharge infrastructure is excluded from Standard I415.6.3(1).

I415.6.4. Noise

- (1) The noise (rating) level from any activity must not exceed the noise limits in Table I415.6.4.2 Noise standards.

Table I415.6.4.2: Noise standards

Time	Noise limit
7:00am to 10:00pm	55dB L _{Aeq}
10:00pm to 7:00am	45dB L _{Aeq} 75dB L _{AFmax}

- (2) All activities within the precinct must be conducted and managed to ensure that the average noise level at the six monitoring locations shown on the Glenbrook Steel Mill: Precinct plan does not exceed the stated limits.
- (3) Subject to Standards I415.6.4(4) to I415.6.4(6), the noise levels must be measured in accordance with the requirements of NZS6801:2008 and assessed in accordance with the requirements of NZS6802:2008.

Averaging of noise levels

- (4) Noise levels at any one monitoring location may exceed the stated limits only where this can be clearly attributed to meteorological conditions.
- (5) The measured noise level at any one monitoring location must not exceed the noise limit by more than 5 dBA.
- (6) For the purpose of calculating any one average noise level, measurements from the six monitoring locations must be taken consecutively over a continuous six hour period.
- (7) A correction of 2 dBA must be added to any measurements taken at Monitoring Stations 5 and 6.
- (8) Weather permitting, the operators of the Glenbrook Steel Mill must regularly monitor the night time noise level generated by its operations. This monitoring must be at intervals of no greater than three months, and from the specified monitoring locations. All monitoring information must be forwarded to Council.

I415.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I415.8. Assessment – restricted discretionary activities

I415.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the Auckland-wide or zone provisions:

- (1) Any activity that does not comply with yards and/or landscaping standards:
 - (a) The visual effects of the bulk and scale of buildings within the precinct on the amenity values of private properties, roads and public open spaces.
 - (b) The effects of development on the natural character and amenity values of the coastal environment.
- (2) Any activity which does not comply with noise standards:
 - (a) The effects of the non-compliance with noise standards on the amenity values of surrounding properties.
- (3) Any activity which does not comply with any other standard:
 - (a) Any objective or policy which is relevant to the standard;
 - (b) The purpose (if stated) of the standard and whether that purpose will still be achieved if consent is granted;
 - (c) Any specific matter identified in the relevant rule;
 - (d) Any special or unusual characteristic of the site which is relevant to the standard;
 - (e) The effects of the infringement of the standard; and
 - (f) Where more than one standard will be infringed, the effects of all infringements considered together.

I415.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the Auckland-wide or zone provisions:

- (1) The visual effects of the bulk and scale of buildings within the precinct on the amenity values of private properties, roads and public open spaces:
 - (a) The extent to which the height, location and design of the building allow reasonable sunlight and daylight access to:
 - (i) streets and public open spaces; and
 - (ii) adjoining sites.

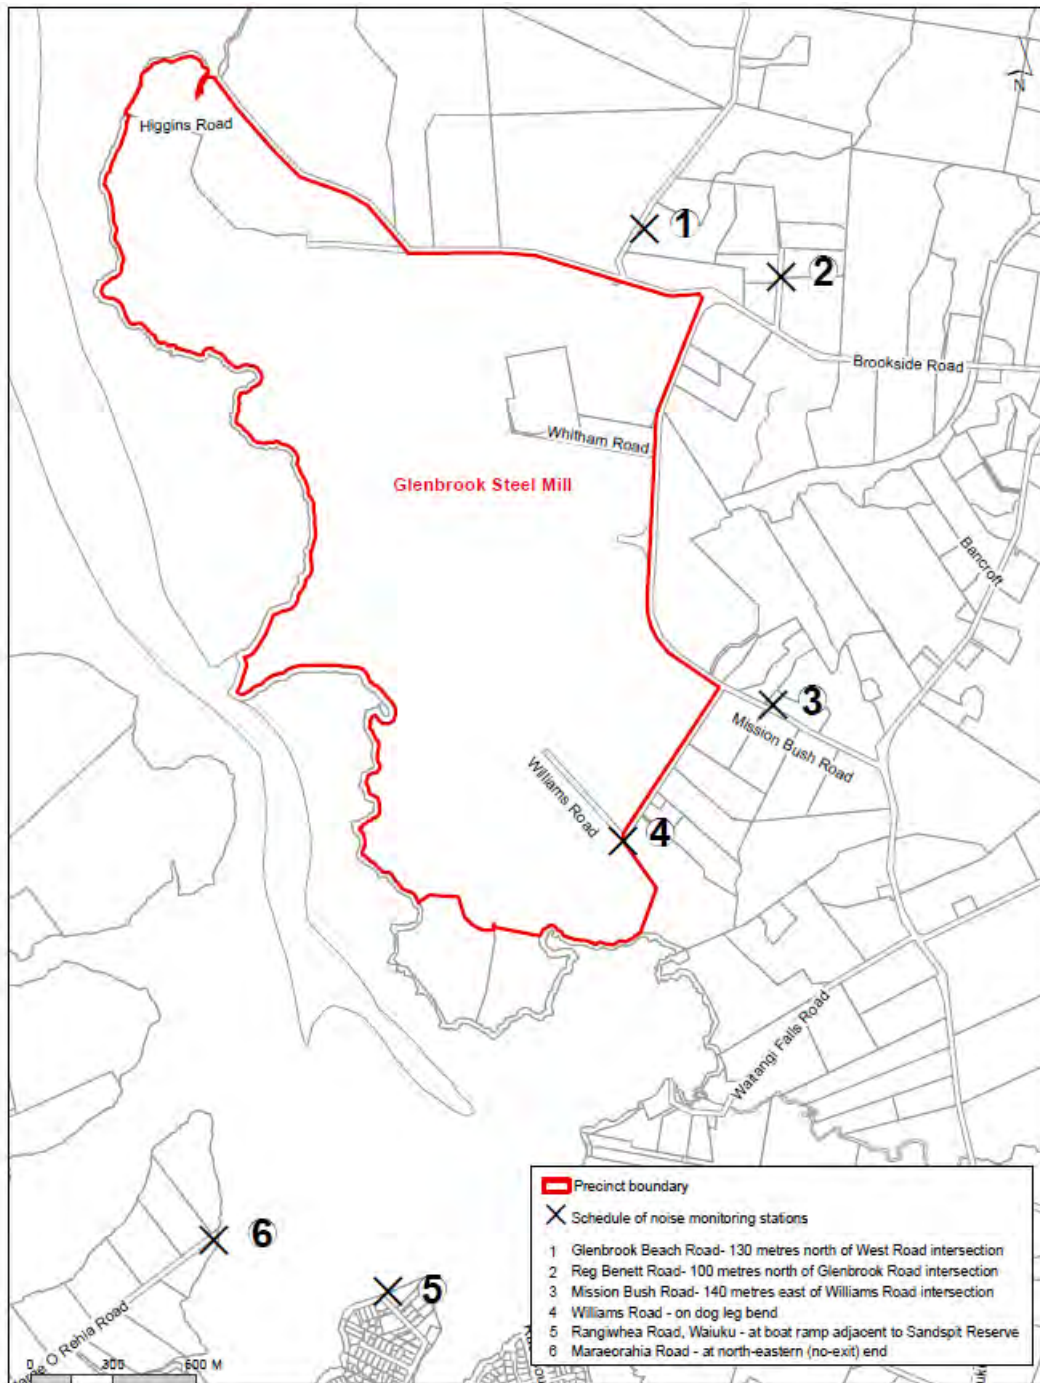

- (b) The extent to which the building avoids, remedies or mitigates any potential loss of privacy for surrounding properties.
 - (c) The extent to which adverse effects of the visual dominance of the building on the surrounding area (including roads) are avoided, remedied or mitigated having regard to the amenity and character of the surrounding area and the functional and operational needs of the facility.
- (2) The effects of development on the natural character and amenity values of the coastal environment:
- (a) The extent to which the activity affects:
 - (i) amenity values or views, both from land and sea;
 - (ii) landscape and natural character values; and
 - (iii) people's experience and values associated with an area, including the predominance of nature and wilderness values.
 - (b) Whether there will be adverse ecological effects from any land disturbance on the coastal ecosystem.
 - (c) Whether the activity will increase any risk of land instability or erosion; and
 - (d) The extent to which the activity will revegetate land, prevent siltation or avoid other adverse effects of stormwater runoff.
- (3) The effects of the non-compliance with noise standards on the amenity values of surrounding properties.
- (a) Whether the effects of the activity will give rise to noise effects that are unreasonable, having regard to all of the following:
 - (i) the cumulative noise effects of other activities which are permitted on the site;
 - (i) the cumulative effect of numerous infringements of noise standards; and,
 - (ii) the degree of non-compliance.
 - (b) The extent to which duration and hours of operation are managed to minimise the effects of the infringement having regard to the operational requirements and reason for the infringement.

I415.9. Special information requirements

There are no special information requirements in this precinct.

I415.10. Precinct plan

I415.10.1 Glenbrook Steel Mill: Precinct plan

I416. Karaka 1 Precinct

I416.1. Precinct description

The Karaka 1 Precinct adjoins the Southern Motorway and the Papakura Interchange. The purpose of the precinct is to provide for the continued use and development of the New Zealand Bloodstock Karaka Sales Centre which attracts national and international visitors to its series of annual sales.

The primary activities undertaken within the precinct relate to the sale and auction of horses and stock. This activity includes buildings and areas within the precinct that are used for administrative offices associated with the sales centre, stables, horse exercise areas and parking and circulation areas. There is a need to support these activities by providing for a range of accessory activities such as on-site accommodation for staff, visitor accommodation, equestrian centres and reception and promotional functions. The precinct enables these activities to be undertaken.

The zone of land within this precinct is Business - Light Industry Zone.

I416.2. Objectives

- (1) Bloodstock sales and associated temporary activities, equestrian centres and accessory activities continue to operate and any adverse effects on the environment are managed.
- (2) New buildings avoid or mitigate adverse effects to the character of the surrounding area.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above with the exception of H17.2(1) and H17.2(2).

I416.3. Policies

- (1) Allow bloodstock sales and associated temporary activities, equestrian centres and accessory activities to establish and operate within the precinct.
- (2) Restrict the scale, intensity, frequency and hours of operation of accessory activities.
- (3) Require the location and design of buildings and structures to avoid or mitigate adverse effects on adjoining residential zoned sites.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above with the exception of H17.3(1) – H17.3(3).

I416.4. Activity table

The provisions in any relevant overlays, zone and Auckland-wide zone apply in this precinct unless otherwise specified below.

Table I416.4.1 Activity table specifies the activity status of land use and development activities in the Karaka 1 Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I416.4.1 Activity table

Activity		Activity status
Accommodation		
(A1)	Dwellings	NC
(A2)	Visitor accommodation (includes conference facilities and recreation facilities accessory to visitor accommodation)	RD
(A3)	Workers accommodation accessory to the sale and auction of horses and stock	P
Commerce		
(A4)	Sale and auction of horses and stock	P
(A5)	Retail accessory to the sale and auction of horses and stock	P
(A6)	Food and beverage accessory to the sale and auction of horses and stock	P
(A7)	Temporary activities	P
(A8)	Equestrian centres	P
Development		
(A9)	Buildings	P
(A10)	Demolition of buildings	P
(A11)	Additions and alterations to buildings	P

I416.5. Notification

- (1) Any application for resource consent for an activity listed in Table I416.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I416.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct in addition to the following standards.

All activities listed as permitted and restricted discretionary in Table I416.4.1 Activity table must comply with the following activity standards.

I416.6.1. Food and beverage

- (1) Food and beverage activities must be limited to the duration of temporary activities for any particular event.

I416.6.2. Temporary activities

- (1) Temporary activities must be limited to receptions, such as weddings, product launches, conferences, seminars and promotions.

- (2) Temporary activities must be limited to 7 days duration for any particular event.
- (3) Temporary activities must not require permanent buildings or other activities to be developed for that activity.

I416.6.3. Equestrian centres

- (1) Equestrian centres must be accessory to the sale and auction of horses and stock.
- (2) Equestrian centres must be limited to 10 days duration for any particular event.
- (3) Equestrian centres must not be permanently based in the precinct.
- (4) Equestrian centres must not require permanent buildings.

I416.6.4. Building location

- (1) Buildings must be located in accordance with I416.10.1 Karaka 1: Precinct plan 1.

I416.7. Assessment – controlled activities

There are no controlled activities in this section.

I416.8. Assessment – restricted discretionary activities

I416.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) for visitor accommodation:
 - (a) effects of intensity and scale; and
 - (b) effects of landscape design and site layout.

I416.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) for visitor accommodation:
 - (a) intensity and scale:
 - (i) the extent to which the intensity and scale of the activity, in particular, the number of people involved and traffic generated by the activity (including vehicle noise and lights), are compatible with the surrounding area and in particular, the adjoining residential land;
 - (b) landscape design and site layout:

- (i) whether the landscaping enhances the visual appearance of the development, including around parking areas, service areas and at the precinct boundary;
- (ii) the extent to which landscaping is in general accordance with I416.10.1 Karaka 1: Precinct plan 1;
- (iii) the extent to which landscaping is used to:
 - soften large facades;
 - provide visual screening of service buildings; and
 - visually integrate development with any adjoining zones; and
- (iv) whether the general layout of buildings enables any adverse visual effects of the proposal to be internalised to the greatest extent practicable.

I416.9. Special information requirements

There are no special information requirements in this section.

I416.10. Precinct plans

I416.10.1. Karaka 1: Precinct plan 1

I417. Karaka North Precinct

I417.1. Precinct Description

The purpose of the Karaka North precinct is to provide for the integrated development of a rural village settlement centred at the intersection of Dyke, Blackbridge and Linwood Roads. The village precinct is made up of three sub-precincts.

At the heart of the village settlement the local centre will enable the development of local retail, service and community activities to support the village and the wider rural community. Development in the local centre area is expected to achieve a high quality amenity, slow traffic and pedestrian orientated environment.

The precinct will provide for both medium density and more traditional residential development that will be dispersed throughout the precinct to deliver a rural village.

Amenity tree planting is envisaged along Linwood, Dyke and Blackbridge Roads to contribute to a visually interesting and cohesive rural village environment.

The integrated development of the village will be achieved by requiring management plans and design guidelines to be prepared at the first stage of developing the village. Subsequent stages of the village will then be required to be consistent with these, or any variation approved.

The zoning of land within this precinct is Business - Local Centre Zone, Residential - Mixed Housing Suburban Zone, Residential - Single House Zone and Rural - Rural Coastal Zone.

I417.2. Objectives

- (1) A range of residential living opportunities are created to achieve a well-connected rural village settlement that is based around a local commercial and community centre and areas of open space.
- (2) A rural village settlement is achieved through a redistribution of density that is reminiscent of historic rural New Zealand village settlement patterns, whereby the overriding pattern is non-uniformity, and retention of rural amenity and rural character.
- (3) Rural village amenity is achieved by providing a hierarchy of open space, retention of rural buildings where possible, pedestrian and cycle trails and tree lined streets and lanes that draw on the rural character of the surrounding area.
- (4) Efficient infrastructure is provided to service the needs of Karaka North Village.
- (5) Development maintains and, where possible, enhances the public realm.

The relevant overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I417.3. Policies

- (1) Enable a range of residential living opportunities to achieve a rural village character, with more intensive housing located either immediately adjacent to the

local centre or in locations that positively contribute to a rural village character and make best use of landscape attributes.

- (2) Avoid more intensive housing in the Rural Amenity Area and the Rural Character Area.
- (3) Enable a compact, contained village form with a high level of amenity that is developed in accordance with its precinct plan.
- (4) Encourage the enhancement of tributary streams and associated riparian areas.
- (5) Require a movement pattern of streets and lanes, shared footpaths and trails that are responsive to site features.
- (6) Create nodes of interest and activity through the relationship between the movement pattern, open spaces and built form.
- (7) Require a slow speed, pedestrian orientated rural village environment with pedestrian and roads access to the village from Linwood, Dyke and Blackridge Roads.
- (8) Enable retail, service and community activities to establish within the Business - Local Centre Zone and promote active building frontages oriented to Linwood, Blackbridge and/or Dyke Roads.
- (9) Achieve a heart or focus to the settlement that comprises a mix of activities and uses with areas of open space that can be used for events and market related activities.
- (10) Require development to establish a distinctive rural village and encourage a distribution of density that is reminiscent of historical New Zealand rural villages.
- (11) Avoid on-site wastewater disposal within the precinct where possible.
- (12) Integrate and co-ordinate the provision of a reticulated wastewater treatment and disposal facility, water supply, stormwater and roads networks, unless connections to Council infrastructure are available.
- (13) Avoid multiple small scale wastewater treatment and disposal systems within each sub-precinct.
- (14) Encourage integrated stormwater management using water sensitive design techniques.
- (15) Require an interconnected movement network that has a rural village form and character and which has regard to the Karaka North Precinct Roding Typologies in Figures I417.7.2.1 and I417.7.2.2 Roding Typologies.

The relevant overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I417.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the underlying zone apply in this precinct unless otherwise specified below.

Table I417.4.1 specifies the activity status of land use, development and subdivision activities in the Karaka North Precinct pursuant to section 9(3) of the Resource Management Act 1991.

A blank in Table I417.4.1 Activity table below means that the provisions of the overlays, zone or Auckland-wide apply.

Table I417.4.1 Activity table

Activity		Activity status		
		Sub-precinct A	Sub-precinct B	Sub-precinct C
Use				
Residential				
(A1)	Dwellings in the Residential – Single House and Residential – Mixed Housing Suburban Zones	C	C	C
(A2)	Dwellings in Sub-Precinct B and C not meeting Standard I417.6.1	NA	D	D
(A3)	Dwellings in the Rural – Rural Coastal outside the Rural Amenity Area or the Rural Character Area identified in identified in Karaka North: Precinct Plan 1	C	NA	NA
(A4)	Dwellings in the Rural Amenity Area or the Rural Character Area identified in Karaka North: Precinct Plan 1	D	NA	NA
Commerce				
(A5)	Restaurants in the Residential - Mixed Housing Suburban Zone	RD		
Community				
(A6)	Community facilities	P	P	P
Rural				
(A7)	Equestrian Centre in the Rural – Rural Coastal Zone	RD		
Development				
(A8)	New buildings in the Business – Local Centre Zone	C	C	C
(A9)	Development that does not comply with Standard I417.6.5 or Standard I417.6.4	D	D	D

Subdivision				
(A10)	Subdivision complying with Standards I417.6.6 to I417.6.9 and in general accordance with the Karaka North: Precinct plan	C	C	C
(A11)	Subdivision not proposing a connection to a reticulated wastewater system within each sub-precinct	NC	NC	NC
(A12)	Any other subdivision not listed in this table	NC	NC	NC

I417.5. Notification

- (1) Except as specified in I417.5.(3) below, an application for resource consent for a controlled activity listed in Table I417.4.1 above will be considered without public or limited notification or the need to obtain written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991.
- (2) Any application for resource consent for any of the following activities will be considered without public or limited notification or the need to obtain the written approval from affected parties unless the Council decides that special circumstances exist under section 95A(4) of the Resource Management Act 1991:
 - (a) restaurants in the Residential - Mixed Housing Suburban Zone; and
 - (b) equestrian Centre in the Rural – Rural Coastal.
- (3) Any application for resource consent for an activity listed in Table I417.4.1 Activity table and which is not listed in I417.5.(1) or I417.5.(2) above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991. This includes:
 - (a) new buildings in the Business – Local Centre Zone.
 - (b) subdivision complying with the subdivision controls of this precinct and in general accordance with the Karaka North: Precinct plan 1.
- (4) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I417.6. Standards

The overlay, Auckland-wide and zone standards apply in this precinct unless otherwise specified below.

All activities listed as permitted, controlled or restricted discretionary in Table I417.4.1 must comply with the following permitted activity standards.

I417.6.1. Maximum density

- (1) The maximum density for sites is as set out in Table I417.6.1.1 Density Limits below.

Table I417.6.1.1 Density limits

Zone	Sub-precinct A	Sub-precinct B	Sub-precinct C
Residential - Mixed Housing Suburban zone	No limit	300m ²	300m ²
Residential – Single House zone	No limit	600m ²	600m ²
An unserviced site	No limit	2500m ²	2500m ²

I417.6.2. Maximum Yield

- (1) No more than 460 residential dwellings may be established in Sub-precinct A.

I417.6.3. Terraced Housing Typologies

- (1) Within Sub-precinct A:
- (a) Up to 33% of dwellings within the Residential - Single House Zone may be comprised of terraced housing and duplex typologies; and
 - (b) The standards of the Residential - Mixed Housing Suburban Zone must apply to these dwellings.

I417.6.4. Height

- (1) Buildings must not exceed 8 metres in height.

I417.6.5. New community, commercial and residential buildings

- (1) Community facilities, buildings for commercial services and dwellings must be connected to the one centralised waste water system consented and constructed for each sub-precinct within the Karaka North precinct unless a connection is available and approved to a public reticulation system.

I417.6.6. Minimum site size

- (1) The minimum site sizes for the Karaka North sub-precincts is set out in Table I417.6.6.1 Minimum site below.

Table I417.6.6.1 Minimum site sizes

Zone	Sub-precinct A	Sub-precinct B	Sub-precinct C
Residential - Mixed Housing Suburban zone	No minimum	300m ²	300m ²
Residential – Single House zone	No minimum	600m ²	600m ²
An unserviced site	No minimum	2500m ²	2500m ²

I417.6.7. Wastewater servicing

- (1) Unless a connection is available and approved to a public reticulation system, all sites must be connected to a village or neighbourhood wastewater treatment and disposal system which at a minimum services a sub-precinct. For private systems, legal mechanisms must be put in place to ensure the on-going operation, maintenance, and monitoring of the system.
- (2) Where a reticulated wastewater treatment and disposal system is located on a site outside the Karaka North Precinct an appropriate easement or other legal mechanism shall be secured to achieve the matters detailed in clause 0.(1) above.

I417.6.8. Street tree planting

- (1) Where subdivision is proposed on a site with frontage to Dyke Road, Linwood Road or Blackbridge Road, street tree planting must be provided along the length of the road berm adjacent to the site prior to Council issuing a section 224(c) certificate.

I417.6.9. Access

- (1) Where subdivision proposes sites with a boundary to Linwood or Dyke Roads, the site's vehicle access must be to that road only. Legal mechanisms may be placed on the certificates of title to achieve this outcome where sites have dual frontages.

I417.7. Assessment – controlled activities

I417.7.1. Matters of control

The Council will reserve its control to the following matters when assessing a controlled activity resource consent application, in addition to the matters specified for the relevant controlled activities in the zone, Auckland-wide, or overlay provisions:

- (1) subdivision in general accordance with the precinct plan:
 - (a) the matters of discretion in E38 Subdivision – Urban E38.12.1.(7);
 - (b) the effect on any approved master plan or management plan;
 - (c) the effects on rural village character and amenity values;
 - (d) the effect on infrastructure capacity and servicing; and
 - (e) the effect on the roading network.
- (2) dwellings in the Residential – Single House and Residential – Mixed Housing Suburban Zones; and dwellings in the Rural – Rural Coastal:
 - (a) the consistency with the Karaka North Precinct Plan; and
 - (b) the effect on any approved master plan or management plan;
- (3) buildings in the Business - Local Centre Zone:

- (a) the effect of the design and location of the building on public spaces;
- (b) the effect of landscaping and screening for the proposed building on the amenity of public spaces; and
- (c) the effect of on-site parking.

I417.7.2. Assessment criteria

The Council will consider the relevant assessment criteria below for controlled activities, in addition to the assessment criteria specified for the relevant controlled activities in the zone, Auckland wide or overlay provisions:

- (1) subdivision in general accordance with the precinct plan:
 - (a) The matters of discretion in E38 Subdivision – Urban E38.12.1.(7);
 - (i) The assessment criteria of E38 Subdivision – Urban E38.12.2.(7).
 - (b) the effect on any approved master plan or management plan;
 - (i) whether the subdivision is consistent with any approved master plan required by I417.9.1;
 - (ii) whether the subdivision is consistent with any approved landscape management plan required by I417.9.2; and
 - (iii) whether the subdivision is consistent with any approved infrastructure management plan required by I417.9.3.
 - (c) the effects on rural village character and amenity values;
 - (i) refer Policies I417.3.(3), I417.3.(5) and I417.3.(10); and
 - (d) the effect on infrastructure capacity and servicing;
 - (i) whether adequate infrastructure capacity is provided for within the subdivision;
 - (ii) whether information has been provided on the location, design, connections and any staging and integration of the stormwater, wastewater, or water supply such that adverse effects on the environment and human health are avoided;
 - (iii) whether any upgrading of the stormwater, wastewater, or water supply is necessary; and
 - (iv) refer Policies I417.3.(11) to I417.3.(14); and
 - (e) the effect on the roading network;
 - (i) whether the proposed subdivision makes provision for the indicative roads, indicative pedestrian/cycling crossings and indicative intersections; and
 - (ii) refer to Policies I417.3.(4), (6), and (14)

Figure I417.7.2.1 Road typologies 1

Figure I417.7.2.2 Village road typologies

(2) dwellings in the Residential – Single House and Residential – Mixed Housing Suburban Zones; and dwellings in the Rural – Rural Coastal Zone:

(a) the consistency with the Karaka North Precinct Plan;

(i) refer Policies I417.3.(1), I417.3.(2) I417.3.(3) and I417.3.(10).

(b) the effect on any approved master plan or management plan;

(i) refer to I417.7.2.(1).(a) above.

(3) new buildings in the Business - Local Centre Zone:

(a) the effect of the design and location of the building on public spaces;

- (i) whether buildings on sites adjoining Dyke Road, Linwood Road and the Village Square provide a continuous building frontage;
- (ii) if buildings cannot be built with frontage to all road boundaries as described above, whether-attractive landscaped areas been provided between the building and the road frontage, and whether the use of such areas for parking has been avoided due to adverse effects on streetscape and pedestrian amenity. Where car parking is required it should have a maximum depth of a single aisle;
- (iii) whether frontages are provided with verandahs that provide shelter and shade to pedestrians using the footpath;
- (iv) the extent to which principal pedestrian entries of all buildings face the road and/or Village Square and are be easily accessible and clearly identifiable from the footpath;
- (v) whether outdoor service areas for rubbish storage etc is concealed from views from public roads by being contained within buildings or through the appropriate configuration of the building or by a combination of the building, landscape planting and screen fencing;
- (vi) whether buildings on sites fronting roads and the Village Square accommodate retail, commercial or community activities at ground floor level with compatible uses (including residential) encouraged to locate above ground floor;
- (vii) whether buildings create visual interest through articulation, openings, and design variation when viewed from the road or any public space;
- (viii) whether buildings exhibit proportions and forms that complement nearby residential development;
- (ix) whether buildings have been designed such that that they provide for passive surveillance over roads and open spaces (including the Village Square);
- (x) whether solid blank walls facing a road or open space have been avoided;
- (xi) whether verandahs reflect the design and style of the building and accentuate entrances and window treatment;
- (xii) whether buildings on corners utilise design features to integrate the corner and promote linkages with the surrounding land, including existing or potential development on opposing corners. In these locations there may be opportunities to provide additional building height to create a landmark;

- (xiii) whether the principal pedestrian entry points of all buildings are clear and obvious within the building frontage;
 - (xiv) whether buildings front directly onto, or face, roads and provide pedestrian entries and windows along the road frontage, and whether buildings adjacent to the Village Square also front onto the Village Square;
 - (xv) whether large doors (e.g. for loading or servicing) are concealed from view from roads and public open spaces. If they are visible from these spaces, the extent to which their dominance in the frontage is reduced, and set back from the front face of the building; and
 - (xvi) whether signage has been integrated within the design of the building, rather than free-standing structures extending above the eaves or parapets of buildings;
- (b) the effect of landscaping and screening on the amenity of public spaces:
- (i) whether open spaces have been well designed, functional, highly visible and accessible; and
 - (ii) whether the location of buildings that front the Square have been designed and orientated to ensure good solar access and to avoid the adverse effects of prevailing winds; and
- (c) the effect of vehicular and pedestrian movement and on-site parking:
- (i) whether car parking has been provided in appropriate places, generally within the street or behind buildings, and that is easily accessible and appropriately landscaped;
 - (ii) whether parking and movement layouts are designed for safe and effective movement of vehicles through an easily understood layout with appropriate surface markings and signs;
 - (iii) whether, where car parking is provided on sites that adjoin residential areas, it is screened by buildings, fencing and/or landscaping;
 - (iv) whether off-street car parking and servicing areas has been located to the rear of the buildings. Off-street car parking adjoining the Village Square should be avoided; and
 - (v) whether accessways to rear parking/service areas have reduced the width and number of vehicle crossings over footpaths. This may involve shared accessways.

I417.8. Assessment – restricted discretionary activities

I417.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the

matters specified for the relevant restricted discretionary activities in the overlay, Auckland-wide or zone provisions:

- (1) restaurants in the Residential - Mixed Housing Suburban Zone
 - (a) the matters of discretion for H6 Restaurants in the Residential – Terraced Housing and Apartment Buildings Zone H6.8.1.(1).
- (2) equestrian centre in the Rural – Rural Coastal Zone:
 - (a) the matters of discretion set out in H19 Rural Zones H19.12.1.(1)
- (3) infringement of the Standards I417.6.1, I417.6.2 and I417.6.3:
 - (a) the consistency with the Karaka North: Precinct Plan; and
 - (b) the effect on any approved master plan or management plan.

I417.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the Auckland wide or zone provisions:

- (1) restaurants in the Residential - Mixed Housing Suburban Zone;
 - (a) The matters of discretion for H6 Restaurants in the Residential – Terraced Housing and Apartment Buildings Zone H6.8.1.(1):
 - (i) The assessment criteria for H6 Restaurants in the Residential - Terraced Housing and Apartment Buildings Zone H6.8.2.(1).
- (2) equestrian centre in the Rural – Rural Coastal Zone:
 - (a) the matters of discretion set out in H19 Rural Zones H19.12.1.(1):
 - (i) the assessment criteria listed at H19 Rural Zones H19.12.2.(1).
- (3) infringement of the Standards I417.6.1, I417.6.2 and I417.6.3:
 - (a) the consistency with the Karaka North: Precinct Plan;
 - (i) refer Policies I417.3.(1), I417.3.(2), I417.3.(3) and I417.3.(10); and
 - (b) the effect on any approved master plan or management plan;
 - (i) refer to I417.7.2.(1).(a) above.

I417.9. Special information requirements

The following applies to land use consent applications or subdivision resource consent applications for land within the Karaka North Precinct:

I417.9.1. Master Plan

- (1) As part of the of the first land use consent application (excluding new farm buildings or additions to existing buildings that are less than 10 per cent of the existing gross floor area of the building), or the first subdivision resource

consent application (excluding any boundary adjustments) the applicant is required to produce a masterplan for the sub-precinct to which it relates.

The master plan is required to address the following matters:

- (a) village layout;
 - (b) movement network;
 - (c) access from Linwood, Dyke and Blackbridge Roads;
 - (d) location, hierarchy and character of open space;
 - (e) building footprints;
 - (f) land use;
 - (g) relationship with other sub-precincts;
 - (h) landscape planting;
 - (i) landscape enhancement;
 - (j) retained farm buildings; and
 - (k) staging
- (2) The masterplan that includes the location of the indicative Village Square identified in Karaka North: Precinct Plan 1 must address the following:
- (a) the design, function, visibility and accessibility of the Village Square;
 - (b) the seating, lighting landscaping of the Village Square that supports its function as a community focal point for the village; and
 - (c) the proposed surface materials, that will ensure its versatility and all year round use (including for community activities and events).
- (3) The first and subsequent land use and/or subdivision consent applications must be consistent with the master plan and design guidelines approved for the relevant sub-precinct as part of the first land use or subdivision resource consent, or any approved variation.
- (4) Where a land use and/or subdivision consent application is accompanied by a variation to the approved master plan and/or design guidelines, it must address the matters in I417.9.1.1 above, as applicable to the variation.

I417.9.2. Landscape Management Plan

- (1) As part of the of the first land use consent application (excluding new farm buildings or additions to existing buildings that are less than 10 per cent of the existing gross floor area of the building), or the first subdivision resource consent application (excluding any boundary adjustments) the applicant is

required to produce a landscape management plan for the sub-precinct to which it relates.

The purpose of the landscape management plan is to ensure the ongoing management of open space areas set out in the Village masterplan. The landscape management plan will ensure:

- (a) the integration of buildings and rural open space areas within the precinct;
and
 - (b) the maintenance and enhancement of the natural character values of the Whangamarire Stream corridor.
- (2) The landscape management plan is required to address the following matters:
- (a) the management of open space for the purposes of rural amenity for the Village and the maintenance and enhancement of rural character;
 - (b) the location and design detail of passive recreation facilities including bridle trails and pathways;
 - (c) the management of existing and proposed vegetation;
 - (d) the management of pasture including any grazing and fencing;
 - (e) the management of any proposed common areas including orchards and allotments;
 - (f) environmental enhancement including weed and pest management of gully areas, steep slope areas and the margins of the Whangamarire Stream corridor; and
 - (g) the implementation and ongoing maintenance of existing and proposed planting across the site.
- (3) The first and subsequent land use and/or subdivision consent applications shall be consistent with the landscape management plan approved for the relevant sub-precinct as part of the first land use or subdivision resource consent, or any approved variation.
- (4) Where a land use and/or subdivision consent application is accompanied by a variation to the approved landscape management plan it must address the matters in I417.9.2.1(b) above, as applicable to the variation.

I417.9.3. Infrastructure Plan

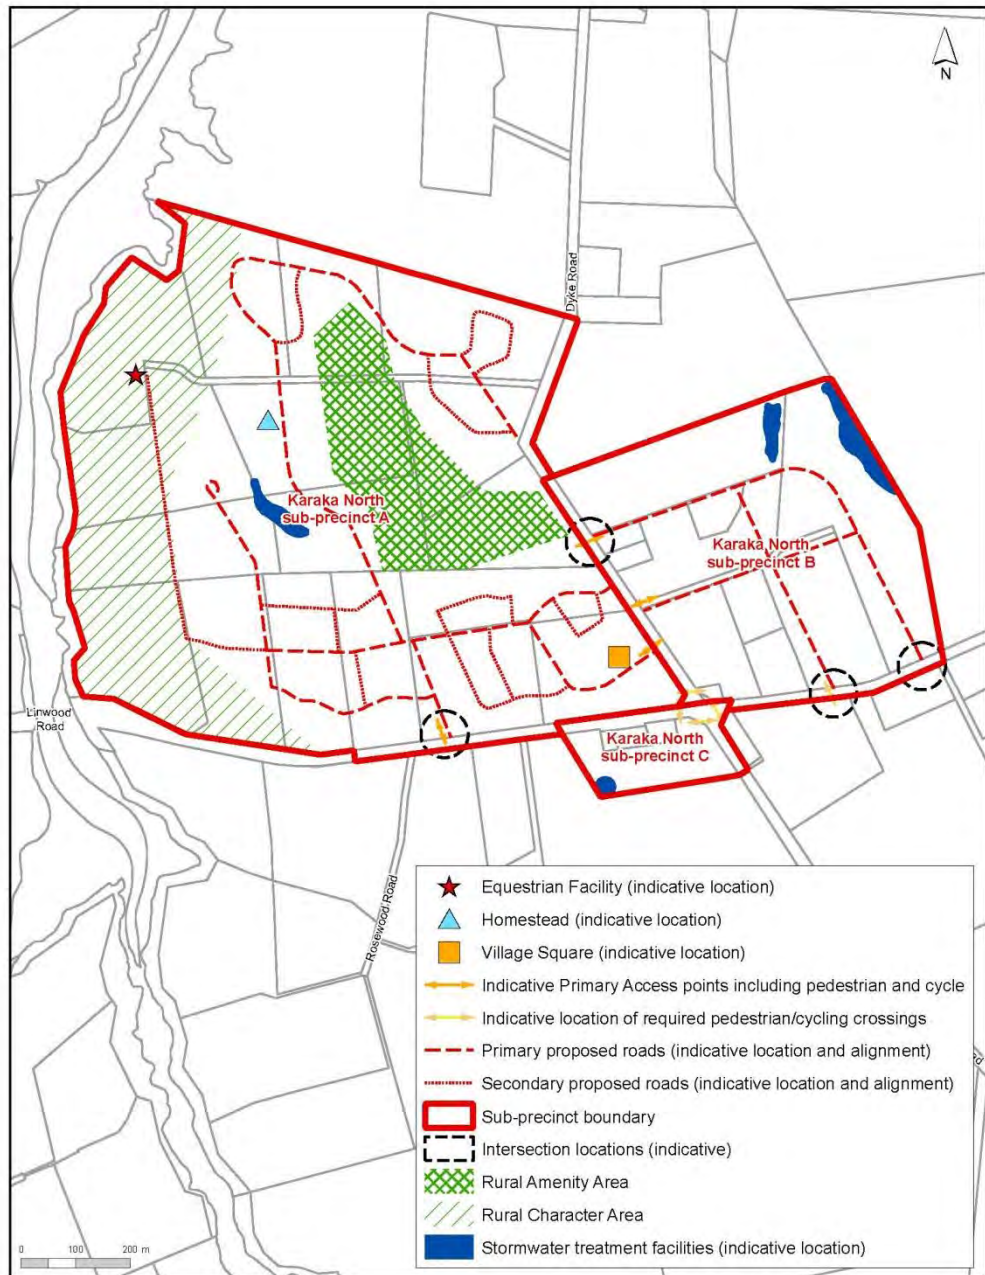

- (1) As part of the of the first land use consent application (excluding new farm buildings or additions to existing buildings that are less than 10 per cent of the existing gross floor area of the building), or the first subdivision resource consent application (excluding any boundary adjustments) the applicant is required to produce an infrastructure management plan for the sub-precinct to

which it relates. The management plan is required to address the following matters:

- (a) method of wastewater treatment;
 - (b) stormwater management;
 - (c) water supply;
 - (d) integrated stormwater management approach; and
 - (e) ownership and method of ongoing maintenance
- (2) The first and subsequent land use and/or subdivision consent applications shall be consistent with the infrastructure management plan approved for the relevant sub-precinct as part of the first land use or subdivision resource consent, or any approved variation.
- (3) Where a land use and/or subdivision consent application is accompanied by a variation to the approved infrastructure management plan it shall address the matters in I417.9.3.1(a) above, as applicable to the variation.

I417.10. Precinct plans

I417.10.1. Karaka North: Precinct plan 1

I418.11.5. Appendix 1: Kingseat Precinct

Design elements

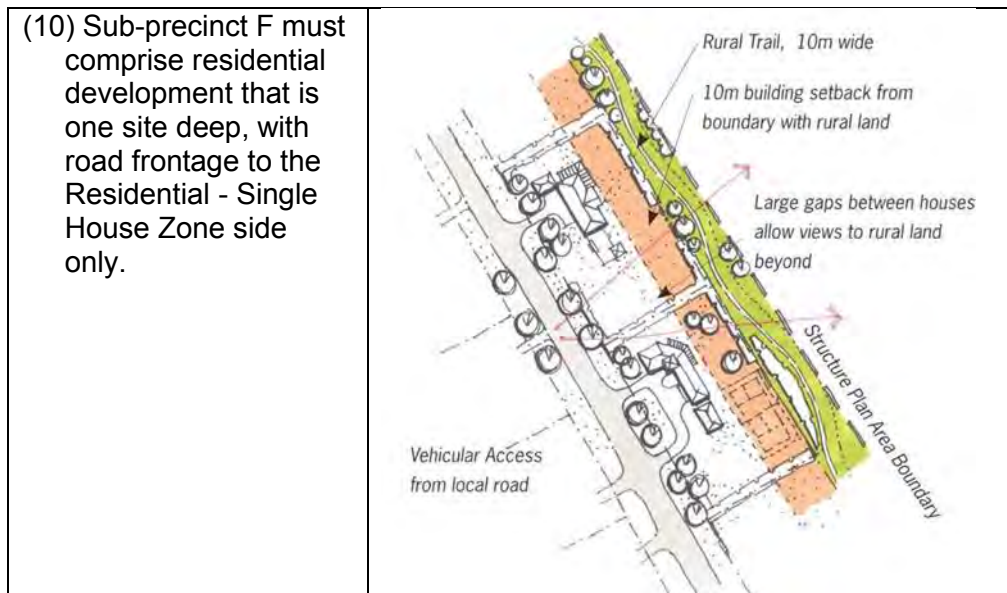

I418.11.5.1. Design element 1: Movement and access networks:

- (1) layout design, and the design of, walking, cycling, public transport and vehicular and open space networks, should support an integrated movement network, avoid conflicts between users, provides safe and convenient access and achieve accessibility to, and connectivity between, local centre, residential neighbourhoods, parks and reserves, the coastal edge and the rural hinterland (through a rural trail);
- (2) roading, development patterns and earthworks should respond to, and reinforce, identified topographical features, landscape patterns and any heritage and/or character values. Taking an integrated stormwater management approach to development should be promoted;
- (3) layout design should retain existing mature trees (including those protected trees in I418.10.3. Kingseat: Precinct plan 3 – Protected heritage places and trees of merit;
- (4) preferably in reserves or road reserves, where these contribute to amenity;
- (5) the road, reserve and access networks should make adequate provision for an integrated stormwater management approach and have regard to the impact of road gradient on options for stormwater management;
- (6) earthworks should be undertaken principally at the initial subdivision stage and, where appropriate, the creation of reasonably flat sites appropriate for subsequent development should occur at the bulk earthworks stage (subject to avoiding the need for excessively high retaining walls);
- (7) road patterns should maximise convenient access to collector routes, parks/reserves and the town centre;
- (8) road patterns should be logical and contribute to the legibility of the area.
- (9) road pattern and design should promote appropriate vehicle speed, having regard to the adjacent land use activities and the level of pedestrian, cycle and equine activity likely to occur in the vicinity;
- (10) road patterns should avoid, where possible, situations where commercial traffic uses residential roads; and
- (11) pedestrian, cycle routes and horse trails should be integrated with road and reserve design in a manner that minimises or manages potential conflicts between users, and provides safe and convenient access around the town, and between the town and the coastal edge and rural hinterland.

I418.11.5.2. Design element 2: Block size, site type and orientation:

- (1) Blocks should:
 - (a) be of a scale and shape to achieve a permeable street layout; and

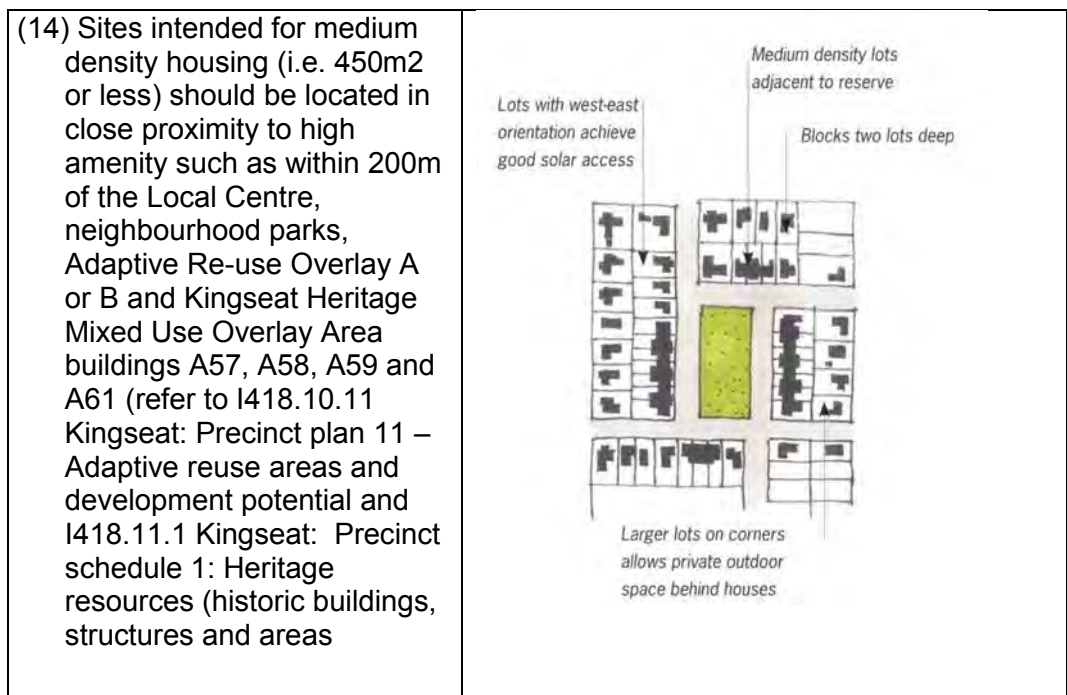

- (b) designed to enable good solar access for future dwellings.
- (c) primarily front onto, and be accessed directly from, a legal road and rear and through sites should generally be avoided;
- (2) corner sites should be designed to maximise opportunities to accommodate private outdoor space on-site, without the need for high front fences;
- (3) a variety of sites sizes should be provided. Larger sites should generally be located furthest from the local centre, neighbourhood parks, and principally within the sub-precinct F, and sub-precinct G;
- (4) sites intended for medium density housing should be of an appropriate size, shape and orientation and should have adequate frontage with a road to support the development of medium density housing in accordance with the design assessment criteria;
- (5) within sub-precincts F and G sites should be larger and provide an appropriate low density and spacious interface with the coast and rural hinterland. More intensive forms of residential development, including medium density housing, should be avoided in these areas;
- (6) sites within the former Kingseat hospital site should be designed to incorporate existing elements (scheduled buildings, structures and trees and areas) of the former Kingseat hospital site;
- (7) sites within the sub-precinct F should always gain access from internal roads within the precinct and address the road frontage with the principal building façade;
- (8) sites should avoid inappropriate road connections to the Rural - Rural Coastal and Rural - Rural Production zones (Manukau Harbour Management Area); and
- (9) Specified Building Areas within the Sub-precinct F must be sited at least 20m back from any boundary with Rural - Rural Coastal and Rural - Rural Production Zoned land, and 10m from the rural trail network.

(11) sites within the Sub-precinct F will generally be wider than they are deep to provide a spacious aspect to the surrounding rural area.

(12) within Sub-precinct G subdivision layout and design should seek to minimise the need for earthworks and retaining structures, and promote an integrated stormwater management approach to development.

(13) specified building areas within Sub-precinct G should be sited at least 30 metres back from the boundary with an existing or proposed esplanade reserve or recreation zone and 50 metres back from mean high water springs (whichever is the greater, see Table **Error! Reference source not found..1** Yards in Residential - Single House Zone

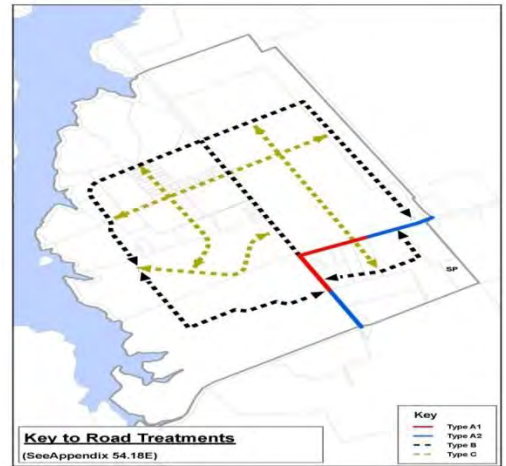

<p>(15) Through lots (lots with dual road frontage) should be avoided.</p>	
<p>(16) Subdivision and development within the Sub-precinct G should provide for and enhance public access to and from the urban areas of Kingseat and the Whatapaka Inlet/Harbour edge.</p>	

(17) All blocks and lots should be designed to adequately provide for on-site stormwater re-use and or retention of roof runoff, and treatment and retention of car parking and access areas, while ensuring connection to a catchment-wide management device where available.

(18) Consideration of appropriate stormwater management devices at the subdivision planning stage will ensure that roads are designed to incorporate appropriate stormwater management. Devices should be designed to be able to be incorporated into the treatment train system proposed for the sub-catchment.

1418.11.5.3. Design element 3: Roads and accesways

(1) In addition to transport engineering and NZS 4404 requirements, road cross sections, within proposed subdivisions and including adjoining public road areas, should be appropriate to the nature of the service they provide, generally be consistent with the adjacent diagram and typical road cross sections and also reflect urban design legibility considerations. Road cross sections should also provide opportunities for the establishment of effective integrated stormwater management such as minimising kerb and channel features and adopting overland flow conveyance via vegetated swales, and incorporating stormwater management devices and connectivity to catchment-wide management device(s) where available.

- (2) On-street parking should be provided clear of traffic lanes, clearly demarcated from the moving lanes, and positioned with regard to probable driveway positions on adjacent lots. Parking should be provided informally on minor roads.
- (3) Cyclists should generally be accommodated on the carriageway, although, if a school is to be established within Kingseat, specific design should be required for roads in proximity to the school.

(4) Local traffic management measures such as road narrowing, tightened intersection corners, chicanes, raised table pedestrian crossing points and material differentiation should be applied to limit the speed of vehicles on local roads to enhance safety, movement and amenity for pedestrians and cyclists. The devices to be used should, however, be appropriate to the character of the area so that devices do not adversely affect amenity, or landscape and landform values.

- (5) A consistent palette of traffic management tools should be used in a development area or neighbourhood.

- (6) Generous avenue planting (where appropriate) and street tree planting should be provided on all roads. A street planting plan should be submitted to Council for approval with subdivision resource consent applications.
- (7) Jointly-owned accessways are not encouraged but, where required, they should be generous in width, and comply with Council's standards. Consideration of water sensitive design should be given at design stage to minimise the overall impervious nature of the accessway.
- (8) Key intersections should be designed to recognise a 'gateway' function and be sited in general accordance with the 'gateway' locations shown on I418.10.2 Kingseat: Precinct plan 2 – Development plan.
- (9) Single-stacked green streets alongside stream and stormwater reserves should be subject to specific design. In such cases the model cross-section (Design element 3 Type C – green street) is unlikely to have carparking, kerb and channel, footpaths or berms or stormwater management devices within the road reserve where it is alongside a riparian reserve, though protection of reserve areas, for example, from parking, should be provided.

Typical road cross sections (refer criterion 1)

Proposed Auckland Unitary Plan Decisions Version with Annotated Appeals

Type A1 - Collector Route through Village Centre

Type B1 - Village Loop Road and Willage Spine

Type A2 - Collector Route with Urban Interface

Type B2 - Local Urban in Light Industrial Area

Type C - Green Street

Typical road cross sections (refer criterion 1)

Local Road in Village Centre

Local Road in Residential Area - Outside Village Living Area

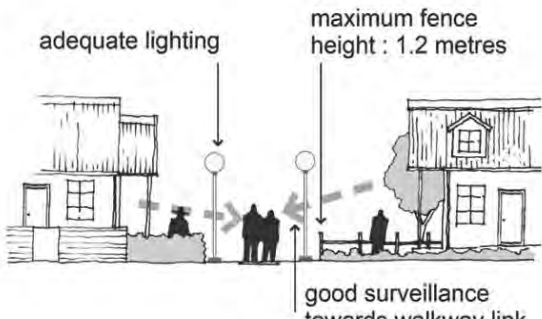

Local Road in Kingsseat Village Living Area

1418.11.5.4. Design element 4: Pedestrian, cycle and horse links and routes

- (1) Within the Local centre, pedestrian, and cycle links and routes (excluding the rural and coastal trails) should be primarily accommodated within a road reserve.

<p>(2) Green corridors links should provide for at least 6 metre wide corridors (accommodating 2 metre wide footpaths or 3 metre wide shared surfaces), be of easy gradient (without steps and not exceeding a gradient of 1:12), include clear and coherent signage, and incorporate appropriate landscaping and lighting.</p>	
---	--

- (3) Links should run along the front of sites and avoid run along the rear of sites. Where sites abut links, these should be designed so that boundary fences of not more than 1.2 metres in height can be provided along the boundary of the links without compromising privacy on adjacent sites. Consent notices may be utilised on sites adjoining the links to ensure this outcome is achieved and is maintained.

<p>(4) Adequate lighting provision for links should be made for safe night time use. Lighting should be integrated with landscaping to ensure that lighting is effective in providing a well-lit environment.</p>	
---	--

- (5) Where the pedestrian, cycle and bridle path network needs to cross major roads (such as the collector route or key roads), appropriate surface level crossings should be provided. Underpasses and over-bridges should be avoided.

- (6) Off-street cycle and pedestrian routes and bridle paths/trails should be safe, barrier-free, be appropriately surfaced, and be located above the average yearly storm event level. The treatment and design should, in each case,

reflect the role and function of paths and the character of the surrounding area.

(7)The rural and coastal trail network should provide for active and passive recreation opportunities. As such, the design of the trails should reflect their rural and coastal interface. Surface treatments should reflect ease of access to the trail, and lighting and clear directional signage should be provided in appropriate locations to promote the safety of all users. The trails should be designed to manage potential conflicts between users, in particular potential conflicts between horses and cyclists travelling at speed. Where required, users should be segregated through the provision of separate routes. The trails and any associated works or tracks should be so designed as to avoid direct public access, including equine, to the foreshore and coastal marine area (and so prevent water access to the roosting sites of migratory birds), and provide a sufficient separation between the trail and the foreshore to avoid potential adverse effects from trail activities upon the coastal environment, and on archaeological sites. Trail location and construction within the esplanade reserve adjacent to the Whatapaka Creek should:

- avoid where practicable archaeological sites;
- avoid where practicable the use of construction methods necessitating earthworks;
- be culturally sensitive to the existence of archaeology; and
- consider the use of grassed and metalled areas to form pathways

Coastal Trail

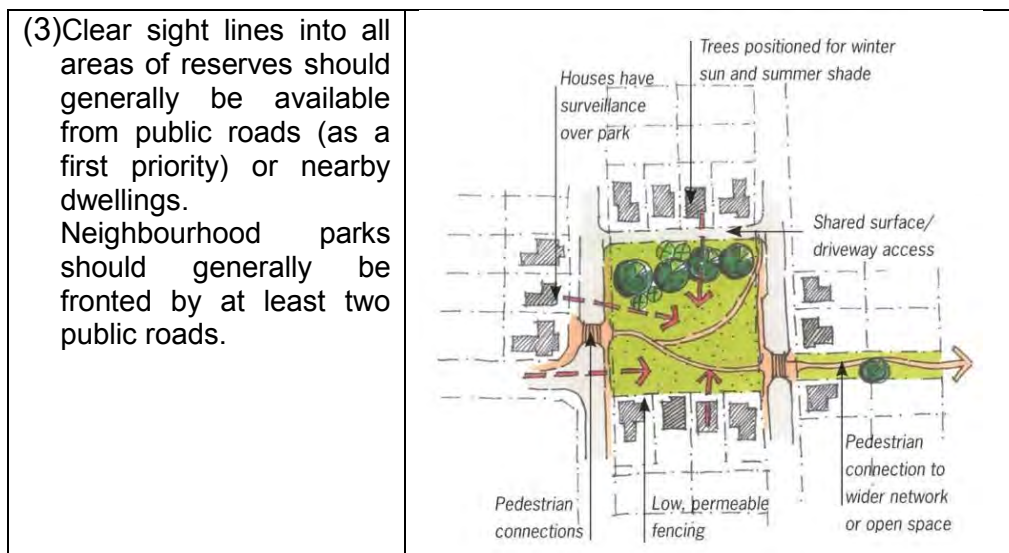

Rural Trail

I418.11.5.5. Design element 5: Reserves

- (1) Reserves should be distributed throughout the Kingseat Precinct in accordance with the locations and types shown on I418.10.2 Kingseat: Precinct plan 2 – Development plan and any other relevant precinct plan, and as described further in the explanation below, to provide a variety of recreation opportunities and to provide amenity around the town.
- (2) Neighbourhood parks should be provided in general accordance with I418.10.2 Kingseat: Precinct plan 2 – Development plan to support medium

density residential development in appropriate locations and to provide amenity and recreational opportunities. Neighbourhood parks should be provided in accordance with the requirements of I418.10.2 Kingseat: Precinct plan 2 – Development plan, have a minimum size of 1,200m² of reasonably level topography, and be designed and located to provide a focal point for the neighbourhood that it serves.

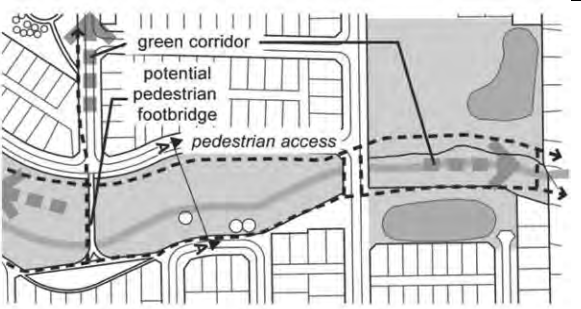

- (4) Trees, and any structures, should be positioned for winter shelter and summer shade. Furthermore, they should maximise the visual qualities of the reserve, and reinforce any linkages from the reserve to the surrounding area.
- (5) Harbourside Parks should be provided in general accordance with I418.10.2 Kingseat: Precinct plan 2 – Development plan. These parks should provide a strong connection to, and interface with, the movement network and the coast to promote public access to the coast for passive recreation purposes. The parks should provide views of the Whatapaka Inlet and promote public enjoyment of these views through the provision of grassed areas and seating/picnic areas.
- (6) A sports park is to be provided at Kingseat in the location identified on I418.10.2 Kingseat: Precinct plan 2 – Development plan. This park should provide for a range of organised, formal sports activities, and include the provision of facilities such as changing rooms and public conveniences. The sports park should also provide opportunities for equine-related activities, which should be appropriately separated from sports fields to avoid potential conflicts of use.
- (7) Reserves should be located and designed to retain any existing significant vegetation and/or heritage features/areas. Notwithstanding the protection of significant vegetation or heritage features/areas, sufficient land should be available outside the protected area to ensure that:
 - (a) the recreational needs of the community can be fulfilled;

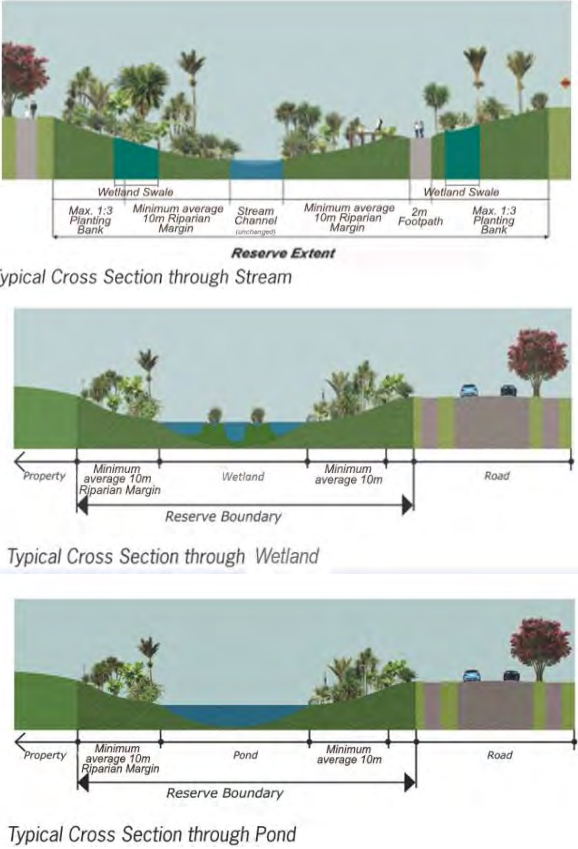

- (b) public physical access is avoided, including any equine access, to the foreshore area (including car parking, vehicle or boat ramp or launching areas); and
 - (c) walkways/cycleways/bridle paths address conflicts between activities, and adverse effects, including effluent disposal, on the coastal marine area.
- (8) the protection of archaeological sites and appropriate tangata whenua access to such sites occurs.
- (a) Reserves should have relatively low maintenance planting.

I418.11.5.6. Design element 6: Stormwater management, wastewater and water

- (1) Stormwater management devices and associated reserves and linkages should be appropriately located, consistent with an approved Stormwater Management Plan and Stormwater Discharge Consent, relevant engineering standards, relevant technical publications and approved by Council. The design and total number of public stormwater devices should be considered in the context of the full lifecycle costs to the community of maintaining this infrastructure. Planting and maintenance plans for stormwater reserves and riparian margins should be submitted with resource consent applications and approved by Council.

<p>(2) Where possible, stormwater reserves should be developed as a connected system with pedestrian access, creating green corridors to enhance the ecology of the area and providing a visual connection of green networks to the surrounding rural and coastal areas.</p>	
--	--

- (3) Permanent and intermittent streams should be retained and enhanced by:
- (a) reinstating piped streams to restore the natural stream network; and
 - (b) providing a vegetated planted buffer within the riparian margin on both sides of the channel. The appropriateness of the stream geometry and stream profile should be considered, and a suitable stream and flood profile developed.

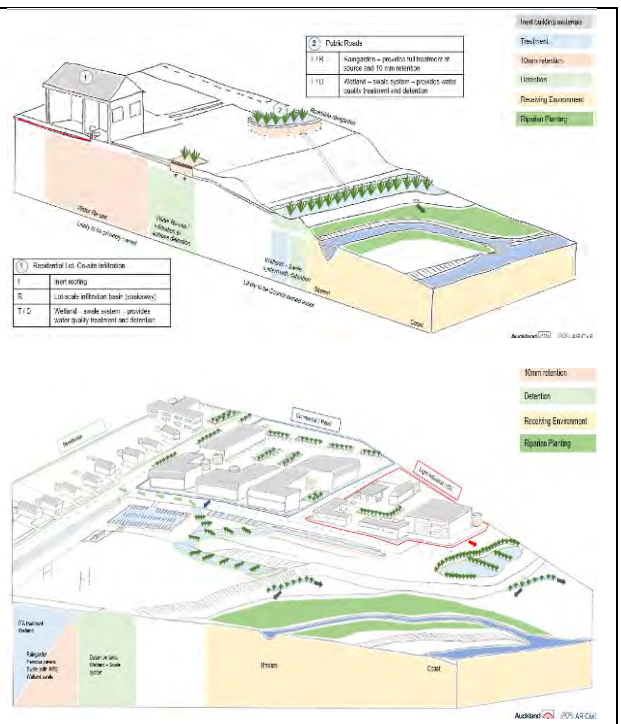

<ul style="list-style-type: none"> • Vegetated buffers should also be provided on the margins of streams (10m minimum average), existing ponds and wetlands which should: • Include native specimen trees on the lower and upper banks of existing ponds, and predominantly to the north and west of existing ponds to provide shade; • Provide a minimum average 10m of native planting on both sides of permanent and intermittent streams, including shallow water rushes and sedges. Additional planting may be required, and there may be cases where specific design is necessary to allow for an adequate overland flow path; • For wetlands and existing ponds, include native wetland species in the different planting zones as per Auckland Regional Council's planting guide "Making the most of Auckland's stormwater ponds, wetlands and rain gardens" 2008, or its successor. 	 <p>The diagrams illustrate typical cross-sections through different water features, showing the 'Reserve Extent' and various planting zones:</p> <ul style="list-style-type: none"> Typical Cross Section through Stream: Shows a central 'Stream Channel (unvegetated)' flanked by 'Wetland Swale' areas. On the outer edges are 'Max. 1:3 Planting Bank' zones. A 'Minimum average 10m Riparian Margin' is indicated on both sides of the stream channel. Typical Cross Section through Wetland: Shows a 'Wetland' area between a 'Property' boundary and a 'Road'. A 'Minimum average 10m Riparian Margin' is shown on both sides of the wetland. Typical Cross Section through Pond: Shows a 'Pond' area between a 'Property' boundary and a 'Road'. A 'Minimum average 10m Riparian Margin' is shown on both sides of the pond.
--	--

- (4) Off-line by-passes should be incorporated in stormwater management devices to locate the overflow at the upstream end of the device to direct runoff directly to the piped stormwater network.
- (5) Stormwater management devices, including wetlands and wetland-swale systems should be designed to complement the surrounding landscape, and should appear as a natural component of the overall setting. Steep batters should be avoided.
- (6) Walkways through buffer vegetation should be designed to minimise any impacts on the ecological function of the pond or buffer, and personal security should be a priority in walkway design (refer I418.11.5.4 Design element 4: Pedestrian, cycle and horse links and routes above).

- (7) Vegetated buffers in close proximity to lots should be designed to minimise shading effects on probable living areas, and to allow visual connection with any walkway passing through the buffer.
- (8) Wastewater treatment and disposal system, and Water treatment facilities should be comprehensively designed, or staged, to provide for the maximum probable development in the Kingseat Precinct for connection, and;
- (a) be located to be suitable for purpose;
 - (b) possess an appropriate system’s design and operation methodology; and
 - (c) be located and constructed in a manner that will enable practical and reliable access for maintenance and renewal purposes.

(9) Stormwater management should be designed in an integrated manner to achieve a treatment train system across each sub-catchment, which incorporates at source control and devices on-site to provide treatment, detention and retention within each lot in accordance with Standard I418.6.16 Stormwater Management , and should consider the extent to which:

- (a) It is practicable to manage all stormwater runoff on-site, and where not practical a treatment train approach should be implemented that includes primary treatment and retention on-site; and secondary treatment and detention to a catchment-wide device(s);
- (b) A treatment train system uses vegetation, soils, and natural processes to manage water and create healthier environments;
- (c) All concentrated point discharges to streams or to the coastal environment are avoided through use of dispersal devices or techniques;
- (d) Sites in the sub-precincts F and G can reasonably achieve 100% mitigation of stormwater runoff on-site;
- (e) Light Industrial sites are served by stormwater

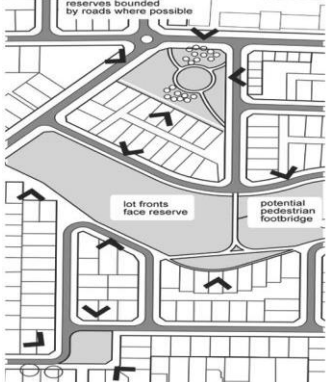

<p>wetlands or equivalent catchment-wide stormwater treatment devices designed to provide secondary treatment for the sub-catchment within which the zone is located;</p> <p>(f) New stormwater management devices are constructed within a catchment that has existing unmanaged impervious area it should be sized to accommodate the entire contributing catchment including existing and new impervious areas.</p>	
--	--

<p>(10) Treatment efficiencies of stormwater wetlands should be designed using Auckland Council guidelines as a minimum standard.</p> <ul style="list-style-type: none"> • Wetland-swale systems can be located in the 1% AEP flood plain. • Wetland-swale systems should be designed to accommodate detention (temporary storage) with a volume equal to the run off volume from the 95th percentile event from all new impervious areas, and disperse flows to avoid concentrated point discharges. 	<p>The diagram illustrates a cross-section of a stormwater management system. On the left, a vegetated section (green) leads to a detention area (shaded green). A vertical timber spreader with notches acts as an outlet, directing water into a stream (blue) on the right. A horizontal arrow at the bottom indicates the entire system is within the extent of the floodplain and riparian planting.</p>
---	---

I418.11.5.7. Design element 7: Interface design

- (1) Reserves/parks should be bounded by public roads on at least two sides unless there are topographical constraints.

<p>(2) Where a road boundary is not practical, the lot layout should ensure that the fronts of houses face onto the reserve across driveways as a next preference, and these driveways should remain unfenced so a clear line of sight and physical access is maintained.</p>	
<p>(3) If lots 'back onto' reserves, they should only do so on the southern edges of reserves, maximising the likelihood that houses will provide north-facing glazing looking onto reserves.</p>	 <p>Where lots back on to the south side of a reserve, ensure road or at least driveway edge to the north side</p>

- (4) The principal pedestrian entries to all buildings should face a road or open pedestrian space and be easily accessible and clearly identifiable from the footpath.

I418.11.5.8. Design element 8: Adaptive re-use overlay areas - Kingseat Hospital site

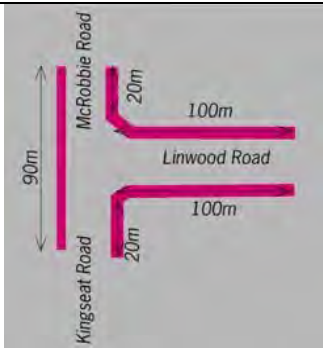

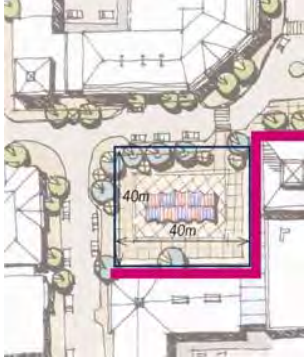

- (1) Subdivision and Development within the Adaptive Re-use Overlay Areas A and B and the Kingseat Heritage Mixed Use Overlay Area should:
- (a) be designed to incorporate existing elements (existing Buildings and Trees) within the Former Kingseat Hospital Site; and
 - (b) allow for a high degree of pedestrian access, and provide safe and attractive pedestrian routes.
- (2) Outdoor storage should be avoided or concealed from view from public roads or public spaces by internalisation, or appropriate configuration of the building (preferred), or by screen fencing.
- (3) Solid blank walls facing a road or internal public space should be avoided.
- (4) The principal pedestrian entries to all buildings should face a road or open pedestrian space and be easily accessible and clearly identifiable from the footpath.
- (5) Car parking should be provided in appropriate places that are easily accessible and appropriately landscaped.

- (6) Internal public spaces should have active edges, should be overlooked by windows from adjoining buildings and should be visible from roads.
- (7) Where car parking is provided on sites that abut residential areas, it should be designed to include screening fencing and/or landscaping.
- (8) Vehicular movement in and around open spaces should give equal priority to pedestrians and cyclists.
- (9) Any subdivision or development should: take into account the Concept plan as shown on Sub-precinct A on I418.10.4 Kingseat: Precinct plan 4 – Kingseat Hospital site and I418.10.5 Kingseat: Precinct plan 5 – Concept plan Kingseat Hospital site; and consider the effects of the retention and reuse of existing buildings and maintenance of their heritage value, including the extent to which the proposal maintains or enhances the character of the former Kingseat Hospital Site.
- (10) Any subdivision or development should promote the function and retention of key open spaces and vegetated areas, and entrance feature roadway;
- (11) The proposal should demonstrate the manner in which new buildings will achieve integration and sensitivity to the heritage buildings and their surrounding environment and relate, in their location, scale, bulk, mass and extent, by means of:
 - (a) open spaces and the creation of a sense of communal access and use both within, and to the area surrounding the Adaptive Re-use Overlay Areas; and
 - (b) the creation of relationship and distinctions (where appropriate) between buildings, activities and public spaces (streets and parks and communal areas) through innovative and sensitive design including the use of scale, design elements and materials that reflect and acknowledge/respond to functions, heritage, character and amenity values;
- (12) The stream and riparian environments and vegetated areas, and their ecological and landscape values (notably the stream/overland flow and vegetated area immediately south of the Local Centre) should be retained, protected and enhanced.
- (13) The key roading layout should be integrated with the Business - Local Centre Zone and adjoining sites, while avoiding adverse effects upon the stream and open space environment.
- (14) Opportunities for buildings to be available for a variety of community uses and regeneration and employment should be promoted.
- (15) The scale and type of activities should not undermine the vibrant, sustainable development of the Local Centre, and/or its on-going vitality, function or purpose.

I418.11.5.9. Assessment development in Sub-precinct D

- (1) Design assessment criteria for development in Sub precinct D of the Kingseat Precinct are detailed below under “Design Elements” against which development proposals will be assessed at resource consent stage.

I418.11.5.9.1. Design element 1: Site planning

<p>(1) Buildings on sites adjoining the Main Frontage Control Line (as detailed on Precinct Plans 2 and 6) should provide a continuous building frontage along boundaries with:</p> <ul style="list-style-type: none"> (a) Kingseat Road (b) Linwood Road (c) McRobbie Road (d) At least two sides of the Village Square. <p>Setbacks from the road boundary should be avoided to maintain a continuous built form and buildings must be two storeys on the Centres main street corners, and two storeys encouraged elsewhere along this frontage.</p>	 <p style="text-align: right;">15</p>
<p>(2) A Village Square having an area of at least 1,600m² should be established in general accordance with the location shown on I418.10.2 Kingseat: Precinct plan 2 - Development area and have at least one continuous frontage to the main frontage control line. The area of the Village Square must be defined as excluding any roads or service lanes, or verandahs. The Village Square must be vested.</p>	
<p>(3) The building frontage should be provided with verandahs to provide shelter and shade to pedestrians using the footpath or square</p>	

(4) Buildings within the Local Centre zone should generally adopt a perimeter block layout where buildings address the street and parking and servicing areas are located internally.

(5) The Village Square should be capable of accommodating a shape factor of a square or rectangle with side lengths not exceeding a ratio of 2:1.

(6) No vehicular access ways/service lanes should be provided within the Main Frontage Control Line. An exception to this may be allowed if an alternative access (e.g. a service lane) providing access to the Village Square is required.

(7) The layout of streets, buildings and blocks should allow for a high degree of pedestrian access, provide safe and attractive pedestrian routes and incorporate on-site stormwater management devices. Pedestrian access from rear car parking areas is anticipated to the street network with routes through the main frontage control line.

(8) Accessways to rear parking/service areas should reduce the width and number of vehicle crossings over footpaths, which may involve shared accessways.

(9) The principal pedestrian entries to all buildings should face a road and be easily accessible and clearly identifiable from the footpath.

--	--

- (10) If buildings cannot be built with frontage to all road boundaries (other than within the Main Frontage Control Line where this is required), attractively landscaped areas should be provided between the building and the road frontage. The use of such areas for parking should be limited to avoid adverse effects on the streetscape and pedestrian amenity, and where car parking is required, this should have a maximum depth of a single aisle.
- (11) Outdoor storage should be avoided or concealed from view from public roads by internalisation, or appropriate configuration of the building (preferred), or by screen fencing.
- (12) Except where located in the road reserve, areas of car parking should not adjoin the Village Square.
- (13) Initial development of the local centre should occur on those parts of sites subject to frontage controls
- (14) Proposal should include a Roothing Plan detailing the design of the relevant section of existing public road as defined in Precinct plan 9.
- (15) A Roothing Plan prepared for the relevant section of existing public road should be consistent with the Auckland Transport Code of Practice.

Note: Auckland Transport approval is required for any works to public roads in accordance with the Local Government (Auckland Council) Act 2009.

- (16) Proposals should incorporate the required road works adjacent to the relevant development area (refer I418.10.10 Kingseat: Precinct plan 10 – Kingseat development areas) or alternatively an infrastructure roading agreement should exist that addresses these matters.

I418.11.5.9.2. Design element 2: Building form, public interface and external appearance

- (1) Buildings on sites adjoining the main frontage control line should accommodate retail, commercial or community activities at ground floor level with compatible uses (including residential) encouraged above ground floor.
- (2) When viewed from the road or any public space, buildings should create visual interest through articulation, openings, and design variation.

<p>(3) Buildings which adjoin the Village Square should be of sufficient (and consistent) height to provide a sense of enclosure to that space and should generally be at least two stories in height</p>	
<p>(4) Buildings should be designed such that they provide for passive surveillance over roads and open spaces (including the Village Square).</p>	

(5) Solid blank walls facing a road or open space should be avoided.

(6) Verandahs should reflect the design and style of the building and accentuate entrances and window treatment.

(7) The principal pedestrian entry points of all buildings should be clear and obvious within the building frontage.

<p>(8) Buildings on corners should utilise design features to address and emphasise the corner.</p>	
<p>(9) Signage should be integrated with the design of the building, rather than freestanding, and should not extend above the eaves or parapets of buildings.</p>	

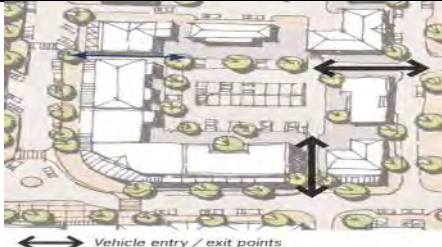

(10) Buildings should front directly onto, or face, roads and provide pedestrian entries and windows along the road frontage. Buildings adjacent to the

Village Square should front onto the Village Square, with the principal pedestrian entrance for such buildings being provided from the Village Square frontage.

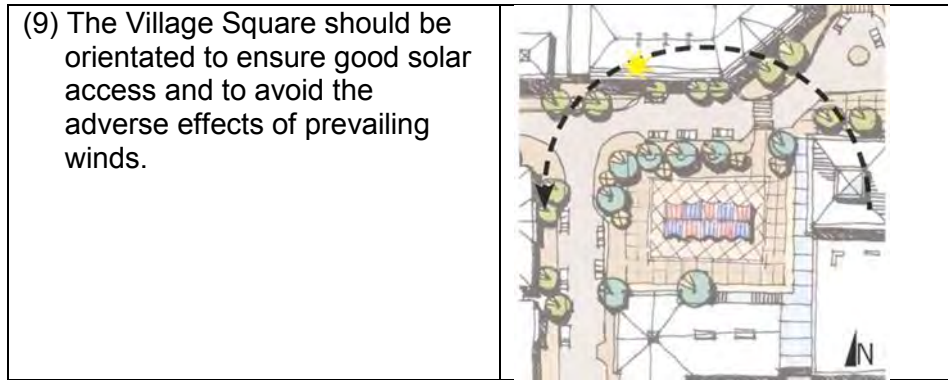

- (11) Large doors (e.g. for loading or servicing) that are not principal building entrances should be concealed from view from roads and open spaces. If they are visible from these spaces, their dominance in the frontage should be reduced, and they should be set back from the front face of the building.

I418.11.5.9.3. Design element 3: Open spaces (including the Village Square), parking areas and landscaping

- (1) Open spaces (including the Village Square) should be well designed and highly visible and accessible.

<p>(2) Car parking should be provided where appropriate, generally within the street or behind buildings, be easily accessible, appropriately landscaped and incorporate an integrated stormwater management approach.</p>	
--	---

- (3) Open spaces should have active edges, should be overlooked by windows from adjoining buildings and should be visible from roads.
- (4) Open spaces should provide for the safe and convenient movement of pedestrians and cyclists clear of motor vehicle traffic, car parking and manoeuvring areas.
- (5) Parking and movement layouts should be designed for safe and effective movement of vehicles through an easily understood layout with appropriate surface markings and signs.
- (6) Where car parking is provided on sites that abut residential areas, it should be screened by buildings, fencing and/or landscaping.
- (7) Vehicular movement in and around open spaces should give priority to pedestrians and cyclists.
- (8) The Village Square should provide appropriate features (e.g. seating, lighting, landscaping etc.) to support its function as the 'heart' of the Kingseat precinct.

(10) The Village Square should be well connected to pedestrian and cycle routes.

(11) The Village Square should be constructed of appropriate surface materials to ensure year round use and offer opportunities to incorporate Integrated stormwater management approach.

I418. Kingseat

I418.1. Precinct Description

The Kingseat Precinct covers some 298 hectares. It adjoins the Whatapaka Creek of the Manukau Harbour (which is of significant importance to the Mana whenua of the area) and encompasses the existing Kingseat village, the former Kingseat Hospital site and parts of the surrounding rural area.

The purpose of the Kingseat Precinct is to provide for the integrated and comprehensively planned expansion of the rural village of Kingseat. The precinct provides the opportunity for an appropriately designed, managed, and environmentally sensitive village to serve this community and surrounding area.

The precinct should be of a sufficient size and mass to provide a range of facilities and services, and accommodate the demands of growth within a compact and walkable area for a population of approximately 5000 people. The precinct also gives recognition to the historic, cultural and environmental attributes, and character of the area, for example by providing for the adaptive reuse of the former Kingseat Hospital site and protecting environments of the Whatapaka Inlet.

The Kingseat Precinct incorporates the provisions of the Kingseat Structure Plan and modifies the underlying Plan zones where appropriate to provide for the precinct's integrated and sustainable management.

Sub-precinct A– Kingseat Hospital Buildings

Sub-precinct A encompasses the following buildings on the former Kingseat Hospital site and provides opportunities for their protection and reuse, as well as allowing for complementary new development:

- (a) a group of Heritage Buildings (Ancillary Hospital Buildings);
- (b) the Heritage Nurses Home; and
- (c) Heritage Villas 11, 12, and 13.

These buildings along with trees of merit are identified on Kingseat Precinct plan 3: Protected heritage place and /notable trees, in the map diagrams. Notable trees at the Kingseat Hospital site are identified in the general listing of Notable trees for the Auckland region in this Plan.

The zoning for Sub-precinct A, Residential - Mixed Housing Suburban Zone, is modified by specific provisions that promote the reuse of the heritage buildings on the former Kingseat Hospital site while recognising their heritage values. Sub-precinct A also provides for activities that are complementary to the local centre, and that do not undermine the commercial and retail functions of the local centre.

Sub-precinct B – Single House Zone

Sub-precinct B is zoned Residential - Single House Zone. It surrounds both the local centre and the medium density precincts (i.e. those in the Residential - Mixed Housing Suburban Zone). An area adjoining Linwood Road is zoned Open Space – Sport and

Active Recreation Zone. Two areas off McRobbie Road are zoned Open Space – Informal Recreation Zone.

Sub-precinct C – Medium Density Residential

Sub-precinct C is located within the former Kingseat Hospital site and partly surrounds the local centre. Its purpose is to provide for a more intensive form of housing and to consolidate and support the local centre while having regard to the amenity and heritage values of the former Kingseat Hospital site. It is zoned Residential - Mixed Housing Suburban Zone. Specific density provisions apply.

Sub-precinct D – Kingseat Village Centre

Sub-precinct D is zoned Business - Local Centre Zone. The local centre is identified on Kingseat Precinct plan 2 and Kingseat Precinct plan 8. The local centre's purpose is to serve both the settlement and wider surrounding rural areas. Activities and development in this area is required to be consistent with design elements.

Sub-precinct E - Kingseat Light Industry

Sub-precinct E is zoned Business - Light Industry Zone and is identified on Kingseat Precinct plan 2 and Kingseat Precinct plan 8. Light Industry areas are required to be consistent with design elements. The Light Industry zone provides for a range of employment activities that complement the local centre.

Sub-precinct F – Rural Transition

Sub-precinct F is zoned Residential - Single House Zone and is shown on Kingseat Precinct plan 1: Sub-precincts and areas. It provides a transition or rural interface area between the urban settlement in Sub-precinct B and the adjoining rural land. This sub-precinct provides for a more spacious type of residential development set within larger grounds than in Sub-precinct B, and reflects the relationship with the adjoining rural areas. The larger minimum site requirements for development in this sub-precinct are intended to reduce potential reverse sensitivity conflicts with adjoining rural activities and land uses, and recognise elements of rural character.

Sub-precinct G – Coastal Transition

Sub-precinct G is zoned H3 Residential - Single House Zone and is shown on Kingseat Precinct plan 1: Sub-precincts and areas. This plan identifies this area as being located along the length of the coastal environment of the Whatapaka Creek. It provides a buffer and a transition between the urban settlement area and the coastal edge and environment.

The provision of large spacious sites for subdivision and development in this sub-precinct maintains the cultural heritage and natural environmental values of this area, and reduces potential adverse impacts upon the coastal environment. An area of conservation reserve (existing and proposed esplanade reserve) is identified along the coastal edge of the sub-precinct providing a buffer to the coastal environment and is zoned Open Space – Informal Recreation Zone.

The zoning of land within this precinct comprises of the following sub-precincts and areas with the following underlying zones:

- Sub-precinct A: Residential - Mixed Housing Suburban Zone
- Sub-precinct B: Residential - Single House Zone, Open Space – Sport and Active Recreation Zone and Open Space – Informal Recreation Zone
- Sub-precinct C: Residential - Mixed Housing Suburban Zone
- Sub-precinct D: Business - Local Centre Zone
- Sub-precinct E: Business – Light Industrial Zone
- Sub-precinct F: Residential – Single House Zone
- Sub-precinct G: Residential – Single House Zone and Open Space – Informal Recreation Zone

I418.2. Objectives [rp/dp]

- (1) All stormwater and wastewater infrastructure is adequately serviced and appropriately managed for the type, location and extent of subdivision and development, and the cultural heritage values of the coastal and stream environments are recognised.
- (2) The significant heritage, environmental and cultural values of the former Kingseat Hospital site are recognised and enhanced.
- (3) Subdivision and development, as well as adaptive reuse activities, takes place in a manner that accounts for the heritage value of buildings in the precinct, particularly those on the former Kingseat hospital site.
- (4) The interface between urban, coastal and rural environments is recognised and protected.
- (5) The local centre is maintained or further developed in a way that achieves its key functions and role as a commercial and retail centre for the precinct.
- (6) A range of residential densities that support the development of an integrated multimodal transport system (private vehicles, public transport, horse riding, walking, cycling) is provided.
- (7) Protected heritage places and the relationship of Mana Whenua to the surrounding area and Whatapaka Creek is recognised, provided for and protected from inappropriate subdivision and development.

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I418.3. Policies [rp/dp]

- (1) Undertake subdivision and development to achieve a compact and contained urban form that is consistent with the Kingseat Precinct plans and the controls that apply to the sub-precincts.

- (2) Undertake subdivision and development within the former Kingseat Hospital site in a manner consistent with Precinct plans 4 and 5.
- (3) Require developers of the Kingseat Precinct to provide appropriate stormwater infrastructure taking an integrated stormwater management approach to service developments at no cost to the council.
- (4) Avoid large self-serviced individual sites.
- (5) Undertake subdivision and development in a manner that maintains, protects and/or enhances those elements identified on the Kingseat Precinct plans and relevant planning maps that contribute towards protecting and/or enhancing:
 - (a) the existing amenity and character values of the coastal environment of the Whatapaka Inlet, significant watercourses and riparian margins, significant trees and vegetation;
 - (b) scheduled heritage places within the former Kingseat Hospital site; and
 - (c) the interface between the urban village / development areas and the adjoining rural and coastal environments.
- (6) The relationship of Mana Whenua with the coastal environment is recognised and protected, and in particular adverse effects on wāhi tapu and other taonga from inappropriate land use and subdivision activities in close proximity to the coastal edge.
- (7) Promote and support the development of a defined local centre with an appropriate range of accessible, walkable and conveniently-located retailing activities, service and commercial activities, and community facilities that serve the day-to-day needs of the precinct and of residents in the wider area.
- (8) Ensure that subdivision and land use activities establish a transport network that provides for the safe and efficient movement of motor vehicles, pedestrians, horse riders (coastal and rural trails), and cyclists.
- (9) Provide for the co-ordinated upgrade of public roading infrastructure within the precinct so that such upgrades occur either before or concurrent with development.
- (10) Ensure infrastructure provision for public water supply and one public waste water system in the precinct is in advance of, or concurrent with, any resource consents for subdivision and development, provided that resource consent for the reticulated and treated waste water disposal and any required resource consents for storm water discharge have been granted.
- (11) Subdivision and development should avoid, remedy or mitigate any adverse effects of urban development in the Kingseat precinct by:

- (a) implementing the recommendations of any approved Stormwater Management Plan(s) (which will include analysis of best, most practical options) and any approved Stormwater Discharge Consent;
- (b) establishing open space, stormwater reserves, approved stormwater infrastructure (quality and detention) and approved wastewater infrastructure, in an appropriate and timely manner, cognisant of:
- (i) the full life cycle costs of the asset;
 - (ii) the need to establish approved low impact design stormwater solutions to limit the number, scale and maintenance requirements of stormwater infrastructure;
 - (iii) the need to establish approved stormwater infrastructure in an integrated and coordinated manner based on catchments rather than landholdings, while also accepting the role of individual lots and public places in effective stormwater management;
 - (iv) the need to avoid direct discharges from stormwater and from wastewater treatment to streams and the Whatapaka Creek and Manukau Harbour;
 - (v) the need to ensure that the discharge of treated wastewater from the Kingseat Precinct area occurs in an environmentally and culturally sensitive way and which is characterised by:
 - One public wastewater treatment plant (membrane bioreactor or similar) which treats wastewater to a high standard;
 - Avoidance of any discharge of treated wastewater directly, or by overland flow, into the Mana Whenua Management Precinct associated with the Whatapaka Creek;
 - Any direct discharge of treated wastewater from the Kingseat Precinct outside the Mana Whenua Management Precinct associated with the Whatapaka Creek having no more than a de minimis adverse ecological effect on the Mana Whenua Management Precinct;
 - Ngati Tamaoho being notified of any application to discharge wastewater collected from the Kingseat Precinct;
 - (vi) On-site management and the use of communal devices or facilities to reduce stormwater contaminants, volumes and peak flows and minimise adverse effects, focussing in particular on:
 - activities that have the potential to generate high contaminant concentrations (such as parking areas and road reserves) and loads;

- managing stormwater runoff to achieve hydrological mitigation through detention and retention in areas discharging to rivers and streams;
 - minimising the temperature effects of stormwater discharges on rivers and streams where practicable; and
 - providing for the management of gross stormwater pollutants, such as litter, in areas where the generation of these may be an issue;
- (c) protecting, maintaining and/or enhancing significant vegetation;
- (d) protecting, maintaining and /or enhancing all perennial streams requiring riparian margins identified on the Kingseat Precinct plan 2;
- (e) protecting, maintaining and/or enhancing coastal ecosystems, character and significant coastal values of the Whatapaka Inlet and Manukau Harbour including the needs of migratory birds. This includes limiting development to low density lots adjoining the coast, maintenance of setbacks and establishment of indigenous vegetation, in a manner that recognises the cultural heritage values of the coastal and stream environment;
- (f) maintaining water quality by managing earthworks to avoid siltation and sedimentation of watercourses and adjoining properties; and
- (g) appropriately managing earthworks during subdivision to avoid, as far as practicable, the need for further significant earthworks and retaining during the development of buildings, and to avoid adverse effects upon archaeological sites and areas of cultural significance.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I418.4. Activity table

The provisions in any relevant overlays, zone and the Auckland-wide apply in this precinct unless otherwise specified below.

Table I418.4.1 Activity table specifies the activity status of land use, development, subdivision, and discharge activities in the Kingseat Precinct pursuant to section 9(2), 9(3), 11, and 15 of the Resource Management Act 1991 or any combination of all of these sections where relevant.

A blank in Table I418.4.1 Activity table below means that the provisions of the overlays, zone or Auckland-wide apply.

Table I418.4.1 Activity table 1 – Sub-precinct A-G

Activity		Activity status						
Use		A	B	C	D	E	F	G
(A1)	Any permitted activity seeking to operate outside the hours specified in the Performance Standards	P						
	Residential							
(A2)	More than a single dwelling on a site within the Single House zone		D					
(A3)	One dwelling on sites no less than a net site area of 450m ²		P					
(A4)	Dwellings on sites less than 1500m ²						NC	
(A5)	Dwellings on sites less than 2500m ²							NC
(A6)	One dwelling on a site of 325m ² -500m ² located 200 metres from a neighbourhood park complying with Standards H4.6 in the H4 Residential - Mixed Housing Suburban Zone with the exception of: <ul style="list-style-type: none"> • H4.6.1 Activities listed in Table I418.4.1; • H4.6.2 Home occupations; and • H4.6.3 The conversion of a principal dwelling existing as at 30 September 2013 into a maximum of two dwellings 		D					
(A7)	More than one dwelling on a site less than 300m ² in net site area		NC	NC	NC		NC	NC
(A8)	More than two dwellings within existing Protected Heritage Places identified on Precinct plan 3 - Protected heritage place and trees of merit.	RD						
(A9)	More than two dwellings within an existing building	RD						
(A10)	Residential development not complying with I418.6.6 main frontage control.				NC			
(A11)	Home occupation within existing Protected Heritage Places identified as A57, A58, A59 and A61 on Precinct plan 3 - Protected heritage place and trees of merit.	RD						
(A12)	Any new dwelling where required road works associated with the full	P	P	P	P		P	P

	adjoining road frontage of any development area have been completed.							
(A13)	Any new dwelling where required road works associated with the full adjoining road frontage of any development area either: are proposed in an application; are covered by a roading infrastructure agreement.	RD	RD	RD	RD		RD	RD
(A14)	Any new dwelling constructed where no roading plan has been prepared for the relevant section of public road specified in Kingseat:Precinct plan 9 – Public road sections requiring a roading plan.	NC	NC	NC	NC		NC	NC
(A15)	Any new dwelling constructed within a development area where required road works associated with the full adjoining road frontage either: are not proposed in an application; are not covered by a roading infrastructure agreement; have not already been completed.	NC	NC	NC	NC		NC	NC
(A16)	Visitor accommodation	RD						
(A17)	Multi-Unit Housing (any residential development, whether of attached or detached structures or a combination thereof, which provides for the existence or establishment of more than one household on a site) within an existing Building	RD						
(A18)	Special Housing Development (being a residential development intended to suit the particular residential needs and characteristics of a homogenous group of people and includes any building or buildings)	RD						
(A19)	Live Work Units (being a single unit consisting of a workshop, workroom, home enterprise or home occupation with a residential component that is occupied by the same owner/tenant.)	RD						
(A20)	Integrated residential development, Supported residential care and boarding houses	RD						
(A21)	Community							
(A22)	Marae Complex and Kokiri Centres	P	P					

(A23)	Education facilities	RD						
(A24)	Hospital (but not including a Psychiatric Hospital as defined in the Mental Health Act 1969)	RD						
(A25)	Public Toilets except in building 52 within the Kingseat Heritage Mixed Use Overlay	RD						
(A26)	Public amenities within existing Protected Heritage Places identified as A57, A58 , A59 and A61 on Precinct plan 3 - Protected heritage place and trees of merit.	RD						
(A27)	Public amenities	RD						

Commerce								
(A28)	Retail selling predominantly convenience goods up to 400m ² GFA	RD						
(A29)	Retail selling predominantly convenience goods greater than 400m ² GFA	D						
(A30)	Veterinary clinics and health facilities not exceeding 400m ² total GFA	P						
(A31)	The selling of hand crafts	P						
(A32)	Cafe up to 100m ² of GFA within existing buildings as at 31 May 1994	P						
(A33)	Restaurants and cafes	P						
(A34)	Outdoor eating places within existing Protected Heritage Places identified as A57, A58 , A59 and A61 on Precinct plan 3 - Protected heritage place and trees of merit.	RD						
(A35)	Outdoor eating places	RD						
(A36)	Fitness centres within buildings up to 400m ² total GFA	P						
(A37)	Entertainment facilities up to 400m ² total GFA within existing protected Heritage Places identified as A57, A58 , A59 and A61 on Precinct plan 3 - Protected heritage place and trees of merit.	RD						
(A38)	Entertainment facilities up to 400m ² total GFA	RD						
(A39)	Offices within existing Protected Heritage Places identified as A57, A58 , A59 and A61 on Precinct plan 3 - Protected heritage place and trees of merit.	RD						
(A40)	Offices	RD						
(A41)	Offices ancillary to any permitted activity	P						
Industry								
(A43)	Manufacturing not exceeding 400m ² total GFA	P						
(A44)	Industrial laboratories within existing Protected Heritage Places identified as A57, A58 , A59 and A61 on Precinct plan 3 - Protected heritage place and trees of merit.	RD

(A48)	Construction of new buildings	RD						
(A49)	Internal alteration to the buildings existing as at 31 May 1994, where there is no change in site coverage or building height	P						
(A50)	Repair, redecoration and insignificant alteration to the buildings existing as at 31 May 1994, carried out with materials similar in appearance to those originally used	P						
(A51)	Modification, demolition or removal of any part of buildings A62, A63, A64, A65, A66 and A67 as identified on Kingseat: Precinct plan 11 Adaptive reuse areas and development potential.	RD						
(A52)	For any heritage item listed in I418.11.1 Kingseat: Precinct schedule 1 - Heritage resources (historic buildings, structures and areas): - (a) any external modification, except re-painting, of any building or object; (b) any removal, relocation or demolition; (c) any work within 6 metres of the exterior surface of any building or object except: (i) where the building or work is on a public road or reserve; (ii) where such work is on a different SITE and that SITE was in existence as at 31 May 1994; (d) any new building within the Heritage setback (former Kingseat Hospital site); (e) any activity which would offend mana whenua in terms of the known spiritual or cultural associations;	RD	RD	RD	RD	RD	RD	RD

Subdivision								
(A53)	Subdivision in the Kingseat Precinct which complies with Standards I418.6.10 to I418.6.16.	RD						
(A54)	Subdivision in Sub-precinct B, and Sub-precincts F and G that does not comply with I418.6.11 Minimum site size road frontage, size requirements	NA	D	NA	NA	NA	D	D
(A55)	Medium density subdivision (net site area down to 325m ²) or that approved by resource consent in Sub-precinct C	NA	NA	C	NA	NA	NA	NA
(A56)	Subdivision involving cul-de-sac roads	D						
(A57)	Subdivision creating a rear site in Sub-precinct F of the Kingseat precinct	NA	NA	NA	NA	NA	NC	NA
(A58)	Subdivision which does not comply with any Standards I418.6.10 to I418.6.16 excluding lots not connected to a public reticulated water supply or public reticulated wastewater network.	D						
(A59)	Subdivision which complies with all Standards I418.6.10 to I418.6.16 and is located outside the area identified in I418.6.8 Historic heritage alert setback.	RD						
(A60)	Subdivision which complies with all standards in with I418.6.10 to I418.6.16 and is located within the I418.6.8 Historic heritage alert setback	D						
(A61)	Subdivision which does not comply with Standards I418.6.10 to I418.6.16 provided that, at the time at which the application is lodged with Council, all necessary resource consents have been obtained for a public reticulated water supply network and a public reticulated sewage disposal system, and where such resources consents are still in force at the time of determination.	D						
(A62)	Subdivision of sites within the Kingseat Precinct not connected to a public reticulated water supply or a public reticulated sewage disposal system and where all necessary resource consents have not been granted for a public reticulated water	NC						

	supply network and a public reticulated sewage disposal system.	
(A63)	Any subdivision within the Kingseat Precinct relating to an area identified in Kingseat: Precinct plan 9 – Public road sections requiring a roading plan where no roading plan for the relevant section of existing public road has been prepared.	NC
(A64)	Any subdivision within the Kingseat Precinct within a development area identified on Kingseat: Precinct plan 10 - Kingseat development area, where the required road works associated with the full adjoining road frontage, either: <ul style="list-style-type: none"> a) are not proposed as part of the subdivision application, or b) are not covered by a roading infrastructure development agreement, or c) have not already been completed. 	NC

Note 1

For the purposes of this Precinct:

Required road works means the works that must be undertaken to the centreline of the adjoining public road, and which must be along the full road frontage of the development area in which the subdivision or development is occurring, All such works must be undertaken in accordance with a roading plan that has been approved as part of a resource consent application.

Development area means those areas of land as denoted as such in any precinct plan. Any development or subdivision in a development area will necessitate the upgrading of the entire adjoining public road frontage to the centreline of that road.

Heritage Setback means that area of a scheduled building identified in Kingseat: Precinct plan 3 – protected heritage places and trees of merit located:

- Between 15m and the front façade of Building A.52 facing the central roadway;
- 10m from all other facades of Building A.52 and from the facades of Buildings A.57, A.58, A.59 and A61; and
- 6m from all facades of scheduled Buildings A.62 to A.67

I418.5. Notification

- (1) Any application for resource consent for an activity listed in Table I418.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I418.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct unless otherwise specified below.

I418.6.1. Density

- (1) More than one dwelling on a site within Sub-precinct B is a permitted activity provided that the number of dwellings must not exceed a density of one dwelling per 450m² net site area.
- (2) Development exceeding the density provided for in this rule is a discretionary activity.

I418.6.2. Height

- (1) Buildings in Sub-precinct A must not exceed 12m in height.

I418.6.3. Height in relation to boundary

- (1) Standard H4.6.5 height in relation to boundary, H4 Residential - Mixed Housing Suburban Zone does not apply to internal boundaries within Sub-precinct A.

I418.6.4. Yards

- (1) A building or parts of a building must be set back from the relevant boundary by the minimum depth listed in Table I418.6.4.1 Yards in Sub-precincts A, B, F and G below.

Table I418.6.4.1 Yards in Sub-precincts A, B, F and G

Yard	Minimum depth
Front	5m for Sub-precincts A, B and F
	10 m for Sub-precinct G
Side or rear yards adjoining land which is within any of the zones in section H19 –Rural Zones	20m from the boundary of land zoned Rural - Rural Coastal or Rural - Rural Production Zones
Side or rear yards adjoining a Rural Trail identified on Kingseat: Precinct plan 2: Development plan	10m from the boundary of the Rural Trail
Coastal protection yard	30m from existing or proposed Esplanade Reserve or 50m from Mean High Water Springs whichever is the greater

I418.6.5. Building coverage

- (1) Within the Kingseat Precinct building coverage must comply with the following maximum total.
 - (a) Building coverage per site must be 35% of the net area within the Residential - Single House Zone except as listed in Table I418.6.5.1 Building coverage in Sub-precincts A, F and G below:

Table I418.6.5.1 I418.6.4 Building coverage in in Sub-precincts A, F and G

Sub-precinct	Maximum building coverage per site
Sub-precinct A	50%
Sub-precinct F	25%
Sub-precinct G	20%

I418.6.6. Main frontage control

- (1) In the Kingseat Precinct all residential development on the “main frontage control line” identified on Kingseat: Precinct plan 6 - Special control must not have habitable rooms at ground level.

I418.6.7. Building line setback

- (1) In the Kingseat precinct, road widening from the current legal road width (as at 23 September 2010) will be required in the locations shown and in the dimensions specified in Kingseat: Precinct plan 7 – Road widening. Where road widening is identified on Kingseat: Precinct plan 7 – Road widening and where the construction of a building precedes subdivision, buildings must be located outside of the building line and this shall be deemed the new front boundary until such time as the road widening identified for the Site has been undertaken and subsequently vested in Council.

I418.6.8. Historic heritage alert setback

- (1) Within the Kingseat precinct where any earthworks, including any land disturbance required for access way, formation work, or building, or planting of indigenous vegetation is proposed, or where a specified building area associated with proposed subdivision is proposed, within the width of 100m from the line of Mean High Water Springs:
 - (a) The person(s) undertaking the proposed activity (including subdivision) must provide the council with a report from a qualified archaeologist, identifying whether any archaeological site is within the Historic heritage alert setback of the proposed subdivision, and stating whether any archaeological site will be damaged, modified or destroyed by such activities;

- (b) Where a report of the type described above has been previously received by council then a further report will not be required; and
- (c) Where a person proposes to undertake such activity and instigates a survey of a property or properties by a qualified archaeologist and no archaeological sites are recorded provisions I418.6.8 Historic heritage alert setback(a) and (b) will cease to apply.

I418.6.9. Car parking

(1) Kingseat Sub-precinct D: Local Centre

- (a) Within the Kingseat Local Centre zone the number of parking spaces required under section E27 Transport at E27.6.2(4) will apply to activities only at the ground floor of the local centre with no parking requirements for activities within the first floor or above.

(2) Kingseat Sub-precinct A

- (a) The following parking standards apply:

- (iii) One parking space for every 40m² of gross floor area (GFA).

- (b) Except that:

- (iv) no parking is required for sites with total buildings having 400m² GFA or less;

- (v) one parking space per site is required for sites with total buildings that exceed 400m² GFA but which do not exceed 1500m² GFA; and

- (vi) two parking spaces are required for any site having total buildings greater than 1500m² GFA.

I418.6.10. Kingseat precinct and sub-precinct A

- (1) All subdivision within the precinct must be general accordance with Kingseat: Precinct plan 1 – Sub-precincts and areas and Kingseat: Precinct plans 2 – Development plan.
- (2) All subdivision within the former Kingseat Hospital Site must be in general accordance with Kingseat: Precinct plan 4 – Kingseat Hospital site and Kingseat: Precinct plan 5 – Concept plan Kingseat Hospital site.

I418.6.11. Minimum site size, road frontage, size requirements

- (1) Any new site within Sub-precinct B must:

- (a) have a minimum net area of 450m²;

- (b) have road frontage of no less than 15m;

- (c) not be a rear site; and

- (d) have a minimum distance of 20m between any specified building area and the boundary of an adjoining rural or coastal area.
- (2) Any new site within Sub-precinct F must:
- (a) have a minimum net area of 1500m²;
 - (b) have a minimum distance between any specified building area and the boundary of another zone of 20m;
 - (c) must not be a rear lot; and
 - (d) have road frontage of no less than 50 metres.
- (3) Any new site within Sub-precinct G must:
- (a) have a minimum net area of 2500m²;
 - (b) have a minimum distance between any specified building area and the boundary of an existing or proposed esplanade reserve of 30m;
 - (c) where adjoining an existing or proposed esplanade reserve revegetate 25% of the area of the new site with indigenous vegetation and protect this area through consent notices (subject to requirements of the Historic Heritage Alert Setback); and
 - (d) not be a rear site.
- (4) Medium density subdivision (i.e. net site area down to 325m²) or that approved by resource consent must be located within 200m of:
- (a) a Neighbourhood Park (excluding Harbourside Parks);
 - (b) Sub-Precinct D the Business Zone (Kingseat Village Centre);
 - (c) the Adaptive Re-use Overlay Area A and B shown on Kingseat Precinct plan 11 – Adaptive reuse areas and development areas; or
 - (d) buildings A57, A58, A59 and A61 within Sub- Precinct A (refer to Precinct plans 1, 2, 8 and 11).

I418.6.12. Wastewater and Water Supply

- (1) Any site located within the Kingseat precinct must be connected to a public reticulated wastewater treatment and disposal system.
- (2) Any site located within the Kingseat precinct, must be connected to a public reticulated water supply and network.

I418.6.13. Rural trail

- (1) In the Kingseat precinct, subdivision must provide a 10m wide strip of land in the location of the annotation “Local Purpose Access Rural Trail’ on I418.10.2

Kingseat: Precinct plan 2 – Development plan. The Rural Trail must be vested as local purpose access.

I418.6.14. Average minimum density

(1) The average minimum density in Sub-precinct B is 10 dwellings per hectare

I418.6.15. Design and layout Business - Local Centre Zone

(1) Whether subdivision within the Local Centre establishes, or does not preclude the establishment and development of a Village Square of at least 1,600m² in area with at least one continuous frontage to the Main Frontage Control Line shown on Kingseat: Precinct plan 6 – Special controls and as described in I418.6.6 Main frontage control.

I418.6.16. Stormwater Management

(1) Any subdivision within the Kingseat Precinct must meet the following :

- (a) the only new ponds permitted for stormwater management must be dry detention basins that temporarily detain water and, where practical, must be able to completely empty via an orifice controlled outlet over a 24 hour period;
- (b) all new stormwater management devices must not be located on the bed of any stream (off-stream);
- (c) all stormwater from lots in the H17 Business - Light Industrial Zone must drain to a stormwater wetland that provides for secondary treatment prior to discharge. The treatment efficiency of a stormwater wetland must be designed using Auckland Council Guidelines as the minimum standard;
- (d) all lots in Sub-precincts F & G must manage stormwater on-site and not rely upon or require the use of public stormwater wetlands or wetland-swale systems;
- (e) all lots must be designed to accommodate the on-site volume and quality standards set out below;
- (f) a 20m riparian margin must be provided from the edge of any permanent stream and 10m from the edge of intermittent streams;
- (g) roads, uncovered parking areas, and jointly owned accessways must be designed to meet the stormwater quality standards set below; and
- (h) All concentrated point discharges are to be avoided and methods to disperse discharges are to be implemented.

On-site volume control

(2) All sites must provide on-site retention (volume control) of stormwater for a 10mm, rainfall event from:

- (a) all new impervious areas 25m² or larger in area; and

- (b) both existing and new impervious areas where new or redevelopment of existing impervious areas exceed 50 square metres on redeveloped sites.

In achieving the above standard, all stormwater run-off from roofs must be directed to a rain tank providing for non-potable re-use; a planted infiltration pit or trench; permeable paving, or a combination.

- (3) In addition to I418.6.16(2) Stormwater Management above, where stormwater from a site discharges directly to a stream or to land that drains to a stream, stormwater management by on site devices or catchment-wide devices must be provided that meet the following:

(a) detention (temporary storage) with a volume equal to the remainder of the 95th percentile event from all new impervious areas 25 square metres or larger in area, and for both existing and new impervious areas where new impervious areas exceed 50 square metres on redeveloped sites;

(b) the discharge must not result in, or increase, flooding of other properties in events up to 10 per cent annual exceedance probability or the inundation of buildings in events up to the one per cent annual exceedance probability; and

(c) the discharge must not cause or increase scouring or erosion at the point of discharge or downstream and must be dispersed prior to stormwater entering the stream or coastal marine area.

Provided that where the stormwater from a site discharges directly to the coastal marine area and not to a stream, on site stormwater management does not need to comply with (a) and (b) above.

On-site quality control

- (4) All buildings must avoid the use of unpainted roofing or spouting materials containing zinc or copper to minimise contaminant runoff.

- (5) Stormwater runoff from high contaminant generating land uses must be treated by an Approved Stormwater Quality Device.

For the purposes of this rule, high contaminant-generating land uses means:

- all road carriageways; and
- parking areas and associated accessways that are exposed to rainfall and which carry more than 50 vehicles per day,

For the purpose of this rule Approved Stormwater Quality Device means:

A stormwater quality treatment device or system that is sized and designed in accordance with TP 10 – Stormwater Management Devices: Design Guidelines Manual (May 2003), or alternative devices that are demonstrated to achieve an equivalent level of contaminant removal performance to that of TP 10 – Stormwater Management Devices: Design Guidelines Manual (May

2003) for the land use activity and associated contaminants of concern as follows:

- (a) for high use roads and carparks, stormwater quality treatment devices that are more effective at removal of sediment and metals must be used;
 - (b) for high contaminant yielding building materials, stormwater quality treatment devices that are more effective at removal of metals must be used.
- (6) Industrial and Trade Activity (ITA) areas are excluded from these provisions where they are located within the Business - Light Industrial Zone. However, any additional impervious area outside of the ITA area but which are located within the same lot are subjected to these provisions.

I418.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I418.8. Assessment – restricted discretionary activities

I418.8.1. Matters of discretion

The Council will restrict its discretion to all of the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

(1) Matters of discretion (General):

- (a) whether sites can be adequately serviced with water, wastewater disposal and systems to control discharge of contaminants;
- (b) the extent to which stormwater management takes an integrated stormwater management approach with riparian planting, earthworks, silt and sediment control;
- (c) the adequacy of measures for remediation of soil contamination;
- (d) the potential effects arising from geotechnical matters including site stability and natural hazards such as flooding;
- (e) measures adopted to address proximity to national grid transmission lines (refer Planning Maps);
- (f) whether residential subdivision achieves the yield depicted on Kingseat: Precinct plan 11 – Adaptive reuse areas and development areas, design and layout, site planning, building form, public interface and external appearance, open spaces, parking areas, landscaping and amenity planting;
- (g) the design, function and measures proposed to secure the future viability of the local centre;

- (h) the measures to avoid adverse effects on natural features including existing native (and significant exotic) vegetation, riparian planting, ecosystems and stream and riparian environments and their natural landscape quality ecological and landscape values including proposals for their retention, protection and enhancement;
- (i) the measures to avoid adverse effects on the coastal environment including proposals for its protection and enhancement;
- (j) measures for the retention and promotion of the function of key open spaces and vegetated areas, and the entrance feature roadway, notable and significant trees and heritage resources including historic heritage places, other existing trees and landscape quality and heritage values of the former Kingseat Hospital Site;
- (k) measures for the protection and/or enhancement of archaeological sites, and cultural and heritage resources and the coastal environment;
- (l) the application of the key roading layout and its functions and connectivity, including the physical integration of sub-precinct A with the Local Centre and the construction, location and/or extension of trails for walking, cycling and horse riding within the structure plan area including within any existing or required esplanade reserve or riparian margin **and** roading plans and the implementation of any required road works;
- (m) measures for noise attenuation and limitation on hours of operation;
- (n) consistency with Precinct Plans;
- (o) consistency with any relevant Sub-precinct plan; and
- (p) consistency with design elements.

I418.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions:

- (1) Whether the sites are serviced for water and wastewater disposal and the adverse effects avoided, remedied or mitigated.
- (2) The extent to which an integrated stormwater management approach has been adopted including:
 - (a) whether an integrated stormwater management approach has been undertaken, and whether this has incorporated riparian planting, earthworks, silt and sediment control measures;
 - (b) whether the creation or increase of existing flooding, including incremental adverse effects has been avoided;

- (c) whether incremental and cumulative adverse effects of increased stormwater flows including such effects on stream channels and stream health, natural character, biodiversity, erosion and stability and community and Mana Whenua values has been avoided, or if not avoided then mitigated;
 - (d) whether any existing adverse effects have been reduced;
 - (e) whether any available stormwater network which has capacity to cater for increased stormwater flows has been utilised;
 - (f) the extent to which stormwater flow is managed on-site and stormwater management devices in the catchment utilised to accept and cater for increased stormwater flows to meet mitigation requirements;
 - (g) the extent to which discharge points have ensured dispersal of flows before entering a stream or the coastal marine area;
 - (h) whether the adverse effects on sensitive receiving environments, including coastal waters, from stormwater contaminants have been avoided, remedied or mitigated; and
 - (i) the extent to which incremental and cumulative adverse effects of stormwater contaminants on receiving environments including on biodiversity, community and Mana Whenua uses and values have been avoided, or if not avoided then mitigated.
- (3) Whether remediation of soil contamination has occurred including the verification of effective completion of works.
- (4) The extent to which geotechnical matters including site stability and natural hazards such as flooding have been considered and addressed.
- (5) The extent to which development has taken account of proximity to national grid transmission lines (refer Planning Maps) including whether the provisions of the National Grid Corridor overlay have been addressed.
- (6) The extent to which density, design and layout, site planning, building form, public interface and external appearance of the proposed development including open spaces, parking areas, landscaping and amenity planting promotes the protection and enhancement of the natural and heritage environment and amenity and character of Kingseat and the Whatapaka Creek.
- (7) The extent to which the design of the town centre and other areas and activities, promotes, maintain and enhance the function and the ongoing continuance of the town centre.
- (8) Whether adequate provision has been made for the protection, retention and enhancement of existing native (and significant exotic) vegetation, riparian

planting, ecosystems and stream and riparian environments and their natural landscape quality ecological and landscape.

- (9) Whether the coastal environment has been protected or enhanced.
- (10) Whether the function of key open spaces and vegetated areas, and the entrance feature roadway, existing trees and landscape quality and heritage values of the former Kingseat hospital site have been protected, retained and enhanced.
- (11) Whether archaeological sites, and cultural and heritage resources have been protected, retained or enhanced, including the following considerations:
- (a) In relation to proposals affecting heritage resources listed in Kingseat Precinct Schedule 1: Heritage Resources (Historic Buildings, Structures and Areas) :
- (i) whether the opinion of an Architectural Conservator, Archaeologist, Historian, Mana Whenua representative, or other suitably qualified or experienced person has been sought;
 - (ii) where the heritage resources would be compromised or lost, the extent to which those effects could be mitigated if consent were granted;
 - (iii) the nature and extent of any work or proposal and how conspicuous or significant it would be in the context of the maintenance of the integrity and intrinsic value of the scheduled item;
 - (iv) whether the height, location, design and external appearance of buildings, structures and other objects is appropriate; and
 - (v) whether a Conservation Plan prepared by a suitably qualified or experienced person, is provided to ensure the proper management of any heritage resource;
- (b) In the event of an application to damage, modify or destroy an archaeological site identified within the I418.6.8 Historic heritage alert setback, the extent to which the following assessment matters to ensure that adverse effects are avoided, remedied or mitigated have been given regard:
- (i) the nature, form and extent of the activity and the likelihood of damage, modification or destruction of the archaeological site;
 - (ii) the importance and weight given to the results of any consultation with Mana Whenua;
 - (iii) the significance of the archaeological site assessed on the uniqueness of the site, representative nature of the site, its condition and the importance attached to the site by Mana Whenua and the landowner;

- (iv) any archaeological assessment carried out and contained in a report by a qualified archaeologist to identify and provide: an assessment of effects, proposals for avoidance or mitigation of effects; the provisions of any relevant management plan where appropriate; and whether the proposal meets the provisions of the ICOMOS New Zealand Charter for the Conservation of Places of Cultural Heritage Value;
 - (v) the identification of any alternative methods and locations available for applicants to carry out the works or activities;
 - (vi) the degree to which development can occur within I418.6.8 Historic heritage alert overlay setback where there is no adverse effect on the archaeological site; and
 - (vii) the manner in which landowners, the community and Mana Whenua source or provide funding and methods of voluntary protection for the management of archaeological sites including the use of covenants;
- (c) for the assessment of applications that involve the modification, alteration or demolition of any scheduled building, structure or area existing on the former Kingseat Hospital site and listed in I418.11.1 Kingseat: Precinct Schedule 1- Heritage Resources (Historic Buildings, Structures and Areas), or any new building located within the Heritage setbacks, whether a heritage impact assessment of the proposal has been carried out by an appropriately qualified person that includes the following considerations:
- (i) in consideration of any scheduled building, structure or area:
 - 1. its structural condition and the ability for it to be converted to a new use; and
 - 2. its contribution to the overall heritage and/or character of the former Kingseat Hospital site.
 - (ii) in consideration of any new building located within the Heritage setbacks:
 - 1. the effects upon the heritage value of the scheduled building in the vicinity; and
 - 2. the effects upon the overall heritage and/or character of the former Kingseat Hospital site;.
 - (iii) regarding any scheduled building:
 - 1. The retention of the scheduled building in its present form in a manner that preserves its heritage values including:
 - the fabric identified in I418.11.2 Kingseat: Precinct schedule 2: Heritage assessment by building type as

having 'exceptional' significance should be retained unless exceptional circumstances require its removal;

- the fabric identified as having 'considerable' significance should be retained unless special circumstances require its removal;
- the fabric identified as having 'some' significance should be retained where practicable; and
- proposals that remove any accretions or features that detract from the heritage values should be favourably considered;

(iv) new buildings within Heritage set back (Former Kingseat hospital Site):

1. whether new buildings are of an appropriate scale (including height (irrespective of the permitted zone height) and overall bulk), and located, so that:
2. where close to any scheduled building, they are not taller than the scheduled buildings, and preferably one storey lower than the scheduled building;
3. views of the scheduled building from the central roadway and central field are provided; and
4. open space around and in the vicinity of the central field, and central roadway of the former Kingseat Hospital site should be promoted and retained;

(v) the design and layout of subdivision and development including particular regard to:

1. the protection and/or enhancement of any scheduled building, trees, structures or areas;
2. the overall character and amenity of the former Kingseat Hospital site derived from the scheduled buildings, structures, trees and areas, and the integration of new subdivision and development with these features;
3. medium density housing giving recognition to an appropriate scale of development within close proximity to scheduled buildings, that promotes:
 - the retention of heritage values and character of the buildings;
 - associated open space surrounding the scheduled buildings and complementary landscape heritage character;
 - views of the scheduled buildings from the central field, and central roadway of the former Kingseat Hospital site; and

- open space around the central field area.

(12) Roading

(a) whether efficient roading layout, function connectivity, including the physical integration of Sub-precinct A with the Local Centre is achieved;

(b) whether implementation of any required road works are required;

(c) With respect to the construction of public roads:

(i) whether the proposal includes a roading plan detailing the design for the relevant section of public road as defined in Kingseat: Precinct plan 9 – Public road sections requiring a roading plan;

(ii) whether the roading plan prepared for the relevant section of existing public road is consistent with the Auckland Transport Code of Practice; and

Note 1: Auckland Transport approval is needed for any changes to existing public roads under the Local Government (Auckland Council) Act 2009

(iii) whether applications propose to undertake the required road works along the frontage of the relevant development area (refer Kingseat: Precinct plan 10 – Kingseat development areas; or whether an infrastructure agreement exists to complete the required road works referred to above.

(13) Whether adequate noise attenuation and hours of operation are proposed where appropriate.

(14) The extent to which the proposals are consistent with Precinct Plans.

(15) The extent to which the proposals are consistent with any relevant sub-precinct plan.

(16) Subdivision

(a) In addition to considering the relevant assessment criteria I418.8.2(1) - (11) above the Council will also consider :

(i) whether the subdivision is in general accordance with the relevant subdivision design assessment criteria (see the below table which outlines the appropriate design elements for specific sub-precincts).

Table I418.6.48.2.1 Design assessment criteria

Sub-precinct	Relevant design assessment criteria contained in I418.11.5 Appendix 1: Kingseat Precinct
A	Design elements 1 and 8
B & C	All design elements
D	Design element 6
E	Design elements 1, 5 and 6
F & G	As specified in the design elements

(17) Former Kingseat Hospital site and consistency with relevant precinct plans.

(a) The council in considering the relevant assessment criteria in I418.8.2(1) - (11) above for subdivision and development considered restricted discretionary activities within the former Kingseat hospital site, will also consider the following matters:

- (i) the overall character of the site including heritage, environmental and amenity values, scheduled buildings and trees(including trees of merit in Kingseat: Precinct schedule 4 – Trees of merit);
- (ii) the extent to which existing notable and trees of merit that contribute to the visual amenity and treed character of the site are retained;
- (iii) the extent to which proposed landscaping contributes to the treed character of the site and maintains its future visual amenity, including its effectiveness in offsetting the effects arising from the removal of existing trees from the site;
- (iv) whether subdivision and development achieves the structural elements shown on Precinct plans I418.10.2 , I418.10.4 and I418.10.5;
- (v) the extent to which subdivision and development reflects any assessment criteria contained in heritage and character provisions in the Unitary Plan including those matters set out in I418.8.2 (11) above;
- (vi) the extent to which the proposed subdivision and development affecting the former Kingseat hospital site is in accordance with Kingseat: Precinct Plan 4 – Kingseat Hospital site, and avoids more than minor adverse effects, including cumulative adverse effects, on the development and/or viability, vitality or function of the Kingseat local centre;

- (vii) whether proposals to reuse buildings appropriately protect and/or enhance the external appearance, character and heritage values of the historic heritage place, and buildings and the layout of access, outdoor living courts and other accessory structures and buildings and does not undermine the character and amenity of the areas and vegetation within which the building is located;
 - (viii) whether Scheduled Trees including trees that provide a high level of amenity are appropriately incorporated within the proposed development;
 - (ix) whether the subdivision and development within the adaptive re-use areas in Sub-precinct A promotes opportunities for community re-use, community activities and regeneration and employment;
 - (x) whether activities within the Kingseat Hospital Precinct area avoid more than minor adverse effects, including cumulative adverse effects, on the development and/or viability, vitality or function of the Kingseat local centre;
 - (xi) whether subdivision and development (including new buildings) within the Adaptive Re-use Overlay Areas do not promote activities that may undermine the function and purpose of the Local Centre.
 - (xii) whether within the Adaptive Re-use Overlay areas and the Kingseat Mixed Use Overlay Area:
 - 1. effects that any proposal may have on the safety and character of the Hospital site as a result of traffic effects are less than minor;
 - 2. adequate provision has been made for onsite parking;
 - 3. adequate provision has been made for noise attenuation where proposals involve potential effects on the occupants of buildings, particularly where residential accommodation sits in close proximity to other land uses; and
 - 4. subdivision and development complies with appropriate parts of design element 2 (Block size, lot type and orientation) and design element 8 (Adaptive re-use overlay areas and kingseat heritage mixed use overlay area).
- (b) within the Kingseat Precinct where proposed buildings are in excess of 8 metres, and are within 50m of protected heritage buildings A52, A57, A58 and A59 the extent to which views are retained between the protected heritage buildings A 52, A57, A58 and A59, and to/from the Central Field.
- (18) Archaeological place (sites) historic heritage set back

- (a) whether in considering a discretionary activity application to damage, modify or destroy an archaeological site within the I418.6.8 Historic Heritage Set back (100m of Mean High Water Springs), regard is had to the assessment matters detailed in assessment criteria I418.8.2.(11)(b) to ensure that adverse effects are avoided, remedied or mitigated.

(19) Historic heritage places (former Kingseat Hospital site)

- (a) Whether in assessing applications that involve modification, alteration or demolition of any scheduled building, structure, area or tree:

- (i) existing on the former Kingseat hospital site, or any new building or structure located within 10m to 15m of historic heritage places; or
- (ii) that area of a scheduled building located between 15m from the front façade facing the central roadway, and 10m from all other facades of a scheduled building and located within the former Kingseat Hospital site as identified in Kingseat: Precinct plan 2 – Development area , or the Sub-precinct A plan in Kingseat: Precinct plan 4 – Kingseat Hospital site and Kingseat: Precinct plan 5 – Concept plan Kingseat Hospital site;

an independent study of the protected item, carried out by an appropriately qualified person has been provided .

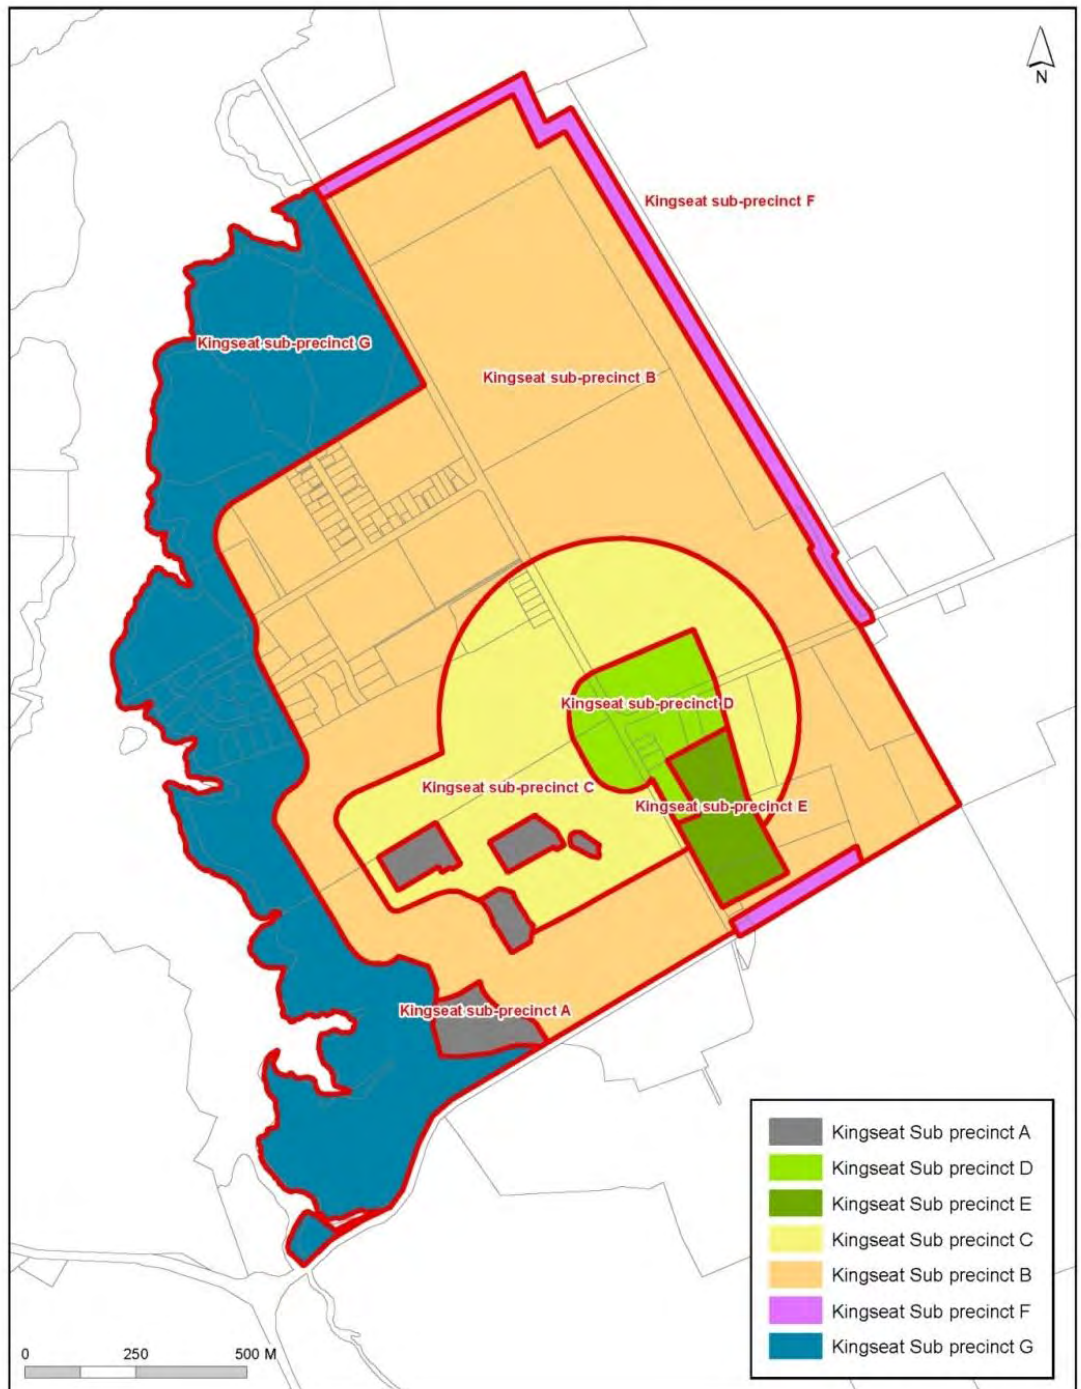

- (b) With reference to provision I418.8.2(19)(a) above and consideration of any scheduled building, structure, area or tree, assessment criteria in section I418.8.2(11)(c) are relevant.
- (c) With reference to I418.8.2(19)(a) above and consideration of any new building located within the Heritage setbacks assessment criteria in I418.8.2(11)(c)(ii) are relevant.
- (d) With reference to I418.8.2(19)(a) above and consideration of the protection of any scheduled building assessment criteria in I418.8.2(11)(c)(iii) are relevant.
- (e) With reference to I418.8.2(19)(a) above and new buildings within heritage set back (former Kingseat hospital site) assessment criteria in I418.8.2(11)(iv) are relevant.
- (f) With reference to I418.8.2(19)(a) above and subdivision and development (including mixed housing, more than one building on a site), assessment criteria in I418.8.2(11)(c)(v) are relevant.

I418.9. Special information requirements

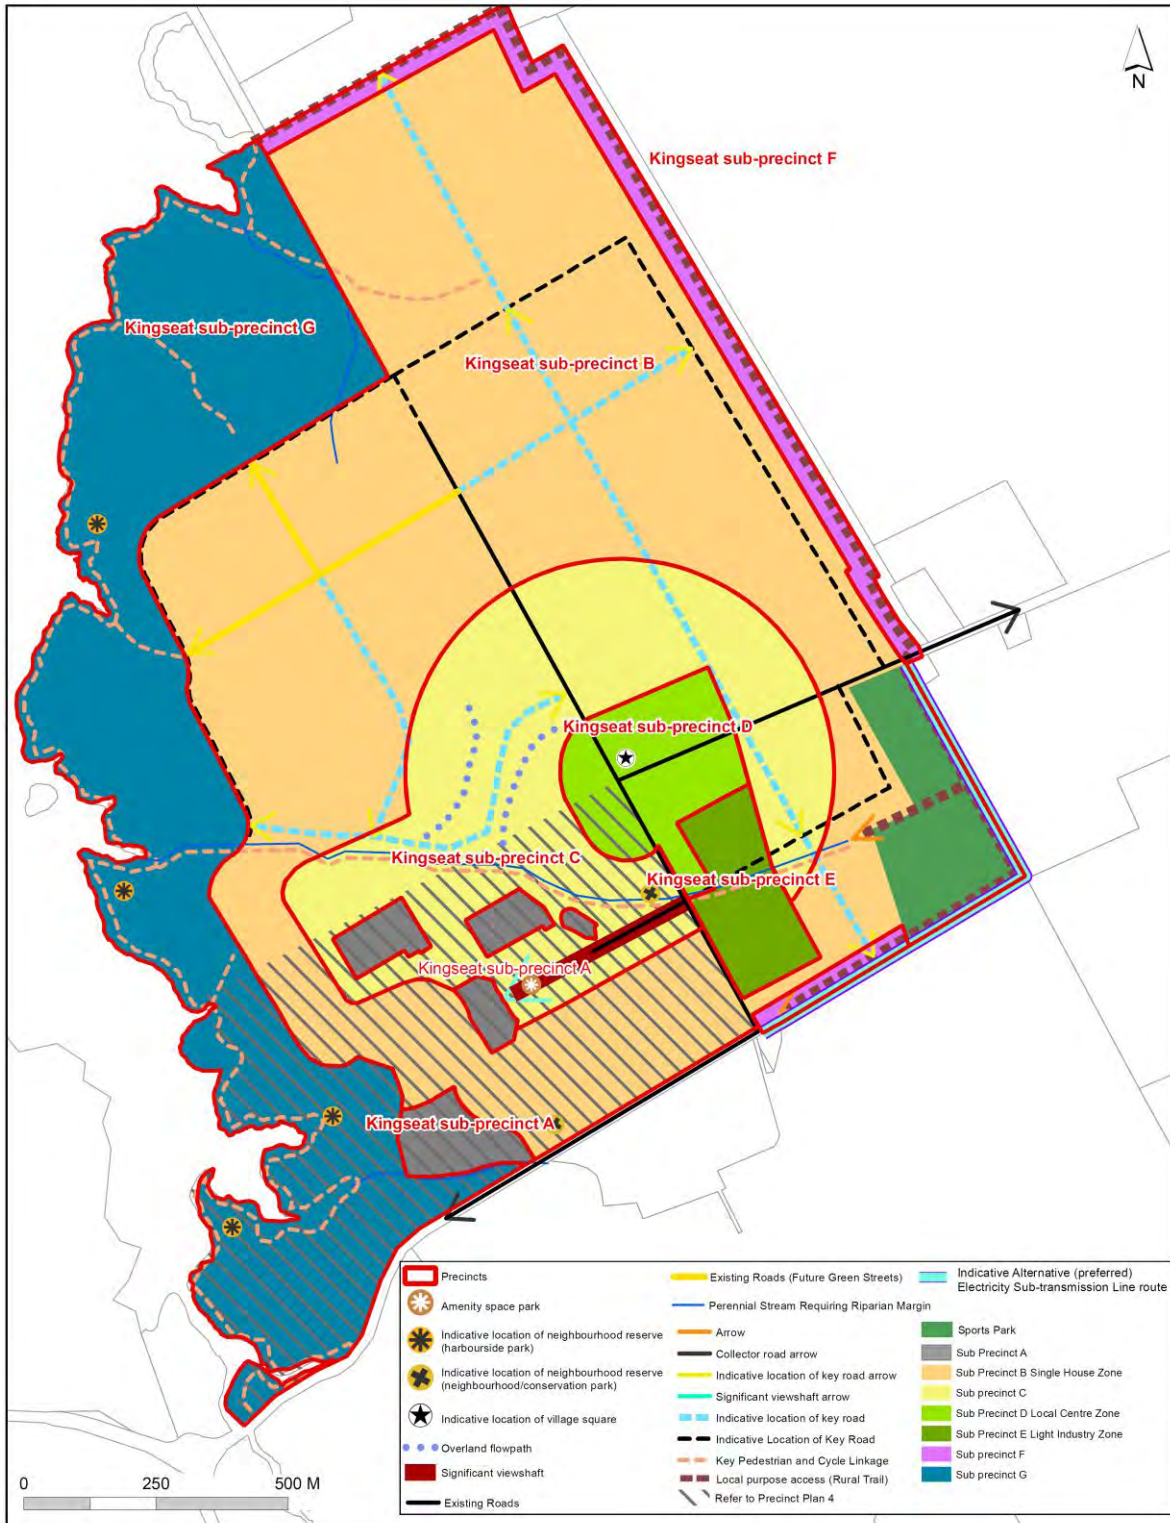

There are no special information requirements in this precinct.

I418.10. Precinct plans

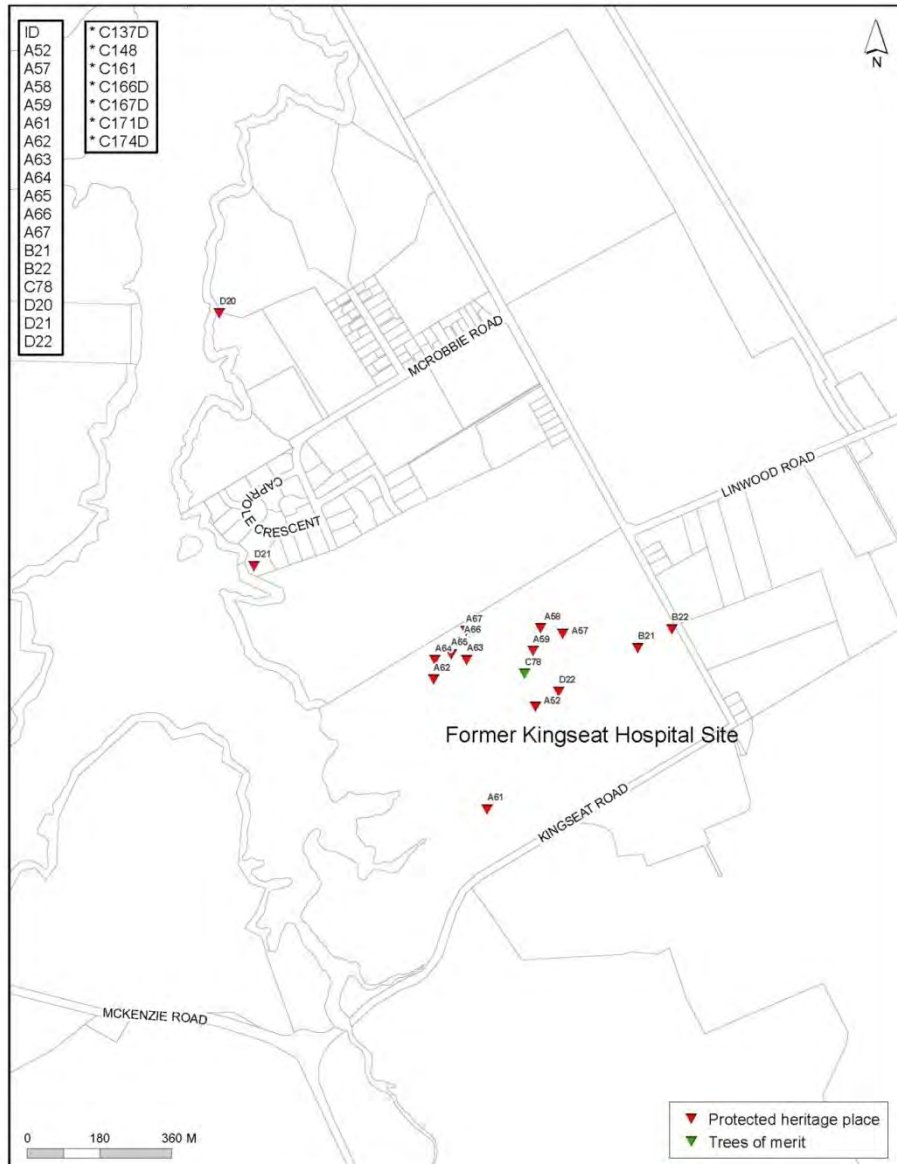

I418.10.1. Kingseat: Precinct plan 1 – Sub-precincts and areas

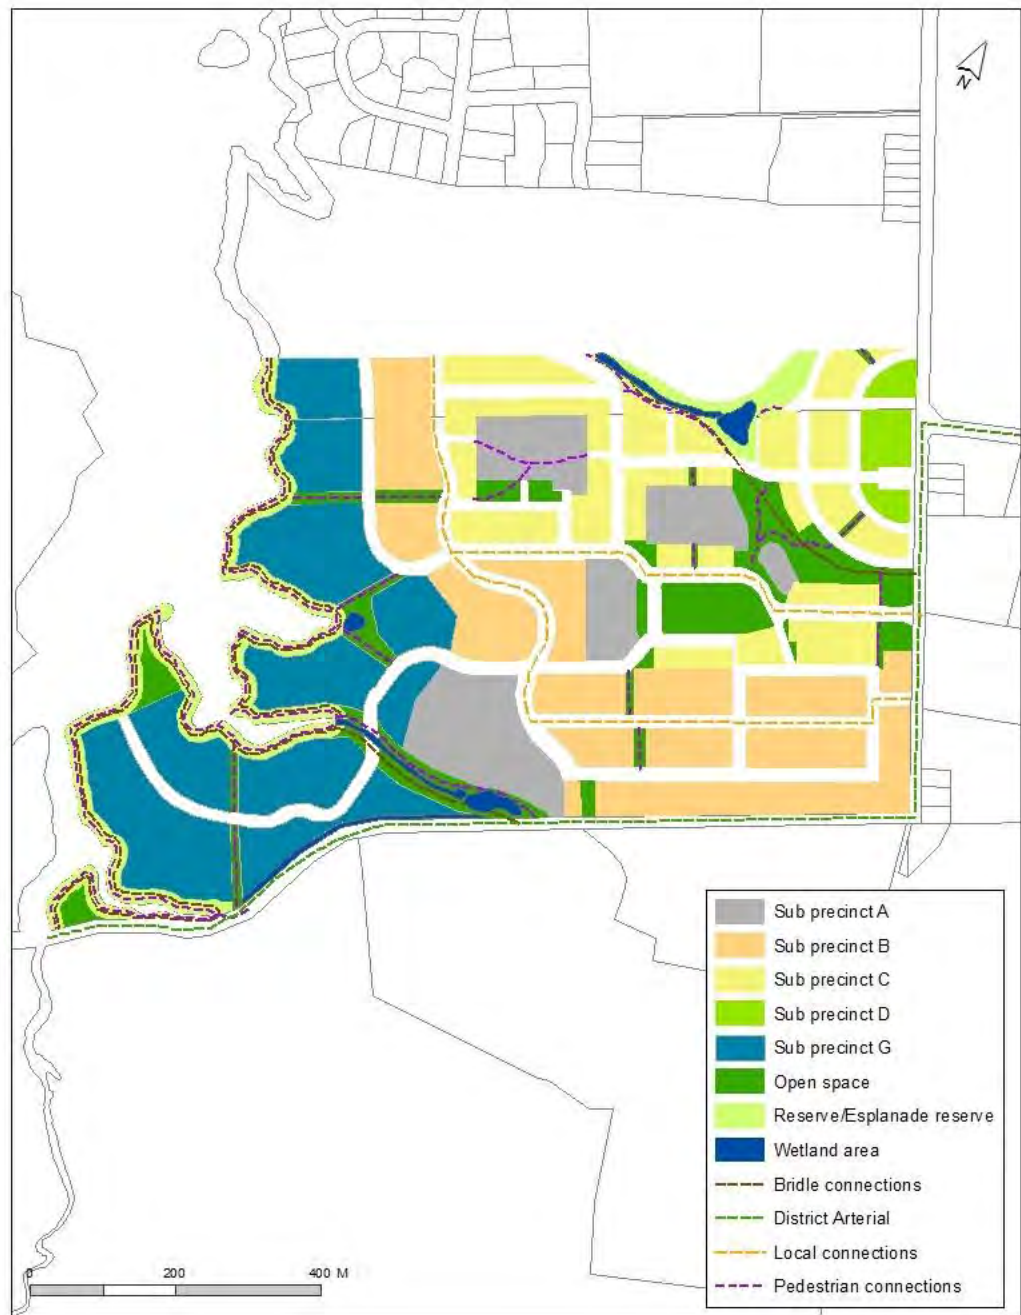

I418.10.2. Kingseat: Precinct plan 2 – Development plan

I418.10.3. Kingseat: Precinct plan 3 – Protected heritage places and trees of merit

I418.10.4. Kingseat: Precinct plan 4 – Kingseat Hospital site

I418.10.5. Kingseat: Precinct plan 5 – Concept plan Kingseat Hospital site

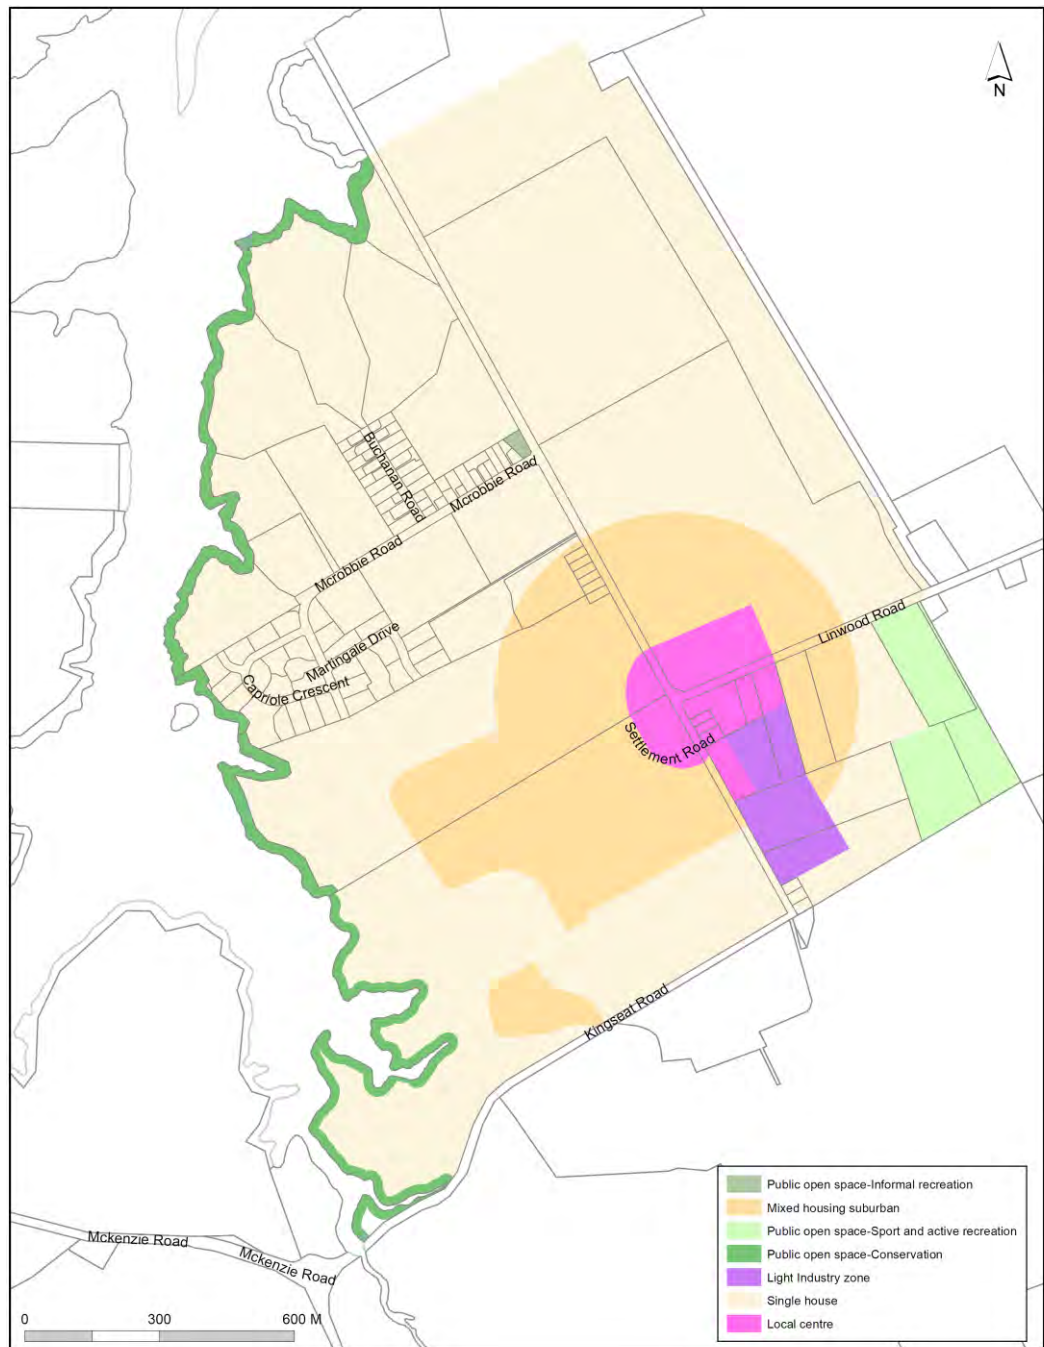

I418.10.6. Kingseat: precinct plan 6 – Special controls

I418.10.7. Kingseat: Precinct plan 7 – Road widening

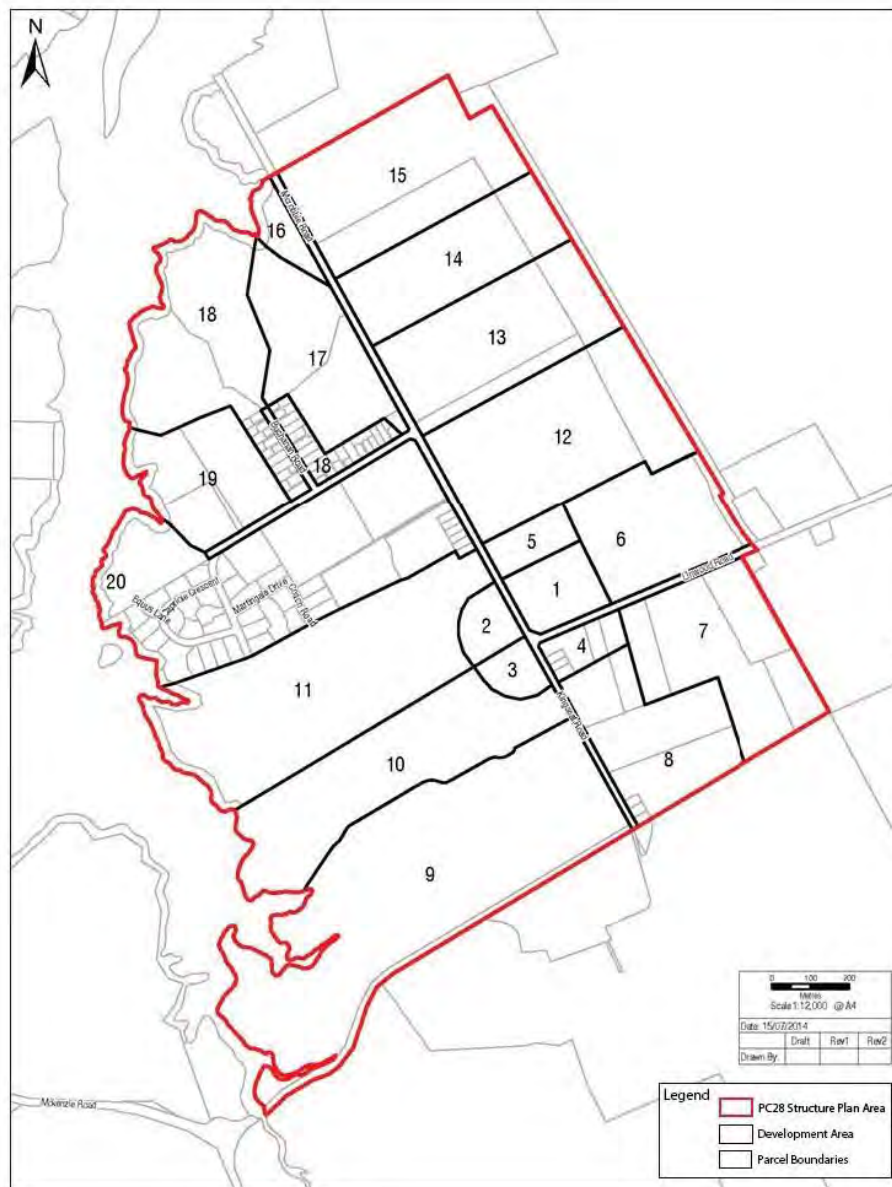

I418.10.8. Kingseat: Precinct plan 8 – Zoning

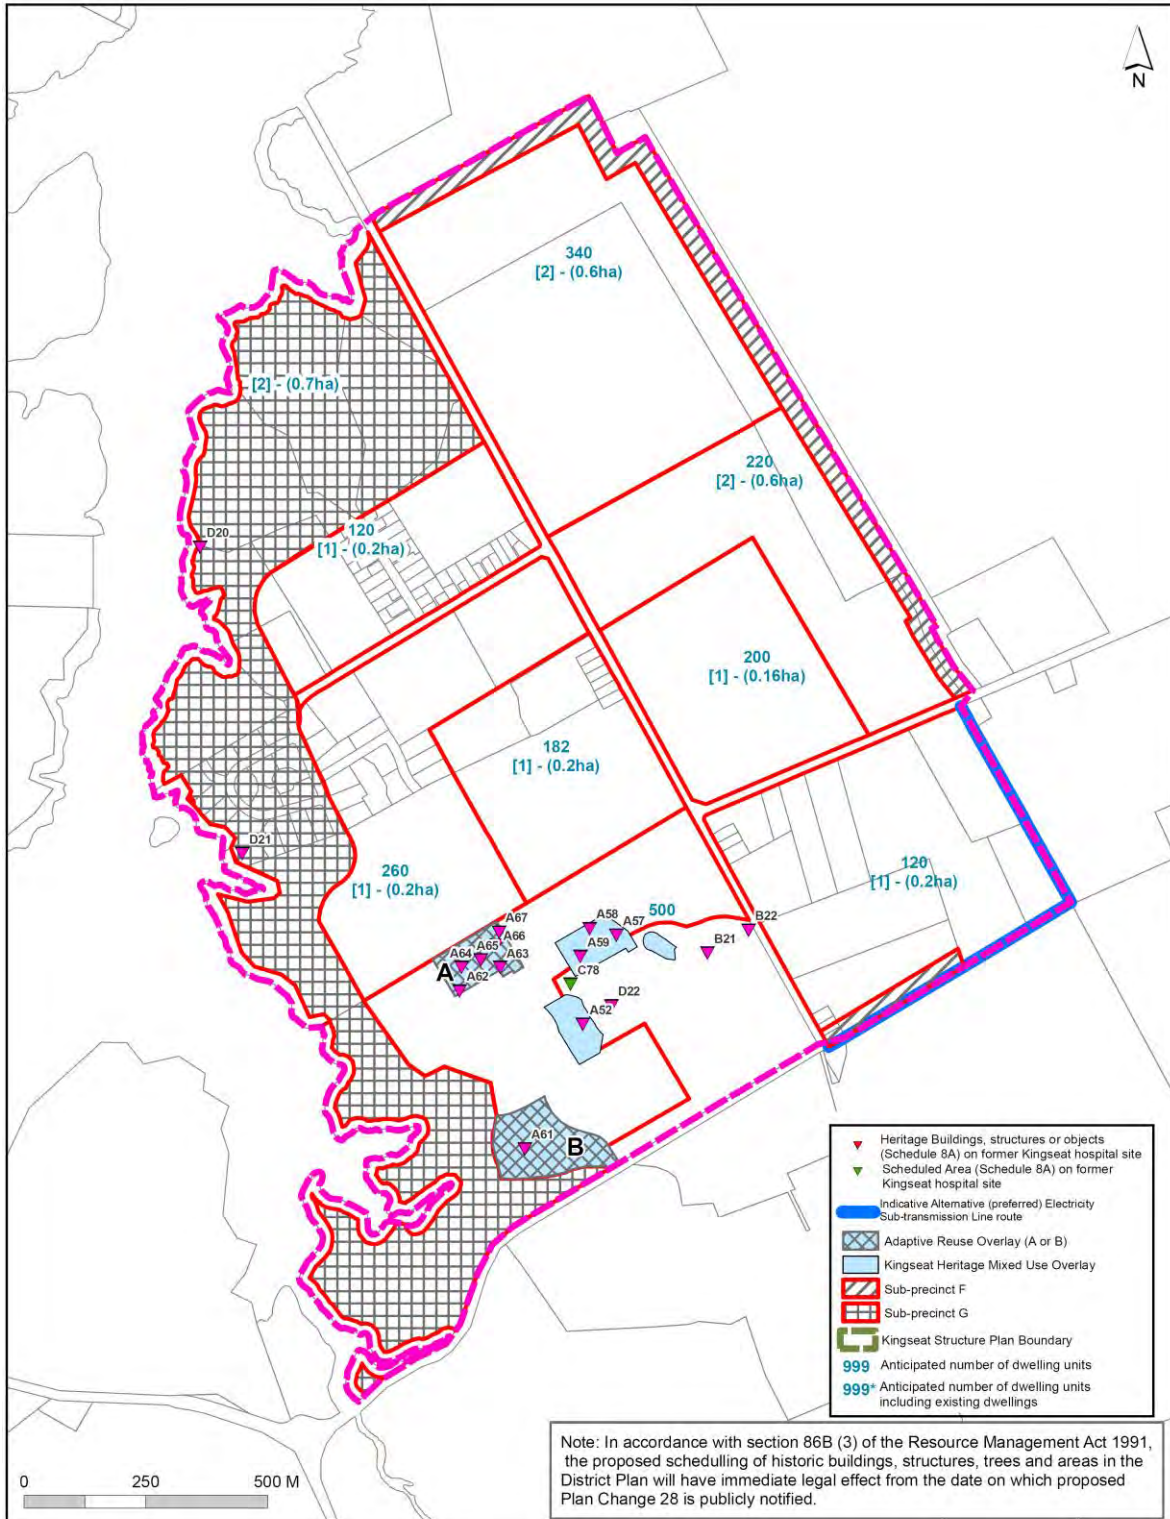

I418.10.9. Kingseat: Precinct plan 9 – Public road sections requiring a roading plan

I418.10.10. Kingseat: Precinct plan 10 – Kingseat development areas

I418.10.11. Kingseat: Precinct plan 11 – Adaptive reuse areas and development potential

I418.11. Schedules**I418.11.1. Kingseat: Precinct schedule 1 – Heritage resources (historic buildings, structures and areas**

Group A: Buildings			
Item No.	Item	Location and description	Valuation no.
A.52	Kingseat Hospital Administration Building	Former Kingseat Hospital site (Lot 1 DP 137234) Three storey plaster-rendered building with single storey wings all having clay tile hipped pitched roofs	03720/264.00
A.57	Kingseat Hospital Villa 11	Former Kingseat Hospital site (Lot 1 DP 137234) Two-storey red brick (ground floor), plastered (upper floor) villa building with clay tile fully hipped pitched roof	03720/264.00
A.58	Kingseat Hospital Villa 12	Former Kingseat Hospital site (Lot 1 DP 137234) Two-storey red brick (ground floor), plastered (upper floor) villa building with clay tile fully hipped pitched roof	03720/264.00
A.59	Kingseat Hospital Villa 13	Former Kingseat Hospital site (Lot 1 DP 137234) Two-storey red brick (ground floor), plastered (upper floor) villa building with clay tile fully hipped pitched roof	03720/264.00
A.61	Former Nurses Home	Former Kingseat Hospital site (Lot 1 DP 137234) Two-storey red brick villa building with clay tile fully hipped pitched roof	03720/264.00
A.62	Kingseat Hospital Ancillary Building 1	Former Kingseat Hospital site (Lot 1 DP 137234) Laundry Building, but excluding later added south eastern annex. Single storey rectangular brick building with vaulted hipped corrugated roof.	03720/264.00
A.63	Kingseat Hospital Ancillary Building 2	Former Kingseat Hospital site (Lot 1 DP 137234)	03720/264.00

		Stores Building, but excluding later added single storey south eastern annex. Two storey brick building with plaster finish to upper storey with hipped corrugated roof.	
A.64	Kingseat Hospital Ancillary Building 3	Former Kingseat Hospital site (Lot 1 DP 137234) Boiler Room Building. Single storey building with hipped and gabled corrugated roof.	03720/264.00
A.65	Kingseat Hospital Ancillary Building 4	Former Kingseat Hospital site (Lot 1 DP 137234) Kitchen Building. Single storey brick building with smaller second storey plaster finished with flat roof over single storey and hipped roof over second storey.	03720/264.00
A.66	Kingseat Hospital Ancillary Building 5	Former Kingseat Hospital site (Lot 1 DP 137234) Timber Stores Building. Small single storey, 4 bay garage like building with corrugated, hipped roof.	03720/264.00
A.67	Kingseat Hospital Ancillary Building 6	Former Kingseat Hospital site (Lot 1 DP 137234) Woodwork Building. Single storey brick building with open truss, hipped, corrugated roof.	03720/264.00

Group B: Structures and Objects

B.21	Main access road from Kingseat Road	Former Kingseat Hospital site (Lot 1 DP 137234) Main Phoenix Palm-lined access road to former Kingseat Hospital site from Kingseat Road. This includes significant views from Kingseat Road to the scheduled Administration Building and amenity open space area.	03720/264.00
B.22	Main entrance gates, piers and wing walls	Former Kingseat Hospital site (Lot 1 DP 137234) Simple plaster gateposts with tiered tops, and curved walls on either side of the main entrance and	03720/264.00

		access road to the former Kingseat Hospital site	
--	--	--	--

Group D: Areas			
D.20	Terraces	Lot 2 DP112871, 112B McRobbie Road (E 1758965 N 5890134) Two terraces adjacent to coastal edge. The lower terrace is less defined and measures 6m x 4m. The upper terrace is more defined and measures 5m x 5m. Both terraces are grassland pasture and have undergone some modification through land clearance activities.	03720/286.08
D.21	Terraces	Lot 4 DP 173114, 125 McRobbie Road Terraces close to coastal edge.	03720/279.04
D.22	Central Field	Former Kingseat Hospital site (Lot 1 DP 137234) Open playing fields to the east of the main administration building, centrally located within the former Kingseat Hospital site.	03720/264.00

I418.11.2. Kingseat: Precinct schedule 2

Assessments of Historic Importance relevant to all building types

<p>Franklin/ New Zealand History Reflection of important or representative aspects of Franklin's and/or NZ's history. Psychiatric hospitals were part of New Zealand's history until the 1990s when the emphasis shifted to community care. The former Kingseat Hospital is a representative example of those psychiatric hospitals. The Administration Building was opened in 1938 and as one of the original buildings, it has played an important part in the development of the Kingseat site.</p>
<p>Community Association/Public Esteem Community association with/or public esteem for the place. Kingseat Hospital is likely to have had community associations by providing employment for local inhabitants.</p>
<p>Technical Accomplishment/ Architectural Design The Administration Building is an institutional building, the design of which was influenced by both the Modernist and Art Deco Movements of the day. Such details as the steel balustrade on the first floor balcony add to the aesthetic value of the building. Originally the central wing culminated in a parapet with a flat roof behind, a detail typical of its architectural style. Its original character has been compromised by the addition in 1957 of the second storey with its hipped roof.</p>

Rare Types of Historic Places Importance of identifying rare types of historic places or resources.

Other examples of former psychiatric hospitals exist in New Zealand including Tokanui in Te Awamutu, Sunnyside in Christchurch, Lake Alice in Manawatu and Seacliff and Waikari in Dunedin. Kingseat was one of two such hospitals in Auckland, the other being Oakley (Carrington). Kingseat was the only hospital in the south Auckland area. The administration building has rarity value as a building designed for a particular purpose, that of providing administrative functions for the hospital.

Historical/ Cultural Landscape The former Kingseat Hospital can be considered to be part of the historical landscape of the south Auckland area and the Administration building is an integral part of that landscape. The Administration building was placed in a prominent location on the Kingseat site. It faces onto an open space and is clearly visible from the road, being positioned on the axis of the driveway. It also provides a focal point on the site with the other buildings being grouped around it. The building was arguably the most important building on the site as it housed all the administrative functions. The significance of the site as a whole would be reduced if the Administration block were to be removed.

Heritage assessment by building type – significance of elements

Description	Significance of Elements	Elements
Administration block		
<p>Exterior The exterior includes the central block and extended wings on either side. Some additions have been made at the rear. The central block has been modified with the addition of a third level and corresponding changes to the roofline. The front façade has an overall rating of exceptional significance while other facades are considered to have considerable significance.</p>	Considerable	Original joinery Copper vents on roof ridge Marseilles tiled roof on original building. Plaster rendered walls Brick base wall Stringcourse Front façade balcony and balustrade Clock Flagpole Chimneys 1938 etched glass Concrete steps Brick side plinths Cast iron rainwater heads Cast iron waste disposal pipes Clay pan tiles on chimney breast at rear of building Tiled porch floors Central Block Facade
	Some	Additional storey on central block Corrugated steel roof on central block Northern side of central block
	Intrusive	Fire escapes PVC downpipes Aluminium joinery Fire hose Veranda to southern projecting wing Blocked in windows on northern projecting wings Fibre-cement addition on south western side

Description	Significance of Elements	Elements
		Metal garage door at rear of building
<p>Interior The interior of the building has been altered over a period of years. However, a significant number of original features survive, particularly in the central wing. The entry hall is considered to have an overall rating of exceptional significance, while the remainder of the ground floor has considerable significance. The first floor has been substantially remodelled and second floor was subsequently added. These areas are considered to have some significance.</p>	Exceptional	Rimu wall panelling in entry hall Rimu columns at end of entry hall
	Considerable	Rimu moulded architraves and skirtings in remainder of central wing Original ply faced flush doors Decorative plaster ceilings in central wing Decorative arch in northern hallway Decorative plaster work to beams in entry hall Plaster rendered fireplace Marble fireplace surround Steel balustrade on staircase Rimu moulded rail on staircase Cast steel radiators Original bathroom wall tiles Original terrazzo floors in bathrooms Original cork tile floors Original tongue & groove timber floors Glazed blocks in hallway Original basin in bathroom
	<u>Some</u>	Rimu pelmets Rimu bench at end of entry hall Panelled door to stairs Battened ceilings Original kitchen cupboards with chrome recessed door pulls Original plastered walls Original soft board ceilings Steel security windows Floor mounted power sockets Original floor tiles in kitchen
	<u>Not relevant</u>	Later flush doors Light switches Later mosaic bathroom floor tiles Kitchen fittings on upper floors Ply veneer dadoes on upper floors

Description	Significance of Elements	Elements
		Later bathroom fittings Later kitchen fittings Later brass door furniture Later radiators
	Intrusive	Fluorescent light fittings Fire hydrant signs and holders Vinyl flooring on staircase and landing Floor tiles in entry hall Plastic laminate walls in bathrooms Plastic laminate ceilings in some rooms Acoustic wall tiles in one room Air-conditioning units in windows Wire glazed fire doors Fire hose reels Fire alarm panels
The Villas		
Exterior The exterior of the villas are generally in their original form with only minor alterations having occurred. They have an overall rating of considerable significance.	Considerable	Original joinery Marseilles tiled roofs Plaster rendered walls Brick ground floor walls Cast iron rainwater heads and downpipes Arched central stairwell window Plaster frieze Small circular sculptural rosettes
	Intrusive	PVC downpipes Enclosed verandas Aluminium joinery Fibre cement additions Altered door joinery Skylights Television aerials Vents in windows
Interior The interiors of some of the villas have been substantially altered while others are generally in their original form. The more intact villas retain a number of original features. The interiors have an overall rating of considerable significance.	Considerable	Solid plaster ceilings and walls Exposed concrete beams Timber panelled doors and fanlights Tongue and groove doors to individual cells Latticed ceiling vents Window shutters Terrazzo floors Tongue and groove flooring in dining area Original kitchen fittings
	Intrusive	Fluorescent light fittings Fire hydrant signs and holders

Description	Significance of Elements	Elements
		Blocked up fireplaces Plastic laminate walls Plastic laminate ceilings in some rooms Lowered and suspended ceilings Later bathroom fittings Later kitchen fittings
The Former Nurses Home		
Exterior Apart from the temporary structures outside the building, the Nurse's Home appears to have had little alteration. It has an overall rating of exceptional significance.	Considerable	Original joinery Brick walls Herringbone patterns in brickwork Corbelled brickwork on entries to verandas Brick soldier course Brick chimneys Cast iron downpipes First floor balconies Original light fittings Concrete balustrades to steps Symbolic relief sculpture above entrances.
	Intrusive	PVC downpipes Timber ramp over brick steps at front Signs on building Temporary structures outside building Wire netting on balcony Floodlights Corrugated plastic roof above balcony
Interior The interior of the former Nurse's Home has been altered to some extent to meet the requirements of the current occupiers. However many original features have been retained. The interior of the Nurses' Home has an overall rating of considerable significance.	Considerable	Moulded architraves and skirting board Decorative plaster ceilings Marble fire place surrounds Art Deco fireplaces Curved staircase balustrade Moulded banister on staircase Mosaic tiles in foyer Solid plaster walls Mosaic floor in bathroom Corbelled plaster work in alcove of nurse's room Original bathroom wall tiles
	Intrusive	Fluorescent light fittings Fire hydrant signs and holders Plastic laminate walls in bathrooms. Air conditioning units in windows. Fire hoses in hall Fire alarm fittings

Description	Significance of Elements	Elements
The Ancillary Buildings		
Exterior The exterior of the ancillary buildings are generally original with only small alterations in some cases. As a group, they have an overall rating of considerable significance.	Some	Original joinery Plaster rendered cornice Brick walls Barrelled roof vents Tongue and groove double doors Original light fittings Super six corrugated roofs Portico on loading bay of storeroom.
	Intrusive	PVC downpipes Asbestos cement additions Roller doors Additions Covered opening

1418.11.3. Kingseat: Precinct schedule 3 – Heritage assessment of areas – significance of elements

<p>The landscape at the former Kingseat Hospital comprises a garden setting designed to complement the various buildings. A large number of trees were specifically planted to provide a shelterbelt to the buildings and grounds while others were intended to provide a decorative element. Phoenix palms feature prominently and were amongst the first to be planted to delineate the roadways.</p> <p>Three open spaces were an important aspect of the original layout of the site. These included the central field that the administration building overlooks, the northern field adjacent to the ancillary buildings and a third space in the eastern corner. These contributed to the park-like setting and also provided space for sports activities.</p>		
The Central Field was the focus of Kingseat with the various buildings grouped around it. The entrance driveway was a significant part of the landscape.	Exceptional	Central Field
	Considerable	Entrance driveway with avenue of palm trees
	Some	Lanes between the buildings.

<p>Franklin/New Zealand History</p> <p><i>Reflection of important or representative aspects of Franklin's and/or NZ's history.</i></p> <p>Psychiatric hospitals were part of New Zealand's history until the 1990s when the emphasis shifted to community care. The former Kingseat Hospital is a representative example of those psychiatric hospitals.</p> <p>The grounds of the site were carefully planned and laid out with large outdoor recreation spaces and gardens designed to provide patients with a sense of freedom that was absent from earlier institutions. This was a new concept for psychiatric hospital environments at that time in New Zealand.</p> <p>The site is therefore, an important aspect of life at Kingseat and the history of psychiatric hospitals in New Zealand.</p>
<p>Community Association/Public Esteem</p> <p><i>Community association with/or public esteem for the place.</i></p> <p>Kingseat Hospital is likely to have had community associations by providing employment for local inhabitants who may have attended the gardens and lawn areas.</p>
<p>Scientific Interest/Public Education</p> <p><i>Potential of the place for scientific interest and public education.</i></p> <p>Some of the trees may have scientific value.</p>
<p>Technical Accomplishment/Architectural Design</p> <p><i>Technical accomplishment or value, or design of the place. Whether a building or structure is a notable example of a particular style, designer or period of architecture, or show special craftsmanship or technology.</i></p> <p>The grounds were initially laid out in 1927 and 1928 with the help of patients from Oakley Hospital who were known as the "Pioneer Patients". Staff were also involved in the initial preparation of the grounds. Trees were planted to provide shelter belts as well as contributing to the beauty of the grounds.</p> <p>The grounds were developed over time to resemble a park like setting but the initial layout was designed in a classic symmetric fashion. The central entrance was developed with Phoenix palms planted on either side and a focal point was provided when the Administration Building was constructed. These elements are typical of classical garden design.</p>
<p>Rare Types of Historic Places</p> <p><i>Importance of identifying rare types of historic places or resources.</i></p> <p>Other examples of former psychiatric hospitals exist in New Zealand including Tokanui in Te Awamutu, Sunnyside in Christchurch, Lake Alice in Manawatu and Seacliff and Waikari in Dunedin. Kingseat was one of two such hospitals in Auckland, the other being Oakley (Carrington). Kingseat was the only hospital in the south Auckland area.</p> <p>The Kingseat site has a rarity value as an example of a place where expansive grounds were designed for a particular purpose, that of creating open spaces and gardens for recreation and the enjoyment of patients and staff in a psychiatric hospital environment. The site layout remains generally intact.</p>
<p>Historical/Cultural Landscape</p> <p><i>Extent to which the place forms part of wider historical or cultural complex or historical or cultural landscape. A particular place may not be of such significance in itself that it</i></p>

warrants inclusion in Schedule 8a but its value may be such that its modification or destruction would diminish the significance of the complex or landscape as a whole.

The former Kingseat Hospital and grounds can be considered to be part of the historical landscape of the south Auckland area.

The grounds, developed with a park-like character were an attempt to provide a more open environment for psychiatric patients than the traditional yards that the patients were accustomed to. The concept was to provide patients with a sense of freedom.

The trees, gardens and open spaces were an integral part of the Kingseat Hospital environment and the significance of the site as a whole would be reduced if any significant elements were to be removed.

1418.11.4. Kingseat: Precinct schedule 4 – Trees of Merit

Group D: Trees of Merit			
Appendix to number			
C.78D	Phoenix Palm x1415) (<i>phoenix canariensis</i>) Part of a Group of mature Phoenix Palm trees aligned immediately to the north of the main administration building located centrally within the former Kingseat Hospital site.(Note 4 Palm Trees to the east of the administration building are scheduled C.78)	Former Kingseat Hospital site (Lot 1 DP 137234)	03720/264.0 0
C.137D	Phoenix Palms (x7) (<i>phoenix canariensis</i>) Phoenix Palm trees located to the north of Villa 6 within the southeastern portion of the former Kingseat Hospital site	Former Kingseat Hospital site (Lot 1 DP 137234)	03720/264.0 0
<u>C.148</u>	London Plane #2 (<i>platanus acerifolia</i>) Mature London Plane tree aligned immediately to the north of the main access road to the former Kingseat Hospital site (second tree west of chapel building).	Former Kingseat Hospital site (Lot 1 DP 137234)	03720/264.0 0
<u>C.161</u>	Hungarian Oak tree (<i>quercus frainetto</i>) Mature Oak tree located to the south of an existing dwelling house within the northeast corner of the former Kingseat Hospital site.	Former Kingseat Hospital site (Lot 1 DP 137234)	03720/264.0 0

C.166D	Common Ash (x8) <i>(fraxinus excelsior)</i> Group of 8 mature Ash trees of approximately 8m height and 1.3m girth, located to the east side of McRobbie Road, west of the farm ponds towards the northern end of the Kingseat Structure Plan Area.	Lot 3 DP 400117 (Linwood Road)	03720/246.0 5
C.167D	Gum Tree # 2 Gum Tree # 3 <i>(eucalyptus spp)</i> Group of mature Gum trees, 20m height and located to the east side of McRobbie Road at the northern end of the Kingseat Structure Plan Area.	Lot 1 DP400117, 1016 Linwood Road	03720/246.0 4
C.171D	Gum Tree <i>(eucalyptus spp)</i> Mature Gum tree, 20m height and 3.5m girth, located on the eastern boundary of the Kingseat Structure Plan Area boundary at the intersection of a north-south with east-west farm track.	Lot 1 DP400117, 1016 Linwood Road	03720/246.0 4
C.174D	Gum Trees (x6) <i>(eucalyptus spp)</i> Group of middle-aged Gum trees located at the northeast corner of the Council-owned reserve on McRobbie Road.	Lot 32 DP 145424 (Council-owned reserve McRobbie Road)	03720/264.0 4

I419. Mana Whenua Management Precinct

I419.1. Precinct Description

The purpose of the Mana Whenua Management Precinct is to formally recognise and provide for the special relationship Mana Whenua have with certain parts of the Coastal Marine Area. The precinct seeks to avoid direct discharges of wastewater. It also seeks to control the direct discharge of stormwater and all other contaminants into the precinct from activities undertaken both within and outside the precinct that could adversely affect water quality and the spiritual and cultural values of the Whātāpaka Creek and Pūkaki-Waiokauri Creek.

This precinct comprises two areas, both of which are General Coastal Marine Zone (apart from islands within Whātāpaka Creek which are Rural - Rural Coastal zone):

- Whātāpaka Creek, in the southern reaches of the Manukau Harbour, between Clarks Beach and Kingseat; and
- Pūkaki-Waiokauri Creek, in the northern reaches of the Manukau Harbour, to the northeast of Auckland Airport.

These two creeks were the subject of a Waitangi Tribunal recommendation that they be reserved for the exclusive use of Whātāpaka Marae and Pūkaki Marae respectively. In 1992, the Māori Land Court established Whātāpaka Creek and Pūkaki-Waiokauri Creek as Māori reservations under the Te Ture Whenua Māori Act 1993. These Māori reservations were established for the exclusive use of Whātāpaka Marae and Pūkaki Marae as a landing place, fishing ground, catchment area, bathing place, and a place of historic spiritual and cultural significance. The precinct provisions reflect the intended purpose of these areas.

The Pūkaki-Waiokauri Creek Mana Whenua Management Precinct is adjacent to the Auckland International Airport. Auckland International Airport and the Trustees of the Māori Reservation on the Pūkaki-Waiokauri Creek have a Memorandum of Understanding that acknowledges the special relationship of Mana Whenua with the precinct, as well as the operational requirements of the airport in the precinct. Necessary airport activities are anticipated in this precinct but must be managed with regard to the values of the precinct.

I419.2. Objective [rcp/dp]

- (1) The special relationship, including customary use and responsibilities, Mana Whenua have with Whātāpaka Creek and Pūkaki-Waiokauri Creek, is provided for.

The zone, overlay and Auckland-wide objectives apply in this precinct in addition to those specified above.

I419.3. Policies [rcp/dp]

- (1) Maintain access between the Mana Whenua Management Precinct and Whātāpaka Marae and Pūkaki Marae.

- (2) Enable the use and management of the Mana Whenua Management Precinct by Whātāpaka Marae and Pukaki Marae in accordance with tikanga Māori.
- (3) Avoid direct discharges into the Mana Whenua Management Precinct that may have an adverse effect on:
 - (a) the values associated with Whātāpaka Creek and Pūkaki-Waiokauri Creek; and
 - (b) the use of the Mana Whenua Management Precinct by Whātāpaka Marae and Pūkaki Marae and associated papakāinga.
- (4) Improve water quality within the Mana Whenua Management Precinct such that food-gathering and swimming is possible.
- (5) Maintain and provide for the operational requirements of Auckland International Airport, including the Puhinui Road access from the east to the airport, while ensuring that they have particular regard to the values of the Mana Whenua Management Precinct and avoid, remedy or mitigate adverse effects on those values.

The zone, overlay and Auckland-wide policies apply in this precinct, in addition to those specified above.

I419.4. Activity table

The provisions in the zone and any relevant overlays and Auckland-wide provisions apply in this precinct unless otherwise specified below.

Table I419.4.1 Activity table specifies the activity status of use of the coastal marine area activities in the Mana Whenua Management Precinct pursuant to section 15 of the Resource Management Act 1991 or any combination of all of these sections where relevant.

Table I419.4.1 Activity table

	Activity	Activity status
Wastewater		
(A1)	Direct discharge of wastewater into the precinct	Pr

I419.5. Notification

There is no notification rule for the Mana Whenua Management Precinct.

I419.6. Standards

The zone, Auckland-wide and overlay standards apply in this precinct.

I419.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I419.8. Assessment – Restricted discretionary activities

There are no restricted discretionary activities in this precinct.

I419.9. Special information requirements

The special information requirements in the zone and Auckland-wide provisions apply in this precinct

I419.10. Precinct plans

There are no precinct plans in this precinct.

I420. Māngere 1 Precinct

I420.1. Precinct description

The purpose of the Māngere 1 Precinct is to provide for the SPCA Auckland Animal Village at 50 Westney Road, Māngere. The SPCA was established on 1978 and is a regionally significant resource providing animal welfare and associated services for Auckland. The facility occupies approximately 40 per cent of the 4 hectare site and includes administration buildings, an animal hospital, dog and cat adoption facilities, kennels, and a significant amount of land for grazing. The precinct is made up of two sub-precincts A and B, which delineate the areas within which certain types of activities should take place.

The SPCA is located at the interface of land zoned Residential - Mixed Housing Suburban Zone and Business – Light Industry Zone. Adjacent activities on residential zoned land include a school immediately to the north, and a row of established houses occupying the land to the east, and west on the opposite side of Westney Road.

When first established, the SPCA activity was relatively isolated from other activities, but gradual development of vacant land adjacent to the village has created reverse sensitivity effects. It is therefore important to provide certainty about the range of activities that can occur in the precinct. The Māngere 1 Precinct plan stipulates how the site will be developed and used.

The zoning of land within this precinct is Residential - Mixed Housing Suburban Zone.

I420.2. Objectives

- (1) Animal welfare activities are enabled within the Māngere 1: Precinct plan.
- (2) Adverse effects associated with the animal welfare activities within the Māngere 1 Precinct are recognised and managed.

The objectives for this precinct replace the zone objectives.

The overlay and Auckland-wide objectives apply in this precinct, in addition to those specified above.

I420.3. Policies

- (1) Require current and future animal welfare activities to align with the Māngere 1: Precinct plan.
- (2) Protect the amenity of adjoining residential and education land uses through appropriate built form, scale and location and the implementation of best practice noise management.
- (3) Recognise the significance of the animal welfare facility by avoiding competing land uses within the site.

The policies for this precinct replace the zone policies.

The overlay and Auckland-wide policies apply in this precinct, in addition to those specified above.

I420.4. Activity table

The provisions in the zone do not apply in this precinct, unless otherwise specified below. The provisions in any relevant Auckland-wide and overlay provisions apply in this precinct unless otherwise specified below.

Table I420.4.1 Activity table specifies the activity status of land use and development activities in the Māngere 1 Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I420.4.1 Activity table

Activity		Activity status	
		Sub-precinct A	Sub-precinct B
Rural			
(A1)	Animal breeding or boarding	P	P
(A2)	Farming	P	P
Commerce			
(A3)	Restaurants and cafes	P	D
(A4)	Restaurants and cafes that do not comply with standard I420.6.2	NC	NC
(A5)	Clubroom	P	D
(A6)	Offices	P	D
(A7)	Retail sales	P	P
(A8)	Veterinary clinics	P	D
(A9)	Animal welfare (includes keeping of animals, animal adoption services, education and training of people about animal welfare)	P	P
(A10)	Animal welfare that does not comply with activity I420.4.1(A9) above	D	D
(A11)	Educational facilities	P	P
(A12)	Tertiary education facilities	P	P
(A13)	Workers' accommodation	P	D
(A14)	Workers' accommodation that does not comply with Standard I420.6.1	NC	NC
Development			
(A15)	New buildings and additions to existing buildings	P	D
(A16)	Alterations to buildings	P	P
(A17)	Any activity that complies with Standard I420.6.6 Earthworks	P	P

I420.5. Notification

- (1) Any application for resource consent for an activity listed in Table 0.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.
- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I420.6. Standards

The overlay, zone and Auckland-wide standards apply in this precinct in addition to the following standards.

All activities listed as permitted activities in Table 0.1 Activity table must comply with the following permitted activity standards:

I420.6.1. Worker's accommodation

- (1) No more than one workers' accommodation unit must be located within sub-precinct A of the Māngere 1: Precinct plan.

I420.6.2. Restaurants and cafes

- (1) No more than one restaurant or cafe must be located within sub-precinct B of the Māngere 1: Precinct plan.

I420.6.3. Noise

- (1) Noise levels arising from activities established on a site after 1 October 2003 measured at or within the boundary of any other site must not exceed the following limits:

Table I420.6.3.1 Noise limits

Activity	Average maximum level		Maximum
	dBL _{Aeq}		dBL _{AFmax}
	Monday to Sunday 7am-8pm	All other times	10pm-7am
Within Residential zones	55	45	75
Within Industrial zones	65	65	90

I420.6.4. Yards

- (1) Yards must comply with Table I420.6.4.1 Yards below:

Table I420.6.4.1 Yards

Yard	Dimension
Front	10m
Northern	5m
Southern	None
Rear	30m

I420.6.5. Landscape treatment

- (1) The minimum landscaped area must not exceed 35 per cent of the net site area.
- (2) Where any boundary adjoins a residential zone at least 50 per cent of the yard required in Standard I420.6.4 Yards above must be landscaped by plantings of specimen trees and shrubs.

I420.6.6. Earthworks

- (1) Earthworks associated with the construction/extension of a perimeter bund westward along the boundary with the adjoining residential site (Lot 1 DP 1149852) must not exceed 100m in length.

I420.7. Assessment – controlled activities

There are no controlled activities in this precinct.

I420.8. Assessment – restricted discretionary activities

I420.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, zone or Auckland-wide provisions:

- (1) For yards, landscape treatment and earthworks:
 - (a) effects on amenity values of neighbouring residential areas;
 - (b) effects of site layout, landscaping and planting;
 - (c) effects of noise; and
 - (d) effects of design and external appearance.

I420.8.2. Assessment criteria

The Council will consider the relevant assessment criteria below for restricted discretionary activities, in addition to the assessment criteria specified for the relevant restricted discretionary activities in the overlay, zone or Auckland-wide provisions:

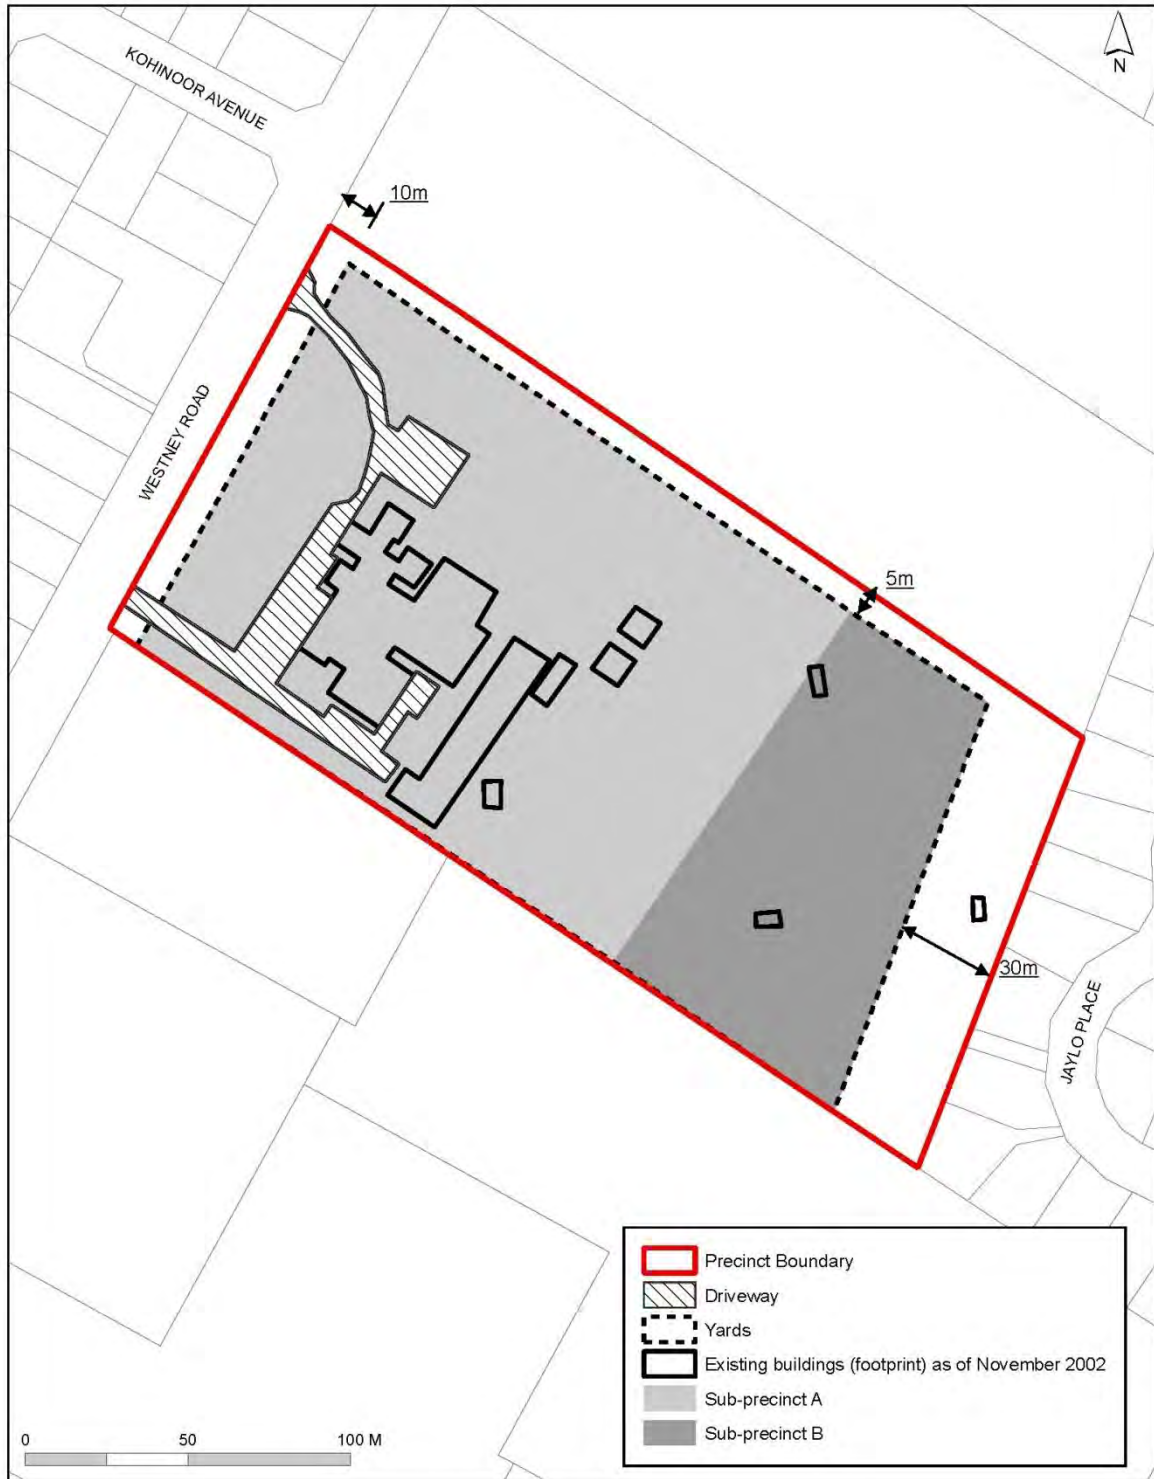

- (1) For amenity values of neighbouring residential areas:
 - (a) the extent to which the amenity values of neighbouring residential areas is maintained, particularly with regard to noise, traffic and other potential nuisances.
- (2) For site layout, landscaping and planting:
 - (a) whether the siting of the buildings and other structures, including car parking areas and vehicle access points, maintain a good relationship between those structures and other structures on the site and on adjoining sites.
- (3) For noise:
 - (a) whether the best practicable measures are put into place to minimise the effects of noise emanating from activities on the site.
- (4) For design and external appearance:
 - (a) whether buildings and other structures are designed to avoid unrelieved mass and bulk and maintain the amenity values of neighbouring residential areas.

I420.9. Special information requirements

There are no special information requirements in this precinct.

I420.10. Precinct plans

I420.10.1. Māngere 1: Precinct plan

I421. Māngere 2 Precinct**I421.1. Precinct Description**

The Māngere 2 precinct seeks to protect one of the first examples of cluster housing in New Zealand in Teo and Tioro lanes. This state housing was built in 1978 and is significant because it represents a change in the government's housing policies relating to architectural and subdivision design.

The zoning of land within this precinct is Residential - Single House Zone.

I421.2. Objectives

- (1) The unique and established character of Teo and Tioro lanes is protected

The overlay, Auckland-wide and zone objectives apply in this precinct in addition to those specified above.

I421.3. Policies

- (1) Manage the demolition of buildings to ensure that the established built character of Teo and Tioro lanes is protected.
- (2) Restrict new development and alterations so that they do not detract from the established built and landscape character of Teo and Tioro lanes.

The overlay, Auckland-wide and zone policies apply in this precinct in addition to those specified above.

I421.4. Activity table

The provisions in any relevant overlays, Auckland-wide provisions and the zone apply in this precinct unless otherwise specified below.

Table I421.4.1 Activity table specifies the activity status of development activities in the Māngere 2 Precinct pursuant to section 9(3) of the Resource Management Act 1991.

Table I421.4.1

Activity		Activity status
Development		
(A1)	Total or substantial demolition of buildings exceeding 30 per cent or more by volume or footprint, (whichever is the greater)	RD
(A2)	External additions or alterations to buildings	RD
(A3)	Construction of new buildings or relocation of buildings onto the site	RD

I421.5. Notification

- (1) Any application for resource consent for an activity listed in Table I421.4.1 Activity table above will be subject to the normal tests for notification under the relevant sections of the Resource Management Act 1991.

- (2) When deciding who is an affected person in relation to any activity for the purposes of section 95E of the Resource Management Act 1991 the Council will give specific consideration to those persons listed in Rule C1.13(4).

I421.6. Standards

The overlay, Auckland-wide and zone standards apply in this precinct except that the following:

Standard H3.8.8 Yards, side yard Residential – Single House Zone does not apply.

All activities listed in Table I421.4.1 Activity table must comply with the following standards.

I421.6.1. Yards

- (1) A building or parts of a building must be set back from the side boundary by a minimum depth of 3 metres.

I421.7. Assessment – controlled activities

There are no controlled activities in this precinct

I421.8. Assessment – restricted discretionary activities

I421.8.1. Matters of discretion

The Council will restrict its discretion to all the following matters when assessing a restricted discretionary activity resource consent application, in addition to the matters specified for the relevant restricted discretionary activities in the overlay, Auckland wide or zone provisions.

- (1) total or substantial demolition of buildings:
- (a) the intrinsic character and value of the existing building; and
 - (b) health and safety considerations for building removal or demolition.
- (2) external additions or alterations:
- (a) use of similar or same design elements, materials and finishes;
 - (b) character of the cluster development or streetscape; and
 - (c) existing landscaping, trees and planting.
- (3) construction of new buildings and relocation of buildings:
- (a) Architectural design; and
 - (b) Streetscape and context.
- (4) building yards:
